I. INTRODUCTION AND SUMMARY.

I have been retained to review scientific evidence and analyze the epidemiological data and, based on these data and other relevant evidence, to provide my professional opinion about whether talcum powder products are causally related to ovarian cancer. I have used a weight of evidence approach in examining the causal relationship between talcum powder products and ovarian cancer. I have relied upon my own systematic review of the literature and the cumulative body of evidence as the basis upon which I provide my opinions. This included gathering all relevant data based on *in vitro*, animal, and human epidemiologic studies on this topic. Although the weight of my opinions is derived from findings published in the peer-reviewed literature, relevant unpublished documents are also noted when applicable. The individual studies were examined for both reliability and validity noting their strengths and limitations. The cumulative body of evidence was then synthesized and examined and weighed using a widely accepted organizing framework- the Bradford Hill approach. (1). Using these materials, my education, and my prior clinical and research experiences, I have employed the methods generally accepted by the scientific community that would be used to develop a peer-reviewed manuscript.

In summary, it is my opinion, to a reasonable degree of scientific and medical certainty, that talcum powder products, specifically here Johnson's Baby Powder and Shower to Shower, can cause ovarian cancer. This finding is based on the totality of the medical and scientific evidence from meta-analysis, and consistent findings of a statistically significantly increased risk in observational studies, evidence of retrograde migration and inhalation of talc, presence of known or suspected carcinogens in Talcum Powder Products, and inflammatory tissue response that initiates multiple pathways and biological mechanisms by which talcum powder products can cause ovarian cancer. While these factors carry the most weight in my assessment, available data on the biological gradient of Talc exposure and ovarian cancer (dose response) also support my opinion.

II. BACKGROUND AND QUALIFICATIONS.

I am an Associate Professor in the Department of Family Medicine and Community Health and the Meyers Primary Care Institute, with a joint appointment in the Department of Quantitative Health Sciences at the University of Massachusetts Medical School, Massachusetts. I received

my M.B.B.S. (equivalent to M.D.) in 1998 from Patna Medical College, India. I then completed my internal medicine internship and residency in the Department of Medicine at the Unity Health Center, affiliated with the University of Rochester School of Medicine in 2005. Subsequently, I served on the Faculty as an Instructor of Medicine at Wake Forest University until 2007, and then as an Assistant Professor of Medicine in 2007. I received a joint appointment as an Assistant Professor of Epidemiology at Wake Forest University in 2008. While on the faculty at Wake Forest University, I obtained my master's in public health at Johns Hopkins University in 2008. I was an Assistant Professor in the School of Medicine at Johns Hopkins University as a recipient of the NIH Johns Hopkins Clinical Research Scholars Award in 2009. I held joint appointments in the Department of International Health and Health Policy and Managements and served as the Associate Director at the Center for Drug Safety and Effectiveness at Johns Hopkins University until 2016.

In my current position, I devote most of my professional time to epidemiologic research. I conduct clinical research with a focus on drug safety, evidence synthesis, and shared decision making. The major focus of my research is understanding the adverse effects of pharmacologic therapies. The remainder of my professional effort is dedicated to practicing general medicine and teaching activities. I have taught courses in systematic reviews, clinical epidemiology, pharmacoepidemiology, and the practice of internal medicine to medical students, interns, residents, and public health students at Johns Hopkins University and Wake Forest University. I have taught courses in clinical epidemiology and pharmacoepidemiology to researchers in the Bloomberg School of Public Health at Johns Hopkins University

I have served as an advisor to the World Bank, WHO International Agency for Research on Cancer and various pharmaceutical firms. I was part of World Health Organization International Agency for Research (WHO-IARC) panel which evaluated the carcinogenicity of various drugs and herbal products. (2). I currently serve as a member of the American College of Chest Physicians Guideline Panel. I have also been part of a panel that developed the PRISMA-HARMS (Preferred Item for Reporting Harm in Systematic Reviews and Meta-Analyses) checklist with an aim to improve the reporting of systematic reviews and meta-analysis of adverse effects. (3). My research has been funded by the Food and Drug Administration, the Agency for Health Care Research and Quality, the National Institute of Health and the Patient Centered Outcomes Research Institute. I am a recipient of numerous awards including the prestigious Johns Hopkins Clinical Research Scholars Award from the

National Institute of Health and the Tinsley R. Harrison Master Teachers Award at Wake Forest University School of Medicine. My systematic review on varenicline and the risk of cardiovascular events published in the prestigious Canadian Medical Association Journal was awarded the Best Research Paper of the year among hundreds of articles submitted to the Journal. I also serve as a peer reviewer for more than 50 journals and serve on the editorial board of prominent journals such as *BMJ Evidence Based Medicine*. I have reviewed grants for numerous federal and international organizations. I have conducted several epidemiological studies and systematic reviews and meta-analysis featured in prominent medical journals such as the *Journal of the American Medical Association* and the *British Medical Journal*. I have authored or co-authored more than 100 original peer-reviewed scientific articles and my work has been cited more than 13,000 times and my h-index is 48 [h number of papers which has been cited by others at least h times]. My work has been featured in *Science*, *Journal of the American Medical Association*, *British Medical Journal*, and the *Lancet*, as well as media outlets such as the *NYTIMES*, *Wall Street Journal* and *Washington Post*.

This background provides expertise in the use of epidemiological research methods in diverse settings, and in the clinical practice of medicine, both relevant to the present scenario. I have charged a rate of \$600.00 per hour in the preparation of this report. Attached as Exhibit A is a copy of my curriculum vitae.

III. PUBLICATIONS.

Below is a representative sampling of those articles published in leading medical journals such as *Journal of American Medical Association*, *Journal of American Medical Association-Internal Medicine*, and *British Medical Journal*. Please refer to my attached curriculum vitae for a complete listing of all publications.

IV. STUDY DESIGN CONSIDERATIONS.

I will examine the strengths and weaknesses of the study designs that are relevant to the present scenario. Each of the study-types discussed below has its advantages and disadvantages. Every study is subject to biases and error; none is appropriate and feasible for every situation. Instead, the evidentiary value of each study must be assessed and weighed on an individual basis, and in the context of the totality of the body of literature or scientific studies.

IV.I Randomized controlled trials. In double blind randomized controlled trials (RCTs) both the investigator and the participant are blinded to treatment assignment. All characteristics whether known or unknown, are evenly distributed at random between the intervention and placebo arm. Thus, if there are differences in incidence of outcome, it can be inferred to be a consequence of the exposure itself (i.e. causative).

However, the prospective nature of RCTs also results in several significant drawbacks for effects that are rare and/or slow to develop, like ovarian cancer. In addition to the ethical difficulties of administering a substance that may be harmful, such as talcum powder products, it is difficult prospectively to ensure study-subject compliance over the decade-plus timeframes required to assess ovarian cancer risk, and obviously impractical to have researchers administer a daily perineal talc application to study subjects. Similarly, there is no mechanism by which to randomly assign participants for non-modifiable exposures or the event may be sufficiently rare, such as in the present case of ovarian cancer to be evaluated in a randomized trial. The definitive randomized controlled trial in which patients would be randomized to talcum powder products and/or placebo and measure the outcome of ovarian cancer would be ideal. However, such a randomized trial does not exist, and such a randomized trial would be unethical.¹ Then again, randomized clinical trials are not necessary to establish causal evidence of harm. For instance, there is no randomized trial which supports the causal role of smoking in lung cancer. As a result, to address this question, we must rely on other study designs including observational studies and their meta-analysis to draw inferences on causation. The preponderance of evidence we have on harms of products are derived from such epidemiological studies.

¹ Defendants here have admitted this fact. Deposition of Linda Loretz 562:14-563:6 (October 1, 2018) (4); Deposition of Joshua Muscat 408:21-410:20 (September 25, 2018) (5).

IV.II Systematic reviews and Meta-analysis. A systematic review and meta-analysis is a study design wherein systematic searches are carried out to identify studies reporting on a question of interest. Systematic reviews provide a high level of evidence when evaluating the effect of interventions. (6).

The meta-analytic point estimate represents the sum of evidence from all the included studies. When individual studies may be underpowered to detect an effect, meta-analysis of cumulative studies may allow one to distinguish whether the entire body of evidence supports the presence or argues against evidence of a causal association. Apart from the P-value as a measure of statistical significance, the confidence intervals are used to assess the statistical variability around the estimate. In a meta-analysis the studies are weighted by the sample size of included studies with larger studies contributing more weight to the final estimate. Studies are examined to determine whether the findings are clinically and statistically homogenous or heterogenous. Clinical heterogeneity includes any differences in populations and interventions. It is also important to evaluate statistical heterogeneity among studies included in the meta-analysis. (7). Although some amount of variation in individual estimates of treatment effect is expected by chance, the excess of variation which cannot be explained by chance alone is referred to as statistical heterogeneity. I^2 is used as a measure of *statistical heterogeneity*—a percent of variation due to heterogeneity compared to chance, the higher the value the more the proportion of statistical heterogeneity.

The different approaches to modelling data across studies may yield slightly different results. Fixed effects meta-analysis which assumes that all the studies are measuring the same effect yield tighter confidence intervals, whereas random effects meta-analysis which assume that studies are measuring different effects in the population yield more conservative effects. Random-effects models may be more appropriate when the amount of statistical heterogeneity is high. Some amount of heterogeneity is expected when the database includes observational studies.

However, it must be noted that while meta-analysis can overcome issues of limited statistical power and provide information on consistency or inconsistency of effects, one needs to carefully examine the individual studies for their limitations and susceptibility to bias and confounding.

Thus, for example, if a study is too short to detect the effect in question, then even a patient-level pooled analysis of several such studies will very likely fail to detect a true causal relationship, even when one exists. This is an illustration of why it is important to consider study design, bias, and confounding in weighing the results from both individual studies and their meta-analysis. Systematic reviews are also susceptible to various publication and funding biases which need to be considered in interpreting results.

Meta-regression in using summary or group level published data may be susceptible to ecological or group level biases and result in spurious conclusions. (8). As a result, it is not recommended to evaluate the association between treatment effect, such as the difference in the risk of ovarian cancer, and participant characteristics at the study level (e.g., mean age of all participants) using aggregate level data, (9) as these may be susceptible to group level or ecological biases. An individual participant pooled analysis in which investigators have access to the patient-level data, such as that by Terry et al. discussed below, (10) is considered of higher quality than meta-analysis of summary data and provides the ability to reliably assess the effect of other patient and outcome related variables.

Umbrella reviews and overviews of systematic reviews. An umbrella review systematically collects and reviews evidence from multiple systematic reviews and meta-analysis and allows integration of evidence from multiple systematic reviews and meta-analysis, (11) to offer a much broader view of the evidence landscape. Individual systematic reviews and/or meta-analysis included in an umbrella review or overview should be critically appraised for quality. The 11-item critical appraisal tool AMSTAR (Assessing the Methodological Quality of Systematic Reviews) is a reliable and valid tool which provides an assessment of the quality of included systematic reviews and meta-analysis in an overview. (12).

What is the precise causal question or the hypothesis being tested? One cannot interpret the scientific evidence without being precise about the causal question that is being addressed when evaluating the association between any exposure and an outcome in any epidemiologic study. An exclusively narrowly framed hypothesis (e.g., evaluating only one route of exposure such as using talcum powder on contraceptive diaphragm), (13) while disregarding other important and relevant routes and mechanisms of exposure, is inherently limited by design. Since we may not have a complete picture of the underlying mechanisms or the timings of risk of products at the

time of study design, it is even more critical that studies on safety evaluate all potential routes of exposure.

IV.III. Cohort and Case-Control Studies. There are several considerations in interpreting data from prospective or retrospective observational studies or case-control studies. However, it is important to consider issues of study design, random error, systematic error, bias, and confounding in the interpretation of data. Random errors are statistical fluctuations in the measured data due to the limitations of the measurement instrument. They may occur in both direction because of the inability to measure exposure and outcomes in precisely the same manner. There is also the possibility of measurement error in the measurement of outcome and exposure in both study designs. If the measurement error is non-differential, such misclassification of exposure or outcomes usually biases findings towards the null. Systematic errors, by contrast, are reproducible inaccuracies that are consistently in the same direction, often due to a problem which persists throughout the entire study and are difficult to correct.

Case-control studies involve subjects diagnosed with the disease at issue, such as ovarian cancer (the “cases”), and a suitable number of subjects without the disease (the “controls”). Exposure is ascertained retrospectively among both cases and controls. The results are then analyzed to see if there is an association between the exposure and the disease. In contrast, prospective cohort studies are study designs in which subjects with and without the exposure of interest are recruited and followed up in time for the development of outcomes. This study design establishes temporality wherein the exposure precedes the outcome. It is important to determine the latency and induction between the exposure and the disease to assess the duration of follow-up. As an example, a 12-month follow-up study to evaluate the association between exposure to smoking and lung cancer would be unlikely to demonstrate an increase in the risk of lung cancer.

There are several strengths to the case-control design including the ability to ascertain long-term exposure-outcome relationships, particularly important to the present scenario because ovarian cancer develops over many years. Once cases and controls have been established, one can evaluate the association between multiple exposures and outcomes. In contrast, prospective cohort studies may be limited by the short-duration of follow-up which may be insufficient to ascertain the effect of exposure on long-term outcomes and bias their findings towards the null. Secondly, for relatively rare diseases, such as ovarian cancer, case-control studies are more

efficient. Because we are looking at the incidence of disease between the two arms of a study, a cohort study may have limited statistical power regardless of the actual number of subjects enrolled if the number of cases is small. For example, the Nurses' Health Study recruited almost 80,000 participants for only 307 cases of ovarian cancer. (14).

Both study designs are susceptible to selection bias when the selection of the participants into the study (or their likelihood of being retained in a cohort study) leads to a result that is different from the result had we enrolled the entire target population. In other words, the exposure-outcome relationship in controls or cases may be different from the target population. This can arise due to selection of controls not representative of the target population, non-response that is related to exposure and outcome, or differential loss to follow-up in a cohort study related to exposure and outcome status. Selection bias can bias findings either away from the null or towards the null.

Case-control studies, by their design, are generally not blinded and are also susceptible to bias as a result. They are also susceptible to recall bias, i.e. the concern that subjects with the disease may be more diligent in recollecting past uses. However, the degree of recall bias will depend on the type of exposure with chronic daily long-term exposures, such as talcum powder product use, being less likely to be subject to recall bias than intermittent short-term exposures. In contrast, prospective cohort studies in which subjects are recruited and then followed up for the development of outcomes are less susceptible to recall bias.

In addition, there is the issue of what may be called "behavior change" bias in cohort studies which may also bias their findings towards the null if exposure is only ascertained at baseline and not updated during follow up. This bias towards the null reduces the apparent effect of the exposure on the outcome. For example, if the subjects accurately report their talcum powder product use (or lack there-of) at baseline, but there is no follow-up, then the "ever" users' status will still be correct at the end of the study, because once having used talc, their "ever" status cannot change. This will not be true, however, of the "never" users; if they subsequently use talc, then without follow-up, their status will still be incorrectly recorded as "never." If there is a true causal connection, some ovarian cancers caused in the "never" category will, in fact, belong in the "ever" category, potentially biasing the study towards the null. Cohort studies are also susceptible to attrition bias and efforts should be used to minimize loss to follow-up. The main strengths of cohort studies are that if an effect (after adjusting for other confounding

factors) is found despite these biases towards the null, then it is more likely to be a causal relationship; the limitations being that they are less sensitive to determining a causal relationship. Case-control studies are based on past behavior and are not affected by this bias. Cohort studies are also susceptible to several prevalent user biases including potential bias due depletion of susceptibles. (15). A cohort study evaluating the association between talc use and ovarian cancer which limits the analysis to prevalent users (rather than new users), may largely be composed of survivors of the early effect of talc exposure on ovarian cancer, since new users who developed ovarian cancer after talc exposure may be ineligible for inclusion. This will potentially bias the estimates towards the null.

One important distinction to note is between risk factors for the disease and confounders. (16). A risk factor is an exposure which may explain the development or cause of disease in the population. These could be potentially modifiable or non-modifiable risk factors such as genetic risk factors. Confounding represents a special case of bias that results when the relationship between the risk factor -disease relationship is altered. A variable is considered a confounder only when ALL three criteria are present: a) the confounder is associated with the exposure in the population; b) the variable is related to the disease in the population; and c) the variable is not a link in the causal pathway to the disease. Risk factors that do not meet all the above criterion are not considered confounders of the exposure-outcome relationships (and thus may not require adjustment in the analysis).

Observational studies may also be susceptible to unmeasured confounding. Importantly, the potential for confounding does not mean that such a confounding exists. To address bias, confounders of the disease-outcome relationship need to be adjusted for in the analysis of epidemiologic studies. The methods for adjustment for known confounders include regression or propensity score methods. In establishing the effect of any exposure on an outcome it is important to disentangle the direct effect of an exposure of an outcome vs the indirect effect because of some mediators. The strength of association, in and of itself, does not denote whether a risk factor causes the disease. It is reflective of the background rate of the disease in the population and the relative risk of other competing risk factors. When the strength of association is weak, restricting the disease to a low risk population with low background rates of the diseases will magnify the association due to lack of competition among risk factors. (16)

One must be careful in interpreting data from subgroup analysis, such as analysis of various dose categories or age or ethnic groups, such as the case here with pre-menopausal women vs post-menopausal women or subgroup of women stratified by age, sex and ethnicity. The results of tests of interaction are important in interpreting data from such studies. If the test of interaction is not significant, this suggests that there is a lack of significant difference between the two groups. However, such subgroup tests can be underpowered because of reduction in sample size. Additionally, while a study may be internally valid it may not be generalizable to participants in the overall population beyond those included in the study. As an example, the cohort study of post-menopausal women reporting a non-significantly increased risk of ovarian cancer with genital talc use may not be generalizable to premenopausal women. (17). Despite the limitations noted above, most of our knowledge of the adverse effects of therapies has been derived from observational studies, since randomized controlled trials are not practical for several agents and rare outcomes.

It is also important to draw attention to the proper interpretation of P-values, confidence intervals and statistical significance. (18). I have followed the general principles laid out by the American Statistical Association on the interpretation of P-values and statistical significance. P-value can only indicate how incompatible data are with a statistical model. P-values do not indicate the probability that the studied hypothesis is true or the probability that data were produced by random chance alone. A P-value does not measure the size of an effect or the importance of a result and undue reliance should not be placed on whether a P-value passes a specific threshold. Full reporting and transparency are needed for interpretation of results. Confidence intervals (CI) measure statistical significance, (19) and indicate the precision and degree of uncertainty associated with a sample statistic. A 95% CI means that if we used the same sampling method to select different samples and computed an interval estimate for each sample, we would expect the true population parameter to fall within the interval estimates 95% of the time. CIs that remain elevated above 1 for relative risks (RRs) or odds ratios (ORs) are considered statistically significant. A narrow CI indicates a relatively higher level of precision. Non-overlapping CIs across two studies suggest a statistically significant difference between the study findings, whereas overlapping CIs may suggest consistent results. Thus, it is not necessary, and it is highly unlikely to have identical point estimates across studies to establish the presence of a consistent exposure-outcome association.

V. EPIDEMIOLOGY AND PATHOGENESIS OF OVARIAN CANCER.

Ovarian cancer is the most lethal gynecologic cancer in women. It is the leading cause of cancer death among gynecologic cancer in the US and the fifth most common cause of cancer with more than 14,000 deaths per year. The incidence is 11.4 cases per 100,000 women per year, with a mortality rate of 7.4 deaths per 100,000 women. (20). Approximately 1.3 percent of women will be diagnosed with ovarian cancer at some point during their lifetime. Approximately 22,400 new cases of ovarian cancer would be diagnosed in the US in 2017 with 14,080 deaths. (21).

Most women are diagnosed at an advanced stage of the disease and it is usually asymptomatic but may present as abdominal distention, bloating, and in a minority of cases vaginal bleeding. The prognosis is relatively poor when it presents at the advance stage where therapeutic options including chemotherapy offer little benefit. As discussed in more detail in Section X below, inflammation is known to play an important role in the pathogenesis of ovarian epithelial cancer through a mechanism of cell proliferation, oxidative stress DNA damage and gene mutations.

VI. WHAT CONSTITUTES COSMETIC TALCUM POWDER PRODUCTS?

- While I will examine the evidence of talcum powder products and their causal association with ovarian cancer, ascertaining what constitutes “talcum powder” it is important to emphasize that Talcum powder cosmetic products are not “pure talc.” The evidence I reviewed demonstrates talcum powder products contain asbestos, fibrous talc, heavy metals such as cobalt, chromium, nickel, and various fragrance chemicals (22)(23). This report evaluates the risk of ovarian cancer associated with talcum powder products and its constituents. When I refer to talc or talcum powder products in this report, I am referring to commercially available talcum powder products and all constituent elements contained within.

- Talc is a naturally occurring mineral and its chemical composition is hydrous magnesium silicate with a chemical formula of $\text{Mg}_3\text{Si}_4\text{O}_{10}(\text{OH})_2$. In its natural form, talc may contain asbestos, also a naturally occurring silicate mineral, with a different crystal structure. Both talc and asbestos belong to the family of silicates that may occur in fibrous form, which is known to cause cancer. The structure of talc is characterized by a hexagonal sheet arrangement of silicon oxygen tetrahedral groups in a common plane. This results in a double-sheeted structure where the sheets are held together by weak van der Waals bonds. Talc consists mostly of these plate-

like structures ("platy talc") but talc can occur in fibrous form. Talc fibers are like asbestos fibers in size and shape. (22, 24).

- Despite claims that talcum powder products manufactured after the mid-1970s were "asbestos free," published articles, internal company documents, and testing of historical samples I reviewed demonstrate that talcum powder products can contain asbestos and other carcinogenic constituents as discussed below. For example, talc powders from national and international markets were analyzed by Paoletti et al. in a 1983 study to assess fiber content. (25). Samples of talc powders demonstrated fiber contents up to 30% of total particles. About half of the talc powders revealed the presence of asbestos. In some samples, a very high level of asbestos was revealed. (25). Consistently, the 1991 Blount study also found asbestos in cosmetic talcum powder. (26). In a recent deposition, the author of the 1991 study testified she had detected specifically in Johnsons and Johnsons baby powder. (27).

- Although the FDA conducted a survey of talc manufacturers in 2009-2010 and found no asbestos fibers or structures in any of the samples of cosmetic-grade raw material talc or cosmetic products containing talc, (28) the results were limited; only four out of nine talc suppliers submitted samples, and the number of products tested was low. The failure to detect asbestos could either be due to the technique used or the use of a non-representative sample. The FDA itself noted the study could not "prove that most or all talc or talc-containing cosmetic grade products currently marketed in the United States are likely to be free of asbestos contamination." (29).

- I reviewed Longo et al.'s report from August 2017 where he tested 30 bottles of Johnson's Baby Powder. (30). They found 17 samples contained detectable amounts of asbestos. They also found half of the samples contained fibrous talc. I also reviewed two additional reports from Dr. Longo where he found fibrous talc and asbestos in Johnson's Baby Powder. (31, 32). I reviewed the depositions and exhibits of Dr. John Hopkins, corporate representative for Johnson and Johnson, who testified to numerous positive tests for asbestos and fibrous talc. (33).

- In a recent report, Longo et al. (34) estimates that 37 out of 56 random samples (66%) of bottles of talcum powder products tested contain asbestos, which indicates that approximately 2 out of 3 bottles of talcum powder containing products are contaminated with asbestos. Talcum powder products are generally used by women habitually for months or years, rather than a

single application or a single bottle of use. Each successive use of a bottle of talcum powder product by an individual further accentuates the cumulative probability of their exposure to asbestos, beyond the probability conferred by the use of a single bottle. I reserve the right to supplement my report in order to estimate this probability of exposure to asbestos through habitual use of talcum powder products contaminated with asbestos, once the analysis of additional samples of talc is complete. Longo et al. also estimates that 41 of 42 random samples of bottles of talcum powder products tested contain fibrous talc. I reserve the right to supplement my report in order to estimate this probability of exposure to fibrous talc through habitual use of talcum powder products contaminated with fibrous talc, once the analysis of additional samples of talc is complete.

- I also reviewed the deposition and exhibits of Julie Pier, corporate representative for Imerys Talc America, Inc., who testified to numerous positive tests for asbestos and heavy metals between 1985 and 2002. (35).
- My review of monographs published by the International Agency for Research on Cancer (IARC) show that asbestos is a well-established carcinogen and unequivocally known to cause several cancers including mesothelioma of the lung, larynx, and ovarian cancer. (36). Overall, the International Agency for Research on Cancer Working Group classified asbestos compounds as “carcinogenic to humans” (Group 1) in 2012. (36, 37). IARC has also concluded that talc including asbestiform fibers grown in an asbestiform habit - commonly termed “fibrous talc” - is “carcinogenic to humans” (Group 1). (38).
- I also reviewed documents demonstrating talcum powder products may contain heavy metals such as chromium, nickel, and cobalt. (22). Asbestos, chromium, and nickel were all classified as a Group 1 carcinogens by IARC. (36) Cobalt is also present in talcum powder products and classified by IARC as a Group 2B carcinogen.

VII. SUMMARY OF OPINIONS.

1. **Statistical Significance.** There is a statistically significant increased risk of ovarian cancer with talcum powder products as demonstrated by most meta-analyses to date. (10, 39-42). Although a flawed analysis conducted limited to the use of talc dusted diaphragms and ovarian cancer conducted on behalf of the manufacturer reported an excess risk which was not

statistically significant, (13) it had several data extraction errors and was of lower methodological quality. (43). Several independent meta-analysis by academic researchers, some of which include individual participant data, (10) and the most recent meta-analysis reported a statistically significantly increased risk of ovarian cancer associated with perineal talc use, (42) rendering the previous findings of Huncharek et al obsolete. The studies of the highest rated methodologic quality as shown in **Table 1** which provides a methodologic grading of the quality of the included systematic reviews using the AMSTAR checklist have reported a statistically significantly increased risk of ovarian cancer associated with genital talc use. (10, 41, 42). See Section IX.IV for a summary of findings from epidemiological studies.

2. **Consistency and Replication.** These findings of a statistically significantly increased risk of ovarian cancer with talc use have been consistently replicated by several independent investigators in different population, and different settings across different data sources using different study designs. These slight differences in magnitude of risk reflect differences in inclusion or exclusion criteria and the accumulation of evidence over time. The meta-analysis of case-control studies has consistently shown a statistically significantly increased risk, whereas the meta-analysis of cohort studies has also shown an excess risk, (42) which failed to reach statistical significance, due to inadequate statistical power and low number of events; but the confidence intervals of results between the two study designs overlap providing evidence of consistency. The number of ovarian cancers in the case-control studies exceeds the number of ovarian cancers in the cohort studies by several fold. (42).

3. **Strength of Association.** The cumulative strength of association for the increased risk of ovarian cancer associated with talcum powder containing products is significant and ranges from 30 % to 60% %. The strength of association is similar to estimates of other established carcinogens (e.g., 24 % increased risk of lung cancers in non-smokers exposed to environmental tobacco smoke) (44), hormone replacement therapy and breast cancer (RR 1.33, 95% CI: 1.24-1.44) (45), particulate matter and lung cancer (PM_{2.5}: RR 1.09, 95% CI: 1.04, 1.14 and PM₁₀: 1.08, 95% CI: 1.00-1.17). (46). Beyond carcinogens, there are well established examples of causal associations in epidemiology, such as in the case of particulate matter and myocardial infarction, where the statistically significant excess risks are in the order of even less than a percent (carbon monoxide: 1.048, 95% CI: 1.026-1.070; nitrogen dioxide: 1.011, 95% CI, 1.006-1.016; sulfur dioxide: 1.010, 95% CI: 1.003-1.017; PM₁₀: 1.006, 95% CI: 1.002-1.009; and PM_{2.5}: 1.025, 95% CI: 1.015-1.036 and ozone: RR 1.003, 95% CI: 0.997-1.010; P = .36). (47).

4. **Exposure-Response Assessment.** The assessment of exposure-response or biological gradient is hindered by the difficulty in quantifying talcum powder use usually collected by

self-reported data (frequency, amount, and duration), timing and patterns of use (e.g., douching), and other individual factors (e.g., co-existence of inflammatory conditions such as endometriosis and or vaginal bleeding) resulting in differences in measurement of exposure across studies. As discussed in the dose-response summary of epidemiological studies below, some studies have measured the frequency of exposure, others the duration of exposure with few studies measuring the combined duration and frequency or intensity of exposure. (48). It is important to interpret the exposure-response data in the context of mechanistic studies which report that talc accelerates the development of ovarian cancer through alteration of the redox state in epithelial ovarian cancer cells, (49) and a monotonic dose-response curve may not accurately reflect this mechanism of development of ovarian cancer mediated via inflammation and alterations in redox states. Some epidemiologists have argued that it is difficult to know how dose-response should be modelled and it is unclear why nature would mandate a monotonic dose-response gradient. (50). Although it is difficult to know how to model the talc-ovarian cancer exposure-response assessment, it is possible that an agent which accelerates the development of cancer could account for threshold effects rather than monotonic dose-response effect. Despite these challenges, I address studies which have shown evidence of dose-response as measured by an increased risk with increased frequency, (48, 51-55) or increased duration, (52, 54, 56) or a combination of frequency and duration of exposure. (52, 57). Some studies have also shown evidence of increased risk with increased number of lifetime applications, (10, 48, 52) which may be a more accurate measure for long term exposure outcome association mediated via inflammation. The most updated meta-analysis reported an increased risk with >3600 lifetime applications compared to <3600 lifetime applications of perineal talc based on data from case-control studies. (42). A limited number of studies have shown no evidence of dose-response either with increased frequency or duration of exposure. (58-60).

5. **Retrograde Migration of Talc and Routes of Talc Exposure.** Talcum powder particles can migrate to the fallopian tubes and ovaries. (61-63). Talc and/or other constituents have been detected within the ovaries of women who report perineal talc use, (64) and found deeply embedded within ovarian tumors. (62, 65). Talc has also been reported in the lymph nodes which could occur through migration absorption or inhalation with transport through the lymphatic system. (66). Although an industry funded study performed by the Cosmetic, Toiletry, and Fragrance Association failed to detect translocation of “measurable quantities of talc” in unrelated monkey models, (67) the timing and techniques of assessment and intraspecies differences could not completely rule out migration of talc particles. Furthermore, supportive evidence for migration comes from the findings of a decreased risk of ovarian cancer with tubal

ligation and hysterectomy, (62) evidence of migration of other particles such as starch. (68). The FDA concluded that the “potential for particles to migrate from the perineum vagina to the peritoneal cavity is indisputable.” (69). A secondary route of exposure is inhalation. (36, 70).

6. **Multiple Biological Mechanisms of Talc Induced Ovarian Cancer.** Although not an absolute requirement for demonstrating causality, there is strong evidence that talcum powder products can induce ovarian cancer through established biological mechanisms (Section X). (39, 49, 71, 72). Inflammation plays a leading role in ovarian cancer and talc has pro-inflammatory effects; it also induces alterations in redox potential and pro-oxidant effects. (49) In ovarian cells talc has been shown to increase proliferation, increase neoplastic transformation and increase reactive oxygen species in the ovarian cells. (71). Talc has also been shown to be mutagenic in human ovarian epithelial cells through increased activation of gene activating transcription factors. Finally, the presence of asbestos and other Group 1 carcinogens likely contributes to the carcinogenicity of talcum powder products, and provides biologic plausibility for the consistent and significant increased risk seen in the epidemiologic studies on Talc and Ovarian cancer.

VIII. METHODS FOR THE OVERVIEW OF SYSTEMATIC REVIEW OF OBSERVATIONAL STUDIES OF GENITAL TALC USE AND OVARIAN CANCER.

I conducted an overview of systematic reviews and meta-analysis of observational studies of genital talc use and ovarian cancer. I included systematic reviews regardless of the performance of quantitative synthesis as meta-analysis may occasionally not be performed for data from observational studies. To inform the causal question, I also evaluated additional studies which provided evidence on the causal question of whether talcum powder products induce ovarian cancer. I critically appraised the meta-analysis using the 11- item AMSTAR (Assessing the methodologic quality of Systematic Review) checklist for systematic reviews and meta-analysis. (12) The individual epidemiological studies were also evaluated and summarized for their key strengths and limitations.

VIII.I. Systematic search. I performed an initial systematic search of Scopus and PubMed with the following search terms on June 12, 2017:

Pubmed: ("talc"[MeSH Terms] OR "talc"[All Fields]) AND ("ovarian neoplasms"[MeSH Terms] OR ("ovarian"[All Fields] AND "neoplasms"[All

Fields]) OR "ovarian neoplasms"[All Fields] OR ("ovarian"[All Fields]
AND "cancer"[All Fields]) OR "ovarian cancer"[All Fields])

Scopus: (TITLE-ABS-KEY (talc) AND TITLE-ABS-KEY (ovarian AND cancer)

VIII.II Eligibility Criteria. I included and considered epidemiological studies, including case-control studies, cohort studies and systematic review and meta-analysis which reported on the association between talc and ovarian cancer. I searched the references of included studies and citing articles to find additional original articles. I also included in vitro, animal, and human epidemiologic studies that reported data that either support or refute the role of talc in the development of ovarian cancer. I excluded duplicate articles identified in the two databases, articles with no original data, narrative reviews, commentaries and opinion pieces, and citations not relevant to the present scenario. The title and abstracts of each manuscript were reviewed to identify potential studies for inclusion in this report. I also searched the reference of included studies to find relevant citing articles. New studies were identified after evaluating citing articles. I reviewed the full length of each of these manuscripts and provide a summary of their key findings below.

IX. RESULTS.

The results of the initial search yielded 273 citations. I included 9 studies in the section on overview of systematic reviews and meta-analysis. (10, 13, 39-42, 57, 73, 79). I also assessed the 29 case-control studies, (48, 51-60, 62, 66, 75-91) and 3 cohort studies (14, 17, 92-93). The list of excluded citations is shown. The difference in the citation count of included and excluded articles largely reflects excluded duplicate articles retrieved from the two databases. I also evaluated several studies (36, 37, 49, 64-68, 72, 94-109) which reported on the biological mechanisms that supported or refuted the causal association between talcum powder products and ovarian cancer.

IX.I. Overview of Systematic Reviews and Meta-analysis. Three meta-analysis were not preceded by a systematic search (57, 73, 79). There were 4 systematic reviews and meta-analysis which evaluated the link between perineal talc use and ovarian cancer (39-42) using summary data, while an individual participant data analyses pooled data from case-control studies in the Ovarian Cancer Consortium (10). Another systematic review and meta-analysis analysis conducted on behalf of the manufacturer only evaluated the use of cosmetic talc on

contraceptive diaphragms and ovarian cancer (13) and was not directly relevant to the causal question of genital talc use and the development of ovarian cancer, but was critically evaluated for strengths and weaknesses. The results of the methodologic assessment of each of these using the AMSTAR checklist is summarized in the Table 1. Two meta-analysis (13, 40) are of poor methodological quality. Regardless, the findings of older meta-analysis have been superseded given the publication of new meta-analysis. (41, 42).

1. In 1992, Harlow et al. combined crude odds ratios from their case-control study, discussed below with 5 pre-existing existing case-control studies (79) to evaluate the association between perineal talc exposure and ovarian cancer. The studies included 1106 cases and 1756 controls, with talc exposure reported among 50.7% of cases and 46.9% of controls. Using crude odds ratios from the individual studies, perineal exposure to talc was associated with a statistically significantly increased risk of ovarian cancer (OR 1.3, 95% CI: 1.1-1.6). Major limitations include the lack of a systematic search methodology.

2. A 1995, meta-analysis by Gross and Berg (39) was conducted on behalf of the manufacturer Johnson and Johnson. A search of PubMed issuing the terms “ovarian cancer” and “talc or cosmetic” identified 9 case-control studies and reported a statistically significant increased risk of ovarian cancer in both the crude odds ratio (1.27, 95% CI: 1.09-1.48) and adjusted odds ratio (1.31, 95% CI: 1.08-1.58). They also examined the odds ratio by tumor type and notes that all the analyses produced relative risks greater than 1 with confidence intervals that exceeded 1. Despite the statistically significantly increased risk seen in analyses, the authors concluded that the *“literature does not unequivocally support the hypothesis.... But [does] suggest the possibility of an increased risk of ovarian cancer due to perineal talc use.”* The description of study procedures was incomplete, and the search strategy was limited. The study was supported in part by the manufacturer.

3. Cramer et al. 1999 combined crude odds ratio data from their case-control study with pre-existing case-control studies in a meta-analysis of 14 total case-control studies, (57) and reported a statistically significant OR of 1.36 (95% CI: 1.24-1.49). The tests for statistical heterogeneity were not significant (p=0.085). Limitations include the lack of a systematic search.

4. Huncharek, for his 2003 publication, conducted a meta-analysis of 16 studies including 11,933 subjects. (40). They searched MEDLARS, Embase and Cancer Lit databases using search term “talc exp ovarian neoplasms.” They excluded studies on borderline tumors or those which did not report on types of perineal exposure (dusting vs sanitary napkins). The meta-analysis was conducted using adjusted measures of effect using the inverse variance method. It included 15 population-based and 1 hospital-based study and excluded the 1983 Hartge study. (76). The pooled analyses yielded a significantly increased risk of ovarian cancer (RR 1.33, 95% CI: 1.16-1.45) associated with the perineal use of talc without evidence of statistical heterogeneity. Seven studies reporting on the number of talc applications per month were evaluated where the highest risk category (RR 1.21, 95% CI: 1.00-1.45) and lowest risk category (RR 1.83, 95% CI: 1.55-2.15) reported an increased risk. In sensitivity analyses, hospital-based studies showed no statistically significant excess risk between talc use and ovarian cancer risk, i.e., RRs 1.19 (95% CI: 0.99-1.41) versus population-based studies which showed an increased risk (RR 1.38, 95% CI: 1.25-1.52), despite the proportion of controls using talc being similar across the two designs. The confidence intervals were overlapping suggesting that the findings were consistent. Recent updated meta-analysis discussed below report similar estimates from hospital and population based studies. (42). The RRs were relatively stable even after exclusion of the single cohort study or limiting the analysis to studies that controlled for body weight and BMI. The authors stated that the association between talc use and ovarian cancer could also be attributed to exposure misclassification among prevalent cases or side effects of treatment such as radiotherapy and chemotherapy which may predispose to talc use (“reverse causality”). Study limitations include the inability to conduct meaningful dose-response analysis because only nine of the 16 studies provided data on dose-response, with substantial differences in dose stratification levels among these studies.

5. Langseth reported on a meta-analysis of 20 case-control studies and one cohort study in 2008. The various case-control studies provided a significant excess risk (10 studies) and non-significant excess risk in 10 studies. (73). The prospective cohort study reported no association between cosmetic talc use and all types of ovarian cancer combined but showed evidence of an increase in serous tumors. The hospital-based case-control studies reported a pooled OR of 1.12 (95% CI: 0.92-1.36) and population-based case-controls studies reported a pooled OR of 1.40 (95% CI: 1.29-1.52). The combined OR from all case-control studies using the fixed effects model was 1.35 (95% CI: 1.26-1.46).

6. Terry et al conducted an individual participant pooled analysis of eight case-control studies was conducted by the investigators for the Ovarian Cancer Consortium. (10). Genital powder use was defined as any powder use (talc, cornstarch, deodorizing) applied directly or indirectly (with sanitary pads, tampons or underwear) to genital, perineal or rectal area. Criteria for exposure varied from ever use to one year or longer. Women who reported both genital and non-genital powder use were considered genital users. Cumulative exposure was calculated by multiplying months of use by frequency of use. Never users and women who reported non-genital powder use were considered as the reference group. Analyses were adjusted for potential confounders such as age, duration of contraceptive use, parity, tubal ligation history, BMI and race/ethnicity. Family history of breast and ovarian cancer was not included in the final model. Genital powder use was reported in 25% of controls and 31% of cases. The rates of genital powder use varied widely between studies ranging from 15-45% in the control group. Ever regular uses of genital powder reported a statistically significantly increased risk of ovarian cancer (OR 1.24, 95% CI: 1.15–1.33) compared to non-users. There was no evidence of heterogeneity in the studies regardless of the reference group ($P_{\text{heterogeneity}}=0.61$). Results were similar when the reference group included those with genital powder use and never users. Risk was elevated for various histologic subtypes of ovarian cancer including invasive serous (OR 1.20, 95% CI: 1.09–1.32), endometrioid (OR 1.22, 95% CI: 1.04–1.43), and clear cell (OR 1.24, 95% CI: 1.01–1.52) tumors, and for borderline serous tumors (OR 1.46, 95% CI: 1.24–1.72). There was an increased risk of all nonmucinous subtypes of epithelial ovarian cancer combined across quartiles of genital powder use compared with nonuse: (OR_{Q1} 1.18, 95% CI: 1.02–1.36; OR_{Q2} 1.22, 95% CI: 1.06–1.41; OR_{Q3} 1.22, 95% CI: 1.06–1.40; OR_{Q4} 1.37, 95% CI: 1.19–1.58). Although a significant increase in risk with an increasing number of genital powder applications was found for nonmucinous epithelial ovarian cancer when nonusers were included in the analysis ($P_{\text{trend}} < 0.0001$), no significant trend was seen when analyses were restricted to ever users ($P=0.17$). After excluding those with tubal ligation or hysterectomy, the results were similar. Restricting analysis to applications before tubal ligation made no substantive difference. There was an evidence of interaction by BMI, with the risk being higher for women with BMI $< 30 \text{ kg/m}^2$ (OR 1.28, 95% CI: 1.17-1.39) than women with BMI $\geq 30 \text{ kg/m}^2$ (OR 1.14, 95% CI: 0.98-1.32; $P_{\text{interaction}}=0.01$). There was no evidence of interaction by tubal ligation, parity, endometriosis or post-menopausal status. The association was similar for women who used powder during varying time periods (1952-1961; 1962-1972; and after 1972). The strengths of this meta-analysis include the use of individual participant data, which allowed them to conduct dose-response analysis and analysis by histologic subtype. The lack of statistically significant evidence on non-

mucinous cancer could be attributed to the low number of users, or talc may not be relevant to these tumor types which have different biological mechanisms. The limitations include the definition of exposure as genital powder user varied from ever user, ever regular user to powder use for at least 6 months or at least 1 year in the studies.

7. Berge et al. 2018, a meta-analysis of 27 studies (41) (24 case-control studies and 3 cohort studies) was conducted according to the Preferred Item for Reporting of Systematic Reviews and Meta-Analysis Guidelines. (110). The authors searched multiple databases including Pubmed, Embase and Scopus. They examined the citations independently and in duplicate. They rated the studies using the New Castle Ottawa scale for study quality. They conducted meta-regression for duration (RR for every 10-year increase in duration) and frequency of genital talc use (RR for one time/week increase in frequency) for studies reporting at least three categories of duration or frequency after excluding the non-exposed category. Dose-response analysis was conducted using two methods. Study specific slopes were estimated from the natural logarithm of the risk estimates within each study; in a second step the slopes were pooled using a random-effects model. The study specific estimates were pooled in a single meta-analysis in the second method. Six of the case-control studies were hospital-based and the remainder were population-based. Most of the studies were conducted in North America and Europe. They reported a statistically significant increase in risk of developing ovarian cancer with talc use (adjusted RR 1.22, 95% CI: 1.13-1.30). A statistically significant risk was seen in the case-control studies (RR 1.26, 95% CI: 1.17-1.35), whereas the excess risk in the cohort studies did not reach statistical significance (RR 1.02, 95% CI: 0.85-1.20; $P_{\text{heterogeneity}} = 0.007$). There was no difference between results for borderline (RR 1.27, 95% CI: 1.09–1.44) and invasive ovarian cancer (RR 1.20; 95% CI: 1.08–1.31). There was a trend in RR with duration and frequency of genital talc use and suggestion of dose-response. There was a statistically significant risk for only serous carcinoma (RR 1.24, 95% CI: 1.15–1.34) and no other histologic subtypes ($P_{\text{heterogeneity}}$ between histologic types was 0.04). Use of talcum powder in the “early” period showed increased_risk of ovarian cancer (RR 1.18, 95% CI: 0.99–1.37). The use in the “late” period was higher (RR 1.31, 95% CI: 1.03–1.61; P-value for test for heterogeneity between the groups of studies was 0.37), arguing against the hypothesis that a higher risk would be seen only among those with earlier exposure during time-periods in which talcum powder was reported to contain asbestos. The cut-off points varied between studies was variable between 1970 and 1980. Use of sanitary napkins or diaphragms was not associated with an increased risk of ovarian cancer (RR 1.00; 95% CI: 0.84–1.16, and RR 0.75, 95% CI: 0.63–0.88, respectively).

Stratified analysis based on the adjustment for confounders (use of oral contraceptives and hormone replacement therapy, socioeconomic status/ education, BMI) found no evidence of heterogeneity. Meta-regression using the two different approaches yielded similar results. Based on the two-step approach, a 10-year increase in genital talc use was associated with a RR of 0.97 (95% CI: 0.82–1.12; nine studies reporting on duration), whereas the RR for an increase of one application per week was 1.03 (95% CI: 0.82–1.25; five studies reporting on frequency). There was no evidence of publication bias on visual inspection of funnel plot and the Egger test ($P=0.7$), with the cumulative meta-analysis reporting stabilization RR of in the range of 1.20–1.25. Stratified analyses conducted did not suggest the possibility of residual confounding (i.e., higher adjusted estimates than unadjusted estimates).

There are some limitations to the analysis. While the role of selection and recall bias is a possibility, given higher estimates reported from recent studies, such biases should account for increase in recall for all histologic cancer subtypes and not just serous ovarian cancer. Importantly, the dose-response analyses analyzed duration and frequency separately and not the intensity of exposure (duration combined with frequency) or cumulative exposure to talc and the exclusion of the reference category from the dose-response curve diminished the power of the dose response analysis to detect any threshold effects.

8. Penninkilampi, et al. 2018 (42), the most recent and comprehensive meta-analysis which focused on studies with greater than 50 cases of ovarian cancer also reported on data from 26 case-control studies (13,421 cases and 19,314 controls) and 3 cohort studies (890 cases). The study was also conducted according to the PRISMA protocol and included a search of multiple databases (MEDLINE, PubMed, EMBASE, Cochrane Central Register of Controlled Trials) and LILACS. They also evaluated the quality of studies using the Newcastle Ottawa Scale. They also evaluated long term talc use in which OR were extracted for group with the longest duration of exposure compared to controls, if there was a minimum of 10 years of talc exposure. Lifetime applications within each study were divided into < 3600 lifetime applications (equivalent to less than 10 years) and >3600 applications or more than 10 years of exposure. The number of lifetime applications is a better marker of intensity of exposure compared to duration or frequency of exposure alone. They assessed publication bias using the failsafe method where the failsafe number is the number of studies missed to nullify the findings of meta-analysis.

This was a well-conducted analysis and some strengths and limitations are notable. They found all studies to be of reasonable quality and did not exclude studies based on study quality. None of the analyses in this review had statistically significant heterogeneity except for non-perineal application arguing for the consistency of estimates. Any perineal talc use was associated with an increased risk of ovarian cancer (OR 1.31, 95 % CI: 1.24-1.39). Greater than 3600 lifetime applications were more associated with ovarian cancer than lifetime applications of less than 3600, although risks were significantly elevated in both groups. While the case-control studies reported a statistically significantly increased risk of ovarian cancer (OR 1.35, 95% CI: 1.27-1.43), the cohort studies reported an increased risk which was not statistically significant (OR 1.06, 95 % CI: 0.90-1.25).

9. Meta-analysis on Talc-Dusted Diaphragms and Ovarian Cancer. Another meta-analysis of 9 case-control studies by Huncharek et al. (13) reported on exposure to talc dusted diaphragms and ovarian cancer. On one hand, the authors dismissed the “talc hypothesis” for potential carcinogenicity, but then argued that talc dusted diaphragms was a more “intuitive model” for testing whether talc exposure increased the risk of ovarian cancer without any biological evidence (or references) to support this intuition. They searched MEDLARS, Cancer Lit and Current Contents. They included 9 studies and the pooled analyses yielded an excess risk of ovarian cancer which was not statistically significant (RR 1.03, 95% CI: 0.80-1.33). Exclusion of the study in which exposure to dusted diaphragms was assumed rather than measured further elevated the OR, which was not statistically significant (OR 1.12, 95% CI: 0.84–1.48) similar to a non-significant elevation in OR after the exclusion of the studies not published as full research articles.

This meta-analysis was flawed for several reasons. The most important limitation was its exclusive focus on talc powder dusted diaphragms as the route of exposure which could not inherently address the causal question of whether genital talcum powder dusting is associated with increased risk of ovarian cancer. As a result of this narrow hypothesis, they excluded several available studies that reported a statistically significant excess risk of ovarian cancer with perineal talc use. Several methodological flaws include the exclusion of the lowest category of exposure for some studies, (51) data extractions errors for others (56), and inclusion of ineligible studies that did not disaggregate data between talc and cornstarch users. (77) The study was by Johnson & Johnson and Luzenac America and was of poorer methodological quality than those conducted by their academic counterparts (43). As a result of these serious methodological

flaws, and the publication of several newer, higher quality meta-analysis with updated data, (10, 41, 42) the findings of this study have been superseded.

It is important to note here that while the AMSTAR checklist evaluates the methodologic quality of systematic reviews, several studies shown below were published prior to the publication of the AMSTAR checklist.

IX.II. Case-Control Summaries.

1. More than three decades ago Cramer et al. (75) evaluated 215 white women diagnosed with epithelial ovarian cancer identified through 12 hospitals in the greater Boston area. They were randomly matched by age, race and residence to 215 population-based controls. Surgical specimens were reviewed to confirm and classify tumors by histologic type. Talc exposure was determined through in person interviews. Multivariable logistic regression was used to estimate the Relative Risk. Ninety-two (42.8%) cases regularly used talc either as a dusting powder on the perineum or on sanitary napkins compared with 61 (28.4%) controls.

Adjusted for parity and menopausal status, this difference yielded a RR of 1.92 (95% CI: 1.27-2.89) for ovarian cancer associated with talc exposure. Women who had regularly engaged in both practices had an adjusted RR of 3.28 (95 % CI: 1.68-6.42; $P < 0.001$) compared to women with neither exposure. After adjusting for religion, marital status, educational levels, ponderal index, age at menarche, parity, oral contraceptive or menopausal hormone use and smoking the RR was attenuated but remained statistically significant (RR 1.61, 95% CI: 1.04-2.49). The limitations of the study include the potential for selection bias in controls because of high rates of non-participation, although RR remained statistically significantly elevated even though the analysis was restricted to 121 cases matched with controls without a referral. Since approximately 50% of ovarian cancer cases in the Boston area was sampled, any potential for pervasive selection bias of cases was minimal. Other potential limitations include the adjustment for only a limited set of confounders such as parity and menopausal status.

2. Hartge et al. 1983 (76) conducted a hospital-based case-control study of women with pathologically confirmed primary epithelial ovarian cancers matched to equal number of women for conditions other than gynecologic, psychiatric, or malignant diseases or pregnancy in the same hospitals in Washington, DC. Controls were frequency matched for age, race and hospital. Exposure to talc was ascertained through questions about reproductive and sexual history, medical history, drug use, and other exposures. The questions for talc use were added after the study began yielding 135 cases and 171 controls.

Among the women users of talc in sanitary napkins, underwear, or the genital area there was an excess risk of ovarian cancer (unadjusted RR 2.5, 95 % CI: 0.7-10.0) which was not statistically significant due to small sample size (n= 7 cases and 3 controls). The limitations to the study include the limited number of cases and controls reporting genital use of talc (n=10) and publication as a letter to the editor which may or may not undergo peer review depending on editorial practices at the journal. They did not report adjusted results of ovarian cancer after perineal exposure to talc. Another limitation is the potential for recall bias; however, this was likely minimal given similar reporting of douching practices in cases and controls.

3. In 1988, Whittemore et al. (58) evaluated 188 pre-menopausal and postmenopausal women between the ages of 18 and 74 with primary epithelial ovarian cancer in Santa Clara County hospitals or at the University of California, San Francisco Medical Center. The diagnoses were subsequently histologically verified. One group of controls was selected from the hospital (n=280); and a second group was selected from the population using random digit dialing (n=259). Exposure to talcum powder products was determined through a structured in-person interview at home where subjects were asked about whether they had used talcum powder products on the perineum, sanitary pads and/or diaphragms. Data was recorded by type (perineum, sanitary pads, diaphragm or some combination thereof), and duration of use.

Population cases were more likely to be younger and more likely to be premenopausal than cases and hospital-based controls. Approximately 52% of cases reported talc use compared to 46% controls (RR 1.40, p=0.6). After adjusting for parity and oral contraceptive use, perineal use of talc was associated with an excess risk of ovarian cancer that was not statistically significant (RR 1.45, 95% CI: 0.812.60). Women who used talc an average of 1-20 times per month reported an excess risk in comparison to those who used it less frequently which was not statistically significant (RR 1.27, p=0.29). The risk among users of more than 20 times per month was 1.45 times greater than non-users, but the findings were not statistically significant (p=0.09). The overall increased risk in overall applications per month was 1.30 (p=0.19).

Although the data showed a *trend* of increasing risk with increasing frequency of perineal exposure, the trends were not statistically significant and there was no trend with increasing duration of exposure. The risk of ovarian cancer with talc use between one and nine years was 1.6 times the risk of those with a shorter duration (95% CI: 1.00-2.57; p=0.05), and the risk among those with more than 10 years of exposure was 1.11 higher than that of non-users (95% CI: 0.74-1.65; p=0.61).

The limitations of the study are the inability to interview cases and the choice of two controls. Some amount of non-differential misclassification of exposure may bias findings towards null. The dose-response analysis was limited by the inability to determine the combined effect of frequency and duration of exposure. The study reported a statistically increased risk of ovarian cancer with coffee consumption and a non-significant reduction in risk with smoking. Subsequent meta-analysis (111) or Mendelian randomization (112) studies have confirmed that there is no association between coffee consumption and ovarian cancer, whereas smoking has a heterogeneous relationship to ovarian cancer which varies by histologic subtypes. (112) The reports of such additional spurious associations suggest an element of measurement error in their database.

4. Harlow et al. 1989 (77) conducted a population-based case-control study which included 116 females 20-79 years old with *serous and mucinous borderline ovarian tumors* identified using International Classification of Disease (ICD)-9 codes from the cancer registries of three western urban counties in Washington State. An independent pathology review confirmed diagnosis for 73% of tumors with 94% agreement, so the additional 33 cases were included. A sample of 158 controls of white women was identified through random digit dialing. Women with bilateral oophorectomy were excluded from the analysis. Any exposure to talc including any perineal exposure to powder, method of use, type of powder use (cornstarch, baby powder, talc, deodorizing powder), and combinations of method and type was ascertained through in-person interviews.

The study reported no statistically significant increased risk of ovarian cancer with perineal use of dusting powders (RR 1.1, 95% CI: 0.7-2.1). When looking at unspecified talc adjusted for the same factors, the RR was 1.0 (95% CI: 0.4-2.4). However, women who reported any use of talc containing powder on sanitary napkins showed an excess risk which was not statistically significant due to limited statistical power (RR 2.2, 95% CI: 0.8-19.8). However, among the sample of women who used deodorizing powders alone or in combination with talc, the risk of ovarian cancer was RR 2.8 (95% CI: 1.1-11.7) attributed to the potential exposure to asbestos. The limitations to the study include the potential for selection bias since 30% of cases and controls did not participate, although their characteristics were like the included participants which may have limited any impact. It is also possible that these findings are limited to borderline rather than malignant ovarian cancers.

5. In 1989, Booth et al. (51) conducted a population-based case-control study of 280 cases of ovarian cancer in women under 65 years of age from 13 hospitals in London and two in

Oxford. 451 controls were selected from other hospitals as enough age-matched controls were unavailable. The study included both pre- and post-menopausal women. Ovarian cancer was determined through hospital diagnoses with pathological specimens being histologically classified. Serous tumors were most prevalent, though mucinous, endometrioid and clear cell carcinoma was included. Information regarding talc exposure was obtained through a questionnaire and frequency of talc use was reported as never, rarely, monthly, weekly, or daily talc use.

After adjusting for age and social class (based on occupation of the husband for married women, and their own occupation for women who were not married) talc users reporting use more than once a week had a higher risk compared to never users. (RR 2.0, 95 % CI: 1.3-3.4). Those who reported daily use also had a non-significantly higher risk (RR 1.3, 95% CI: 0.8-1.9). There was some amount of missing data (8% of cases and 4% of controls), and no consistent trend of increasing risk with increasing frequency of use. However, data was not available on the duration of talc exposure to conduct meaningful dose-response analysis.

6. In 1992, Harlow et al. (79) included 235 cases of white women between the ages of 18 and 76 who had been diagnosed with ovarian cancer at one of 10 hospitals in the Boston metropolitan area. Controls were randomly selected from the town books; annual publication lists and address lists within 2 years of the age of case as potential controls. Cancer was confirmed through an independent pathology review. Talc exposure was determined through in-person interviews. Talc exposure from infancy with diapering, or use on other parts of the body, was not included. Talc use in other parts of body was considered unexposed. Talc use was reported as any genital application, type of application (sanitary napkin/underwear, via partner or application to diaphragm, via dusting to perineum), number of applications per month, years of use, age at first use, years since last use, whether use was before or after 1960, brand of application, estimated total lifetime applications, estimated applications excluding use after hysterectomy or tubal ligation, and estimated applications excluding use after hysterectomy or tubal ligation and use during nonovulatory months. The Chi square test for change in linear trend based on change in deviance in models.

Most participants reported use of baby powder. Perineal talc use was associated with an increased risk for ovarian cancer (OR 1.5, 95% CI: 1.0-2.1) when adjusted for parity, education, marital status, religion, use of sanitary napkins, douching, age, and weight. Perineal use of talc via dusting powder to perineum was associated with a significantly increased risk of ovarian cancer OR 1.7 (95% CI: 1.1-2.7), whereas use by sanitary napkins, underwear, use via

diaphragms was not associated with a significantly increased risk. Adjusted risk was highest for endometrioid tumors (OR 2.8, 95% CI: 1.2-6.4) and borderline tumors. A greater proportion of women with endometrioid tumors reported more than 10,000 lifetime applications of talc during ovulatory cycles while having an intact genital tract compared to other histologic types (34 % vs 16%, respectively). The risk of cancer increased significantly with increased frequency of applications per month using a linear test trend as a continuous variable. The risk was highest among the women who applied talc once daily relative to non-users. Women who applied talc for more than 10 years were at 60% greater risk for ovarian cancer relative to non-users. An 80% excess risk was associated with an estimated exposure of more than 10,000 applications. The association between talc and ovarian cancer was greater than in talc products before 1960. Restricting the analysis to exposure during ovulatory months, women with intact genital tract and more than 10,000 applications during ovulatory cycles had a threefold increase in risk of ovarian cancer. Limitations included the high rates of non-response (n=31% cases and 19% of controls) and failure to adjust for family history of ovarian cancer and oral contraceptive use.

7. Chen et al. 1992 (78) evaluated 112 cases of ovarian cancer in Beijing China. The diagnosis was confirmed by laparotomy and pathological examination. Serous cancer accounted for 51% of cases, mucinous for 19%, and miscellaneous epithelial for 30% of cases. Two controls were matched for each case using random selection from the same street, office, or township. A comprehensive questionnaire was administered through face-to-face interviews and collected information about menstrual, obstetric, marital, medical, familial, and dietary histories with reference to events 3 years or more prior to diagnosis. A total of 224 controls were selected. Talc exposure was measured through a yes or no metric, for exposure occurring 3 or years prior to date of diagnosis or equivalent date in controls. Logistic regression was conducted to estimate relative risk.

The mean age of participants was 48.5 and 49 years among cases and controls respectively. After adjusting for education and parity, there was an excess risk of ovarian cancer associated with a history of long-term (>3 months) application of dusting powder to the lower abdomen and perineum (RR 3.9, 95% CI: 0.9-10.6) which was not statistically significant due to limited statistical power (n=7 cases and 5 controls reporting powder use). The limitations of the study include the small sample size, loss to follow up and death, the inability to fully ascertain all cases of ovarian cancer and the exclusion of controls with other health problems. Although the applicability of these findings from a Chinese population to a US population is limited, the

findings of an increased risk in different parts of the world provide evidence in support of an increased risk of ovarian cancer with dusting powder use.

8. In 1992 Rosenblatt et al. (80) conducted a hospital-based case-control study of the association between genital and respiratory talc exposure and the development of epithelial ovarian cancer at the Johns Hopkins Hospital. Among 140 diagnosed cases of epithelial ovarian cancer, approximately 108 were successfully interviewed. Seventy-seven pathologically-confirmed incident cases diagnosed within 6 months of admission were matched to age-race matched controls (n=46). Exposure was ascertained using a structured questionnaire administered at home and in the hospital. Conditional logistic regression was used to obtain strength of the association.

Although genital powder use was not associated with an increased risk of ovarian cancer, statistically significant increased risk was observed for exposure to talc on sanitary napkins (OR 4.79, 95% CI: 1.29-17.79) after adjusting for confounders such as obesity, socioeconomic status, religion, reproductive status and oral contraceptive use, with a smaller risk after genital bath exposure (RR 1.7, 95% CI: 0.7-3.9). An excess risk of borderline significance was seen for exposure of ≥ 37.4 years (RR 2.4, 95% CI: 1.0-5.8). The limitations include the small sample size, lack of data on frequency of talc use, and the limited generalizability of the findings from one hospital. The control group also reported a very high rate of talc use (90%) which may have limited the ability to detect any differences.

9. In 1993, Tzonou et al. (81) reported on a hospital-based study of 189 women under 75 years of age with histopathologically confirmed ovarian cancer in Athens, Greece compared with 200 hospital visitor controls in two hospitals. Control patients were those hospitalized in the same ward as cancer cases. Talc exposure was determined by asking participants to report talc use (over an extended period before the onset of illness for cases and for a comparable period among controls) among other characteristics, through interviews in the hospital. Talc use was reported as a yes/no metric. Estimates were adjusted for age, years of schooling, weight before onset of the disease, age at menarche, menopausal status and age at menopause, parity and age at first birth, tobacco smoking, coffee drinking, consumption of alcoholic beverages, hair dyeing and mutual (analgesics-tranquilizers/hypnotics) tranquilizers.

An exceedingly small number of cases (n=6) and controls (n=7) reported perineal use of a talc. There was no statistically significant increased risk of ovarian cancer associated with perineal application of talc (RR 1.05; 95% CI: 0.28 to 3.98). The limitations of the study include the low

proportion of talc exposure, which was ascertained in only approximately 3% of cases and controls.

10. In 1995, Purdie et al. (82) evaluated 824 histologically confirmed cases of epithelial ovarian cancer and 860 controls from gynecological oncology treatment centers in the three most populous Australian states. Controls were selected from electoral rolls in Australia where electoral participation is mandatory using a random procedure to match the age distribution of cases. Talc exposure was determined through face-to-face interviews conducted by trained interviewers using a standard questionnaire.

After adjusting for parity, there was a statistically significant increase risk of ovarian cancer reported with talc use on the abdomen or perineum (OR 1.27, 95% CI: 1.04-1.54). The limitations include high non-response rates in controls which may differ from the source population, but the age distribution of controls was like non-responders suggesting minimal response bias by age. There is also the possibility of bias in the selection of cases. They only adjusted for a limited set of confounders. Some misclassification of outcome is also possible given borderline and malignant cases were lumped together, although no differences were found when results were analyzed separately. Recall and interviewer bias was minimized by trained interviewers who administered standardized questionnaires.

11. In 1996 Shushan et al. (83) reported on findings from a study of two hundred living cases aged 36-64 years with history confirmed diagnosis of primary invasive or borderline invasive ovarian cancer in the Israel Cancer registry. There were 408 women from the same area selected by random digit dialing. Both were interviewed using standardized questionnaires.

A larger proportion of cases than controls reported using moderate to a large amount of talc (10.5% vs 5.6%; $P=0.04$) compared to never users or seldom users, a difference which was statistically significant. Limitations include high refusal rate for cases (30%), the low rates of talc exposure among controls and limited adjustment for confounders. (14)

12. In 1997, Cook et al. (84) reported on 329 white women between the ages of 20-79 diagnosed with epithelial and borderline ovarian cancer identified through the Cancer Surveillance System of Western Washington. Women were randomly selected as controls using random digit dialing from a larger pool of women for cancer studies. Genital powder exposure was collected through structured in person interviews and reported as any lifetime powder application, method of use (perineal dusting only, diaphragm only, sanitary napkin only, or genital deodorant spray only). Additional exposure information included cumulative

lifetime days of use for dusting and similar metrics for other methods of use. Genital powder use was also separated into use of talcum powder, baby powder, cornstarch, deodorizing powder, bath/body powder, or unspecified powder. Analysis was presented by age because adjustment for other confounders such as income, marital status, body mass index, oral contraceptive or parity did not change results.

Genital powder exposure was more common among cases (50.8%) than controls (39.3%). After adjusting for age, any use of genital powder was associated with a statistically significant increased risk of ovarian cancer (RR 1.5, 95% CI: 1.1-2.0) compared to non-use, although there was no clear pattern of increasing risk after increasing duration of use. After adjusting for age, exclusive use of perineal dusting was also associated with a statistically significant increased risk of ovarian cancer (RR 1.8, 95% CI: 1.2-2.9), whereas the risks for use via other routes of exposure (e.g. diaphragms, powder) were not significant. There was a statistically significant increased risk of serous tumors associated with any genital powder application (RR 1.7, 95% CI: 1.1-2.5), but not for the smaller number of mucinous or endometrioid tumors. Limitations include low participation rates (64.3% for cases, 68% for controls), the potential for recall bias, and confounding by family history of ovarian cancer in a study where more than 50% of controls were less than 45 years of age.

13. In 1997, Chang et al. (56) conducted a population-based case study of cases of borderline and invasive histologically confirmed ovarian cancer among participants aged 35 to 79 years from Canada. Talc exposure was determined through a questionnaire conducted during an in-home in person interview to detail medical and reproductive histories. Powder use was reported as talc, cornstarch, or a mixture. Information was provided for type of exposure, number of uses per month, years of use, years of use pre- and post-1970, and well as years of use before and after a tubal ligation or hysterectomy. They adjusted for age, years of oral contraceptive use, number of full-term pregnancies, duration of breastfeeding per pregnancy, tubal ligation, hysterectomy, and having a mother or sister with breast or ovarian cancer.

Talc exposure was reported in 44% of cases and 35.6% of controls. After adjusting for confounders there was a statistically significantly increased risk of ovarian cancer associated with any talc exposure via sanitary napkins, direct application to the perineum or both (OR 1.42, 95% CI: 1.08-1.86). The dose-response analysis showed a borderline-significant association was detected between duration of after-bath talc exposure and risk (OR 1.09, 95% CI: 0.98-1.21, per 10 years of exposure), without any significant association between frequency of exposure and

risk. Although risk was elevated for both invasive and borderline carcinomas, it was statistically significant only for invasive carcinoma. The limitations of the study include the potential for recall bias and the high rates of non-response (28.7% for cases and 35.5% for controls)

14. Green et al. 1997 (62) conducted a population based case-control study of 824 women aged 18-79 with histologically confirmed ovarian cancer compared to 824 controls. The methods and limitations were similar to the study by Purdie et al. (82). The prevalence of talc use was approximately 40% in the control use. Perineal talc was significantly associated with ovarian cancer (RR 1.3, 95% CI: 1.1-1.6), without any effect of longer duration of talc use. Compared to women who had neither used talc nor had sterilization, the risk was highest among talc users without surgery like the findings by Whittemore et al. (58). There is the potential for recall bias, and the quantity of talc use was unknown.

15. In 1998, Godard et al. (85) examined 170 French-Canadian women with a histologic diagnosis of ovarian cancer from 2 large Montreal teaching hospitals. Cancer diagnoses were histologically confirmed, and pathology reports were reviewed for tumor classification. 170 population-based controls were identified using modified random digit dialing to match the age distribution of cases. Talc exposure was obtained through a 57-item questionnaire. 70% of interviews were conducted in person in clinics and 30% were conducted via phone. Talc use was reported through an ever/never metric for perineal use.

Only 10.6% of cases and 4.7% of controls reported talc use. As a result, perineal talc use was associated with an increased risk for ovarian cancer which was not statistically significant (RR 2.49, 95% CI: 0.94-6.58; $P = .066$) because of limited statistical power. Similar patterns of excess risk which did not reach statistical significance were seen in both the comparisons for sporadic and familial cases and controls. The limitations of the study include a modest non-response rates among cases (13%) and controls (10.7%).

16. In 1999, Cramer et al. (57) evaluated 563 ovarian cases identified through tumor boards and statewide cancer registries in Massachusetts or New Hampshire in a population-based control study. Pathology reports were reviewed, and slides were sought in any case where there was a discrepancy between histologic description and final diagnosis. Controls were selected from the population using random digit dialing with a response rate of 72% among eligible controls. Talc exposure was obtained through questionnaires in which potential controls and cases were blinded. Specific hypothesis regarding talc use were not discussed. Exposure was assessed prior to 1 year before date of diagnosis or date of interview for

controls. Talc use in the genital or rectal area, on sanitary napkins and on underwear was considered as exposure whereas non-use and non-genital use was considered as unexposed. Exposure from condoms and diaphragms was not assessed.

Genital talc exposure was reported in 27% of cases and 18.2% of controls and the average duration of talc use exceeded more than 20 years in cases and controls. There was a statistically significantly increased relative risk of ovarian cancer with genital talc exposure 1.60 (95% CI: 1.18-2.15) after adjusting for age, study center, tubal ligation, BMI, parity, or primary relative with breast or ovarian cancer. The highest risk was seen among women whose age at first use was between 20 and 25 (RR 1.87, 95% CI: 1.03-3.39) those who have used talc for less than 20 years (RR 1.86, 95% CI: 1.16-3.00), those whose total applications is less than 3000 (1.84, 95% CI: 1.12-3.03), women who used talc when nulliparous (RR 2.80, 95% CI: 0.64-12.20), and those with serous invasive tumors (RR 1.70, 95% CI: 1.22-2.39). Only one case and 3 controls reported primarily using cornstarch, these numbers are likely accurate for talc use, despite the potential for including other kinds of powders. There was little evidence of effect by confounders such as age, oral contraceptive use and parity. Linear trends were significant in models that included women who were not exposed without any clear trend in duration or intensity of exposure in models that excluded women who were not exposed. Analysis of dose-response censured after closure of female tract or non-ovulatory cycles, and models showed a trend this was statistically significant only after inclusion of non-genitally exposed categories ($P_{\text{trend}}=0.022$).

Potential limitations include the potential for recall bias, although this is likely to be minimal and more likely to occur for short term exposures rather than long term exposures. The evidence for substantial degree of recall bias is refuted by the findings that there is no evidence of higher proportion of perineal talc exposure reported among cases in more recent compared to older studies to suggest stimulated reporting, no evidence of significant excess of non-genital talc exposure among cases, and the excess is limited to invasive serous carcinoma,(84) rather than all types of ovarian cancer or endometrial carcinoma.

17. In 1999, Wong et al. (86) reported-on a hospital-based study of 499 patients with epithelial ovarian cancer and 775 age-matched controls with non-gynecologic cancer diagnoses. Cancer diagnoses were confirmed in the cancer registry. Exposure was ascertained through self-administered questionnaire in which approximately 15% of participants did not respond to questions about talc use or its frequency.

Talc use was reported by 47.8% of cases and 44.9% of controls. Genital talc use was reported by 34% of cases and 32.2% of cases. The mean duration of talc use was 22 years in controls and 21 years in the study population. After adjusting for age at diagnosis, parity, oral contraceptive use, smoking history, family history of epithelial ovarian cancer, age at menarche, menopausal status, income, education, geographic location, history of tubal ligation, and previous hysterectomy there was no statistically significant increased risk of ovarian cancer among ever users of talc (OR 0.92, 95% CI: 0.24-3.62). There was no significant association between duration of use and development of ovarian cancer even after prolonged exposure of more than 20 years. However, when evaluating genital talc use via histologic subtypes of cancer, all ORs were above 1 (except for undifferentiated carcinoma) but were not statistically significant. Similarly, those who had no history of genital tract interruption the ORs were elevated but not statistically significant. However, the study was limited by the non-response rate and the choice of a controls with malignancies. (113). Additionally, data on exposure were reported on a self-administered questionnaire rather than administered by interviewers. The results could not rule out the effect of talc exposure via condom use and data was not available on the frequency of talc use.

18. Ness et al. (87) conducted a population-based control study. Cases (20-69) years of age with recent diagnosis of ovarian cancer (n=) were compared with community-based controls 65 years or younger through random digit dialing. Controls were age-matched as well as matched by last 3 digits of the phone number. Approximately 72% of controls were selected. As a part of detailed interviews with calendars women were asked about their reproductive history including talc use. The question was, "As an adult and prior to [reference date] did you ever use talc, baby or deodorizing powder, at least once per month for 6 or more months on your: 1) feet, arms, or breasts, but not the genital or rectal areas? 2) genital or rectal area? 3) on your sanitary napkins? 4) on your underwear? 5) on your diaphragm or cervical cap?" They were then asked whether they had a male sexual partner(s) for more than a year who regularly used such products on his genital area or underwear. The duration of use of talc for each of these modes of use was also queried. The estimates were analyzed using conditional logistic regression after adjusting for age and gravidity (each as continuous variables), race (white/black/other), history of ovarian cancer in any first degree relative (yes/no), oral contraceptive use (yes/no), tubal ligation (yes/no), hysterectomy (yes/no), and breast-feeding (yes/no).

Talc use was reported in 53.2 % of controls. Compared to never talc use, talc use on all parts of the body (OR 1.4, 95% CI 1.1-1.6), genital/rectal (OR 1.5, 95% CI 1.1-2.0) on sanitary napkins

OR 1.6, 95% CI 0 1.1- 2.3) and underwear OR 1.7, 95% CI. 1.2-2.4) was associated with a statistically significantly increased risk of ovarian cancer after adjusting for confounders. However, talc use on diaphragms (OR 0.6, 95% CI 0.3-1.2) or by male partner (OR 1.0, 95% CI 0.7 to 1.4) was associated with an increased risk which was not statistically significant. Although duration of talc use did not show a pattern of increased risk with increased risk with duration of exposure, the OR for each categories (> 1 year, 1-4 years, 5- 9 years and > 10 years) were elevated and were statistically significant for 1-4 years. Tubal ligation and hysterectomy decreased ovarian cancer risk. Limitations to the study include the low response rates among cases and controls due to exclusion of prevalent ovarian cancer. Recall bias while always a concern was less likely to be a concern given that risk factors overall did not increase risk but were limited to those linked to inflammation.

19. In 2004, Mills et al. (59) conducted a population-based case-control study of 256 women with histologically confirmed incident epithelial ovarian cancer from 22 counties in Central California. They also selected 1122 controls who were residents of that area who had one intact ovary and no history of ovarian cancer. Talc exposure was determined through phone interviews conducted by trained interviewers. Talcum powder use in the genital area was reported as an ever/never metric, as well as by frequency, duration, and cumulative use. The final parsimonious model adjusted for age, race, duration of oral contraceptive use and breast feeding.

The rates of talc use in controls was 37.1 % and higher among white non-Hispanics. Controls were more likely to have been outside the US. Most of talc exposed cases and controls were non-white. There was a statistically significant risk of ovarian cancer associated with genital talcum powder use (OR 1.37, 95% CI: 1.02-1.85) after adjusting or age, race, duration of oral contraceptive use, and breast feeding. Although increasing frequency of use showed a 74% increased risk among women who used talcum powder more than 4-7 times per week ($P_{\text{trend}}=0.015$), this risk was not monotonic because risk the decreased between second (rarely to several times per month) and third categories (1 to 3 times per week). Duration of use also showed increasing risk and peaking between 4-12 years of use and declining thereafter ($P_{\text{trend}}=0.045$). Cumulative exposure increased in the second and third quartiles of exposure but declined among the highest quartile of users ($P_{\text{trend}}=0.051$). The risk was highest among those who had stopped using talcum powder in the last 1-2 years compared to those in the more distant past. The risks were primarily elevated for serous and mucinous tumors. Risk was higher among those reporting use after 1975 which may be related to the recency of use, and those after age 20. Limitations of the study include a low response fraction which was only

40% for eligible cases and 57% for eligible cases, and high rates of non-participation- 34.2% among cases and 29.3% among controls. The dose-response analysis did not exclude exposure during non-ovulatory periods or after gynecologic surgery which may have diluted the relative risk estimates. However, strengths include the ability to rule out prevalent cases by examining incident cases alone.

20. In 2004, Langseth et al. (88) conducted a case-control study of pulp and paper workers from different mills in Norway. Only one of these mills reported use of fibrous talc. They included 46 cases and reviewed histological records for each case. Most of the cases were invasive tumors. Four controls free of ovarian cancer and having intact ovaries were matched by birth year +/- 2 years and were drawn by incidence density sampling. A total 179 controls were available for analysis. Talc exposure was determined through personal interviews which took place in mill offices, at home, at a medical institution, or by phone. Talc exposure was reported environmentally and as use by personal hygiene (diapers, sanitary napkins, non-genital area or husbands use in genital area)

Talc exposure was reported among 50% of cases and 48% of controls. After adjusting for number of children, breastfeeding, age at birth of first and last child, age at menarche, age at menopause, smoking, and family history the use of talc use by personal hygiene was associated with an excess risk of ovarian cancer OR 1.15 (95% CI: 0.41-3.21), which was not statistically significant. The study has significant limitations. The sample size of the study was low with limited statistical power to detect a two-fold increased risk with a probability of only 53 % and response rate for interviews were low -76.1% for cases and 65.7% for controls. The inclusions of non-genital or husband's use in genital area among the exposed category diluted the estimates of relative risk for ovarian cancer associated with talc exposure. More information on cases was collected from relatives than controls because 71.5 of cases were deceased compared to only 28.6% of controls. The rates of missing data on talc use was high, because it was obtained from proxy respondents introducing an element of uncertainty in the estimates for relative risk of ovarian cancer associated with talc use.

21. In 2008, Merritt et al. (89) reported on a population-based study of 1,576 women with epithelial ovarian cancer as part of the Australian Ovarian Cancer Study. Pathology reports and diagnostic slides were reviewed for a sample of 87 women with 97% agreement with original abstracted data. Cases were confirmed by histopathology. 1509 controls were selected from the electoral rolls and were matched by age and residence. Talc exposure was identified through a comprehensive health and lifestyle questionnaire. Talc use was reported as

ever/never for perineal use (powder or talc in the genital area or on underwear or on sanitary napkins), years of use prior to surgery, use post-surgery, and use stratified by age at diagnosis. All analyses were conducted for talc use while the reproductive tract was patent and exposure occurring 12 months prior to the diagnosis of cases and similar period in controls was excluded.

The rate of talc use was 43% among controls and 46% among cases. When adjusted for age, education, parity, and oral contraceptive use of talc in the perineal region among women with patent tubes there was a statistically increased risk of ovarian cancer (OR 1.17, 95% CI: 1.01-1.36) with the highest risk reported for serous tumors (OR 1.21, 95% CI: 1.03-1.44). The tests for trends for duration of use were of borderline statistical significance for all cancers and serous subgroup ($P_{\text{trend}} = 0.02$ for both). No significant associations between number of years used pre- or post-surgery and significantly elevated risks for overall cancer and serous ovarian cancer were seen in women both above 70 years of age, and below 50 years of age suggesting that timing of talc exposure (before or after 1976) did not affect results. There was no association between PID and the risk of ovarian cancer or the protective effect of NSAIDs. Limitations include low response rates and the lack of data on the frequency of exposure.

22. In 2008 Gates et al. (55) conducted a nested case-control study as part of the New England Case-Control study and the Nurses' Health Study (NHS). Further cohort analysis from the NHS are presented in the section on cohort studies below. **Section IX.III.I** Ovarian cancer diagnoses were confirmed by the researchers. They included 1385 cases and 1802 controls. 76.7 % of cases were incident with respect to the timing of DNA collection in the NHS. Exposure was assessed through a questionnaire that asked questions related to use of talcum powder. The NECC questionnaires included questions about regular use of talcum, baby or deodorizing powder as an adult. Specific questions asked about type of use (as a dusting powder to the genital area, sanitary napkins, underwear, or non-genital areas), frequency of use, age at first use, number of years used, and brand of powder used. The 1982 NHS questionnaire requested information on whether the participant had ever commonly applied talcum, baby, or deodorizing powder to the perineal area (no, <once/week, 1-6 times/week, or daily) or to sanitary napkins (yes/no). The study defined regular genital talc use as application of powder to the genital/perineal region at least once per week. We also created a categorical variable for frequency of talc use, using the categories from the NHS questionnaire.

Most of the participants were white. Regular genital talc was reported among 56 cases and 44 controls, and daily genital talc use reported among 35 cases and 25 controls, respectively. There was a statistically significant increased risk of total epithelial ovarian cancer (RR 1.36, 95% CI: 1.14-1.63; $P < 0.001$) and of serous invasive subtype (RR 1.60, 95% CI: 1.26-2.02) associated with regular use of talc when adjusted for age, study center, duration of oral contraceptive use, parity, tubal ligation, BMI, and duration of hormone use. The New England Case-control study had a higher RR associated with genital talc use than the Nurses' Health which had a smaller sample size. There was a statistically significant trend between increasing frequency of talc use and risk of both total and serous invasive ovarian cancer in the pooled analyses ($P_{trend} < 0.001$ for both total and serous invasive ovarian cancer). The association between talc and ovarian cancer was stronger among women with the glutathione S-transferase M1 (GSTM1) null genotype ($P_{interaction} = 0.03$), particularly in combination with the GSTM1 present genotype alone ($P_{interaction} = 0.03$) in two independent study populations. The strengths of the study include robust findings from two independent study populations. Although talc exposure was only measured in the 1982 NHS questionnaire when participants were between 36 to 61 years of age, the number of users who began talc use after this is likely small as shown by the fact that more than 95% of controls with regular talc in the NECC reported talc use before age 35. The consistent findings from the prospective NHS study and the NECC may have minimized any potential biases due to the case-control design. Since talc exposure was defined as at least once per week, such habitual exposure is less susceptible to recall bias than sporadic exposure.

23. In 2009, Wu et al. (48) conducted a population-based study of 609 cases of women and 688 controls between the ages of 18 and 74 residing in Los Angeles with histologically confirmed incident invasive or borderline ovarian cancers. Cases were identified through the Surveillance, Epidemiology and End Results (SEER) Program. Cases were matched to neighborhood controls on age and race/ethnicity. Controls were women with one intact ovary with no history of cancer except non-melanomatous skin cancer matched on age and race/ethnicity. Talc exposure was determined through a detailed interview by the same person which included a comprehensive questionnaire that used a reference date of 2 years before the date of diagnosis (or date of interview for controls). Talc use was reported as a yes or no metric (including yes or no for perineal area use), frequency and duration, total times of use, and total times of use before and after 1975. Few users of talc (24) had tubal ligation or hysterectomy prior to talc use and were considered as non-users.

The cases were primarily white woman but also included 41 African American women, 136 Hispanic women, and 51 Asian women. After adjusting for race, age, education, tubal ligation, family history, menopausal status, use of oral contraceptives, and parity perineal use of talc was associated with a statistically significantly increased risk of ovarian cancer (RR 1.53, 95% CI: 1.13-2.09). Elevated risks were also noted among those who used it on sanitary napkins, underwear and on diaphragms but not significant due to limited statistical power. There was a clear trend of increasing risk with increasing frequency of use among users who had used it for more than 20 years. The risk of ovarian cancer increased significantly with increasing frequency and duration of talc use; compared to never users, risk was highest among long duration (20 years), frequent (at least daily) talc users (RR 2.08, 95% CI: 1.34-3.23). The risk increased significantly with lifetime total times of talc use, but the association was limited to those who started talc use before 1975 ($P_{\text{trend}} < 0.001$). The association between talc use and ovarian cancer was strongest for serous ovarian cancer. Risk of ovarian cancer increased with the diagnosis of endometriosis. Limitations include the rates of non-response among cases and controls, and classification of talc use among a small number of users with prior hysterectomy as being non-exposed. However, the effect of this misclassification is likely to be minimal.

24. In 2009, Moorman et al. (90) reported on a study involving 1,114 cases with histopathologically confirmed tumors as part of the North Carolina Ovarian Cancer Study. newly diagnosed cases were identified through the North Carolina Central Cancer Registry. All cases were confirmed by histopathologic review. Controls were frequency matched to cases and recruited from the same geographic region using random digit dialing. The controls could not have had a bilateral oophorectomy. Talc exposure was reported through in-person interviews conducted by nurses with life calendar and pictures of contraceptives, menopausal hormones, and other medications were used to help aid recall. Talc use was reported as a yes/no metric.

The analysis focused on invasive ovarian cancer which comprised of 78% of cancers for African-Americans and 79% for whites. Among controls, talc use was reported by 23.9% among whites and 31.2% of African-Americans. After adjusting for age there was an excess risk reported for both whites (OR 1.04, 95% CI: 0.82-1.33) and African Americans (RR 1.19, 95 % CI: 0.68-2.09) which were not statistically significant. Limitations include the high rates of non-response (33.5% among cases, 39.1% among controls), with higher non-response rates among African-Americans. There was a large proportion of missing data on talc use for cases and controls; 23.6% and 38.5% among whites, respectively, and 25.2% and 29.1% among African Americans, respectively, resulting in misclassification of exposure. The authors did not

clarify the route of talc exposure and may have classified non-genital talc exposure to the talc exposed group which may have diluted the RR. Additionally, the study did not adjust for confounders to address the timing, frequency and duration of talc exposure, or whether talc exposure occurred before or after tubal ligation or hysterectomy.

25. In 2011, Rosenblatt et al. (60) reported on a study of women between the ages of 35 and 74 from 13 counties in Washington state. Cases of borderline or invasive epithelial ovarian cancer were identified through the Cancer Surveillance System. Controls were selected from the population using digit dialing. Talc exposure was determined through in person interviews which included a reference period of unstated length before diagnosis or interview. For powder use on sanitary napkins and deodorant spray, the total number of months of use was recorded. For powder use on perineum after bathing, only intervals of at least one year when powder was usually used was recorded. Talc use was reported as genital powder exposure by type of use, duration of use, lifetime applications, age at first use, age at last use, calendar year of first use, time since first use, and time since last use.

Perineal use of powder after bathing was reported in 12% of controls. Reporting of cornstarch was uncommon in the study. After adjusting for age, calendar year of diagnosis, county of residence, number of full term live births, and duration of hormonal contraception the perineal use of powder after bathing was associated with an increased ovarian cancer risk (OR 1.27, 95% CI: 0.97-1.66) which was not statistically significant, but a statistically significant increased risk was seen among women with borderline tumors (OR 1.55, 95% CI: 1.02-2.37), similar to that reported by Harlow et al. (79) There were no differences in risk among various types of powder use, as the risk among those who reported use of talcum powder was RR 1.38 (95% CI: 0.77-2.47). There was no difference in exposure outcome relationship between talc use before and after 1980. There was no pattern of risk associated with perineal dusting powder and the increasing extent of use as defined by years in which it was used or number of lifetime applications. The participation rate of cases and controls was modest at 76.8% and 69%. Some misclassification of exposure is possible as participants may be unable to provide accurate information on whether the specific powder contained talc. However, the presence of talc, rather than a specific dose, is the primary determinant of exposure in which case genital powder use is a reasonable proxy for talc exposure.

26. Kurta et al. 2012 (91) reported on a case-control study from the Hormones and Ovarian Cancer Project using 902 ovarian cancer cases and 1802 controls. Participants were diagnosed with histologically confirmed ovarian, fallopian tube or peritoneal cancers. They were at least

9 years old and within 9 months of diagnosis. Controls were frequency matched by age and area code to cases at 2:1 ratio. Trained interviewers collected data via questionnaires. Perineal talc use was defined as ever using dusting powder or deodorizing spray on the genital or rectal areas, on sanitary napkins or underwear or on diaphragms or cervical caps.

Perineal talc use was reported among 20.9% of controls and 27.6% of cases. After adjusting for age, race, education perineal talc was associated with a statistically significantly increased risk of ovarian cancer OR 1.40 (95% CI: 1.16-1.69). Limitations include the population which was women seeking treatment for infertility which may limit generalizability.

27. In 2015, Wu et al. (53) evaluated 1,701 newly diagnosed histologically confirmed cases of invasive epithelial ovarian cancer cases of ovarian cancer among participants aged 18 and 74 in Los Angeles county identified through the USC Cancer Surveillance Program. Cases were primarily white but 308 Hispanic Women and 128 African American women were also included. Controls were selected from residents of LA county and were matched to cases on race/ethnicity and year of birth. Talc exposure was ascertained through in person interviews conducted using standardized questionnaires with a reference date of 12 months prior to diagnosis (or date of interview for controls). Genital talc was reported as no use or less than one year of use, yes use, and use per 5 years of talc.

Among controls the prevalence of talc use ≥ 1 year was 30.4% in non-Hispanic whites, 28.9% in Hispanics and 44.1%. After adjusting for several confounders including race, age group, menopausal status, age at menarche, hormone therapy use, BMI, income, education, life births, tubal ligation, oral contraception, endometriosis, and first-degree family history of ovarian cancer there was a statistically significant increased risk of ovarian cancer associated with genital talc use across all races (OR 1.46, 95% CI: 1.27-1.69), non-Hispanic whites (OR 1.41, 95% CI: 1.21-1.67), and Hispanics (OR 1.77, 95% CI: 1.20-2.62) compared to non-use or less than 1 year of use. The risk was elevated but not statistically significant among African-Americans (OR 1.56, 95% CI: 0.80-3.04) because of low statistical power for the subgroup. Every 5-year use of talc was associated with a statistically significant risk of cancer among the overall population (OR 1.14, 95% CI: 1.09-1.20) and non-Hispanic whites and Hispanics, whereas the excess risk among African-Americans was not statistically significant. The non-response rate for cases (36.8%) and controls was modest. There was no evidence of systematic bias in the ascertainment of exposure as prevalence of various conditions such as endometriosis was consistent with other prior studies.

28. Schildkraut et al. 2016 (52) evaluated African women aged 20-79 years of as part of the African-American Cancer Epidemiology Study. They selected 584 cases of newly diagnosed epithelial ovarian cancer and matched 745 controls to cases on age and region of residence using random digit dialing. Talc exposure was determined through a telephonic interview which included information on baby powder use. Participants were considered regular users if they reported use at least more than 1 time per month for 6 months. Regular users were asked about genital or nongenital use, frequency, duration, and lifetime applications (number of applications per month by number of months used). Since there was a small number of users who reported only genital powder use, they were grouped with genital and non-genital users to "any" genital use. Exposure was examined by frequency of use (less than 30 times per month, daily), duration of use (<20 years, ≥ 20 years) and lifetime number of applications (<3600, ≥ 3600). They also assessed for reporting biases and the effect of stimulant reporting because of the filing of class action lawsuits.

The median duration of body powder use in both cases and controls was 20 years and body powder use were reported among 52.9% of controls. After adjusting for age at diagnosis/interview, study site, education, tubal ligation, parity, BMI, duration of oral contraceptive use, first degree family history of breast or ovarian cancer, and interview year there was a statistically significant increased risk of ovarian cancer with any genital powder use (OR 1.44, 95% CI: 1.11 to 1.86). There was a stronger association for ≥ 20 years of any genital powder exposure compared with <20 years of exposure and the test for trend was significant ($P_{\text{trend}} = 0.002$). Similarly, the ORs for association between daily any genital powder users and EOC were larger in magnitude than never users, and the test for trend was significant ($P_{\text{trend}} < 0.01$) There was also evidence of dose-response for any genital powder for the cumulative number of life-time applications with a higher risk among those with lifetime applications ≥ 3600 ; the test for trend was significant ($P_{\text{trend}} < 0.01$). A stronger association was reported among post-menopausal women who used HRT compared to non-users. There was also an increase associated with non-genital powder exposure (OR 1.31, 95% CI: 0.95-1.79) which was not statistically significant. There was no evidence of statistically significant increased risk with "only" non-genital users and serous ovarian cancer but was statistically significant increased for non-serous ovarian cancer.

Limitations include the assessment of data by self-report. The underreporting of powder use in the abdomen which may reach the genital area may have resulted in a spuriously increased risk among "only" non-genital users or such an effect may be specific to African-American users. Although there was some evidence that there was more reporting of genital powder use

after class action lawsuits in 2014, recall bias alone is insufficient to explain these findings because there was a statistically significantly increased risk both before and after 2014.

29. In 2016, Cramer et al. (54) included 2,041 ovarian cancer cases from Eastern Massachusetts and New Hampshire as part of the Nurses' Health Study and the Ovarian Cancer Association Consortium. Pathology reports were reviewed to confirm diagnosis. The population was primarily white with less than 30 participants who were African Americans, Hispanics, Asians, or other race/ethnicities. Controls were identified through random digit dialing, driver license and town-resident lists and were frequency matched to cases by age and residence. Talc exposure was determined through in person interviews with a reference point 1 year prior to diagnosis or date of interview (for controls). Subjects were asked whether they regularly or monthly applied powder to the genital or rectal area, or on sanitary napkins, tampons or on other non-genital areas. Talc exposure was reported as personal use, potential exposure with no personal use (diaphragm, condoms, partner use), any genital powder use, type of genital powder use (cornstarch, baby powder, other), age of first use, time since exposure ended, frequency of use, years used, months per year of use, and total applications. Lifetime application was assessed by multiplying frequency of application per month with months of exposure. This was divided by 360 to yield talc years which were partitioned into separate quartiles for dose-response analysis. The study adjusted for a variety of confounders, with adjustments for age, study center, study phase, race, BMI, height, weight, parity, breastfeeding, oral contraceptive use, IUD use, ovulatory cycles, endometriosis or painful periods, Jewish ethnicity, family history, personal history of breast cancer, menopausal status, current smoking, ever smoked, asthma, alcohol consumption, and acetaminophen, aspirin or ibuprofen use.

Any genital powder use was reported in 26% of controls. The women who exclusively used cornstarch were considered unexposed. Most talc users began talc exposure around the age of 20. Overall, genital powder use was associated with a statistically significant increased risk of ovarian cancer (OR 1.33, 95% CI: 1.16-1.52) adjusted for age, study center and phase. BMI, smoking and alcohol use did not alter the association by more than 10% suggesting a lack of confounding. Most women reported using Johnson's Baby Powder and Shower to Shower with a trend for increasing risk by talc years. The trend for frequency of use was significant, but the trend for duration of use was flat. The talc ovarian cancer association was largely confined to premenopausal women and post-menopausal women with hormonal therapy. Sensitivity analysis indicated that the risk of misclassification of exposure in controls would have to very high (18%) to nullify the increased risk shown in the study. No data is available

on the extent of misclassification of talc exposure. Although some amount of misclassification is possible in retrospective studies, such a large amount is unlikely as shown by estimates from other analogous exposure-outcome association such as alcohol and breast cancer in the Nurses' Health Study. (114).

IX.III Cohort Studies. I will discuss the cohort studies below. However, it is important to emphasize that none of the cohort studies discussed below were designed to evaluate the association between talc use and ovarian cancer at the time of cohort assembly. In other words, evaluating the association between talc use and ovarian cancer was not the a-priori primary objective of the study but evaluated as a subsequent hypothesis, with its inherent limitations. For example, the NHS cohort was assembled in 1976 but data on talc use was not collected until 1982. (14). In contrast the primary objective of most case-control studies noted above was to evaluate the risk of ovarian cancer associated with talc use.

IX.III.I. In 2000, Gertig et al. (14) reported on an analysis from the U.S. Nurses' Health Study. 121,700 registered nurses were enrolled in the study; 78,630 were included in the cohort study; and 307 cases of ovarian cancer in 11 states. Notably, the Nurses' Health Study was a broad-based study of women's health. Ovarian cancer information was obtained through a questionnaire mailed to married female nurses 30-55 years which were updated every 2 years. Talc exposure was obtained from a survey question which asked "Have you ever commonly used talcum, baby powder, or deodorizing powder a) to apply to perineal (private) area? No, daily, one to six times per week, or less than once per week or b) to apply on sanitary napkins? No, Yes." Frequency was thus both reported as an "ever, never" metric as well as applications per week but duration of use was not recorded. Information gathered by a questionnaire requesting information on perineal talc use was ascertained only in 1982, and never updated during follow-up. Medical records were obtained for women reporting diagnoses of ovarian cancer or those participants who died (mortality follow up was 98% complete). Histologic subtypes of ovarian cancer were determined from pathology reports and classified as serous (cystadenocarcinoma and papillary adenocarcinoma), mucinous (mucinous papillary adenocarcinoma and adenocarcinoma), endometrioid (clear cell and mixed epithelial), and borderline. Cases of epithelial ovarian cancer (ICD 183.0) confirmed by medical record review or death certificate between 1982-1996 were included in the analyses. Participants who did not respond to the 1982 question on talc use were excluded, as were participants with cancer other than non-melanomatous skin cancer, bilateral oophorectomy, ovarian removal and those with radiation therapy. They included 307 cases of ovarian cancer among 984,212 person-years of follow up (0.03% PYs or 31.2/100,000 PYs). Information on covariates was obtained from the

biennial questionnaire and included oral contraceptive use, tubal ligation, parity, family history (not asked until 1992), smoking and BMI. Age adjusted incidence rates were calculated after adjusting for covariates above, as well as age at menarche, duration of breast feeding, age at menopause. 40.4% (n=31789) reported ever talc use of which 14.5% were ever daily talc users. Women who were talc users and did not have a tubal ligation had no increased risk of epithelial ovarian cancer with talc use- no evidence of interaction. There was an increased risk for histologic subtypes of ovarian cancer with talc use which was not statistically significant (RR 1.09, 95 % CI: 0.86-1.37) after adjusting for age, duration of oral contraceptive use, body mass index, tubal libation history, smoking status, and postmenopausal hormone use. While daily talc use on perineum (RR 1.12, 95% CI: 0.82-1.55) or use less than once/week (RR 1.14, 95% CI: 0.81-1.59) was associated with an excess risk which was not statistically significant, the point estimates for talc use on perineum 1-6 times/week (RR 0.99, 95% CI: 0.67-1.46) and on sanitary napkins (yes/no) (RR 0.89, 95% CI: 0.61-1.28) were lower than 1, and these confidence intervals may not rule out an increased risk. Importantly, there was a statistically significant increased risk for ever talc use for serous invasive cancers (RR 1.40; 95% CI: 1.02–1.91). For women who reported ever daily use, the RR for serous invasive cancer was 1.49 (95% CI: 0.98-2.26). The RRs for ever-users of less than 1 time/week and of 1-6 times/week were 1.29 (95% CI: 0.81-2.04) and 1.49 (95% CI: 0.77-2.11), respectively ($P_{\text{trend}}=0.05$). Women above age 45 in 1982 who reported ever talc use had a higher risk of serous invasive cancer (RR 1.51, 95% CI: 1.07-2.15).

The strengths of the study include the prospective design which reduces the risk of recall bias. The relatively short follow up period may have been unable to determine ovarian cancer. The NHS cohort was not primarily designed to evaluate the association between talc and ovarian cancer. Further, as discussed above, determining “never” use based only on a one-time question near the start of the study (14 years prior to terminating the study in 1996) introduces unidirectional “behavioral change” bias, likely misclassifying some “ever” users who used talc during the study as “never” users; and biased the findings towards the null. The exclusion of prevalent cases of ovarian cancer allows one to determine the influence of exposure on incident ovarian cancer, it also introduces an element of selection bias. Of the initial cohort of 121,700 volunteers, only 78,630 women were enrolled. It is not known whether any (or how many) of the 43,000 excluded women had ovarian cancer, nor whether any (or how many) of any such ovarian cancer volunteers excluded were talc users. They could not determine the intensity of exposure as they had no information on duration of talc exposure, or number of life-time applications or the age at which talc was initiated. The study was not a “new user design” and

used prevalent rather than incident users, and is susceptible to “prevalent user biases.” (15) Prevalent users are “survivors” of the early period of talc use, which can introduce substantial bias if risk varies with time. This may bias findings towards the null due to the “depletion of susceptibles.” They had no data on the intensity of exposure because there was no data on the duration of talc use, or number of life-time applications. The analysis on tubal ligation could not determine whether talc use was initiated after tubal ligation. Any such misclassification of exposure is also likely to be non-differential and bias towards the null.

As a continuation of the Nurses’ Health Study, in 2010, Gates et al. reported on 924 cases of the ovarian cancer as part of Nurses’ Health Study with ovarian cancer confirmed by a gynecologic pathologist review of medical records. (92). They evaluated the findings between risk factors for ovarian cancer and histologic subtypes of ovarian cancer and information on talc exposure was collected through biennial questionnaires. Talc use was reported as either greater than or less than once a week. After adjusting for body mass index activity, past smoking, current smoking, family history of breast or ovarian cancer, age, parity, parous status, breastfeeding, oral contraceptive use, tubal ligation, hysterectomy, age at natural menopause, and estrogen use they reported a non-significantly increased risk of all epithelial ovarian cancer (RR 1.06, 95% CI: 0.89 to 1.28) with genital talc use > once/week compared to < once a week. Although the estimates for the RR were higher for mucinous subtype (RR 1.50, 95% CI 0.84-2.66), there was no evidence of interaction across the subtypes ($P_{\text{heterogeneity}}=0.55$) in this analysis. The strengths and weaknesses of this study are largely like the Gertig analysis of the NHS cohort above, with the additional limitations in the low number of cases (only 29 cases of epithelial ovarian cancer among genital talc users in 108, 870 women).

IX.III.II. In Houghton et al. (17) reported on finding from the Women’s Health Initiative Observational Study (50-79 years at enrollment and post-menopausal). Among the 93,676 volunteers, only 61,576 participants were in the study cohort, and 429 adjudicated incident ovarian cancer (0.7%). Participants completed annual mailed questionnaires. Participants with bilateral oophorectomy, unknown number of ovaries, history of cancer (except non-melanomatous skin cancers were excluded). Perineal powder exposure (rather than specifically talc use) was obtained via self-report at baseline, and not updated during follow-up. Participants were asked whether powder had been used on genital areas, diaphragm or sanitary napkin or pad. If the participant answered affirmatively, there were further questions regarding duration of use where participants indicate use for less than 1 year, 1-4 years, 5-9 years, 10-19 years, or 20

or more years, but frequency of use was not recorded. The area of use was assessed dichotomously, and duration of use was categorized as never, 9 years or less and 10 years or more for analysis. Analysis was conducted for ever perineal powder use (ever use for any of the three categories) and duration for any powder use (maximum duration of any single area of application). Cancer cases were self-reported and confirmed through medical records including pathology reports. Data on covariates for age, race, education, alcohol, metabolic equivalents, smoking, recreational physical activity, oral contraceptive use duration, hormone replacement therapy, family history, age at last birth, BMI, self-reported family history of ovarian cancer were evaluated. They also evaluated reproductive factors such as age at menarche, age at menopause, age at first birth, age at last birth, parity, breastfeeding duration, history of tubal ligation, hysterectomy, irregular cycles, endometriosis. The covariates were obtained at baseline and not updated. The proportional hazards analysis was conducted to examine the risk of ovarian cancer and proportional hazards was tested using Schoenfeld residuals. Participants with other cancers were still considered at risk for ovarian cancer. Covariates were selected for the multivariate analyses, if they had P-values of less than 0.1 during the backward regression until they had a parsimonious model. Additional variables from the literature were also included although they were not statistically significant. They analyzed ever perineal use, perineal use by application area, duration of use and combinations. Test for linear trend was evaluated across duration categories by modeling categories as continuous variables.

The average age of participants was 63.3 years at baseline with 12.4 years of mean follow-up. Most participants were white and were obese. Approximately 52.6% of the population reported ever use of perineal powder. Ever users were more likely to be heavier, used oral contraceptives and/or diaphragms. Perineal use of powder was associated with a 12% excess risk which was not statistically significant ($HR_{adj}, 1.12$, 95% CI: 0.92- 1.36) whereas point estimates for use on sanitary napkins and diaphragms were lower than 1 but could not rule out an excess risk. Duration of perineal, sanitary napkin or diaphragms were not associated with ovarian cancer. Strengths include the prospective design which reduces the risk of recall bias. Limitations includes the lack of information on whether the perineal powder use constituted talc use, and the inability to measure the frequency of exposure. It is possible that the analysis by duration included infrequent long duration users with short term frequent users which may result in bias towards null. Since exposure was not updated during follow-up, some never users who became ever users were misclassified as never users resulting in a bias towards the null. The exclusion of prevalent cases of ovarian cancer introduced an element of selection bias. Of the initial cohort

of 93,676 volunteers, only 61,576 women were enrolled; 10,622 volunteers who had already developed cancer at baseline were excluded. It is not known whether any (or how many) of these excluded women had ovarian cancer, nor whether any (or how many) were talc users. The inclusion of “prevalent users” rather than “incident users,” leads to depletion of susceptibles and may bias findings towards the null. Data on covariates was not available after baseline resulting in the potential inclusion of participants (e.g., oophorectomy) not at risk of ovarian cancer and resulting bias towards the null. The generalizability of the study findings to younger pre-menopausal women is also unknown as the study findings are limited to older post-menopausal women (average age =63.3 years).

IX.III.III. In 2016 Gonzales et al. (93) examined the relationship between douching, talc use, and ovarian cancer among 50,884 women aged 35-74 years of age (84 % white and 64% post-menopausal) who had never had breast cancer but had a full or half-sister who with breast cancer. They excluded participants with bilateral oophorectomy and ovarian cancer. Among 41,654 participants 154 incident ovarian cancers (n=135 ovarian cancers) were reported (0.3%). Participants completed a telephone interview which included questions about reproductive history (oophorectomies), health and lifestyle and use of personal care products before enrollment, including the use of douching and use of genital talc applied as a powder or spray applied to underwear, sanitary napkin, diaphragm, cervical cap, or vaginal area. The frequency of use was categorized as no use, less than once a month, 1-3 times per month, 1-5 times per week, > 5 times per week, but duration of use was not recorded. As with the WHI and Nurses’ study exposure was only measured at baseline and not updated during follow-up. Updated information on oophorectomy was collected during follow-up and information on cancer cases was collected via annual health update. Data on 37.6% of ovarian cancer cases was available only by self-report and the remainder confirmed by medical record review or death certificate. Cancer cases included tumors of the ovary, fallopian tubes, peritoneum, or of uncertain origin. Those who were BRCA1 or BRCA 1 positive test or those who had a sister with a positive test but had no report of negative test were considered BRCA positive. Cox proportional hazards analysis was conducted until diagnosis of ovarian cancer, oophorectomy, censoring or death. Generalized estimation equations was used to account for familial clustering at baseline. The proportional hazards assumption was evaluated by the goodness of fit test. A joint analysis of talc and douching use was also conducted. The included covariates were patency (yes or no for tubal ligation or hysterectomy), menopausal status, duration of OC use (none, < 2 to <10, 10 or more years), parity (yes/no) race and BMI.

The median duration of follow up was only 6.6 years. The average age was mean 57.8 years for cases. These cases were more likely to have a family history of ovarian cancer and carry a BRCA1 or BRCA2 mutation. More non-cases than cases used oral contraceptives. Talc use was only reported by 12% of cases and 14% of non-cases. Talc users were more likely to have BMI >30 kg/m². Talc use in the last 12 months after adjusting for race, BMI, parity, duration of oral contraceptive use, baseline menopausal status, and patency, was not associated with a statistically significant increased risk of ovarian cancer (HR 0.73, 95% CI: 0.44-1.20], but could not rule out an excess risk. There was no change in estimates when adjusted for douching. Douching at baseline, more common among talc users, was associated with increased risk of ovarian cancer (HR: 1.8 95% CI: 1.2-2.8).

There were significant limitations to the study. The authors acknowledge that an important limitation of their study was that they collected douching and talc information for the year before the study and did not account for the latency. As with the other two cohort studies, the Sister Study was limited by the issue of selection bias through the exclusion of women who had already developed ovarian cancer (and who could also have been lifetime talc users). Secondly, the Sister Study was vulnerable to behavioral change bias. The bias towards the null of this inaccurate assessment of “ever” user status prospectively, at the start of the study, was compounded by the fact that it was also vulnerable to retrospective inaccuracy, because it was based only on the 12 months preceding baseline. Thus, a participant who had last used talc 13 months before baseline would be categorized as a never-user, as would a participant who started using talc after baseline. Thirdly, the Sister Study’s median follow-up of only 6.6 years is likely insufficient to detect any risk of ovarian cancer which likely takes more than 6.6 years to develop. The study also suffered from the limitations of prevalent user biases. Additionally, exposure was measured as ever/never use in 12 months prior rather than total applications resulting in non-differential misclassification towards the null. Data was only available by self-report on the diagnosis of ovarian cancer for many cases (37.6%) resulting in misclassification of outcome, which was likely non-differential and may bias findings towards the null. The study reported the lowest rate of talc use among the cohort studies (13.8%), further compounding the limited statistical power due to a short duration of follow-up. The generalizability of these findings is also limited as they included women without breast cancer who all had a family history of breast cancer and may be at a higher risk (60%). The missing data were not missing at random and unclear whether analyses were adjusted for missing data. The authors concluded that the study

could not exclude a increased risk despite these findings. The study findings are limited to the predominant cohort of white post-menopausal women who constituted the majority of participants.

IX. IV. Summary of Findings from Epidemiological Studies.

1. The cumulative evidence from these studies demonstrates a statistically significant increased risk of ovarian cancer associated with perineal talc powder use which has been independently replicated by several investigators in different populations, different settings, across different sources using different study designs and time periods. Slight differences in magnitude of risk among these studies may reflect differences in inclusion or exclusion criteria and the accumulation of evidence over time and some variation due to chance. The updated meta-analyses in 2018, which have included all the studies, reported a statistically significant increased risk of perineal talc use and ovarian cancer, (41, 42), with little evidence of statistical heterogeneity or publication bias. The case-control studies provided 13,421 cases compared to 890 cases in the cohort studies. (42). Most case-control studies demonstrate an increased risk of ovarian cancer associated with talc use with an OR between 1.3 and 1.6, even after adjusting for various risk factors.

2. Meta-analysis which evaluate the association between perineal talc use and ovarian cancer have consistently shown an increased risk of ovarian cancer, (39, 41, 42, 73, 79), including pooled analysis using individual participant data. (10). My conclusions about the causal increase in the risk of ovarian cancer associated with talc exposure are heavily weighted by recent cumulative meta-analysis published in 2018, (41, 42). These meta-analyses provide the most comprehensive evidence base given the size of the study database and their methodologic superiority as assessed by the AMSTAR rating above. (Table 1). Also, importantly, there is no meta-analysis which has reported a statistically significant decreased risk of ovarian cancer with talc.

3. The only case-control study in which point estimates are below one was limited by the poor choice of controls and very high non-response rates. Despite these limitations it could not rule out a 21% increased risk of ovarian cancer associated with talc use which is not inconsistent with other studies. (86). Although the exposure rate to talc in the case-control studies has been variable in the control group from 5%-45%, this reflects the varying practices in the use of talc rather than the lack of an increased risk of ovarian cancer with talc use.

4. Although all studies are at potential risk of outcome misclassification, most of the studies used histologically verification for the diagnosis of ovarian cancer. Any such potential

misclassification of outcomes is likely to be non-differential and would have biased the findings towards the null.

5. There is no reason to believe, from the studies, that ovarian cancer would result in talc use, so the temporality of the association is established.

6. Case-control studies are susceptible to recall bias particularly when data on exposure are self-reported. However, several studies have included these questions on talc exposure as a part of larger questionnaires on other risk factors minimizing the possibility of recall bias. Recall bias is less likely to occur for chronic daily exposures such as talc as compared to intermittent short exposures. Further, recall bias is equally likely to affect other histologic types of ovarian (and endometrial) cancer but here the increased risk was limited to only epithelial ovarian cancer in most studies. Finally, the findings that only perineal talc use was associated with ovarian cancer but not with non-genital talc use argues against recall bias alone as a potential explanation of these findings.

7. Confounding is one potential explanation for these findings. However, several case-control studies adjusted for major confounders including the more recent case-control studies. (54). Although residual confounding is always possible in an observational study, studies that have reported adjusted and non-adjusted findings have reported similar results minimizing the impact of residual confounding. (41). Although there are some risk factors for ovarian cancer (e.g., genetic risk factors, family history, obesity and reproductive history), for any of them to be confounding to an extent that could account for the positive relations that have been reported, they would have to be strongly correlated with talc use. Family history, ethnicity, obesity and some reproductive risk factors are positively associated with the risk of ovarian cancer, but the magnitude of these associations does not appear high enough to introduce enough confounding, even jointly, to explain completely the positive association. To invalidate the statistically significant findings of an increased risk of ovarian cancer from the studies, one would have to postulate a degree of selection, recall bias and confounding pervasive across different time periods, different populations which is highly implausible.

8. Case-control studies are also at risk of selection bias which may introduce bias in both directions. As opposed to hospital-based controls, which may be less susceptible to selection bias, the population-based case-control studies have consistently showed a higher estimate of increased risk of ovarian cancer associated with talc use.

9. Reverse causality, where the diagnosis of ovarian cancer results in perineal use of talc, may be one possible explanation of the nonsignificantly increased risk in the group exposed to perineal talc. However, this is also likely minimal in the case of ovarian cancer in which most

cases present at advanced stages with abdominal bloating, and vaginal symptoms only occur in a small minority of cases.

10. One of the cohort studies reported an increased risk with perineal talc exposure and serous invasive cancer (14). The pooled results from all three cohort studies, reported an excess risk of ovarian cancer, (42) which failed to reach statistical significance because of several limitations. The duration of follow up was limited resulting in low number of events and inadequate statistical powder. The only cohort study which reported an inverse association between perineal talc use and ovarian cancer included several other cancers beyond the ovary (such as peritoneum, endometrial) (93), which may have diluted an increased risk. It had a very short duration of median follow up of approximately 6.6 years which is insufficient to ascertain the development of ovarian cancer. Since talc induced carcinogenesis occurs via a foreign body mechanism, the latency period required to demonstrate such an effect is long. Despite these limitations, the upper bounds of the confidence intervals exceeded one and could not rule out an increased risk of ovarian cancer with perineal talc use. The cohort studies were at risk of significant other biases. Exposure was measured at baseline and not updated during follow-up (14, 17), which may have misclassified those participants at baseline who were never users but used talc during the study as never users resulting in a bias towards the null. The exclusion of prevalent cases of ovarian cancer (some of whom may have been exposed to talc) may also bias their findings. (14, 17) The cohort studies were also susceptible to “depletion of susceptibles” biasing their findings towards the null. None of the cohort studies were primarily designed to study the association between genital talc use and ovarian cancer as their primary objective. Despite these limitations, the meta-analysis of cohort studies demonstrated a statistically significant increased risk of serous invasive ovarian cancer.

11. Ascertaining *dose response* relationship with talc and ovarian cancer is difficult because of the challenges in quantifying talcum powder use usually collected by self-reported data (frequency, amount and duration), timing and patterns of use (e.g. douching), and other individual factors (e.g. co-existence of inflammatory conditions such as endometriosis and or vaginal bleeding) resulting in differences in measurement of exposure across studies. The dose response depends on both the amount of talc exposure, the frequency of talc uses and the duration. It is difficult to quantify the amount of powder actually used and degree of perineal dusting that might constitute an “application of talc.” Another factor that may affect the dose-response relationship is whether use occurred at a time when the female tract was open, the age of initiation of talc use since the talc/ovarian cancer association is modified by closure of the female tract as a result of tubal ligation or hysterectomy (79). The presence of other risk factors

such as post-menopausal status, cancers other than invasive serous ovarian cancer may make it difficult to ascertain a dose-response relationship among older post-menopausal. The lack of statistical trend (58, 60) in some earlier studies may reflect some of these challenges as well the lack of a monotonic dose response effect. The exposure-response data need to be interpreted in the context of mechanistic studies which report that talc accelerates the development of ovarian cancer in susceptible individuals through accelerating the redox state in epithelial ovarian cancer cells. (49). Thus, an assessment of the gradient through a monotonic dose-response curve may not provide a complete picture of the biological gradient. It unclear why nature would mandate an increasing mono-tonic dose-response mechanism for causation, and some have argued that among Bradford-Hill viewpoints it is difficult to know how dose-response should be modelled. (50). Cumulative lifetime exposure may be a more appropriate measurement of exposure given the inflammatory mechanisms by which talc induces the development of ovarian cancer. It is important to recall that if the carcinogenicity of talc induced ovarian cancer most likely resembles that of asbestos induced mesothelioma (with which it shares histologic similarities), asbestos induced mesothelioma does not have a dose-response relationship. In the case of asbestos induced mesothelioma, latency may be more important whereas in the case of talc induced ovarian cancer induced by inflammation latency may be of lesser importance.

12. Despite these challenges, several studies have shown evidence of dose-response as measured by an increased risk with increased frequency (51-55) or increased duration, (52, 54) or combination of frequency and duration of exposure. (48, 54). Some studies show a exposure-response trend, (54) and the most updated meta-analysis show evidence of duration dose and responsiveness. (42). In the individual participant data meta-analysis a significant increase in risk with an increasing number of genital powder applications was found for nonmucinous epithelial ovarian cancer when nonusers were included in the analysis, but no significant trend was seen when analyses were restricted to ever users. (10) Importantly, the most recent meta-analysis reported an evidence of dose-response with risk being higher among those with >3600 applications of talc compared to participants with <3600 applications. (42) Both of these categories of exposure were associated with an increased risk of ovarian cancer. None of the cohort studies were able to conduct meaningful dose-response analysis because they did not collect data either on duration, (14, 93) or frequency of exposure. (17).

X. BIOLOGICAL MECHANISMS OF TALCUM POWDER INDUCED OVARIAN CANCER.

Although not an absolute requirement for determination of causation there are multiple well-established biological and molecular mechanisms by which talcum powder products induce ovarian cancer. The key routes of exposure and biological mechanisms are noted below.

X.I. Retrograde Migration of Talc Particles. Genital talc can migrate up to the fallopian tubes and ovaries and talc particles have been detected within the ovaries of women who report perineal talc use. Heller et al. detected talc in the ovaries of 24 women undergoing incidental oophorectomy demonstrating that it can reach the upper genital tract (64) although the fact that talc particle counts were unrelated to reported levels of perineal talc exposure reflects the challenges in measuring exposure to talc. Talc has been found deeply embedded within ovarian tumors, (65) and subsequent studies have confirmed that these are not due to contamination. (94). Talc has also been demonstrated in pelvic lymph nodes of women with perineal talc exposure.(66). Supportive evidence of migration comes from studies showing retrograde migration of additional particles such as starch after gynecological examination, (68) findings of a decreased risk of ovarian cancer with tubal ligation and hysterectomy in case-control studies, (87) and meta-analysis, (115) which may minimize exposure to inflammatory particles. Although an industry funded study performed by the Cosmetic, Toiletry, and Fragrance Association failed to detect translocation of “measurable quantities of talc’ in monkey models, (67) the timing and techniques of assessment and intraspecies differences could not rule out migration of talc particles. The FDA response to Citizen’s Petition 2014 concluded the “*potential for particles to migrate from the perineum vagina to the peritoneal cavity is indisputable*’. Johnson & Johnson and IMERYS documents also acknowledge migration. In one document it was stated, “A review of the literature suggests that it is biologically plausible for talc particles to migrate from the vagina to the peritoneal cavity and ovaries following perineal application.” (63, 116).

X.II. Inhalation of Perineal Talcum Powder. Inhalation of talcum powder is another potential route of exposure that is biologically plausible and can cause inhaled fibrous talc (and asbestos) fibers to reach the ovary and thus increase the risk of ovarian cancer in women using these products. Approximately 50 percent of talc particles in commercially available talcum powder are less than 10 microns in size, (117) which have the potential for inhalation and reach the alveolar regions of the respiratory tract. (118) Asbestos fibers can pass from the alveoli to the

lung interstitium, from which they can travel via the lymphatic system to the bloodstream and other organs including ovaries. (119, 120) Inhaled fibrous talc shares extensive physical and chemical similarities with asbestos, and inhaled fibrous talc generated from perineal application may also reach the ovaries by inhalation. This mechanism was confirmed in a September 2017 study, "Below the Waist Application of Johnson & Johnson Baby Powder," Longo, et al. showed that normal application of Johnson's Baby Powder can produce airborne asbestos and talc fibers which could be inhaled. (70).

X.III. Talcum Powder Induced Inflammation and Alteration of Redox Potential. Inflammation has long been understood to be an important mechanism underlying the development of ovarian cancer. (61). Inflammation may underlie ovulatory events because an inflammatory reaction is induced during the process of ovulation. Risk factors for ovarian cancer include endometriosis (i.e., ectopic implantation of uterine lining tissue) and pelvic inflammatory diseases (PID). (121). PID was associated with an increased risk of borderline ovarian tumors, particularly among women who had had multiple episodes of pelvic inflammatory disease in a meta-analysis. (122). Consistent with the inflammatory mechanism for ovarian cancer, a prospective nested case-control study from the Prostate, Lung, Colorectal and Ovarian Cancer has also shown that global markers of inflammation such as C-reactive protein, Interleukin L-1 α , Interleukin-8 and Tumor Necrosis Factor- α are associated with a significantly increased in the risk of ovarian cancer. (123). Supportive evidence for the role of inflammation also comes from a meta-analysis showing a decreased risk of ovarian cancer with tubal ligation and hysterectomy. (115). Studies have demonstrated increased risk of ovarian cancer with talcum powder use, and increased risk of ovarian cancer with endometriosis. (87). This risk is 3-fold higher among women exposed to talc who have endometriosis. (48).

Oxidative stress in the form of reactive oxygen species (ROS) and reactive nitrogen species (RNS) plays a role in the pathogenesis, neo-angiogenesis (formation of new vessels) and the dissemination of both early and late stage epithelial ovarian cancer. (124, 125). Epithelial ovarian cancer cells manifest a persistent pro-oxidant state characterized by upregulation of certain key oxidant and downregulation of key antioxidant enzymes, (125) and the presence of oxidative stress triggers cancer cells to favor anaerobic metabolism. Oxidative stress induces phenotypic modification of tumor cells by altering cross-talk between tumor cells and surrounding stroma. Talc can alter this redox state and cause a marked increase in mRNA levels of the prooxidant enzymes, iNOS (nitrous oxide) and MPO (myeloperoxidase) in talc treated ovarian cancer cells as compared to control as early as 24 hours in all doses, (49) as well as a marked decrease in the

mRNA levels of the antioxidant enzymes catalase CAT, glutathione peroxidase (GPX), and superoxide dismutase (SOD3) providing a mechanism by which talcum powder products can induce the development of ovarian cancer.

Cancer antigen [CA-125] a tumor marker secreted by the epithelial cell for monitoring recurrence after treatment of ovarian cancer, was elevated when both normal ovarian cell lines [1.7 +/- 0.5-fold] and ovarian cancer cell lines [1.4±0.5 and 4.4±0.5-fold increase in OV90 and TOV-21G EOC cell lines] were exposed to talc, providing another molecular mechanism by which talc can increase the risk of ovarian cancer. (106).

Talc has been shown to increase proliferation, induce neoplastic transformation and increase ROS generation time-dependently in the normal human epithelial and granulosa ovarian cells and dose-dependently in the polymorphonuclear neutrophils. (71). In studies of human mesothelial cells, both nonfibrous talc and asbestos have shown evidence of genotoxicity. (109) Some have suggested that perineal talc use may also increase risk of ovarian cancer by the induction of anti-MUC1(monoclonal antibodies) possibly via heat-shock protein, (72) although the data are not definitive. (101).

X.IV. Carcinogenicity in Animal Studies. Among animal studies a study among rats demonstrated the development of papillary changes after intrabursal injection of talc. Such papillary changes may be precursors of serous papilloma precursors of epithelial cancers. (107). Another 2-year inhalation study with cosmetic grade talc in rats and mice showed evidence of carcinogenic activity in male (an increased incidence of pheochromocytomas of the adrenal gland) and female (increased incidences of alveolar/bronchiolar adenomas) rats and carcinomas of the lung and pheochromocytomas of the adrenal gland. (108). There was no evidence of carcinogenicity in mice. However, limitations of this study include the lack of a suitable control (e.g. titanium dioxide), alternative explanations of these findings via particle overload, (127) and the fact that ovulatory patterns in rats are not fully applicable to humans.

X.V. Presence of Asbestos and other carcinogens in Talcum powder products. In assessing the biological plausibility of talcum powder products as a cause of ovarian cancer, it is important to consider the constituents of talcum powder products including whether it contains known or suspected carcinogens. The presence of asbestos in talcum powder products can and does provide a plausible biological explanation of the development of ovarian cancer. (36, 37).

Occupational exposure to asbestos is a well-established causal agent for the development of pleural and peritoneal mesothelioma, larynx and ovarian cancer. (36, 127). Talc and asbestos also share chemical similarities. The carcinogenicity of asbestos relies on shape of particles with long thin fibers-such as those occurring in crocidolite asbestos being particularly carcinogenic. Although talc consists primarily of platy talc, it may also contain fibrous talc or other asbestiform minerals. Epithelial ovarian cancer, one most closely associated with talc, histologically most closely resembles mesothelioma providing further evidence of biological mechanisms. As Huncharek notes in their meta-analysis of ovarian cancer associated with talc dusted diaphragm meta-analysis on page 427 "*If one is exposed to a mixture of talc and asbestos, it is reasonable to expect a carcinogen effect as it contains a known carcinogen.*" (13). In addition talcum products contain fibrous talc, heavy metals and fragrance ingredients which are known or suspected carcinogens. (26, 33, 35, 36). Like the presence of Asbestos Fibers, the presence of these known or suspected carcinogens provide a plausible biologic explanation for the increased risk seen in the epidemiologic studies.

XI. ASSESSMENT OF CARCINOGENECITY OF TALC BY THE IARC IN 2006.

The International Agency for Research on Cancer (IARC) expert panel evaluates the carcinogenicity of various products using the following criterion after review of animal studies, experimental studies and epidemiological data. (128). The data is examined to determine whether there is *sufficient evidence, limited evidence, inadequate evidence, or evidence suggesting lack of carcinogenicity* for both cancer in humans and animals, respectively. The mechanistic and other relevant data are examined to *identify established and likely mechanisms and determines whether each mechanism could operate in humans*. The agents are then classified into several groups. Group 1 are agents *carcinogenic* to humans (e.g., asbestos,) (37), Group 2A are agents *probably* carcinogenic to humans, Group 2B *possibly* carcinogenic to humans, Group 3 agents which are *unclassifiable* and Group 4 agents which are *probably not carcinogenic* to humans.

In 2006 IARC concluded that perineal use of talc not containing asbestos or asbestiform fibers was possibly carcinogenic to humans (129) based on *limited evidence in humans for the carcinogenicity of perineal use of talc based body powder and the limited evidence in experimental animals for the carcinogenicity of talc* (93) (Group 2B-b). (38). Although a positive association has been observed between exposure to the agent and cancer for which causal interpretation is considered by the Working Group to be credible, but chance, bias, or confounding could not be ruled out

with reasonable confidence. For purposes of their evaluation, IARC considered 19 case-control studies and 1 cohort study. (14). The Working Group concluded that 8 of the more informative case-control studies (as well as most of the less informative ones) showed a consistent excess risk in the order of 30-60%. The cohort studies neither supported or refuted the evidence from case-control studies.

The IARC assessment was carried under the assumption that talcum powder products did not contain asbestos based on the published findings at the time- an assumption that is not supported by current data. In such a case, talcum powder products would be unequivocally classified as a Group 1 carcinogen like asbestos. Importantly, even absent a finding of asbestos in talcum powder products, the consistent cumulative evidence of peritoneal use of talcum powder products demonstrates an increased risk of ovarian cancer. Several *new systematic reviews based on recently published studies have further added to the accumulating evidence on an increased risk of ovarian cancer with talc use.* (10, 41, 42). *There is now further evidence of exposure response relationships, with measured by an increased risk with increased duration (52, 54) or combination of frequency and duration (48) and the most updated meta-analysis show evidence of duration dose and responsiveness.* (42). Finally, in addition to the epidemiologic evidence there is evidence from toxicology , molecular biology and other mechanistic data which supports my opinions .

XII. COSMETIC EXPERT REVIEW PANEL REPORT.

For the sake of completeness I also reviewed a report on the safety of cosmetic talc by an industry sponsored panel. (130). The panel was primarily composed of dermatologists, with limited expertise in epidemiology and carcinogenicity. The review was carried out under the flawed assumption that cosmetic-grade talc must contain no detectable fibrous, asbestos minerals and thus limited its assessment to animal and clinical studies on talc that did not contain asbestos, and erroneously concluded that there was no evidence of talc migration. As a result of these serious methodologic shortcomings and funding biases it arrived at its erroneous conclusions that talc was safe for use in cosmetics. (130) As discussed above, the findings of this panel have been superseded by findings from several new epidemiological studies, mechanistic studies and systematic reviews which have further added to the accumulating evidence on an increased risk of ovarian cancer with talcum powder product use.

XIII. ASSESSMENT OF CAUSALITY.

While talc is clearly associated with development of ovarian cancer, we must assess whether the observed association leads to an inference about causation. In 1965, in the President's Address to the newly-established Section of Occupational Medicine of the Royal Society of Medicine, Sir Austin Bradford Hill, Professor Emeritus of Medical Statistics at the University of London, attempted to encapsulate the aspects of a causal relationship, as it was understood at the time. (1). As he described them, they were: 1. strength of association, 2. consistency, 3. specificity, 4. temporality, 5. biological gradient, 6. plausibility, 7. coherence, 8. experiment, and 9. analogy. As Professor Hill explained, no aspect alone is either necessary or sufficient: "What I do not believe . . . is that we can usefully lay down some hard-and-fast rules of evidence that *must* be obeyed before we accept cause and effect. None of my nine viewpoints can bring indisputable evidence . . . and none can be required as the *sine qua non*." Further, according to Professor Bradford Hill, these are not the only aspects of causation, but they are informative. It must also always be remembered, as highlighted in a recent statement by the American Statistical Association, that a lack of statistical significance does not imply lack of clinical significance (18) – a point also highlighted by Bradford Hill, who noted that while statistical tests can remind us of the role of chance, "*No formal tests of significance can answer those questions.*"

With respect to the analysis at issue, that is, the association between talcum powder products and ovarian cancer—the results are not only statistically significant, but, as described above, have been replicated by several independent authors in multiple studies across a range of study designs. The cumulative body of evidence was appraised using the Bradford Hill viewpoints. In this regard, and as described in this report, I put significant weight on the Strength, Consistency, Temporality, Biologic Plausibility, and coherence factors and, to a lesser extent, Gradient (Dose-Response) and Analogy data to support my opinion that Talcum Powder Products can cause ovarian cancer. For the reasons stated below, I do not weigh heavily the Experiment and Specificity data in light of the totality of the evidence supporting a causal inference. My assessment is described below.

1. Strength of Association. This aspect of a causal relationship refers to the degree or magnitude of effect to which the exposure is associated with the outcome. (1). According to Bradford Hill, the more likely the exposure is associated with the outcomes, the more likely is it to be causal. As summarized in the meta-analysis in section above, I conclude that the association of talc with

ovarian cancer shows an approximate 30-60% relative increase in the risk of ovarian cancer, after adjustment for multiple confounders of the talc and ovarian cancer relationship. (10, 42). The strength of the association, replicated in multiple studies, provides evidence in support of a causal association. There are several noteworthy examples of well-established causal relationships (e.g. second hand smoking and lung cancer), (131) where the strength of the association is in the order of 20-40%. Such causal associations can have significant effects on the population if a large segment of the population is exposed, as in the case of air pollutants and myocardial infarction, which are significantly associated with an increase in MI risk with small relative risk (carbon monoxide: 1.048; 95% CI, 1.026-1.070; nitrogen dioxide: 1.011; 95% CI, 1.006-1.016; sulfur dioxide: 1.010; 95% CI, 1.003-1.017; PM₁₀: 1.006; 95% CI, 1.002-1.009; and PM_{2.5}: 1.025; 95% CI, 1.015-1.036) but a large population burden because of the large percentage of the population that is exposed. (47). Similarly, 75-100 mg of daily Aspirin has been shown to reduce the risk of cardiovascular events among those weighing 50-69 kg by 25 % [HR 0.75, 95% CI, 0.65-0.5] (132) in an individual participant data meta-analysis of randomized controlled trials. An increment of one serving a day of fruit and vegetables reduced all-cause mortality by 5% (HR 0.95 95% CI: 0.92 - 0.98) in a meta-analysis of cohort studies. (133). As discussed below, I place significant weight on the fact that studies demonstrate a strong association between talcum powder use and ovarian cancer and show consistency of the data.

2. Consistency. This viewpoint assesses whether the finding is repeated in different settings, place and time. (1). As shown in detail above, the direction and strength of association of talc and ovarian cancer is generally consistent across studies, including observational studies of various designs and their meta-analysis, and observational studies. These studies have been conducted in different clinical settings across the world, with different duration of follow up and the cumulative evidence has consistently shown a significantly increased risk of ovarian cancer with the use of talcum powder products. As expected, there are slight differences in the point estimates which reflect differences in study population with nearly all point estimates showing a direction of increased risk of ovarian cancer. The confidence intervals, however, across study designs overlap, indicating consistent results. I place significant weight on the fact that the consistency and strength of the association found in multiple independent studies demonstrates that the association is causative.

3. Specificity. This viewpoint considers whether the outcome of the disease appears to be specific to the exposure, (1) although since the original publication of the Bradford Hill we know

in most cases, absolute specificity for an exposure outcome association is not generally possible for many diseases, particularly cancer, and not required to provide proof of causation. Even the well-established, causal relationship between cigarette smoking and lung cancer or heart disease is not characterized by specificity. Genetic factors may also play a role in the occurrence of ovarian cancer. As discussed above, the occurrence of ovarian cancer is consistently higher among talcum powder users compared to non-users, even after adjusting for several confounders. I placed less weight on absolute specificity of the association between talcum powder exposure and ovarian cancer given the multi-causal nature of the outcome, particularly in light of the strength and consistency of association factors.

4. Temporality. The temporality viewpoint assesses whether the exposure always predates the development of disease. (1). In each of the epidemiologic studies noted above, talc exposure occurred before the diagnosis of ovarian cancer. Although some have argued that some of the symptoms of ovarian cancer (vaginal bleeding, irritation) may lead to talcum powder use, since most ovarian cancers present with abdominal bloating and advanced stages of the disease it is difficult to attribute how development of ovarian cancer would lead to talc use (e.g., reverse causality). I placed significant weight that the exposure to talc preceded the development of ovarian cancer in the studies above.

5. Biological Gradient. This viewpoint assesses whether there is a biological gradient or dose-response effect, (1) recognizing that presence of dose-response is not an absolute requirement for causation. In order to determine dose-response, it is necessary first to determine dose. While the presence of a dose-response relationship supports a causal link, the absence of such a relationship does not preclude a causal association. The causal relationship between asbestos and mesothelioma, which most closely resembles the current scenario is not dose-dependent. Assessing dose-response is challenging in the context of perineal talc use for several reasons: first, unlike, say, birth-control pills, the amount of talc powder product use is not fixed, nor is the number of uses per time (day, week, or month). At a minimum, to assess total dose, it is necessary to acquire information about both duration and frequency. Ascertaining a dose-response relationship with talc and ovarian cancer is particularly challenging given that the risk of ovarian cancer may vary with age, premenopausal and post-menopausal status and the presence of other risk factors. The dose-response depends on both the amount of talc exposure, the frequency of talc uses and the duration. The presence of other risk factors such as post-menopausal status, cancers other than invasive serous ovarian cancer and the “depletion of

susceptibles” over time may make it difficult to ascertain a dose-response relationship. Several studies show evidence of dose-response as measured by an increased risk with increased frequency, (48, 51-55) or increased duration, (52, 54, 56) or a combination of frequency and duration of exposure. (52, 54). Some studies have also shown evidence of increased risk with increased number of lifetime applications, (10, 48, 52) which may be a more accurate measure for long term exposure outcome association mediated via inflammation. The most updated meta-analysis show evidence of duration dose and responsiveness, (42) with risk being higher among those with >3600 applications of talc compared to participants with < 3600 applications, although with overlapping confidence intervals. (42). Based on the above limitations with study design to ascertain dose effect, specificity of dosing of talc and the possibility of threshold effect, I find biological gradient less compelling, but still compelling of my causation analysis than the other Bradford Hill overviews as referenced above.

6. Plausibility. Although this is not a requirement for causation, an association that is biologically plausible is more likely to be causal. (1). While this viewpoint only requires biological mechanism to be *plausible*, which is necessarily limited to the state of biological knowledge at the time of assessment, evidence from the literature described in detail in the section in biological mechanisms shows multiple routes of exposure, multiple pathways and multiple mechanism by which talc can cause ovarian cancer. **Section X** demonstrates how talcum powder products can migrate to the ovaries, induce inflammation, alter redox potential resulting in a pro-oxidant state, (49) and act as a mutagen. (109). As a results of the significant body of evidence that has accumulated on biological mechanisms, I place significant weight on the fact biological plausibility provides evidence in support of the causal role of talc in the development of ovarian cancer and there is a highly biological plausible mechanism here for carcinogenicity which supports my opinion.

7. Coherence. This viewpoint assesses whether the cause-and-effect interpretation of data conflicts with the generally known facts of the natural history and biology of the disease. (1). The evidence on the risk of ovarian cancer with talcum powder exposure is consistent with the nature of the disease. Multiple studies suggest that talcum powder products have biological effects which plausibly explain the occurrence of ovarian cancer. Given the biological mechanisms related to inflammation described above, this mechanism and causal association itself fit easily within the current framework of scientific knowledge about the development of

ovarian cancer mediated by inflammation. I placed a significant weight on the coherence of findings in support of the causal role of talc in the development of ovarian cancer.

8. Experiment. Occasionally, in making a causation assessment, it is possible to appeal to experimental, or semi-experimental, evidence. The definitive experimental evidence would be a placebo controlled randomized trial among patients who are assigned to use talc and others who do not use talc in which the outcome of incident ovarian cancer would be actively ascertained. However, such evidence does not exist and would not be ethical nor feasible with a rare outcome such as ovarian cancer with an incidence of 11.4/100, 000 person-years noted above. While there is no randomized controlled trial here, that is common when dealing with a suspected cancer risk. For instance, there is no randomized controlled trial which supports the causal role of smoking in lung cancer. Such a trial to provide absolute proof of harm, which ignores the body of evidence that has accumulated and places patients at risk for developing ovarian cancer raises significant ethical concerns when data from robust observational studies and their meta-analysis have consistently shown an increased risk of ovarian cancer. In the absence of experimental evidence, this overview is weighted as less important than the other more important viewpoints noted above.

9. Analogy. Asbestos has been shown to cause ovarian cancer which offers an appropriate analogy, (40) but this viewpoint was considered less significant than other viewpoints noted above.

XIV. CONCLUSIONS.

Based on my background, training and education as a physician and epidemiologist, review and analysis of the totality of the evidence, using the weight of evidence analysis, including considering and weighting the Hill viewpoints, as described in this report, it is my opinion stated to a reasonable degree of scientific and medical certainty that peritoneal use of talcum powder products can cause ovarian cancer.

Signed this 16th day of November 2018

A handwritten signature in cursive script, appearing to read "Sonal Singh", written in black ink. The signature is fluid and stylized, with a long horizontal line extending from the end of the name.

Education

MPH, Bloomberg School of Public Health, Johns Hopkins University
Baltimore, MD 6/2005 to 5/2008

Internal Medicine Residency, Unity Health System, affiliate University of Rochester
Sch of Medicine and Dentistry, Rochester, NY 7/2002 to 6/2005

MD, Patna Medical College, Patna, India 12/91 to 05/1999

Academic Appointments

Associate Professor, Department of Family Medicine & Comm Health 10/2016 to date
Department of Medicine, University of Massachusetts Medical School

Assistant Professor, Dept of Medicine, Johns Hopkins Univ SOM 7/2009 to 9/2016

Assistant Professor, Center for Public Health and Human Rights
Bloomberg School of Public Health, JHU (joint) 7/2009 to 9/2016

Assistant Professor, Department of Medicine, Wake Forest University 7/2007 to 6/2009

Instructor, Department of Medicine, Wake Forest University 7/2005 to 06/2007

Employment History

Associate Professor, Department of Fam Medicine & Comm Hlth 10/2016-present
Meyers Primary Care Institute & Department of Medicine (Joint)
University of Massachusetts Medical School
Role: Clinician- Investigator

Associate Professor, Department of Quantitative Health Sciences 10/2018-present
University of Massachusetts Medical School
Role: Clinician- Investigator

Assistant Professor, Dept of Medicine, Johns Hopkins University. 7/2009 to 9/2016
Role: Clinician- Investigator

Assistant Professor, Department of Medicine, Wake Forest University 7/2007 to 6/2009
Role: Clinician- Educator

Instructor, Department of Medicine, Wake Forest University 7/2005 to 6/2007

Sonal Singh M.D., M.P.H

Role: Clinician- Educator

Residency (Medicine) Unity Healthy System, affiliate of the University of Rochester, Rochester,
NY 7/2002 to 6/2005

Role: PGY 1, PGYII and PGY III Internal Medicine Resident

Research Associate, Clinical Pharmacology, Ohio State University 3/2001 to 6/2002
Role: Research assistant in clinical trials

Voluntary Research Associate, Clinical Pharmacology, Ohio State University 8/2000 to 2/2001
Role: Research assistant in clinical trials

USMLE STEP 1, II, III and Clinical Skills Exam Preparation 2/2000 to 7/2000
Role; Medical student

Resident, Medicine, Patna Medical College, Patna, Bihar, India 2/1998 to 1/2000
Role: Junior Resident in Medicine

Compulsory rotatory internship, Patna Medical College, Patna, India 12/97 to 12/98
Role: Fulfilling requirements for completion of medical degree in India

Certification and Licensure

Diplomate, American Board of Internal Medicine 8/2005-12/25

Massachusetts Board of Physicians 8/2016-8/2019

Physicians and Surgeons of Maryland (Inactive) 2009-2017

North Carolina Medical Board (Inactive) 2005 to 2009

Professional Memberships and Activities

Massachusetts Medical Society 2017-current

American College of Physicians 2003-2019

International Society of Pharmacoepidemiology 2011-current

Society of General Internal Medicine 2003 to 2016

International Society of Pharmacoeconomic Outcomes Research 2016 to 2017

Academy Health 2013

Global Health Council 2006 to 2010

Honors and Awards

Finalist W. Leigh Thompson Excellence in Research: Faculty Award, JHU	2016
Visiting Professor, Department of Medicine, Univ of Alabama	2013
3 rd Best Abstract (trainee) 29 th ICPE Montreal, Canada	2013
Bruce Squires Award for the Best Research Paper, CMAJ	2011
Scholars Abstract Award, Society for Clinical and Translational Sciences.	2010
Society of General Internal Medicine Clinical Investigator Award (Mid-Atlantic)	2010
Elected, Delta Omega Honorary Public Health Society, Johns Hopkins University	2008
Master Teacher Award, WFUSOM	2008
Tinsley R Harrison Faculty Outpatient Teaching Award, WFUSOM	2007
Tinsley R Harrison Faculty Outpatient Teaching Award, WFUSOM	2006
Senior-Resident Scholarship award, Unity Health System, NY	2005
ACP Health and Public Policy Scholarship, NY	2005

Committee Assignments and Administrative Services

American College of Physicians, Massachusetts Chapter, Health Policy Committee	2018
Chairs Advisory Council, Department of Fam Medicine & Comm Hlth	10/2016-present
American College of Chest Physicians, Cough Guideline Expert Panel	2017- present
Associate faculty, Welch Ctr for Prevention, Epi & Clin Research, JHU	2015 to 2016
Associate-Director, Center for Drug Safety and Effectiveness, JHU	2013 to 2016
Affiliate faculty, Center for Hlth Services and Outcomes Research, Johns Hopkins Bloomberg School of Public Health	2012 to 2016
World Health Organization, International Agency of Research on Cancer (IARC) Monograph- 108 Working group, Lyon, France.	2013

Sonal Singh M.D., M.P.H

Preferred Items for Reporting of Systematic Reviews and Meta-analysis of harms Working Group
Alberta Canada. 2012

Member, Health & Human Rights Working Group, JHU Center for Aids Research 2012

Core faculty, Center for Public Health and Human Rights, Johns Hopkins Bloomberg School of
Public Health 2009 to 2016

Core faculty, Evidence-Based Practice Center, JHU 2009 to 2016

Medical Director, Outpatient Clinic, WFUSOM 7/2005-6/2009

Teaching Activities

Classroom

Comparative effectiveness research (2 cr), Johns Hopkins Medicine 2015 to 2016

Role: Developed course in CER for MD and MD/PhD trainees in the CTSA

Health and Human Rights, Johns Hopkins Bloomberg School of Public Health 2011 to 2015

Role: Annual lecture in the course for MPH students

Health Economic, Johns Hopkins Bloomberg School of Public Health 2013

Role: Annual lecture in the course for master's students

Pharmacoepidemiology, Johns Hopkins Bloomberg School of Public Health 2011-2015

Role: Annual lecture in the course for Masters and Doctoral students

Evidence-based Medicine, Johns Hopkins University School of Medicine 2012

Role: Course facilitator

Intro to Clinical Investigation, Johns Hopkins University School of Medicine 2012

Role: Annual lecture in the course

Clinical Epidemiology, Johns Hopkins Bloomberg School of Public Health, 2010-2014

Role: Annual lecture in the course

Patient Physician and Society, Johns Hopkins University School of Medicine 2009

Role: Course facilitator

Clinical Teaching

Outpatient medicine 2016-2018

Sonal Singh M.D., M.P.H

Role: Precepting residents and medical students in clinic at University of Massachusetts Medical School

Evidence Based Medicine

2012-2014

Role: Developed a novel course to teach Evidence based Medicine to Osler medical residents at Johns Hopkins University School of Medicine

Outpatient medicine

2005 to 2009

Role: Precepting residents in clinic at Wake Forest University

Inpatient Medicine

2005 to 2009

Role: Precepting internal medicine residents at Wake Forest University

Trainee /Junior Faculty Name	Mentoring Role	Title of Research Project/Paper	Current Position and Institution	Training Period
Univ of Massachusetts				
Mayuko Itofukunaga, MD	Faculty mentor	Systematic review of decision aids for lung cancer screening	Assistant Professor- Pulmonary Medicine and Critical Care	2017-18
Nathaniel, Erskine MD, PhD (student)	Scholarly activity	SR of herpes zoster and cardiovascular disease	MD/PhD Student Umass Med School	2017
Richeek Pradhan MS	Scholarly activity	Comparison of data on Adverse events	Phd Student McGill University	2017-18
Johns Hopkins Univ				
Omar Mansour	Scholarly activity	SGLT2inhibitors and cardiovascular outcomes	Masters student	2018
Geetha Iyer, MD	Faculty mentor	Multiple Pharmacoepidemiologic studies	Doctoral student, HSPH	2015-16
Sathiya Priya Marimathu	Faculty mentor	Generic drugs and patient oriented outcomes	MHS Student, JHMI	2015-16
Yohalakshmi Chelladurai, MD, MPH	RA Scholarly activity	Review of varenicline	Resident physician, Mercer, Atlanta	2013
Hsien-Yen Chang PhD	Faculty mentor	Pharmacoepidemiologic studies	Assistant Scientist at JHU	2011-15
Hasan Shihab, MD, MPH	RA Scholarly activity	Review of GLP-based therapies	Resident, Franklin Square, Baltimore	2013-14
Joshua Sclar, MD, MPH	Scholarly activity	Systematic review of attacks on health workers	General Preventive Medicine Resident	2013
Crystal Ng, MPH	Scholarly activity	Human Rights measures	MPH Student, JHSPH	2013
Ekta Agarwal, MPH	Capstone	Safety of novel anticoagulants	MPH student JHSPH	2013
Meijia Zhou, MHS	Scholarly activity	Adherence to novel anticoagulants	Doctoral student, Univ of Pennsylvania	2013
Kaitlin Hayman, MD	Capstone	SR of the impact of disasters On CVD outcomes	MPH student, JHSPH	2013
Wenze Tang, MPH	Scholarly activity	SCCS analysis of GIB bleeding with dabigatran	Doctoral student, HSPH	2013

Sonal Singh M.D., M.P.H

Omar Mansour	Scholarly activity	SGLT2inhibitors and cardiovascular outcomes	Masters student JHSPH	2018
Shabana Walia MD	Scholarly activity	SR of CVD among refugees and displaced	ER physician, UT Houston	2016-2018
Wake Forest Univ				
Aman Amin, MD	Resident	Inhaled corticosteroids and pneumonia	Practicing internist, NC	2007-09
Apurva Trivedi, MD	Scholarly activity	SSRIs and bleeding	Gastroenterologist	2007-09
Other institutions				
Tonya Breaux-Shropshire PhD, MPH	Scholarly activity	Systematic review	Post-doctoral trainee, UAB	2015
Abhay Kumar, MD	Resident Scholarly activity	Wernicke encephalopathy after gastric bypass: systematic review	Assistant Professor St Louis University	2007

Current Grants and Contracts

Grants

(Ming Tai-Seale)

2/2016-12/2021

PCORI

Improving Patient-Centered Communication in Primary Care: A Cluster Randomized Controlled Trial of the Comparative Effectiveness of Three Interventions

The aim is to compare three interventions to improve patient communication in primary care

Role: co-investigator

(PI Jerry Gurwitz)

08/2018- 09/2019

NIH/NIA-1 R56 AG061813-01

Project Title: Controlling and Stopping Cascades leading to Adverse Drug Effects Study in Alzheimer's Disease (CASCADES-AD)

Role : co-investigator

The aim is to develop interventions to prevent prescribing cascades among those with Alzheimer's related Dementia (ADRD)

Past Grants

Death Data Exploration

08/01/17- 03/02/18

FDA Foundational Elements 3 HHSF223200910006I

Task Order Number: HHSF22301012T

Efforts to Develop the Sentinel Initiative HHSF223200910006I.

Role (Project Lead)

Effect of Therapeutic Class on Generic Drug Substitutions.

2014-2016

U01FD005267-01 (PI, Jodi Segal)

Sonal Singh M.D., M.P.H

FDA 349,480
Role: Co-Investigator 0.6 CM

Comparative effectiveness Research & The Cochrane Eyes and Vision Group 2013-2016
U01 EY020522 (PI, Kay Dickersin)
NIH/NEI 825,397
Role: Co-Investigator 2.4 CM

Systematic review of gabapentin for neuropathic pain using multiple data sources 2015-2016
(PI, Caleb Alexander)
FDA Center of Excellence in Regulatory Science
Role: Co-Investigator (20% effort)

Integrating multiple data sources for meta-analysis to improve patient-centered outcomes
research 2014-2016
(PI- Dickersin)
PCORI (ME-1303-5785) \$698,174
Role: Advisor (2% effort)

Development of a scale for human rights violations. 2013-2014
(PI, Chaisson & Beyrer)
NIH Johns Hopkins Center for AIDS Research \$ 18,873
Role: Pilot Awardee

Comparative effectiveness review of therapeutic options for obesity in the Medicare population.
Johns Hopkins Evidence Based Practice Center. 2013-2014
PI (Eric Bass)
AHRQ \$125,000
Role: Project Principal Investigator (20% effort)

Center for Excellence in Comparative Effectiveness Education 2012-2013
PHRMA Foundation (PI Jodi Segal) Total Direct Cost: \$250,000
Role: Co-investigator (5% effort)

A multi criteria decision analysis to assist with regulatory decisions around benefit and risk
Partnership in Applied Comparative Effectiveness Science: 2010 to 2013
PI (PI, Jodi Segal).
FDA \$3,509,657
Role: Project Principal Investigator (25% effort)

Combination therapy vs. intensification of statin mono-therapy: An update. 2012-
2013
PI (E. Bass- P.I of EPC.)
AHRQ
Role: Advisor (5% effort)

Troponin cardiac marker during renal impairment. (E. Bass- P.I of EPC.) Agency for Health Care Quality and Research Role: Advisor (5% effort)	2012-2013	
To develop an instrument for attacks on health workers. PI (Len Rubenstein) US Institute of Peace Role: Co-investigator (10% effort)	2012-2013	
To develop an instrument for attacks on health workers. PI (Len Rubenstein) McArthur Foundation Role: Co-investigator (15% effort)	2012-2013	\$434,782
To conduct a benefit and harm assessment of <i>roflumilast</i> in COPD. Johns Hopkins ICTR Role: Co-investigator (5% effort)	2012-2013	
To develop a China-JHU consultation for civil society public health professionals. Open Society Foundation Role: PI (20% effort). Proposal for a public health training program.		2012 \$49,534
PACER. PI (Rothman) Google-Flu Role: Coinvestigator (5%) Systematic reviewer and meta-analysis expert.		2012
Methods for Balancing Benefits and Harms in Systematic Reviews Johns Hopkins Evidence Based Practice Center. (PI, Bass) AHRQ Role: Project Task Leader and co-Investigator (10% effort)		2011-2012 \$188,871
Comparative effectiveness review of Meditation Programs for Stress and Wellbeing Johns Hopkins Evidence Based Practice Center. (PI, Bass) AHRQ Role: Project Task Leader and co-Investigator (15% effort)		2011-2012 \$375,666
Comparative effectiveness review of prevention of VTE in special populations Johns Hopkins Evidence Based Practice Center. (PI, Bass) AHRQ Role: Project Principal Investigator (20% effort)		2011-2012 \$375,666

Sonal Singh M.D., M.P.H

To prevent and respond to gender-based violence (GBV) in refugee and conflict-affected populations. 2010-2011
(PI, Vu & Rubenstein) \$293,946
Role: Co-investigator (10% effort)

Comparative effectiveness review of oral hypoglycemic medications
Johns Hopkins Evidence Based Practice Center. (PI, Bass) 2009-2010
AHRQ \$125,000
Role: Co- Investigator (0% effort)

Johns Hopkins Clinical Research Junior Faculty Award. 2009-2012
NIH-KL2
ICTR
Role: Recipient (75% salary support)

Measuring exposure to human rights violations among men who have sex with men.
(PI, Mullany). 2009-2010
Center for Global Health Johns Hopkins \$50,000
Role: Co-investigator (0% effort).

Research ethics for conducting research in vulnerable populations and unstable settings.
(PI, Mills) 2007-2009
CIHR \$99, 887
Role: Co-investigator (10% effort).

Patents None.

Editorial work

Editor-in-chief and founder
BMC Conflict and Health 2007-12

Editorial Board Membership

Evidence Based Medicine (BMJ Group of Journals) 2017-current
Drug Safety 2008-16
American College of Physicians-PIER

Grant review 2012-current

Medical research foundation of New Zealand
Johns Hopkins Center for Public Health and Human Rights
Junior Faculty Research Grants
Medical Research Council of South Africa
Catalina Health Technology Assessment, Spain
Diabetes, UK
Johns Hopkins Medicine Research Council Synergy Awards
Johns Hopkins Institute for Clinical and Translational Research

Abstracts and Presentations

Oral Presentations

National/International

1. GLP-1-based therapies and risk of pancreatitis: A matched case-control study. 29th International Society of Pharmacoepidemiology, Annual Meeting, Montreal Convention Center, August 26. Montreal, Quebec, Canada.2013
2. GLP-1 based therapies and risk of pancreatitis. 36th SGIM Annual Meeting, Denver, Colorado Posters. 2013
3. Risk of fractures with inhaled corticosteroids in COPD: Systematic review and meta-analysis of randomized controlled trials and observational studies, Society of General Internal Medicine, Minneapolis, Minnesota. 2011

Sonal Singh M.D., M.P.H

4. Odds of fractures with inhaled corticosteroids in COPD: Systematic review and meta-analysis of clinical trials and observational studies, 27th International Society of Pharmacy-Epidemiology, Annual Meeting, Hyatt Regency August 24th. Chicago, Illinois. 2011

Local/Regional

Not applicable

Posters

National/International Meetings

1. Diagnostic algorithms for cardiovascular death in administrative claims databases. A systematic review 2018. International Society of Pharmacoepidemiology, Prague, August 24, 2018.
2. Risk of gastrointestinal bleeding among dabigatran users-a self-controlled case series analysis. Health Care Systems Research Network, San Deigo, March 22, 2017.
3. GLP-1 based therapies and risk of pancreatitis. Pancreatitis, Diabetes, and Pancreatic Cancer Workshop. NIH, Bethesda, Maryland. 2013
4. Thiazolidinediones and risk of bladder cancer: A systematic review and meta-analysis. 36th SGIM Annual Meeting, Denver, Colorado.2013
5. Who is the patient's doctor? Primary care responsibility and co-management relationships among generalist and non-generalist physicians in the National Ambulatory Care Survey, 2002 SGIM 29th Annual Meeting, Los Angeles, California.2006
6. The educational value of case reports from the SGIM national meeting in the internal medicine clerkship. SGIM 29th Annual Meeting, Los Angeles, California.2006
7. Using IPod technology to create a self-guided clinic tour for resident orientation SGIM 29th Annual Meeting, Los Angeles, California.2006
8. Narcotic management in chronic non-malignant pain. A survey of resident's knowledge and attitudes. SGIM 29th Annual Meeting, Los Angeles, California.2006
9. Formulary conversion programs pose a significant risk to patients, SGIM 27th Annual Meeting, Chicago, Illinois.2004

Local regional meetings

Inhaled corticosteroids and the risk of fractures in COPD: A systematic review and meta-analysis. DOM Annual retreat, Johns Hopkins University 2011

Invited presentations

National/International

1. Oral direct acting antivirals and the incidence or recurrence of hepatocellular carcinoma. NIH Collaboratory Grand Rounds [Web] March 2, 2018
2. Resurgence of hepatocellular carcinoma in the era of oral direct acting antivirals. Cause or Consequence? Fundamentals of Biomedicine Seminar Series. Texas Tech University Health Sciences Center. El Paso, Texas Dec 13, 2017

Sonal Singh M.D., M.P.H

3. Aligning evidence with preferences: Methodological Challenges and Opportunities. - Department of Medicine. Dartmouth-Hitchcock Medical Center, Dartmouth, New Hampshire, June 15, 2016
 - Dartmouth-Hitchcock Medical Center, Dartmouth, New Hampshire, June 15, 2016
 - Department of Health Services and Research, Michael De-Bakey VA and Baylor University, Houston, Texas, May 16, 2016.
 - Meyers Primary Care Institute and Department of Family and Community Medicine, University of Massachusetts, Massachusetts, March 31 and June 9 2016.
 - VA Center for Chronic Disease and Outcomes Research, Minnesota VA, March 2016.
 - Department of Medicine. University of Central Florida, Orlando, Florida, November 2015.
 - Center for Health Policy and Research Grand Rounds. UC Davis, Sacramento California, Oct 9 2015;
 - Center for Evidence and Outcomes, Agency for Health Care Research and Quality. Gaithersville Maryland, August 31, 2015.
4. Risks of Spiriva Respimat outweigh its benefit: A Debate. Inhalation Asia, University of Hong Kong, Department of Pharmacology and Pharmacy, Hong Kong. 2013
5. GLP-1-based therapies and risk of pancreatitis. Center for Clinical Epidemiology and Biostatistics Seminar Series, Philadelphia, Pennsylvania. 2013
6. Visiting Professor. Department of Medicine. University of Alabama. 2013
7. Value based health care: Can shared decision making methods get us there? Center for Value and Effectiveness, Medicine Institute, Cleveland Clinic, Noon Conference.2013
8. Role of Multi-criteria decision analysis in regulatory policy
 - Stanford Prevention Research Center, Stanford University, Palo Alto, Stanford, California. 2013
 - South Carolina College of Pharmacy, Columbia, South Carolina.2013
 - Department of Medicine. UC Davis, Sacramento, California.2013
 - Department of Clinical Sciences, UT Southwestern, Dallas, Texas.2013
 - Department of Medicine, Geisenger Medical Center, Danville, Pennsylvania. 2013
9. Weighing benefits and risks: Role of shared decision making in type 2 diabetes. CTSA Grand Rounds, Mayo Clinic, Rochester, Minnesota. 2013
10. Are long-acting muscarinic agents safe for patients with COPD: A Debate. Airway Vista, Asan Medical Center, Seoul, Korea
11. Academia and industry collaboration for cardiovascular risk mitigation. CBI and Applied Clinical Trials. 6th Annual Summit, Closing Address. Ritz Carlton, Arlington, Virginia.2012
12. Varenicline: Where are we today? Tobacco Disease Research Program, UCSF. San Francisco California. Varenicline debate.2012
13. The Maoist Insurgency in Nepal: Health Systems Challenges and Opportunities Conference on Health in Fragile States: Challenges for the Next Decade. United States Institute of Peace. Washington DC.2011

Sonal Singh M.D., M.P.H

14. Standards of Care and the Role of Community Advocacy in Clinical Trials. Clinical Research in Developing Countries, IIIrd Annual Marcus Evans Conference, Washington, DC.2008
15. Nepal-A Case study. Integrating public health methods into Conflict Analysis. Norman Patterson School of International Affairs, Carleton University, Ottawa, Canada.2007

Local/Regional

1. Oral direct acting antivirals and the incidence or recurrence of hepatocellular carcinoma. Research Seminar Series, Department of Family Medicine and Community Health. University of Massachusetts Medical School. June 15.2018
2. Safety of novel anticoagulants vs warfarin- a case study using complementary study designs. Quantitative Health Sciences, University of Massachusetts Medical School, February 28, 2017
3. GLP-1-based therapies and risk of pancreatic adverse events. University of Maryland, Division of Endocrinology, Metabolism and Nutrition, Grand Rounds, Baltimore, Maryland. 2013
4. Thiazolidinediones and Patient-Oriented Outcomes in Type 2 Diabetes, GIM Grand Rounds. Johns Hopkins University School of Medicine. 2012
5. Patient-Centered Benefit and Risk Assessment. Center for Health Services and Outcomes Research. Johns Hopkins University 2012
6. Varenicline and cardiovascular and neuropsychiatric adverse events: Do benefits outweigh risks? Welch Center Grand Rounds. Johns Hopkins University. 2011
7. The new wave, HIV, Human Rights and Men who have Sex with Men in Nepal. Johns Hopkins Bloomberg School of Public Health, 2011.
8. Network Meta-analysis and Serious Adverse Events. Network Meta-Analysis Methods Workshop. Johns Hopkins Bloomberg School of Public Health. 2010
9. Thiazolidinediones and Cardiovascular Outcomes in Type 2 Diabetes. Internal Medicine Grand Rounds. Wake Forest University School of Medicine, 2008
10. How Safe Are Our Drugs and How Do We Know? North Carolina ACP, Durham.2008
11. Clinico Pathologic Conference. Internal Medicine Grand Rounds. Wake Forest University School of Medicine, 2007
12. Globalization and Health Equity: An emerging Challenge for Academic Medicine. Internal Medicine Grand Rounds. Wake Forest University School of Medicine, 2007
13. Thiazolidinediones and Cardiovascular Disease: The Seduction of Common Sense. Epidemiology Seminar Series, Public Health Sciences. Wake Forest University 2007

Workshops and Precourses

1. ISPOR National Meeting, Next Generation Comparative Effectiveness Research- Are we getting organized to facilitate research for the individual patient? Washington, DC May 24, 2016 (workshop)
2. SGIM national meeting, developing high-quality search strategies for systematic reviews. 2010
3. SGIM national meeting, Systematic Review. 2009

Peer reviewed original research publications (reverse chronological order)

Dr. Singh, we are here to take your</p>	<p style="text-align: right;">Page 13</p> <p>1 you don't understand.</p> <p>2 Can you do that?</p> <p>3 A. Yes.</p> <p>4 Q. If you don't understand a question, let</p> <p>5 me know, and I'll repeat the question or rephrase</p> <p>6 it, so that we can make it clear to you.</p> <p>7 Can you do that?</p> <p>8 A. Yes.</p> <p>9 Q. If you answer a question that I ask,</p> <p>10 then I'm going to assume that you understood it.</p> <p>11 Is that fair?</p> <p>12 A. Yes.</p> <p>13 Q. You are here today pursuant to a Notice</p> <p>14 of Deposition, which we have marked as Exhibit 1.</p> <p>15 (Notice of Oral and Videotaped</p> <p>16 Deposition of Sonal Singh and Duces Tecum</p> <p>17 marked Exhibit 1.)</p> <p>18 BY MR. ZELLERS:</p> <p>19 Q. Is that correct?</p> <p>20 A. Yes.</p> <p>21 MR. ZELLERS: Katherine, when I mark an</p> <p>22 exhibit, I'm going to need to hand them to you.</p> <p>23 MS. MCBETH: Sure.</p> <p>24 MR. ZELLERS: Thank you.</p> <p>25</p>

4 (Pages 10 to 13)

Sonal Singh, M.D., M.P.H.

Page 14	Page 16
<p>1 BY MR. ZELLERS: 2 Q. Did you have an opportunity to review 3 Deposition Exhibit 1 before today's deposition? 4 A. Yes. 5 Q. Have you brought with you or provided 6 to counsel for production all materials in your 7 possession that are responsive to the Notice of 8 Deposition? 9 A. I have. 10 MR. ZELLERS: I will mark, as 11 Deposition Exhibit 2, your report in this matter 12 dated November 16 of 2018. 13 (Rule 26 Expert Report of Sonal 14 Singh, MD, MPH marked Exhibit 2.) 15 BY MR. ZELLERS: 16 Q. Is that correct? 17 A. It is. It doesn't have the references. 18 Q. Deposition Exhibit 2 is just a copy of 19 your report itself. It ends at Page 66. 20 Attached to your report were some additional 21 materials; is that right? 22 A. Yeah. Yeah. I just want to make sure 23 because when I refer to the report, I understand 24 it to include references and tables and so on. 25 Q. Your report includes everything that</p>	<p>1 A. Yes. 2 Q. If at any time today you need to look 3 at any of those documents, they're available, and 4 you're free to do that. Understood? 5 A. It is understood. 6 Q. You had attached or provided with your 7 report a curriculum vitae, which I understand has 8 been updated; is that right? 9 A. Yes. 10 MR. ZELLERS: We will mark your updated 11 CV or curriculum vitae as Deposition Exhibit 3. 12 (Sonal Singh, MD, MPH, FACP, 13 curriculum vitae marked Exhibit 3.) 14 MR. ZELLERS: Folks, I believe that 15 Ms. Parfitt has distributed to you, before the 16 deposition, Exhibit 3. 17 BY MR. ZELLERS: 18 Q. Can you tell us, just briefly, in what 19 respect has Exhibit 3 been updated from the CV 20 that was produced with your report in this 21 matter? 22 A. A few publications, and then I was 23 elected to the fellowship of the American College 24 of Physicians on January 1st. So I'm an FACP, 25 and, yes, just a couple of publications,</p>
Page 15	Page 17
<p>1 was produced by plaintiffs' counsel as part of 2 that report; is that right? 3 And, Dr. Singh, I'm going to mark separately 4 a number of the attachments -- 5 A. Okay. 6 Q. -- to your report. Right now, I'm just 7 trying to identify, is the body of your report -- 8 A. Yeah. 9 Q. -- what we have identified and marked 10 as Exhibit 2? 11 MS. PARFITT: And if I may, 12 Mr. Zellers, object. The body of the report, 13 Dr. Singh may include as the body of the report 14 plus all of its attachments. 15 So just so the record is clear, but I 16 understand how you'd like to conduct it, and 17 that's fine. 18 MR. ZELLERS: Understood. 19 BY MR. ZELLERS: 20 Q. Your counsel today has provided us with 21 two bankers boxes of your report, plus all of the 22 references from the report. Is that correct? 23 A. Yes. 24 Q. You also have brought that along with 25 you; is that right?</p>	<p>1 presentations. 2 Q. Is the curriculum vitae that we have 3 marked as Deposition Exhibit 3 complete and up to 4 date? 5 A. Yes. Up to January 3rd. Yes. 6 Q. Of 2019? 7 A. 2019. Yeah. 8 Q. Are there any further additions or 9 corrections that need to be made to that CV? 10 A. No. 11 MR. ZELLERS: Deposition Exhibit 4 is 12 the list of references from your report. And 13 that goes from Page 67 to Page 75. 14 Q. Is that correct? 15 A. Yes. 16 (List of references marked 17 Exhibit 4.) 18 MR. ZELLERS: Deposition Exhibit 5 is 19 also from your report, and it's a listing of 20 additional materials and data considered. 21 (Additional Materials and Data 22 Considered marked Exhibit 5.) 23 BY MR. ZELLERS: 24 Q. Is that right? 25 A. Yes.</p>

5 (Pages 14 to 17)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 18</p> <p>1 MR. ZELLERS: Deposition Exhibit 6 is 2 an updated list of materials that defendants were 3 provided on January 13th of 2019. 4 (Updated Materials List marked 5 Exhibit 6.) 6 BY MR. ZELLERS: 7 Q. Is that correct? 8 A. Yes. 9 MR. ZELLERS: Folks, I need one more of 10 those back. Can I get one more? Thank you. 11 Deposition Exhibit 7 is a listing of 12 the trial testimony and expert deposition 13 testimony that you have provided in the last five 14 years. 15 (List of Trial Testimony marked 16 Exhibit 7.) 17 BY MR. ZELLERS: 18 Q. Is that right? 19 A. Yes. Actually, I have provided them an 20 update, as well, of that. So I don't know if 21 that was with you, but -- 22 Q. You have brought with you today an 23 updated list of expert deposition testimony for 24 the last five years? 25 A. Yes. No. 7 is the update.</p>	<p style="text-align: right;">Page 20</p> <p>1 testimony list, several additional documents that 2 counsel for plaintiffs has indicated are 3 responsive to the deposition notice. 4 Let me mark these. I have not had a chance 5 to look at them yet substantively. 6 THE WITNESS: Sure. 7 MR. ZELLERS: But I will and may, at a 8 later time today, have some questions for you. 9 THE WITNESS: Actually, I will say 10 there's a substantive document that's not here. 11 That's the table of rating that I created for the 12 report, and that should be part of the report. 13 MR. ZELLERS: Let me see if I can find 14 that. 15 BY MR. ZELLERS: 16 Q. It would be helpful to have that marked 17 as well; is that right? 18 A. Yes. 19 MR. ZELLERS: I will mark, as 20 Deposition Exhibit 9, the Amstar rating of 21 reviews, Pages 77 and 78 from your full report. 22 (Table 1 AMSTAR marked 23 Exhibit 9.) 24 BY MR. ZELLERS: 25 Q. Is that right?</p>
<p style="text-align: right;">Page 19</p> <p>1 MR. ZELLERS: We will mark the updated 2 trial testimony list as Deposition Exhibit 8. 3 (List of Expert Deposition 4 marked Exhibit 8.) 5 MR. ZELLERS: And I understand that's 6 out of order, but I premarked one other exhibit. 7 BY MR. ZELLERS: 8 Q. What is the difference between 9 Deposition Exhibit 8, your updated list of 10 deposition testimony, and Exhibit 6, which is the 11 list of testimony you provided with your report 12 in November? 13 A. Yes. So there's an updated deposition 14 in a medical-legal case regarding standard of 15 care. 16 Q. You've added that -- 17 A. Yes. 18 Q. -- to -- 19 A. No. 7. 20 Q. -- what we have marked as Deposition 21 Exhibit 8? 22 A. Yes, it is. 23 Q. In addition to the materials that we 24 have marked already, which were provided, other 25 than the updated CV and the updated expert</p>	<p style="text-align: right;">Page 21</p> <p>1 A. Thank you. 2 MR. TISI: That was No. 9? 3 MR. ZELLERS: No. 9. 4 Let's go off the stenographic record. 5 You can keep the video going. 6 (Discussion off the stenographic record.) 7 MR. ZELLERS: Let's go back on the 8 stenographic record here. 9 Doctor, counsel for plaintiffs have 10 requested, and I am agreeable to marking a 11 complete copy of your report, including all of 12 the reference list and other materials that we've 13 marked individually, so the complete copy of your 14 report with all attachments, we will mark as 15 Deposition Exhibit 10. 16 (Rule 26 Expert Report of Sonal 17 Singh, MD, MPH, with attachments marked 18 Exhibit 10.) 19 BY MR. ZELLERS: 20 Q. Have we, though, marked individually 21 your complete record -- strike that. 22 Have we marked individually your complete 23 report prior to marking Exhibit 10? 24 A. Yes. 25 (Letter dated June 1, 2015</p>

6 (Pages 18 to 21)

Sonal Singh, M.D., M.P.H.

Page 22	Page 24
<p>1 marked Exhibit 11.)</p> <p>2 BY MR. ZELLERS:</p> <p>3 Q. The documents that were produced by</p> <p>4 counsel this morning, Deposition Exhibit 11, is a</p> <p>5 June 1st, 2015 letter with Janssen</p> <p>6 Pharmaceuticals at the top to you from a</p> <p>7 Dr. Zanca. Is that right?</p> <p>8 A. Yes.</p> <p>9 Q. Is this inviting you to a program?</p> <p>10 A. Yes. Consultation for a panel on</p> <p>11 products discussion manufactured by Johnson and</p> <p>12 Janssen Pharmaceuticals.</p> <p>13 Q. You're producing this in response to</p> <p>14 the request asking for all communications between</p> <p>15 yourself and any Johnson & Johnson company; is</p> <p>16 that right?</p> <p>17 A. That's what I understood it to be,</p> <p>18 but -- yeah.</p> <p>19 Q. You've gone and you've made a search,</p> <p>20 and in the search for additional records</p> <p>21 responsive to the Notice of Deposition, which we</p> <p>22 marked as Exhibit 1, you have brought these</p> <p>23 additional documents that we're marking here; is</p> <p>24 that correct?</p> <p>25 A. Well, I wouldn't say I made a search.</p>	<p>1 A. Yes.</p> <p>2 MS. PARFITT: And for the record,</p> <p>3 Mr. Zellers, and we can go ahead and redact the</p> <p>4 copy later, but just so the record is clear, that</p> <p>5 communication at the top to me from Dr. Singh was</p> <p>6 simply, we asked him, do you have any</p> <p>7 communications, and then he sent it to me.</p> <p>8 MR. TISI: We'll redact the part with</p> <p>9 your agreement.</p> <p>10 MR. ZELLERS: Yes. We can do that at a</p> <p>11 break --</p> <p>12 MS. PARFITT: At a break.</p> <p>13 MR. ZELLERS: -- or, you know, at the</p> <p>14 conclusion --</p> <p>15 MS. PARFITT: I appreciate that. Thank</p> <p>16 you.</p> <p>17 MR. ZELLERS: -- of the deposition.</p> <p>18 BY MR. ZELLERS:</p> <p>19 Q. Do you -- strike that.</p> <p>20 The date of your e-mail at the bottom of</p> <p>21 Page 1 is December 13th of 2018; is that right?</p> <p>22 A. Yes.</p> <p>23 Q. You had been retained as an expert?</p> <p>24 A. Yes.</p> <p>25 Q. And had submitted, in fact, your expert</p>
Page 23	Page 25
<p>1 I sort of read it, you know, decided, okay, what</p> <p>2 other additional things that are requested and,</p> <p>3 you know, recalled that I had had this</p> <p>4 interaction with Johnson & Johnson employees.</p> <p>5 Q. Are you comfortable that you have</p> <p>6 brought with you today all of the documents that</p> <p>7 are responsive to the Notice of Deposition?</p> <p>8 A. Yes.</p> <p>9 (Email string with top e-mail</p> <p>10 dated December 27, 2018 marked Exhibit 12.)</p> <p>11 MR. ZELLERS: All right.</p> <p>12 BY MR. ZELLERS:</p> <p>13 Q. Deposition Exhibit 12 is an e-mail</p> <p>14 string. The very last e-mail is from you to --</p> <p>15 well, it's to Michelle Parfitt. I'm assuming</p> <p>16 that you were forwarding to Ms. Parfitt just the</p> <p>17 e-mail below, which is from you to Mr. Restaino</p> <p>18 and then, apparently, the substantive e-mail is</p> <p>19 at the bottom of the first page of Exhibit 12.</p> <p>20 And this is a communication e-mail from you</p> <p>21 to Lee-May Chen and others; is that right?</p> <p>22 A. Yes.</p> <p>23 Q. The subject is "Up-to-date references."</p> <p>24 And the section on epidemiology and risk factors</p> <p>25 of ovarian cancer; is that right?</p>	<p>1 report that we have marked previously; is that</p> <p>2 right?</p> <p>3 A. Yes.</p> <p>4 Q. In this communication, Exhibit 12, do</p> <p>5 you at all identify yourself as a paid, retained</p> <p>6 expert for the plaintiffs in the talc litigation?</p> <p>7 A. No. This was just a communication</p> <p>8 about references, and I did not.</p> <p>9 MR. ZELLERS: Dr. Singh, the next set</p> <p>10 of documents that you have brought with you and</p> <p>11 that we will mark collectively as Exhibit 13 are</p> <p>12 your invoices.</p> <p>13 (Invoices from Dr. Singh marked</p> <p>14 Exhibit 13.)</p> <p>15 BY MR. ZELLERS:</p> <p>16 Q. The first invoice is dated July 14 of</p> <p>17 2010. There's a total of five invoices.</p> <p>18 The last invoice is from July 11, 2018, to</p> <p>19 November 19, 2018. Is that right?</p> <p>20 A. It should be 2017, not 2010. I'm</p> <p>21 sorry. You mentioned 2010.</p> <p>22 Q. And the date is 2017?</p> <p>23 A. Yeah. I wanted to correct that.</p> <p>24 Q. No. Thank you for correcting that.</p> <p>25 I also have not had a chance to review,</p>

7 (Pages 22 to 25)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 26</p> <p>1 substantively, the invoices. 2 A. Sure. 3 Q. And I don't think we have a complete 4 copy. I'm going to ask you some questions in a 5 bit. 6 A. We do have a complete copy. I mean, in 7 terms of -- 8 Q. No. I understand that Exhibit 13 is a 9 complete copy of your invoices. 10 A. Yeah. 11 Q. That you now have the copy in front of 12 you. I don't have the copy in front of me. Keep 13 it. I'll have some questions for you a bit 14 later. 15 Have we now marked all documents that are 16 responsive to the Notice of Deposition which you 17 have produced here today? And let me withdraw 18 that. 19 Have we now marked all of the documents that 20 you have produced in response to the Notice of 21 Deposition? 22 A. Yeah. And I think that, you know, 23 there were some updated materials that I reviewed 24 that are part of this list. 25 Q. All right. And we need to be more</p>	<p style="text-align: right;">Page 28</p> <p>1 (Plaintiffs' Steering 2 Committee's Response and Objections to the 3 Notice of Oral and Videotaped Deposition of 4 Sonal Singh and Duces Tecum marked Exhibit 5 14.) 6 MR. ZELLERS: Back on the stenographic 7 record. 8 Dr. Singh, at the request of 9 plaintiffs' counsel, we will mark and 10 incorporate, as an Exhibit 14, the objections 11 that plaintiffs have filed to the deposition 12 notice. 13 MS. PARFITT: Thank you. 14 BY MR. ZELLERS: 15 Q. Have we identified and marked all of 16 the documents that you have produced pursuant to 17 the Notice of Deposition? 18 A. We have. 19 Q. To your knowledge, there are no 20 additional documents that you have in your 21 possession to produce; is that right? 22 A. I don't have any additional documents. 23 Q. The report that we have marked as 24 Deposition Exhibit 10, does that contain all of 25 the opinions that you intend to offer at trial?</p>
<p style="text-align: right;">Page 27</p> <p>1 specific -- 2 A. Sure. 3 Q. -- as you understand from doing this 4 before. 5 You are referring to the list of updated 6 materials that was produced about a week ago? 7 A. Yeah. 8 Q. And that is Deposition Exhibit -- well, 9 strike that. 10 Just for the record, it was produced on 11 January 13th of 2019. The updated materials that 12 you have reviewed are listed on Deposition 13 Exhibit 6; is that right? 14 A. I have not reviewed these materials. I 15 was provided these materials. I have reviewed 16 portions of these. I have not had a chance to 17 review all of these materials. 18 Q. Anything else that you have responsive 19 to the deposition notice that we have not marked? 20 A. Give me a second. Let me read. 21 MS. PARFITT: If we can go off the 22 stenographic record for one moment while he's 23 doing it. 24 MR. ZELLERS: Sure. 25 (Discussion off the stenographic record.)</p>	<p style="text-align: right;">Page 29</p> <p>1 A. Actually, it's Deposition Exhibit 2. 2 Q. I understand. 3 A. Sorry. I'm a little confused here. 4 Q. That's fine. We don't want you to be 5 confused. And I asked you in the beginning to 6 tell me if you were getting confused. 7 We have marked Deposition Exhibit 10, which 8 contains all of the attachments -- 9 A. Okay. 10 Q. -- that we have separately marked; is 11 that right? 12 A. Yeah. Yeah. 13 Q. All right. The substance of your 14 report in terms of your written opinions, we have 15 marked separately as Exhibit 2; correct? 16 A. Yes. 17 Q. Does that report, Exhibit 2, and also 18 marked as Exhibit 10, contain all of the opinions 19 that you intend to offer at any trial or hearing 20 in this matter? 21 A. Well, I mean, it's hard to say it 22 contains all the opinions because there have been 23 some updates since then and, you know, science 24 evolves. 25 Q. Go ahead. Finish your answer.</p>

8 (Pages 26 to 29)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 30</p> <p>1 A. Science evolves, and, you know, we 2 update our opinions. So it's not like you offer 3 an updated opinion one day and that stays that 4 way. 5 Q. Dr. Singh, this is our opportunity to 6 ask you questions about the opinions that you 7 have formed in this matter. 8 As of today, does your report, which we've 9 marked as Exhibit 2 and also -- 10 MS. PARFITT: 10. 11 Q. -- Exhibit 10, does that include all 12 of the opinions that you intend to testify to at 13 any trial or hearing of this matter? 14 A. Yes. In terms of the causation 15 opinions, it does. But in terms of what 16 additional evidence has been reviewed or what 17 additional evidence has come up that, you know, 18 supports or refutes that, that might have 19 changed. 20 Q. Dr. Singh, do you have any new or 21 additional opinions today that you intend to 22 offer at any trial or hearing of this matter 23 beyond the opinions that are included in your 24 report which we've marked as Exhibit 2 and 25 Exhibit 10?</p>	<p style="text-align: right;">Page 32</p> <p>1 that you intend to provide at any hearing or 2 trial in this matter? 3 A. No. I'm relying on additional evidence 4 since then that has become available on this. 5 Q. Let's -- I will ask you a new question. 6 Are all of the materials that you are 7 relying on in forming the opinions that you 8 expect to testify to at any hearing or trial, 9 identified either in your report, which we have 10 marked as Exhibit 10, or the updated list of 11 materials, which we have marked as Exhibit 6? 12 A. Yes. 13 MS. PARFITT: And 5. 14 THE WITNESS: Okay. That's the part of 15 the whole report. 16 MR. ZELLERS: Yes. 17 BY MR. ZELLERS: 18 Q. Exhibit 5 had previously been produced 19 as part of your report; is that right? 20 A. Yes. 21 Q. Is your report accurate? 22 A. Yes. 23 Q. Is your report complete? 24 A. Yes, it is. It has some typos, but... 25 Q. As we go along, if there's a typo --</p>
<p style="text-align: right;">Page 31</p> <p>1 A. I'm sorry. I'm just not -- it's not 2 like I don't want to answer. I'm trying to 3 understand. When you say "additional opinions," 4 does it just mean like a causal opinion or does 5 it mean -- 6 Q. Dr. Singh, you have done this before; 7 right? 8 A. Yeah. I'm trying to understand and I'm 9 trying to be responsive. 10 Q. This is the defense opportunity to ask 11 you what opinions you intend to offer at any 12 hearing or trial of this matter. 13 As of today, do you have any additional 14 opinions beyond the opinions that are set forth 15 in your report which you intend to offer at any 16 trial or hearing of this matter? 17 A. I don't -- yeah -- I mean, it's, you 18 know, the opinions that I've offered are included 19 in the report. 20 Q. Does your report identify -- and by 21 "report," we can refer to the report that we've 22 marked as Exhibit 10. 23 A. Mm-hmm. 24 Q. Does that report identify everything 25 that you are relying on in forming the opinions</p>	<p style="text-align: right;">Page 33</p> <p>1 strike that. 2 Are there any typos that are substantive 3 typos? 4 A. No. But sometimes it's we and they. I 5 can point that out at some point in time. 6 Q. Are there any documents that were in 7 your possession that you produced to counsel 8 responsive to the deposition notice that have not 9 been produced here? 10 A. No. Not that I can think of. 11 Q. When were you first contacted by anyone 12 regarding the talc ovarian cancer litigation? 13 A. So this was in 2017 by Attorney John 14 Restaino and Attorney Parfitt. I don't know the 15 exact day, but it has to be the, you know, spring 16 or summer of 2017. Spring or summer. 17 Q. Your invoice, your first invoice is 18 dated July of 2017; is that right? 19 A. Yeah. But, you know, it just covers a 20 period of background. It's not that they 21 contacted me and may have contacted me prior to 22 that. 23 Q. Sometime in the first part of 2017, you 24 were contacted by Mr. Restaino and by 25 Ms. Parfitt; is that right?</p>

9 (Pages 30 to 33)

Sonal Singh, M.D., M.P.H.

Page 34	Page 36
<p>1 A. Yes.</p> <p>2 Q. Anyone else?</p> <p>3 A. No.</p> <p>4 Q. What attorneys have you met with or</p> <p>5 communicated with in the talc ovarian cancer</p> <p>6 litigation other than Ms. Parfitt and</p> <p>7 Mr. Restaino?</p> <p>8 A. So Attorney Chris Tisi, and then I have</p> <p>9 communicated on the phone with Attorney Gates.</p> <p>10 Is that -- no. Margaret?</p> <p>11 Q. Margaret Thompson?</p> <p>12 A. Thompson. Yeah.</p> <p>13 Q. Do you know Margaret Thompson?</p> <p>14 A. I mean, I know her as an attorney. I</p> <p>15 just spoke to her on the phone for 30 minutes.</p> <p>16 Q. Have you ever met in person with</p> <p>17 Ms. Thompson?</p> <p>18 A. No.</p> <p>19 Q. Have you ever had any communications or</p> <p>20 interactions with Ms. Thompson other than the</p> <p>21 30-minute-or-so phone call?</p> <p>22 A. No.</p> <p>23 Q. When was that conversation with</p> <p>24 Ms. Thompson?</p> <p>25 A. I don't know. A couple of days ago.</p>	<p>1 you asked to do?</p> <p>2 A. So to clarify, I don't know I was</p> <p>3 retained at that time.</p> <p>4 I was asked to consult on and provide, you</p> <p>5 know, a review and look at -- look at the</p> <p>6 literature on this topic. So I'm not sure --</p> <p>7 depending on semantics, you can define it as</p> <p>8 being retained or, you know -- I don't think we</p> <p>9 had an "agreement," but I was asked to provide a</p> <p>10 consultation on that matter. And these invoices</p> <p>11 include that consult.</p> <p>12 Q. In the first part of 2017, what were</p> <p>13 you asked by counsel for plaintiffs in the talc</p> <p>14 litigation, ovarian cancer talc litigation, to</p> <p>15 do?</p> <p>16 MS. PARFITT: Objection. Limit your</p> <p>17 response to communications with regard to simply</p> <p>18 the requests, not the conversations.</p> <p>19 A. Yeah. So I was asked to review, you</p> <p>20 know, the literature on talcum powder products</p> <p>21 and ovarian cancer.</p> <p>22 Q. Had you ever done that before?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 A. I mean, when I say "review," yes, I had</p> <p>25 read about talcum powder products and ovarian</p>
Page 35	Page 37
<p>1 Yeah.</p> <p>2 Q. It was in preparation for the</p> <p>3 deposition; is that right?</p> <p>4 A. Yes.</p> <p>5 Q. How much time did you spend with the</p> <p>6 lawyers for plaintiffs preparing for this</p> <p>7 deposition?</p> <p>8 A. With the lawyers, I've spent -- yeah,</p> <p>9 I'd have to go back, maybe five or six hours.</p> <p>10 But, again, I can't be very precise.</p> <p>11 Q. Any other attorneys that you've</p> <p>12 communicated with that you understand to</p> <p>13 represent the plaintiffs other than the attorneys</p> <p>14 that you have identified?</p> <p>15 A. No. Not that I can recall.</p> <p>16 Q. Do you understand that you are -- or</p> <p>17 strike that -- have been retained as an expert by</p> <p>18 plaintiffs in the MDL talc ovarian cancer</p> <p>19 litigation?</p> <p>20 A. Right now, I do. Yes.</p> <p>21 Q. Is there any other ovarian cancer</p> <p>22 litigation matter that you have been retained in?</p> <p>23 A. No.</p> <p>24 Q. When you were retained back in early</p> <p>25 2017 by Mr. Restaino and Ms. Parfitt, what were</p>	<p>1 cancer.</p> <p>2 Q. You were asked to make a systematic</p> <p>3 review of the literature relating to talcum</p> <p>4 powder products and ovarian cancer; is that</p> <p>5 right?</p> <p>6 A. Not necessarily a systematic review,</p> <p>7 but they asked me to, you know, review the</p> <p>8 literature, and I had been reading it from</p> <p>9 other -- from my own reading in different</p> <p>10 journals, and they asked me to, you know, review</p> <p>11 and, you know, provide my own opinion on that</p> <p>12 matter.</p> <p>13 Q. At some point, you were retained,</p> <p>14 agreed --</p> <p>15 A. Yes.</p> <p>16 Q. -- to work with the attorneys for</p> <p>17 plaintiffs; is that right?</p> <p>18 A. Yes.</p> <p>19 MS. PARFITT: Objection. Form.</p> <p>20 Q. Were you ever given any new or</p> <p>21 additional assignment in the MDL talc ovarian</p> <p>22 cancer litigation other than to do a literature</p> <p>23 review?</p> <p>24 MS. PARFITT: Objection. Form.</p> <p>25 A. Well, I mean, I guess I was, you know,</p>

10 (Pages 34 to 37)

Sonal Singh, M.D., M.P.H.

Page 38	Page 40
<p>1 asking the causal question that is the use of 2 talcum powder products a cause of ovarian cancer. 3 Q. You looked at the literature -- 4 A. Mm-hmm. 5 Q. -- to try to determine if you could 6 answer that question; is that right? 7 A. Yeah. So we looked at -- I looked at 8 the literature and, you know, obviously, looked 9 at other documents and performed a methodology, 10 and we can discuss that in detail later. 11 But the primary question of interest is -- 12 was, is the use of perineal use of talcum powder 13 products associated with and causally related to 14 the development of ovarian cancer. 15 Q. That has been the request from 16 plaintiffs' counsel to you in terms of providing 17 expert opinions in this matter; is that right? 18 A. Yes. 19 Q. When were you first asked to prepare a 20 report setting forth your opinions? 21 A. Again, I can't recall the specific 22 timelines. I'm sorry. It's been a while. 23 Q. Were you asked by plaintiffs to assume 24 any facts? 25 A. No. I mean, at that time, you know,</p>	<p>1 that right? 2 A. Yes. 3 Q. How much are you charging per hour for 4 your time in this case? 5 A. \$600 an hour. 6 Q. You have invoices in front of you. 7 What is the total value of the time that 8 you've spent on the talc ovarian cancer 9 litigation, whether that's been billed or not 10 billed, paid or not paid? 11 A. I can't calculate the time. I can 12 calculate -- 13 Q. Can you estimate it for us? 14 A. I don't want to give a number that's 15 inaccurate; right? I mean, these are accurate 16 numbers. But I will just have to sum it up -- 17 Q. Let's try to do this as quickly as we 18 can. 19 A. Yeah. 20 Q. The five invoices that you've marked 21 or -- strike that -- that we have marked as 22 Deposition Exhibit 13 -- 23 A. Mm-hmm. 24 Q. -- does that capture all of your time 25 on the ovarian cancer talc litigation through</p>
Page 39	Page 41
<p>1 and even prior to that, I was reading the 2 literature. I was, you know, agnostic to it. 3 And, yeah, I didn't -- in fact, I didn't 4 form an opinion on this topic until -- until the 5 very end of, you know, 2018. 6 Q. When you say you were "agnostic" -- 7 A. Mm-hmm. 8 Q. -- to this issue, whether or not 9 talcum powder products are associated with 10 ovarian cancer, do you mean that you had not 11 formally come up with or developed any opinions 12 prior to becoming involved as an expert for 13 plaintiffs? 14 MS. PARFITT: Objection. Form. 15 A. Yeah. So my -- what I mean is I had 16 not systematically reviewed the literature to 17 form an opinion whether talcum powder products 18 is, so I had not done the processes required to, 19 you know, develop an opinion. 20 Q. All right. You have now done that and 21 you're here to talk about it; is that right? 22 A. Yes. 23 Q. Plaintiffs' counsel have paid you for 24 your time to review documents, the literature, 25 prepare a report, and render your opinions; is</p>	<p>1 November of last year? 2 A. Yes. 3 Q. Is there any additional time that you 4 have spent on the talcum powder litigation up 5 through November of last year that's not 6 reflected in the invoices we've marked as 7 Exhibit 13? 8 A. No. 9 Q. All right. First invoice, what is the 10 total? 11 A. 9,300. 12 Q. The second invoice, total? 13 A. Twenty, one, zero, zero. 14 Q. 21,000? 15 A. 20,100. 16 Q. Next invoice, total? 17 A. 5,100. 18 Q. Next invoice, total? 19 A. 19,200. 20 Q. Last invoice, total? 21 A. 40,800. 22 Q. Since November of 2018, can you 23 estimate for us the number of hours that you have 24 spent on this matter? 25 A. So, I mean, apart from three to five</p>

11 (Pages 38 to 41)

Sonal Singh, M.D., M.P.H.

Page 42	Page 44
<p>1 hours that I spent with the lawyers, I don't 2 know. Maybe I've spent 10, 15 hours on my own. 3 Maybe more. I just don't have that exact number. 4 I'll have to look. 5 Q. At some point, you will submit an 6 invoice -- 7 A. Yes. 8 Q. -- for your time; is that right? 9 A. After today. Yeah. 10 Q. Have you been disclosed as an expert in 11 any other talcum powder proceeding aside from 12 this case? 13 A. No. 14 Q. What percent of your professional time 15 do you currently spend performing work as a 16 consultant? 17 A. Yeah. It could be -- you know, varies. 18 It could be 20 to 30 percent of my time. 19 Sometimes 20 percent. 20 Q. Has that 20 to 30 percent of your 21 professional time spent working as a consultant, 22 has that been consistent for the past five, ten 23 years? 24 A. Yeah. So, actually, it's been less in 25 the past, sometimes a little more, but, you know,</p>	<p>1 A. Okay. 2 Q. What percentage of income is from 3 consulting on litigation matters? Give us an 4 estimate. 5 A. Okay. Yeah. Maybe 30 percent. I'm 6 doing my best to give you -- 7 Q. Is that your -- you're here to be 8 truthful; correct? 9 A. Yeah. 10 Q. Is 30 percent of your income from 11 consulting on litigation matters, is that your 12 best estimate as you sit here today? 13 MS. PARFITT: Objection. Some clarity 14 as to over what period of time? 15 A. Yeah. Over five years, I mean, that's 16 my best estimate. 17 Q. Is it a little bit more now? 18 MS. PARFITT: Objection. 19 A. Well, over the last year, yes, but over 20 five. 21 Q. Over the last year, what are you 22 working on? You're working on the talc 23 litigation; is that right? 24 MS. PARFITT: Objection. Form. 25 Q. Doctor, did you hear my question?</p>
Page 43	Page 45
<p>1 overall, I would average out, you know, sort of 2 as I was preparing over the last five years, it 3 would probably be 15 to 20 percent, but, you 4 know -- 5 Q. Currently, though, best estimate is 20 6 to 30 percent; is that right? 7 A. Over the last six months. Yes. 8 Q. What percent of your income is from 9 consulting on litigation matters? 10 A. Again, I can't give you my gross 11 income. I mean, I -- 12 Q. I don't want your gross income. I'm 13 asking just for -- I just want to know a 14 percentage of your income that comes from 15 consulting in litigation cases. 16 A. Well, again, you know, consulting is 17 not just litigation for me. As I said, I've 18 consulted, you know, including for J&J, Eli 19 Lilly, others, that's, you know, on my CV. 20 Overall, and other, you know, insurers. So it's 21 not just -- first of all, it's not litigation 22 consulting that I do. 23 Q. Dr. Singh -- 24 A. Yes. 25 Q. -- listen to my question, if you can.</p>	<p>1 A. Yeah. Yeah. 2 Q. What other litigations are you serving 3 as an expert for? 4 A. Viagra. 5 Q. You're an expert for plaintiffs in 6 Viagra; is that right? 7 A. Yes. 8 Q. What other litigations are you serving 9 as an expert for plaintiffs in? 10 A. None other than that, that I know of. 11 Q. Are you still working as an expert for 12 plaintiffs in the Lipitor litigation? 13 A. That ended several years ago, as far as 14 I recall. 15 Q. You list two Tasigna cases against 16 Novartis. 17 Are you still working on those cases? 18 A. That ended in, I think, in -- yeah, it 19 ended. 20 Q. You list on your expert testimony, 21 2018; is that right? 22 A. Yes. I mean, but I listed everything 23 that was -- I have done in the five years. It 24 doesn't mean that those are ongoing. 25 Q. You are no longer serving as an expert,</p>

12 (Pages 42 to 45)

Sonal Singh, M.D., M.P.H.

Page 46	Page 48
<p>1 to your knowledge, in the Tassigna cases; is that 2 right? 3 A. Yes. 4 Q. How about the Rahmoeller versus Walmart 5 litigation, is that still ongoing? 6 A. That stopped, but, you know, it's been 7 a year since I've heard anything, so I don't 8 know. 9 Q. You also provided testimony in a matter 10 of Brufett versus Washington University. 11 Is that still ongoing? 12 A. That has ended. 13 Q. Is it fair to say that all of the cases 14 in which you have been retained in the past -- 15 A. Sure. 16 Q. -- as an expert for plaintiffs 17 involving a pharmaceutical company defendant have 18 involved prescription medications? 19 A. Yeah. Prescription medications, issues 20 of systems. I mean, that's my area of research. 21 Q. How much of your work is for plaintiffs 22 versus defense as a litigation consultant? 23 MS. PARFITT: Objection. Form. 24 A. Yeah. I mean, over the last ten years, 25 I've provided opinions to both sides, but I have</p>	<p>1 A. I don't understand. Like, what is a 2 personal injury? Is it like somebody -- MVA kind 3 of case or -- 4 Q. Well, you've been involved in Lipitor. 5 You have been involved in a number of other 6 litigations. Let me withdraw that question. Let 7 me make it a little more precise. 8 Have you ever been retained in a case 9 involving cosmetic products? 10 A. No. 11 Q. In the preparation of your report, did 12 you review the other expert reports provided by 13 plaintiffs in this MDL litigation? 14 A. I mean, other than those cited, I have 15 not had a chance to review them. 16 Q. The updated materials list that you 17 have produced here today, which we've marked as 18 Exhibit 6, it contains a number of expert reports 19 from plaintiff experts in the MDL talcum powder 20 ovarian cancer litigation; is that right? 21 A. Yes. 22 Q. What is Exhibit 6? It says "Updated 23 materials." 24 Does that mean updated materials that you 25 have reviewed and considered?</p>
Page 47	Page 49
<p>1 not been, you know -- when you say how much of 2 your work, is it time spent or -- 3 Q. In terms of time spent, most of your 4 work is for plaintiffs; is that right? 5 A. I would say, yeah, 70 percent. Yeah. 6 Q. And it can be more than 70 percent; is 7 that right? 8 MS. PARFITT: Objection to form. 9 Objection to form. 10 A. Well, it depends, again, for frame of 11 time and, you know, if you say yes, in the last 12 year, yes. More than -- 13 Q. Last year, it's been more than 14 70 percent -- 15 A. Sure. 16 Q. -- for plaintiffs; is that right? 17 A. Yes. 18 Q. Have you ever been retained in a case 19 involving asbestos? 20 A. No. 21 Q. Have you ever been involved in a 22 case -- strike that. 23 Have you ever been retained in a case 24 involving personal injuries? 25 MS. PARFITT: Objection. Form.</p>	<p>1 A. They were provided to me at some point 2 in time between November 15th, and I haven't 3 even -- I have actually not reviewed any of the 4 expert reports other than those that have been 5 cited in my report. 6 Q. This list of updated materials is 7 something that was provided to you by plaintiffs' 8 counsel; is that right? 9 A. Yes. 10 Q. Have you reviewed any of the materials 11 that are on the updated materials list, which we 12 have marked as Exhibit 6? 13 A. Yeah. I had a chance to review some of 14 them. 15 Q. Which materials that are identified on 16 Exhibit 6, updated materials, have you actually 17 looked at, reviewed, and considered? 18 A. Yeah. So, I mean, I was already aware 19 of the Health Canada assessment and, you know, so 20 that's -- I've reviewed. 21 I have reviewed, obviously, the Up to Date, 22 that child's sent. 23 I have reviewed the state of the science. I 24 have reviewed -- 25 Q. What do you mean "state of science"?</p>

13 (Pages 46 to 49)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 50</p> <p>1 Where is that listed?</p> <p>2 A. No. 2. No. 2.</p> <p>3 Q. All right. You've reviewed Chen Up to</p> <p>4 Date. You have reviewed the second reference,</p> <p>5 Committee on the State of Science.</p> <p>6 A. Yeah.</p> <p>7 Q. Have you reviewed the Evolving</p> <p>8 Paradigms and Research and Care?</p> <p>9 A. Yes.</p> <p>10 Q. The Draft Screening Assessment, Talc</p> <p>11 Health Canada?</p> <p>12 A. Yes.</p> <p>13 Q. The EFSA Science Committee?</p> <p>14 A. Yes.</p> <p>15 Q. The EPA documents that are listed?</p> <p>16 A. No.</p> <p>17 Q. The FDA Ingredients Talc?</p> <p>18 A. No.</p> <p>19 Q. The Fadak Burnola citation?</p> <p>20 A. Yes.</p> <p>21 Q. The Federal Register, Volume 81?</p> <p>22 A. Yes.</p> <p>23 Q. Have you reviewed the Kemp hearing</p> <p>24 opinion and order?</p> <p>25 A. I don't think so.</p>	<p style="text-align: right;">Page 52</p> <p>1 Q. Did you review Talc Information Sheet,</p> <p>2 Health Canada?</p> <p>3 A. Yes.</p> <p>4 Q. Talc Potential Risk of Lung Effects?</p> <p>5 A. Yes.</p> <p>6 Q. Task Force on Science Risk Assessment?</p> <p>7 A. Yes.</p> <p>8 Q. The Weed Reference?</p> <p>9 A. Yes.</p> <p>10 Q. And the Zervomanolakis citation?</p> <p>11 A. Yes.</p> <p>12 Q. Have we covered all of the materials</p> <p>13 that you've reviewed on the updated materials</p> <p>14 list? Is that right?</p> <p>15 A. Yes.</p> <p>16 Q. Have you communicated or had any</p> <p>17 discussions with any of the other plaintiffs'</p> <p>18 experts in the talc ovarian cancer litigation?</p> <p>19 A. No.</p> <p>20 Q. Have you reviewed any deposition or</p> <p>21 trial transcripts from prior talcum powder cases?</p> <p>22 A. Not prior cases, but I reviewed the</p> <p>23 deposition of Dr. Plunkett.</p> <p>24 Q. Plunkett?</p> <p>25 A. Plunkett.</p>
<p style="text-align: right;">Page 51</p> <p>1 Q. The Keys Model Information Bias?</p> <p>2 A. Yes.</p> <p>3 Q. Kunz?</p> <p>4 A. Yes.</p> <p>5 Q. Official Journal of the European Union?</p> <p>6 A. No.</p> <p>7 Q. Qiao, Q-I-A-O?</p> <p>8 A. No.</p> <p>9 Q. Risk Management Scope, Talc Health</p> <p>10 Canada?</p> <p>11 A. No.</p> <p>12 Q. You have not reviewed any of the</p> <p>13 plaintiff expert reports submitted in this</p> <p>14 matter. Is that your testimony?</p> <p>15 A. Yeah. They were provided to me and,</p> <p>16 you know, I formed my opinion independent of</p> <p>17 them.</p> <p>18 Q. Have you reviewed any of the reports</p> <p>19 prepared and submitted by plaintiffs that are</p> <p>20 identified in your updated materials?</p> <p>21 A. No. Except if any of them were cited,</p> <p>22 that's the one that I reviewed it in.</p> <p>23 Q. Yup. Did you review Talc Canada Plain</p> <p>24 Language Summary?</p> <p>25 A. Yes.</p>	<p style="text-align: right;">Page 53</p> <p>1 Q. Have you reviewed any other depositions</p> <p>2 of experts that have been taken in the MDL</p> <p>3 ovarian cancer talcum powder litigation?</p> <p>4 A. No.</p> <p>5 Q. Did you conduct any independent</p> <p>6 investigation to reach your opinions?</p> <p>7 A. I mean, I -- my opinion is independent</p> <p>8 of these.</p> <p>9 Q. As I understand it, what you did is you</p> <p>10 were asked by plaintiffs to review and consider</p> <p>11 and form an opinion regarding the causal</p> <p>12 question. Is that right?</p> <p>13 A. Yes.</p> <p>14 Q. To do that, you went and you reviewed a</p> <p>15 number of different literature sources; is that</p> <p>16 right?</p> <p>17 MS. PARFITT: Objection. Misstates his</p> <p>18 opinion. He indicated he had reviewed some prior</p> <p>19 to that.</p> <p>20 MR. ZELLERS: Ms. Parfitt, just object,</p> <p>21 form. And let's not have speaking objections.</p> <p>22 MS. 14 (Pages 50 to 53)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 54</p> <p>1 recross, but I'm trying to clean it up. 2 BY MR. ZELLERS: 3 Q. Doctor, go ahead. 4 A. I didn't get the question. Can you 5 repeat? 6 Q. Sure. The question is: You were asked 7 to form an opinion by plaintiffs. You went out 8 and you reviewed the literature. 9 You considered the literature and you 10 formulated an opinion; is that right? 11 A. Yes. 12 MS. PARFITT: Objection. 13 A. And it was an independent opinion. 14 Q. An independent opinion based upon your 15 review of the literature; is that right? 16 A. Yeah. Based upon my review of the 17 literature and the documents and, you know, 18 whatever was available to me. 19 Q. And those -- all of those materials 20 that you reviewed, considered and relied upon 21 have been included in the exhibits that we've 22 marked in this deposition; is that right? 23 A. That is correct. 24 Q. Was there anything that you asked 25 plaintiffs' counsel for to prepare your report</p>	<p style="text-align: right;">Page 56</p> <p>1 not necessarily the ones who may have helped me 2 in printing articles. 3 Q. My question is: Who helped prepare 4 your report other than yourself? 5 MS. PARFITT: Objection. Objection. I 6 believe you've asked that. He's answered it. 7 A. Okay. Let me answer. 8 Q. Sure. Go ahead, Doctor. Please 9 answer. 10 A. I prepared my report. 11 Q. I understand you prepared your report. 12 My question is: Did anyone assist you in 13 preparing your report? 14 MS. PARFITT: Objection. 15 A. No. 16 Q. You were provided some materials by 17 plaintiffs' counsel; is that right? 18 A. Yes. 19 Q. You reviewed some of those materials, 20 but not all of those materials; is that right? 21 A. Yes. 22 Q. In terms of the references, Exhibit 4. 23 And that is identified as Pages 67 through 75 in 24 your full report that we marked as Exhibit 10. 25 But looking at your references, Exhibit 4,</p>
<p style="text-align: right;">Page 55</p> <p>1 that you were not provided with? 2 A. No. 3 Q. Did anyone assist you in the 4 preparation of your report? 5 A. Well, I may have asked them to print, 6 like, these things and, you know, I may have 7 asked my -- I had means to print some articles 8 when I was preparing that. 9 Q. Do you have a staff? 10 A. Yes. 11 Q. All right. Who is your staff? 12 A. I have several staff. I have, you 13 know, three offices. 14 Q. So you have three offices? 15 A. Yes. 16 Q. In those three offices, do you have 17 folks who help you? 18 A. Yeah. 19 MS. PARFITT: Objection to form. 20 Q. Do you have folks who do research? 21 MS. PARFITT: Objection. Form. 22 A. So, I mean -- so I have a dual 23 appointment in my research, and so I have 24 clinical staff and my research staff. I have 25 people who work with me on projects. They are</p>	<p style="text-align: right;">Page 57</p> <p>1 some of these references were provided by counsel 2 for plaintiffs to you; is that right? 3 MS. PARFITT: Objection. 4 A. Yes. 5 Q. Some, you went out and found on your 6 own; is that right? 7 A. Well, it's not that way. It's the 8 majority of the references, I would say 9 95 percent of, are my own work, and, you know, I 10 had questions about the product and the 11 mechanism, what additional documents were 12 available. 13 And that's a process. And documents were 14 provided, and they need to be cited and are 15 cited. 16 Q. Are you able to tell us, of the 17 references that you cite, Deposition Exhibit 4, 18 which ones came from plaintiffs' counsel and 19 which ones you came up with on your own? 20 MS. PARFITT: Objection. Form. 21 A. Sure. 22 Q. You could do that if we went through 23 one by one? 24 A. Yeah. 25 Q. Let me ask you the same question with</p>

15 (Pages 54 to 57)

Sonal Singh, M.D., M.P.H.

Page 58	Page 60
<p>1 respect to the additional materials and data 2 considered, Exhibit 5. 3 Do you see that? 4 A. Yes. 5 Q. What's the difference between 6 Exhibit 4, references, and Exhibit 5, additional 7 materials and data considered? 8 A. So as I went about and did my, you 9 know, systematic review and, you know, umbrella 10 review, I gathered all the materials and, you 11 know, I included studies and data that provided 12 original data on the causal question that we 13 discussed. 14 Q. Doctor, my question was simply, what's 15 the difference between references and additional 16 materials and data considered? 17 A. So the additional materials are those 18 that were, I would say, you know, reviewed, were 19 still reviewed in forming the opinion, but they 20 are not -- they don't -- they don't form the 21 basis of my opinion. 22 Q. The materials that you relied on in 23 forming your opinion are what you've set forth as 24 your references, Exhibit 4; is that right? 25 MS. PARFITT: Objection.</p>	<p>1 additional materials and data considered, items 2 that are listed in Exhibit 5? 3 A. By reviewed and considered, I mean, 4 have I read every word of it? No. I reviewed 5 and considered. 6 Q. Who prepared the additional materials 7 and data considered list? 8 MS. PARFITT: Objection. 9 A. I prepared the list, but I asked them 10 also to help me with what materials they had 11 sent. 12 Q. The lawyers for plaintiffs; is that 13 right? 14 A. Yes. 15 Q. So in your documents, you do have a 16 listing of the materials that were provided to 17 you by plaintiffs' counsel for consideration; is 18 that right? 19 MR. LOCKE: Objection. Misstates the 20 testimony. 21 A. I'm sorry. Can you repeat? 22 Q. Sure. The question is: You do have, 23 because you requested it, a listing of the 24 documents and materials that were provided to you 25 by plaintiffs' counsel for you to consider;</p>
Page 59	Page 61
<p>1 A. Yeah. I mean, and then things that, 2 you know -- obviously, for the report, it is the 3 references. Yeah. 4 I did rely on these to review them and, you 5 know -- 6 Q. Did you -- strike that. 7 MS. PARFITT: For the record, that was 8 Exhibit 5. 9 MR. ZELLERS: Well, no -- well, the 10 references is Exhibit 4. The additional 11 materials and data considered is Exhibit 5. 12 MS. PARFITT: Correct. 13 BY MR. ZELLERS: 14 Q. So looking at Exhibit 5, additional 15 materials and data considered, were some of these 16 materials provided to you by counsel for 17 plaintiffs? 18 A. Yeah. They may have been. These are 19 data considered. So I'm not as familiar with 20 these as -- 21 Q. Have you -- are you finished? 22 A. Yeah. I'm not -- I mean, I reviewed 23 them. I, you know -- 24 Q. Is it your testimony that you have 25 reviewed and considered each and every one of the</p>	<p>1 correct? 2 MS. PARFITT: Objection. Misstates his 3 testimony. 4 He didn't say he got a list. 5 MR. ZELLERS: Okay. Ms. Parfitt, 6 please, form, foundation. You know, he can 7 testify, and whatever he's testified to, it's 8 part of the record. 9 MS. PARFITT: Sure. And, Mr. Zellers, 10 I am not trying to interrupt your deposition, 11 trust me on that, but I do want some clarity to 12 the record. 13 MR. ZELLERS: Great. That's what we're 14 doing right here. 15 MS. PARFITT: Well -- 16 MR. ZELLERS: We've now asked the 17 question two or three times. 18 BY MR. ZELLERS: 19 Q. Do you have the question? 20 MS. PARFITT: It's a little different. 21 But go ahead. 22 A. So I had asked for additional materials 23 in understanding the causal question between 24 talcum powder products and ovarian cancer. 25 Q. What additional materials did you</p>

16 (Pages 58 to 61)

Sonal Singh, M.D., M.P.H.

Page 62	Page 64
<p>1 request?</p> <p>2 A. I requested additional materials</p> <p>3 regarding what are the constituents of talcum</p> <p>4 powder products. I -- you know, additional</p> <p>5 materials regarding testing of talcum powder</p> <p>6 products -- I -- you know, anything to, you know,</p> <p>7 enhance my understanding whether there's evidence</p> <p>8 to support or refute what we are seeing in the</p> <p>9 epidemiologic studies about an increased risk of</p> <p>10 ovarian cancer with talcum powder products.</p> <p>11 Q. When you requested these materials,</p> <p>12 testing materials, ingredient materials and any</p> <p>13 other materials, did you want to see all of the</p> <p>14 materials that were available so that you could</p> <p>15 form your opinion?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 A. All is -- you know, there's only so</p> <p>18 many hours. I mean, you know, I think I wanted</p> <p>19 to see as much as, you know, was relevant to</p> <p>20 forming an opinion.</p> <p>21 Q. Well, you asked for records of testing</p> <p>22 and you were provided with records, and we'll</p> <p>23 take a look at it --</p> <p>24 A. Sure.</p> <p>25 Q. -- that purport to show that there is</p>	<p>1 material, I can tell you, there's not enough time</p> <p>2 to review all of it. I mean, if somebody has,</p> <p>3 that's great. I can't.</p> <p>4 Q. Are you done?</p> <p>5 A. Yes.</p> <p>6 Q. Did you, when you made that request,</p> <p>7 intend for plaintiffs to provide you with all of</p> <p>8 the information that was available related to</p> <p>9 testing or related to ingredients or whatever</p> <p>10 other issues you requested documents on?</p> <p>11 MS. PARFITT: Objection. Form.</p> <p>12 A. Yes.</p> <p>13 Q. All right. In your report, you cite --</p> <p>14 and this is in references -- to the depositions</p> <p>15 of witnesses in the talcum powder litigation.</p> <p>16 For example, and let's take a look at Exhibit 4,</p> <p>17 your references, Cite No. 4 is to the deposition</p> <p>18 of Linda Loretz.</p> <p>19 Did you review this?</p> <p>20 A. Yes, I did.</p> <p>21 Q. And who is she?</p> <p>22 A. I don't recall offhand, who she is.</p> <p>23 Q. Is that information that was provided</p> <p>24 to you by plaintiffs' counsel?</p> <p>25 A. Yes.</p>
Page 63	Page 65
<p>1 asbestos or asbestos has been found in talcum</p> <p>2 powder; correct?</p> <p>3 A. I mean, that's not the only -- that's</p> <p>4 not only --</p> <p>5 Q. Understood.</p> <p>6 MS. PARFITT: Excuse me. Let him</p> <p>7 finish his answer, if you will, please. I'm not</p> <p>8 sure he was done. Appreciate that.</p> <p>9 Q. Are you done?</p> <p>10 A. No. I'm not. I want to finish my</p> <p>11 answer.</p> <p>12 Q. Okay.</p> <p>13 A. So I requested documents because I</p> <p>14 wanted to understand what constitutes talcum</p> <p>15 powder products, and whether it is asbestos or</p> <p>16 whether it is other heavy metals, that's sort of</p> <p>17 a separate answer, and we can discuss that, and</p> <p>18 I'm sure we will.</p> <p>19 But I wanted to understand the constitution</p> <p>20 of the product and, you know, whether there were</p> <p>21 additional studies on, you know, whether it was</p> <p>22 mechanisms that -- so because -- so that's what</p> <p>23 the request was for.</p> <p>24 And the documents were provided. And my</p> <p>25 review, looking at the complexity and volume of</p>	<p>1 Q. Who is Joshua Muscat, reference list,</p> <p>2 Cite No. 5?</p> <p>3 A. I think he did one of the</p> <p>4 meta-analyses. He's an author of one of the</p> <p>5 meta-analyses as well.</p> <p>6 Q. Who is Alice Blount, Cite 27?</p> <p>7 A. Yeah. They did a study on talc and</p> <p>8 also I was deposed on that.</p> <p>9 Q. Did you request that deposition or was</p> <p>10 that provided to you?</p> <p>11 MS. PARFITT: Objection.</p> <p>12 A. I requested information on -- as I</p> <p>13 said, my request wasn't for deposition -- you</p> <p>14 know, all documents that helped me answer the</p> <p>15 causal question.</p> <p>16 Q. Whether they support plaintiffs'</p> <p>17 position or refute plaintiffs' position; is that</p> <p>18 right?</p> <p>19 A. To answer the causal question. That's</p> <p>20 what --</p> <p>21 Q. You wanted, though, all relevant</p> <p>22 documents, whether they supported plaintiffs'</p> <p>23 position or whether they refuted plaintiffs'</p> <p>24 position; correct?</p> <p>25 A. To answer the causal questions. I</p>

Sonal Singh, M.D., M.P.H.

Page 66	Page 68
<p>1 don't --</p> <p>2 Q. Can you not answer that question?</p> <p>3 MS. PARFITT: Objection. I believe --</p> <p>4 A. I'm answering your question.</p> <p>5 MS. PARFITT: -- he did.</p> <p>6 Q. My question is: When you requested</p> <p>7 documents from plaintiffs' counsel on various</p> <p>8 topics, did you expect to receive whatever</p> <p>9 documents may support plaintiffs' position and</p> <p>10 whatever documents may refute plaintiffs'</p> <p>11 position?</p> <p>12 A. Yes.</p> <p>13 Q. All right. Who is John Hopkins,</p> <p>14 reference item -- strike that -- reference list,</p> <p>15 Cite 33?</p> <p>16 A. I think it's -- yeah. It's a</p> <p>17 deposition on behalf of J&J, I think.</p> <p>18 Q. Do you know who Mr. Hopkins is?</p> <p>19 A. No, I don't.</p> <p>20 Q. Do you know what role he had with</p> <p>21 talcum powder?</p> <p>22 MS. PARFITT: Objection. Form.</p> <p>23 A. I mean, he was deposed in this</p> <p>24 litigation and he provided testimony.</p> <p>25 Q. The question is: Do you know what role</p>	<p>1 A. So we can -- we can go back to the</p> <p>2 sections where I cite these and then we can</p> <p>3 discuss. Is that okay?</p> <p>4 Q. No. Well, and if you need to -- if you</p> <p>5 can't answer a question, tell me you can't answer</p> <p>6 a question.</p> <p>7 My question is: For these five or six folks</p> <p>8 who you have quoted a snippet from their</p> <p>9 deposition, did you review their entire</p> <p>10 transcript or did you just review an excerpt?</p> <p>11 MS. PARFITT: Objection to the form.</p> <p>12 A. So the answer will be, we have to go</p> <p>13 one by one.</p> <p>14 Q. All right. For Mr. Hopkins, did you</p> <p>15 review his entire deposition?</p> <p>16 A. No.</p> <p>17 Q. For Ms. Pier, did you review her entire</p> <p>18 deposition?</p> <p>19 A. No.</p> <p>20 Q. For Ms. Blount, did you review her</p> <p>21 entire deposition?</p> <p>22 A. I recall, yes.</p> <p>23 Q. Yes, you did?</p> <p>24 A. Yes.</p> <p>25 Q. For Ms. Loretz, did you review her</p>
Page 67	Page 69
<p>1 Mr. Hopkins played in and with talcum powder?</p> <p>2 A. He was providing testimony on behalf of</p> <p>3 the company. Is that --</p> <p>4 Q. Other than that, do you know anything</p> <p>5 about what he did on behalf of the company?</p> <p>6 A. No.</p> <p>7 Q. Do you know what his positions were?</p> <p>8 A. I don't recall.</p> <p>9 Q. Do you know what his duties and</p> <p>10 responsibilities were?</p> <p>11 A. I don't review that as a part of my</p> <p>12 deposition, is to review positions and do</p> <p>13 responsibilities.</p> <p>14 Q. And who is Julie Pier, Item 35?</p> <p>15 A. She was testifying on behalf of Imerys,</p> <p>16 I think.</p> <p>17 Q. Do you know her position?</p> <p>18 A. I don't review -- you know, she was</p> <p>19 testifying for the company, as that's as far as I</p> <p>20 know. Again, I don't know what role she was</p> <p>21 playing and what she does.</p> <p>22 Q. Did you read, for each of these</p> <p>23 depositions that you reference and cite to, did</p> <p>24 you read just that section or did you read the</p> <p>25 entire transcript?</p>	<p>1 entire deposition?</p> <p>2 A. Yes.</p> <p>3 Q. Did -- strike that.</p> <p>4 For Mr. Muscat, did you review his entire</p> <p>5 deposition?</p> <p>6 A. Yes, I did.</p> <p>7 Q. Did you review all of the exhibits to</p> <p>8 those depositions?</p> <p>9 A. Again, those are pages and pages of</p> <p>10 documents. I don't know that -- if I reviewed</p> <p>11 every single page of it.</p> <p>12 Q. Is it your practice, outside of</p> <p>13 litigation, to rely on excerpts of deposition</p> <p>14 testimony?</p> <p>15 A. Well, I mean, when you say "excerpts of</p> <p>16 depositions," when I reviewed evidence, when I</p> <p>17 try to gather evidence, as I said, you know, I</p> <p>18 was trying to answer the causal question; I try</p> <p>19 to gather all relevant evidence to the relevant</p> <p>20 causal question at hand.</p> <p>21 And sometimes these are unpublished</p> <p>22 documents, and sometimes these are regulatory</p> <p>23 documents and sometimes, as is in this case, they</p> <p>24 are depositions. And this approach is quite</p> <p>25 consistent with other -- other approaches, such</p>

18 (Pages 66 to 69)

Sonal Singh, M.D., M.P.H.

Page 70	Page 72
<p>1 as those conducted by, you know, Health Canada. 2 I mean, they clearly state that, you know, 3 you gather all relevant available evidence. 4 Q. That was your goal; is that right? 5 A. Yes. 6 Q. Did Health Canada review deposition 7 testimony of company witnesses, to your 8 knowledge? 9 A. Well, they were not available to them. 10 Q. When you practice, outside of being a 11 litigation consultant, do you rely on excerpts of 12 deposition testimony? 13 A. Well, again, you know, outside of this, 14 when I do papers -- I mean, I do include 15 unpublished or whatever you can collect, 16 whether -- whether it's excerpts of -- I mean, I 17 haven't -- if I look at my past papers, I can't 18 say that I've used excerpts of deposition 19 transcripts. 20 Q. Did -- strike that. 21 You also cite company documents in your list 22 of references; is that right? 23 A. Which one is that? 24 Q. Exhibit 4. 25 A. Which company?</p>	<p>1 as humanly possible. 2 Q. My question is a little more specific. 3 I'm talking now just about any documents produced 4 by Johnson & Johnson defendants or any documents 5 produced by Imerys defendants. 6 You do cite to several of those in your 7 reference list; correct? 8 A. Yes. 9 Q. You were provided those documents by 10 counsel for plaintiffs; correct? 11 A. Yes. 12 Q. Were you provided a large set of 13 materials, company documents from the J&J 14 defendants and from the Imerys defendants, or 15 were you provided with select documents? 16 MS. PARFITT: Objection. Form. 17 A. I mean, these are company documents. I 18 mean, what is the difference between the two? 19 Like explain to me by example. 20 Q. Were you provided a box of J&J 21 documents or documents produced by J&J for your 22 review by plaintiffs' counsel? 23 MS. PARFITT: Objection. Form. 24 A. I don't know. I mean, they provided 25 documents. I see them as documents. I don't see</p>
Page 71	Page 73
<p>1 Q. Well, for example, Item 116 refers to 2 an Imerys document, item 63 refers to a document 3 or set of documents produced by the 4 Johnson & Johnson defendants; correct? 5 A. What was the second one? I'm sorry. 6 You said 116 and then? 7 Q. Yes. Sixty -- 8 MS. PARFITT: 63. 9 Q. 63. 10 A. I'll have to go back and see what do 11 they cite about, to refresh my memory. 12 Q. As you sit here, you don't remember 13 what those documents are, do you? 14 A. Yeah. Yeah. I'd have to go back. 15 Q. Is that correct? 16 A. Yeah. I mean, I have to go back to my 17 report and see them. 18 Q. My question is: Did plaintiffs' 19 counsel provide you with a large set of J&J 20 and Imerys company documents and you went through 21 and whittled them down, or did they provide you 22 with select documents? 23 MS. PARFITT: Objection. Form. 24 A. Well, I mean, I feel it's a large set. 25 As you can see, I've reviewed, you know, as much</p>	<p>1 a difference between. You can -- you know, you 2 can make that connection. 3 Q. Let me do it this way. 4 A. Sure. 5 Q. Are the documents that you reviewed 6 relating to those produced by J&J or produced by 7 Imerys, do you list those in your references, 8 Exhibit 4, and your additional materials and data 9 considered, Exhibit 5? 10 A. They are listed. Yes. 11 Q. All right. When you are doing your day 12 job, outside of your litigation consulting work, 13 do you rely on internal company documents? 14 MS. PARFITT: Objection. Form. 15 A. I mean, I have relied on company 16 documents. When you say "internal company 17 documents," that's, you know -- yeah. I have 18 relied on company documents. We have relied on 19 company trial registries for publications. We 20 have relied on -- whether you're talking about 21 company communication, that's different. 22 But in terms of if we have data available 23 from the company, there's no reason not to rely 24 on that. 25 Q. I'm talking about company</p>

19 (Pages 70 to 73)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 74</p> <p>1 communications, the types of documents that you 2 cite from or produced by J&J and by Imerys in 3 your reference list. 4 Those are not the types of materials that 5 you typically would rely on if you were doing a 6 study for publication; correct? 7 MS. PARFITT: Objection. Form. 8 A. And, again, I've just said that, you 9 know, I gathered all the relevant evidence, as 10 would -- you know, as a methodology that's 11 acceptable and considered. 12 But, you know, in my previous reviews, I've 13 not had access to -- access to those documents. 14 And that's the only -- that's the only place 15 where you can get access to these documents. 16 Q. The answer to my question is no, you 17 know, when you publish articles, you do not rely 18 on internal company documents or communications 19 as you are in this litigation matter; correct? 20 MS. PARFITT: Objection. Form. 21 A. The reason is because there's a 22 confidentiality order. And so you can't say you 23 can't publish articles when you can't access 24 them. I mean, there's a chicken and egg, here, 25 right?</p>	<p style="text-align: right;">Page 76</p> <p>1 testimony. 2 A. I've already stated that when I publish 3 articles, the approach is to gather all relevant, 4 available evidence. 5 And I have, in fact -- you can go back at my 6 articles -- and included data from company 7 documents in various systematic reviews and 8 meta-analyses. So this idea that I have not 9 relied on company documents is -- you know, is 10 not. 11 The question is about deposition transcripts 12 and communiques. Those are generally not 13 available in the published domain, and even for 14 this particular instance, you know, for there's a 15 confidentiality order. I'm just trying to 16 explain what happens. 17 Q. So that our record is clear, when you 18 talk about internal communiques, we're talking 19 about internal communications, in this case, 20 materials that you have been provided by 21 plaintiffs that have been produced by J&J and by 22 Imerys. 23 Those are not the types of documents that 24 you typically have available and rely upon in 25 your published work; correct?</p>
<p style="text-align: right;">Page 75</p> <p>1 Q. Understood. 2 The answer, though, to my question is yes; 3 correct? 4 MS. PARFITT: Objection. Form. 5 A. The reason is because these 6 documents -- 7 Q. Doctor, you need to answer the 8 question. 9 MS. PARFITT: Wait, Mr. Zellers. 10 Excuse me. Let the witness answer the question. 11 MR. ZELLERS: I'm asking him to answer 12 the question and then I'll be happy to move on. 13 MS. PARFITT: No. You're telling him, 14 say yes. He's trying to answer your question. 15 Ask him again. He'll answer the 16 question. He's done it twice. 17 Q. Do you need me to repeat the question? 18 A. Yes, please. 19 MR. ZELLERS: Could you read the 20 question? 21 I'll ask it again. 22 Q. Dr. Singh, when you publish articles, 23 you do not rely on internal company documents; 24 correct? 25 MS. PARFITT: Objection. Misstates his</p>	<p style="text-align: right;">Page 77</p> <p>1 MS. PARFITT: Objection. Misstates his 2 testimony. 3 Q. Is that correct, Doctor? 4 MS. PARFITT: Objection. Misstates his 5 testimony. 6 A. These are just not available to form an 7 opinion in the published domain. 8 Q. You have an additional -- 9 THE WITNESS: Can I take a break? 10 MR. ZELLERS: Sure. Of course. At any 11 time. 12 THE WITNESS: Sorry about that. 13 MR. ZELLERS: No. That's fine. 14 THE VIDEOGRAPHER: Off the record. 15 10:22 a.m. 16 (A recess was taken.) 17 THE VIDEOGRAPHER: Here begins media 18 No. 2 in today's deposition of Sonal Singh, M.D., 19 M.P.H. Back on the record, 10:35 a.m. 20 BY MR. ZELLERS: 21 Q. Dr. Singh, are you ready to continue? 22 A. Yes, I am. 23 Q. When we broke, we were looking at the 24 additional materials and data considered list, 25 which we have marked as Deposition Exhibit 5.</p>

20 (Pages 74 to 77)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 78</p> <p>1 Do you have that?</p> <p>2 A. Yes.</p> <p>3 Q. There are some documents on this list</p> <p>4 that have a preface of Imerys. And if you look</p> <p>5 on Page 87, you list those documents out. And</p> <p>6 then turning to Page 88, there's a series of</p> <p>7 documents that begin with J&J.</p> <p>8 Do you see those?</p> <p>9 A. Yes.</p> <p>10 Q. Did you rely on those documents in</p> <p>11 informing your opinions?</p> <p>12 A. No. I mean, I reviewed -- I don't know</p> <p>13 if I reviewed them in full. I just -- you know,</p> <p>14 they were provided to me.</p> <p>15 Q. That is, the set of documents that were</p> <p>16 provided to you by counsel for plaintiffs; is</p> <p>17 that right?</p> <p>18 A. Yes.</p> <p>19 Q. Are you able, as we sit here, to tell</p> <p>20 me what those documents are?</p> <p>21 A. Yeah. I mean, for example, some of</p> <p>22 them is, you know, duplicative of expert reports</p> <p>23 that are listed here. I don't know by number and</p> <p>24 number, J&J, what that means.</p> <p>25 Q. I'm referring to, for this series of</p>	<p style="text-align: right;">Page 80</p> <p>1 answer the causal question in this case; is that</p> <p>2 right?</p> <p>3 A. Yes.</p> <p>4 MS. PARFITT: Objection.</p> <p>5 Q. You did not have access to internal</p> <p>6 documents of J&J companies or of Imerys; is that</p> <p>7 right?</p> <p>8 A. Yes.</p> <p>9 Q. You asked for those documents, the ones</p> <p>10 that would be relevant to you in forming an</p> <p>11 answer to the question you were asked of</p> <p>12 plaintiffs' counsel; correct?</p> <p>13 A. Yeah. Relevant to consider or support</p> <p>14 or refute. Yeah.</p> <p>15 Q. The documents that were provided to you</p> <p>16 are the documents that appear with a J&J</p> <p>17 preface -- preface and an Imerys preface in the</p> <p>18 reference list, Exhibit 4, and in the additional</p> <p>19 materials and data considered list, Exhibit 5;</p> <p>20 correct?</p> <p>21 A. Yes.</p> <p>22 Q. Once you got those documents and you</p> <p>23 looked at those documents -- and you're not sure</p> <p>24 you looked at all of them; is that right?</p> <p>25 A. Yes. I did not. I mean --</p>
<p style="text-align: right;">Page 79</p> <p>1 questions, just to the other materials that you</p> <p>2 have listed, the ones that begin with Imerys. So</p> <p>3 starting at Item 2 on Page 87. And then also</p> <p>4 including the documents that begin J&J that go</p> <p>5 through Item 23 on Page 88.</p> <p>6 Are you able to identify and tell us what</p> <p>7 those documents are?</p> <p>8 A. I mean, I was provided them. I don't</p> <p>9 know what specifically they are, you know.</p> <p>10 Q. Do you know how they were compiled?</p> <p>11 A. No. I'm not aware of the process.</p> <p>12 Q. Do you know what percentage of internal</p> <p>13 documents, internal to Johnson & Johnson</p> <p>14 companies and to Imerys, have been produced in</p> <p>15 the case that appear on your reliance list?</p> <p>16 A. I'm not aware of that proportion.</p> <p>17 Q. Did you request any additional J&J or</p> <p>18 Imerys documents other than the ones that were</p> <p>19 provided to you by plaintiffs' counsel?</p> <p>20 A. So, it's hard to say request</p> <p>21 additional. I requested question -- materials to</p> <p>22 answer my question. How would I know what</p> <p>23 additional -- you know, I requested materials.</p> <p>24 Q. The way it worked is you asked</p> <p>25 plaintiffs for materials that would be helpful to</p>	<p style="text-align: right;">Page 81</p> <p>1 Q. All right.</p> <p>2 A. -- because it is not possible to look</p> <p>3 at all of them.</p> <p>4 Q. Did you make any follow-up request for</p> <p>5 additional company documents, either documents</p> <p>6 produced by J&J or documents produced by Imerys,</p> <p>7 of plaintiffs' counsel?</p> <p>8 A. I was inundated with these, and I don't</p> <p>9 think it was practical of me to request for</p> <p>10 additional documents.</p> <p>11 Q. In terms of internal company documents</p> <p>12 and communications produced either by</p> <p>13 Johnson & Johnson and by Imerys, the only</p> <p>14 documents you reviewed are the ones that were</p> <p>15 hand selected by lawyers for plaintiffs; is that</p> <p>16 right?</p> <p>17 MS. PARFITT: Objection. Form.</p> <p>18 A. The documents that I reviewed are</p> <p>19 listed, you know, in 4 and 5.</p> <p>20 Q. My question --</p> <p>21 A. I don't know what -- so you're asking</p> <p>22 me to infer what they hand selected; right? I</p> <p>23 mean, whether they provided all, whether they</p> <p>24 provided hand selected, that's not my -- I don't</p> <p>25 know that. You know that. But I don't.</p>

21 (Pages 78 to 81)

Sonal Singh, M.D., M.P.H.

Page 82	Page 84
<p>1 So how can I answer that they were hand 2 selected?</p> <p>3 Q. The company documents that you 4 reviewed, internal company documents, they came 5 from plaintiffs; is that correct?</p> <p>6 A. Yes.</p> <p>7 Q. The updated materials list, we marked 8 that as Exhibit 6.</p> <p>9 Those are materials that were provided to 10 you by plaintiffs' counsel; is that right?</p> <p>11 A. No. I submitted -- I mean, I had 12 access to several of these documents, you know, 13 after the submission of my report, and I reviewed 14 them and I actually sent them some of them. 15 So...</p> <p>16 Q. What documents on this list did you 17 provide to plaintiffs and what documents on this 18 list -- we're looking at Exhibit 6 -- did they 19 provide to you?</p> <p>20 A. Like I had the Fadak article. I had 21 the Health Canada Assessment. They provided the 22 submitted reports. I had the Weed article. They 23 provided the Zervo -- I don't know how to 24 pronounce that name. Yeah.</p> <p>25 So, yeah, I had access to some of these, and</p>	<p>1 Q. It's fair to say you did not rely on 2 the updated materials list in forming your 3 opinions and preparing your report in this case; 4 correct?</p> <p>5 A. Yeah. I did not rely on this, on these 6 materials in preparing the report, but several of 7 these materials are, you know, are helpful in 8 explaining my opinions on this, which were, you 9 know, provided in the report.</p> <p>10 Q. Have you published anywhere your theory 11 that baby powder causes ovarian cancer?</p> <p>12 A. I don't consider it my theory. I mean, 13 several other people have studied this. I don't 14 know how many studies. There have been more than 15 30 studies.</p> <p>16 So I don't consider it my theory. But, no, 17 I have not published a study on it.</p> <p>18 Q. Do you plan to publish on this?</p> <p>19 A. Yes, I do.</p> <p>20 Q. Are those plans underway?</p> <p>21 A. Well, I mean, a lot of it will, again, 22 depend on, you know, the questions you asked 23 about how much of this material will become 24 eventually -- you know, I have signed a 25 confidentiality order. So, you know, how much is</p>
Page 83	Page 85
<p>1 I provided the up-to-date article, and the 2 remainder, they provided.</p> <p>3 MR. KLATT: May I interject? I didn't 4 understand the very first article you said. It 5 sounded like dark.</p> <p>6 THE WITNESS: Fadak.</p> <p>7 MS. PARFITT: F-A-D-A-K.</p> <p>8 THE WITNESS: Fadak, that's a paper --</p> <p>9 MR. KLATT: Okay. I see. Thank you.</p> <p>10 THE WITNESS: That's a 2015 paper.</p> <p>11 MR. KLATT: I saw it. Thank you.</p> <p>12 BY MR. ZELLERS:</p> <p>13 Q. When did you review the materials that 14 are listed on the updated materials list, 15 Exhibit 6?</p> <p>16 A. So, again, maybe we circle back earlier 17 when I said I did not review all of them, like I 18 did not review the expert reports. Yeah.</p> <p>19 Q. Of the materials that you did review, 20 on the updated materials list, when did you 21 review those?</p> <p>22 A. Sometime between December and January.</p> <p>23 Q. It was after you had prepared your 24 written report and produced it; is that right?</p> <p>25 A. Yes.</p>	<p>1 allowed to be published.</p> <p>2 And so, you know, a lot of it will depend 3 on, I guess, the permission of the judge, who 4 allows -- who oversees these kind of -- I would 5 like to, eventually.</p> <p>6 Q. Have you previously published on any 7 topic relating to talc and ovarian cancer?</p> <p>8 A. No.</p> <p>9 Q. Have you conducted any test or 10 experiments to confirm your theory that talc 11 migrates to the ovaries and causes cancer via 12 inflammation?</p> <p>13 A. So, again, that is not a theory that I 14 have propounded, that talc migrates through the 15 ovary, that talc migrates up to cause ovarian 16 cancer, that I have evaluated the epidemiologic 17 studies, which show a causal link between talc 18 and ovarian cancer, and several other 19 investigators, some of them which I cite, have 20 provided evidence that -- of talc-induced, you 21 know, migration.</p> <p>22 So it's not my theory, as you say.</p> <p>23 MR. ZELLERS: Move to strike as 24 nonresponsive. Try to listen.</p> <p>25 Q. My question is, I think, a simple</p>

22 (Pages 82 to 85)

Sonal Singh, M.D., M.P.H.

Page 86	Page 88
<p>1 question.</p> <p>2 Have you, Dr. Singh, conducted any test or</p> <p>3 experiments to confirm your statement in your</p> <p>4 report that talc migrates to the ovaries and</p> <p>5 causes cancer via inflammation?</p> <p>6 A. No. I have not done any experiments.</p> <p>7 Q. Can you identify for me a single</p> <p>8 article that identifies inflammation anywhere in</p> <p>9 a woman's reproductive tract resulting from</p> <p>10 external genital talc application?</p> <p>11 MS. PARFITT: Objection. Form.</p> <p>12 A. Can you repeat the question?</p> <p>13 Q. Sure. Can you identify for me a single</p> <p>14 article that identifies inflammation anywhere in</p> <p>15 a woman's reproductive tract resulting from</p> <p>16 external genital talc application?</p> <p>17 A. I mean, again, this is, you know, when</p> <p>18 I reviewed -- so this relates to the biological</p> <p>19 question about talc. And when I reviewed the</p> <p>20 biological evidence, I was on migration and</p> <p>21 inflammation, I was looking for evidence, support</p> <p>22 or refute that.</p> <p>23 And there's studies that show that talc</p> <p>24 migrates through HS, you know, whatever,</p> <p>25 hysterosalpingography, and induces inflammation.</p>	<p>1 A. Yeah. It was available to everyone in</p> <p>2 December.</p> <p>3 Q. Have you looked into what other public</p> <p>4 health authorities have to say about talc and</p> <p>5 ovarian cancer?</p> <p>6 A. Yes.</p> <p>7 Q. Would it be important for you to know</p> <p>8 that CDC does not list talc as a risk factor for</p> <p>9 ovarian cancer?</p> <p>10 MS. PARFITT: Objection. Form.</p> <p>11 A. I mean, it would be important to know,</p> <p>12 you know, various agencies, you know, CDC,</p> <p>13 whatever. I mean, you would like to know of</p> <p>14 many, many agencies.</p> <p>15 But, again, you'd have to -- you'd have to</p> <p>16 see the quality of their judgment. I mean, what</p> <p>17 is their rationale? What are the studies they</p> <p>18 reviewed? What is the data available?</p> <p>19 Just like as you said, what is the data</p> <p>20 available to me to make that judgment, what is</p> <p>21 data available to them? Just because they are</p> <p>22 the CDC doesn't mean that, you know -- yes, I</p> <p>23 would like to know their opinion, but then what</p> <p>24 is the underlying basis of their opinion?</p> <p>25 Q. You're familiar with the CDC; correct?</p>
Page 87	Page 89
<p>1 I mean, the definitive study is not there.</p> <p>2 And, again, I did not do these studies. So</p> <p>3 I can only rely on people who have done such</p> <p>4 studies.</p> <p>5 Q. Can you cite a single study, animal or</p> <p>6 human, that traces externally applied talc up</p> <p>7 through the reproductive tract to the ovaries?</p> <p>8 MS. PARFITT: Objection. Form.</p> <p>9 A. Again, but I do not believe that's</p> <p>10 necessary to, you know, provide my causal opinion</p> <p>11 in support of a causal hypothesis.</p> <p>12 MR. KLATT: Objection. Nonresponsive.</p> <p>13 Q. Is the answer to my question, no?</p> <p>14 MS. PARFITT: Objection. Form.</p> <p>15 A. No, with context.</p> <p>16 Q. Health Canada Risk Assessment, that was</p> <p>17 not something that you included in your</p> <p>18 references or materials considered as part of</p> <p>19 your report; is that right?</p> <p>20 A. Yes. It was not available at that</p> <p>21 time.</p> <p>22 Q. All right. It is listed, the Health</p> <p>23 Canada Risk Assessment is listed in your updated</p> <p>24 materials list that we got over the weekend;</p> <p>25 correct?</p>	<p>1 A. I'm very familiar with the CDC.</p> <p>2 Q. It is an unbiased governmental entity;</p> <p>3 correct?</p> <p>4 A. Well, it would depend on the opinion.</p> <p>5 I mean, you know, we cannot say an entity is</p> <p>6 unbiased. It would depend what is the particular</p> <p>7 opinion -- you know, if the CDC provides</p> <p>8 vaccination. We have to look at the particular</p> <p>9 context.</p> <p>10 Q. Are you aware that the CDC does not</p> <p>11 list talc as a risk factor for ovarian cancer?</p> <p>12 A. Yes.</p> <p>13 MS. PARFITT: Objection.</p> <p>14 Q. Are you aware that the Mayo Clinic does</p> <p>15 not list talc as a risk factor for ovarian</p> <p>16 cancer?</p> <p>17 A. I'm not aware of Mayo Clinic.</p> <p>18 Q. You are aware of NIH; correct?</p> <p>19 A. Yes. I'm funded by the NIH.</p> <p>20 Q. Do you know that NIH does not list talc</p> <p>21 as a risk factor for ovarian cancer?</p> <p>22 A. Yes. And I have been aware of, you</p> <p>23 know, changes in the past to their -- to their</p> <p>24 statements.</p> <p>25 (Article entitled "Ovarian,</p>

23 (Pages 86 to 89)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 90</p> <p>1 Fallopian Tube, and Primary Peritoneal 2 Cancer Prevention (PDQ) - Health 3 Professional Version marked Exhibit 15.) 4 MR. ZELLERS: Take a look at Deposition 5 Exhibit 15. 6 MS. PARFITT: Thank you. 7 BY MR. ZELLERS: 8 Q. Deposition Exhibit 15 is a publication 9 from the National Cancer Institute; is that 10 right? 11 A. It is. 12 Q. National Cancer Institute is a leading 13 health authority; is that right? 14 A. Yes. 15 Q. It's a leading cancer research 16 institution in the world? 17 MS. PARFITT: Objection. Form. 18 A. Yes. 19 Q. Have you ever received a grant from the 20 National Cancer Institute? 21 A. I've applied. I have not received any. 22 I am applying again. 23 Q. They fund more cancer research than any 24 organization in the world; correct? 25 MS. PARFITT: Objection.</p>	<p style="text-align: right;">Page 92</p> <p>1 not a risk factor for ovarian cancer? 2 MS. PARFITT: Objection. 3 A. So the National Cancer Institute hasn't 4 opined on that talc is not a causal -- you know, 5 is causally linked to ovarian cancer. It has 6 provided a listing of documents. It has not gone 7 through any systematic process, that I'm aware 8 of, of looking at the epidemiologic data 9 systematically. 10 It has not provided any evidence of 11 inflammation or lack thereof or migration or lack 12 thereof or to even, you know, arrive at this 13 causal hypothesis. 14 Q. Because it's important to look at both 15 sides of an issue; correct? 16 A. Yes. I did look -- so I'm saying that 17 I did look at this and my opinion -- 18 Q. Did you -- 19 MS. PARFITT: Please let him finish. 20 Q. Are you finished? 21 A. I'm saying I did look at this, and I'm 22 aware of this document. 23 Q. Did you cite to the CDC in your report 24 or references? 25 A. I don't -- I wasn't aware of the CDC.</p>
<p style="text-align: right;">Page 91</p> <p>1 A. I don't know that particular number, 2 but -- I just don't know that answer. 3 Q. Are you aware that the National Cancer 4 Institute reviews the peer-reviewed literature as 5 it relates to risk factors for ovarian cancer? 6 MS. PARFITT: Objection. Form. 7 A. Yes. And I don't know how updated they 8 are. Based on the document you've provided me, 9 they have four citations for perineal talc and 10 ovarian cancer. 11 So, again, I'm not questioning the NCI's 12 motivation, but I am -- I am raising, what is the 13 quality of their judgment. 14 Q. Did you consider the CDC's 15 determination that talc is not a risk factor for 16 ovarian cancer in formulating your opinions? 17 A. Yes. 18 Q. Did you consider NIH's determination 19 that talc is not a risk factor for ovarian cancer 20 in formulating your opinions? 21 A. Yes. Because they did not have 22 sufficient information, based on what they 23 provided in their PDQs. 24 Q. Did you consider National Cancer 25 Institute's opinion or conclusion that talc is</p>	<p style="text-align: right;">Page 93</p> <p>1 Q. Did you cite to the NIH in your report 2 or your references? 3 A. I should have. And if it isn't, it is 4 remiss. 5 Q. Did you cite to the National Cancer 6 Institute in your report or references? 7 A. I have to look at it. 8 Q. The National Cancer Institute, in fact, 9 has done an analysis, a very detailed analysis 10 which we have marked as Exhibit 15 to this 11 deposition; correct? 12 MS. PARFITT: Objection to form. 13 A. I don't think it's a detailed analysis 14 of perineal talc and ovarian cancer. 15 There is how many lines? We can look at it 16 and read it together. It's, you know -- it's 15 17 lines. And they have references 41 to 45, which 18 is five references. 19 So I don't know it is a detailed analysis. 20 Q. National Cancer Institute, one of the 21 things that it does is to review peer-reviewed 22 literature as it relates to risk factors for 23 ovarian cancer. Is that right? 24 MS. PARFITT: Objection. Form. 25 A. It does do that.</p>

24 (Pages 90 to 93)

Sonal Singh, M.D., M.P.H.

Page 94	Page 96
<p>1 Q. All right. This document, this 2 document that we're looking at from the National 3 Cancer Institute, Exhibit 15, was updated in 4 January of 2019; is that right? 5 A. Yeah. But it doesn't mean the review 6 was updated, because it has no recent citations 7 of studies that have been conducted. 8 Q. We -- 9 A. We should look at the citation. Let's 10 look at it, because we are discussing this 11 document, so we should look at it in detail. 12 Q. Doctor, turn to Page 6. 13 A. No. Let me finish. I'm not finished 14 with this document. 15 MS. PARFITT: Go ahead. Let him 16 finish. 17 Q. Doctor, you have to answer my 18 questions. 19 A. But I haven't answered it. 20 Q. My question is look at Page 6. Can you 21 do that? 22 A. Okay. 23 Q. All right. Page 6 is a section on 24 perineal talc exposure; is that right? 25 A. Yes.</p>	<p>1 A. I don't know if it's the conclusion, 2 but, yes, you read that part of the statement 3 correctly. 4 Q. Why would you rely on Health Canada, 5 but not these other public health organizations? 6 MS. PARFITT: Objection. Misstates his 7 testimony. 8 A. In fact, I did rely on the Health 9 Canada when my report was conducted. So you 10 see -- I relied on the quality of the review and 11 the breadth of my review, which had hundreds of 12 studies, the breadth of review of biological 13 plausibility, the breadth of review of, you know, 14 animal studies, applying the Bradford Hill 15 framework, and then forming an opinion. 16 Q. How -- are you done? 17 A. No. I'm not done. 18 And the Health Canada Assessment came after 19 that. And it so happened their methodology -- 20 methodology -- methodology and opinions are 21 consistent with mine. 22 So it's not that I'm relying on that. I'm 23 just saying that they are consistent and they 24 came to the same conclusions. 25 Q. What materials and analysis was done by</p>
Page 95	Page 97
<p>1 Q. This is part of the National Cancer 2 Institute's publication on ovarian, fallopian 3 tube and primary peritoneal cancer prevention; is 4 that right? 5 A. Yes. 6 Q. On Page 6, the first sentence under 7 perineal talc exposure states, "The weight of 8 evidence does not support an association between 9 perineal talc exposure and an increased risk of 10 ovarian cancer." 11 Is that right? 12 A. Based on what? Based on these 41 to 45 13 citations? Which are an incomplete listing of 14 studies and an incomplete review of the evidence. 15 So I'm just stating that, yes, what is the 16 underlying basis? 17 Q. Doctor -- 18 MS. PARFITT: Wait. Let him finish. 19 He's in the middle of a sentence. 20 A. What is the underlying basis of this 21 opinion? 22 Q. Dr. Singh, my question is: Did I read 23 the conclusion of the National Cancer Institute 24 correctly? 25 MS. PARFITT: Objection.</p>	<p>1 the CDC in determining that talc is not a risk 2 factor for ovarian cancer? 3 MS. PARFITT: Objection. Form. 4 A. I don't have that. 5 Q. What materials were reviewed and relied 6 upon by NIH in determining that talc is not a 7 risk factor for ovarian cancer? 8 A. References 41 to 45. 9 Q. How do you know that that's all that 10 the NIH and National Cancer Institute reviewed? 11 A. Because that's what they cite. 12 Q. Have you been privy to the complete 13 review and analysis of the National Cancer 14 Institute? 15 A. But you just stated that this was the 16 complete review and analysis of the National 17 Cancer Institute? 18 Q. I'm asking you: Do you know what 19 specific studies and materials were reviewed and 20 what analysis was done by NIH and by the National 21 Cancer Institute? 22 A. Yeah. These are the studies that were 23 reviewed. 24 Q. You are assuming that this is the 25 entire analysis and review that was done by the</p>

25 (Pages 94 to 97)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 98</p> <p>1 National Cancer Institute; is that right?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 A. I'm not assuming anything. I'm</p> <p>4 assuming that, just as the conclusions that you</p> <p>5 are assuming are definitive, I'm also, you know,</p> <p>6 stating that these are the studies that they</p> <p>7 relied on to form those conclusions.</p> <p>8 So we can't pick and choose, assess</p> <p>9 statement of the excerpt that you -- supports</p> <p>10 your opinion, but then not look at the underlying</p> <p>11 evidence base that supports that opinion.</p> <p>12 Q. But we should consider all of that</p> <p>13 information; correct?</p> <p>14 A. Yeah. And the studies underlying.</p> <p>15 Q. And you did not consider the CDC's</p> <p>16 opinion in your report, did you?</p> <p>17 A. I mean, CDC -- so let's just step back</p> <p>18 a little.</p> <p>19 When I say CDC opinion, I mean, I'm looking</p> <p>20 at original studies. I'm looking at data in</p> <p>21 forming my opinion. I did look at what IARC</p> <p>22 considered and other agencies considered.</p> <p>23 My opinion is based on my review and the</p> <p>24 methodology and I was, you know, obviously,</p> <p>25 taking into account what agencies say, but</p>	<p style="text-align: right;">Page 100</p> <p>1 assessment prior to its publication?</p> <p>2 A. No.</p> <p>3 Q. Have you submitted any comments to</p> <p>4 Health Canada?</p> <p>5 A. No.</p> <p>6 Q. Do you intend to submit any comments to</p> <p>7 Health Canada?</p> <p>8 A. I don't know. I mean, it will depend</p> <p>9 on the timeline and I don't know what their</p> <p>10 timeline is and what my -- you know, I</p> <p>11 haven't -- I haven't thought about it.</p> <p>12 Q. Outside of your litigation consulting,</p> <p>13 do you generally rely on draft assessments by</p> <p>14 regulatory agencies?</p> <p>15 MS. PARFITT: Objection. Form.</p> <p>16 A. Yes. I mean, you know, we look at</p> <p>17 draft assessments on regulatory. There's no</p> <p>18 reason not to.</p> <p>19 Q. Have you ever cited a draft assessment</p> <p>20 by a regulatory agency in any study that you've</p> <p>21 published?</p> <p>22 A. Oh, I've published 200 papers, and I</p> <p>23 can't recall, you know, which one, but I know</p> <p>24 that I have looked at draft assessments by the</p> <p>25 FDA.</p>
<p style="text-align: right;">Page 99</p> <p>1 agencies' opinion is not necessarily the</p> <p>2 underlying basis of my causal opinion.</p> <p>3 Q. Whether it's CDC, NIH, NCI or Health</p> <p>4 Canada; correct?</p> <p>5 A. Yeah. I mean, they're informing. I</p> <p>6 want to look at their thinking and what is the</p> <p>7 quality of their judgment on this.</p> <p>8 Q. You understand Health Canada has simply</p> <p>9 produced a draft assessment; is that right?</p> <p>10 MS. PARFITT: Objection. Form.</p> <p>11 A. Yes.</p> <p>12 Q. We are at the beginning of the public</p> <p>13 comment period; is that right?</p> <p>14 A. I don't know the timeline of that.</p> <p>15 Q. Are you aware that Health Canada can</p> <p>16 take up to two years to take any action or no</p> <p>17 action at all?</p> <p>18 A. Well, I mean, I was not asked a causal</p> <p>19 question on what to do about this. I was just</p> <p>20 asked a question on causality. And I'm not sort</p> <p>21 of -- I'm not privy to their process.</p> <p>22 Q. How did you come to learn of the Health</p> <p>23 Canada Risk Assessment?</p> <p>24 A. News, news documents.</p> <p>25 Q. Were you involved in the risk</p>	<p style="text-align: right;">Page 101</p> <p>1 Q. Have you cited any?</p> <p>2 A. I can't recall and tell you that. It's</p> <p>3 just something I can't recall.</p> <p>4 Q. Are you familiar with the precautionary</p> <p>5 principle?</p> <p>6 A. Yes.</p> <p>7 Q. What is the precautionary principle?</p> <p>8 A. It is to, you know, apply, as my</p> <p>9 understanding, is to warn when there is, you</p> <p>10 know, evidence of a hazard.</p> <p>11 Q. That's your understanding of the</p> <p>12 precautionary principle?</p> <p>13 A. Yeah.</p> <p>14 Q. Do you understand that, as defined by</p> <p>15 Health Canada, a precautionary principle means</p> <p>16 taking a precautionary approach to</p> <p>17 decision-making that emphasizes the need to take</p> <p>18 timely preventative action even in the absence of</p> <p>19 a full scientific demonstration of cause and</p> <p>20 effect?</p> <p>21 A. If you're stating -- well, let's get</p> <p>22 the document out before we --</p> <p>23 Q. Sure. Take a look at deposition</p> <p>24 Exhibit 16.</p> <p>25 (Document entitled "Health</p>

26 (Pages 98 to 101)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 102</p> <p>1 Canada Decision-Making Framework for 2 Identifying, Assessing, and Managing Health 3 Risks - August 1, 2000" marked Exhibit 16.) 4 A. Okay. Can you point out which page? 5 Q. Sure. Take a look at Pages 8 and 9. 6 So we identify it for the record, Exhibit 16 is 7 the Health Canada Decision-Making Framework for 8 Identifying, Assessing and Managing Health Risk; 9 is that right? 10 A. Yes. 11 Q. If you go to Page 8 and 9, Section 1.3 12 are the underlying principles for Health Canada; 13 is that right? 14 MS. PARFITT: Objection. 15 MR. TISI: You're looking at the wrong 16 document. You're not looking at the draft 17 assessment. You're looking at the -- 18 MR. ZELLERS: Counsel, I am -- 19 MR. TISI: But you identified something 20 as something different than what it is. 21 MR. ZELLERS: I identified the document 22 as Health Canada Decision-Making Framework for 23 Identifying, Assessing and Managing Health Risk. 24 I'm reading the title of the document. 25 MR. TISI: Okay. I have it wrong. Go</p>	<p style="text-align: right;">Page 104</p> <p>1 precautionary approach. A key feature of 2 managing health risk is that decisions are often 3 made in the presence of considerable scientific 4 uncertainty. A precautionary approach to 5 decision-making emphasizes the need to take 6 timely and appropriately preventative action, 7 even in the absence of a full scientific 8 demonstration of cause and effect." 9 Did I read that correctly? 10 A. Okay. 11 Q. Do you agree that the recommendation by 12 Health Canada does not require a finding of 13 causation like is required in a court; correct? 14 MS. PARFITT: Objection. Form. 15 A. But I mean, that's what they conclude, 16 that there is a cause. We can look at the Health 17 Canada document. 18 Q. Is a guiding principle of the Health 19 Canada Decision-Making and Assessment to use a 20 precautionary approach? 21 MS. PARFITT: Objection. Form. 22 A. Well, no. I mean, precautionary -- 23 they are just defining a precautionary approach. 24 But when they assess talc for its whatever, you 25 know, the talcum powder products, their</p>
<p style="text-align: right;">Page 103</p> <p>1 ahead. 2 MR. ZELLERS: That's okay. 3 A. Wherever we are. 4 Q. No problem, Doctor. 5 MS. PARFITT: We'll orient ourselves. 6 Q. Are we oriented? 7 A. Yeah. I know the document. But the 8 page number. 9 Q. Look at Pages 8 and 9. 10 A. Okay. 11 Q. 1.3 are the underlying principles for 12 Health Canada decision-making. 13 Do you see that? 14 A. Yes. 15 Q. They list out a number of underlying 16 principles on Pages 8 and 9. 17 One of those is to use a precautionary 18 approach; is that right? 19 A. Yes. 20 Q. If you then turn to Page 11, at the 21 bottom, they define use of a precautionary 22 approach; is that right? 23 A. Yes. 24 Q. Health Canada states in this document, 25 which we've marked as Exhibit 16, "Use a</p>	<p style="text-align: right;">Page 105</p> <p>1 particular assessment clearly states it's causal. 2 And we should open that document. We should not 3 talk about it in hypotheticals. 4 Q. On what basis are you relying to state 5 that Health Canada did not use a precautionary 6 approach in assessing talcum powder? 7 MS. PARFITT: Objection. Form. 8 A. No. No. No. Let me answer that 9 question. 10 You were asking about decision-making. 11 Decision-making would be removal of talc, removal 12 of that. 13 But there's two parts to that question about 14 cause and effect. So let's bring the document 15 out and say where they state there is a causal 16 relationship. 17 Why aren't you bringing that document out? 18 I mean, you can't talk about documents without 19 documents. 20 Q. Dr. Singh -- 21 A. Yeah. 22 Q. -- do you have any basis to state 23 that, in evaluating talcum powder, Health Canada 24 did not follow its underlying principle of using 25 a precautionary approach?</p>

27 (Pages 102 to 105)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 106</p> <p>1 MS. PARFITT: Objection. Form. 2 Misstates the evidence. 3 A. Yeah. But that does not preclude at 4 arriving at a causal opinion. Just because you 5 have a precautionary approach, you can still 6 arrive at causal opinion, which they did. 7 So this is -- this principle is not 8 inconsistent with their report on a causal 9 opinion. 10 Q. The standard under a precautionary 11 approach is that decisions can be made even in 12 the absence of a full scientific demonstration of 13 cause and effect; correct? 14 MS. PARFITT: Objection. Form. 15 A. That is a threshold, but that does not 16 preclude the determination of cause and effect, 17 which has been done already. 18 Q. Are you familiar with the Taher 2018 19 publication? 20 A. Taher. I don't know which one. 21 Q. T-A-H-E-R. 22 A. Yes. 23 Q. Are you familiar with that publication? 24 A. Yeah. It was cited in the Health 25 Canada document.</p>	<p style="text-align: right;">Page 108</p> <p>1 A. No. 2 Q. Hold on. Stop. Stop. 3 A. Sure. 4 Q. Just so we're clear, the updated 5 materials list is a list that was created by 6 plaintiffs' counsel; correct? 7 MS. PARFITT: It was based upon 8 materials that we had either sent or we had sent 9 that he also had; correct. 10 MR. ZELLERS: This Exhibit 6 is a list 11 of materials that were provided by plaintiffs' 12 counsel to Dr. Singh, understanding that 13 Dr. Singh has testified that he independently had 14 access to some of the materials. 15 MS. PARFITT: Correct. Including 16 Taher. 17 THE WITNESS: Yeah. And some of them, 18 I added, such as some of the published articles 19 and Health Canada. 20 BY MR. ZELLERS: 21 Q. You have read the Taher 2018 22 manuscript; is that right? 23 A. I mean, I read the -- yeah, I mean, 24 primarily, I read their assessment in Health 25 Canada.</p>
<p style="text-align: right;">Page 107</p> <p>1 Q. Have you reviewed and analyzed that 2 publication? 3 A. I mean, I reviewed it. I don't know if 4 I analyzed it. 5 What do you mean by "analyzed"? 6 Q. You have not included it on your 7 references or additional materials considered or 8 updated materials; is that right? 9 MS. PARFITT: Objection. 10 A. It was part of the Health Canada. It 11 should have been part, because it was part, in my 12 mind, part of the Health Canada Assessment. 13 Q. Can you show me where -- 14 A. Well, I haven't. 15 Q. -- the Taher publication is listed in 16 your updated materials which we marked as 17 Exhibit 6? 18 MS. PARFITT: For the record, we 19 created this list, Mr. Zellers, and part of the 20 Canadian, just for form, and you can inquire. 21 MR. ZELLERS: That's okay. 22 MS. PARFITT: But since we did create 23 Exhibit No. 6, additional materials, we had 24 included, I will tell you, we had given him 25 Taher. He may have found it himself.</p>	<p style="text-align: right;">Page 109</p> <p>1 MR. ZELLERS: Deposition Exhibit -- 2 well, strike that. 3 Q. What you told me, when I asked you 4 about CDC and NIH and NCI, is you got to look at 5 the underlying documents, the underlying studies; 6 is that right? 7 A. Yes. 8 Q. One of the underlying documents and 9 studies on which Health Canada reviewed was the 10 Taher article; is that right? 11 A. Yes. 12 (Document entitled "Systematic 13 Review and Meta-Analysis of the Association 14 between Perineal Use of Talc and Risk of 15 Ovarian Cancer" marked Exhibit 17.) 16 BY MR. ZELLERS: 17 Q. The Taher article is what we have 18 marked as deposition Exhibit 17; is that right? 19 MS. PARFITT: Thank you. 20 MR. TISI: Is it Thayer or Taher? 21 A. It is Taher, T-A-H-E-R. 22 Q. Did you have access to the Taher 2018 23 article before it was published? 24 A. Yes. 25 Q. How did you have access to the Taher</p>

28 (Pages 106 to 109)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 110</p> <p>1 2018 article?</p> <p>2 A. Yeah. I requested access from the</p> <p>3 attorneys, if they had it. They provided it.</p> <p>4 Q. So plaintiffs' attorneys provided you</p> <p>5 with access to the article we've marked as</p> <p>6 Exhibit 17 prior to its publication; is that</p> <p>7 right?</p> <p>8 A. Yeah.</p> <p>9 MS. PARFITT: Objection.</p> <p>10 A. I don't know if it has been published</p> <p>11 yet.</p> <p>12 Q. Did you have access to the appendices</p> <p>13 or supplemental tables referenced in the Taher</p> <p>14 publication?</p> <p>15 A. Yes, I did.</p> <p>16 Q. In your epidemiologic -- strike that.</p> <p>17 Is the Taher publication, which we've marked</p> <p>18 as Exhibit 17, is that peer-reviewed?</p> <p>19 A. It's peer-reviewed, and I assume that</p> <p>20 it's going to be published. And it was reviewed</p> <p>21 by Health Canada. So I mean, it is</p> <p>22 peer-reviewed, is my understanding.</p> <p>23 It is -- I don't know the exact status of</p> <p>24 that manuscript.</p> <p>25 Q. What organization has peer-reviewed the</p>	<p style="text-align: right;">Page 112</p> <p>1 Q. Why did you rely on this article,</p> <p>2 Taher, Exhibit 17?</p> <p>3 MS. PARFITT: Objection to form.</p> <p>4 A. I mean, when you say I relied on, I</p> <p>5 mean, I reviewed the, again, Health Canada</p> <p>6 Assessment. So none of this is in isolation.</p> <p>7 I mean, this is just a part of, you know,</p> <p>8 the body of evidence. You know, my testimony</p> <p>9 relies on -- and my report relies on the evidence</p> <p>10 cited there.</p> <p>11 This is, you know, another meta-analysis</p> <p>12 that, you know, I reviewed the evidence in</p> <p>13 slightly different ways and came to the same</p> <p>14 conclusions and, you know, also did a causal</p> <p>15 analysis. So it's sort of, you know, you have to</p> <p>16 review what evidence comes out.</p> <p>17 If another meta-analysis comes out tomorrow,</p> <p>18 then I would review it.</p> <p>19 Q. Do you know the source of funding for</p> <p>20 this publication?</p> <p>21 A. I don't know. I mean, Health Canada or</p> <p>22 something else, I don't know that. I can't</p> <p>23 answer that question.</p> <p>24 Q. You're assuming that Health Canada is</p> <p>25 the source of funding for this publication?</p>
<p style="text-align: right;">Page 111</p> <p>1 Taher publication, Exhibit 17?</p> <p>2 A. So I don't -- yeah, again, I take it --</p> <p>3 I don't know the status of that manuscript, where</p> <p>4 it is.</p> <p>5 Q. You do not know, one way or the other,</p> <p>6 as to whether the Taher publication, Exhibit 17,</p> <p>7 has been peer-reviewed; is that right?</p> <p>8 A. Yeah. Whether it's been accepted or</p> <p>9 submitted or -- I don't know.</p> <p>10 Q. Are you finished?</p> <p>11 A. I don't know the status. I'm trying to</p> <p>12 say that.</p> <p>13 Q. In your epidemiological work, outside</p> <p>14 of litigation, do you rely on articles that have</p> <p>15 not been peer-reviewed?</p> <p>16 A. Yes. Several times, we rely on</p> <p>17 articles. Several times, we actually request</p> <p>18 articles if it's key to something that we are</p> <p>19 working on and we know that a particular</p> <p>20 investigator is active in that area and he may</p> <p>21 have.</p> <p>22 So, yes, we actually -- sometimes we request</p> <p>23 that. And the majority of the times people don't</p> <p>24 provide their work until it's published. But</p> <p>25 sometimes we get it. Yeah.</p>	<p style="text-align: right;">Page 113</p> <p>1 A. I don't know. I shouldn't answer that.</p> <p>2 Q. Do you know the credentials of the</p> <p>3 authors of the Taher 2018 publication,</p> <p>4 Exhibit 17?</p> <p>5 A. I have no idea.</p> <p>6 Q. Do you personally know any of the</p> <p>7 authors that are listed?</p> <p>8 A. No.</p> <p>9 Q. Do you know whether or not any of the</p> <p>10 authors of the Taher publication, as listed out</p> <p>11 on the first page of Exhibit 17, have conflicts</p> <p>12 of interest?</p> <p>13 MS. PARFITT: Objection.</p> <p>14 A. Not that -- I didn't -- again, I read</p> <p>15 the article. I don't know what their, you know,</p> <p>16 declarations are. Yeah.</p> <p>17 And it does say it was conducted under</p> <p>18 contract to Health Canada. So it seems like the</p> <p>19 funding source is Health Canada. And let's look</p> <p>20 at their source of funding.</p> <p>21 Q. Doctor, we'll never finish if you want</p> <p>22 to just go through and look at things.</p> <p>23 My specific question is whether or not you</p> <p>24 know whether or not any of the authors have</p> <p>25 conflicts of interest?</p>

29 (Pages 110 to 113)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 114</p> <p>1 MS. PARFITT: Objection. 2 A. That's a very vague and broad question. 3 I mean, conflicts of interest as it relates to 4 what? 5 Q. Do you know? 6 MS. PARFITT: Objection. Form. 7 A. As it relates to what? 8 Q. You told me you don't know any of the 9 authors; right? 10 A. Yeah. 11 Q. I've now asked you if you know if any 12 of the authors had conflicts of interest. 13 A. And I'm saying that I'm reading the 14 article and I'm reading their declaration, and 15 that's the only way to find out that they have 16 conflicts of interest, right. 17 Q. I should be more precise. 18 A. Yeah. 19 Q. Of your own personal knowledge, do you 20 know whether or not any of the authors have 21 conflicts of interest? 22 A. That's a separate -- 23 MS. PARFITT: Objection. 24 A. So what I'm trying to say is, you know, 25 when you ask about conflicts of interest, if you</p>	<p style="text-align: right;">Page 116</p> <p>1 sentence. And I'll read it. Have you found 2 Page 41 of Exhibit 17? 3 A. 41? 4 Q. Yes. Page 41. Do you have that? 5 A. Yeah. Yeah. 6 Q. The very last -- 7 A. Yeah. I'm looking at it. 8 Q. Tell me if I read this correctly. "The 9 similarity of findings between studies published 10 prior to and after this point suggest asbestos 11 contamination does not explain the positive 12 association between perineal use of talc powder 13 and risk of ovarian cancer." 14 Did I read that correctly? 15 A. Yes. 16 Q. Do you disagree with the authors on 17 that point? 18 A. Let me just read it. 19 Well, I mean, to the extent that they are 20 aware that asbestos does not contaminate -- talc 21 is not contaminated with asbestos, I do agree. 22 But, again, I have, you know, obviously more 23 information on that. 24 Q. On Page 25 of Exhibit 17, the Taher 25 2018 article, is a table entitled "Summary of</p>
<p style="text-align: right;">Page 115</p> <p>1 want to ask about my article, you'd have to go 2 and read the article and see that, what is stated 3 there. 4 So that's what I'm trying to answer when you 5 ask. I'm trying to be honest and truthful about 6 my answers. 7 MR. KLATT: Objection; nonresponsive. 8 MR. ZELLERS: Move to strike as 9 nonresponsive. 10 THE WITNESS: I didn't understand the 11 question. 12 MR. LOCKE: We all have questions to 13 ask this witness. We're not going to make the 14 seven hours with these answers that do not answer 15 the questions. 16 THE WITNESS: Maybe I'm not 17 understanding the question. I'm sorry. It's not 18 that I'm trying to -- 19 Q. Dr. Singh, the authors of the Taher 20 paper concluded that the evidence suggests that 21 asbestos contamination does not explain the 22 positive association between perineal use of talc 23 powder and ovarian cancer; is that right? 24 A. Where do you -- 25 Q. Take a look at Page 41, the last</p>	<p style="text-align: right;">Page 117</p> <p>1 Evidence for Each of the Hill Criteria of 2 Causation as Applied to Perineal Application of 3 Talc and Ovarian Cancer." 4 Is that right? 5 A. Yes. 6 Q. One of the Hill criteria is 7 consistency; is that right? 8 MS. PARFITT: Objection. Form. 9 A. Yes. 10 Q. Looking at authors' statement on 11 consistency, it states, "15 out of the 30 studies 12 reported positive and significant associations." 13 Is that right? 14 A. Yes. 15 Q. 15 out of 30, that's 50 percent; is 16 that right? 17 MS. PARFITT: Objection. Form. 18 A. Yeah. But I have -- I disagree with 19 their interpretation of consistency as being, you 20 know, statistically significant. I mean, you 21 know, my assessment is, you know, estimates 22 towards greater than one. 23 MR. ZELLERS: Move to strike as 24 nonresponsive. 25 Q. My question was: 15 out of 30 is</p>

30 (Pages 114 to 117)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 118</p> <p>1 50 percent?</p> <p>2 A. Yes.</p> <p>3 MS. PARFITT: Objection. Let me</p> <p>4 object, please.</p> <p>5 Q. That's no better than a coin toss;</p> <p>6 correct?</p> <p>7 MS. PARFITT: Object to the form.</p> <p>8 A. It is 50 percent.</p> <p>9 Q. Would you say that 15 out of 30 means</p> <p>10 there are consistent results across studies?</p> <p>11 A. Well, I mean, again, my definition of</p> <p>12 inconsistency, as noted in my report, is</p> <p>13 different from theirs.</p> <p>14 Q. These are just the case control</p> <p>15 studies; is that right?</p> <p>16 A. When you say -- they just say 30</p> <p>17 studies. Yeah.</p> <p>18 Q. These are case-control studies; is that</p> <p>19 right?</p> <p>20 MS. PARFITT: Objection. Form.</p> <p>21 A. Well, they're both, right? Case</p> <p>22 control and core.</p> <p>23 Q. The authors in Taher also recognize</p> <p>24 that there's no consistent dose-response across</p> <p>25 studies; is that right?</p>	<p style="text-align: right;">Page 120</p> <p>1 consistent evidence. There are studies that</p> <p>2 provide dose-response and other studies that</p> <p>3 don't.</p> <p>4 Q. You currently work for the University</p> <p>5 of Massachusetts; is that right?</p> <p>6 A. Yes.</p> <p>7 Q. You work for both the medical school</p> <p>8 and the medical center; is that right?</p> <p>9 A. Yes.</p> <p>10 Q. Are you aware that the University of</p> <p>11 Massachusetts does not claim that talcum powder</p> <p>12 causes ovarian cancer?</p> <p>13 MS. PARFITT: Objection. Form.</p> <p>14 A. I don't know what -- they're listed on</p> <p>15 their website. I'm not sure they provide any</p> <p>16 information sheet that I am aware of.</p> <p>17 (Printout entitled "Ovarian</p> <p>18 Cancer: Risk Factors" marked Exhibit 18.)</p> <p>19 BY MR. ZELLERS:</p> <p>20 Q. Take a look, if you will, at Deposition</p> <p>21 Exhibit 18.</p> <p>22 MR. TISI: What is 16?</p> <p>23 MR. ZELLERS: Exhibit 16 was the Health</p> <p>24 Canada Decision-Making Framework. It's right</p> <p>25 here.</p>
<p style="text-align: right;">Page 119</p> <p>1 MS. PARFITT: Objection. Form.</p> <p>2 A. Well, let me look at the dose-response</p> <p>3 section.</p> <p>4 Q. Page 21. And I'm looking at the very</p> <p>5 last sentence above Section 3.3.2.</p> <p>6 A. Tell me, which page number?</p> <p>7 Q. Sure. Page 21.</p> <p>8 A. We do have to slow down so that I can</p> <p>9 move between pages, if you don't mind.</p> <p>10 Yes.</p> <p>11 Q. This is in the section "Evidence from</p> <p>12 Human Studies"; correct?</p> <p>13 A. Okay.</p> <p>14 Q. Is that a yes?</p> <p>15 A. Yes.</p> <p>16 Q. The statement by the authors, "When</p> <p>17 conducted, findings from trend analyses were not</p> <p>18 consistent."</p> <p>19 Is that right?</p> <p>20 A. The last line?</p> <p>21 Q. Yes.</p> <p>22 A. Yes. But the criteria for</p> <p>23 dose-response is just exposure-response</p> <p>24 gradients. I mean, it doesn't, you know, say</p> <p>25 as -- even in -- I state in my report, there's no</p>	<p style="text-align: right;">Page 121</p> <p>1 MR. TISI: Oh. I have that, Counsel.</p> <p>2 Thank you.</p> <p>3 BY MR. ZELLERS:</p> <p>4 Q. Have you had an opportunity, Dr. Singh,</p> <p>5 to review Deposition Exhibit 18?</p> <p>6 A. Yes.</p> <p>7 Q. This is a website from the University</p> <p>8 of Massachusetts Memorial Healthcare; is that</p> <p>9 right?</p> <p>10 A. Yes.</p> <p>11 Q. Are you familiar with the website?</p> <p>12 A. I mean, overall website, but not this</p> <p>13 particular document.</p> <p>14 Q. On the second page of Exhibit 18,</p> <p>15 there's a statement by your employer, the</p> <p>16 University of Massachusetts, on use of talcum</p> <p>17 powder.</p> <p>18 Do you see that?</p> <p>19 A. Yes.</p> <p>20 Q. The statement is, "It's not clear if</p> <p>21 using talcum powder on the genital area raises</p> <p>22 the risk for ovarian cancer. Talk with your</p> <p>23 healthcare provider if you decide you want to use</p> <p>24 talcum powder."</p> <p>25 Did I read that correctly?</p>

31 (Pages 118 to 121)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 122</p> <p>1 A. Yes, you did.</p> <p>2 Q. Why doesn't your institution list talc</p> <p>3 exposure as a risk factor for ovarian cancer?</p> <p>4 MS. PARFITT: Objection. Misstates the</p> <p>5 evidence.</p> <p>6 A. So, yeah, I mean, first of all, this</p> <p>7 is -- I've seen this the first time here, but as</p> <p>8 you can see, again, this is -- we have to go to</p> <p>9 Page 3 of 4 and it's medical reviewers and they</p> <p>10 are, you know, basing their opinion on whatever.</p> <p>11 This was done in 2013.</p> <p>12 So it depends on the -- it's not that, you</p> <p>13 know, my medical, you know, employer is listing</p> <p>14 it. Obviously, it's listed there.</p> <p>15 And but it's based on the quality of the</p> <p>16 evidence. This was reviewed on 2016, and it was</p> <p>17 reviewed by, as you see, the credentials of --</p> <p>18 did they review the -- did they review the</p> <p>19 biological evidence? Did they have any</p> <p>20 additional information?</p> <p>21 So I don't disagree with their opinion, I'm</p> <p>22 just saying.</p> <p>23 Q. Dr. Singh, do you recommend to your own</p> <p>24 patients that they avoid talcum powder use?</p> <p>25 A. Now, I do.</p>	<p style="text-align: right;">Page 124</p> <p>1 take a look at Exhibit 2 or Exhibit 10, whichever</p> <p>2 is easier for you.</p> <p>3 A. Page 66?</p> <p>4 Q. Yes. Your conclusion.</p> <p>5 A. Yes.</p> <p>6 Q. You state that peritoneal use of talcum</p> <p>7 powder products can cause ovarian cancer;</p> <p>8 correct?</p> <p>9 A. Yes.</p> <p>10 Q. Is it your opinion that it does cause</p> <p>11 ovarian cancer or just that it can?</p> <p>12 MS. PARFITT: Objection to form.</p> <p>13 A. I don't know the semantics of what</p> <p>14 would be -- if -- semantics of can and does. I</p> <p>15 mean, you can explain to me. Maybe my English is</p> <p>16 not as good as yours.</p> <p>17 Q. What type of exposure causes ovarian</p> <p>18 cancer?</p> <p>19 A. Perineal application. So I mean, are</p> <p>20 you asking specific to talc?</p> <p>21 Q. Yes. With respect to talc exposure,</p> <p>22 what type of talc exposure causes ovarian cancer?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 A. You know, perineal application of talc</p> <p>25 can, you know, use of talc.</p>
<p style="text-align: right;">Page 123</p> <p>1 Q. When did you begin doing that?</p> <p>2 A. Last year.</p> <p>3 Q. Do you ask them if they use talcum</p> <p>4 powder as part of a routine screening?</p> <p>5 A. In people that -- sorry.</p> <p>6 In patients that I talk about ovarian</p> <p>7 cancer.</p> <p>8 Q. Is that something that you began doing</p> <p>9 over the past year?</p> <p>10 A. I would say sometime last year.</p> <p>11 Q. What about patients with a long history</p> <p>12 of use? Do you consider them at elevated risk of</p> <p>13 developing cancer?</p> <p>14 MS. PARFITT: Objection. Form.</p> <p>15 A. So I haven't thought about it that way.</p> <p>16 I mean, you know, when that discussion about</p> <p>17 ovarian cancer comes up, we talk about risk</p> <p>18 factors and, you know, I recommended that.</p> <p>19 Q. Have you ever recommended prophylactic</p> <p>20 surgery to remove the fallopian tubes and ovaries</p> <p>21 that you think -- patients that you think may</p> <p>22 have had long-term exposure to talc?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 A. No.</p> <p>25 Q. Causation. On Page 66 of your report,</p>	<p style="text-align: right;">Page 125</p> <p>1 Q. What types of -- strike that.</p> <p>2 What types of talcum powder cause ovarian</p> <p>3 cancer?</p> <p>4 MS. PARFITT: Objection. Form.</p> <p>5 A. So, again, I -- I -- my causal question</p> <p>6 was the use of talcum powder products and ovarian</p> <p>7 cancer. I did not disaggregate between X and Y</p> <p>8 and Z in terms of, you know, this type of talcum</p> <p>9 powder product.</p> <p>10 Q. What type of ovarian cancer does talcum</p> <p>11 powder cause?</p> <p>12 MS. PARFITT: Objection. Form.</p> <p>13 A. Talcum powder products are, you know,</p> <p>14 causally linked to the development of ovarian</p> <p>15 cancer, but the link is strongest for serous</p> <p>16 epithelial ovarian cancer.</p> <p>17 Q. Any other types of ovarian cancer that</p> <p>18 you believe talcum powder causes?</p> <p>19 MS. PARFITT: Objection. Form.</p> <p>20 A. You know, other studies have provided,</p> <p>21 you know, causal links to borderline, you know,</p> <p>22 other tumors. But, you know, it's mainly the</p> <p>23 epithelial ovarian cancer.</p> <p>24 Q. What dose of talcum powder is required</p> <p>25 to cause ovarian cancer?</p>

32 (Pages 122 to 125)

Sonal Singh, M.D., M.P.H.

Page 126	Page 128
<p>1 MS. PARFITT: Objection. Form.</p> <p>2 A. I examined, you know, the causal link</p> <p>3 between talcum powder products and ovarian cancer</p> <p>4 as the data was available in the available</p> <p>5 studies. You know, I could not -- there was</p> <p>6 no -- I mean, there was data on</p> <p>7 dose-responsiveness, and we can discuss that.</p> <p>8 But, you know, I don't know if it's a single</p> <p>9 application or it's 20 years. I mean, it is</p> <p>10 regular use and that would cause it.</p> <p>11 Q. It's correct that you have not</p> <p>12 evaluated specifically what dose of talcum powder</p> <p>13 is required to cause ovarian cancer; correct?</p> <p>14 MS. PARFITT: Object to form.</p> <p>15 A. Yeah. I mean, I don't know a specific</p> <p>16 dose that would cause ovarian cancer.</p> <p>17 Q. What was your methodology for</p> <p>18 concluding that talc causes ovarian cancer or, I</p> <p>19 guess to be more precision, serous ovarian</p> <p>20 cancer?</p> <p>21 A. Yeah. I mean, mainly --</p> <p>22 MS. PARFITT: Objection.</p> <p>23 A. Yeah. Epithelial ovarian cancer.</p> <p>24 Q. What was your methodology?</p> <p>25 A. So, yeah, I did, you know -- so prior</p>	<p>1 Q. You did not conduct a meta-analysis</p> <p>2 here; is that right?</p> <p>3 A. Yes. And I -- partly pragmatic</p> <p>4 reasons. Partly, there were so many other</p> <p>5 meta-analyses that I, you know -- although I</p> <p>6 would have done things a little bit differently,</p> <p>7 and I just didn't feel the need for one more</p> <p>8 meta-analysis that would be informative.</p> <p>9 Q. What was your methodology for focusing</p> <p>10 on certain studies or excluding other studies?</p> <p>11 A. So I'm not aware that I excluded</p> <p>12 certain studies, because I, as I compare, I have</p> <p>13 included all the epidemiologic studies that are</p> <p>14 here. There's always a possibility that once,</p> <p>15 you know, when you do a review, that you may</p> <p>16 have.</p> <p>17 But, you know, I included all the relevant</p> <p>18 case-control studies and the cohort studies and</p> <p>19 the systematic review and meta-analysis that I</p> <p>20 identified.</p> <p>21 And, yeah, I mean, I may have weighed</p> <p>22 studies differently based on their quality,</p> <p>23 validity and reliability.</p> <p>24 Q. That's how you tried to make a</p> <p>25 distinction?</p>
Page 127	Page 129
<p>1 to that, I was aware of systematic reviews and</p> <p>2 other reviews in this area.</p> <p>3 So I, as a broad -- you know, we should look</p> <p>4 at the methods section of this report.</p> <p>5 Do you want to look at the methods?</p> <p>6 Q. Well, if you have to. I mean, my</p> <p>7 question was just simply: What was your</p> <p>8 methodology for concluding that talc causes</p> <p>9 epithelial ovarian cancer?</p> <p>10 MS. PARFITT: Dr. Singh, anytime you</p> <p>11 need to consult your report.</p> <p>12 A. Yeah. I mean, the methodology was, you</p> <p>13 know, gathering lines of evidence. You know,</p> <p>14 assessing for relevance, reliability and, you</p> <p>15 know, again, assembling other lines of evidence</p> <p>16 for animal, human studies, the constituents of</p> <p>17 talc. And then assessing them within an analytic</p> <p>18 framework, the Bradford Hill, and then, you know,</p> <p>19 providing a weight-of-evidence opinion based on</p> <p>20 my professional judgment.</p> <p>21 Q. In other cases in which you've been</p> <p>22 retained as an expert, you've conducted a</p> <p>23 meta-analysis of the available data to reach a</p> <p>24 conclusion about the relative risk; correct?</p> <p>25 A. I have.</p>	<p>1 A. Yeah.</p> <p>2 Q. Do you believe the standard for proving</p> <p>3 causation in the scientific literature is the</p> <p>4 same as the one that applies in litigation?</p> <p>5 MS. PARFITT: Objection. Form.</p> <p>6 A. Yeah. I mean, the standard for</p> <p>7 causation, you know, is -- at least I was</p> <p>8 applying the same standard.</p> <p>9 Q. Are you familiar with the FDA analysis</p> <p>10 of the Bradford Hill factors and that they have</p> <p>11 concluded that causation is not established with</p> <p>12 respect to talc and ovarian cancer?</p> <p>13 MS. PARFITT: Objection. Misstates the</p> <p>14 evidence.</p> <p>15 A. I am aware of a FDA letter. I'm not</p> <p>16 sure that there's a Bradford Hill analysis. And</p> <p>17 if you can share that with me, that would be --</p> <p>18 Q. Please review Deposition Exhibit 19.</p> <p>19 (Letter dated April 1, 2014</p> <p>20 marked Exhibit 19.)</p> <p>21 MS. PARFITT: Thank you.</p> <p>22 BY MR. ZELLERS:</p> <p>23 Q. Deposition Exhibit 19 is a letter from</p> <p>24 the FDA to Sam Epstein, dated April 1st of 2014;</p> <p>25 is that right?</p>

33 (Pages 126 to 129)

Sonal Singh, M.D., M.P.H.

Page 130	Page 132
<p>1 A. Yes.</p> <p>2 Q. And when I say "dated," there's a stamp</p> <p>3 at the top that says April 1, 2014; correct?</p> <p>4 A. Yes.</p> <p>5 Q. Have you reviewed this FDA analysis</p> <p>6 before today?</p> <p>7 A. Yes. I have reviewed the letter.</p> <p>8 Yeah.</p> <p>9 Q. On Page 4 of the FDA document, at the</p> <p>10 bottom, do you see that?</p> <p>11 A. I do.</p> <p>12 Q. The FDA noted that selection bias</p> <p>13 and/or uncontrolled confounding result in</p> <p>14 spurious positive associations between talc use</p> <p>15 and ovarian cancer; is that right?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 A. Yes. That's what they conclude.</p> <p>18 Q. The FDA notes a lack of consistency in</p> <p>19 the study results; is that right?</p> <p>20 MS. PARFITT: Objection.</p> <p>21 A. Yes. And this was conducted in, I</p> <p>22 don't know, 2014, 2013.</p> <p>23 Q. The FDA specifically states, "Results</p> <p>24 of case-control studies do not demonstrate a</p> <p>25 consistent positive association across studies";</p>	<p>1 MS. PARFITT: Objection. Form.</p> <p>2 A. So just to clarify, where do they say</p> <p>3 they apply the Bradford Hill in this document?</p> <p>4 Q. You're familiar with the Bradford Hill</p> <p>5 criteria; is that right?</p> <p>6 A. Yes. I use it, but in this FDA</p> <p>7 document, where does it state they apply the --</p> <p>8 Q. It is one of the criteria for</p> <p>9 consistency across studies. Is that a Bradford</p> <p>10 Hill criteria?</p> <p>11 A. But exactly they don't go through all</p> <p>12 of them. So I don't know if they did a Bradford</p> <p>13 Hill. So how can I just assume that? They don't</p> <p>14 talk about, you know, specificity. They don't</p> <p>15 talk about strength of association. So I can't</p> <p>16 assume that they're applying Bradford Hill.</p> <p>17 Q. IARC did address the Bradford Hill</p> <p>18 considerations; is that right?</p> <p>19 A. Yes. In the year 2005. That was</p> <p>20 around 15 years ago.</p> <p>21 Q. IARC rejected classification of talc as</p> <p>22 carcinogenic and, instead, assigned it to the</p> <p>23 classification of possibly carcinogenic to</p> <p>24 humans; is that right?</p> <p>25 MS. PARFITT: Objection. Misstates the</p>
Page 131	Page 133
<p>1 is that right?</p> <p>2 A. Yes. That's what they state.</p> <p>3 Q. The FDA also states that,</p> <p>4 "Dose-response evidence is lacking"; is that</p> <p>5 right?</p> <p>6 MS. PARFITT: Objection.</p> <p>7 A. Where is that? I'm sorry.</p> <p>8 Q. Look at Paragraph 3 at the bottom of</p> <p>9 Page 4.</p> <p>10 A. Yes.</p> <p>11 Q. The FDA further concludes that, "A</p> <p>12 cogent biological mechanism by which talc might</p> <p>13 lead to ovarian cancer is lacking"; is that</p> <p>14 right?</p> <p>15 MS. PARFITT: Objection to form.</p> <p>16 A. Yeah. But it also concludes, in the</p> <p>17 same letter, that there is, you know, the</p> <p>18 potential for talc to migrate. So, I mean, I'm</p> <p>19 just trying to be -- that's what I reviewed.</p> <p>20 Yes, it does say that there's no biological</p> <p>21 mechanism.</p> <p>22 Q. You reviewed -- or strike that.</p> <p>23 In addition to the FDA looking at and</p> <p>24 applying the Bradford Hill criteria, IARC does</p> <p>25 that as well; is that right?</p>	<p>1 evidence.</p> <p>2 A. So, again, you know, just clarifying</p> <p>3 that this was done in 2005, with evidence that</p> <p>4 has accumulated since then. And I wouldn't</p> <p>5 classify it -- I have served on IARC panels, and</p> <p>6 I'm very familiar with their process. They don't</p> <p>7 reject anything. They classify drugs in the</p> <p>8 particular categories that they're supposed to</p> <p>9 be.</p> <p>10 So it was actually classified as possibly</p> <p>11 carcinogenic.</p> <p>12 Q. Take a look at Exhibit 20.</p> <p>13 (IARC Classifications marked</p> <p>14 Exhibit 20.)</p> <p>15 BY MR. ZELLERS:</p> <p>16 Q. Deposition Exhibit 20 are the IARC</p> <p>17 classifications; is that right?</p> <p>18 I'm sorry. Did you answer the question?</p> <p>19 A. Yes. Sorry.</p> <p>20 Q. That's okay.</p> <p>21 A. Yes.</p> <p>22 Q. All right. It lists out, starting with</p> <p>23 Group 1, carcinogenic to humans, down to Group 4;</p> <p>24 is that right?</p> <p>25 A. Yes.</p>

34 (Pages 130 to 133)

Sonal Singh, M.D., M.P.H.

Page 134	Page 136
<p>1 Q. There are 120 agents that have been 2 determined by IARC, the International Agency for 3 Research on Cancer, as Group 1 agents, 4 carcinogenic to humans; is that right? 5 A. Yeah. That includes asbestos, many 6 others. 7 Q. That is the only category in which IARC 8 finds sufficient evidence in humans; correct? 9 A. No. To clarify, they have -- it may be 10 in my report, that they have a particular way of 11 defining that category. And it may not be just 12 sufficient evidence in humans. They may be 13 something else. If I can look back at my report. 14 Q. Well, if it's in your report, it's in 15 your report. And we can all read that. 16 My question to you is: Group 1 is a 17 category where IARC has determined that there is 18 sufficient evidence in humans to classify an 19 agent as carcinogenic; is that right? 20 MS. PARFITT: Objection. Misstates 21 Dr. Singh's testimony. 22 A. I mean, do I get time to -- 23 Q. Doctor, I only have seven hours here. 24 So go to Exhibit 20. I'll make this quick. 25 Do you see Exhibit 20 in front of you?</p>	<p>1 A. Yes. 2 Q. So out of the 1,000 agents that IARC 3 has reviewed, it has placed only one agent in 4 Group 4, probably not carcinogenic; is that 5 right? 6 A. Yeah. But 499 are not classifiable as 7 it relates, so. 8 Q. IARC doesn't even have a Group 5, not 9 carcinogenic, does it? 10 A. Well, I mean, all the -- once it's 11 probably not carcinogenic, it's not carcinogenic. 12 Q. The best that IARC can state is that an 13 agent is probably not carcinogenic to humans, 14 which is Group 4; is that right? 15 A. Yes. 16 MS. PARFITT: Objection. 17 Q. All right. As with -- strike that. 18 With genital talc, the IARC group 2B 19 designation is based on limited evidence in 20 humans; is that right? 21 MS. PARFITT: Objection. 22 A. Yes. There was some animal 23 consideration. There were some biological 24 mechanisms, but, again, in 2005, and as I state 25 in my report, which I have, and there have been</p>
Page 135	Page 137
<p>1 A. Yeah. 2 Q. This is the IARC classifications; is 3 that right? 4 A. Okay. Mm-hmm. 5 Q. Group 1 states, "Carcinogenic to 6 humans." 7 A. Yes. 8 Q. Do you see that? 9 A. Yeah. 10 Q. All right. Group 2A, there are 82 11 agents that are probably carcinogenic to humans; 12 is that right? 13 A. Yes. 14 Q. IARC is certainly capable of reaching a 15 decision that something is a known or probable 16 carcinogen; is that right? 17 MS. PARFITT: Objection. 18 A. Yes. I mean, 15 years ago, yes, based 19 on the evidence. 20 Q. It has placed at least 200 agents in 21 Group 1 or Group 2A; is that right? 22 A. Yes. 23 Q. There's only one agent in Group 4, 24 probably not carcinogenic to humans; is that 25 right?</p>	<p>1 multiple studies since then. And that, you know, 2 that they should be revisited. 3 Q. That means IARC cannot rule out chance, 4 bias or confounding with reasonable confidence; 5 correct? 6 A. Based on the data they had at that 7 time. 8 Q. What else is in 2B, possibly -- strike 9 that. 10 What else is in class 2B, possibly 11 carcinogenic? Are you familiar with Ginkgo 12 biloba? 13 MS. PARFITT: Objection to form. 14 A. I know the name. 15 Q. Are you aware that that's classified as 16 a 2B agent by IARC? 17 A. I don't know. I mean, you know, they 18 also classify as it relates to exposure. So I 19 haven't reviewed Ginkgo biloba to be able to 20 answer the question. 21 Q. Pickled vegetables, 2B; is that right? 22 A. How do I know? Show me. 23 Q. Occupational -- 24 A. That's what you're saying. 25 Q. -- carpentry and joinery, 2B? Are you</p>

35 (Pages 134 to 137)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 138</p> <p>1 aware of that?</p> <p>2 A. Again, this is 2015. And, you know,</p> <p>3 yes. I don't know I'm aware of that. I mean,</p> <p>4 you can't put words in my mouth that pickle --</p> <p>5 how do I know that?</p> <p>6 Q. There's no chance of my putting words</p> <p>7 in your mouth. IARC can change its</p> <p>8 classification for a substance; is that right?</p> <p>9 A. It does. I mean, from what I</p> <p>10 understand.</p> <p>11 Q. It has not changed its Group 2B</p> <p>12 classification since it determined that talc was</p> <p>13 a 2B agent; is that right?</p> <p>14 MS. PARFITT: Objection. Form.</p> <p>15 A. It has not carried out an assessment</p> <p>16 since 2005, that I'm aware of.</p> <p>17 Q. Has IARC changed its group 2B</p> <p>18 classification?</p> <p>19 A. No --</p> <p>20 MS. PARFITT: Objection.</p> <p>21 A. -- and as far as I'm aware, no</p> <p>22 assessment has been carried out.</p> <p>23 Q. Bradford Hill, strength of association</p> <p>24 is one of the criteria; is that right?</p> <p>25 A. I don't consider them criteria.</p>	<p style="text-align: right;">Page 140</p> <p>1 Q. Doctor, I'm asking you questions.</p> <p>2 My question is: Epidemiologists consider a</p> <p>3 1.3 odds ratio in case-control studies to be a</p> <p>4 weak or modest association; correct?</p> <p>5 MS. PARFITT: Objection. Misstates the</p> <p>6 evidence and the science.</p> <p>7 A. Not the epidemiologists that I</p> <p>8 contacted. You know, we look at various, you</p> <p>9 know -- as I state in my report, you know, you</p> <p>10 can have modest associations and you can have a</p> <p>11 relative risk of one that are lower, and if you</p> <p>12 go to a low-prevalence population, and then</p> <p>13 remove competing risk factors, those can be</p> <p>14 attenuated.</p> <p>15 So the epidemiologists that I interact with,</p> <p>16 and we don't look at this as weak or modest or</p> <p>17 high. We just look at it in the whole causal</p> <p>18 framework.</p> <p>19 Q. Can you point to any peer-reviewed</p> <p>20 literature on talc and ovarian cancer that states</p> <p>21 that 1.3 odds ratio is a strong association?</p> <p>22 A. Again, that's not -- I'm not looking at</p> <p>23 talc at 1.3 is a strong association. I'm stating</p> <p>24 that, yeah, I can't point to the talc literature</p> <p>25 that states that.</p>
<p style="text-align: right;">Page 139</p> <p>1 There's overviews. I think -- I'm just picking</p> <p>2 the terms. I mean, they're overviews of Bradford</p> <p>3 Hill. Doesn't list them as criteria, because</p> <p>4 criteria implies a list of things that you can</p> <p>5 pick and choose from.</p> <p>6 Q. You would call them what?</p> <p>7 A. Overviews. Actually, that's what he</p> <p>8 calls them.</p> <p>9 Q. Overviews. Strength of association is</p> <p>10 a Bradford Hill overview; is that right?</p> <p>11 A. Yes.</p> <p>12 Q. Epidemiologists consider a 1.3 odds</p> <p>13 ratio in case-control studies to be a weak or</p> <p>14 modest association; is that right?</p> <p>15 MS. PARFITT: Objection. Misstates the</p> <p>16 evidence.</p> <p>17 A. No. I mean, again, strength of</p> <p>18 association based on -- depends on the study</p> <p>19 question at hand, the study design, and, you</p> <p>20 know, the quality of the underlying data. So</p> <p>21 strength of association, in and of itself, does</p> <p>22 not provide any -- any -- any sort of -- any</p> <p>23 answer to the causal question. Again, I'll go</p> <p>24 back to my report, because I have to go back to</p> <p>25 my report.</p>	<p style="text-align: right;">Page 141</p> <p>1 Q. IARC does not refer to this as a strong</p> <p>2 association; correct?</p> <p>3 MS. PARFITT: Objection. Form.</p> <p>4 A. I don't know what -- the particular</p> <p>5 objective or qualifier they use. I mean --</p> <p>6 Q. FDA doesn't refer to this as a strong</p> <p>7 association, do they?</p> <p>8 MS. PARFITT: Objection to form.</p> <p>9 A. Again, you have to sort of just show me</p> <p>10 where they are, and I'll agree with it.</p> <p>11 Q. Have you seen any statement from IARC</p> <p>12 that there is a strong association between</p> <p>13 genital talc use and ovarian cancer?</p> <p>14 A. I don't recall that particular phrase.</p> <p>15 Q. All right. The National Cancer</p> <p>16 Institute doesn't refer to this as a strong</p> <p>17 association; correct?</p> <p>18 MS. PARFITT: Objection to form.</p> <p>19 A. I don't recall that particular</p> <p>20 objective.</p> <p>21 Q. Do your opinions on strength of</p> <p>22 association apply equally to all forms of ovarian</p> <p>23 cancer?</p> <p>24 MS. PARFITT: Objection. Form.</p> <p>25 A. Again, I'm -- you know, my opinions are</p>

36 (Pages 138 to 141)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 142</p> <p>1 not -- again, we can parse this out. I mean, I 2 was just looking at the causal question. Is talc 3 causally related to the development of ovarian 4 cancer? 5 And, you know, most of the evidence that I 6 examined were -- was provided in terms of serous 7 epithelial cancer, and -- 8 Q. I thought you told me that your 9 methodology was to look at the Bradford Hill 10 overview factors; is that right? 11 A. Yeah. 12 Q. All right. And one of those factors is 13 strength of association; is that right? 14 A. Yes. 15 Q. And that's a factor that you looked at; 16 correct? 17 A. Yes. 18 Q. Do your opinions on strength of 19 association apply equally to all forms of ovarian 20 cancer? 21 MS. PARFITT: Objection. Form. 22 A. Well, I did not disaggregate my, you 23 know, opinion by histologic subtype. 24 Q. You cite to the Langseth paper; is that 25 right?</p>	<p style="text-align: right;">Page 144</p> <p>1 me when you have that. 2 A. Yeah. 3 Q. "Proposal to research community." Do 4 you see that? 5 A. Yes. 6 Q. Tell me if I read this statement by the 7 authors correctly. 8 "The current body of experimental and 9 epidemiological evidence is insufficient to 10 establish a causal association between perineal 11 use of talc and ovarian cancer risk. 12 Experimental research is needed to better 13 characterize deposition, retention, and clearance 14 of talc to evaluate the ovarian carcinogenicity 15 of talc." 16 Did I read that correctly? 17 A. Yes. 18 Q. You're drawing conclusions from this 19 study that are broader than the study authors' 20 own conclusions; is that right? 21 MS. PARFITT: Objection. 22 A. I didn't draw. So you were asking me 23 that whether I drew a single conclusion from the 24 Langseth. I mean, there are -- I think I cite 25 all the meta-analyses first, and then -- so I'm</p>
<p style="text-align: right;">Page 143</p> <p>1 A. I do. 2 Q. You state that the authors in Langseth 3 2008 found an odds ratio ranging between 1.12 to 4 1.4, depending upon the type of study design. Is 5 that right? This is on Page 22 of your report. 6 A. Okay. 7 Q. Langseth, in fact, rejects causation 8 and says more study is needed; correct? 9 MS. PARFITT: Objection. Form. 10 A. I don't know why you have stated they 11 reject causation. Show me that statement in that 12 article. 13 Q. Take a look, if you will, at Deposition 14 Exhibit 21. 15 (Article entitled "Perineal use 16 of talc and risk of ovarian cancer" marked 17 Exhibit 21.) 18 MS. PARFITT: Thank you. 19 MR. ZELLERS: Mm-hmm. 20 BY MR. ZELLERS: 21 Q. Deposition Exhibit 21 is the Langseth 22 2008 meta-analysis that you cite in your report; 23 is that right? 24 A. Yeah. It's one of the meta-analyses. 25 Q. Turn to Page 359 of Exhibit 21. Tell</p>	<p style="text-align: right;">Page 145</p> <p>1 not just drawing inferences from there. 2 And the authors, as far as I am aware, A, 3 there have been several other studies published 4 since then. This is 2007. So we have 12 years 5 and several publications. And, B, the authors 6 themselves have provided opinions that they are 7 causally related. Dr. Siemiatycki, as far as I'm 8 aware. 9 Q. Did you cite this paper in your report? 10 A. Yes. 11 Q. The authors in this paper state that 12 the current body of experimental and 13 epidemiological evidence is insufficient to 14 establish a causal association between perineal 15 use of talc and ovarian cancer risk; is that 16 right? 17 MS. PARFITT: Objection. Misstates the 18 evidence in this case. The science and 19 testimony. 20 A. It says the current body of evidence. 21 This is current as of two thousand and whenever. 22 Q. This is the paper. 2008, Exhibit 21, 23 that you relied on -- 24 A. Yeah. 25 Q. -- and cite in your report; correct?</p>

37 (Pages 142 to 145)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 146</p> <p>1 A. This is not the only --</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 A. -- paper. I cited on 2017, 2018.</p> <p>4 Q. Go to the acknowledgments section.</p> <p>5 Do you see the acknowledgments off to the</p> <p>6 left?</p> <p>7 A. Yes.</p> <p>8 Q. The authors are IARC members; is that</p> <p>9 right?</p> <p>10 A. Yes.</p> <p>11 Q. The authors of this paper, Langseth?</p> <p>12 A. Yes.</p> <p>13 Q. Another overview factor of Bradford</p> <p>14 Hill is consistency; is that right?</p> <p>15 A. Yes.</p> <p>16 Q. The literature does not show a</p> <p>17 consistent association between talc use and</p> <p>18 ovarian cancer; right?</p> <p>19 MS. PARFITT: Objection to form.</p> <p>20 A. I disagree.</p> <p>21 Q. The cohort studies do not show an</p> <p>22 association between talc use and ovarian cancer;</p> <p>23 correct?</p> <p>24 MS. PARFITT: Objection to form.</p> <p>25 A. I disagree. The cohort studies show</p>	<p style="text-align: right;">Page 148</p> <p>1 overall evidence, my testimony is that the cohort</p> <p>2 study estimates are in line with the case-control</p> <p>3 evidence and provide evidence of consistency.</p> <p>4 Q. The cohort studies themselves, looking</p> <p>5 just at those studies, and I'm going to ask you</p> <p>6 about the others --</p> <p>7 A. Sure, sure.</p> <p>8 Q. -- do not show a consistent</p> <p>9 association between talc use and ovarian cancer;</p> <p>10 correct?</p> <p>11 MS. PARFITT: Objection. Misstates the</p> <p>12 testimony.</p> <p>13 A. So that's not the way I look at</p> <p>14 evidence. I look at everything. That's what you</p> <p>15 want to look at. You can look at it.</p> <p>16 I just look at evidence, you know, whatever</p> <p>17 is out there. So I didn't look at cohort studies</p> <p>18 in and of themselves.</p> <p>19 And that's why we do systematic reviews.</p> <p>20 That's why we do meta-analyses, because you want</p> <p>21 to look at everything at the same time.</p> <p>22 Q. You did not look at the cohort studies</p> <p>23 individually; correct?</p> <p>24 A. I did. And they're in my report.</p> <p>25 Q. If you looked at the cohort studies</p>
<p style="text-align: right;">Page 147</p> <p>1 significant -- you know, increased risk, which is</p> <p>2 in the same direction as the case-control</p> <p>3 studies, which, as several of the authors, such</p> <p>4 as Penninkilampi and others and me, interpret as</p> <p>5 evidence of consistency.</p> <p>6 Q. The cohort studies are what?</p> <p>7 A. I'm sorry?</p> <p>8 Q. List out the cohort studies for us.</p> <p>9 A. Penninkilampi is a meta-analysis. They</p> <p>10 are an interpretation of the cohort studies.</p> <p>11 Q. You told me before that to do a proper</p> <p>12 analysis, you have to go and look at the</p> <p>13 individual studies; is that right?</p> <p>14 A. I do. I did.</p> <p>15 Q. And you went and you reviewed the</p> <p>16 cohort studies; is that right?</p> <p>17 A. Yes.</p> <p>18 Q. And it's your testimony that those</p> <p>19 cohort studies do show an association between</p> <p>20 talc use and ovarian cancer. Is that your</p> <p>21 testimony?</p> <p>22 A. So I reviewed the cohort studies in</p> <p>23 line with 30 case-control studies in line with</p> <p>24 70, you know -- sorry -- seven other</p> <p>25 meta-analyses and, you know, synthesizing the</p>	<p style="text-align: right;">Page 149</p> <p>1 individually, they do not show a consistent</p> <p>2 association between talc use and ovarian cancer;</p> <p>3 correct?</p> <p>4 MS. PARFITT: Objection. Misstates the</p> <p>5 evidence.</p> <p>6 A. So how can you look at individually and</p> <p>7 answer questions about consistency? To answer</p> <p>8 questions about consistency, you have to look</p> <p>9 across studies. And when you look across</p> <p>10 studies, you have to bring all studies.</p> <p>11 And that's when you can opine on</p> <p>12 consistency.</p> <p>13 Q. Doctor, my question relates just to the</p> <p>14 cohort studies.</p> <p>15 A. I understand.</p> <p>16 Q. The cohort studies do not demonstrate</p> <p>17 an association between talc use and ovarian</p> <p>18 cancer; correct?</p> <p>19 MS. PARFITT: Objection. Misstates the</p> <p>20 evidence.</p> <p>21 Q. Just the cohort studies.</p> <p>22 MS. PARFITT: Objection. Misstates the</p> <p>23 evidence.</p> <p>24 A. First of all, you know, they do</p> <p>25 increase -- an increase of serous epithelial</p>

38 (Pages 146 to 149)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 150</p> <p>1 ovarian cancer in one of them, and cumulative 2 evidence from cohort studies shows an excess risk 3 of ovarian cancer which is not statistically 4 significant. 5 Q. Hospital-based, case-control studies 6 collectively do not show an association between 7 talc use and ovarian cancer; correct? 8 MS. PARFITT: Objection. Misstates the 9 evidence. 10 A. That is incorrect, because 11 hospital-based, case-control studies also show an 12 association between talc use and ovarian cancer 13 which is not, you know -- and I would have to 14 look again. Please bring out the studies, 15 because I want to look at some of the studies 16 before I, you know, provide specific -- you're 17 asking very specific questions about 18 hospital-based studies, so I have to look at the 19 studies. 20 Q. If you can't answer a question, tell me 21 you can't answer it. But my question is, 22 hospital-based, case-control studies collectively 23 do not show an association between talc use and 24 ovarian cancer; correct? 25 MS. PARFITT: Objection. Misstates the</p>	<p style="text-align: right;">Page 152</p> <p>1 MS. PARFITT: Wait. Are you in the 2 middle? 3 A. Yeah. That's incorrect. It should be 4 the population-based case studies. That's my -- 5 you know, that's a misstatement on my part. 6 Q. So you need to amend your report? 7 A. Yeah. Yeah. 8 Q. So if we go to Page 54 -- 9 A. Yeah. 10 Q. -- Paragraph 8, you state that it's an 11 error when you state, "As opposed to 12 hospital-based controls, which may be less 13 susceptible to selection bias, the 14 population-based, case-control studies have 15 consistently showed a higher estimate of 16 increased risk of ovarian cancer associated with 17 talc use." 18 A. Yeah. And I was applying the less 19 susceptible to the population-based statement. 20 Q. How do you need to correct this 21 statement? 22 A. I don't know how, you know. Yeah, it 23 would be as opposed to hospital-based controls, 24 population-based, case-control studies may be 25 less susceptible to selection bias.</p>
<p style="text-align: right;">Page 151</p> <p>1 evidence. 2 A. No. I disagree. And, again, I'd have 3 to -- can we pull the Penninkilampi paper? 4 Q. Doctor, I'm going to ask you about that 5 paper. 6 A. No. But then how can I answer 7 questions? 8 Q. I need you to answer my questions. 9 If you can't answer a question, then tell me 10 you can't answer the question. 11 A. I'm willing to answer the question. 12 Just bring me the evidence so that I can look at 13 it. 14 I'm sorry. I'm trying my best. 15 Q. In your report, you state that 16 hospital-based, case-control studies may be less 17 susceptible to selection bias than 18 population-based, case-control studies; correct? 19 A. Where do I state that? 20 Q. Look at your report on Page 54, 21 Paragraph 8. 22 A. Actually, I state entirely the 23 opposite. I state that the population-based 24 studies may have -- 25 Q. So --</p>	<p style="text-align: right;">Page 153</p> <p>1 Q. You believe that population-based 2 studies may be susceptible to less selection 3 bias? 4 A. May be less susceptible. 5 Q. Take a look at Exhibit 21. That's the 6 article we looked at a few minutes ago. 7 Do you see that? 8 A. That's the Langseth? 9 Q. Yes. The Langseth article. 10 Do you see that? 11 A. Yes. 12 Q. Take a look under the hospital-based 13 studies. 14 Do you see that on Page 359? 15 A. Yes. 16 Q. You are the one who cites this paper 17 and relies on it; is that right? 18 A. Yes. 19 Q. If we look at pooled odds ratio for 20 hospital-based studies -- 21 A. Mm-hmm. 22 Q. -- the odds ratio is 1.2 and the 23 confidence interval is a .92 to 1.36; is that 24 right? 25 A. Yes.</p>

39 (Pages 150 to 153)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 154</p> <p>1 Q. That means that it may or may not be -- 2 show an association between talc use and ovarian 3 cancer. The pooled result; is that right? 4 MS. PARFITT: Objection to form. 5 Q. Given that confidence interval. 6 MS. PARFITT: Objection to form. 7 A. Yeah. Again, this is -- you know, at 8 that time. I don't know what studies have been 9 added. We can look in the new paper, which I'm 10 not sure why it's not been brought up. 11 But, yes, it does show an excess risk, not 12 statistically significant, consistent with the 13 population studies. 14 Q. All right. Hospital-based control 15 studies, you're more likely to be comparing 16 hospitalized patients to hospitalized patients; 17 is that right? 18 A. Yes. That's why they're hospital 19 based. 20 Q. Population-based studies, you're more 21 likely to be comparing ill people to healthy 22 people; is that right? 23 A. Yeah. Your source of control. I 24 mean -- well, it depends. How do you know if 25 it's ill people? If you are sourcing from the</p>	<p style="text-align: right;">Page 156</p> <p>1 behavioral change bias, which attenuates towards 2 the null. It induces an element of 3 misclassification of exposure, which goes towards 4 null. It limits the duration of assessment, 5 which, you know, limits assessment. So it 6 doesn't have power to suggest. 7 So, yes, recall bias is a feature that is 8 better assessed in the cohort studies, but recall 9 bias, for exposures that are daily use, such as 10 talc, are less likely, you know, to be in play. 11 Recall bias -- let me finish my explanation. 12 Recall bias would less likely be in play 13 because we don't see evidence with nonperineal 14 talc exposure. Recall bias are less likely to be 15 in play because we only see it with epithelial 16 ovarian cancer. 17 So, yes, cohort studies less, but there are 18 other biases. 19 Q. Couldn't recall bias explain the 20 difference between cohort studies and 21 retrospective case-control studies? 22 MS. PARFITT: Objection. Form. 23 A. I don't think so. There's multiple 24 other biases and multiple other strengths and 25 limitations that would have to be considered.</p>
<p style="text-align: right;">Page 155</p> <p>1 population in both, it's a population-based 2 study. 3 Q. Population-based, case-control studies, 4 the ones that you look at only show a weak 5 association between talc use and ovarian cancer; 6 is that right? 7 MS. PARFITT: Objection. Misstates the 8 evidence. 9 A. I think we went about that weak. I 10 don't believe that they are weak. We went 11 through that. 12 Q. That's your -- 13 A. Yeah. My opinion is that they're not 14 weak evidence. 15 Q. Isn't the absence of an association in 16 the cohort studies especially significant in that 17 the study design reduces the likelihood of recall 18 bias? 19 MS. PARFITT: Objection to form. 20 A. Yes. I mean, it is important to look 21 at recall bias in the cohort studies. But the 22 study design introduces several elements of other 23 bias for an outcome such as ovarian cancer. 24 You know, I'm answering your question, 25 because you asked about bias. It introduces</p>	<p style="text-align: right;">Page 157</p> <p>1 Q. You cite to Berge, a 2017 paper, in 2 your report; is that right? Is that correct? 3 A. Yes. 4 MR. ZELLERS: Take a look at 5 Exhibit 22. 6 (Article entitled "Genital use 7 of talc and risk of ovarian cancer: A 8 meta-analysis" marked Exhibit 22.) 9 MR. ZELLERS: Ms. Court Reporter, where 10 do you want me to put it, maybe here, on top? 11 COURT REPORTER: Sure. 12 MR. TISI: Thank you. 13 BY MR. ZELLERS: 14 Q. Deposition Exhibit 22 is a paper that 15 you cite by Berge, is the first named author, 16 2017. It's a recent meta-analysis; is that 17 right? 18 A. Yes. 19 Q. Go to Page 6 of the Berge paper, 20 Exhibit 22. 21 The authors conclude that, "Information bias 22 from retrospective self-report of talc use is a 23 possible explanation for the association detected 24 in case-control studies." Is that right? 25 A. Yes.</p>

40 (Pages 154 to 157)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 158</p> <p>1 Q. What was your methodology for 2 discounting the effect of recall bias in the 3 population-based, case-control studies? 4 A. I mean, it's not like there's a -- once 5 recall is operational, there are no methods that 6 you can and do discount. But just the quality 7 and, you know, the quantity of evidence over 8 studies and the fact that even the cohort 9 studies, despite these limitations, show an 10 increased risk suggests that recall bias, while 11 it is potential, cannot explain -- be the only 12 explanation for a causal link between talc and 13 ovarian cancer. You cannot adjust for recall 14 bias after the completion of the study. 15 Q. What is the rate of error in that 16 methodology? 17 A. I think that none of them have 18 calculated it. And Dr. Cramer has done in his 19 last study. And it appears that you'd have to 20 need a significant degree of recall bias. And I 21 am going to reference my report. 22 Q. Okay. Didn't the cohort studies 23 involve a much greater -- 24 A. I'm not done. 25 MS. PARFITT: Excuse me.</p>	<p style="text-align: right;">Page 160</p> <p>1 that the case-control studies are more powered. 2 Q. Do you agree that some case-control 3 studies have shown statistically significant 4 findings and others have not? 5 A. Yes. 6 Q. What is your methodology for weighing 7 the lack of consistency in statistical 8 significance across studies? 9 MS. PARFITT: Objection. Form. 10 A. I can answer that. Yeah. 11 So the methodology for correcting the lack 12 of significance, that's why you do a 13 meta-analysis. That's an inverse variance 14 weighted meta-analysis. You -- so all of these 15 studies have accounted for the fact that their 16 confidence intervals are crossing 1. And that's 17 how they have accounted for lack of a statistical 18 significance. 19 So you can see that all of these estimates 20 are weighted by sample size. So -- 21 Q. Do you agree that if a study does not 22 show a statistically significant association, it 23 could mean that no risk exists? Correct? 24 MS. PARFITT: Objection. Form. 25 A. In the context of that study. But,</p>
<p style="text-align: right;">Page 159</p> <p>1 A. I'm done. 2 MS. PARFITT: One moment. He wanted to 3 reference something in his report. 4 A. Yeah. The risk of exposure would have 5 to be very high to nullify the increased risk. 6 Q. Didn't the cohort studies involve a 7 much greater number of women than the 8 case-control studies? 9 MS. PARFITT: Objection. Misstates the 10 evidence. 11 A. Yeah. But their combined number of 12 ovarian cancer cases was 890. So power is only 13 -- depends on the number of cases. 14 Q. What was your methodology for weighing 15 the power of the cohort studies versus the 16 case-control studies? 17 A. I mean, retrospective calculations of 18 power are, you know, not really recommended once 19 you already have the results. I mean, we already 20 see that the overall cumulative evidence 21 from many meta-analyses suggests an increased -- 22 you know, provides an increased risk. 23 And we know that there's thousands of cases 24 in the case control. There's, you know, I don't 25 know how many cases in the cohort, so we know</p>	<p style="text-align: right;">Page 161</p> <p>1 again, I am looking at the cumulative evidence. 2 Q. It could mean -- strike that. 3 It could just be occurring by chance; is 4 that right? 5 MS. PARFITT: Objection. Form. 6 A. I'm looking at the whole body of 7 evidence. 8 In the context of a single study, yes. 9 Q. If a study is underpowered it could be 10 because the difference in risk is too small to 11 detect such as a risk ratio smaller than 1.15; 12 isn't that right? 13 A. Yes. It's possible. 14 Q. All right. You have a criticism in 15 your report of the Nurses' Health Study; is that 16 right? 17 MS. PARFITT: Objection to form. 18 A. I don't have -- again, I don't have 19 criticisms. I have pointed out the strengths and 20 limitations. 21 Q. Well, let's look at some of those. 22 On Pages 40 and 41 of your report, you 23 discuss the Gates 2008 study; is that right? 24 A. 40. Yes. 25 Q. The Gates 2008 study showed a</p>

41 (Pages 158 to 161)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 162</p> <p>1 statistically significant increased risk of total 2 epithelial ovarian cancer; is that right? 3 A. Let me just look at it. There's so 4 many of these. Yes. 5 Q. The Gates 2008 study used data 6 collected in the Nurses' Health Study; is that 7 right? 8 A. Yes. There was another part to it as 9 well. 10 Q. In the Nurses' Health Study, the 11 participants were asked about their talc exposure 12 in one questionnaire in 1982; is that right? 13 A. Yes. 14 Q. When they were asked about their talc 15 use, the participants were between 36 and 61 16 years of age; is that right? 17 A. Yes. 18 Q. As you state in your report, you agree 19 that, although talc exposure -- and I'm looking 20 at Page 41 -- 21 A. Yes. 22 Q. The first paragraph. You agree that, 23 "Although talc exposure was only measured in the 24 1982 Nurses' Health Study questionnaire, when 25 participants were between 36 to 61 years of age,</p>	<p style="text-align: right;">Page 164</p> <p>1 Study questionnaire; correct? 2 A. Yes. 3 Q. And you cite that on Page 48 of your 4 report, second paragraph; is that right? 5 A. Yes. 6 Q. You state, "Further, as discussed 7 above, determining never use, based only on a 8 one-time question, near the start of the study, 9 14 years prior to terminating the study in 1996, 10 introduces unidirectional behavioral change bias, 11 likely misclassifying some ever users who used 12 talc during the study as never users and biased 13 the findings toward the null." 14 Is that what you state in your report? 15 A. Let me just read it. Yes. 16 Q. So when you discuss the Gertig 2000 17 study, you say that, because the participants in 18 the Nurses' Health Study were only about or only 19 asked about talc use once, near the beginning of 20 the study, women who started using talc after 21 they completed that questionnaire could have been 22 misclassified as never users; is that right? 23 A. Yeah. 24 Q. But when you talk about the study that 25 you believe supports your opinion --</p>
<p style="text-align: right;">Page 163</p> <p>1 the number of users who began talc use after this 2 is likely small, as shown by the fact that more 3 than 95 percent of controls with regular talc in 4 the NECC reported talc use before age 35." 5 A. Yes. 6 Q. Is that correct? 7 A. Yes. 8 Q. Later in your report, on Pages 47 and 9 48, you discuss the Gertig 2000 study; is that 10 right? 11 A. Yes. 12 Q. That study also uses the data from the 13 Nurses' Health Study; correct? 14 A. Yes. It's all part of the same cohort. 15 Q. That study, Gertig 2000, did not find a 16 statistically significant relationship between 17 daily talc use and all types of ovarian cancer; 18 is that right? 19 A. Yeah. Again, I mean, they are 20 different -- they're the same cohort with 21 different follow-up time, different design. But 22 it did not. And it found an increased risk for 23 serous ovarian cancer. 24 Q. Gertig 2000, that study also relied on 25 the national -- strike that -- the Nurses' Health</p>	<p style="text-align: right;">Page 165</p> <p>1 A. Yeah. 2 Q. -- Gates 2008, you recognize that the 3 vast majority of women who use talc initiate use 4 before age 36; is that right? 5 A. Yeah. But it does not -- both points 6 are valid. I mean, I'm just stating the 7 limitations of the Gates study and the Gates 8 analysis. So. 9 I don't see an incongruity that you're 10 trying to point out. I'm just saying the 11 proportion of women who were never users, the 12 number of users who began is likely small. But 13 it still does not eliminate the possibility of 14 unidirectional behavioral change bias. 15 Q. When you're looking at a cohort study, 16 Gertig 2000 that does not support your opinion, 17 you're talking about limitations; correct? 18 MS. PARFITT: Objection. Misstates his 19 testimony. 20 A. I'm not talking about a study that does 21 not support mine. I'm looking at the strengths 22 and limitations of a study. 23 Q. You state two different things, 24 depending upon whether you're talking about Gates 25 2008 or Gertig 2000; correct?</p>

42 (Pages 162 to 165)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 166</p> <p>1 MS. PARFITT: Objection. Misstates his 2 testimony. 3 A. I am not. 4 First of all, they are two different 5 analyses of a cohort. So they're not two 6 different things about. 7 And I'm pointing out, you know, the reasons 8 that that -- so I'm, you know, pointing out in 9 Gates that, yes, talc exposure is a single-time 10 exposure. And it is -- you know, introduces an 11 element of bias. 12 But I'm also pointing out in Gates why that 13 bias is likely to be, you know, small coming from 14 the other consortium. 15 Q. But you don't say that when you discuss 16 Gertig 2000, do you? 17 A. Yeah. Because it wasn't done in 18 conjunction with the NECC consortium. 19 Q. All right. Look at Page 49 of your 20 report. You discuss the Houghton 2014 study; is 21 that right? 22 A. Yes. 23 Q. All right. Houghton did not find a 24 statistically significant increase in the risk of 25 ovarian cancer with perineal talc use; is that</p>	<p style="text-align: right;">Page 168</p> <p>1 participants in the Houghton 2014 study was 63.3 2 years at baseline, with 12.4 years of follow-up 3 on average; is that right? 4 A. Yes. 5 Q. And then you say that, because 6 participants were not asked again about talcum 7 powder use during follow-up, people who initiated 8 talc use after the study began were being 9 misclassified as never users. Is that right? 10 A. Yes. 11 Q. So, again, when the study supports your 12 opinion, you recognize that the vast majority of 13 perineal talc users begin that use well before 14 age 63. 15 MS. PARFITT: Objection. Misstates 16 testimony. 17 A. I don't recognize that. How do I 18 recognize that? I'm just citing that, in Gates, 19 they provided that opinion. Yeah. 20 In the Gates study, they quoted data from 21 the NECC, that that's one study that provides. I 22 don't know what's happening in the -- in this 23 Houghton study, that vast majority. That's 24 something that you are providing. And you 25 provide data that the vast majority of users</p>
<p style="text-align: right;">Page 167</p> <p>1 right? 2 A. Yes. 3 Q. Houghton did not find a statistically 4 significant increase in the risk of ovarian 5 cancer with use of talcum powder on sanitary 6 napkins or diaphragms; is that right? 7 A. Yeah. They found an increased risk 8 which was not statistically significant. 9 Q. And Houghton 2014 did not find a 10 statistically significant increase in risk of 11 ovarian cancer with increasing durations of use 12 or when stratified by age or tubal ligation 13 status; correct? 14 MS. PARFITT: Objection. Form. 15 A. I don't know that specific. I mean, 16 you'd have to show me. Again, I don't remember 17 these studies offhand. 18 Q. Like the Nurses' Health Study, the 19 Houghton 2014 authors ask participants about 20 their talcum powder use at the participants' 21 entry into the study; is that right? 22 A. Yes. And they don't update during a 23 follow-up, introducing, you know, bias. 24 Q. On Page 50 of your report, second 25 paragraph, you note that the average age of the</p>	<p style="text-align: right;">Page 169</p> <p>1 began -- 2 Q. It's something you cited in your 3 report; correct? 4 A. Yeah. But it doesn't mean that that 5 applies to, you know, this Houghton study as 6 well. 7 Q. And that's my point. You take a piece 8 of information in terms of when women begin their 9 talc use. You apply it differently in your 10 analysis of studies that favor plaintiffs' 11 position than studies that do not favor 12 plaintiffs' position? 13 A. I'm sorry. I have to object. 14 MS. PARFITT: Objection. 15 A. I have to object. This is a 16 mischaracterization of my testimony. I mean, I 17 have to object to this. Because -- no, I have 18 to. 19 MS. PARFITT: Let him finish. Let 20 him -- 21 A. Because you are mischaracterizing my 22 testimony. 23 Yes, I point out the limitations in one 24 section that, you know, a majority of women. And 25 I also point out the unidirectional change bias,</p>

43 (Pages 166 to 169)

Sonal Singh, M.D., M.P.H.

Page 170	Page 172
<p>1 and both are entirely congruent with each other. 2 But yes -- 3 Q. Tell -- 4 A. Yes. 5 Q. Are you finished? 6 A. Yes. 7 Q. All right. On what are you relying to 8 opine that enough women begin talcum powder use 9 in their 50s and 60s such that the results of 10 Houghton or Gates 2000 are biased toward the 11 null? 12 A. Well, I mean, we know -- exactly. I 13 mean, we don't know that. I mean, we can't -- 14 even a small amount, and that's important to 15 know, that even a small amount of users was 16 class- -- because we didn't ask those questions. 17 So even a small amount of users who had moved to 18 the other category would have nullified -- you 19 know, would have biased it towards the null. 20 Q. Based on all your review, the data that 21 you came across and that you cite in your report, 22 are that the vast majority of women begin talc 23 use in their 20s or earlier; correct? 24 A. No. I cite that in the NECC. That's 25 the data I came across. And that's why it is</p>	<p>1 MR. ZELLERS: So I'll ask just a few 2 questions about this study -- 3 MS. PARFITT: And if it's not here -- 4 MR. ZELLERS: -- then we'll take a 5 break, because we've been going for a while. 6 (Article entitled "Perineal Talc 7 Use and Ovarian Cancer, A Systematic Review 8 and Meta-Analysis" marked Exhibit 23.) 9 BY MR. ZELLERS: 10 Q. Doctor -- 11 A. I think we need a break in five 12 minutes. I need a break. I don't know about 13 you. 14 Q. We don't want to wear you out. 15 A. It's only half. Not even half the way. 16 Q. I'm handing you Exhibit 23. This is 17 the Penninkilampi meta-analysis that you have 18 referred to in your report and also in your 19 testimony; is that right? 20 A. Yes. 21 Q. You rely on this meta-analysis, 22 Deposition Exhibit 23, in forming your opinions; 23 is that right? 24 A. As one of the studies. Yes. 25 Q. It's a 2018 meta-analysis; is that</p>
Page 171	Page 173
<p>1 cited. So to mischaracterize it as not being 2 cited is incorrect. 3 Q. What is the latency period for ovarian 4 cancer? 5 A. I don't know a specific number. It's, 6 you know, several years. 7 Q. Several years. 8 That's your testimony based upon all of the 9 data and material you've reviewed? 10 A. Yes. I mean -- 11 MS. PARFITT: Objection. 12 Q. You've -- you've been referring to 13 Penninkilampi; is that right? 14 A. I don't know the name. Yes. 15 Q. But let me give it to you and we can 16 both see if we can pronounce it together. 17 MS. PARFITT: Before we start, it's 18 about 12:20. We do have lunch coming. May I 19 just take two minutes to see if it's here? 20 MR. ZELLERS: Sure. Or you can let me 21 ask a couple of questions about this study and we 22 can take a break, but whatever your preference 23 is. 24 MS. PARFITT: What's your preference? 25 THE WITNESS: Let's do it.</p>	<p>1 right? 2 A. Yes. 3 Q. Are you aware that this meta-analysis 4 by Penninkilampi does not include the Gates 2010 5 update of the Nurses' Health Study? 6 A. When you say the Gates 2002 -- the 7 study that we -- 8 Q. What we looked at before was Gates 9 2008. And we also looked at Gertig 2000 -- 10 A. All these different studies. 11 Q. That's all right. 12 You're aware that there are several 13 different cohort studies relating to the Nurses' 14 Health Study; is that right? 15 A. Yes. 16 Q. What we talked about earlier was the 17 Gertig 2000 study. 18 A. Okay. 19 Q. Correct? 20 A. Yes. And before that, we talked 21 about -- 22 Q. The Gates 2008. 23 A. Okay. 24 Q. Are you aware that Gates, in 2010, 25 updated the Nurses' Health Study, which we have</p>

44 (Pages 170 to 173)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 174</p> <p>1 referred to as Gertig 2000?</p> <p>2 A. Yeah. I have. It's cited in my report</p> <p>3 as well, 92.</p> <p>4 Q. Are you aware that Penninkilampi does</p> <p>5 not include the Gates 2010 update of the Nurses'</p> <p>6 Health Study?</p> <p>7 MS. PARFITT: Refer to your --</p> <p>8 A. Can I take a look?</p> <p>9 MS. PARFITT: Of course, you can.</p> <p>10 Q. Sure.</p> <p>11 A. Yeah. It cites Gertig.</p> <p>12 Q. But it does not cite Gates 2010; is</p> <p>13 that right?</p> <p>14 A. I don't see it.</p> <p>15 Q. Do you weigh this study, the</p> <p>16 meta-analysis by Penninkilampi, less because it</p> <p>17 does not include the Gates 2010 study?</p> <p>18 A. I mean, all of these meta-analyses,</p> <p>19 most of them have found, you know, similar odds</p> <p>20 ratio. You know, some of them have made</p> <p>21 different decisions.</p> <p>22 They have made -- for example, they made</p> <p>23 decisions about more than 50 cases. Other -- if</p> <p>24 you look at the Taher meta-analysis, they</p> <p>25 decided, based on -- that a New Castle Tawas</p>	<p style="text-align: right;">Page 176</p> <p>1 So I think it's quite reliable and, you</p> <p>2 know, they were justified. They said we're going</p> <p>3 to look at case control with more than 50 cases.</p> <p>4 So I don't consider it unreliable for that</p> <p>5 reason.</p> <p>6 MR. ZELLERS: Let's take a break.</p> <p>7 THE VIDEOGRAPHER: Here ends Media</p> <p>8 No. 2. Off the record, 12:24 p.m.</p> <p>9 (Lunch recess was taken.)</p> <p>10 THE VIDEOGRAPHER: Here begins media</p> <p>11 No. 3 in today's deposition of Sonal Singh, MD,</p> <p>12 M.P.H. Back on the record, 1:02 p.m.</p> <p>13 BY MR. ZELLERS:</p> <p>14 Q. Dr. Singh, another Bradford Hill</p> <p>15 overview factor that you considered is</p> <p>16 dose-response; is that right?</p> <p>17 A. Yes.</p> <p>18 Q. Which studies show a dose-response?</p> <p>19 A. Let me just refer to my report.</p> <p>20 So in -- you know, in assessing</p> <p>21 dose-response, it's very challenging with an</p> <p>22 exposure such as perineal talc, particularly</p> <p>23 because, you know, you need to know the amount,</p> <p>24 you need to know the duration, you need to know</p> <p>25 the intensity of exposure. So there are</p>
<p style="text-align: right;">Page 175</p> <p>1 Skill Rating will include studies.</p> <p>2 So you have to review that. Just because</p> <p>3 they excluded Gates 2010, I wouldn't weigh it</p> <p>4 differently. That's my answer.</p> <p>5 Q. Gates 2010 tends to negate an</p> <p>6 association between perineal talc use and ovarian</p> <p>7 cancer; correct?</p> <p>8 MS. PARFITT: Objection. Misstates the</p> <p>9 evidence.</p> <p>10 A. So negates the evidence? I mean, in</p> <p>11 fact, if you look at influence analyses conducted</p> <p>12 by Taher, it sort of doesn't matter which study</p> <p>13 you take out and which study you take in. All of</p> <p>14 the estimates are statistically significant.</p> <p>15 Q. If you're going to do a reliable</p> <p>16 meta-analysis, you should include the pertinent</p> <p>17 studies; correct?</p> <p>18 MS. PARFITT: Objection. Misstates his</p> <p>19 testimony.</p> <p>20 A. Just give me a second.</p> <p>21 Yeah. I mean, you have to include the</p> <p>22 permanent study -- but as we know, as we know,</p> <p>23 people have made different decisions, like Taher</p> <p>24 made separate decisions, Berge has made</p> <p>25 separate -- the previous analysis made.</p>	<p style="text-align: right;">Page 177</p> <p>1 challenges.</p> <p>2 The second is the challenge of modeling</p> <p>3 dose-response. When we say dose-response -- or</p> <p>4 exposure outcome, is it linear monotonic</p> <p>5 relationships?</p> <p>6 And, you know, several studies, some measure</p> <p>7 duration, some measure intensity, some measure</p> <p>8 duration and frequency. So as I cite in my</p> <p>9 dose-response section, which I'm trying to</p> <p>10 find -- I'm sorry -- yeah, Page 56 of my report.</p> <p>11 Q. Which studies show a dose-response?</p> <p>12 A. I mean, this is, you know,</p> <p>13 references -- with increased frequency, 51 to 55.</p> <p>14 Duration, 52 to 54. Frequency and duration,</p> <p>15 58 -- 48 to 54.</p> <p>16 Q. Doctor, which studies did you review</p> <p>17 that show a dose-response?</p> <p>18 A. These are the studies that I cited.</p> <p>19 Q. What page are you looking at?</p> <p>20 A. Page 56.</p> <p>21 Q. Are there studies that do not show a</p> <p>22 dose-response?</p> <p>23 A. Yes.</p> <p>24 Q. Do you cite those studies that do not</p> <p>25 show a dose-response in your report?</p>

45 (Pages 174 to 177)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 178</p> <p>1 A. Yes, I do. 2 Q. On what page? 3 A. Just give me a second. I know I have 4 cited them, and I'm just trying to find where. 5 Yeah. None of the cohort studies were able 6 to conduct meaningful dose-response because they 7 did not collect durational. 8 Q. Are those the only studies, the cohort 9 studies that did not find a meaningful 10 dose-response? 11 A. No. There were several -- 12 MS. PARFITT: Objection to form. 13 A. There were other case-control studies. 14 No. If you take out 41, 55 -- I mean, these 15 references cite above -- that are, you know, 16 included in the sections, and I talk about their 17 dose-response in the respective section. 18 Q. What is your justification for 19 disregarding the studies that did not show a 20 dose-response? 21 MS. PARFITT: Objection. Form. 22 A. So I did not disregard these studies. 23 They are included in the report. So, obviously, 24 the cohort studies already are, and we can go 25 through the case-control studies, which did not</p>	<p style="text-align: right;">Page 180</p> <p>1 Q. On 337, there's a table that shows the 2 risk of ovarian cancer for women who used talc 3 daily for one year, one to five years, five to 20 4 years, and more than 20 years. Is that right? 5 A. Yes. 6 Q. There was only statistical significance 7 for the time periods of one to five years of use 8 and more than 20 years of use; correct? 9 A. Yes. 10 Q. If there is a dose-response, shouldn't 11 there continue to be statistical significance 12 with increased exposure? 13 MS. PARFITT: Objection. Form. 14 A. Yeah. So that is -- I'm just 15 concluding what they concluded. The trend for 16 frequency of use was significant, but the trend 17 for use -- years use was flat. And if you look 18 at Page 337, the last line of that paragraph, 19 "Even with this imprecision, the trend remained, 20 although the increase was less monotonic." 21 Q. When we look at the data, there is only 22 a dose-response -- strike that. 23 The data only shows statistical significance 24 for one to five years of use. It does not show 25 statistical significance for one year or five to</p>
<p style="text-align: right;">Page 179</p> <p>1 show dose-response and are included. 2 Q. One of the studies you reviewed and 3 considered and relied upon was the Cramer 2016 4 study; is that right? 5 A. Yeah. 6 (Article entitled "The 7 Association Between Talc Use and Ovarian 8 Cancer, A Retrospective Case-Control Study 9 in Two US States" marked Exhibit 24.) 10 BY MR. ZELLERS: 11 Q. Exhibit 24 is the Cramer 2016 study; 12 correct? 13 A. Yes. 14 Q. This is a retrospective case-control 15 study published in 2016; is that right? 16 A. Yes. 17 Q. You claim in your report that this 18 study shows a trend for increasing risk by talc 19 years on Page 46, the last paragraph; is that 20 right? 21 A. Yes. 22 Q. Let's take a look at whatever the study 23 shows. Turn to Page 337 of Exhibit 24, the 24 Cramer 2016 study. 25 A. 337? Yes.</p>	<p style="text-align: right;">Page 181</p> <p>1 20 years; correct? 2 MS. PARFITT: Objection. Misstates the 3 evidence. 4 A. Yeah. So let's go to -- 5 Q. Is that correct? 6 MS. PARFITT: Objection. 7 A. Yes. But let's go to the section of my 8 testimony in which -- report which discusses how 9 dose-response analysis should be interpreted, 10 because they lose statistical power. So subgroup 11 tests lose statistical significance, and I'll 12 point out -- 13 Q. You -- 14 MS. PARFITT: Excuse me. I think he's 15 still -- 16 A. Yeah. I'm trying to explain something. 17 Yeah. We are talking on the subject of 18 dose-response. And one must be careful in 19 interpreting data from the subgroup analysis such 20 as analysis of dose categories or, you know, as 21 subgroups. The results are important. If the 22 test is not significant, there's lack of 23 significant difference. However, such subgroup 24 tests can be underpowered because of reduction in 25 sample size.</p>

46 (Pages 178 to 181)

Sonal Singh, M.D., M.P.H.

Page 182	Page 184
<p>1 Q. Doctor, if there is a dose-response in 2 a study such as the Cramer 2016 paper, looking at 3 the data, shouldn't there continue to be 4 statistical significance with increased exposure? 5 MS. PARFITT: Objection. 6 A. No, no, you don't -- it doesn't have to 7 be statistical significance with, you know, 8 increased exposure. I mean, you look at the test 9 score interaction. 10 So I don't think that, with each category of 11 exposure, you're already -- you have a power for 12 a study. Now with each, you're decreasing the 13 number of users, so you're not going to get 14 statistical significance. 15 Q. Then why do you get statistical 16 significance at greater than 20 years of daily 17 use? 18 A. Yeah. Because there's differential, 19 you know -- at that point, you know, there's 20 more -- there's, you know, more case subjects 21 have ovarian cancer. 22 Q. Why do you not have statistical 23 significance at five to 20 years? 24 A. Because it's underpowered at that time. 25 Q. Why do you not have statistical</p>	<p>1 that testing to determine how much talcum powder 2 reaches a woman's ovary after each application. 3 Q. Do you have any idea how much asbestos 4 reaches a woman's ovaries each time she uses 5 talc, assuming that talc powder is contaminated 6 with asbestos? 7 MS. PARFITT: Objection. Form. 8 A. I have not conducted that assessment. 9 Q. How much heavy metal exposure reaches a 10 woman's ovaries, assuming that there are heavy 11 metals in talcum powder? 12 MS. PARFITT: Objection. Form. 13 A. I have not conducted that assessment. 14 Q. Do you know that heavy metals, 15 chromium, cobalt and nickel, are in vitamins? 16 A. Yeah. They are in, you know -- they 17 are ubiquitous in various other areas as well. 18 Q. They're in food; right? 19 A. I don't know which one is in which. 20 Yeah. I can't be specific. 21 Q. In drinking water? 22 A. I don't know. I don't want to say yes 23 to whichever. 24 Q. It's in bottled water? 25 A. I don't know that.</p>
Page 183	Page 185
<p>1 significance at one year? 2 A. It's underpowered. 3 Q. But it is appropriately powered at one 4 to five years? 5 A. Yes. Based on the number of cases. 6 Q. Isn't this an instance where you're 7 cherry-picking the data that is favorable to 8 plaintiffs' position and ignoring all of the data 9 which would tend to refute plaintiffs' position? 10 MS. PARFITT: Objection. Form. 11 A. I don't know what the plaintiffs' 12 position -- but what I'm trying to say is this 13 is -- my interpretation of dose-response is based 14 on, you know, not based on statistical 15 significance. So that's all. 16 Q. Which studies show a dose-response for 17 asbestos exposure and ovarian cancer? 18 A. I have not evaluated the causal link 19 between asbestos and ovarian cancer. Other 20 agencies have, and they have opined that it 21 causes ovarian cancer. But I have not. 22 Q. Do you have any idea how much talcum 23 powder reaches a woman's ovaries each time she 24 uses it? 25 A. I have not conducted that -- conducted</p>	<p>1 Q. Are heavy metals, chromium, cobalt and 2 nickel, considered essential nutrients in the 3 body? 4 MS. PARFITT: Objection. 5 A. Yeah. I mean, that's, you know, 6 it's -- pertaining to this case, the question is 7 not that, whether they are in drinking water. 8 I asked myself this question, causal 9 question, what constitutes talcum powder 10 products. And to that effect, if there are 11 substances such as, you know, chromium, cobalt, 12 and other heavy metals that have been, you know, 13 classified as Grade I or Grade II carcinogens 14 that provide further evidence of a causal link, 15 whether they are present in air, ambient air, 16 that's not the assessment I've done, and I'm not 17 making a causal claim that chromium, per se, is 18 causing that ovarian cancer in that causal 19 framework. 20 Q. You have no evidence whatsoever that 21 the blood or tissue levels of any trace heavy 22 metals are higher in genital talc users compared 23 to nonusers; correct? 24 MS. PARFITT: Objection. Form. 25 A. Blood or genital talc. I'm sorry. Can</p>

47 (Pages 182 to 185)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 186</p> <p>1 you repeat?</p> <p>2 Q. Sure. I'll ask it again.</p> <p>3 You have no evidence that the blood or</p> <p>4 tissue levels of any trace heavy metals are</p> <p>5 higher in genital talc users compared to</p> <p>6 nonusers; correct?</p> <p>7 MS. PARFITT: Objection. Form.</p> <p>8 A. Yeah. But I do know that there is</p> <p>9 perineal talc application, and at least from the</p> <p>10 documents I have reviewed, that, you know,</p> <p>11 asbestos is present in talc, at least from the</p> <p>12 documents I've reviewed, from the studies that</p> <p>13 I've reviewed, and from a -- as you say, the</p> <p>14 excerpts of the deposition.</p> <p>15 And, you know, whether these are in blood</p> <p>16 levels or, as you said, in the uterine tissue,</p> <p>17 no, I don't know that.</p> <p>18 Q. Another Bradford Hill overview factor</p> <p>19 is biological plausibility; right?</p> <p>20 A. Well, it's actually plausibility.</p> <p>21 Q. Plausibility means that a biological</p> <p>22 mechanism exists; correct?</p> <p>23 A. Well, that's what we mean. But if you</p> <p>24 actually go back and read Bradford Hill, he was</p> <p>25 talking even about social factors. Yes, but, you</p>	<p style="text-align: right;">Page 188</p> <p>1 infer from whatever the biological evidence that</p> <p>2 I've reviewed, that there's, you know, evidence</p> <p>3 that supports biologic probability. There are</p> <p>4 some studies that, you know, don't support that</p> <p>5 claim.</p> <p>6 Q. My question simply was if you defer to</p> <p>7 other experts on the topic of biologic</p> <p>8 plausibility.</p> <p>9 MS. PARFITT: Objection.</p> <p>10 Q. You do; correct?</p> <p>11 MS. PARFITT: Objection. That's not</p> <p>12 his testimony.</p> <p>13 A. I won't just defer to them. I'm just</p> <p>14 providing my own opinion. Yeah. I mean, they</p> <p>15 can provide -- you know, it depends. If it's a</p> <p>16 plaintiff expert, a defense expert. I mean, how</p> <p>17 do I know? I can't defer to somebody without</p> <p>18 reading their opinion; right?</p> <p>19 Q. Is all ovarian cancer caused by the</p> <p>20 same mechanism?</p> <p>21 A. No. And neither is any kind of cancer.</p> <p>22 Q. Different subtypes of cancer have</p> <p>23 different biological mechanisms; correct?</p> <p>24 A. Yes. But we are dealing with biologic</p> <p>25 plausibility.</p>
<p style="text-align: right;">Page 187</p> <p>1 know, we've gone forward and interpreted that as</p> <p>2 biologic plausibility.</p> <p>3 Q. The biological mechanisms of cancer are</p> <p>4 not your area of expertise; is that right?</p> <p>5 MS. PARFITT: Objection.</p> <p>6 A. Yes. But, again, the question for me</p> <p>7 was not, you know, to elucidate every precise</p> <p>8 step either in the occurrence of ovarian cancer</p> <p>9 or the talc installation into the development.</p> <p>10 The precise question was, you know, the</p> <p>11 epidemiology shows these findings. Whatever is</p> <p>12 the data in biology, does it support or does it</p> <p>13 refute, you know, these findings in epidemiology?</p> <p>14 Q. On that topic, biologic plausibility,</p> <p>15 you defer to other experts; is that right?</p> <p>16 MS. PARFITT: Objection.</p> <p>17 A. Yeah. I would defer to other people</p> <p>18 for more details on, you know, precise mechanisms</p> <p>19 of ovarian cancer.</p> <p>20 But I do have -- and I'm an epidemiologist.</p> <p>21 I mean, I can't -- so that's why I just can't</p> <p>22 look at whether it's Cramer or Penninkilampi or</p> <p>23 Berge in isolation. We have to look at the whole</p> <p>24 evidence, including epidemiology, including --</p> <p>25 but, yes, I can -- I have that experience to</p>	<p style="text-align: right;">Page 189</p> <p>1 Again, I don't need to know the precise</p> <p>2 biological mechanisms to arrive at a causal</p> <p>3 opinion.</p> <p>4 Q. If talc is associated with all subtypes</p> <p>5 of epithelial ovarian cancer, or with different</p> <p>6 subtypes in different studies, doesn't that</p> <p>7 suggest that the association is by chance?</p> <p>8 MS. PARFITT: Objection. Misstates the</p> <p>9 evidence.</p> <p>10 A. I mean, again, I don't know enough</p> <p>11 details about the biologic plausibility of each</p> <p>12 ovarian cancer subtype to say that, you know,</p> <p>13 talc would be, by chance, alone. I'd defer to,</p> <p>14 you know, people who evaluate these.</p> <p>15 Q. There is no one biological mechanism</p> <p>16 that could tie all of these subtypes together, is</p> <p>17 there?</p> <p>18 A. I will defer to people with more</p> <p>19 experience. I don't know that. What I know is</p> <p>20 biological plausibility mechanisms that inform</p> <p>21 the hypothesis that I was looking at.</p> <p>22 Q. How does talc reach the ovaries?</p> <p>23 A. Well, you know, talc migrates from, you</p> <p>24 know -- my understanding and opinion is that, you</p> <p>25 know, perineal application of talc, you know,</p>

48 (Pages 186 to 189)

Sonal Singh, M.D., M.P.H.

Page 190	Page 192
<p>1 migrates upwards and upwards through the, you 2 know, vaginal canal and migrates to. 3 Q. Is that an area of your expertise? 4 A. Again, no. But I have reviewed the 5 studies, several studies that -- some studies 6 that I cite, several studies that were added. 7 And it's quite well accepted, at least in the 8 gynecological community, that there's, you know, 9 particulate matter can migrate upwards. 10 Q. What studies support the theory that 11 talcum powder applied externally migrates from 12 the perineal region to the ovaries? 13 A. Again, I reviewed various studies on 14 migration. 15 Q. Can you name them for me? 16 A. I'm going to look at it. 17 Yeah. So I cite several studies in this 18 section on migration. And, again, this in the 19 context of biologic plausibility. Is it 20 plausible that particulate matter, such as talc, 21 can migrate? And, again -- 22 Q. What page are you looking at? 23 A. Sorry. 57. 24 Q. What studies are you relying on? 25 A. Yeah. So I'm relying on the studies</p>	<p>1 A. Yeah. I know that. 2 Q. Ness is an expert for plaintiffs in the 3 talc litigation; is that right? 4 MS. PARFITT: Objection. 5 A. I'm not aware of that. 6 Q. So Justin, that dealt with glove 7 powder; is that right? 8 A. Which one was that, 68? 9 Q. 68. 10 A. Yes. 11 Q. Isn't it true that that study did not 12 involve perineal use, but an exam with force to 13 the cervix? 14 A. Yeah. You know, and I'm relying on it, 15 again, for biologic plausibility. It does not 16 involve talc. So, you know, it's glove powder 17 in -- 18 Q. Isn't it true that they found some 19 particles in women who were examined with 20 powder-free gloves? 21 A. Yes. 22 Q. Heller, didn't Heller find talc in 23 tissues in all 24 patients, including the 12 who 24 did not use perineal talc? 25 A. Yes.</p>
Page 191	Page 193
<p>1 described by, you know, Heller, 64. 2 Q. Any others? 3 A. 65. 4 Q. What is 65? 5 A. I'll have to go take a look. 6 It's Henderson, I think, but I don't want 7 to -- these are big documents. Yeah, it is 8 Henderson. 9 And then 66 is presence of talc in lymph 10 nodes and then -- 11 Q. Who is the author? 12 A. Cramer. 13 And then supportive evidence of migration of 14 other, you know, particulate matter comes from, 15 you know, 68, 87 and -- 16 Q. 68 is what? 17 A. 68 is Justin. 18 Q. Eighty -- is it -- 87 is what? 19 A. Ness. 20 Q. Is who? 21 A. Ness. Ness 2000. 22 Q. Cramer is a litigation consultant and 23 expert for plaintiffs in the talc litigation; is 24 that right? 25 MS. PARFITT: Objection.</p>	<p>1 Q. What is the evidence in the ovarian 2 tissues that have been studied of granulomatous 3 reaction which is what you would see if there was 4 a huge amount of talc? 5 A. Well, I mean, I'm not opining that 6 there is a huge amount of talc, but others have 7 found talc in the ovaries. I am just -- my 8 opinion is that it is biologically plausible. I 9 mean, you know, the FDA has stated that it is 10 biologically plausible for particles, retrograde 11 particles to migrate. 12 And so I'm opining on that. I'm not saying 13 that talc is in the ovaries and it's inducing 14 this granulomatous reaction. I mean, these 15 people have found that it can occur. 16 And this is sufficient evidence for my 17 opinion to support on biologic plausibility. 18 Other studies, which I cite in my report, 19 which, you know, for example, monkey models, 20 couldn't, you know detect -- didn't detect 21 translocation. So there are studies that don't. 22 Q. Can you cite any article that shows 23 granulomas, fibrosis, or adhesions anywhere up 24 the reproductive tract of a woman as a result of 25 her external genital talc application?</p>

49 (Pages 190 to 193)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 194</p> <p>1 MS. PARFITT: Objection. Form. 2 A. I did not review those studies, if 3 there are. 4 Q. In your report, you say that, "The 5 migration theory is supported by findings of a 6 deceased risk" -- strike that. 7 In your report, you say that, "The migration 8 theory is supported by findings of a decreased 9 risk of ovarian cancer with tubal ligation and 10 hysterectomy." Pages 18 and 19. 11 Is that right? 12 A. Yes. 13 Q. Don't the studies pertaining to tubal 14 ligation show mixed results? 15 A. No. 16 MS. PARFITT: Objection. 17 A. As far as -- 18 MS. PARFITT: Sorry. 19 A. I mean, as far as I'm aware, you know, 20 tubal ligation and hysterectomy are protective 21 risk factors for ovarian cancer. 22 Q. That's your opinion based upon your 23 review and analysis of the literature; is that 24 right? 25 A. Yeah.</p>	<p style="text-align: right;">Page 196</p> <p>1 history of breast cancer, had a tubal ligation or 2 hysterectomy, were pre-menopausal or were 3 post-menopausal and used HT." 4 Is that correct? 5 A. Yeah. 6 Q. So, in fact, Cramer did find a 7 significantly greater association between talcum 8 powder use and ovarian cancer for women who had a 9 tubal ligation; is that right? 10 A. Yeah. But my -- my point, in Page 57, 11 is that, you know, first of all, that's more than 12 just one Cramer. There are several studies that 13 -- in inferring biologic plausibility, tubal 14 ligation and hysterectomy are protective of 15 ovarian cancer. It is not that talc in this had 16 a higher risk among those. 17 I mean, those, again, those are not two 18 incongruent arguments. I mean, Cramer is making 19 a separate argument that, in his study, he found 20 a higher risk among those who had tubal ligation 21 or hysterectomy. 22 Q. If you're correct in the opinion that 23 you set forth in your report, you would have 24 expected the Cramer study to show a decreased 25 risk of ovarian cancer for women who had tubal</p>
<p style="text-align: right;">Page 195</p> <p>1 Q. Take a look at the Cramer article that 2 we referred to before, Exhibit 24. This is 3 Cramer 2016. 4 Do you have that in front of you? 5 A. Oh, my copy? 6 Q. Yes. You have a copy. 7 A. Yes. Which page? 8 Q. Take a look -- well, Cramer found a 9 significantly greater association between talcum 10 powder use and ovarian cancer for women who had a 11 tubal ligation or hysterectomy. Isn't that true? 12 A. Where is that? 13 Q. Look at the bottom of Page 337 of 14 Exhibit 24 to the top of page -- look at 337. 15 A. And which table? 16 Q. I'm sorry. Look at the bottom of 17 Page 337, that carries over to the top of Page 18 339. This is Cramer describing his results; is 19 that right? 20 A. Yes. 21 Q. Tell me if I'm reading this correctly, 22 and I'm starting at the bottom of Page 337. 23 "By test for interaction, Column 3, the 24 association was significantly greater for women 25 who were African American, had no personal</p>	<p style="text-align: right;">Page 197</p> <p>1 ligation or hysterectomy; correct? 2 MS. PARFITT: Objection. Form. 3 Misstates his testimony. 4 A. Yeah. I mean, I don't -- I mean, 5 that's probably, in that study. Yeah. 6 Q. How do you account for the fact that 7 Cramer and the authors of this 2016 paper found a 8 significantly greater association among women who 9 had a tubal ligation or hysterectomy? 10 A. I have no -- you know, you can find 11 different studies have different findings, but, 12 overall, we know that tubal ligation and 13 hysterectomy are protective. 14 Q. The Gertig 2000 Nurses' Health Study, 15 that's also a study that you have reviewed; is 16 that right? 17 A. Yes. 18 Q. That study did not show a reduction of 19 ovarian cancer in talc users who have had a tubal 20 ligation; correct? 21 A. Which page is that? 22 Q. I'm just asking, based upon your review 23 of that study. 24 A. I can't answer. You know, there are so 25 many different -- can I ask for the Taher</p>

50 (Pages 194 to 197)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 198</p> <p>1 appendix, because that actually breaks it down by 2 tubal ligation and hysterectomy. 3 You're asking very specific questions. I 4 need to have specific materials. 5 MR. TISI: I have them. 6 Q. What are you asking for? 7 A. You asked a question about tubal 8 ligation. 9 Q. I understand. What are you asking 10 counsel for plaintiffs to get you? 11 A. The Taher appendix. 12 Q. You want to go back and look at the 13 Taher -- 14 A. Appendix. Because they did stratify 15 the analysis by hysterectomy and tubal ligation. 16 Q. That's the 2018, unpublished paper; is 17 that right? 18 A. Yes. 19 Q. All right. Did the Houghton -- as 20 they're looking for this -- 21 A. Yeah. Sure. 22 Q. Did the Houghton two thousand -- strike 23 that. 24 The Houghton 2014 study also did not show a 25 reduction of ovarian cancer in talc users who</p>	<p style="text-align: right;">Page 200</p> <p>1 talc users who had a tubal ligation; correct? 2 A. I mean, I think I need to look at the 3 data. I think -- I don't have it. We are trying 4 to get it, so we'll have to wait. 5 I mean, you're asking me questions. I mean, 6 you have to show me documents. I mean -- 7 Q. Well, you made a statement in your 8 report -- 9 A. How can I make a statement in the 10 report around Taher, because it wasn't even 11 available at that time? 12 Q. What I'm trying to do is ask you -- 13 A. Sure. 14 Q. -- about the statement in your report, 15 where you say that, "Migration theory is 16 supported by findings of a decreased risk of 17 ovarian cancer with tubal ligation and 18 hysterectomy." 19 A. And I'm just stating that I just need 20 to look at a figure in the Taher appendix and 21 then I'll be able to answer that. That's all. 22 Q. Well, we saw that Cramer doesn't show 23 that; right? 24 A. Yes. 25 Q. You're not aware that Gertig 2000 or</p>
<p style="text-align: right;">Page 199</p> <p>1 have had tubal ligation; correct? 2 A. Again, you know, I don't want to agree 3 or disagree with you without just looking at it. 4 I don't think I comment on it. 5 Q. Would you agree or can you agree that 6 both Gertig 2000 and Houghton 2014 were large 7 prospective cohort studies; right? 8 A. Yeah. But we've already discussed 9 their limitation in terms of they were not 10 designed to study the talc ovarian cancer. They 11 had prevalent user biases. You know, they lost a 12 lot of users and cases of ovarian cancer. You 13 know, they had misclassification. 14 And, yes, they were large studies, but had 15 small number of ovarian cancer cases. 16 MR. KLATT: Objection. Nonresponsive. 17 MR. ZELLERS: Join. 18 Q. You read the Ter Riet 2013 19 meta-analysis; is that right? 20 A. Yes. 21 Q. You rely on that; correct? 22 A. Yes. 23 MS. PARFITT: Objection. 24 Q. The Ter Riet 2013 meta-analysis also 25 did not show a reduction of ovarian cancer in</p>	<p style="text-align: right;">Page 201</p> <p>1 Houghton 2014 shows that. Are you? 2 MS. PARFITT: Objection. Misstates his 3 testimony. 4 A. You have not shown me that. You have 5 not shown me documents to say one way or the 6 other. 7 Q. When you did your analysis, didn't you 8 look at the studies to try to see if they 9 supported or refuted the points you were making? 10 A. I -- you know, I did not look at every 11 subanalysis by, you know -- by whether it's, you 12 know, pre-menopausal, post-menopausal. 13 Q. You cite Cramer 2016 as supportive of 14 your position and opinions. 15 A. Sure. 16 Q. Is that right? 17 A. Well, again -- 18 MS. PARFITT: Objection. Mis -- 19 A. I don't. 20 MS. PARFITT: Let me get my objection 21 in. 22 THE WITNESS: Sorry. Go ahead. 23 MS. PARFITT: No. My objection is in, 24 I think. 25 Q. But then you ignore those portions or</p>

51 (Pages 198 to 201)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 202</p> <p>1 parts of Cramer 2016, Gertig 2000, Houghton 2014, 2 Ter Riet 2013, Rosenblatt 2011, Wong 1999, Cook 3 1997, Harlow 1992, that don't support your 4 position. 5 MS. PARFITT: Counsel completely 6 misstates his opinion. The question misstates -- 7 A. I don't even know what was the 8 question, and I can't answer that because I don't 9 know what the question was. 10 Q. The question is: When you opined in 11 your report that the migration theory is 12 supported by findings of a decreased risk of 13 ovarian cancer with tubal ligation and 14 hysterectomy, did you pick out just a couple of 15 cases to look at and cite or did you try to see 16 if there was consistency to that finding across 17 all of the studies? 18 A. Yeah. So when I cite that, and you can 19 see the citation, I am trying to make an 20 inference about separate from talc use, and 21 ovarian cancer, you know, is hysterectomy and 22 tubal ligation protective of that. 23 So that's the inference. It's not that each 24 of these studies, I'm trying to ignore, you know, 25 the studies that you mentioned. I'm just trying</p>	<p style="text-align: right;">Page 204</p> <p>1 by findings of a decreased risk of ovarian cancer 2 with tubal ligation and hysterectomy. 3 A. Yeah. But it doesn't talk about, you 4 know -- so if you look at the reference, in 5 case-control studies and meta-analysis, let's 6 look at the references. You know, so, yes, 7 there's one. And if -- let's look at -- 8 Q. Okay. Can you cite one reference? 9 A. Yeah. Let's look at that. 10 Q. All right. 11 A. Then let's look at 115. So when I cite 12 115, that's not even about talc. That's about 13 tubal ligation and hysterectomy, in general, is 14 it -- you know, so taking talc out of the 15 equation, I'm trying to opine or understand 16 whether tubal ligation and hysterectomy are 17 protective factors, and then I can infer on talc, 18 yes, should only Ness have been cited? Yes, 19 there are other studies otherwise. 20 Q. And there are other studies, many 21 studies -- 22 A. Yes. 23 Q. -- that do not support your position; 24 is that right? 25 MS. PARFITT: Objection. Form. His</p>
<p style="text-align: right;">Page 203</p> <p>1 to say, as you're looking at mechanisms, what 2 would happen with tubal -- I'm trying to do the 3 best to explain, tubal ligation and ovarian 4 cancer. 5 If, in the individual studies, yes, as in 6 Cramer, and if we see that in the other studies, 7 then, you know, they provide a different opinion. 8 But I'm trying to make an opinion, based on the 9 general knowledge of tubal ligation and 10 hysterectomy being, you know, protective. 11 Q. Do you agree with me, to have a 12 scientifically valid opinion -- 13 A. Sure. 14 Q. -- you need to look at all of or at 15 least the important studies; correct? 16 A. Yeah. I did look at these studies. 17 Q. And, in fact, a number of the studies 18 that you cite in your report -- 19 A. Sure. 20 Q. -- don't support your position; 21 correct? 22 MS. PARFITT: Objection. Form. 23 Support his position on tubal ligation? 24 Q. Well, right now, we're talking about 25 migration, that the migration theory is supported</p>	<p style="text-align: right;">Page 205</p> <p>1 position on tubal ligation? 2 MR. ZELLERS: Yes. 3 MS. PARFITT: Thank you. 4 A. Yeah. So it's -- it's -- I think 5 there's -- I mean, whether Ness and others should 6 have been cited there, that's a valid point. But 7 when I make a point about tubal ligation and 8 hysterectomy, it's a general point on the, you 9 know, migration hypothesis. 10 BY MR. ZELLERS: 11 Q. You should at least cite to or make 12 some reference -- 13 A. Yeah. 14 Q. -- right, to the studies that do not 15 support that position? 16 A. Yeah. And I think that I have made it 17 in the individual sections, and I can try to look 18 for it, but it will take us time there. 19 Q. Isn't there evidence that if tubal 20 ligation has a protective effect, the protective 21 effect in ovarian cancer stems from the fact that 22 the ligation procedure itself changes the 23 fallopian tube cells? 24 A. I am not an expert -- 25 MS. PARFITT: Objection.</p>

52 (Pages 202 to 205)

Sonal Singh, M.D., M.P.H.

Page 206	Page 208
<p>1 A. -- in, you know, this area to provide, 2 you know, why it would do that. 3 Q. Did you review or are you familiar with 4 Tiourin, T-I-O-U-R-I-N, a 2015 study? 5 A. Did I cite that? I don't remember. 6 Q. Are you -- is that study familiar to 7 you? 8 A. I just can't remember the names. There 9 are so many studies. If you show it to me, I 10 can -- 11 Q. I'll show it to you. You can tell me 12 if it's familiar to you. And if it's not, I'll 13 move on. 14 (Article entitled "Tubal 15 Ligation Induces Quiescence in the 16 Epithelia of the Fallopian Tube Fimbria" 17 marked Exhibit 25.) 18 MR. ZELLERS: 25 is the -- 19 A. No, it's not. I don't know about. 20 BY MR. ZELLERS: 21 Q. For the record, 25 is a 2015 study by 22 Tiourin, T-I-O-U-R-I-N. 23 That's not a study that you reviewed or 24 considered; is that right? 25 A. You know, I have to go through all the</p>	<p>1 concentration in the rectal, vulvar, vaginal, 2 cervical, and uterine tissues which are closer to 3 the area of the initial exposure; correct? 4 MS. PARFITT: Objection. Misstates his 5 testimony. 6 A. I just don't have an opinion in terms 7 of where it will be high or low. Because that's 8 not my area of expertise. 9 Q. Talc particles should be causing 10 inflammation in all those organs and areas; 11 correct? 12 MS. PARFITT: Objection. 13 A. Again, that's -- that's, you know, I'm 14 opining on biological plausible mechanisms of 15 talc-induced ovarian cancer. I didn't look at, 16 you know, whether it's vaginitis or vulvar or 17 whether it's, you know, rectal inflammation. And 18 that's not my area of expertise again. 19 Q. In fact, there are no studies that show 20 inflammation as a result of genital talc use in 21 any of those areas; correct? 22 MS. PARFITT: Objection. Misstates the 23 evidence. 24 A. Again, I have not -- you know, my 25 testimony and report on talcum powder products</p>
Page 207	Page 209
<p>1 references, but I can't recall straight off 2 whether it does. 3 Q. If talcum powder migrates from the 4 perineal region to the ovaries, shouldn't 5 exposure to talc be far greater in concentration 6 in the rectal, vulvar, vaginal, cervical and 7 uterine tissues? 8 MS. PARFITT: Objection to form. 9 Q. Because those are closer to the area of 10 initial exposure? 11 MS. PARFITT: Same objection. 12 A. Yes. So, again, my -- I did not 13 examine, you know, which areas of -- now, as an 14 epidemiologist, I examine general exposures to, 15 you know, products and their associations. 16 Whether, you know, we want to know, yes, route of 17 exposure, whether it's perineal application. 18 But, you know, the evidence that I examined 19 was, you know, I did not distinguish within 20 whether it was perineal or vaginal, vulvar. That 21 would have been different. 22 Q. Let's go step by step. 23 You do agree that if talcum powder migrates 24 from the perineal region to the ovaries, the 25 exposure to talc would be far greater in</p>	<p>1 and inflammation is looking at, are there 2 biological plausible mechanisms. 3 And, again, if there's no studies that 4 provide that talc, in and of itself, causes 5 inflammation, then there are no studies. But, 6 you know, but there's still biologic 7 plausibility. 8 MR. KLATT: Objection. Unresponsive. 9 Q. Are there any studies that you are 10 aware that show a link between external genital 11 talc use and rectal, vulvar, vaginal, cervical, 12 or uterine cancer? 13 MS. PARFITT: Asked and answered. 14 Objection. 15 A. I'm not aware of those. I have not 16 reviewed those studies. 17 Q. As part of your report, you discuss a 18 study published by Huncharik and others in 2007; 19 is that right? 20 A. Yes. Let's bring it out, I mean, if 21 you want to talk about that. 22 Q. I believe it's on Page 26 of your 23 report. 24 A. Sure. 25 Q. Huncharik 2007 is a meta-analysis of</p>

53 (Pages 206 to 209)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 210</p> <p>1 studies on the relationship between ovarian 2 cancer and using diaphragms that are dusted with 3 talcum powder; is that right? 4 A. Yes. 5 Q. A diaphragm is inserted directly onto a 6 woman's cervix; is that right? 7 A. Yes. 8 Q. On Page 26 of your report, you say 9 that, "This meta-analysis is flawed because it 10 only focuses on powder-dusted diaphragms"; 11 correct? 12 A. Well, no. That's not the only flaw. I 13 mean, there are several other flaws, including 14 exclusion of loss category, data extraction 15 analysis, which is, you know, really inclusion of 16 inability studies that did not disaggregate. 17 I mean, the question is if you're asking 18 about perineal exposure, yes, perineal -- 19 diaphragms is one route of exposure. But that's 20 not the only route of exposure that you should be 21 concerned about. 22 Q. Do you state in your report, "The most 23 important limitation with the Huncharik 2007 24 meta-analysis was its exclusive focus on talc 25 powder-dusted diaphragms as the route of</p>	<p style="text-align: right;">Page 212</p> <p>1 means that you cannot exclusively focus on one 2 route of exposure. So it does not mean that it 3 cannot in and of itself. You have to look at 4 perineal-dusted diaphragm. You have to look at, 5 other, you know, perineal applications. 6 Q. So putting aside inhalation for the 7 moment, your opinion is that talcum powder 8 travels from the perineal region to the ovaries 9 through the woman's reproductive tract; is that 10 right? 11 A. I mean, I don't even know through the 12 ovaries. I know it migrates upwards. That's, 13 you know, my opinion. 14 Q. So talcum powder must travel past the 15 labia, through the vagina, through the cervix, 16 and then to the uterus; is that right? 17 A. Yes. It migrates upwards through the 18 vagina, you know, the tract. 19 Q. And then the powder travels through the 20 uterus and into the fallopian tubes to reach the 21 ovaries; is that right? 22 A. Well, I mean, I'm not -- again, I don't 23 intend to elucidate, you know, the precise link 24 that a study has shown that talcum powder -- I 25 think we answered this earlier, I answered this</p>
<p style="text-align: right;">Page 211</p> <p>1 exposure, which could not inherently address the 2 causal question of whether genital talcum powder 3 dusting is associated with increased risk of 4 ovarian cancer"? 5 Is that what you said? 6 MS. PARFITT: Counsel, do you have a 7 copy of the -- otherwise, may I show him the 8 Huncharik study so he's got it in front of him? 9 MR. ZELLERS: I'm just asking general 10 questions right now. That was just a question, 11 does he say that in his report. If he needs to 12 review the study, then he can look at the study. 13 MS. PARFITT: I would appreciate that. 14 MR. ZELLERS: Sure. 15 MS. PARFITT: I just didn't want to 16 pass something to him without your permission. 17 A. Yeah. I do state that. 18 Q. You say that, "Studies on the use of 19 talcum powder-dusted diaphragms cannot address 20 the question of whether perineal use is 21 associated with an increased risk of ovarian 22 cancer"; correct? 23 A. Where is that? 24 Q. It's what we just read. 25 A. No. It doesn't mean that. It just</p>	<p style="text-align: right;">Page 213</p> <p>1 earlier -- that I am not aware of one study that 2 shows that. But, you know, several shows that 3 talc ends up in the ovaries. 4 Q. Well, given how talc, talcum powder 5 must travel to reach the ovaries, how can you 6 exclude data about the relationship between 7 ovarian cancer and talcum powder that is applied 8 directly to the cervix? 9 MS. PARFITT: Objection. Misstates his 10 testimony. 11 A. Nobody is excluding data. So this is 12 not exclusion of this data. 13 But I am saying that this particular 14 question of talc-dusted diaphragms, A, is an 15 exclusive focus on one route of exposure, so it 16 does not answer the causal question about 17 perineal exposure. 18 And, two, it is not excluded. It's included 19 and discussed and several flaws are noted, 20 including, you know, data extraction errors for 21 the most part, inclusion of studies. 22 And so -- and as can you see in my 23 methodological rating of meta-analyses, it is 24 weighted differently than others. So it is not 25 excluded.</p>

54 (Pages 210 to 213)

Sonal Singh, M.D., M.P.H.

Page 214	Page 216
<p>1 Q. But you state, as the most important 2 limitation of the Huncharik 2007 study, is the 3 exclusive focus on talc powder-dusted diaphragms. 4 A. Yeah. 5 Q. And those diaphragms are applied 6 directly to the cervix; is that right? 7 A. Yeah. Because -- because of its 8 exclusive focus. If the study had, you know, 9 other routes of exposure, yeah. 10 What I'm trying to say is its exclusive 11 focus on one route of exposure cannot -- if 12 you're just asking the question about dust, 13 dusted diaphragm, then don't make inferences 14 about perineal routes of exposure. You have to 15 look at broader exposures. 16 Q. On what studies are you relying to say 17 that talcum powder affects the body differently 18 when it is applied to the perineal region and 19 travels to the cervix compared to when it is 20 applied directly to the cervix? 21 A. I have not made a distinction between 22 those studies. 23 Q. And, in fact, when applied to the 24 perineal region, the talcum powder would also be 25 in close contact with a woman's urethra; is that</p>	<p>1 don't know anything about. I don't -- you know, 2 I haven't reviewed it to answer that question. 3 Q. Do you have an opinion on whether 4 inhaled talc can migrate to the ovaries? 5 A. Yeah. I mean, I think the primary 6 route of exposure is, you know, reproductive, but 7 there are some potential, I would say, you know, 8 potential plausible mechanisms that, you know, 9 when perineal application is applied, it can get 10 inhaled through the lungs and potentially reach 11 the ovaries. But I think that that mechanism is 12 probably not as plausible as the reproductive 13 mechanism. 14 Q. Well, in fact, studies of talcum powder 15 use failed to show a statistically significant 16 association between nongenital use of talcum 17 powder and ovarian cancer; correct? 18 MS. PARFITT: Objection. Form. 19 A. Yeah. And I've cited those studies. 20 Q. If inhaled talc could migrate to the 21 ovaries, wouldn't you expect to see increased 22 ovarian cancer risk with nongenital use of talcum 23 powder? 24 MS. PARFITT: Objection. 25 A. Well, I mean, it also depends on, you</p>
Page 215	Page 217
<p>1 right? 2 MS. PARFITT: Objection. Form. 3 A. Yeah. I mean, anatomically. 4 Q. Substances are capable of traveling up 5 the urethra; correct? 6 A. I mean, yes. Just as we agree that, 7 you know, talc can migrate upwards, substances 8 can migrate through the urethra. If you agree 9 talc can migrate upwards, then, you know, 10 substances can migrate through the urethra. 11 Q. Women get urinary tract infections when 12 bacteria travels up the urethra; correct? 13 A. Yeah. 14 Q. But studies do not show an increase in 15 bladder cancer with talcum powder use, do they? 16 MS. PARFITT: Objection to form. 17 A. I did not ask the causal question about 18 that. And, you know, I have not evaluated. 19 Maybe there are studies that show decreased risk 20 for all that I know. I just can't answer that 21 question. 22 Q. And studies do not show an increase in 23 rectal cancer with talcum powder use; is that 24 right? 25 A. I don't answer the questions that I</p>	<p>1 know, the quantity of inhalation, the degree of 2 talc that's -- and I don't know enough about that 3 to say that, yes, there's a sufficient quantity, 4 you know, migration to cause that. I don't know 5 which studies have evaluated sort of inhaled talc 6 and ovarian cancer. 7 Q. Well, let's look back at Cramer 2016, 8 Page -- or Exhibit 24. Do you have that in front 9 of you? 10 A. Yeah. 11 Q. In that study, Cramer found no apparent 12 risk associated with nongenital talc use; isn't 13 that correct? 14 A. Yeah. And I think I cite that in my 15 report, too. 16 Q. You don't disagree that Cramer, in his 17 study, 2016, did find no apparent risk associated 18 with nongenital talc use; correct? 19 A. Yeah. 20 Q. The same result was found in the pooled 21 analysis that was done by OCAC, Ovarian Cancer 22 Association Consortium; is that right? 23 MS. PARFITT: Objection. Which study 24 are you referring to? What year? There have 25 been many studies by OCAC.</p>

55 (Pages 214 to 217)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 218</p> <p>1 MR. ZELLERS: I'm referring to Page 341 2 of the Cramer article. Page -- strike that. 3 The second and third paragraphs. 4 BY MR. ZELLERS: 5 Q. Tell me when you have that, Doctor. 6 A. 341. Discussion? 7 Q. Yes. So in the second and third 8 paragraph, I'm reading the second sentence. 9 "Talc use regularly" -- strike that. 10 "Talc used regularly in the genital area was 11 associated with a 33 percent increase in ovarian 12 cancer risk overall while no apparent risk was 13 associated with talc used only in nongenital 14 areas." 15 A. Yeah. And I agree with their opinion. 16 Q. All right. Do you also agree with the 17 next sentence? "Our results are consistent with 18 the recent pooled analysis from the OCAC which 19 reported that use of powder on genitals is 20 associated with a 24 percent increased risk and 21 no effect of nongenital use of talc." 22 A. Yeah. 23 Q. Have you ever performed any study 24 yourself pertaining to whether inhaled talc can 25 migrate to the ovaries?</p>	<p style="text-align: right;">Page 220</p> <p>1 mechanisms that have been shown in terms of 2 increase in, you know, inflammatory enzymes, and 3 increase in alterations of redox potential that 4 are some of the potential plausible biological 5 mechanisms. Again, other people who are 6 biological experts will opine on them and detract 7 from the strengths and weaknesses. 8 Q. You have not done an expert review of 9 inflammation evidence yourself; correct? 10 A. When you say -- I mean, expert review 11 of inflammation. 12 MS. PARFITT: Object. 13 Q. You're deferring to other experts on 14 the topic and subject of inflammation; is that 15 right? 16 MS. PARFITT: Objection. 17 A. Yeah. I mean, other experts, I mean, I 18 can look at the evidence and see, A, one, that 19 inflammation plays a role in cancer. Two, 20 inflammation plays a role in ovarian cancer. 21 At least my opinion is that, you know, talc 22 can, you know, induce inflammation; others will 23 provide more detailed opinion. 24 Q. In terms of the mechanism by which 25 ovarian cancer may or may not be related to</p>
<p style="text-align: right;">Page 219</p> <p>1 A. No. And I would have a different job. 2 That's not my area of expertise. 3 Q. And you can't, as we sit here, cite me 4 to such a study; correct? 5 A. Well, I don't know if it's -- I'll go 6 back to my report and just cite that -- that 7 Dr. Luongo, you know, has done analyses which say 8 that inhaled talc can migrate. 9 Q. You're not expressing that opinion here 10 today; correct? 11 A. No. I'm not. I'm not vouching for his 12 testimony. 13 Q. Assuming baby powder can reach the 14 ovaries, what is the method by which baby powder 15 causes ovarian cancer? 16 A. So, yeah. I mean, we talked about, you 17 know, potential biological mechanisms of 18 inflammation. 19 And, again, I don't -- in my inference on 20 biologic plausibility, I don't intend to offer 21 the opinion that, A, I know the precise 22 biological mechanisms which cause biological -- 23 ovarian cancer or the precise steps by which talc 24 causes it. 25 But, you know, there are several, you know,</p>	<p style="text-align: right;">Page 221</p> <p>1 inflammation, you are deferring to other experts; 2 correct? 3 MS. PARFITT: Objection. Misstates his 4 testimony. He just told you -- 5 MR. ZELLERS: I'm asking him the 6 question. Okay? 7 MS. PARFITT: Counsel, he did answer 8 it. And you just asked the question again and 9 you misstated what he said. 10 MR. ZELLERS: Ms. Parfitt, please. I 11 thought we had a discussion. 12 MS. PARFITT: We did. 13 MR. ZELLERS: We ought not to have 14 speaking objections. 15 MS. PARFITT: We don't. But I'll tell 16 you the discussion we did have. You can't 17 misstate -- 18 MR. ZELLERS: I'm allowed to ask the 19 witness what his opinions are and are not. 20 MS. PARFITT: Absolutely. But not to 21 misstate them. That's all. Let's ask it again. 22 THE WITNESS: I'm sorry. I forgot. 23 MR. ZELLERS: It was a question. 24 THE WITNESS: What was the question? 25 MR. ZELLERS: Can you read the</p>

56 (Pages 218 to 221)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 222</p> <p>1 question?</p> <p>2 MS. PARFITT: Listen carefully to the</p> <p>3 question.</p> <p>4 MR. ZELLERS: Okay. Again,</p> <p>5 Ms. Parfitt, let the witness handle himself.</p> <p>6 He's an experienced, capable person.</p> <p>7 MS. PARFITT: Yes. I would certainly</p> <p>8 both agree with that. He's quite good.</p> <p>9 (The question was read by the</p> <p>10 reporter, as requested.)</p> <p>11 MS. PARFITT: Objection. Misstates his</p> <p>12 testimony.</p> <p>13 A. No. To the extent that my causal</p> <p>14 question needs -- you know, evaluated the</p> <p>15 evidence on the link between, you know,</p> <p>16 inflammation, ovarian cancer and talc and</p> <p>17 inflammation, I can opine that, you know, this</p> <p>18 link supports my causal opinion. Whereas, to the</p> <p>19 precise details of such a link, I would obviously</p> <p>20 defer to other experts.</p> <p>21 BY MR. ZELLERS:</p> <p>22 Q. Not all inflammatory conditions lead to</p> <p>23 cancer; correct?</p> <p>24 A. Yes. And there are pro-oxidant</p> <p>25 conditions and there are antioxidants. And I</p>	<p style="text-align: right;">Page 224</p> <p>1 Q. Rheumatoid arthritis doesn't increase</p> <p>2 the risk of ovarian cancer, does it?</p> <p>3 A. I don't know that question. I have not</p> <p>4 evaluated it.</p> <p>5 Q. Psoriasis does not increase the risk of</p> <p>6 ovarian cancer, does it?</p> <p>7 A. For all, it could. We don't know that.</p> <p>8 We can spend time reviewing that. We can't</p> <p>9 answer questions.</p> <p>10 Q. We're here to talk about the science;</p> <p>11 correct?</p> <p>12 A. Yeah. So the science, you have to</p> <p>13 look -- I haven't looked at psoriasis and cancer.</p> <p>14 I haven't looked at, for example, rheumatoid</p> <p>15 arthritis increases cardiovascular disease,</p> <p>16 because I've looked at it. I can't answer</p> <p>17 questions that I haven't looked at.</p> <p>18 Q. Have you done an expert review of the</p> <p>19 role of inflammation in causing ovarian cancer?</p> <p>20 Have you personally done that review?</p> <p>21 A. No. I have just looked at, you know,</p> <p>22 what is the role of inflammation in ovarian</p> <p>23 cancer, and are there plausible biological</p> <p>24 mechanisms that either support or refute whether</p> <p>25 talc can induce inflammation.</p>
<p style="text-align: right;">Page 223</p> <p>1 examined the evidence which relates to if there</p> <p>2 were -- you know, if talcum powder products, for</p> <p>3 example, had antioxidants or, in the Saed study,</p> <p>4 they increased the level of antioxidant enzymes,</p> <p>5 then that would be evidence against the link</p> <p>6 between redox potential and talc and ovarian</p> <p>7 cancer. So there are various pieces of the</p> <p>8 evidence.</p> <p>9 Q. All of us experience inflammatory</p> <p>10 reactions of one sort or another, including</p> <p>11 chronic conditions, and they do not all lead to</p> <p>12 cancer; correct?</p> <p>13 MS. PARFITT: Objection. Form.</p> <p>14 A. Yeah. But it's the balance of -- you</p> <p>15 know, that is altered between pro-inflammatory</p> <p>16 and anti-inflammatory conditions and the</p> <p>17 pro-oxidant state and the antioxidant state in my</p> <p>18 understanding that, you know, is a plausible</p> <p>19 mechanism for talc in ovarian cancer. Again,</p> <p>20 based on my understanding. Others will provide</p> <p>21 details.</p> <p>22 Q. Rheumatoid arthritis is an inflammatory</p> <p>23 condition; right?</p> <p>24 A. Heart disease is -- everything is</p> <p>25 inflammation.</p>	<p style="text-align: right;">Page 225</p> <p>1 Q. How does an acute inflammatory response</p> <p>2 lead to cancer?</p> <p>3 A. Yeah. I mean, and I'm not making a</p> <p>4 case for an acute inflammatory. I'm not sure.</p> <p>5 Did I state that? You know, this is a chronic</p> <p>6 inflammatory process.</p> <p>7 Q. What evidence is there that externally</p> <p>8 applied talcum powder causes chronic</p> <p>9 inflammation?</p> <p>10 A. Yeah. I mean, you know -- can you give</p> <p>11 me a second?</p> <p>12 Q. Sure.</p> <p>13 A. Yeah. I'm not aware of a study that</p> <p>14 talc specifically itself causes chronic</p> <p>15 inflammation.</p> <p>16 Q. There are no reports in the literature</p> <p>17 of externally applied talc leading to</p> <p>18 inflammation, granulomas, fibrosis or adhesions</p> <p>19 anywhere along a woman's reproductive tract;</p> <p>20 correct?</p> <p>21 MS. PARFITT: Objection.</p> <p>22 A. Yeah. There are other studies that,</p> <p>23 you know, not externally applied.</p> <p>24 Q. If up to 50 percent of U.S. women have</p> <p>25 used genital talc, shouldn't this be a common</p>

57 (Pages 222 to 225)

Sonal Singh, M.D., M.P.H.

Page 226	Page 228
<p>1 finding?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 A. So I'll step back and share with you</p> <p>4 what epidemiology.</p> <p>5 Yeah. I mean, ovarian cancer, the incidence</p> <p>6 of ovarian cancer is, what, 11 by 100,000. It's</p> <p>7 a very rare cancer. Even if 50 percent use it,</p> <p>8 you know, it increases, you know, it affects it.</p> <p>9 So we are not -- nobody is saying that,</p> <p>10 yeah, every woman who gets talc will get it. So</p> <p>11 just because there's an increased risk with talc,</p> <p>12 how much of the U.S. population should get</p> <p>13 ovarian cancer is a different question. That's</p> <p>14 not what I estimated.</p> <p>15 That's -- you're asking a question about</p> <p>16 attributable risk and population attributable</p> <p>17 risk. Some have attributed it to 10 percent,</p> <p>18 40 percent. I haven't done that estimation.</p> <p>19 MR. KLATT: Move to strike.</p> <p>20 Nonresponsive.</p> <p>21 MR. ZELLERS: Join.</p> <p>22 Q. Granulomas, fibrosis or adhesions don't</p> <p>23 cause ovarian cancer; correct?</p> <p>24 MS. PARFITT: Objection.</p> <p>25 A. I'm not aware of precise biological</p>	<p>1 A. Yeah. And I think it's the studies on</p> <p>2 NSAIDs. I don't remember the precise -- I don't</p> <p>3 know if -- yeah. It's Ness or --</p> <p>4 Q. I will and do intend to ask you a few</p> <p>5 questions about NSAIDs and about some of those</p> <p>6 studies.</p> <p>7 A. I think that's where --</p> <p>8 Q. Well, let me talk about or ask you a</p> <p>9 question about a study that you do cite in</p> <p>10 support of your inflammation opinion. You rely</p> <p>11 on -- is it Saed 2018 article?</p> <p>12 A. Yes.</p> <p>13 MR. ZELLERS: I'll hand you the Saed</p> <p>14 2018 paper.</p> <p>15 (Article entitled "New Insights</p> <p>16 into the Pathogenesis of Ovarian Cancer:</p> <p>17 Oxidative Stress" marked Exhibit 26.)</p> <p>18 MS. PARFITT: Thank you.</p> <p>19 MR. ZELLERS: We'll mark that as</p> <p>20 Deposition Exhibit 26.</p> <p>21 BY MR. ZELLERS:</p> <p>22 Q. This is a study that you cite in</p> <p>23 support of your position; is that right?</p> <p>24 A. I don't know if I cite it as a support</p> <p>25 of my position. I cite it as an article that</p>
Page 227	Page 229
<p>1 mechanisms of, you know, ovarian cancer.</p> <p>2 Q. Isn't the theory of inflammation as a</p> <p>3 cause of ovarian cancer an unproven hypothesis?</p> <p>4 MS. PARFITT: Objection.</p> <p>5 A. Well, it's a plausible hypothesis that,</p> <p>6 you know -- and it's well accepted that, you</p> <p>7 know, one of the mechanisms is inflammation.</p> <p>8 Q. It's still unproven; correct?</p> <p>9 MS. PARFITT: Objection. Misstates</p> <p>10 testimony.</p> <p>11 A. Well, I'm not -- my standard wasn't</p> <p>12 looking at absolute certainty that, A, talc</p> <p>13 induces inflammation, and inflammation causes</p> <p>14 ovarian cancer. I'm looking for evidence for or</p> <p>15 against whether inflammation, you know, induces</p> <p>16 or reduces ovarian cancer.</p> <p>17 Q. What studies or evidence do you cite in</p> <p>18 your report against the proposition or theory</p> <p>19 that inflammation is a cause of ovarian cancer?</p> <p>20 A. Yeah. I think -- I'm sorry. The</p> <p>21 question was what studies --</p> <p>22 Q. You told me it was important to cite</p> <p>23 both the studies that support your position and</p> <p>24 also the studies that refute your position; is</p> <p>25 that right?</p>	<p>1 shares insight into the parthenogenesis of</p> <p>2 ovarian cancer. I mean, you know, he's the</p> <p>3 expert and he'll form his opinion.</p> <p>4 So it's a study cited in my report. In</p> <p>5 fact, I won't even be able to discuss the details</p> <p>6 of that study with you.</p> <p>7 Q. You're not comfortable discussing the</p> <p>8 details?</p> <p>9 A. Yeah. I mean --</p> <p>10 MS. PARFITT: Objection.</p> <p>11 A. -- you can ask a question and I'll try</p> <p>12 to answer to the best of my ability. And if I</p> <p>13 won't, I'll be able --</p> <p>14 Q. The point is, this is really an area</p> <p>15 for other experts; agreed?</p> <p>16 A. Yes. This is an area for other</p> <p>17 expertise.</p> <p>18 Q. Saed, that paper just looked at</p> <p>19 immortalized cell lines; is that right?</p> <p>20 MS. PARFITT: Objection. Form.</p> <p>21 A. Yes.</p> <p>22 Q. The authors do not identify what either</p> <p>23 the positive or the negative controls were; is</p> <p>24 that right?</p> <p>25 MS. PARFITT: Objection.</p>

58 (Pages 226 to 229)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 230</p> <p>1 A. So is this the study or is this just 2 their review article? 3 Q. This is the paper that you cite to in 4 your report. 5 A. Can you point out in my report which 6 reference number is that? I know I've cited 7 them, but I'm just trying to orient myself. 8 Q. Are you familiar with this paper? Have 9 you looked at it before? 10 A. Yes. I have looked at this paper, but 11 they also have other abstracts and other papers. 12 I think that's what I was relying on. 13 Yeah. So I'm relying on this and 125, Saed. 14 Q. The authors in this paper that you 15 support -- strike that -- that you cite and are 16 relying on do not identify what either the 17 positive or the negative controls were; correct? 18 MS. PARFITT: Objection. Misstates the 19 evidence. 20 A. Let me just look at 125, and then I'll 21 answer the question. 22 No. That's not 125. 23 Q. I'll move on and ask another question. 24 A. Sorry about that. 25 Q. That's all right.</p>	<p style="text-align: right;">Page 232</p> <p>1 users? 2 A. Yeah. So I don't know if that's 3 consistently. But as I mentioned earlier, and I 4 may have cited it in this study, that when I 5 talked about Ness, and I'm trying to find it, 6 but, yes, there is, you know, NSAIDs have not 7 been -- they don't consistently reduce the risk 8 of ovarian cancer, but in some studies, they have 9 shown to reduce the risk of ovarian cancer. 10 Q. If, in fact, inflammation was a 11 causative factor in ovarian cancer, and if NSAIDs 12 and aspirin use reduce inflammation, wouldn't you 13 expect some consistency in the studies that would 14 show NSAIDs and aspirin use reduced the incidence 15 of ovarian cancer? 16 A. So, first of all, you're asking a broad 17 question. Inflammation. What do you mean by 18 that? 19 And I don't know -- yeah. Exactly. So I 20 don't know the precise biological mechanisms of 21 ovarian cancer. And just because the ovarian 22 cancer-mediated inflammation is different from, 23 you know, anti-inflammatory, so both may be 24 entirely consistent, I'm not saying they are, but 25 both mechanisms, you could have NSAID-induced</p>
<p style="text-align: right;">Page 231</p> <p>1 Saed references unpublished data; correct? 2 MS. PARFITT: Objection. 3 A. Yeah. And I've just been informed by 4 counsel that it has been accepted for 5 publication, but the data that I -- that I 6 referenced were, you know, at the time, available 7 as abstracts. 8 Q. Saed referenced -- references 9 unpublished data that you rely on in coming up 10 with at least some of the opinions in your 11 report; is that right? 12 A. Yeah. I mean, it's one of the, you 13 know, number of studies that I reviewed. It's 14 not the only study on, you know, on biological 15 mechanisms. 16 Q. Why doesn't inflammation generally, for 17 example, in pelvic inflammatory disease, cause 18 ovarian cancer? 19 A. Again, that's not -- you know, that is 20 not -- I'm not going to be opining on the precise 21 mechanisms of ovarian cancer in my testimony or 22 my report. That's not my area of expertise. 23 Q. Why don't NSAIDs and aspirin use, which 24 supposedly reduce inflammation, consistently 25 reduce the incidence of ovarian cancer in chronic</p>	<p style="text-align: right;">Page 233</p> <p>1 reduce inflammation and NSAID-induced increase 2 inflammation. That's just not what -- that area 3 where other people will provide, you know, more 4 testimony. 5 Q. If inflammation is the issue, why would 6 cornstarch be a superior alternative to talc? 7 MS. PARFITT: Objection. Form. 8 Q. And to give you context, the FDA banned 9 the use of cornstarch on surgical gloves because 10 of the risk of inflammation, granulomas, 11 fibrosis, adhesions and irritation; is that 12 right? 13 A. I'm not aware of all the particular, 14 you know, regulatory actions on cornstarch. 15 Q. Take a look at the FDA 21 C.F.R, parts 16 878, 880, and 895. 17 MR. ZELLERS: We'll mark that as 18 Deposition Exhibit 27. 19 (Federal Register, Vol. 81, No. 20 243 marked Exhibit 27.) 21 BY MR. ZELLERS: 22 Q. If you look at the second page, first 23 paragraph, last sentence, so I'm under executive 24 summary. The last sentence in the last full 25 paragraph.</p>

59 (Pages 230 to 233)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 234</p> <p>1 "However, the use of powder on medical 2 gloves presents numerous risks to patients and 3 healthcare workers, including inflammation, 4 granulomas, and respiratory allergic reactions." 5 Did I read that right? 6 A. Yeah. 7 MS. PARFITT: Do you know where it is? 8 Mm-hmm. 9 A. Okay. 10 Q. Why, then, given that, would cornstarch 11 be considered a superior alternative to talc? 12 MS. PARFITT: Objection. Form. 13 A. Am I -- did I state in my -- I mean, 14 you know, I'm not evaluating the causal role of 15 cornstarch and, you know, its role in ovarian 16 cancer. I'm not even aware of the existence of 17 this document and what it pertains to. 18 I don't see any reference to cornstarch 19 here. I don't evaluate how they regulate various 20 products, whether it's food or cornstarch. 21 Q. Are you familiar with the term 22 "confounding"? 23 A. Yes. 24 Q. That's where the presence of another 25 association confuses the relationship between the</p>	<p style="text-align: right;">Page 236</p> <p>1 is that right? 2 A. I don't disagree -- what I am trying to 3 define precisely confounding is that, you know, 4 it creates a different relationship, had the 5 confounder not been present, and I'm just trying 6 to say how it does that. 7 It's associated with the outcome. It's 8 associated with the exposure and not, you know, 9 and not on the -- 10 Q. Let's use an example, so we're sure 11 we're talking about the same thing. 12 If you are studying the association between 13 coffee and pancreatic cancer, you need to be 14 mindful of whether cigarette smoking is more 15 common in coffee drinkers than in the rest of the 16 population; correct? 17 A. Yes. 18 Q. Cigarette smoking could be a confounder 19 in that situation; is that true? 20 A. Well, so there are several parts to 21 that. Just because it's more common in coffee 22 drinkers does not make it a confounder. To make 23 a confounder, you have to have three specific. 24 What you're talking is, yeah, it's associated 25 with coffee. But is it associated with</p>
<p style="text-align: right;">Page 235</p> <p>1 exposure and disease being studied; correct? 2 A. I don't -- I don't think that's the 3 definition of confounding. 4 Q. What is wrong with that definition? 5 A. Confusion is not an epidemiologic term. 6 There's no such thing as confusion in 7 epidemiology. You have bias. You have 8 misclassification. You have measurement error. 9 Confounding is a case where you have a 10 variable that's related to the outcome and 11 that's, you know, maybe associated with the 12 exposure and is not on the causal pathway between 13 exposure and outcome. 14 And, you know, it creates an artifactual 15 relationship between exposure and outcome. 16 Q. Confounding and confusion are similar 17 terms; correct? 18 A. No. They're not. Confounding is a 19 scientific term. Confusion is layman from that. 20 I don't think it has -- at least in my term, I 21 don't -- 22 Q. So you disagree that confounding 23 relates to the presence of another association 24 which potentially confuses the relationship 25 between the exposure and disease being studied;</p>	<p style="text-align: right;">Page 237</p> <p>1 pancreatic cancer? Is it on the causal pathway? 2 So a confounder is a very precise 3 epidemiologic term. It's not just everything we 4 pull off the air and say because it's associated 5 with the coffee, it becomes a confounder. 6 Q. Listen to my question. 7 A. Sure. 8 Q. Cigarette smoking could be a confounder 9 in my hypothetical; right? 10 A. If it was associated with pancreatic 11 cancer and not present in the causal pathway and, 12 obviously, associated with coffee. 13 Q. Because if more coffee drinkers are 14 smokers than non-coffee drinkers -- 15 A. It could be the other way around. 16 Q. Exactly. An association between coffee 17 drinking and pancreatic cancer might be due to 18 smoking and not the coffee drinking; correct? 19 A. Yes. 20 Q. Confounding can distort results in 21 epidemiological studies; is that right? 22 A. Yes. And you have to adjust for 23 confounding. 24 Q. Residual confounding is possible in 25 every occupational study; is that right?</p>

60 (Pages 234 to 237)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 238</p> <p>1 MS. PARFITT: Objection.</p> <p>2 A. Sorry. Can you repeat the question?</p> <p>3 MS. PARFITT: Here it is.</p> <p>4 Q. Sure. Residual confounding is possible</p> <p>5 in every observational study; correct?</p> <p>6 A. Observational. Yeah.</p> <p>7 It is possible; right? Is that what you</p> <p>8 said?</p> <p>9 Q. Yes.</p> <p>10 A. Yeah. Residual confounding is possible</p> <p>11 because you can't measure, you know, every</p> <p>12 variable that you can think of.</p> <p>13 Q. And unmeasured confounders may be</p> <p>14 present in every observational study; correct?</p> <p>15 A. Yeah. There's always the potential for</p> <p>16 unmeasured confounding. It doesn't mean that it</p> <p>17 exists.</p> <p>18 Q. It's impossible to say that all known</p> <p>19 and unknown confounding factors have been</p> <p>20 controlled for in any given study; correct?</p> <p>21 A. You don't -- you know, what you don't</p> <p>22 know, you can't control for.</p> <p>23 Q. In this case, new factors possibly</p> <p>24 involved in ovarian cancer are just being</p> <p>25 published in the literature; is that right?</p>	<p style="text-align: right;">Page 240</p> <p>1 But most importantly, just because, A, first</p> <p>2 of all, are they associated with the outcome?</p> <p>3 Then you have to ask, are they causally</p> <p>4 associated, and they would have to be associated</p> <p>5 with the exposure talc to be considered a</p> <p>6 confounder, just because they're a risk factor.</p> <p>7 Every risk factor need not be controlled in a</p> <p>8 study. You have to be associated with the</p> <p>9 exposure to, you know, consider the confounder.</p> <p>10 That is the precise definition of</p> <p>11 confounding, is you have to be associated with</p> <p>12 the exposure. You have to be associated with the</p> <p>13 outcome. And you can't be on the path.</p> <p>14 So just because chlamydia -- let me finish.</p> <p>15 Chlamydia, A, has a risk factor of ovarian</p> <p>16 cancer. If I design a study tomorrow for X and</p> <p>17 ovarian cancer, you know, I'm not going to</p> <p>18 consider it a confounder for my analysis.</p> <p>19 Q. Confounders can distort the results in</p> <p>20 epidemiological studies; correct?</p> <p>21 MS. PARFITT: Objection. Form.</p> <p>22 A. Yeah. We've discussed that, I think.</p> <p>23 THE WITNESS: We'll take a break. If</p> <p>24 you want to finish this confounding thing.</p> <p>25 MR. ZELLERS: No. We can take a break</p>
<p style="text-align: right;">Page 239</p> <p>1 MS. PARFITT: Objection. Vague.</p> <p>2 A. Yeah. I don't -- I don't know what</p> <p>3 you're like -- just give me an example so I</p> <p>4 can --</p> <p>5 Q. Okay. History of chlamydia infection</p> <p>6 and history of weight gain during adolescence are</p> <p>7 two recent examples that are being published in</p> <p>8 the literature as factors possibly involved with</p> <p>9 ovarian cancer; correct?</p> <p>10 MS. PARFITT: Objection. Form.</p> <p>11 A. I haven't seen them. But I mean,</p> <p>12 weight gain has been adjusted for in several of</p> <p>13 the analyses. So I don't know about that. Yeah.</p> <p>14 Q. Well, let's assume --</p> <p>15 A. We're talking about chlamydia.</p> <p>16 Q. Let's assume that that's correct.</p> <p>17 Those factors, history of chlamydia</p> <p>18 infection and history of weight gain during</p> <p>19 adolescence, those factors were not controlled</p> <p>20 for in any of the published talc-ovarian cancer</p> <p>21 studies, were they?</p> <p>22 MS. PARFITT: Objection. Form.</p> <p>23 A. Yeah. So if they're not known, first</p> <p>24 of all, you have to evaluate and, you know, is</p> <p>25 that a true -- true association?</p>	<p style="text-align: right;">Page 241</p> <p>1 now.</p> <p>2 MS. PARFITT: Good. Thank you.</p> <p>3 THE VIDEOGRAPHER: This ends Media 3.</p> <p>4 Off the record, 2:17 p.m.</p> <p>5 (A recess was taken.)</p> <p>6 THE VIDEOGRAPHER: Here begins Media</p> <p>7 No. 4 in today's deposition of Sonal Singh, MD,</p> <p>8 M.P.H. Back on the record, 2:29 p.m.</p> <p>9 BY MR. ZELLERS:</p> <p>10 Q. Dr. Singh, in your report, at Page 54,</p> <p>11 Paragraph 7, you address the subject of</p> <p>12 confounding in studies of talcum powder use and</p> <p>13 ovarian cancer; is that right?</p> <p>14 A. Yes.</p> <p>15 Q. On Page 54 of your report, you state,</p> <p>16 "Although there are some risk factors for ovarian</p> <p>17 cancer," and then it continues, "for any of them</p> <p>18 to be confounding to an extent that could account</p> <p>19 for the positive relations that have been</p> <p>20 reported, they would have to be strongly</p> <p>21 correlated with talc use. Family history,</p> <p>22 ethnicity, obesity and some reproductive risk</p> <p>23 factors are positively associated with the risk</p> <p>24 of ovarian cancer, but the magnitude of these</p> <p>25 associations does not appear high enough to</p>

61 (Pages 238 to 241)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 242</p> <p>1 introduce enough confounding either jointly to 2 explain completely the positive associations." 3 And it should be the positive association. 4 A. Yes. 5 Q. Is that the statement that you make? 6 A. Yes. 7 Q. There's no citation for that statement; 8 is that right? 9 A. Yes. But partly because I couldn't 10 find evidence -- and, you know, about the risk of 11 talcum powder use and these risk factors. And so 12 that -- so the issue that I -- prior to the 13 statement, states that -- these other risk 14 factors, which we know are risk factors for 15 ovarian cancer. 16 Q. Is this your statement that you made 17 here? 18 A. Yeah. Let me just explain what I did 19 here. 20 Q. That was a simple question. 21 A. Yeah. It is my statement. 22 Q. Have I read your statement? 23 A. Yes. But it is about the fact that we 24 don't have, you know, family history, ethnicity, 25 obesity and reproductive factors associated, but</p>	<p style="text-align: right;">Page 244</p> <p>1 Cancer"; is that right? 2 A. If I haven't, then I haven't. Yeah. 3 Q. You did put it on your additional 4 materials and data considered. 5 Do you see that? 6 A. Yes. 7 Q. It's on the last page. 8 MR. ZELLERS: I'm going to mark that 9 paper as Exhibit 28. 10 (Document entitled 11 "Interpretation of Epidemiologic Studies on 12 Talc and Ovarian Cancer" marked 13 Exhibit 28.) 14 MS. PARFITT: Thank you. 15 MR. ZELLERS: You're welcome. 16 BY MR. ZELLERS: 17 Q. Do you see Exhibit 28 in front of you? 18 A. Yes. 19 Q. Exhibit 28 is an article prepared by 20 Kenneth Rothman entitled "Interpretation of 21 Epidemiologic Studies of Talc and Ovarian 22 Cancer." 23 Is that right? 24 A. Yes. 25 Q. Take a look at Page 5 of that paper,</p>
<p style="text-align: right;">Page 243</p> <p>1 these associations, as it relates to talc use, we 2 don't have data on how these -- to be considered 3 a confounder, they have to be associated with 4 talc use. We don't have data on that. 5 Q. My question just is: Did you write 6 that? 7 A. I did. Yeah. 8 Q. All right. Now, do you know who Ken 9 Rothman is? 10 A. Yeah. He has written a textbook on 11 epidemiology. 12 Q. He is a well-respected epidemiologist; 13 is that right? 14 A. Yeah. He's well respected. 15 Q. He has written a textbook on 16 epidemiology that's widely recognized as one of 17 the best; is that right? 18 MS. PARFITT: Objection. 19 A. It is nice. I mean, I have a copy of 20 it. 21 Q. I've looked at your report and your 22 reliance list. In terms of your reliance list, 23 you do not cite to a paper by Ken Rothman and 24 others published in 2000 entitled "Interpretation 25 of Epidemiologic Studies in Talc and Ovarian</p>	<p style="text-align: right;">Page 245</p> <p>1 the second paragraph. 2 Do you see where -- 3 A. Confounding, you're talking about? 4 Q. Yes. Where Rothman discusses 5 confounding? 6 A. Yeah. 7 Q. Other than the list of four risk 8 factors in parentheses, you just copied the 9 language from Dr. Rothman's article and pasted it 10 into Page 54 of your report; correct? 11 MS. PARFITT: Objection. 12 A. No. 13 Q. All right. Do you have your report in 14 front of you, Page 54? 15 A. And you say that I don't cite this 16 article or -- 17 Q. If you don't cite that article, you 18 have just testified under oath that these are 19 your words in your report. 20 So take a look at Page 54 of your report. 21 Take a look at Page 5 of the Rothman paper. 22 A. Yeah. I mean, you know, I may have -- 23 I think I'm talking of different risk factors. 24 Q. Doctor -- 25 MS. PARFITT: Let him finish, please.</p>

62 (Pages 242 to 245)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 246</p> <p>1 MR. ZELLERS: Okay.</p> <p>2 A. I may have failed to cite that article.</p> <p>3 You know, it's okay. I mean, it's not okay, but</p> <p>4 I'm just saying I may have failed to cite that</p> <p>5 article.</p> <p>6 Q. Do you agree that the entire first part</p> <p>7 of Rothman on confounding that you have cited</p> <p>8 word for word in your report, and you can start</p> <p>9 with "although there have been some strong risk</p> <p>10 factors for ovarian cancer, for any of them to be</p> <p>11 confounding."</p> <p>12 A. Yeah.</p> <p>13 Q. If you read the rest, all the way</p> <p>14 through the next couple of sentences, down to</p> <p>15 "positive association," it's --</p> <p>16 A. Yeah.</p> <p>17 Q. -- word for word; right?</p> <p>18 A. Yeah. I wouldn't say I copy and</p> <p>19 pasted. I would say that I have not referenced</p> <p>20 it.</p> <p>21 Q. You copied and pasted it.</p> <p>22 A. No. I did not. I read it, and I wrote</p> <p>23 it. And I did not reference it.</p> <p>24 Q. You didn't write it. It's exactly word</p> <p>25 for word from the Rothman paper --</p>	<p style="text-align: right;">Page 248</p> <p>1 factors, family history, obesity and reproductive</p> <p>2 history," what else is different? Show me one</p> <p>3 word that is different --</p> <p>4 A. Yeah.</p> <p>5 Q. -- between what you've written here and</p> <p>6 what is written by Rothman in his paper.</p> <p>7 A. Yeah. It isn't, and I should have</p> <p>8 cited it.</p> <p>9 Q. All right. The paper by Rothman and</p> <p>10 others -- well, strike that.</p> <p>11 A. And where was this published, just -- I</p> <p>12 mean, it doesn't have a citation in it.</p> <p>13 Q. If you're going to copy it word for</p> <p>14 word --</p> <p>15 A. I did not.</p> <p>16 MS. PARFITT: Excuse me. Object to the</p> <p>17 question. Don't be argumentative, Counsel. He</p> <p>18 said he didn't cut and paste it. He said he</p> <p>19 failed to cite it. That's his testimony.</p> <p>20 A. You can, you know, go forward and say</p> <p>21 that.</p> <p>22 Q. The question is: You don't know -- let</p> <p>23 me withdraw that. You're looking at something.</p> <p>24 A. Yeah. Go ahead and ask the question.</p> <p>25 Q. You thought that this was a reliable</p>
<p style="text-align: right;">Page 247</p> <p>1 A. No. It isn't.</p> <p>2 Q. -- with the exception of you added, in</p> <p>3 parentheses --</p> <p>4 A. Yeah.</p> <p>5 Q. -- "genetic risk factors, family</p> <p>6 history, obesity and reproductive history"; is</p> <p>7 that right?</p> <p>8 A. Yeah. And I didn't cite it, but -- so</p> <p>9 you look at a study and a paper, and, you know, I</p> <p>10 wrote it. And I was remiss in not citing it. I</p> <p>11 didn't copy and paste it.</p> <p>12 Q. Well, you copied it word for word;</p> <p>13 correct?</p> <p>14 A. I did not.</p> <p>15 MS. PARFITT: Objection. Misstates his</p> <p>16 testimony.</p> <p>17 A. I'm saying what I did. But I did not</p> <p>18 cite it.</p> <p>19 Q. The fact are the facts.</p> <p>20 A. Well, the facts are that the content is</p> <p>21 different and I did not cite it.</p> <p>22 Q. What content is different other than</p> <p>23 you adding in --</p> <p>24 A. The risk factors.</p> <p>25 Q. -- parens, "Example, genetic risk</p>	<p style="text-align: right;">Page 249</p> <p>1 source; correct?</p> <p>2 A. Yes. And I did not cite it.</p> <p>3 Q. The Rothman paper, Exhibit 28?</p> <p>4 A. Yes.</p> <p>5 Q. All right. Now --</p> <p>6 A. Well, it's a source. I mean, it's in</p> <p>7 with other source that I rely on.</p> <p>8 Q. At least in these couple of</p> <p>9 sentences --</p> <p>10 A. In the paragraph.</p> <p>11 Q. -- you agree; correct?</p> <p>12 A. Yeah.</p> <p>13 MS. PARFITT: Agree what? Agree what?</p> <p>14 Q. Agree that the -- the two sentences</p> <p>15 from Rothman are the same two sentences as in his</p> <p>16 report and does he agree with those two</p> <p>17 sentences?</p> <p>18 A. Well, obviously, the risk factors are</p> <p>19 different, because I know more about the risk</p> <p>20 factors since 2000. And -- but the point that</p> <p>21 I'm trying to make, and as you can see the</p> <p>22 language is the same, and it should have been</p> <p>23 cited.</p> <p>24 Q. You told us throughout this deposition</p> <p>25 that it's important for you to be -- as an</p>

63 (Pages 246 to 249)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 250</p> <p>1 expert, to be fair and to cite information, 2 positions on -- that both support and refute your 3 position and plaintiffs' position; correct? 4 A. Well, it's not about their position, 5 support or refute the causal hypothesis. 6 And I'm agreeing that I was remiss in not 7 citing this. 8 Q. You also did not cite the next sentence 9 of Rothman -- 10 A. Yes. 11 Q. -- which states, "Of course, it remains 12 possible that yet unidentified risk factors for 13 ovarian cancer could be important confounders, 14 and several such factors in the aggregate could 15 give risk to an overall association as weak as 16 the one between talc and ovarian cancer." 17 You did not cite that; correct? 18 A. Yeah. And -- but that is already 19 expressed. The same factor is also expressed in 20 the first sentence. Confounding is one potential 21 explanation for -- so, you know, again, if I had 22 placed that sentence, you would say that, well, 23 you're taking three lines, four. 24 So I cite that confounding is one potential 25 explanation.</p>	<p style="text-align: right;">Page 252</p> <p>1 MS. PARFITT: No worries. No worries. 2 A. Which line are you in there? 3 Q. Sure. Look at "recall bias." Does the 4 third sentence state, "Recall bias can readily 5 introduce enough bias to produce the modestly 6 sized overall effect, relative risk equal 1.3, 7 that emerges from these studies"? 8 A. That's -- yeah, that's his 9 interpretation. 10 Q. You don't disagree with that, do you? 11 A. Well, I do disagree in the sense that, 12 you know, he's making inference on the magnitude. 13 I'm not disagreeing that there's a potential for 14 recall bias. But, you know, as I've discussed in 15 my report and -- and, again, if you say that, 16 then I should be writing the Rothman paper 17 instead of my report. Right? You would want Ken 18 Rothman to testify. 19 You have to, you know, take -- you know, I 20 understand what he's trying to say. He's saying 21 that recall bias can introduce an element that 22 would produce 1.3. 23 Q. In fact, Rothman and the other authors 24 of this paper conclude that the modest positive 25 association --</p>
<p style="text-align: right;">Page 251</p> <p>1 Q. You don't disagree with that statement. 2 A. Yeah. Yeah. Because that's one, you 3 know, it's stated that, you know, one potential 4 explanation. 5 Q. All right. Look at, if you will, on 6 Page 1 of the Rothman paper, the middle 7 paragraph. Rothman states, "Most of the 8 published studies are interview-based, 9 case-control studies subject to recall bias which 10 can readily give rise to associations of this 11 magnitude." 12 Did I read that correctly? 13 A. Yes. 14 Q. Go to Page 4, third paragraph of the 15 Rothman paper, Exhibit 28. I'm looking at the 16 section under "recall bias," and the third 17 sentence, "Recall bias can easily introduce 18 enough bias to produce the modestly sized overall 19 effect, relative risk equals 1.3, that emerges 20 from these studies." 21 MS. PARFITT: The only correction -- 22 Q. Is that what Rothman wrote? 23 MS. PARFITT: I'm sorry. It does say 24 "can readily." 25 MR. ZELLERS: I'm sorry.</p>	<p style="text-align: right;">Page 253</p> <p>1 A. Yeah. 2 Q. -- seen in epidemiological studies 3 could be explained by recall bias or an 4 unidentified confounding bias; correct? 5 A. Yes. 6 Q. You did not note in your report 7 Rothman's conclusion -- and if you turn to 8 Page 8, his conclusion -- "More important, there 9 is also positive evidence against a causal 10 association. The inverse dose-response trend for 11 both duration of use and frequency of use, a 12 pattern that could not be explained by a causal 13 relation. Based on these considerations, we 14 suggest that the evidence to date does not 15 indicate that talc can be 'reasonably anticipated 16 to be a human carcinogen.'" 17 A. Yes. And this report was prepared on 18 November 8, 2000. That's 20 years ago. And we 19 have many other studies subsequent to that 20 talking about dose-response, several other 21 understandings about biological mechanisms. 22 So if I wanted -- if you want me to just 23 cite to the Rothman paper or -- there are 115, 24 you know, papers. I mean, there are other -- 25 others will have opined that talc doesn't cause</p>

64 (Pages 250 to 253)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 254</p> <p>1 ovarian cancer.</p> <p>2 Q. What methodology did you use to rule</p> <p>3 out the effect of an unidentified confounding</p> <p>4 bias or multiple unidentified confounding biases?</p> <p>5 A. Yeah. So I mean, as the meta-analyses</p> <p>6 have shown, there are no differences between --</p> <p>7 most of the studies show no differences between</p> <p>8 adjusted and unadjusted estimates, suggesting</p> <p>9 that the potential for confounding is minimal.</p> <p>10 There is no way to rule out unmeasured</p> <p>11 confounding. And that's always a possibility.</p> <p>12 It doesn't mean that it exists.</p> <p>13 Q. As we discussed earlier, you did review</p> <p>14 the Gertig 2000 paper and cite it in your report;</p> <p>15 is that right?</p> <p>16 A. Yes.</p> <p>17 Q. On Page 48 of your report, you note</p> <p>18 that Gertig 2000 found a statistically</p> <p>19 significant increased risk for ever talc use for</p> <p>20 serous invasive cancers; correct?</p> <p>21 A. Let me just come to that section.</p> <p>22 Yes.</p> <p>23 Q. Gertig did not control for BMI or for</p> <p>24 cigarette smoking, did it?</p> <p>25 A. And I'm writing age, duration of</p>	<p style="text-align: right;">Page 256</p> <p>1 cigarette smoking and BMI.</p> <p>2 Q. That it did control for that?</p> <p>3 A. Yeah.</p> <p>4 Q. All right. Show me where, in Gertig</p> <p>5 2000, that they state that they did control for</p> <p>6 BMI and for cigarette smoking.</p> <p>7 A. "For age-adjusted analysis, we</p> <p>8 categorized values as oral contraceptive use,</p> <p>9 tubal ligation, post-menopausal, cigarette</p> <p>10 smoking and BMI."</p> <p>11 Q. What page?</p> <p>12 A. That's two -- whatever that page is,</p> <p>13 250. Yeah. That's my understanding.</p> <p>14 If you look at Table 1, they do have, you</p> <p>15 know, cigarette smoking and whatnot. That's my</p> <p>16 understanding.</p> <p>17 Q. Ter Riet 2013, you cite that in your</p> <p>18 report; is that right?</p> <p>19 A. It is.</p> <p>20 Q. Terry 2013 did not adjust for a hormone</p> <p>21 replacement therapy usage; correct?</p> <p>22 MS. PARFITT: Here is Ter Riet.</p> <p>23 A. Just let me go back to my report. This</p> <p>24 is the Ter Riet meta-analysis?</p> <p>25 Q. Yes. Ter Riet 2013, meta-analysis.</p>
<p style="text-align: right;">Page 255</p> <p>1 contraceptive use, BMI, smoking status.</p> <p>2 Can I look at the study? Sorry.</p> <p>3 Q. You're not wasting my time, are you?</p> <p>4 A. No. No. Because my writeup says that.</p> <p>5 I may be incorrect. And I just want to make sure</p> <p>6 that my writeup is -- you know, if we need to</p> <p>7 correct it, I need to correct it. I'm sorry.</p> <p>8 MR. TISI: Did you mark it?</p> <p>9 MR. ZELLERS: No.</p> <p>10 THE WITNESS: I'm not wasting it, I'm</p> <p>11 saying that because writeup -- I say that it</p> <p>12 does.</p> <p>13 MS. PARFITT: Just so you know, mine is</p> <p>14 a marked-up copy of it.</p> <p>15 MR. ZELLERS: I'm not going to mark it.</p> <p>16 I'm not going to look at it. I just want the</p> <p>17 doctor to answer the question.</p> <p>18 MS. PARFITT: Sure. Here's a copy of</p> <p>19 Gertig.</p> <p>20 BY MR. ZELLERS:</p> <p>21 Q. And my question is very simply --</p> <p>22 A. Age and smoking.</p> <p>23 Q. -- Gertig -- yes -- did not -- well,</p> <p>24 BMI --</p> <p>25 A. Yeah. It says it conducted for</p>	<p style="text-align: right;">Page 257</p> <p>1 A. Okay.</p> <p>2 Q. The question is: Did Ter Riet 2013</p> <p>3 adjust for hormone replacement therapy usage?</p> <p>4 A. Ter Riet.</p> <p>5 MS. PARFITT: Here is a copy.</p> <p>6 A. Mine doesn't say that. Usually,</p> <p>7 Table 1 should answer that question.</p> <p>8 HRT, right? I don't have that data, and I</p> <p>9 haven't included it in my report.</p> <p>10 Q. If hormone replacement therapy is a</p> <p>11 risk factor for ovarian cancer, and assuming that</p> <p>12 Ter Riet did not account for that, that is a</p> <p>13 potential confounding factor; correct?</p> <p>14 A. Again, I have a slight difference in</p> <p>15 your and my definition of confounding, that you</p> <p>16 would have to obviously know if there is an</p> <p>17 association with talc exposure for it to be</p> <p>18 considered a confounder in that specific study.</p> <p>19 Q. All right. You cannot say whether the</p> <p>20 odds ratio of Ter Riet 2013 in that study would</p> <p>21 have been lower if the authors had adjusted for</p> <p>22 hormone replacement therapy usage; correct?</p> <p>23 MS. PARFITT: Objection.</p> <p>24 A. Or higher. I mean, we cannot say one</p> <p>25 way or the other.</p>

65 (Pages 254 to 257)

Sonal Singh, M.D., M.P.H.

Page 258	Page 260
<p>1 Q. Recall bias, it's a concern in every 2 retrospective study; is that right? 3 A. Yeah, it is a potential concern in 4 design of studies where, you know, you're asking 5 about past exposure. 6 Q. Recall bias can distort a scientific 7 evaluation of whether an exposure is actually 8 related to a disease; correct? 9 A. Yes. 10 Q. For example, recall bias could distort 11 results if women with ovarian cancer were more 12 likely to remember their exposure to talc than 13 women without ovarian cancer; correct? 14 A. Yes. I mean, but the extent here is 15 quite minimal, because we don't see it with a -- 16 you know, for daily use, you know, the likely 17 magnitude is small. We've talked about that. 18 You know, if recall bias was operational, we 19 would see it with nongenital talc use. They 20 would be reporting that. And we would be seeing 21 it with other types of, you know, cancer beyond, 22 you know, ovarian. 23 So, yes, recall bias is a potential, but the 24 likely magnitude is small. 25 Q. On Page 54, Paragraph 6 of your</p>	<p>1 talc exposure as part of larger questionnaires on 2 other risk factors, minimizing the possibility of 3 recall bias." 4 Did you write that? 5 A. Yes. 6 Q. How does asking about other risk 7 factors minimize recall bias as to a particular 8 risk factor? 9 A. Yeah. Because, you know, you're not 10 stimulating them to answer -- you know, if you're 11 asking them ten questions about, say -- so it's 12 like, well, were you -- you know, were you 13 active, were you using oral contraceptives, were 14 you -- so if you are -- let me finish. Let me 15 finish my explanation. 16 You're introducing the question of talc use 17 within ten different questionnaires, then you 18 minimize the possibility of recall bias for that 19 particular product versus you're asking talc 20 alone. 21 Q. On what literature are you relying to 22 say that asking about other risk factors 23 minimizes recall bias as to another risk factor? 24 A. I mean, that's just my general 25 understanding of epidemiology. And maybe, you</p>
Page 259	Page 261
<p>1 report -- do you have Page 54, Paragraph 6? 2 A. Yeah. Just to clarify on the question, 3 I disagree with Rothman. So just because it's in 4 Rothman's study, doesn't mean that it's, you know 5 -- 6 Q. I have a new question. Are you ready? 7 A. No. I mean, I have to finish my last 8 question. 9 Q. I didn't ask you a question. 10 A. Okay. Because we are still on the 11 topic of recall bias. 12 Q. I asked the question. 13 A. Okay. 14 Q. Recall bias could distort results of 15 women with ovarian cancer were more likely to 16 remember their exposure to talc than women 17 without ovarian cancer; correct? 18 A. Yes. 19 Q. The next question is: Can you turn to 20 Page 54, Paragraph 6 of your report? 21 A. Okay. 22 Q. You state, "case-control studies are 23 susceptible to recall bias, particularly when 24 data on exposure are self-reported. However, 25 several studies have included these questions on</p>	<p>1 know -- yeah, it's not -- I don't know if it's 2 specific to talc usage. Just a general 3 understanding of epidemiology, about, you know -- 4 yeah, recall bias. 5 Q. Are you done? 6 A. Yeah. 7 Q. All right. Let's look at the effects 8 of recall bias in a study on talcum powder use in 9 ovarian cancer. 10 Are you familiar with the Schildkraut 2016 11 study? 12 A. Yes. 13 Q. That was one of the studies that you 14 relied on in forming your opinions; is that 15 right? 16 A. Yes. 17 MR. ZELLERS: Let's mark that study as 18 Deposition Exhibit 29. 19 (Article entitled "Association 20 between Body Powder Use and Ovarian Cancer: 21 The African American Cancer Epidemiology 22 Study (AACES) marked Exhibit 29.) 23 MS. PARFITT: Got it. Thanks. 24 BY MR. ZELLERS: 25 Q. This is a study titled "Association</p>

66 (Pages 258 to 261)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 262</p> <p>1 Between Body Powder Use and Ovarian Cancer; The 2 African American Cancer Epidemiology Study"; 3 correct? 4 A. Yes. 5 Q. The study looked at, among other 6 things, what impact, if any, lawsuit filings in 7 2014 had on whether women recalled using talc in 8 the past; correct? 9 A. Yeah. It examined the issue of 10 stimulated reporting. And I note it in my 11 report. I don't -- I don't discount that in my 12 discussion of the Schildkraut study. 13 Q. We'll call it Schildkraut. Can we do 14 that? 15 A. Whatever. I don't know. 16 Q. The authors in that study, Exhibit 29, 17 thought that the publicity from lawsuits might 18 influence the participants' recall of prior body 19 powder use; is that right? 20 MS. PARFITT: Objection. 21 A. Yes. And I noted on Page 45 of my 22 report that although there was some evidence that 23 there was more reporting after class action 24 lawsuits in 2014, recall bias alone is 25 insufficient because there is a statistically</p>	<p style="text-align: right;">Page 264</p> <p>1 that they used talc on their genitals was 2 34 percent; is that right? 3 A. Where is that? Yeah. 4 Q. The percentage of cases, meaning women 5 with ovarian cancer, that said that they used 6 talc on their genitals was 36.5 percent; is that 7 right? 8 A. I'm just looking at this. Give me a 9 second. 10 36 -- interview data after 2004? 11 Q. No. My question here is: For women 12 who were interviewed before 2014 -- 13 A. Mm-hmm. 14 Q. -- the control, so women without 15 ovarian cancer, they stated they used talc on 16 their genitals, 34 percent; is that right? 17 A. Yes. 18 Q. For that same time period, women 19 interviewed before 2014 -- 20 A. Mm-hmm. 21 Q. -- with ovarian cancer that said that 22 they used talc on their genitals was 23 36.5 percent. 24 A. Yes. 25 Q. Is that right?</p>
<p style="text-align: right;">Page 263</p> <p>1 significant risk both before and after 2014. But 2 the authors did, you know, think it was an 3 important thing to look at. 4 Q. The authors looked at this and tried to 5 study this; is that right? 6 A. Yes. 7 Q. All right. Go to Page 4, Table 2 of 8 the Schildkraut paper. Tell me when you have it. 9 A. I do. 10 Q. This is a table, Adjusted Odds Ratios 11 for the Associations Between Mode, Frequency and 12 Duration of Body Powder Use and Ovarian Cancer; 13 is that right? 14 A. Yes. 15 Q. The second column shows the number of 16 cases. That's women with ovarian cancer; 17 correct? 18 A. Yes. 19 Q. The third column shows the controls. 20 That's the women who do not have ovarian cancer; 21 correct? 22 A. Yes. 23 Q. Looking at the data, before 2014, 24 before the lawsuits, the percentage of controls, 25 meaning women without ovarian cancer, who said</p>	<p style="text-align: right;">Page 265</p> <p>1 So roughly the same reporting of genital 2 talc use between women with and without ovarian 3 cancer occurred before the lawsuits were filed in 4 2014. 5 MS. PARFITT: Objection. 6 Q. Correct? 7 A. I don't know the timing of lawsuits, 8 but yes, 2014. 9 Q. So then let's look at what happened 10 after the lawsuits were filed. 11 After 2014, what percentage of women without 12 ovarian cancer said that they used talc on their 13 genitals? 14 A. The case -- are you talking about cases 15 or controls? 16 Q. Yeah. I'm talking about controls. 17 A. 34.4, 34.4. 18 Q. So based on this data, the lawsuits had 19 essentially no effect on how many of the women 20 without ovarian cancer, the controls, remembered 21 or recalled using baby powder; correct? 22 A. Yes. 23 Q. It was 34 percent before 2014 and 24 34.4 percent after; is that right? 25 A. Yes.</p>

67 (Pages 262 to 265)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 266</p> <p>1 Q. For women with ovarian cancer, before 2 the lawsuits were filed, 36.5 percent of them 3 said they recalled using baby powder; correct? 4 A. Yes. 5 Q. But after the lawsuits were filed, the 6 percent of women with ovarian cancer who said 7 they used baby powder went up to 51.5 percent; is 8 that right? 9 A. Yes. 10 Q. So after the lawsuits were filed, the 11 percent of women with ovarian cancer who said 12 they used baby powder jumped by over 40 percent; 13 is that right? 14 MS. PARFITT: Objection. Form. 15 A. By 40 percent? Where is 40? 16 Q. A difference between the 36. -- 17 A. 10 percent. It's 51 and 34. Right? 18 Q. It jumped -- I don't have a calculator. 19 A. You're subtracting 51 to 36 or 51 to 20 34? 21 Q. Well, there was -- 22 A. Sorry. 23 Q. That's okay. It's late. 24 There was a significant increase -- 25 A. There was an increase.</p>	<p style="text-align: right;">Page 268</p> <p>1 action lawsuits in 2014, recall bias alone is 2 insufficient to explain these findings, because 3 there was a statistically significant increased 4 risk both before and after 2014." 5 Is that what you state? 6 A. Yeah. 7 Q. Let's look at what the study actually 8 shows. So go to -- 9 A. Yeah. I correct it. Should be there 10 was an excess risk, because there was no 11 statistically significant. 12 Q. Your report is in error; is that right? 13 MS. PARFITT: Objection. 14 A. Well, it should be corrected to an 15 excess risk. 16 Q. It is not, and there is not a 17 statistically significant risk; is that right? 18 MS. PARFITT: Objection. Form. 19 A. Yeah. The test for effect modification 20 by year of interview was technique, but the 21 particular estimate for above -- for, you know, 22 for before 2014 was not significant. 23 Q. Exactly. So pre-2014, there was an 24 odds ratio of 1.19 with a confidence interval 25 ranging from .87 to 1.63; is that right?</p>
<p style="text-align: right;">Page 267</p> <p>1 Q. -- from 36.5 percent before the 2 lawsuits were filed to 51.5 percent after; is 3 that right? 4 A. Yes. 5 Q. So, suddenly, women who had ovarian 6 cancer started reporting a higher incidence of 7 talc use than women had reported before 2014; is 8 that right? 9 MS. PARFITT: Objection. Form. 10 A. Yes. There was -- there was 11 incidence -- you know, evidence of stimulated 12 reporting. But that is just one element of 13 recall bias. That's not completely what is being 14 addressed in my statement on recall bias. This 15 is evidence about stimulated reporting, which is 16 one -- one spectrum of recall bias. 17 Q. It's at least an example of the 18 potential effect of recall bias; correct? 19 A. Yes. 20 Q. All right. Go to Page 45 of your 21 report, the last sentence. 22 A. Yes. 23 Q. "Although" -- and I'm quoting you. 24 "Although there was some evidence that there was 25 more reporting of genital powder use after class</p>	<p style="text-align: right;">Page 269</p> <p>1 A. Yeah. Yeah. 2 Q. That is not statistically significant; 3 is that right? 4 A. Yes. 5 Q. In the absence of statistical 6 significance, that can be indicative of no risk 7 existing; correct? 8 MS. PARFITT: Objection. Form. 9 A. Yeah. But, you know, I'm opining on 10 the study as a whole. That's just one element of 11 stimulated reporting in that study, you know. 12 Yeah. So there's an excess risk, which is in the 13 same direction, but not statistically 14 significant. 15 Q. If the study had ended before 2014, it 16 would have found no statistically significant 17 relationship between talcum powder and ovarian 18 cancer; is that right? 19 A. I'm not seeing the study. I have to 20 interpret the whole study; right? 21 Q. Well, based upon this data that we just 22 looked at -- 23 A. Yeah. 24 Q. -- had the study ended before 2014, 25 there was not a statistically significant</p>

68 (Pages 266 to 269)

Sonal Singh, M.D., M.P.H.

Page 270	Page 272
<p>1 relationship between talcum powder use and</p> <p>2 ovarian cancer; correct?</p> <p>3 MS. PARFITT: Objection. Misstates the</p> <p>4 data.</p> <p>5 A. Yeah. There was an excess risk which</p> <p>6 was not statistically significant. But, you</p> <p>7 know, we are picking and choosing analysis by</p> <p>8 2004. Again, we talked about we are choosing by</p> <p>9 duration. You can pick any one of these analyses</p> <p>10 to cite it. You have to look at the cumulative</p> <p>11 evidence and the cumulative evidence from</p> <p>12 meta-analyses.</p> <p>13 Q. How did you account for this recall</p> <p>14 bias in weighing the Schildkraut study?</p> <p>15 MS. PARFITT: Object to the form.</p> <p>16 A. So, again, I did not weigh one</p> <p>17 individual study. My weight of evidence is based</p> <p>18 on the meta-analysis and the cumulative evidence</p> <p>19 from meta-analysis, the biological studies,</p> <p>20 animal studies, human studies.</p> <p>21 So, you know, I point out the limitations of</p> <p>22 the individual studies, as do the authors of the</p> <p>23 meta-analyses.</p> <p>24 Q. Are your opinions in this matter</p> <p>25 dependent on talcum powder containing asbestos?</p>	<p>1 reports for that.</p> <p>2 Q. You have no personal expertise with</p> <p>3 that; correct?</p> <p>4 A. No.</p> <p>5 Q. Did you consider any testing that found</p> <p>6 no asbestos?</p> <p>7 A. Yeah. I did. I think I'm citing the</p> <p>8 FDA report in my assessment that there are</p> <p>9 studies that suggest the -- I don't know if it's</p> <p>10 an FDA report. It's an FDA study that talks</p> <p>11 about it.</p> <p>12 Q. If your assumption about contamination</p> <p>13 of talcum powder products with asbestos were not</p> <p>14 true, would your opinions in this case change?</p> <p>15 MS. PARFITT: Objection. Form.</p> <p>16 A. Well, again, you know, this is a weight</p> <p>17 of evidence that, does it, you know, contain</p> <p>18 talcum powder -- I mean -- does talcum powder</p> <p>19 product contain asbestos? Or, you know, these</p> <p>20 other metals we've talked about.</p> <p>21 But my opinion was, in fact, arrived at</p> <p>22 before even I was aware of both of the deposition</p> <p>23 testimony, as well as the results of testing by</p> <p>24 Dr. Luongo that my causal opinion was that they</p> <p>25 caused, you know, ovarian cancer.</p>
Page 271	Page 273
<p>1 A. No. I arrived at my causal opinion</p> <p>2 independent of, you know, presence of asbestos</p> <p>3 or, you know, or my understanding of the</p> <p>4 constituents. But I asked to better understand</p> <p>5 what are the constituents of, you know, talcum</p> <p>6 powder products.</p> <p>7 And I was, you know, some of the documents</p> <p>8 and some of the literature even suggests and</p> <p>9 shows that, and some of the testing and some of</p> <p>10 the deposition testimony that I have been privy</p> <p>11 to, suggests the presence of asbestos in talcum</p> <p>12 powder product.</p> <p>13 Q. Do you believe that talcum powder that</p> <p>14 does not contain asbestos causes ovarian cancer?</p> <p>15 A. Yes.</p> <p>16 Q. Is it fair to say that you have not</p> <p>17 made any independent determination as to whether</p> <p>18 or not the talcum powder products manufactured by</p> <p>19 J&J Consumer Products are contaminated with</p> <p>20 asbestos?</p> <p>21 A. Yes. I have not made a determination.</p> <p>22 I've looked at the literature. I have looked at</p> <p>23 the testimony of the experts that was provided,</p> <p>24 and I've looked at testimony -- sorry -- the</p> <p>25 report of Dr. Luongo and I have relied on their</p>	<p>1 MR. ZELLERS: Move to strike as</p> <p>2 nonresponsive. I'm going to ask the question</p> <p>3 again.</p> <p>4 THE WITNESS: Sure.</p> <p>5 BY MR. ZELLERS:</p> <p>6 Q. If your assumption about contamination</p> <p>7 of talcum powder products with asbestos were not</p> <p>8 true, would your opinions in this case change?</p> <p>9 A. No.</p> <p>10 Q. In support of your opinion that talcum</p> <p>11 powder products contain asbestos, you cite to</p> <p>12 exhibits from the depositions of John Hopkins and</p> <p>13 Julie Pier; is that right?</p> <p>14 A. Yes.</p> <p>15 Q. Are you aware that those exhibits were</p> <p>16 created by plaintiff attorneys?</p> <p>17 MS. PARFITT: Objection. Misstates the</p> <p>18 evidence.</p> <p>19 A. Yeah. I mean, I asked them whatever</p> <p>20 that -- you know, these are -- as I understand</p> <p>21 them, they are, you know -- they are created as a</p> <p>22 part of the testimony of these deponents on</p> <p>23 behalf of, you know, the defendants. That's my</p> <p>24 understanding.</p> <p>25 Q. Were you told that the exhibits</p>

69 (Pages 270 to 273)

Sonal Singh, M.D., M.P.H.

Page 274	Page 276
<p>1 Exhibit 28 to the deposition of John Hopkins and 2 Exhibit 47 to the deposition of Julie Pier were 3 exhibits that were created by plaintiffs' 4 attorneys? 5 MS. PARFITT: Objection. Completely 6 misstates the evidence in this case. 7 A. You know. I asked for constituents. I 8 don't know what -- who created what. So I mean, 9 I'm not going to be able to answer that type of 10 question, who created this. 11 I was asked for, you know, what are the 12 constituents, that can I learn more about this? 13 Q. Outside of your work in litigation, do 14 you normally rely on documents created by 15 advocates in order to evaluate epidemiological 16 data? 17 MS. PARFITT: Objection. Again, 18 misstates the evidence as to origin of the 19 Hopkins and Pier Exhibits 28 and 40. 20 You may answer. 21 A. Yeah. I mean, I do. As I said 22 earlier, I rely on our published data. And as 23 the Health Canada approach states, that we rely 24 on whatever evidence becomes available, and, A, 25 is relevant to the particular testimony.</p>	<p>1 than from communicating with plaintiffs' counsel? 2 A. I'm not sure what -- so -- 3 MS. PARFITT: I'm going to object to 4 the form. 5 Q. Sure. The source of data? 6 A. Like source of -- 7 Q. I'm asking you if you know where the 8 data in those exhibits came from. 9 A. So I'll try to answer to the best of my 10 ability. 11 My understanding is that the data on J&J and 12 Imerys were from mines tested over the years, 13 ranging, you know, from several decades. And 14 that contained or -- you know, were contaminated 15 with asbestos, various fibers that were created. 16 And the second was the Luongo report was 17 products that were purchased and that were tested 18 in the laboratory. So that's where the source. 19 I mean, I assume these other two sources. 20 Q. Have you made any effort to investigate 21 the alternative explanations for the data in 22 those charts, Exhibit 28 and Exhibit 47? 23 A. I mean -- 24 MS. PARFITT: Objection. 25 A. So, for example, I think that those</p>
Page 275	Page 277
<p>1 And, importantly, just as my causal opinion 2 was arrived at independent of the constitution of 3 asbestos in talc, Health Canada also is unaware 4 of the presence of -- or at least, you know, they 5 haven't assessed the presence of asbestos in 6 talc, and they are, you know, both congruent. 7 Q. Your testimony is that outside of your 8 work in litigation, that you normally do rely on 9 data and documents created by plaintiffs' 10 counsel? 11 MS. PARFITT: Objection. Form. Asked 12 and answered. And misstates the evidence. 13 A. So I, you know, rely on evidence that's 14 available in terms of epidemiologic evidence. 15 And my testimony on asbestos was based on testing 16 and based on -- testing by -- based on some of, 17 you know, there are studies which suggest the 18 presence of asbestos. 19 Q. Do you know where the data in 20 Exhibit 28 to Hopkins and Exhibit 47 to Pier came 21 from? 22 A. You know, I was seeing these were in 23 various mines conducted. That's my 24 understanding. 25 Q. Do you have an understanding, other</p>	<p>1 data are, as I said earlier, my causal opinion 2 is -- is, you know, this is only a -- my causal 3 opinion is only -- you know, this is only a small 4 link in my causal opinion between talc and 5 ovarian cancer, and it's not predicated on the 6 presence of asbestos. 7 I don't have the expertise to determine 8 whether asbestos is present. 9 Q. I'm trying to make it a simple 10 question. I'm just trying to find out what you 11 did and what you did not do. 12 Did you make any effort to investigate the 13 alternative explanations for the data in the 14 charts which are marked as Exhibit 28 and 15 Exhibit 47? 16 A. So -- 17 MS. PARFITT: Objection. 18 A. What is 28, 47? 19 MS. PARFITT: Yeah. Let's get them. 20 Do you have a copy of them here to show -- 21 MR. ZELLERS: No. 22 MS. PARFITT: You aren't going to show 23 it to him? 24 MR. ZELLERS: He cites to these in his 25 report.</p>

70 (Pages 274 to 277)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 278</p> <p>1 MS. PARFITT: Then let's get them. 2 We'll get them. Give him a moment. 3 MR. ZELLERS: We don't need to get them 4 to answer this question. 5 MS. PARFITT: Do you need them, 6 Dr. Singh? 7 THE WITNESS: Yes. 8 MS. PARFITT: Do you want to take a 9 quick break? 10 MR. ZELLERS: And I object. And this 11 should not be time that gets charged me. 12 BY MR. ZELLERS: 13 Q. My question simply is: Did he attempt 14 to investigate any alternative causes. He can 15 either say yes, he can say no, or he can say I 16 don't recall. 17 A. Yes. 18 Q. All right. What did you do to 19 investigate alternative explanations? 20 A. I mean, you know, I was looking at 21 the -- I was already looking at the published 22 literature, but beyond that, I was looking at 23 what are the alternate -- again, as I said, you 24 know, my expertise in determining -- I'm not a 25 mineralist that I can, you know, that I can</p>	<p style="text-align: right;">Page 280</p> <p>1 knowledge on these issues; correct? 2 A. Yeah. I mean, for my purpose, you 3 know, it was more an understanding of the 4 constituents, whether that would provide, you 5 know, proof against biologic plausibility, proof 6 for biologic plausibility. 7 So, for example, you say, did I undertake 8 attempts to understand the constituents? Yes. I 9 mean, I was looking for, well, are there some 10 antioxidants that, if you had some antioxidants 11 in that product, and I'm not aware of, or anti, 12 you know, carcinogens and maybe these scientists 13 will be able to provide that. 14 Q. Did you ask counsel for plaintiffs for 15 any information or testimony from either J&J 16 company folks or Imerys scientists as to what the 17 tests actually showed with respect to asbestos? 18 MS. PARFITT: Other than Exhibits 28 19 and 47? 20 A. I assume those testifying were J&J 21 scientists and Imerys, and they were speaking 22 about those tests. 23 Q. My question is: Did you ask for any 24 additional information? 25 A. No. I mean, I asked -- as I said, I</p>
<p style="text-align: right;">Page 279</p> <p>1 determine that. And, again, I'm not opining that 2 Dr. Luongo's report -- I mean, he will have to 3 vouch for his report. 4 Q. Let me ask it a different way. 5 A. Yeah. 6 Q. If scientists from the J&J companies 7 and Imerys scientists say that those tests don't 8 actually show asbestos, it was just tremolite 9 reported, for example, you have no expertise to 10 dispute that; correct? 11 MS. PARFITT: Objection. Misstates the 12 evidence in this case, entirely. 13 Do you want to ask him a hypothetical? 14 Q. It's a hypothetical question. 15 MS. PARFITT: It's a hypothetical. 16 A. Again, with my limited expertise and my 17 understanding of whatever I was provided and 18 cited there, my understanding was that there was 19 asbestos present in there and, you know, other 20 people can have different opinions and I think 21 mineralogists, geologists will -- 22 Q. Those are the -- 23 A. Yeah. 24 Q. -- expertise or the -- those are the 25 types of experts that would have substantive</p>	<p style="text-align: right;">Page 281</p> <p>1 asked about the causal question and I got what I 2 got. We can go about it in various ways. 3 Like did I ask again? No, I didn't. And I 4 don't want any more documents. 5 Q. We'll try to shortcut this. 6 Do you believe Luongo? You reviewed his 7 testimony; right? 8 MS. PARFITT: Objection. Form. 9 Go ahead. 10 A. Yeah. It's like how do you believe, 11 you know -- again, it's an area of expertise. He 12 tests, you know, these products, you know, this 13 is not my area of experience. At least based on 14 his testing, there is presence of asbestos in 15 my -- and provides additional support. 16 Q. Did you look at any of the experts for 17 the defendants who have opined to the opposite 18 statement or the opposite? 19 MS. PARFITT: I think -- objection. 20 A. I was told that the expert defendants 21 hadn't even been -- you know, haven't submitted 22 reports or haven't been, you know, opined on. 23 That's sort of my understanding. 24 Q. You believed and accepted the Luongo 25 testing for purposes of this case; is that right?</p>

71 (Pages 278 to 281)

Sonal Singh, M.D., M.P.H.

Page 282	Page 284
<p>1 MS. PARFITT: Objection. Misstates the 2 heart of his testimony. 3 A. So, first of all, this report is 70 4 whatever pages. Luongo is maybe a paragraph or 5 two. So, yes, I believe that was one study. 6 For the purposes of, you know, identifying, 7 you know, I identified his. I identified what 8 was shown and what was in those notes. And I 9 identified some epidemiologic -- I mean, some 10 findings in the published literature. 11 I mean, that's as much as I could know about 12 it. I mean, you had Routers' study, you know, 13 talking about it in the media. So there's lots 14 of different things. 15 I didn't go and, you know, go looking into 16 the Routers report. Maybe that's what I should 17 be looking at. 18 Q. You did not confirm that any of the 19 talc samples mentioned in those charts were 20 actually from talc that was used in baby powder; 21 correct? 22 MS. PARFITT: Objection. Misstates the 23 evidence that was available to him. If you want 24 to show him the charts, you can do it. 25 Q. Can you answer that question?</p>	<p>1 I'm not trying to slow you down. 2 MR. TISI: And you said you think he 3 was. 4 MR. ZELLERS: Yes. And it was in jest, 5 Counsel. We all chuckled and we all laughed. 6 MR. TISI: As long as it was in jest, 7 that's fine. 8 THE WITNESS: I took it to be in jest. 9 I know I reviewed one, but I'm just 10 trying to see if I reviewed another one. There 11 was -- yeah. 12 So I said, No. 30 and then 31, 32, two 13 additional reports. Sorry. 14 Q. Have you ever met Luongo? 15 A. I don't know him. 16 Q. Do you know his qualifications? 17 A. No. 18 Q. Had you ever heard of him before you 19 got involved in this MDL talc ovarian cancer 20 litigation? 21 A. No. 22 Q. Have you reviewed any Luongo testing 23 where he did not find asbestos? 24 A. These were the three reports I 25 reviewed. So I don't know if he has conducted</p>
Page 283	Page 285
<p>1 MS. PARFITT: Objection. 2 A. I did not confirm it myself. 3 Q. You realize that the vast majority of 4 talc isn't even used for body powder; correct? 5 MS. PARFITT: Objection. Misstates the 6 evidence. 7 A. I realize that -- yeah, I don't know 8 what -- you know, there are various other uses of 9 talc. 10 Q. Do you also rely on -- well, strike 11 that. 12 How many Luongo reports have you reviewed? 13 A. I just have to take a look. I know 14 that I reviewed one. And I'm not trying to slow 15 you down. I'm just trying to be accurate. 16 Q. I think you are, but -- 17 MS. PARFITT: Objection to the 18 characterization, Counsel. 19 A. I'm trying to find this. 20 MS. PARFITT: He's acted in a 21 professional way throughout all this, so it's 22 good. 23 MR. TISI: You asked him questions 24 looking at his report. 25 MR. ZELLERS: The witness said to me,</p>	<p>1 additional testing. 2 Q. Let me ask again. Have you reviewed 3 any Luongo testing where he did not find 4 asbestos? 5 A. I did not review any additional beyond 6 what is cited here. 7 Q. Have you reviewed the FDA's testing of 8 talcum powder products? 9 A. I have cited it. I mean, I have not 10 reviewed the specific test, but I have, you know, 11 cited what -- what they -- what they found. 12 Q. Have you made any effort to quantify 13 the amount of any alleged contaminant in the 14 Johnson & Johnson Consumer Products talcum powder 15 products? 16 A. That's way beyond my expertise. 17 Q. Is any amount safe? 18 MS. PARFITT: Objection. 19 A. Well, as of my understanding that 20 asbestos, you know, any amount of asbestos is not 21 safe, that's my understanding. And, obviously, 22 others can -- 23 Q. Do you defer to other experts on that 24 issue? 25 A. Yeah. But, you know, my understanding</p>

72 (Pages 282 to 285)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 286</p> <p>1 is that any amount -- and I think there's some 2 testimony from others to that effect as well. 3 But I'll defer to others. 4 Q. Do you have an opinion on what type of 5 asbestos is in the baby powder products? 6 A. Again, you know, this whole -- you 7 know, this sort of questions around constituents 8 of the product, for me, it was more trying to 9 understand whether it's asbestos or any other 10 constituents in the product, provide evidence in 11 support or against. 12 I can't tell you what amount would cause or, 13 you know, not cause baby -- in baby powder will 14 cause ovarian cancer. 15 Q. What types of asbestos are associated 16 with ovarian cancer? 17 A. I haven't done a causal analysis of 18 asbestos and ovarian cancer. I know that the 19 IARC has classified asbestos as a carcinogen, 20 Grade 1, and that also stated that it caused 21 ovarian cancer, but -- about asbestos and fibrous 22 talc, but obviously others will provide more -- 23 more specifics. 24 Q. Do you have any -- strike that. 25 Do you have knowledge as to the different</p>	<p style="text-align: right;">Page 288</p> <p>1 at meta-analysis that, you know, cause, as well 2 as the IARC report that, you know, talks about 3 asbestos and fibrous talc as a carcinogen and 4 also cites studies that show that asbestos causes 5 ovarian cancer. But, again, I wasn't doing a 6 formal causal analysis. 7 Q. Do you agree that research on the 8 potential relationship between asbestos and 9 ovarian cancer has only considered a small number 10 of cases? 11 MS. PARFITT: Objection. Form. 12 A. I mean, ovarian cancer is a rare, rare 13 disease. And, you know, it's going to be a small 14 number of cases, regardless of etiology, what 15 they are trying to study. 16 Q. How many of the studies involve 17 occupational exposure? 18 A. I think the predominant -- 19 MS. PARFITT: Objection. 20 A. -- studies have involved occupational 21 exposure. 22 Q. How many were nonoccupational, if any? 23 A. I don't recall the numbers. 24 Q. Did any of the nonoccupational asbestos 25 studies reach statistical significance?</p>
<p style="text-align: right;">Page 287</p> <p>1 types of asbestos? 2 A. No. 3 Q. What dose of asbestos is associated 4 with ovarian cancer? 5 A. I have not evaluated the dose of 6 asbestos with ovarian cancer. 7 Q. What type of ovarian cancer is asbestos 8 associated with? 9 A. I have not -- as I said earlier, I have 10 not evaluated the specific causal link between 11 asbestos and ovarian cancer. My causal question 12 was, does talcum powder products cause ovarian 13 cancer. And whatever the constituents are, you 14 know, whether they provide evidence in support or 15 against. And, as you said, there may be 16 additional testing. 17 Q. Does the type of ovarian cancer vary 18 based upon the type of asbestos? 19 A. Again, I didn't evaluate that -- that 20 body of evidence. 21 Q. Did you evaluate studies that have 22 explored the potential link between asbestos and 23 ovarian cancer? 24 A. Yeah. I mean, I didn't, again, 25 evaluate the causal link between that. I looked</p>	<p style="text-align: right;">Page 289</p> <p>1 MS. PARFITT: Objection. Form. 2 A. Again, I would have to look at the 3 study that you're talking about. And I just -- I 4 can't recall it off the top of my head. 5 Q. Can you tell how many women were 6 studied? 7 A. No, I can't. I mean, you can't ask 8 questions about these things, and tell me how 9 many women. No. You have to show me the study 10 if you want to go down that line of questioning. 11 Q. I'll show you a study. 12 A. Sure. 13 Q. Are you familiar with the Reid study 14 published May 24th of 2011? 15 A. Yes. 16 Q. It's one of the studies you looked at; 17 is that right? 18 A. Yes. 19 MR. ZELLERS: We'll mark that as 20 Exhibit 30. 21 (Article entitled "Does Exposure 22 to Asbestos Cause Ovarian Cancer? A 23 Systematic Literature Review and 24 Meta-analysis" marked Exhibit 30.) 25 MS. PARFITT: Thank you.</p>

73 (Pages 286 to 289)

Sonal Singh, M.D., M.P.H.

Page 290	Page 292
<p>1 THE WITNESS: Can you repeat the</p> <p>2 question for me?</p> <p>3 MR. ZELLERS: Sure.</p> <p>4 THE WITNESS: I'm sorry.</p> <p>5 BY MR. ZELLERS:</p> <p>6 Q. Go to the first page, the right column.</p> <p>7 A. Mm-hmm.</p> <p>8 Q. Reid. And this article is entitled</p> <p>9 "Does Exposure to Asbestos Cause Ovarian Cancer?"</p> <p>10 Is that right?</p> <p>11 A. Yes.</p> <p>12 Q. The authors state, on the first page,</p> <p>13 on the right-hand side, right above the No. 1 and</p> <p>14 No. 2, "Studies that have examined this issue</p> <p>15 have been limited for two major reasons. No. 1,</p> <p>16 small number of cases"; is that right?</p> <p>17 A. Yes.</p> <p>18 Q. The authors state, "Much fewer women</p> <p>19 than men have been exposed to asbestos,</p> <p>20 particularly in more heavily exposed occupational</p> <p>21 settings where relative risks are higher."</p> <p>22 You agree with that; correct?</p> <p>23 A. Yes.</p> <p>24 Q. Then the second major limitation deals</p> <p>25 with difficulties of diagnosis; is that right?</p>	<p>1 Where are you pointing to?</p> <p>2 MR. ZELLERS: Sure. I'm looking at</p> <p>3 the --</p> <p>4 MS. PARFITT: Thank you.</p> <p>5 MR. ZELLERS: -- No. 2.</p> <p>6 MS. PARFITT: Uh-huh.</p> <p>7 MR. ZELLERS: The last full sentence.</p> <p>8 MS. PARFITT: Thank you. I appreciate</p> <p>9 it.</p> <p>10 MR. ZELLERS: On Page -- first page of</p> <p>11 the article.</p> <p>12 MS. PARFITT: Thank you. I appreciate</p> <p>13 that.</p> <p>14 MR. ZELLERS: Sure.</p> <p>15 A. Yes.</p> <p>16 Q. Have the studies addressed confounding</p> <p>17 and independent risk factors?</p> <p>18 A. Well, again, you know, my examination</p> <p>19 of asbestos -- I mean, I was not trying to</p> <p>20 establish a causal link between asbestos and</p> <p>21 ovarian cancer, you know, when in trying to look</p> <p>22 at talcum powder products and ovarian cancer, you</p> <p>23 know, one of the questions was constituents.</p> <p>24 And, you know, the IARC agrees that, or at</p> <p>25 least opines that it is, causally, is a</p>
Page 291	Page 293
<p>1 A. Yes.</p> <p>2 Q. Are you aware of the difficulties that</p> <p>3 have existed over time in distinguishing between</p> <p>4 peritoneal mesothelioma and ovarian cancer?</p> <p>5 A. Yes. As a general idea of -- you know,</p> <p>6 because they share histologic similarities.</p> <p>7 Q. Did those difficulties affect the</p> <p>8 reliability of the studies?</p> <p>9 A. Yes, but if you look at Table 2 of that</p> <p>10 report, you see that, despite if you look at</p> <p>11 studies that review the ovarian pathology, you</p> <p>12 still see a statistically significant increased</p> <p>13 risk of incidence of mortality from ovarian</p> <p>14 cancer. So, yes, overall studies, it's a higher</p> <p>15 estimate, but even if you take into account</p> <p>16 mesothelioma diagnoses and misclassification, you</p> <p>17 still cannot, you know, account that -- we still</p> <p>18 are left with that asbestos causes, you know,</p> <p>19 ovarian cancer.</p> <p>20 Q. The authors of the Reid paper that you</p> <p>21 reviewed and relied on, Exhibit 30, stated, "It</p> <p>22 has been particularly difficult to distinguish</p> <p>23 between peritoneal mesothelioma and ovarian</p> <p>24 serous carcinoma"; is that right?</p> <p>25 MS. PARFITT: Counsel, I'm sorry.</p>	<p>1 carcinogen and lists that and lists the Kamargo</p> <p>2 study as, you know, that asbestos causes ovarian</p> <p>3 cancer.</p> <p>4 Q. Well, the Camargo 2011 study</p> <p>5 acknowledges an inability to account for</p> <p>6 nonoccupational risk factors for ovarian cancer</p> <p>7 other than age; correct?</p> <p>8 A. Again, if I can --</p> <p>9 Q. Take a look. Sure.</p> <p>10 A. These statements -- it's getting to the</p> <p>11 end of the day, so...</p> <p>12 MR. ZELLERS: Deposition Exhibit 31.</p> <p>13 (Article entitled "Occupational</p> <p>14 Exposure to Asbestos and Ovarian Cancer: A</p> <p>15 Meta-analysis" marked Exhibit 31.)</p> <p>16 BY MR. ZELLERS:</p> <p>17 Q. Deposition Exhibit 31 is the Kamargo</p> <p>18 paper; is that right?</p> <p>19 A. Yes.</p> <p>20 Q. This is another paper that you have</p> <p>21 reviewed?</p> <p>22 A. Yes.</p> <p>23 Q. On the first page, the overview --</p> <p>24 A. Yes.</p> <p>25 Q. -- it states, "Objective: A recent</p>

74 (Pages 290 to 293)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 294</p> <p>1 monograph working group of IARC conducted" -- or 2 strike that -- "concluded that there is 3 sufficient evidence for a causal association 4 between exposure to asbestos and ovarian cancer. 5 We performed a meta-analysis to quantitatively 6 evaluate this association." 7 Is that right? 8 A. Yes. 9 Q. If you look at Page 1216, middle 10 column -- are you there? 11 So I'm looking at the second full paragraph 12 above "conclusion." 13 "A further limitation of our analysis was 14 its inability to account for nonoccupational risk 15 factors for ovarian cancer other than age." 16 Do you see that? 17 A. And what do you mean by that? I mean, 18 I didn't -- again, you know, I -- 19 Q. Let me just ask. Is that a 20 limitation -- 21 A. Yeah. 22 Q. -- on the analysis? 23 A. It is a limitation. 24 Q. Hasn't failure to account for 25 misclassification and known risk factors been</p>	<p style="text-align: right;">Page 296</p> <p>1 Q. And you're not making a causal 2 assessment or determination -- 3 A. No. 4 Q. -- on asbestos; is that right? 5 A. Yes. 6 Q. Okay. Under "discussion," Page 1215 -- 7 A. And I'm going to take a break after 8 that whenever you're done. I'm sorry. I need to 9 use the restroom. 10 Q. That's okay. That's fine. That's 11 fine. 12 Do you see under "discussion," this is on 13 the left-hand column, second full paragraph, 14 where they're talking about Edelman? 15 A. Yes. 16 Q. And the authors state, "They concluded, 17 however, that despite the positive and 18 significant association, there was insufficient 19 information to infer that ovarian cancers were 20 caused by occupational exposure to asbestos 21 because of concerns about tumor 22 misclassification, inappropriate comparison 23 populations and the failure to take into account 24 for known risk factors." 25 Is that --</p>
<p style="text-align: right;">Page 295</p> <p>1 cited as a reason why causality cannot be 2 established? 3 MS. PARFITT: Objection. 4 A. We can't rely on IARC. As you said, 5 one said that it is possibly associated and here, 6 when they haven't arrived at a -- I mean, 7 causality is just not about association in one. 8 I mean, they have to look at other biological 9 mechanisms of asbestos and ovarian cancer, you 10 know, what happens in the lab, what happens -- I 11 haven't done that evaluation. 12 So, yes, this is a limitation. But this 13 needs to be taken into account with, you know, 14 the entire body of evidence on asbestos and 15 ovarian cancer. 16 Q. You're looking at and relying on 17 papers, including Reid, Exhibit 30? 18 A. The IARC monographs. 19 Q. And Kamargo, Exhibit 31; is that right? 20 A. Yes. And, again, I'm clarifying that 21 I'm not making a causal determination on IARC, 22 you know. I'm just relying on that, you know, 23 that I'm not -- first of all, I didn't set out to 24 make a causal determination on asbestos and 25 ovarian cancer.</p>	<p style="text-align: right;">Page 297</p> <p>1 A. Again -- 2 Q. You don't disagree with that, do you? 3 A. Yeah. I mean, I don't -- but I don't 4 disagree -- I mean, I'm relying on the IARC 5 assessment and others that, you know, there's a 6 causal association between exposure. Again, I 7 did not review. I would have gotten and reviewed 8 evidence, Edelman and White and others, if I had 9 to do it over again. 10 MR. ZELLERS: Let's take a break. 11 We'll come back and I'll finish up. Thank you. 12 THE VIDEOGRAPHER: Off the record, 13 3:32 p.m. 14 (A recess was taken.) 15 THE VIDEOGRAPHER: Here begins Media 16 No. 5 in today's deposition of Sonal Singh, MD, 17 M.P.H. Back on the record, 3:43 p.m. 18 BY MR. ZELLERS: 19 Q. Dr. Singh, do you agree that exposure 20 to asbestos through perineal cosmetic talc use, 21 assuming the talc contains asbestos fibers, is 22 different than the heavy occupational exposure 23 that's primarily been researched? 24 MS. PARFITT: Objection to form. 25 A. Again, you know, I've not professed to</p>

75 (Pages 294 to 297)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 298</p> <p>1 be an expert in different kinds and routes of 2 asbestos exposure. My -- my sort of -- at least 3 my understanding of my causal question was 4 exposure to talcum powder products and ovarian 5 cancer and whether the constituents can provide 6 evidence in support or refute that association. 7 So, you know, whether asbestos exposure, 8 what different kinds, others will opine on that. 9 Q. Do you know what a cleavage fragment 10 is? 11 A. No. And we can go on on this kind of 12 stuff, and I'll say no. 13 Q. Do you know how it differs from an 14 asbestos fiber? 15 A. No. And I'm not a mineralogist. 16 Q. If I ask you a whole line of questions 17 about different types of asbestos, you're going 18 to defer to other folks? 19 A. Yes. 20 Q. Is there any epidemiology 21 substantiating the theory that fragrance 22 ingredients can cause ovarian cancer? 23 A. I'm not aware of such studies. 24 Q. Is there any epidemiology 25 substantiating the theory that exposure to trace</p>	<p style="text-align: right;">Page 300</p> <p>1 may do testing and provide antioxidants and 2 substances which reduce the risk. So that will 3 have to be weighed. 4 But I am not providing that causal link 5 between the individual constituent and ovarian 6 cancer. 7 Q. And that would be true for any of the 8 individual fragrance chemicals and heavy metals 9 that may be present in the baby powder; correct? 10 MS. PARFITT: Objection. 11 A. I don't have that area of expertise on 12 individual constituents in products. 13 MR. ZELLERS: I have no further 14 questions. Thank you. 15 THE WITNESS: Thank you for your time. 16 (Discussion off the record.) 17 THE WITNESS: Thank you. 18 MR. ZELLERS: Thank you, Doctor. 19 MR. KLATT: Give me a minute to get 20 organized here, Doctor. 21 THE WITNESS: Sure. 22 MR. KLATT: Are we off the record? 23 THE VIDEOGRAPHER: No. 24 MR. LOCKE: Let's go off the record, 25 then.</p>
<p style="text-align: right;">Page 299</p> <p>1 amounts of the heavy metals at issue can cause 2 ovarian cancer? 3 A. I'm not aware of -- you know, again, I 4 didn't do the evaluation, trace the specific 5 constituents of ovarian cancer. I just was 6 trying to understand the constituents, what are 7 they. I just, you know, whether trace -- trace 8 elements cause inflammation and -- you know, but 9 I am not aware of studies that link them directly 10 to ovarian cancer. 11 Q. You're not opining in this case that 12 the fragrance chemicals and heavy metals that may 13 be present in baby powder are causally associated 14 with ovarian cancer. 15 MS. PARFITT: Objection. 16 Q. Correct? 17 MS. PARFITT: Form. 18 A. Yes. I'm not -- again, I'm not opining 19 on the individual constituents of talcum powder 20 products. My opinion is, you know, I look at the 21 exposure and the exposure is talcum powder 22 products, and the presence of constituents, some 23 of which are identified as, you know, Grade 1 24 carcinogens, others as Grade 2, provide evidence 25 in support, and others may -- you know, others</p>	<p style="text-align: right;">Page 301</p> <p>1 THE VIDEOGRAPHER: Off the record, 2 3:47 p.m. 3 (A recess was taken.) 4 THE VIDEOGRAPHER: Back on the record, 5 3:51 p.m. 6 CROSS-EXAMINATION 7 BY MR. KLATT: 8 Q. Good afternoon, Dr. Singh. My name is 9 Mike Klatt, and I represent Imerys Talc America 10 in this case. 11 Have you ever heard of Imerys Talc America 12 before you got involved in this case? 13 A. I have, but, you know, I don't know in 14 what context and what, you know. 15 Q. Do you know what Imerys Talc America 16 does? 17 A. I don't know all the details of the 18 activities or, you know, Imerys. 19 Q. As you know, Mr. Zellers has covered a 20 fair amount of ground already. And so I'm going 21 to skip around just to ask you some follow-up 22 questions. 23 You said earlier today, when you were 24 talking to Mr. Zellers, that you potentially 25 intended to write up something about talc and</p>

76 (Pages 298 to 301)

Sonal Singh, M.D., M.P.H.

Page 302	Page 304
<p>1 ovarian cancer?</p> <p>2 A. Sure.</p> <p>3 Q. And I just wanted to get a better</p> <p>4 understanding of what you were referring to.</p> <p>5 A. Yeah. So after, sort of -- and I'm not</p> <p>6 going to do it until this is all over, because I</p> <p>7 feel that there, you know, I have access to</p> <p>8 documents that are -- that are sort of protected</p> <p>9 by court order.</p> <p>10 But partly what I'm thinking of is -- like</p> <p>11 there have been so many systematic reviews and</p> <p>12 meta-analyses that I was thinking more on the</p> <p>13 kind of like an umbrella review of all these</p> <p>14 reviews that I cite in my report and with, you</p> <p>15 know, some of the rating of reviews.</p> <p>16 And then -- and that's sort of my thinking,</p> <p>17 was that what I would do is synthesize the</p> <p>18 evidence, that -- what I do best is synthesize</p> <p>19 the evidence from other studies in trying to --</p> <p>20 you know, so it would be separate from, like,</p> <p>21 because he asked the question, would you do a</p> <p>22 systematic review? You know, meta-analysis. No.</p> <p>23 Because there have been so many already.</p> <p>24 Q. Have you undertaken that project yet or</p> <p>25 is this just something you're thinking of?</p>	<p>1 subject; correct?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 A. I mean, depending -- I don't know the</p> <p>4 specifics on arrangement, but the question is,</p> <p>5 you know, as long as the disclosure is</p> <p>6 transparent, and as long as, you know, the</p> <p>7 funding mechanisms, what was the reasons, yeah.</p> <p>8 So it's not like they have commissioned this</p> <p>9 review.</p> <p>10 I mean, first of all, I have just thought</p> <p>11 about it. I haven't even done it. I'm not sure</p> <p>12 I'll do it with my time. But you would have to</p> <p>13 disclose that, yeah.</p> <p>14 Q. But my question, and, again, I think</p> <p>15 we'll go quicker if we just focus on the question</p> <p>16 asked and the answer to that question.</p> <p>17 But my question is: It's entirely</p> <p>18 appropriate for companies to contact and retain</p> <p>19 outside experts to advise them and then to</p> <p>20 publish articles in the literature.</p> <p>21 You've done it yourself; correct?</p> <p>22 MS. PARFITT: Objection. Form.</p> <p>23 You may answer.</p> <p>24 A. Yeah. I have actually been, you know,</p> <p>25 I have worked with Eli Lilly on systematic</p>
Page 303	Page 305
<p>1 A. Yeah. I'm thinking about --</p> <p>2 Q. I'm sorry. Let me finish.</p> <p>3 This is something you're just thinking about</p> <p>4 doing in the future?</p> <p>5 A. In the future. But I have</p> <p>6 conceptualized, if I were to do that, that's what</p> <p>7 I would do.</p> <p>8 Q. And if you do do that, you would be</p> <p>9 obliged, would you not, to disclose to whatever</p> <p>10 entity, body, journal, that you submitted this</p> <p>11 work to, that you had been a retained, paid</p> <p>12 expert by plaintiffs in the talc ovarian cancer</p> <p>13 litigation; correct?</p> <p>14 A. Yeah. And that's been my standard</p> <p>15 practice. If you go back and look at my papers,</p> <p>16 you know, my papers on SGLT2 inhibitors, I've</p> <p>17 disclosed that I was funded by, you know,</p> <p>18 Janssen. You know, a paper on statins that I</p> <p>19 wrote last year, I was a paid expert.</p> <p>20 So it's just standard practice for us to do</p> <p>21 that.</p> <p>22 Q. And now that you bring that up, there's</p> <p>23 absolutely nothing wrong with a company like</p> <p>24 Janssen or any other company hiring an outside</p> <p>25 expert to advise them and to publish on a certain</p>	<p>1 reviews of diabetes medications.</p> <p>2 And -- to a point of clarification, I was</p> <p>3 not paid by them, but I was an expert on that,</p> <p>4 which is sort of a strange arrangement; right?</p> <p>5 You don't get paid, but you're still working for.</p> <p>6 But, you know, that's my area of expertise. So,</p> <p>7 yeah, companies hire and that's how science</p> <p>8 works.</p> <p>9 Q. And, for example, if you contacted your</p> <p>10 institution, the University of Massachusetts</p> <p>11 Medical Center, about this ovarian cancer risk</p> <p>12 factors web pages that they have, and you had any</p> <p>13 input on that, you would disclose that you're a</p> <p>14 paid plaintiffs' expert in talc ovarian cancer</p> <p>15 litigation; correct?</p> <p>16 A. Well, so to do that, I don't know where</p> <p>17 that web page came from. I didn't contact them.</p> <p>18 Yes, but, you know, I'm not trying. So I don't</p> <p>19 know if you're thinking about like the up-to-date</p> <p>20 example. I didn't want to change. I was just</p> <p>21 providing them references.</p> <p>22 But, yes, if I was trying to make changes to</p> <p>23 a document that that's on, you know, I'm trying</p> <p>24 to write something up, then if you look at my</p> <p>25 letter, it's just a contact point. If I'm trying</p>

77 (Pages 302 to 305)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 306</p> <p>1 to write something up and say, you know what, it 2 increases the risk of cancer, decreases, then, 3 yes, I'd disclose that. 4 Q. And just to go over that point -- 5 A. Yeah. 6 Q. -- when you wrote the editor about Up 7 To Date, suggesting that they update their 8 website regarding talc and ovarian cancer, you 9 did not disclose that, at that time, you were a 10 paid retained plaintiffs' expert; is that 11 correct? 12 A. Yes. But I asked them to clarify that 13 this was just to update the references, if you 14 look at them. 15 Q. Now, going back to what this 16 conceptualizing you're having of potentially one 17 day publishing something about talc and ovarian 18 cancer, okay, that's what I'm asking about. 19 Are we on the same page? 20 A. Yeah. 21 Q. Wait. I just want you to know what I'm 22 asking about. Okay? 23 A. Okay. 24 Q. Now, you would agree with me, you 25 mentioned this morning there were confidentiality</p>	<p style="text-align: right;">Page 308</p> <p>1 on time and other considerations. 2 Q. And, again, focusing my question very 3 specifically, the case-control studies on talc 4 and ovarian cancer, the cohort studies on talc 5 and ovarian cancer, the meta-analysis on talc and 6 ovarian cancer that you've reviewed in this case 7 and that you've cited in your expert report in 8 this case, none of those are bound by a 9 protective order that would prevent you from 10 reading them, analyzing or publishing on them; 11 correct? 12 A. None of them are restrictive. 13 Everybody has access. I had, too. 14 Q. Okay. You talked briefly about the 15 Centers for Disease Control this morning. 16 A. Yes. 17 Q. Have you ever worked with them? 18 A. No. I've applied for grants with them, 19 and I wasn't funded, but I'm aware of them. 20 Yeah. 21 Q. Have you ever conducted a 22 population-based, case-control study yourself? 23 A. Yes. 24 Q. As principal investigator? 25 A. Yes.</p>
<p style="text-align: right;">Page 307</p> <p>1 orders in place. But you'd admit that all of the 2 case-control epidemiology and all the cohort 3 epidemiology and all the meta-analysis that 4 you've reviewed are all out there in the 5 published literature; correct? 6 A. The majority of them, studies are, 7 yeah. I mean, Taher is not out in the 8 literature. It's still in somewhere. 9 Q. There's no -- there's no meta-analysis 10 cohort study or case-control study you're aware 11 of that is controlled or -- by some sort of 12 protective order that would limit you citing it 13 in some sort of review; correct? 14 MS. PARFITT: Objection. Form. 15 A. So, first of all, yeah. As you know, 16 Taher is sort of not published. So I don't know 17 how much of the data you can use. 18 But in terms of protective, I don't know all 19 the rules about what you can use and not use. 20 So, I mean, it's just more my unfamiliarity with 21 the process, but nothing -- if you're asking the 22 question, is something preventing me from doing 23 that? No. 24 Q. Okay. 25 A. Can I go ahead and do it? It depends</p>	<p style="text-align: right;">Page 309</p> <p>1 Q. Have you done so for cohort studies? 2 A. No. Not a cohort study. 3 Q. Could we go to Langseth, whatever 4 exhibit number that is? 5 MR. TISI: I've got it. It's 6 Exhibit 21. I've got a copy of it here. 7 MS. PARFITT: Yeah. I know. 8 MR. TISI: Do you mind me giving our 9 copy? 10 MR. KLATT: No. Not at all. 11 BY MR. KLATT: 12 Q. I just have a few more questions. You 13 were already asked about Langseth, but I just 14 have a few more questions for you. 15 At the time the Langseth study was 16 published, you would agree with me, Doctor -- 17 MS. PARFITT: I'm sorry, Mike. I 18 didn't hear your question. I'm sorry. 19 Q. Yeah. Let me start over. 20 MS. PARFITT: I appreciate that. 21 Q. I'm talking about the Langseth paper 22 that we've marked as Exhibit 21; is that correct? 23 It was published in 2008 by the IARC working 24 group members; correct? 25 A. Yes. Some of the members. I suspect</p>

78 (Pages 306 to 309)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 310</p> <p>1 the group is much larger than these folks. 2 Q. Well, these happened to be 3 epidemiologists on the IARC working group; 4 correct? 5 A. I don't know all their qualifications. 6 Q. Do you know any of those people 7 personally who are listed as authors on 8 Exhibit 21? 9 A. No. 10 Q. I'll represent to you that they're 11 epidemiologists. You would agree with me, that 12 if you turn over to Page 2, they listed 14 13 population-based, case-control studies up at the 14 top, and then they had six more hospital-based, 15 case-control studies; correct? 16 A. Yes. 17 Q. At this time, there was one cohort 18 study all on the subject of talc and ovarian 19 cancer at the time; correct? 20 A. Yes. 21 Q. You would admit that the 22 population-based, case-control studies did not, 23 consistently across the board, show a 24 statistically significant increased risk 25 according to the table in Exhibit 21, the</p>	<p style="text-align: right;">Page 312</p> <p>1 it, in and of itself, was not statistically 2 significant; correct? 3 MS. PARFITT: Object to the form. 4 A. Yes. But it was consistent with the 5 overall estimates. 6 Q. And the cohort study didn't show an 7 increased risk. And the two cohort studies since 8 Langseth have not shown an increased risk of 9 ovarian cancer in talc users; correct? 10 MS. PARFITT: Objection. Misstates the 11 evidence. 12 A. I see that, A, two of the cohort 13 studies have showed an excess risk, which is not 14 statistically significant. One study has showed 15 statistically significant increased risk, and the 16 third studies have showed, you know, risk 17 estimates lower than one, but their upper bounds 18 are entirely consistent with what we see here and 19 subsequent to this. 20 Q. So the population-based, case-control 21 studies collectively show an increased risk. But 22 they're inconsistent; correct? 23 A. No. 24 MS. PARFITT: Objection. 25 A. I mean, let's go to Penninkilampi. I</p>
<p style="text-align: right;">Page 311</p> <p>1 Langseth paper. Some were statistically 2 significant, and others were not; correct? 3 A. Yeah. But I mean, I don't view 4 statistical significance as -- 5 Q. Doctor -- 6 A. -- areas of consistency. 7 Q. Doctor, I just asked whether they were 8 statistically significant. 9 A. No. All of them were not statistically 10 significant. 11 Q. And we're talking about the 14 12 population-based, case-control studies in the 13 Langseth paper as of 2008; correct? 14 A. Yes. But I view them as consistent. 15 Q. And the hospital-based, case-control 16 studies that are on Page 2 of the Langseth paper, 17 the six -- the hospital-based, case-control 18 studies, none of them were statistically 19 significant; correct? 20 A. Yes. But I still view them as 21 consistent with the overall findings. 22 Q. And, in fact, when they did a 23 meta-analysis of the hospital-based, case-control 24 studies, that meta-analysis that added all 25 hospital-based, case-control studies together,</p>	<p style="text-align: right;">Page 313</p> <p>1 mean, they clearly opine that -- 2 Q. I'm asking you about Langseth. 3 A. Why are we looking at 2008 when we are 4 in 2019? 5 Q. Because I'm asking the questions. 6 A. Okay. 7 Q. You would agree with me that, of the 8 three study designs, cohort studies, 9 hospital-based, case-control studies and 10 population-based, case-control studies, only one 11 of those three study designs shows an overall 12 increased risk of ovarian cancer in talc users; 13 correct? 14 MS. PARFITT: Objection. Misstates the 15 evidence. 16 A. No. I mean, at least at that time, you 17 had one, you know, cohort study. I believe that 18 all of them show an excess risk, which is 19 consistent. Two of those study designs that 20 you're talking about, the hospital based and the 21 cohort, did not show a statistically significant, 22 which I still believe a significant excess that's 23 consistent. 24 Q. And you said earlier that you consider 25 and use the Bradford Hill considerations;</p>

79 (Pages 310 to 313)

Sonal Singh, M.D., M.P.H.

Page 314	Page 316
<p>1 correct?</p> <p>2 A. Sorry. Just give me a second.</p> <p>3 Yeah. The Bradford Hill overviews as one.</p> <p>4 Q. And you know, Sir Bradford Hill himself</p> <p>5 said that, in evaluating consistency, you have to</p> <p>6 look at consistency across different study</p> <p>7 designs; correct?</p> <p>8 A. Yeah. And times and places and other</p> <p>9 things.</p> <p>10 Q. But I'm correct that Dr. Bradford or</p> <p>11 Sir Bradford Hill said that you have to look at</p> <p>12 consistency across different study designs;</p> <p>13 correct?</p> <p>14 A. That's what I state in my testimony, as</p> <p>15 well in my report cites that specific phrase,</p> <p>16 consistency across study designs, times and</p> <p>17 places. So I am not -- you know, I am, in fact,</p> <p>18 quoting him when I cite that.</p> <p>19 Q. You said, on Page 15 of your report,</p> <p>20 that, "Talc-based body powders are used</p> <p>21 habitually for months or years rather than just a</p> <p>22 single application"; correct?</p> <p>23 A. Where is that?</p> <p>24 MS. PARFITT: Page 15.</p> <p>25 Q. Page 15.</p>	<p>1 things you had reviewed was an Exhibit 47 to</p> <p>2 Imerys employee Julie Pier's deposition.</p> <p>3 Do you recall that?</p> <p>4 A. Yes. If you can show me that.</p> <p>5 MR. KLATT: Sure.</p> <p>6 THE WITNESS: Thank you.</p> <p>7 MR. KLATT: I'm sorry. I'm sorry.</p> <p>8 THE WITNESS: Exhibit --</p> <p>9 MR. KLATT: Yeah. Let's mark it as the</p> <p>10 next exhibit. And that would be 33; is that</p> <p>11 correct?</p> <p>12 MS. PARFITT: 32.</p> <p>13 COURT REPORTER: Here is 32 that you</p> <p>14 haven't used.</p> <p>15 MR. KLATT: Let me do this. Yes. That</p> <p>16 will be 32.</p> <p>17 (Chart marked Exhibit 32.)</p> <p>18 MR. TISI: The chart?</p> <p>19 MR. KLATT: Yes.</p> <p>20 BY MR. KLATT:</p> <p>21 Q. I'm going to show you what's been</p> <p>22 marked as Exhibit 32 to this deposition. But for</p> <p>23 future record references, it also has, in the</p> <p>24 upper right-hand corner, a photocopy, Exhibit</p> <p>25 No. 47; correct?</p>
Page 315	Page 317
<p>1 A. Where is that? I'm sorry. Which part</p> <p>2 of it? 15. I know I have 15. Is it the last</p> <p>3 paragraph or --</p> <p>4 MS. PARFITT: Yeah.</p> <p>5 A. I don't see -- okay. Yeah.</p> <p>6 Q. And what did counsel just point out to</p> <p>7 you?</p> <p>8 A. Yeah. I saw that. That's correct.</p> <p>9 Q. And can you read what you said there?</p> <p>10 A. "Talcum powder products are used</p> <p>11 habitually for months or years rather than a</p> <p>12 single application or single body."</p> <p>13 Q. Would you flip over to Page 54 of your</p> <p>14 report, please. In Paragraph 6 there, you say,</p> <p>15 in the third sentence that, "Recall bias is less</p> <p>16 likely to occur for chronic daily exposures such</p> <p>17 as talc"; correct?</p> <p>18 A. That's, you know, that's my</p> <p>19 understanding.</p> <p>20 Q. Talc, in your estimation, is a chronic</p> <p>21 daily exposure; correct?</p> <p>22 A. That's how -- that's my understanding</p> <p>23 that, you know, women are using it.</p> <p>24 Q. You, in response to Mr. Zellers'</p> <p>25 questions earlier today, said that one of the</p>	<p>1 A. Yeah.</p> <p>2 Q. Exhibit 47 was the exhibit number at</p> <p>3 Ms. Pier's deposition, and Exhibit 32 is the</p> <p>4 exhibit number we're marking this today; correct?</p> <p>5 A. Okay.</p> <p>6 Q. Would you agree with me that you don't</p> <p>7 have the expertise or knowledge to tell me that</p> <p>8 any of the samples on Exhibit 32 to today's</p> <p>9 deposition show asbestos in Imerys talc that</p> <p>10 ended up in Johnson & Johnson's baby powder, do</p> <p>11 you?</p> <p>12 MS. PARFITT: Objection.</p> <p>13 A. I mean, it says, you know,</p> <p>14 anthophyllite -- yeah. I mean, I don't have</p> <p>15 asbestos expertise here.</p> <p>16 Q. Let's -- you understand that most of</p> <p>17 these samples, the source of these samples isn't</p> <p>18 even identified?</p> <p>19 MS. PARFITT: Objection. Form.</p> <p>20 A. Yeah. But -- but, actually, can I</p> <p>21 answer that?</p> <p>22 So, for example, separate from the source, I</p> <p>23 mean, I understand that it says chrysotile</p> <p>24 asbestos for the first one. It says serpentine.</p> <p>25 It says chrysotile.</p>

80 (Pages 314 to 317)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 318</p> <p>1 Q. And where on that first one, and we're 2 looking at the very first line across the top of 3 Exhibit 32 -- 4 A. Sure. 5 Q. -- where in the world does it say that 6 that was a sample of talc that ended up in 7 Johnson & Johnson's talc-based body powder 8 products? 9 A. Well, my understanding, and I can share 10 that, that this was -- this was that -- that 11 testimony was given that this was a testing of 12 mines that was being mined by Imerys or -- I 13 mean, that contained asbestos. 14 Whether it ended up in baby powder was not 15 the question. The question was: Does talc 16 contain asbestos? 17 Q. Did plaintiffs' counsel ask you to make 18 that assumption? 19 A. No. No. 20 Q. Okay. Well, then, I'm confused, 21 because Imerys and its predecessors have tested 22 literally thousands of samples of talc from 23 competitors, from their own mines, from mines 24 that are never used for cosmetic purposes or baby 25 powder, so how can you tell me that the first</p>	<p style="text-align: right;">Page 320</p> <p>1 on your report where I think you refer to it. 2 A. I know it's in the biologic 3 plausibility section somewhere. 4 Q. Look on page -- I believe it's Page 61 5 of your report. 6 A. Yes. 7 Q. No. I'm sorry. It's Page 59 of your 8 report. And it's the third paragraph down. 9 A. Mm-hmm. 10 Q. And you say, in the middle of the third 11 paragraph, "In studies of human mesothelial 12 cells, both nonfibrous talc and asbestos have 13 shown evidence of genotoxicity," and the 14 reference is 109, and my understanding is 15 reference 109 is the Shukla paper published in 16 2009; correct? 17 A. Where are you referring? I'm sorry. 18 In Page 59? 19 Q. Page 59 of your report, third 20 paragraph. 21 A. Yeah. 22 Q. Second sentence. 23 A. Yeah. It says here, should be Shukla. 24 Yeah. 25 Q. Did you read the Shukla paper?</p>
<p style="text-align: right;">Page 319</p> <p>1 sample on Exhibit 32 has anything to do with baby 2 powder? 3 A. Well, I'm not telling you anything to 4 do with baby powder. My question is that, you 5 know -- that what constitutes talcum powder 6 products. And based on this and, you know, talc 7 is mined together with all these other particles, 8 I wanted to know, what are the results. 9 And at least based on my understanding of 10 these results, again, I'm not a mineralogist, 11 they can argue whether the amount of asbestos is 12 significant or, you know, these fibers, chromium, 13 cobalt, nickel are significant. My understanding 14 is that these particles are present. 15 Q. Can you tell me, based on your own 16 knowledge or expertise, that any sample listed on 17 Exhibit 32 was from talc that ended up in 18 Johnson & Johnson's baby powder or Shower to 19 Shower talcum powder products? 20 A. No. I cannot. 21 Q. Okay. You referred in your report to 22 the Shukla paper; correct? 23 Do you recall that? 24 A. Show it to me. It's been a while. 25 Q. Sure. I'm going to give you the page</p>	<p style="text-align: right;">Page 321</p> <p>1 A. I read -- you know, I didn't read it 2 line by line. But, yes, I read it. 3 Q. You know the Shukla paper has nothing 4 to do with genotoxicity; correct? 5 A. I mean, we can look at it. 6 Q. Sure. It's about gene expression; 7 correct? 8 MS. PARFITT: Let's take a moment, 9 Mr. Klatt, see if he can look at the study here. 10 Q. Do you have it handy, Doctor? 11 A. No. I don't. 12 MS. PARFITT: What is he referencing, 13 109? 14 A. Shukla. I mean, it might be in my 15 files. 16 Q. Well, I apologize. I thought I brought 17 an extra copy, but I don't think I have one with 18 me. 19 (Discussion off the record.) 20 Q. Well, just look at the title. The 21 title is "Alterations in Gene Expression in Human 22 Mesothelial Cells Correlates with Neural 23 Pathogenicity." Correct? 24 A. Yes. I remember that title and 25 abstract. Yes.</p>

81 (Pages 318 to 321)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 322</p> <p>1 Q. Gene expression is something that 2 occurs in our bodies every day; correct? 3 Trillions of times every day; correct? 4 A. Yeah. Yeah. 5 Q. And changes in gene expression, in and 6 of themselves, don't establish genotoxicity; 7 correct? 8 A. Yeah. And I'm not -- again, this, you 9 know, in the section on biologic plausibility, 10 I'm not making this argument that talc is an 11 established mutagen and, you know, whether it's a 12 genotoxic or nongenotoxic carcinogen. I'm just 13 citing the studies. 14 So, I mean, again, I don't have that 15 expertise, and, you know, does it provide 16 evidence for or against biological plausibility 17 mechanisms. 18 Q. Okay. But you don't have the expertise 19 to judge that; correct? 20 MS. PARFITT: Objection. 21 A. No. I have expertise to judge whether 22 these studies suggest evidence of, you know, 23 changes and we should probably just look at it -- 24 give me a second. 25 Q. Sure.</p>	<p style="text-align: right;">Page 324</p> <p>1 common in these lawsuits, wasn't associated with 2 pelvic inflammatory disease; correct? 3 A. Again, I don't remember the papers. 4 Sorry. 5 Q. All right. Well, it's on Page 58 of 6 your report and it's reference 122. 7 A. Which page of my report? 8 Q. Page 58 of your report that cites 9 reference 122. 10 MS. PARFITT: Here's the article. 11 Q. Do you see the reference? 12 A. Yeah. Yeah. 13 Q. Do you see the reference in your 14 report? 15 A. Sure. 16 Q. And reference 122 is to the Rasmussin 17 paper from 2017 on pelvic inflammatory disease 18 and ovarian cancer; correct? 19 A. Yeah. And my citation is correct. I 20 mean, about borderline ovarian. I don't misquote 21 the study. 22 Q. I didn't say you misquoted it, but the 23 study does stand for the proposition that the 24 most common form of ovarian cancer, both in the 25 U.S. and in these lawsuits, high-grade serous</p>
<p style="text-align: right;">Page 323</p> <p>1 MS. PARFITT: Give me a second. 2 Q. My specific question is you cited 3 Shukla for evidence of genotoxicity, but it says 4 nothing whatsoever about genotoxicity, does it? 5 A. We have to look at the paper before we 6 say that. 7 It's 109. Yeah. Let me look in my binder. 8 I think I have all the studies. 9 Q. Doctor, I'll represent to you, in the 10 interest of time, I've searched the Shukla paper, 11 and the word "genotoxicity" or "mutagenicity" is 12 never mentioned in the paper. 13 A. I -- I don't want to deny that. It may 14 be. I just feel that I wouldn't have used that 15 term had I not seen it there. 16 Q. In the interest of time, rather than 17 wasting time, let's move on. 18 You'd agree with me that pelvic inflammatory 19 disease is chronic inflammation of the ovaries, 20 fallopian tubes and peritoneum; correct? 21 A. Yes. 22 Q. And, yet, you cited the Rasmussin 23 paper, and the Rasmussin paper says that 24 high-grade serous ovarian cancer, which is the 25 most common form of ovarian cancer and the most</p>	<p style="text-align: right;">Page 325</p> <p>1 ovarian cancer is not associated with pelvic 2 inflammatory disease; correct? 3 A. Where does it show that? I didn't -- 4 Q. Can you go to the "Discussion" section. 5 A. Again, you know, my view of 6 inflammation was, you know, I was looking for 7 evidence for or against. And, you know, I wasn't 8 disaggregating by ovarian cancer subtype, but I'm 9 happy to look at it. 10 MS. PARFITT: Mark, do you have a page 11 in the article? 12 MR. KLATT: I don't know if we have the 13 same pagination, but my page is -- 14 MS. PARFITT: Here. I got it. It's 29 15 of 33. 16 MR. KLATT: I believe that's right. 17 MS. PARFITT: Okay. 18 MR. KLATT: It's the "Discussion" 19 section. 20 MS. PARFITT: Yes. 21 BY MR. KLATT: 22 Q. And if you look at the "Discussion" 23 section, Doctor -- 24 A. Yes. 25 Q. -- it starts -- the very first</p>

82 (Pages 322 to 325)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 326</p> <p>1 paragraph starts with "to our knowledge"; 2 correct? 3 A. Yeah. 4 Q. Okay. Go down one, two, three, to the 5 fourth paragraph starting with "in the present 6 study"? 7 A. Sure. 8 Q. And in that paragraph, tell me if I 9 correctly quote this sentence. 10 "Conversely, no convincing associations 11 between PID," which is pelvic inflammatory 12 disease, "and the risk of high-grade serous, 13 mucinous, clear cell or endometrioid ovarian 14 cancer were noted in the main analysis." 15 Did I read that correctly? 16 A. Yes. 17 Q. And then if you go down to the very 18 next paragraph that begins with "nevertheless." 19 A. Yeah. I see that, but I -- 20 Q. Wait. Wait. 21 A. No. No. I need to answer your 22 question. 23 Q. I'm just asking you, first of all, if 24 I'm reading this correctly. 25 A. Sure.</p>	<p style="text-align: right;">Page 328</p> <p>1 Q. So the paper you cited, the 2017 2 Rasmussen paper on pelvic inflammatory disease 3 and ovarian cancer is inconsistent with the 4 theory that chronic inflammation causes 5 high-grade serous ovarian cancer; correct? 6 A. Let's go to Paragraph 3. 7 Q. Could you just answer my question? 8 A. Yeah. I'm trying to. 9 MS. PARFITT: Objection. 10 A. No. It isn't inconsistent. 11 Because if you look at Paragraph 3, they 12 state, "Furthermore, we observed similarly 13 increased risks of serous and mucinous borderline 14 tumors associated with PID status. Furthermore," 15 and they also state, "Sensitivity analysis 16 revealed statistically significant increased risk 17 of low-grade serous and endometrial when using 18 data from the North American..." 19 So I don't think your -- and concerning the 20 histologic subtypes, indications of risk of 21 low-grade serous cancers were noted in the main 22 analysis. I wasn't disaggregating. But this 23 entirely consistent with what I quote here, that 24 you increase serous type and you increase 25 low-grade type and you increase histologic.</p>
<p style="text-align: right;">Page 327</p> <p>1 Q. In the next paragraph that begins with 2 "nevertheless," do you see what I'm talking 3 about? 4 A. Yeah. 5 Q. There's a sentence that says, 6 midparagraph, "In contrast, no associations 7 between pelvic inflammatory disease and 8 high-grade serous ovarian cancer were observed"; 9 correct? 10 Did I read that correctly? 11 A. Our results suggest -- I'm sorry. 12 Where -- 13 Q. In contrast. Do you see the sentence 14 that says "in contrast"? 15 A. Where was it? Is it in the same 16 paragraph? 17 Q. It's the paragraph starting with 18 "nevertheless, our results." 19 A. Yeah. But it says differentially. 20 Where does it say in contrast? In contrast. 21 Yeah. 22 Q. Okay. Can you read that sentence? 23 A. "In contrast, no associations between 24 PID and high-grade serous ovarian cancers were 25 observed."</p>	<p style="text-align: right;">Page 329</p> <p>1 You are trying to disaggregate this into a 2 high-grade serous. I don't know what's in the 3 lawsuit. I'm really not opining on -- 4 Q. I'm not trying to disaggregate 5 anything, Doctor. I'm saying Rasmussen, the 6 study that you -- 7 A. Yeah. 8 Q. The study that you chose to cite -- 9 A. Sure. 10 Q. -- in your article indicates there's no 11 association between pelvic inflammatory disease 12 that is a chronic disease of the female 13 reproductive tract and high-grade serous ovarian 14 cancer; correct? 15 A. And the same -- 16 MS. PARFITT: Objection is. 17 A. -- study showed an increase risk of -- 18 Q. Is that correct? 19 MS. PARFITT: Let him finish, please. 20 A. -- between PID and serous ovarian 21 cancer. So it sort of is -- is consistent with 22 my hypothesis of inflammation and ovarian cancer. 23 I was not disaggregating histologic 24 subtypes. 25 Q. My question is not about low-grade</p>

83 (Pages 326 to 329)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 330</p> <p>1 serous that doesn't occur very often. My 2 question is about high-grade serous ovarian 3 cancer in the evidence from the Rasmussen paper, 4 and they say clearly twice, that pelvic 5 inflammatory disease is not associated with 6 high-grade serous ovarian cancer; is that 7 correct? 8 A. That's what they state in the study. 9 But they also state clearly that serous ovarian 10 cancer is associated with PID status. So that's 11 also clearly stated. 12 Q. And if, indeed, as they state, there is 13 no association between high-grade serous ovarian 14 cancer and pelvic inflammatory disease, that's 15 inconsistent with the theory that inflammation 16 causes high-grade serous ovarian cancer; correct? 17 MS. PARFITT: Objection. Form. 18 A. So, again, you know, first of all, you 19 know, I -- other people will opine to the 20 biologic sort of arguments about inflammation and 21 ovarian cancer. And I did not disaggregate 22 specific, and I don't think this study is 23 inconsistent with what I state here. And I note 24 that borderline ovarian cancer. 25 So this is entirely consistent with the</p>	<p style="text-align: right;">Page 332</p> <p>1 cancer. So if we disaggregate it, then we have 2 to disaggregate the way they have defined it. 3 Q. And when we disaggregate, you come to 4 the conclusion that inflammation is associated 5 with borderline ovarian cancer. But, in 6 fairness, you have to come to the conclusion that 7 inflammation is not associated with high-grade 8 serous ovarian cancer? 9 MS. PARFITT: Objection. 10 Q. If you're being objective; correct? 11 MS. PARFITT: Objection. Misstates 12 testimony. 13 A. I am being objective. I am providing 14 that they conclude, not I conclude, that, you 15 know, inflammation is PID, you know, it's just 16 one aspect of inflammation. PID is associated 17 with serous ovarian cancer. And, yes, it is not 18 associated with high-grade epithelial ovarian 19 cancer. 20 Q. You talked with Mr. Zellers earlier 21 today about recall bias, correct, and how it can 22 operate in case-control studies? 23 A. I don't recall the details. 24 Q. But you recall the subject was 25 discussed --</p>
<p style="text-align: right;">Page 331</p> <p>1 inflammation hypothesis. And I just, you know -- 2 Q. In your report, you cited what you 3 thought was consistent with the inflammation 4 theory, but you didn't cite the evidence from 5 Rasmussen that was inconsistent with the 6 inflammation theory; correct? 7 MS. PARFITT: Objection. 8 A. No. I was not disaggregating to the 9 level of each histologic subtype. 10 Q. Well, didn't -- in your report, on 11 Page 58 -- 12 A. Yeah. 13 Q. -- didn't you make the specific point 14 that Rasmussen said inflammation was associated 15 with low-grade cancer? 16 A. No. It just said increased risk of 17 borderline ovarian cancer. 18 Q. Okay. Borderline. That's a specific 19 type of ovarian cancer. 20 A. Sure. 21 Q. So you did disaggregate in your report, 22 didn't you? 23 A. Sure. Yeah, but I mean, if you look at 24 the study, and we want to disaggregate it, the 25 study still shows a risk of serous ovarian</p>	<p style="text-align: right;">Page 333</p> <p>1 A. Yes. 2 Q. -- correct? 3 A. Yes. And I'm going to take a break in 4 a minute. 5 Q. Sure. Do you know if, in any of these 6 case-control studies -- well, let me back up. 7 A case-control study takes a group of cases 8 which are women with -- who already have ovarian 9 cancer, and interviews them; correct? 10 A. Yes. 11 Q. And then it takes a group of controls 12 and, in the context of a population-based 13 case-control study, those controls are healthy 14 women out in the community; correct? 15 A. Yeah. In the context of -- yes. 16 Q. Do you know if any of these 17 case-control studies, when they were interviewing 18 the case women who had ovarian cancer, asked them 19 when they entered the study, "Do you have any 20 preconceived notions about what might have caused 21 your ovarian cancer?" 22 A. I didn't review that specific question. 23 Q. Wouldn't that be an important question 24 to ask? Because if a woman already has a 25 preconceived notion from research or word of</p>

84 (Pages 330 to 333)

Sonal Singh, M.D., M.P.H.

Page 334	Page 336
<p>1 mouth what might cause her ovarian cancer, that 2 may bias the results; correct? 3 MS. PARFITT: Objection. 4 A. There's lots of different questions you 5 could ask them. You know, I would have, if I had 6 designed a study, I would have asked many other 7 questions. 8 Q. And would you have asked that one, "Do 9 you have preconceived notions as to what might 10 have caused your ovarian cancer," before you 11 entered the study? 12 A. I don't -- you know, I don't -- I 13 haven't thought about that conceptual or new 14 study. I'm not sure that is that important 15 question to ask. 16 Q. It wouldn't be an important question to 17 ask women entering a study, a case-control 18 study -- 19 A. Sure. 20 Q. -- women who have ovarian cancer, "Do 21 you have a preconceived notion about what caused 22 your ovarian cancer?" 23 A. You know, I've done -- designed 24 case-control studies of etiology cases and 25 outcomes. I've never asked the participants</p>	<p>1 eliminate for the possibility of recall bias. 2 Others may design it differently. 3 THE WITNESS: I'm going to take a 4 break. 5 MR. KLATT: Sure. 6 THE VIDEOGRAPHER: Off the record, 7 4:30 p.m. 8 (A recess was taken.) 9 THE VIDEOGRAPHER: Back on the record. 10 4:36 p.m. 11 BY MR. KLATT: 12 Q. Doctor, are you board certified in 13 epidemiology? 14 A. No. 15 Q. Are you a member of the American 16 College of Epidemiology? 17 A. No. 18 Q. Are you a member of the Society for 19 Epidemiologic Research? 20 A. No. 21 MR. KLATT: All right. I'm going to 22 turn it over to Mr. Locke. Thank you for your 23 time. 24 THE WITNESS: Thank you. 25 THE VIDEOGRAPHER: Off the record,</p>
Page 335	Page 337
<p>1 about what is your preconceived notions about 2 certain outcomes. 3 I mean, I'm just trying to understand, why 4 would you ask that, because -- 5 Q. Because you're trying to eliminate bias 6 from the study; correct? 7 A. Yeah. 8 Q. And if you enter the study with a 9 preconceived notion what caused your ovarian 10 cancer, you already have a bias; correct? 11 MS. PARFITT: Objection. 12 A. But I mean, aren't you introducing bias 13 by asking these questions? "Okay, what is your 14 preconceived notion?" I'm trying to understand 15 this question. I just don't think that -- 16 Q. So it's your testimony that, typically, 17 in these case-control studies, the women who have 18 the disease of interest, in this case, ovarian 19 cancer, are not asked, when they enter the study, 20 if they already have preconceived notions about 21 what caused their ovarian cancer? 22 A. Yeah. In my opinion, if I were to 23 design a next case and control study, I'm not 24 sure that would be a question. I would have to 25 think about why I would ask that question to</p>	<p>1 4:36 p.m. 2 (A recess was taken.) 3 THE VIDEOGRAPHER: Back on the record, 4 4:38 p.m. 5 CROSS-EXAMINATION 6 BY MR. LOCKE: 7 Q. Doctor, my name is Tom Locke. I 8 represent the Personal Care Products Council. 9 Prior to this litigation, had you ever heard 10 of the Personal Care Products Council? 11 A. No. 12 Q. Sometimes it goes by the name of PCPC. 13 Have you ever heard of that? 14 A. No. 15 Q. Previously, the Personal Care Products 16 Council was known as the Cosmetics, Toiletries 17 and Fragrances Association. 18 Prior to this litigation, had you heard of 19 that entity? 20 A. No. 21 Q. And sometimes that's abbreviated, CTFA. 22 Had you heard of that entity? 23 A. No. 24 Q. Have you, prior to this talc 25 multi-district litigation that we're here on</p>

85 (Pages 334 to 337)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 338</p> <p>1 today, have you worked with any of the 2 plaintiffs' lawyers with whom you've had dealings 3 in talc? 4 A. Yeah. I mentioned that I worked with 5 Attorney Restaino in the atorvastatin that is 6 listed on my testimony. 7 Q. Anyone else? 8 A. No. 9 Q. Have you worked with the Beasley Allen 10 firm? 11 A. They're not -- I don't know if they're 12 part of this talc. The name sounds familiar. I 13 just don't know the name of the lawyers. 14 Q. Right. They're part of the lead 15 plaintiffs' counsel in this multi-district 16 litigation. 17 A. But I just have had correspondence with 18 these lawyers. So, you know, I may have had -- 19 received, I don't know, documents or -- I don't 20 know if invoices or something that may have. But 21 I don't -- I haven't, like, corresponded with the 22 lawyers of Beasley Allen. 23 Q. What I'm asking about is whether you 24 had worked with the Beasley Allen firm prior to 25 this talc litigation.</p>	<p style="text-align: right;">Page 340</p> <p>1 A. I remember asking about this specific 2 trial. I have not asked for other trial 3 testimony, I don't think. 4 Q. When you say "this specific trial," 5 what do you mean? 6 A. When I said -- you know, I said, in 7 this litigation, have epidemiology testimony been 8 submitted. And I have asked for it. Yeah. 9 Q. Would it be relevant to you that other 10 scientists have analyzed the very same issues 11 that are encompassed in your report and testified 12 on behalf of defendants in other talc litigation? 13 A. Yeah. And as you see that, I have not 14 even had a chance to review the expert report 15 of -- on behalf of the plaintiffs that were 16 submitted in the list. 17 So, yes, it will be nice to do that. A, how 18 much time; and, B, you know, I think it would 19 probably be more prudent to wait for the 20 epidemiologists on this particular case. 21 But, you know, as you said, I haven't even 22 had the chance to review the plaintiffs' experts. 23 And, you know, I asked for defendants' expert, 24 you know, report. 25 Q. You asked for defendants' expert</p>
<p style="text-align: right;">Page 339</p> <p>1 A. I have listed the -- you know, 2 listed the cases I worked for. I don't remember 3 the name of the counsels and, you know, who were 4 on the firms. So if it ended up that they were 5 involved in Viagra or something else, that's just 6 a recollection issue. 7 Q. Okay. Mr. Klatt asked you about 8 materials authored by defense experts. Let me 9 elaborate on that a little bit. 10 Are you aware that various defense experts 11 authored reports in connection with prior talc 12 litigation? 13 A. No. I'm not aware. 14 Q. Are you aware that there were prior 15 talc trials? 16 A. I mean, I have seen it in the news 17 that -- I don't know if they're in state court, 18 federal court, you know. I see it in the news. 19 Q. Did you -- 20 A. California or something. Yeah. I'm 21 not aware. 22 Q. Did you ask for the testimony of any 23 defense experts who may have testified regarding 24 epidemiology in connection with that other talc 25 litigation trials?</p>	<p style="text-align: right;">Page 341</p> <p>1 reports in this litigation. 2 A. Sure. 3 Q. But you didn't ask for defendants' 4 expert reports, deposition transcripts or trial 5 testimony in the prior talc litigation? 6 A. How do I know? I mean, I'm not very 7 familiar with how these, you know, different 8 trials are occurring, what you can share, which 9 attorneys are involved in which trials. 10 I'm sorry. I didn't ask for it. I know 11 that, but I'm just not familiar with that 12 process, what they can share. 13 Q. Okay. Can you go to Page 10 of your 14 report. And I guess there are two exhibits to 15 it, or it's referred to in two exhibits. 16 Are you looking at Exhibit 10 there? 17 A. Exhibit 10. 18 Q. On the front page. 19 MS. PARFITT: It's your report. Yes. 20 A. Exhibit 10. Yes. 21 Q. So if you could go to Page 10, I'd 22 appreciate that. And on Page 10, you're 23 discussing, among other things, the advantages 24 and disadvantages of cohort and case-control 25 studies; is that correct?</p>

86 (Pages 338 to 341)

Sonal Singh, M.D., M.P.H.

Page 342	Page 344
<p>1 A. Yes.</p> <p>2 Q. Okay. If you would look at the</p> <p>3 paragraph that begins with the phrase</p> <p>4 "case-control studies."</p> <p>5 Do you see that there?</p> <p>6 A. Yeah.</p> <p>7 Q. Okay. You're explaining your opinion</p> <p>8 why case-control studies have some advantages</p> <p>9 over cohort studies in that paragraph; is that</p> <p>10 correct?</p> <p>11 A. No. Not necessarily. I mean, that</p> <p>12 just talks about the strength and weaknesses of</p> <p>13 various studies designs. I mean, in fact, you</p> <p>14 know, it talks about whether, you know, that, in</p> <p>15 fact, it says exposure is ascertained</p> <p>16 retrospectively.</p> <p>17 So I'm just talking about the strength and</p> <p>18 limitations of various designs.</p> <p>19 Q. Okay. I was using advantages and</p> <p>20 disadvantages.</p> <p>21 Is there a significant difference between</p> <p>22 those two?</p> <p>23 A. That's just the term we use. Yeah.</p> <p>24 Q. Okay. Now, one of the strengths, in</p> <p>25 your opinion, of a case-control study, is that it</p>	<p>1 be useful, because you couldn't find all of the</p> <p>2 lung cancer cases.</p> <p>3 A. Yes. And that sort of applies to</p> <p>4 Gonzalez. And it was a six-month study, and some</p> <p>5 of the other cohort studies that were of limited</p> <p>6 duration.</p> <p>7 So, yes, I mean, I don't know about the time</p> <p>8 course exactly of lung cancer risk, but can apply</p> <p>9 to various outcomes.</p> <p>10 Q. Okay. So what is the latency period</p> <p>11 for perineal talc exposure and ovarian cancer?</p> <p>12 A. I do not have -- I don't know, because,</p> <p>13 you know, I don't -- again, I don't elucidate the</p> <p>14 mechanism of ovarian cancer and the precise link.</p> <p>15 So I cannot tell you that X number of days after</p> <p>16 perineal talc or months after. I know that it is</p> <p>17 long-term. It could be months to years. And</p> <p>18 that's as much as I can say.</p> <p>19 Q. So your example, when you were talking</p> <p>20 about 12 months, actually, that really wouldn't</p> <p>21 be a problem or we don't know whether that's a</p> <p>22 problem or not because it could be months?</p> <p>23 A. No.</p> <p>24 MS. PARFITT: Objection.</p> <p>25 THE WITNESS: Sorry.</p>
Page 343	Page 345
<p>1 captures the entire time period when an ovarian</p> <p>2 cancer illness could occur; is that correct?</p> <p>3 A. That's not necessarily like an entire</p> <p>4 time. First of all, we don't know the precise</p> <p>5 number of years.</p> <p>6 But, yes, we know that it is a long-term</p> <p>7 exposure. So case-control studies allow us to</p> <p>8 ascertain long-term exposure. So that's a much</p> <p>9 more accurate reflection.</p> <p>10 Q. And you were saying one of the</p> <p>11 weaknesses of a cohort study is that it might not</p> <p>12 capture all of the ovarian cancer cases because</p> <p>13 ovarian cancer can develop over a long period of</p> <p>14 time; is that correct?</p> <p>15 A. Yes. After a particular agent, if it's</p> <p>16 related, you know.</p> <p>17 Q. Okay. And you mentioned, in fact,</p> <p>18 there's a sentence here, "It is important to</p> <p>19 determine the latency and induction between the</p> <p>20 exposure and the disease to assess the duration</p> <p>21 of follow-up"; is that correct?</p> <p>22 A. It is.</p> <p>23 Q. Okay. And then you give the example of</p> <p>24 smoking. And you talked about, if you looked at</p> <p>25 it for a 12-month follow-up study, that would not</p>	<p>1 A. So, yeah, months would be a problem.</p> <p>2 It's mostly -- I mean, yes, we have some bounds,</p> <p>3 but most of the studies we see, it is likely to</p> <p>4 have been, you know, several years after</p> <p>5 exposure.</p> <p>6 Q. And how do you know that? Which</p> <p>7 studies have you reviewed or analyzed that say</p> <p>8 that it's several years after exposure?</p> <p>9 A. Well, all of -- you know, the</p> <p>10 case-control studies that have provided data on</p> <p>11 duration of exposure and show evidence of</p> <p>12 duration responsiveness suggest that -- so, for</p> <p>13 example, Penninkilampi and others suggest that</p> <p>14 this is -- you know, while there are increased</p> <p>15 risks before both more than 20 years or more than</p> <p>16 3,600 applications as well as those are less, the</p> <p>17 risk is higher among those with higher duration.</p> <p>18 But, again, I cannot partition this at 20 or</p> <p>19 15.</p> <p>20 Q. Okay. You have a phrase in here that</p> <p>21 says "because ovarian cancer develops over many</p> <p>22 years."</p> <p>23 Is that an accurate assessment of your</p> <p>24 views?</p> <p>25 A. Where is that?</p>

87 (Pages 342 to 345)

Sonal Singh, M.D., M.P.H.

Page 346	Page 348
<p>1 Q. If you look at the next paragraph, 2 first sentence, last clause. 3 A. Yeah. 4 Q. Other plaintiffs' experts have stated 5 in their reports that the latency period could be 6 decades. 7 Would you disagree with that? 8 A. Yeah. I mean, when I say many years, 9 it could be -- yeah, I just -- 10 Q. You don't know? 11 A. I don't know the precise. I don't want 12 to quantify the number of years. 13 Q. Okay. I want to shift topics a little 14 bit here. You reference Linda Loretz's 15 deposition transcript in -- I think once in your 16 report. 17 If you would go to Page 7, I believe it is. 18 It's in a footnote. Footnote 1. 19 A. Mm-hmm. 20 Q. Now, did you read the entirety of 21 Dr. Loretz's deposition transcript? 22 A. Again, these are so many documents. I 23 mean, I reviewed, you know, not -- but I don't 24 know if I read the whole transcript. Yeah. 25 Q. Do you know how many days she was</p>	<p>1 not even a citation. I mean, it's -- I feel 2 that, and we were discussing that, you know, 3 could a randomized trial be here conducted. And 4 to my mind, it would be unethical. So... 5 Q. Well, yeah. But then you say, 6 "Defendants here have admitted this fact." 7 And so I'm just wondering what brought you 8 to that particular part midway in her deposition, 9 the second day of her deposition of a three-day 10 deposition. 11 A. Some of this has, you know -- it just 12 doesn't -- I don't know why I would, you know, 13 put it -- but it's sort of -- it's even 14 irrelevant if you take her out of it. Because, 15 you know, it's like, are we really going to do a 16 randomized trial? 17 Q. I agree with you. It's irrelevant. 18 A. Yeah. 19 Q. If you could go to Page 62 of your 20 report. You've got a caption there "Cosmetic 21 Expert Review Panel Report." 22 Do you see that? 23 A. Yes. 24 Q. Roman numeral XII? 25 A. Yes.</p>
Page 347	Page 349
<p>1 deposited? 2 A. I don't recall. 3 Q. More than one day? 4 A. I don't know that. I'm sorry. 5 Q. So her deposition transcript, I'll 6 represent to you, is 1,133 pages in length. 7 Did you read all that? 8 A. No. I didn't agree that I read all of 9 them either. Yeah. 10 Q. Okay. I was a little confused because 11 I thought you had said, for hers, that you had 12 read the whole thing. 13 A. No. I didn't say I had read -- you 14 know, I have read the transcript, but it doesn't 15 mean that I read every, you know, precise word 16 and precise -- 17 Q. Do you know what her background is? 18 A. No, I don't. 19 Q. Do you know if she's a scientist? 20 A. I don't remember, you know, the 21 specifics of the transcript. 22 Q. How is it that you picked out this 23 quote then on -- that's Footnote 1 or this 24 citation, Footnote 1, Page 7? 25 A. Yeah. I mean, it's not even -- that's</p>	<p>1 Q. Do you know what the name of the 2 organization is that you're referring to in that 3 paragraph? 4 A. I don't know the name. 5 Q. Do you know if Dr. Loretz testified 6 regarding that review? 7 A. If I have cited her, then I have. 8 Q. Well, you didn't cite her on this 9 portion. That's why I'm asking about it. 10 A. I don't know. I mean, you're asking 11 all these different names. They're all -- if I 12 haven't cited her, then I haven't reviewed it. 13 Q. Okay. Have you heard of the Cosmetic 14 Ingredient Review? 15 A. Yes. 16 Q. Sometimes referred to as CIR? 17 A. Yes. 18 Q. Dr. Loretz, in her deposition, 19 references the CIR dozens of times, doesn't she? 20 A. Again, as I said, I didn't review the 21 entirety of the thousand pages. 22 Q. Okay. I'm just trying to understand 23 what you did review and you didn't. You wrote a 24 paragraph about the CIR. And I'm trying to 25 understand why you didn't reference Dr. Loretz</p>

88 (Pages 346 to 349)

Sonal Singh, M.D., M.P.H.

Page 350	Page 352
<p>1 when she testified about that.</p> <p>2 A. So, as you can see, it's reference to</p> <p>3 the published report, and, you know, I</p> <p>4 reviewed -- again, even that was lengthy</p> <p>5 document, and, you know, I wanted to review that</p> <p>6 for completeness and understand that.</p> <p>7 Q. Did you read the entirety of that</p> <p>8 report?</p> <p>9 A. As much as I can. Not every word in</p> <p>10 every sentence.</p> <p>11 Q. Okay. Do you know if the FDA plays a</p> <p>12 role in the CIR's review that you're referring to</p> <p>13 on Page 62 of your report?</p> <p>14 A. I'm not aware of the specific</p> <p>15 composition, but I know that FDA is -- attends or</p> <p>16 is a member or has some sort of role there.</p> <p>17 Q. Do you know who the Consumer Federation</p> <p>18 of America is?</p> <p>19 A. No.</p> <p>20 Q. Do you know if they play any role in</p> <p>21 the CIR report?</p> <p>22 A. I don't know. And maybe it's in the</p> <p>23 study and I can't tell you offhand who is in this</p> <p>24 panel.</p> <p>25 Q. It's also in Dr. Loretz's deposition.</p>	<p>1 A. Yes.</p> <p>2 MS. PARFITT: Objection.</p> <p>3 A. But specific to talc, you would want</p> <p>4 more diverse representation with gynecologists,</p> <p>5 oncologists, epidemiologists.</p> <p>6 So it's not that it was a criticism of the</p> <p>7 CIR review panel or whoever was on that as a</p> <p>8 dermatologist, but specific to it, did they have</p> <p>9 the expertise to -- and maybe they did, but I'm</p> <p>10 just pointing that out.</p> <p>11 Q. So you don't know, one way or another,</p> <p>12 whether they had the expertise?</p> <p>13 A. Yeah. I mean, from my understanding,</p> <p>14 they didn't have expertise in carcinogenicity and</p> <p>15 epidemiology.</p> <p>16 Q. What do you base that on?</p> <p>17 A. Yeah. I mean, you know, some of the</p> <p>18 names that are here, they were dermatologists.</p> <p>19 That's sort of my understanding.</p> <p>20 Q. Did you look them up and investigate</p> <p>21 what they do or what they have done in their</p> <p>22 careers?</p> <p>23 A. No. I have not.</p> <p>24 Q. Okay. So you're criticizing them as</p> <p>25 not having the capability of doing the review,</p>
Page 351	Page 353
<p>1 That's the reason I'm exploring it.</p> <p>2 Do you know that one of the missions of the</p> <p>3 Consumer Federation of America is to represent</p> <p>4 consumers in connection with Cosmetic Ingredient</p> <p>5 Reviews?</p> <p>6 A. I'm not aware of that.</p> <p>7 Q. Okay. Do you know who was on the panel</p> <p>8 of the CIR review?</p> <p>9 A. No.</p> <p>10 Q. Do you know whether there were</p> <p>11 toxicologists who were part of the panel?</p> <p>12 A. I don't know that.</p> <p>13 Q. You criticize the panel makeup because</p> <p>14 it was "primarily composed of dermatologists."</p> <p>15 A. Sure.</p> <p>16 Q. Do you see that?</p> <p>17 A. Yes.</p> <p>18 Q. Do you know why dermatologists would be</p> <p>19 relevant to a review of cosmetics?</p> <p>20 A. Yes. I mean, yeah. But, of course,</p> <p>21 the majority of cosmetics are on -- you know,</p> <p>22 applied on the skin. Yeah. It would be</p> <p>23 relevant.</p> <p>24 Q. So they would be relevant to a CIR</p> <p>25 review?</p>	<p>1 but you don't really know their expertise?</p> <p>2 MS. PARFITT: Objection. Misstates his</p> <p>3 testimony.</p> <p>4 A. Yeah. It doesn't say -- first of all,</p> <p>5 it's not a criticism. It just says, what is the</p> <p>6 composition of the panel. It says it was</p> <p>7 composed of, you know, expertise in epidemiology</p> <p>8 and carcinogen -- so it's just sometimes</p> <p>9 panels -- and it may have been very appropriate</p> <p>10 for the 100 and whatever products that were</p> <p>11 evaluated by that panel.</p> <p>12 Q. Okay. One of the things that you</p> <p>13 say --</p> <p>14 A. Sure.</p> <p>15 Q. -- is that there was a -- the review</p> <p>16 was limited or limited its assessment to animal</p> <p>17 and clinical studies on talc that did not contain</p> <p>18 asbestos.</p> <p>19 Do you see that?</p> <p>20 A. Yeah.</p> <p>21 Q. You would agree that the CIR reviewed</p> <p>22 all of the epidemiological studies that were</p> <p>23 available at that time; correct?</p> <p>24 MS. PARFITT: Objection. Misstates</p> <p>25 testimony.</p>

89 (Pages 350 to 353)

Sonal Singh, M.D., M.P.H.

Page 354	Page 356
<p>1 A. I don't know -- you know, I know that 2 they reviewed the process and they looked at 3 studies, and I don't know if it was all 4 epidemiologic studies, but I think and I 5 understand that presumption was that talc does 6 not contain asbestos. I mean, that's what -- the 7 premise they started out with. 8 Q. Well, did the epidemiologic studies 9 make a distinction between talc and its 10 constituents or alleged constituents? 11 A. Yeah. I mean, there are -- as I cite 12 in my report, there are -- they don't make 13 distinctions, but they -- some of the studies -- 14 you know, some of the testimony we've discussed, 15 some of the, you know, testing we've discussed, 16 and some, you know, small publications suggest 17 that talc may contain asbestos. So you have 18 these evidence. 19 But the CIR review was already carried out 20 with the presumption that talc did not contain 21 asbestos. 22 Q. But they reviewed all of those studies 23 that you referenced, or do you not know what they 24 reviewed? 25 MS. PARFITT: Objection.</p>	<p>1 they asked -- this statement is about the 2 question they asked. They asked the question, 3 that talc fiber not containing asbestos, does it 4 cause. 5 So if they ask the question already, we know 6 that, they presume there was no presence of. So 7 it's about the question that I'm stating it. 8 Q. But the epidemiologic studies, when 9 they're analyzing talc use among women, they're 10 not making a distinction between talc that 11 contains or doesn't contain constituents. 12 They're talking about women who use products; 13 correct? 14 A. That is correct. 15 Q. So if your theory is correct and talc 16 contains harmful substances in addition to talc, 17 then the epidemiologic studies would have 18 reviewed women's exposure to those constituents; 19 correct? 20 A. Yeah. So, I mean -- so if you look at 21 what I've written, the review was carried out 22 under the flawed assumption that cosmetic grade, 23 you know, talc was -- did not contain that. And 24 also limited to talc that did not contain. And 25 also concluded that there was no evidence of talc</p>
Page 355	Page 357
<p>1 A. I mean, I do not know every study they 2 reviewed. I'm just providing -- I don't know 3 every study that IARC reviewed. 4 Q. Well, you could find that out by 5 looking at the studies; right? 6 A. There's not enough time. There's so 7 many studies in this and so many reports, so many 8 assessments that -- 9 Q. But you're criticizing the CIR. 10 A. Yeah. 11 Q. And saying it limited its assessment. 12 A. Sure. 13 Q. And I just want to understand the basis 14 for that statement, and what you're saying, 15 testifying here today is you don't know what the 16 CIR reviewed. 17 MS. PARFITT: Objection. Misstates 18 testimony. 19 A. No. That, and we can look at it. 20 Let's look at the, you know, the -- 21 Q. But you made the statement. 22 A. Sure. 23 Q. And I'm asking you, sitting here today, 24 can you say what they reviewed? 25 A. Yes. I know they reviewed -- because</p>	<p>1 migration. 2 I do not say that, you know, there was no -- 3 they did not review the -- the epidemiologic 4 studies of talcum powder products. That's not -- 5 you know, they reviewed it. But I'm just 6 pointing out the limitations of that. 7 Q. Didn't CIR cite the very same studies 8 that were available as of 2013 that you cite in 9 your report? 10 A. Yes. 11 MS. PARFITT: Objection. Form. 12 A. Again, you know, I don't know if they 13 cite evidence of biologic plausibility. I don't 14 know if they cite evidence of talc migration. I 15 don't know how they interpreted the evidence 16 of -- just because they cited a study does not 17 mean that they interpreted the data in the same 18 way that I did. 19 So I don't know what studies specifically in 20 each section they cited. 21 Q. Okay. One of the things that you say, 22 "as a result of these serious methodological 23 shortcomings and funding biases." Let me ask you 24 about that. 25 A. Sure.</p>

90 (Pages 354 to 357)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 358</p> <p>1 Q. Is a review that's funded by an entity 2 with an interest in the outcome of that review 3 inherently flawed? 4 A. No. It isn't. And this is just, you 5 know, one of -- and, you know, it's a potential. 6 It should be potential for funding biases. It 7 doesn't mean that just because it was funded by 8 PCPC or CIR, it is, you know, biased. 9 But yes, I mean, so, for example, my report 10 and testimony, because it's funded by, you know, 11 should be examined for potential biases. Just 12 like, you know, CIR's report should be. 13 Q. I want to ask you about the timing of 14 things, because sometimes you have referred to 15 reports that were done a while ago. And in this 16 case, you do that with CIR. You say, "The 17 findings of this panel have been superseded by 18 several new epidemiologic studies," and so forth. 19 The line goes on. 20 Is it your opinion that -- well, let me ask 21 this way: At what point in time can we say that 22 the epidemiologic studies have sort of been 23 completed so you could rely on that information? 24 MS. PARFITT: Objection. Form. 25 A. Yeah. I mean, so you rely on</p>	<p style="text-align: right;">Page 360</p> <p>1 regulatory agency in late 2018. So things take 2 time. And, you know, people, scientists take 3 time to come to conclusions. 4 Q. Okay. Let's go to Exhibit 22. 5 A. Which is? 6 Q. That's the Berge -- I believe that's 7 how it's pronounced -- report? 8 MS. PARFITT: The Berge study? 9 MR. LOCKE: Yes, yes. I'm sorry. 10 BY MR. LOCKE: 11 Q. So if you could turn to Page 9, can you 12 read the last sentence right before 13 acknowledgments, beginning with the word 14 "several." If you could read it out loud, 15 please. 16 A. "Several aspects of our own results, 17 including the heterogeneity between case-control 18 studies and the lack of dose-response with 19 duration of and frequency of use, however, do not 20 support a causal interpretation of the 21 association." 22 Q. And they're referring to the 23 association between talc and ovarian cancer? 24 A. Yes. But other scientists, you know, 25 such as Penninkilampi, have concluded otherwise,</p>
<p style="text-align: right;">Page 359</p> <p>1 information from, what, 1982, Cramer one. But I 2 guess the question is -- I don't know, I'm not 3 trying to put questions in your mouth. But I 4 don't -- I can't -- because I evaluated the 5 causal question as of 2017 and didn't arrive at 6 an opinion until late 2018. 7 I did not go year by year and, say, okay, in 8 2005, when IARC looked at this, could we have 9 concluded, possible, a problem? In 2010, when 10 Langseth looked, or 2015. 11 So I did not segmentate it by time. And 12 you're just asking, even by epidemiologic study. 13 It doesn't work. You have to look at the whole 14 body of evidence and come to a conclusion. 15 Q. Isn't it true that, prior to the talc 16 litigation, no scientist had published an article 17 stating that talc causes ovarian cancer? 18 MS. PARFITT: Objection to form. 19 A. Yeah. I mean, you know, I think a lot 20 of these articles have talked about -- and 21 scientists don't necessarily publish statements 22 about causation, you know. 23 You have seen that Health Canada has clearly 24 stated that talc causes ovarian cancer. Yes, so, 25 in fact, not even scientists, but now we have</p>	<p style="text-align: right;">Page 361</p> <p>1 that there is, you know, suggestive of a causal 2 association. Health Canada has concluded 3 otherwise, that there's evidence of causal 4 association. 5 Q. But here we are in 2018, there's a 6 study that's published saying, "Does not support 7 a causal interpretation of the association 8 between talc and ovarian cancer"; correct? 9 A. Yes. I mean, you know -- 10 Q. Let me just ask you: So scientists 11 disagree about this issue? 12 A. That's why we are here. If we all 13 agreed, we wouldn't be here. 14 Q. Okay. Let me move to a different 15 topic. 16 MR. TISI: How much time do we have? 17 How much time do we have? That's okay. Just 18 write it on a paper. 19 MR. LOCKE: We're getting close. 20 Q. Okay. Can we go to Page 62 of your 21 report. 22 Now, did we already do that? Maybe we 23 already did that. Sorry. I don't want to have 24 to do things again. 25 A. Please don't.</p>

91 (Pages 358 to 361)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 362</p> <p>1 THE VIDEOGRAPHER: 6:36. 2 THE WITNESS: So we have 6 minutes, 36 3 seconds? 4 Q. You have 24 minutes. 5 A. Oh, sorry. 6 Q. Sorry. We already did that one. So 7 good there. 8 Let's go to Page 15 of your report. We were 9 talking just a moment ago about regulatory 10 entities and what they found. 11 In the middle of that paragraph or middle of 12 that page, there's a part that says, "Although 13 the FDA conducted a survey." 14 Do you see that? 15 A. Yes. 16 Q. And they found no asbestos fibers or 17 structures. 18 But then you, whatever you want to call it, 19 you can call it criticism or deficiencies or 20 disadvantages, you state, "The results were 21 limited, only four out of nine talc suppliers 22 submitted samples, and the number of products 23 tested was low." Is that correct? 24 A. Well, that is a correct restatement of 25 the facts. So it is not something that I made</p>	<p style="text-align: right;">Page 364</p> <p>1 don't know about the specifics, who are 2 manufacturers and -- yeah. But I know the 3 limitations of the survey. 4 And even they acknowledge that the study 5 could not prove that most or all talc-containing 6 cosmetic products currently marketed are likely 7 to be free. So even despite these -- whoever 8 supplied them and whoever, you know, tested them. 9 MR. LOCKE: We're almost there. Then 10 I'll turn it back over. 11 BY MR. LOCKE: 12 Q. Just one second. If you could go to 13 Page 59, please. Okay. 14 On Page 59, you've got a Roman numeral X 15 followed by a Roman Numeral III. Do you see 16 that? Talcum powder-induced inflammation. Am I 17 at the right place? 18 MS. PARFITT: I'm sorry, Tom. 19 MR. TISI: 59 of the report? 20 MR. LOCKE: Yeah. 21 A. It's probably 58. 22 Q. 58 of the report. Sorry. 23 MS. PARFITT: No worries. 24 Q. Okay. So you see that, Roman numeral 25 X, Roman Numeral III?</p>
<p style="text-align: right;">Page 363</p> <p>1 up. I mean, it is true that four out of nine 2 suppliers -- 3 Q. J&J was one of the entities that 4 supplied talc to the FDA; correct? 5 A. I didn't -- you know -- I didn't -- 6 that FDA document, you know, I'm not aware of who 7 supplied. 8 Q. You didn't look at it. You criticized, 9 but you didn't look at the fact that J&J 10 submitted talc samples and product to the FDA? 11 MS. PARFITT: Objection. Misstates his 12 testimony. 13 A. I reviewed the reference and I reviewed 14 the -- you know, so I'm not testifying I reviewed 15 talcum powder products and ovarian cancer. You 16 know, and I was looking at the evidence. But I 17 didn't look at whether J&J submitted samples or 18 Imerys submitted samples, no. 19 Q. And you don't know whether, then, the 20 FDA, in fact, tested the two J&J products at 21 issue in this litigation and found no asbestos 22 fibers or structures in the samples? 23 MS. PARFITT: Objection. Misstates the 24 survey. 25 A. I don't know -- I don't -- you know, I</p>	<p style="text-align: right;">Page 365</p> <p>1 A. Have we gone through this? I'll be 2 happy to go through it again. 3 Q. I want to ask you about something. 4 A. Sure. 5 Q. You have a statement, the first 6 sentence says, "Inflammation has long been 7 understood to be an important mechanism 8 underlying the development of ovarian cancer." 9 Do you see that? 10 A. Yes. 11 Q. And then you referenced 61. And if you 12 go to Exhibit 4, that is your list of references; 13 correct? 14 Well, for me, I was looking at it, because 15 it was broken out separately. But you could see 16 it at the back of Exhibit 10 as well. 17 A. Yeah. 18 Q. Do you see that, 61? 19 A. Yeah. 20 Q. And if you -- can you read the title of 21 the reference that you're citing to there? 22 A. The Ness study, is that? 23 Q. Right. The Ness study. 24 A. Possible Risk of Ovarian in -- Cancer. 25 Q. It's "Possible Role of Ovarian</p>

92 (Pages 362 to 365)

Sonal Singh, M.D., M.P.H.

<p style="text-align: right;">Page 366</p> <p>1 Epithelial Inflammation in Ovarian Cancer." 2 Now, you're citing that for "long been 3 understood to be an important mechanism," but, in 4 fact, the first word in the title is "possible." 5 A. Yeah. And you can clarify that. I 6 mean, this is about plausible mechanisms. 7 Q. But it certainly doesn't say it's long 8 been understood to be an important mechanism. 9 A. Well, I disagree. I mean, you know, 10 maybe that -- you can't cite all the articles for 11 each statement you make. I wish I did. 12 But inflammation, as I understand it, is an 13 important mechanism. And at least has been known 14 for a long time about ovarian cancer. And others 15 can opine in more detail. Is that citation the 16 most? Yeah, that particular citation has a 17 possible, you know, clarifier on that. 18 MR. LOCKE: Okay. Let me just see if 19 I've got anything else here. That's all I have. 20 THE WITNESS: Thank you. 21 MR. LOCKE: Thank you. Anyone else? 22 MS. PARFITT: Let's take a quick break 23 and see if we have any follow-up. 24 THE VIDEOGRAPHER: Off the record, 25 5:13 p.m.</p>	<p style="text-align: right;">Page 368</p> <p>1 ----- 2 E R R A T A 3 ----- 4 PAGE LINE CHANGE 5 REASON: _____ 6 _____ 7 REASON: _____ 8 _____ 9 REASON: _____ 10 _____ 11 REASON: _____ 12 _____ 13 REASON: _____ 14 _____ 15 REASON: _____ 16 _____ 17 REASON: _____ 18 _____ 19 REASON: _____ 20 _____ 21 REASON: _____ 22 _____ 23 REASON: _____ 24 _____ 25 REASON: _____</p>
<p style="text-align: right;">Page 367</p> <p>1 (A recess was taken.) 2 THE VIDEOGRAPHER: Back on the record, 3 5:26 p.m. 4 MS. PARFITT: Thank you. Dr. Singh, 5 the plaintiffs have no questions. I want to 6 thank you for your time today. 7 We would ask that Dr. Singh read and 8 sign. 9 MR. ZELLERS: Thank you, Doctor. 10 THE WITNESS: Thank you. 11 MR. KLATT: Wait. I've got 30 seconds. 12 THE WITNESS: I want to thank everybody 13 for a very professional, you know -- I've done 14 this a couple of times. And if I have raised my 15 voice, it hasn't been anything personal. It's 16 just been trying to explain something. 17 MR. ZELLERS: Thank you, Doctor. 18 THE VIDEOGRAPHER: And we're off the 19 record at 5:27 p.m. 20 (Deposition concluded at 5:27 p.m.) 21 22 23 24 25</p>	<p>1 ACKNOWLEDGMENT OF DEPONENT 2 3 I, _____, do 4 hereby certify that I have read the 5 foregoing pages, and that the same 6 is a correct transcription of the answers 7 given by me to the questions therein 8 propounded, except for the corrections or 9 changes in form or substance, if any, 10 noted in the attached Errata Sheet. 11 12 _____ 13 SONAL SINGH, M.D., M.P.H. 1 CERTIFICATE
2 COMMONWEALTH OF MASSACHUSETTS
3 SUFFOLK, SS.
4 I, Janet M. Sambataro, a Registered Merit
5 Reporter and a Notary Public within and for the
6 Commonwealth of Massachusetts do hereby certify:
7 THAT SONAL SINGH, M.D., M.P.H., the witness
8 whose testimony is hereinbefore set forth, was duly
9 sworn by me and that such testimony is a true and
10 accurate record of my stenotype notes taken in the
11 foregoing matter, to the best of my knowledge, skill
12 and ability; that before completion of the deposition
13 review of the transcript was requested.
14 I further certify that I am not related to any
15 parties to this action by blood or marriage; and that
16 I am in no way interested in the outcome of this
17 matter.
18 IN WITNESS WHEREOF, I have hereunto set my hand
19 this 17th day of January, 2019.
20
21
22 JANET M. SAMBATARO
Notary Public
My Commission Expires:
23 July 16, 2021

Date: November 15, 2018

Rebecca Smith-Bindman, MD

The Relationship Between Exposure to Perineal Talc Powder Products and Ovarian Cancer

Expert Report

Rebecca Smith-Bindman, MD

Professor, Radiology and Biomedical Imaging, Epidemiology and Biostatistics, Obstetrics,
Gynecology and Reproductive Science and Director, Radiology Outcomes Research Lab
University of California San Francisco

Table of Contents

<i>I. Executive Summary.....</i>	<i>4</i>
<i>II. Expertise of Dr. Smith-Bindman.....</i>	<i>6</i>
Education and Employment	6
Research Expertise.....	6
Knowledge of Relevant Study Designs	6
Experience as a Medical Expert.....	8
<i>III. Background: Ovarian cancer and Talc as a Modifiable Risk Factor.....</i>	<i>8</i>
Ovarian Cancer	8
Histologic types	9
Risk Factors	11
Etiology: Origins, Causes, Development and Inflammation	12
Association of Ovarian Cancer with Talc Powder Products	13
Why Talc Powder Products were Initially Suspected as Causing Ovarian Cancer.....	13
Asbestos	14
Talc.....	15
Heavy Metals.....	16
<i>IV. Overview of Publications on Genital use of Talc powder products and Ovarian Cancer.....</i>	<i>16</i>
Explanation of study designs and article types	16
Table of Reviewed Publications	18
Quantifying Exposures	19
Summary of Data	19
Cohort Studies	19
Systematic Reviews	22
Pooled Data	27
Case-Control Trials.....	29
<i>V. Rationale for and Explanation of the New Systematic Review.....</i>	<i>30</i>
<i>VI. New Systematic Review of Literature Quantifying Association Between Regular Frequent Genital (Perineal) Talc powder products Application and Ovarian Epithelial Cancer Risk with A Focus On Invasive Serous Cancer.....</i>	<i>31</i>
Literature Search	31
Article Selection.....	31
Exclusion	32
Defining Talc powder products Use.....	32

I. Executive Summary

Substantial evidence supports a strong positive association between ovarian cancer and genital exposure to talcum powder products and that regular exposure to talcum powder products causes ovarian cancer in some women. Talc is a naturally occurring mineral used in cosmetic products because of its desirable chemical properties such as being soft and absorbent. Women who have had regular exposure of the genitals (specifically the perineal region from the pubic area to the anal area) to talcum powder products are at increased risk of developing invasive ovarian cancer, in particular serous cancer, the most common and most lethal form. In the United States, a substantial portion of women report having ever used talc powder products at some point in their life. The most commonly reported frequency of talcum powder product use is daily. Women who use talcum powder products daily increase their risk of developing ovarian cancer significantly. Regular exposure causes ovarian cancer in some women.

I was asked to review the medical and scientific literature regarding the relationship between genital talcum powder product use and ovarian cancer and determine whether the relationship is causal. For this extensive analysis and report, I applied the same methodology with the same scientific rigor that I use in my research and clinical practice. I reviewed 43 relevant publications presenting scientific data on the association between ovarian cancer and exposure to talc powder products: 4 cohort studies, 8 systematic reviews, 2 studies that pooled data from multiple individual studies, and 30 case-control studies. I also read numerous review articles, and systematic reviews on related topics such as those completed by the International Agency on Research on Cancer (IARC). I also completed my own, new systematic review on of the studies that I reviewed as part of this report. This report contains my overview of these publications plus a detailed new systematic review of the studies that I conducted. After reading, evaluating, and summarizing these publications, in my expert opinion, I do not have any uncertainty that regular exposure to talc powder products increases a woman's chance of developing epithelial ovarian cancer. In my expert opinion, regular exposure to talcum powder products causes ovarian cancer

Quantifying the precise magnitude of the association is more difficult than establishing the association. The association will certainly vary by demographic and reproductive factors and whether women have other underlying ovarian cancer risk factors and exposures. With that caveat, **it is my opinion that women exposed to perineal talc powder products on a regular basis have about a 50% increase in their subsequent risk of developing invasive serous ovarian cancer**, compared to women who do not regularly use talc and even after accounting for other ovarian cancer risk factors. This estimate is supported by existing publications and my quantitative review of the scientific literature that focused on summarizing studies that addressed regular exposure to talc powder products as a risk factor for epithelial ovarian cancer, and in particular serous cancer. Talcum powder exposure is associated with other epithelial cancer subtypes (in particular, clear cell and endometrioid carcinoma), but because these cancers are less common, and because fewer studies have evaluated these cancers in sufficient numbers, quantifying the associations is more difficult. While some publications estimated talc powder products have a slightly greater risk of these cancer subtypes, others

estimated a slightly lower risk of these cancer subtypes. In my opinion, this risk is likely overall in about the same range as for serous cancer, but I would estimate slightly less at 40% increased risk.

The epidemiological evidence documents a strong, positive association between exposure to talcum powder products and ovarian cancer and that regular exposure causes ovarian cancer. The epidemiological evidence alone does not confirm the mechanism by which talc powder product increases ovarian cancer risk, nor does it confirm the specific component in talcum powder products that makes it carcinogenic. Nonetheless, the literature provides compelling evidence that exposure to talcum powder products leads to chronic inflammation and that the inflammation induces a strong biological response that results in the induction, promotion, and growth of cancer. Further, there is evidence that several highly carcinogenic agents are components of the talcum powder products. These include, most importantly, asbestos, a Group 1 carcinogen that the International Agency for Research on Cancer (IARC) has determined causes ovarian cancer. I have seen evidence that talcum powder products contain asbestos. Second, talcum powder products contain asbestiform talc particles which have a similarity in structure to asbestos fibers (and which IARC concludes are carcinogenic). Lastly, talcum powder products contain numerous heavy metals such as, nickel, chromium, (Group 1 carcinogens) and cobalt (Group 2 carcinogen) according to IARC. These components are carcinogenic (cause cancer) and can contribute to the carcinogenicity of talcum powder products. Observational and experimental data confirm that talcum powder product particles applied to the perineum can reach the fallopian tubes and ovaries through the vagina, supporting that talc particles applied to the perineum can deposit on the ovaries. Surgery that impedes the movement of particles from the perineum to the ovaries such as hysterectomy (uterine removal) or tubal ligation (tying or blocking the fallopian tubes to the ovaries), reduces the elevated risk of ovarian cancer from exposure to talcum powder products. This finding supports that local tissue response and inflammation in the fallopian tubes and/or ovaries from talcum powder products (with components) causes the elevated ovarian cancer risk.

In summary, **from my review of the scientific literature and my own analysis, it is my opinion that genital exposure to talcum powder products is an actionable and causative risk factor for ovarian cancer.** As a physician involved in women's health issues, I view talcum powder usage as a modifiable "lifestyle" risk factor that should be avoided because of the substantial risk to health and lack of therapeutic benefit. An elevated risk of 50% is significant and results in a large number of unnecessary ovarian cancers given the large number of women exposed. Depending on estimates of how many women regularly use talcum powder products, between 7% and 20% of all ovarian cancers and 14% - 39% of invasive serous cancers (the most aggressive and feared cancer type) are caused by the use of talcum powder products. These cancers can be prevented if women do not use talcum powder products.

II. Qualifications

Education and Employment

I am a professor of Radiology and Biomedical Imaging, Epidemiology and Biostatistics, Obstetrics, Gynecology and Reproductive Medicine, and Health Policy at the University of California San Francisco (UCSF) School of Medicine. I graduated from Princeton University with a degree in structural engineering (with combined majors in engineering and architecture) and attended UCSF medical school. My training after medical school included an internship, radiology residency, and clinical fellowship in women's health and a research fellowship in epidemiology and biostatistics in the UCSF Departments of Medicine and Epidemiology and Biostatistics.

I am a clinician-scientist. My clinical work includes one day a week in the Department of Radiology and Biomedical Imaging, with a focus on women's health imaging. I work in the ultrasound section, where a large proportion of the work is focused on the diagnosis of ovarian abnormalities (cancer and other functional issues). I run the UCSF Radiology Outcomes Research Lab, spending most of my time on clinical research and leading large epidemiological studies. I teach in the UCSF School of Medicine and Department of Epidemiology and Biostatistics.

Research Expertise

My research expertise is in epidemiology, outcomes research, comparative effectiveness, health services research, and dissemination and implementation sciences. My epidemiological studies have evaluated the quality, use, accuracy, predictive value, and impact of diagnostic testing on patient health. I have measured the risks and benefits of medical imaging in different contexts and different populations. Much of the research is in women's health, including diagnoses of cancers such as ovarian, endometrial, thyroid and breast. I have led many large, multi-institutional research projects. These projects are typically collaborative, involving researchers and clinicians with diverse expertise including radiology, obstetrics and gynecology, medicine, biostatistics, epidemiology, economics, demography, social sciences, medical informatics, radiation science, and dissemination and implementation science.

I have been a prolific researcher. I have led projects funded by more than 50 million dollars in research grants—entirely focused on cancer diagnosis and prediction. The research has been published in the most prestigious medical journals including the *New England Journal of Medicine*, *Annals of Internal Medicine*, *Journal of the American Medical Association*, *Journal of the American Medical Association Internal Medicine*, *Journal of the National Cancer Institute*, *Obstetrics and Gynecology*, and leading radiology specialty journals such as *Radiology* and *Journal of the American College of Radiology*.

Knowledge of Relevant Study Designs

Several of my published studies have been systematic, meta-analytic, quantitative reviews of the published literature. Meta-analyses review existing evidence on a topic and summarize

and re-analyze data from earlier studies. My systematic reviews focused on the diagnoses of endometrial cancer, breast cancer, and a range of birth defects including trisomy 21 (Down syndrome) and trisomy 18 (Edwards Syndrome). Many of my reviews were published in prestigious medical journals, reflecting their scientific rigor based on an in-depth understanding of how to combine and review results from different studies in a scientifically valid and reproducible way.

Several of my recent research projects quantified the variation in radiation dose associated with medical imaging and the expected impact of this variation on cancer outcomes. This work has brought attention to the need for better standards in medical imaging. I am currently leading two large, multi-institutional epidemiological projects on medical radiation funded by the National Institutes of Health. One project is collecting radiation dose measures associated with computed tomography (CT) imaging from more than 150 hospitals in the United States, Europe, and Asia and testing the impact of providing feedback and education to radiologists on average and high doses. The second project is a multinational epidemiological study on childhood cancer. This project is assessing the risk of cancer associated with medical imaging among 1 million children and 1 million pregnant patients after accounting for a range of other cancer risk factors. The study will be the first to quantify the risk of medical imaging including CT among a large group of patients and uses novel methods to accurately estimate radiation dose from imaging.

I have expertise in a range of research study designs. The projects I currently lead (each funded by the National Institutes of Health or the Patient-Centered Outcomes Research Institute for between 9 - 15 million dollars each) have designs selected to be appropriate for the research question. For example, the study assessing the risk of cancer from medical imaging uses a *case-control study design, in which data are collected on a group of patients and those with a condition (cases), are matched to similar patients without the condition (controls)*. Matching people with a disease to people of similar age, gender, and other factors who do not have the disease allows researchers to determine if circumstances such as exposure to a potential toxin influence disease development.

My project on medical imaging uses a *cohort design, comparing groups of people (cohorts) in a population, some exposed to a potential disease agent and some not exposed*, to see if the agent influences disease. My study on radiation doses from CT uses a *randomized controlled design, in which individual patients are randomly assigned to different treatments* so their effectiveness can be compared. I am studying lung nodules using a *cluster-randomized controlled trial design that randomly assigns groups of people in similar circumstances (for example because they all see the same doctor) to different treatments* so the effects of the treatments can be compared.

I have a deep understanding of how epidemiological studies are conducted. I understand what study designs are suitable to particular datasets, populations, and research questions and the advantages and disadvantages of each design. This is relevant as no single study

design is “best;” there are strengths and weaknesses of each. The most appropriate and valid study design varies based on the research question being asked.

Experience as a Medical Expert

For the National Academy of Medicine, I have contributed to several reports, including Saving Women’s Lives (2004), Improving Mammographic Quality Standards (2005), and Breast and the Environment: A Life Course Approach (2012), for which I wrote a review on the association between radiation exposure and breast cancer (Appendix). In addition to this research, I am actively involved in raising awareness of the need for better standards and greater safety around medical imaging, in particular related to radiation exposure. I have spoken at the US Food and Drug Administration, testified before the US Congress on several occasions, and worked with leading professional societies to focus attention on improving medical imaging safety. I have written several quality measures on radiation dose adopted by the National Quality Forum and developed educational tools to help physicians and patients understand the importance of minimizing radiation exposure from imaging.

Prior to providing my opinions on the association between talcum powder products and ovarian cancer, I had not reviewed the relevant literature and had not published in this area. As a result, I brought an unbiased perspective to my review. This report reflects my review of medical and scientific publications in this area (overviews and scientific studies), my own analysis, and review of documents shared with me by the lawyers who engaged me for this task. My curriculum vitae is attached as Exhibit A, the materials I considered are attached as Exhibit B, and my fees and prior testimony are attached as Exhibit C.

III. Background: Ovarian cancer and Talc as a Modifiable Risk Factor

Ovarian Cancer

Ovarian cancer is the seventh most common cancer in women and the fifth leading cause of cancer deaths in the United States.¹ In 2018, 22,240 women are expected to receive a new diagnosis of ovarian cancer and 14,070 women will die from it. Overall, about 1 in 78 women (1.3%) will be diagnosed with ovarian cancer in their lifetime and around 1 in 108 will die of it. About 224,940 women are currently living with ovarian cancer.² Most cases occur among older women; the median age at diagnosis is 62, although this varies by ovarian cancer type.² Ovarian cancer is frequently diagnosed at a late stage, when a cure is unlikely. Because so many ovarian cancers are diagnosed at a late stage, the overall mortality rate is high, and the overall 5-year survival is poor. With the poor prognosis and absence of a reliable screening test to find ovarian cancer early, it is a highly feared cancer for women and their physicians alike.

Histologic types

Cancers are classified by histologic type, meaning the type of cells that are involved. Understanding ovarian cancer histologic types is important because the risk factors, etiology and genetics of ovarian cancer can vary by histological type. Therefore, the importance of talcum powder products as a risk factor or cause can also vary by type.

Ovarian cancers (epithelial and non-epithelial) are a heterogeneous group of malignancies that vary in their pathological appearance, molecular biology, risk factors, etiology and prognosis.¹ Epithelial ovarian cancers have several histologic types; most fall into a small group of more common types including serous, endometrioid, clear cell and mucinous. About 90% of ovarian cancers are epithelial (meaning they arise from cells on the surface of the ovary or fallopian tube) and the most common type of epithelial cancer is serous carcinoma. Serous is not only the most common type of ovarian cancer, it is also the most lethal type of ovarian cancer. Further, it is the type of cancer that pathologists can most consistently, reliably, and reproducibly diagnose. Thus, epidemiological studies will have the greatest ability to document a clear association between serous ovarian cancer types and talcum powder products, if a connection exists. It is also the subtype that has been studied most from a molecular and pathologic research standpoint.

Table 1. Histologic Types of Ovarian Cancers Diagnosed Over 15 Years at the KP Washington (in press, JAMA Internal Medicine)		
Histologic Type	Number	Percent of Total Cancers
Papillary serous cystadenocarcinoma	52	36.6
Endometrioid carcinoma	17	12.0
Serous cystadenocarcinoma	15	10.6
Clear cell adenocarcinoma	12	8.5
Adenocarcinoma, NOS	11	7.7
Mucinous adenocarcinoma	7	4.9
Mixed cell adenocarcinoma	3	2.1
Serous surface papillary carcinoma	3	2.1
Granulosa cell tumor	3	2.1
Carcinoma, not otherwise specific	2	1.4
Mucinous cystadenocarcinoma	2	1.4
Mucinous cystic tumor of borderline	2	1.4
Carcinoma in situ	1	0.7
Squamous cell carcinoma	1	0.7
Papillary adenocarcinoma	1	0.7
Papillary serous cystadenoma, borderline	1	0.7
Adenocarcinoma with squamous meta	1	0.7
Granulosa cell tumor, malignant	1	0.7
Endometrial stroma sarcoma	1	0.7
Mullerian mixed tumor	1	0.7
Carcinosarcoma	1	0.7
Carcinosarcoma, embryonal	1	0.7
Teratoma, malignant	1	0.7
Astrocytoma	1	0.7
Marginal zone B-cell lymphoma	1	0.7
Total	142	100
Summary		
Serous carcinoma	70	49.3
Endometrioid carcinoma	17	12.0
Clear cell carcinoma	12	8.5
Mucinous carcinoma	9	6.3

My research group recently reported on the ultrasound appearance of ovarian cancers among a large cohort of women. The purpose of this cohort study was to quantify the risk of malignant ovarian cancer based on ultrasound findings. We described 142 new ovarian cancer cases in a population of 500,000 women enrolled in Kaiser Permanente Washington, an integrated health plan, between 1997 and 2008, including 72,093 women who underwent pelvic ultrasound. The distribution of cancer histological types is in Table 1. Serous carcinoma was the most common cancer type: In our cohort, it was 50% of the ovarian cancers. Serous carcinoma has the worst prognosis of the ovarian cancer types. Its high frequency and poor

prognosis contribute to the high mortality rate for ovarian cancer overall. The other common histological types of ovarian cancer were endometrioid (12% in our data), clear cell (8.5% in our data), and mucinous (6.3% in our data).

Ovarian cancer types have large differences in stage of diagnosis (a strong predictor of survival) and prognosis independent of stage. The 5-year survival by histological type is in Table 2. Serous cancer is the most frequent and most aggressive, with an overall 5-year survival of 43% as compared with 82% for endometrioid. The survival is strongly influenced by stage at diagnosis, with higher stage numbers indicating more advanced stage.¹ Most serous carcinomas are diagnosed at stage III (51%) or IV (29%) (Figure 1),² for which 5-year survivals from the most recent data were 42% and 26%, respectively. These data reflect the aggressive nature of serous cancer.¹ In contrast, the majority (58% to 64%) of endometrioid, mucinous, and clear cell carcinomas are diagnosed at stage I, similar to nonepithelial tumors (Figure 1). Consequently, the 5-year survivals are 82%, 71%, and 66%, respectively, for endometrioid, mucinous, and clear cell carcinoma. Thus, these cancers behave very differently, even though all are ovarian epithelial cancers.

Table 2. Percent of Women Surviving 5 Years After Diagnosis by Epithelial Ovarian Cancer Type. Data From 2008–2013.

	All epithelial types	Serous	Endometrioid	Mucinous	Clear cell	Sex cord-stromal	Germ cell
Stage							
All	47	43	82	71	66	88	94
Stage I	89	86	95	92	85	98	99
Stage II	71	71	84	69	71	84	93
Stage III	41	42	59	30	35	61	90
Stage IV	20	26	29	13	16	41	69

Figure 1. American Joint Committee on Cancer Sixth Edition Stage Distribution (%) for Ovarian Cancer by Histology, US, 2007-2013, SEER 18 Registries, NCI, 2017. This shows that serious cancers are more likely to be diagnosed at state III, IV (green and teal), compared with other tumor types.

This summary reflects our current knowledge about ovarian cancer histologic types and their associated prognoses. As research results are reported, our knowledge will evolve. For example, recent studies suggest we need to improve our ability to distinguish between high-grade serous and endometrioid carcinomas. Other results suggest that many ovarian mucinous carcinomas are actually gastrointestinal tumors that metastasized to the ovaries and this realization is affecting the reported rates of ovarian mucinous carcinomas (which are declining).^{1,3,4} The categorization of noninvasive tumors classified as borderline is also under investigation and a topic of discussion in the field. These noninvasive tumors have historically been considered in the spectrum of ovarian cancer that have less aggressive behavior. However, many previously described borderline cancers are now generally considered non-malignant.

In summary, when assessing the carcinogenicity of talcum power products, this should focus on invasive serous carcinoma as the most important cancer (based on prognosis) and the most reliable cancer to identify (based on histology and understanding of cancer behavior).

Additionally, over the last decade, there has been research suggesting that many ovarian cancers originate from cells in the distal portion of the fallopian tube. Because the pathogenesis, treatment, and prognosis of serous cancers of the fallopian tube, ovary, and peritoneum are similar, these are now typically considered as a single entity.⁴ This consideration applies to the association with talcum powder product usage discussed in this report.

Risk Factors

Understanding ovarian cancer risk factors is important because analyzing the impact of talcum powder products exposure must consider *covariates, or other characteristics* that a woman might have that might also influence her ovarian cancer risk such as age, inherited genetic mutations, reproductive factors, or family history of cancer. Every risk factor does not have to be considered to come to a valid conclusion; indeed, this is not realistic within the limitations of medical research, and the bias introduced by the exclusion of some risk factors will be small. However, crude analyses that look at the risk of ovarian cancer from talcum powder products without adjusting for any other risk factors must be considered cautiously. For that reason, statistical analyses of research results often adjust for *confounding factors or variables that are covariates that hinder accurate calculation of an association*, for example between talcum powder products and ovarian cancer.

Numerous risk factors are identified for ovarian cancer.⁵ Unfortunately, few can be modified by therapies or lifestyle changes. Risk factors vary by histologic type⁵ but those that increase risk of ovarian cancer include personal or family history of ovarian or breast cancer, inherited mutations including BRCA1 and BRCA2⁶⁻¹⁰ advanced age, white race, increased education, and endometriosis. Other factors that may increase ovarian cancer risk due to estrogen exposure include having no pregnancies or advanced age at first birth, obesity, and postmenopausal hormone therapy.¹¹⁻¹³ Several factors are associated with reduced risk for ovarian cancer including breast feeding, multiple pregnancies, use of oral contraception,

tubal ligation, and removal of uterus, fallopian tubes, or both.¹⁴⁻¹⁸ Smoking is a possible risk factor for ovarian cancer, primarily mucinous subtype, although study results have not been consistent.^{5,19}

Risk factors vary by cancer type. For example, serous cancer is more strongly associated with reproductive risk factors than mucinous tumors²⁰⁻²² and different histologic types have different molecular and genetic profiles.²³⁻²⁵ Serous tumors are more likely to have a cancer-promoting mutation in the p53 gene, whereas similar KRAS mutations are more common in mucinous tumors. Over time, the occurrence of ovarian cancer has changed, in part due to changes in risk factors. For example, small declines in the rates of endometrioid and serous cancer are attributed to declining use of hormone replacement among postmenopausal women.

Etiology: Origins, Causes, Development and Inflammation

Our understanding of the etiology and course of ovarian cancer continues to evolve. Hereditary genetic predisposition increases risk, but overall, accounts for only a small proportion of cancers. And even in women with hereditary genetic mutations, not all will develop ovarian cancer. The majority of ovarian cancers are now believed to arise in the distal portion of the fallopian tube. By convention, fallopian tube, ovary and peritoneal cancers are considered as a single entity. The most widely accepted mechanism for initiation, promotion and progression of ovarian cancer is tissue inflammation leading to a series of responses that result in cancer.

There is very clear and extensive scientific literature describing the relationship between inflammation and cancer across many anatomic areas. Chronic inflammation, and even subtle, subclinical inflammation, is associated with an increased risk of cancer.²⁶⁻²⁸ Many inflammatory conditions predispose to cancer development. Diverse factors that lead to inflammation - infection, chemical exposures, physical agents, autoimmune factors, and even inflammatory reactions of uncertain etiology - can lead to an increase in cancer incidence. For example, there are well described and accepted causal pathways linking inflammation in the etiology of bladder cancer (schistosomiasis, toxic chemicals), cervical cancer (papillomavirus), gastric cancer (H Pylori), colon cancer (inflammatory bowel disease), liver cancer (hepatitis), mesothelioma (asbestos) and ovarian cancer (pelvic inflammatory disease and endometriosis). The biological pathways associated with inflammation include stimulation/interference with a range of biological responses that are involved in initiation of cancer, promotion of cancer, and progression of cancer. Oxidative stress resulting from inflammation can impact all stages of cancer development including cancer initiation (DNA is damaged by introducing gene mutations and structural alterations of DNA leading to inhibition of DNA repair and malignant transformation); promotion (which may be manifest as abnormal gene expression resulting in cell proliferation and decrease apoptosis) and progression (further DNA damage and enhancement of cell growth.²⁹ Local inflammatory response can lead to signaling molecules such as cytokines, chemokines, prostaglandins, growth transcription factors, microRNAs having higher expression that can promote cancer

development and can create a favorable microenvironment for the development and progression of cancer.³⁰ Inflammation impacts every step of tumorigenesis, from initiation through tumor promotion, and extending to metastatic progression. Similarly, the most compelling mechanism for the etiology of ovarian cancer is that of chronic inflammation and scarring in the ovary that leads to malignant transformation and cancer progression. This mechanism involves cell proliferation, oxidative stress, DNA damage and gene mutations.³¹⁻³³ The microenvironment of ovarian cancer contains a broad spectrum of pro-inflammatory cytokines and chemokines contributing to the mechanism.³⁸

There are many processes that can lead to inflammation and tumorigenesis and the exposure to talcum powder products is one such exposure that can strongly enhance the tumor promotion or progression as seen in in vitro and animal studies. For example, normal repeated ovulation leads to injury of ovarian epithelial cells and transformation to malignant cancer cells that can be enhanced by various factors such as talc or asbestos particles. Exposure to talcum powder products can induce the production of pro-oxidant enzymes and reduced production of antioxidant enzymes leads to malignant transformation. In support of inflammation from talcum powder products causing cancer, hysterectomy or bilateral tubal ligation, which would significantly limit ovarian exposure to inflammatory mediators, and toxins, is associated with reduced ovarian cancer risk.

Relationship Between Ovarian Cancer and Talcum Powder Products

The epidemiological evidence described in detail below demonstrates a strong and positive association between exposure to talcum powder products and ovarian cancer and that talcum powder products cause ovarian cancer. Although epidemiologic evidence alone does not provide a definitive mechanism or pathophysiological process that accounts for the increased risk, the evidence for inflammation as described above is very strong. Similarly, epidemiological evidence alone does not confirm the specific component or ingredient in talcum powder products that is responsible for its carcinogenesis. Nonetheless, several constituents within talc powder products are worth highlighting as they may be acting individually or together to create the carcinogenicity of talc powder products inasmuch as they are individually highly carcinogenic

Why Talcum Powder Products were Initially Suspected as Causing Ovarian Cancer

In 1978 samples of commercial body powders were shown to contain asbestos silica minerals. Asbestos was a known carcinogen and about half of the powder samples contained respirable quartz, a lung carcinogen. Concerns were primarily raised that inhaled powder could cause lung scarring, lung cancer, or mesothelioma. In 1971, Henderson observed talc particles deeply embedded in ovarian cancer tissue. The authors noted the close association of talc to the asbestos group of minerals.³⁹ Further concern was raised, in 1982 when a case-control study of ovarian cancer that collected information on talcum powder use reported an increased risk with perineal dusting.⁴⁰ These findings were reported in widely circulated newspapers such as The Globe, raising concern that the powders were carcinogenic because

of the contamination with asbestos, using the relationship between asbestos and lung cancer and mesothelioma as the basis for the concern.

Carcinomic of Constituents of Talc Powder Products

There are hundreds of different constituents and ingredients within talcum powder products in addition to platy talc. Many of these are Group 1 carcinogens (such as asbestos, talc containing asbestiform fibers, heavy metals, and some fragrance chemicals) that likely contribute to the carcinogenicity of the products.

Asbestos

Asbestos is the generic commercial designation for a group of naturally occurring mineral silicate fibers; serpentine mineral fibers are called chrysotile, and amphibole minerals include actinolite, amosite, anthophyllite, crocidolite and tremolites. Talc is formed by complex geological processes acting on pre-existing rock formations with diverse chemical composition. Small amounts of chrysotile (asbestos) may occur in these talc deposits ^{41,42} When talc is mined it may contain asbestos fibers ^{42,43} A study of 21 consumer talcum powders obtained from retail stores in 1971–1975 reported that 10 contained concentrations of asbestos fibers ranging from 0.2 to 14%. ^{41,44} Because of concern that asbestos was present in talcum powder products and the known carcinogenicity of asbestos, it has been reported that voluntary guidelines were established by the cosmetic industry in 1976 to limit the content of asbestos fibers in commercial talc preparations. While currently talcum powder products are believed to be free from asbestos, the data on its continued presence are strong. I have seen evidence of continued presence since 1976. ⁴⁵⁻⁴⁸ For example, Longo tested approximately 50 samples that were taken between the years 1960 through 2000 and the majority of sample are positive for asbestos. ⁴⁷

Asbestos is a known and potent human carcinogen. Asbestos is highly carcinogenic to the lungs, lining of the lungs, and larynx. ⁴⁹ Asbestos is also highly carcinogenic to the ovaries. ⁴⁹⁻⁵⁸ Women working in asbestos-manufacturing industries have an increased risk of ovarian cancer. IARC reviewed the association between asbestos exposure and ovarian cancer in 2012. To assess the relationship, IARC reviewed data primarily from large epidemiological cohort studies of women who had occupational exposure to asbestos as well case-control studies on non-occupational exposure. The context and lengths of exposures varied, along with the type of asbestos fibers to which the women were exposed and the study designs and assessments. Nonetheless, the results were consistent. Most, but not all, were statistically significant and documented a strong and compelling causal association between exposure to asbestos and ovarian cancer, largely the result of the association from cohort studies of women with substantial occupational exposures. ⁵⁰⁻⁵⁴ **IARC concluded that there is sufficient evidence that asbestos is carcinogenic in humans and that asbestos causes cancer of the ovary.** This is the highest risk category. ⁴⁹ IARC also concluded that this categorization applied to all forms of asbestos and to talc containing asbestiform fibers (talc in a fibrous habit or fibrous talc)). IARC also concluded that asbestos is carcinogenic based on animal studies. Camargo completed a systematic review of the relationship between women occupationally exposed to asbestos and ovarian cancer. ⁵⁹ The authors found that of the 18 cohort studies

the pooled standard mortality estimate for ovarian cancer was 1.77 (95% confidence interval, 1.37-2.28). The range in reported SMR values was 1.1– 5.4 across the included cohort studies and the most common values were 2–3. This study supports IARC's conclusion that exposure to asbestos causes ovarian cancer.

IARC explicitly stated that the findings in this Monograph applied to all forms of asbestos, as well as asbestiform talc (fibrous talc).

I reviewed many publications and primary research studies, including experimental and basic science models showing molecular and genetic cancer-promoting changes to cells that occur from exposure to asbestos fibers. I also strongly conclude that asbestos causes ovarian cancer.

Talc

Talc is the primary component of talcum powder products. The chemical structures of talc and asbestos can be similar. While talc particles are usually plate-like, talc can also grow as a fiber which is similar to the group of minerals called asbestos. Both are magnesium silicate and when talc has the fibrous form it is called asbestiform because of its similarity to asbestos. The form of the talc fibers is long and thin, with parallel bundles that are easy to separate from each other, and closely resembles the physical appearance of asbestos minerals. The histologic appearances of mesothelioma and ovarian cancer are similar. The known carcinogenicity of asbestos for lung, pleural, peritoneal and ovarian cancer has led to the theory that the similarity in the fibers and the resulting cancers suggests that talc works mechanistically within the ovary to induce cancer in a way that is similar to how asbestos in the chest induces mesothelioma.

Early observations demonstrated talc particles in both malignant and normal ovaries establishing a route from the perineum to the ovary and shows that many women are exposed to talc.^{39,60} In 2006, the International Agency for Research on Cancer (IARC) reviewed the data on cosmetic (perineal) talc ("non-asbestiform") application and concluded that it is possibly carcinogenic to humans.⁶¹ This is not as strong a recommendation as they made for asbestos and ovarian cancer, but nonetheless is a strong recommendation. IARC classified genital-perineal use of talc-based powder as possibly carcinogenic. Exposure to talc particles can induce an inflammatory response, either directly at the ovary and ovary-fallopian tube juncture, causing local irritation from talc particulates or through more generalized peritoneal inflammation. The mechanism that can lead to cancer is local irritation by talc fibers that disrupts the epithelial surface, increasing rates of cell division and DNA repair that can lead to mutations. Also increased are oxidative stress and cytokine production, indicating inflammation. Fibers that are incorporated into the epithelial cells enter ovarian tissue. This inflammation initiates a series of responses, supported by research, that promote cancer. The reduction in the elevated risk of ovarian cancer from talcum powder exposure after hysterectomy or tubal ligation supports the mechanism by which local irritation and inflammation to the ovary from talc or asbestos causes an elevated cancer risk.

Heavy Metals

Talc powder products can contain Group 1 metals that are considered by IARC as carcinogenic to humans.^{44,49}

This includes nickel compounds which IARC documents cause lung and nasal cavity and paranasal sinus cancer. (IARC100c-10, 2012). Nickel compounds “cause DNA damage, chromosomal aberrations, delayed mutagenicity and chromosomal instability ... and nickel compounds act as co-mutagens.” Talcum powder products also contain Chromium (VI) (IARC100c-9, 2012) another Group 1 carcinogen, where there is sufficient evidence in humans for carcinogenicity (to the nose and nasal sinus). The mechanism includes “DNA damage, generation of oxidative stress and aneuploidy. Talc powder products can also contain Group 2A metals that are considered probably carcinogenic to humans, such as Cobalt which can be found in talc powder products.⁶² IARC considers Cobalt metal with tungsten carbide as probably carcinogenic to humans (Group 2A), but worth noting that a number of the IARC working group members supported an evaluation in Group 1 because they judged the epidemiological evidence to be sufficient, leading to an overall evaluation in Group 1; or they judged the mechanistic evidence to be strong enough to justify upgrading the default evaluation from 2A to 1. The majority of working group members, who supported the group 2A evaluation, cited the need for either sufficient evidence in humans or strong mechanistic evidence in exposed humans. Cobalt metal without tungsten carbide is also considered possibly carcinogenic to humans (Group 2B). Cobalt sulfate and other soluble cobalt(II) salts are possibly carcinogenic to humans (Group 2B).

Any and all of these heavy metals can cause ovarian cancer through an inflammatory mechanism

Fragrances

There are more than 150 different chemicals added to Johnson’s Baby Powder and Shower to Shower products. I reviewed the expert report from Dr. Crowley that concludes that some of these chemicals may contribute to the inflammatory response, toxicity, and potential carcinogenicity of Johnson & Johnson’s talcum powder products. I concur with his opinion.⁶³

IV. Overview of Publications on Genital Use of Talc Powder Products and Ovarian Cancer

To understand the relationship between exposure to talcum powder products and ovarian cancer, I searched for and reviewed scientific papers on this topic. I used several searchable publication databases (Scopus, Embase, Pubmed) and manually searched the reference lists of all articles I found, including a large number of reviews. The results of my review follow the explanation of the main types of studies and articles.

Explanation of study designs and article types

Nearly all published studies that I reviewed used one of two designs: case-control and cohort. Each design has strengths and biases. The commonly held view is that cohort studies are better than case-control studies. This is a misconception thus it is worth explaining their differences. Many articles I reviewed were systematic reviews, which are also explained.

Case-control studies compare people with a condition (cases) by matching them to people with similar characteristics who do not have the condition (controls) to determine the effect of a potential disease-causing factor. They often analyze existing data retrospectively, after people have been diagnosed, and involve tens or hundreds of patients. Cohort studies compare cohorts, or groups of people, who were exposed or not exposed to a potential disease agent. They often collect data on people prospectively, before they develop a disease and track their health over time. Both case-control and cohort studies, if well done, can provide accurate and meaningful information about statistical associations. In general, however, the risk of bias is greater for case-control studies. (An example is recall bias, in which women are more likely to remember and report exposure to talc powder products after they have been diagnosed with cancer compared to women without a diagnosis, perhaps because diagnosed women heard that talc powder products is harmful and are more likely to remember talc use). Nonetheless, when studying a rare disease, the case-control design is frequently highly efficient and desirable as it allows you to assemble a much larger number of cases and can delve in great depth for particular exposures. You can identify all patients who have the outcome of interest, and then query them (and some control group) about any antecedent exposure. The identification of the control group is very important. My large, National Institutes of Health-funded study of cancer risk factors in children is employing a case-control design. This design permits us to ask very detailed questions of a small number of individuals about their various exposures.

Cohort studies potentially avoid some biases of case-control studies since exposures are prospectively assessed and quantified, that is, before disease outcomes. This design also has limitations, though. An extremely important limitation is that because cohort studies are expensive and time-consuming, they rarely focus on a single, narrowly defined question such as the association between regular use of talcum powder products and cancer. Usually, researchers investigate a broad range of questions in cohort studies, so asking patients in-depth questions about any given topic is difficult, especially since tens of thousands of patients may be surveyed on many topics. Further, in cohort studies, having comprehensive assessment of outcomes on all individuals in the cohort is extremely important. Losing patients to follow up (meaning researchers cannot contact or find records on a participant) leads to study bias. The other disadvantage of cohort studies is that a very large number of patients must be assessed over a long period of time to see who will develop a rare outcome (like ovarian cancer). Because of this, typically there will be far fewer patients with disease in a cohort study as compared with case control study (like in this case).

The small number of cohort studies I found on the relationship between talcum powder products exposure and ovarian cancer did not focus on the details of this topic. While they may have included questions about talcum powder exposure, they were not sufficiently nuanced to provide meaningful information. Thus, in most of the cohort studies I found, measurements of exposure were poor, not specific, or inaccurate. Further, several had very short follow-up periods with data or information about the time before the cancer occurred. This negates an advantage of cohort studies, which is being able to learn about exposures before the cancer, eliminating recall bias.

Systematic reviews quantitatively summarize results across multiple studies. One of the rationales of this study design is that individual studies may not have enough participants to yield meaningful results because they are too small or insufficiently powered. Combining small studies can provide more stable and reliable summary estimates of the effects of disease agents and risk factors. Further, a systematic review may be better than a single study, as it provides broader evidence of the results and includes patients from diverse settings. However, in order to statistically combine and summarize the data from different research studies into a single systematic meta-analytic review, the combined studies must ask the same research question and follow sufficiently similar and rigorous scientific methods. A meta-analysis does not compensate for gaps or flaws in an original study: Combining three poorly performed studies does not yield reliable summary estimates even though there may be three times the number of patients. Similarly, combining studies that ask different research questions (for example, assessing women of different ages for a disease in which age is an important risk factor) does not provide reliable summaries. Results from different studies often vary when the studies ask different research questions, have different criteria for including participants, or use different methods. I raise these issues to point out that systematic reviews must be read extremely carefully to ensure that their conclusions are valid.

Table of Reviewed Publications

I identified and reviewed 43 English-language publications that provided quantitative data based on epidemiological studies about the relationship between genital talcum powder exposure and ovarian cancer (Table 3). This list includes 4 cohort studies, 8 systematic meta-analytic reviews, 2 studies that pooled individual patient-level data from several research studies, and 30 case-control studies. One study contributed both the systematic review and a case control study. I also read multiple review articles that are not included in the table. The epidemiological studies were published between 1982 and 2018. I have described the results organized by study design below.

Most studies used a case-control study design with a small number using a cohort study design. Although some studies assessed powder use to any part of the body or assessed the use of talcum powder on diaphragms, condoms or sanitary napkins, the primary research question that I focused on in my review and that was assessed in all included individual research studies, was whether genital area exposure to talcum powder increases risk of epithelial ovarian cancer. Occasionally, study authors assessed combination exposures (i.e., to genitals and other body parts). These studies were included as long as genital powder use was assessed. Nearly all studies adjusted for known ovarian cancer risk factors, but those factors varied. The vast majority of studies found a positive association between any exposure to talcum powder products and cancer. However, the sample size of some studies was small and resulted in high statistical uncertainty. Because of these and other limitations, quantifying a precise association between exposure and cancer was difficult from my review of the literature. The data for some studies may have shown that effects of talcum powder exposure (measured as odds ratios, ORs) was meaningful for cancer development, but with statistical

uncertainty; whereas other studies showed the reverse results, with ORs not showing a positive association, but statistical parameters suggesting that a meaningful association was nonetheless possible because of wide confidence intervals. Therefore, I thought a more precise and careful review was called for. The number of individual women included in each study and the reported or estimated effect size for “any exposure to talc” (adjusted for other risk factors such as age) are in Table 4.

A subset of the studies quantified the *intensity (frequency)* of each woman’s exposure to talc to assess the importance of use patterns (e.g., if a single lifetime use or weekly, monthly, or daily use increased ovarian cancer risk) or *dose dependency (links between the number of exposures and cancer risk, e.g., if doubling exposure doubles risk)*. Further, a subset of studies stratified by cancer type (invasive vs. low malignant potential/borderline) and whether the risks varied by histological types including the four dominant types of serous, mucinous, clear cell, and endometrioid cancer.

Studies that provided data on the frequency of talc use and association by histologic type were included in a separate systematic meta-analytic review that I conducted as part of my review of the literature to include in this report. The reason I completed my own statistical review is further explained below.

Quantifying Exposures

A large proportion of women will have used talcum powder products, highlighting the importance of this issue. However, publications that focus on women reporting “any” genital exposure to talc (i.e., talc at any point in life and for any duration) may be too broad to provide meaningful information. For example, “any use” will include women who applied talc powder products three times over five decades and women who used talc powder products daily, whose might have had 20,000 applications and exposures in comparison to three. Defining a variable as any use is the equivalent to creating a variable of any smoking use, that combines data on individuals who tried one cigarette in their life with individuals with 50 pack years of tobacco use. Combining data on women with infrequent or sporadic exposures with data from women with frequent, sustained use leads to imprecise results, masking any causal associations. Therefore, I selected the studies for my own review that quantified the frequency of talc powder products use as having the most informative data and included them in a separate systematic review.

Summary of Data

I grouped the research studies by their study design. What follows is my review of the cohort studies, systematic review studies, pooled data studies, followed by my own review.

Cohort Studies

Four cohorts (Gertig, Gates, Houghton, Gonzalez) have been published on talcum powder products and ovarian cancer.

Cohort 1: Gertig (2000) ⁶⁴

This first cohort study assessed the relationship between perineal talc and ovarian cancer within the context of the US Nurses' Health Study, a prospective study of 121,700 female registered nurses in the United States who were aged 30–55 years at enrollment in 1976. These are mostly premenopausal women. While talc exposure was not an initial part of the study, questions about talc, including measuring frequency of exposure, were added in 1982; a large subset of the cohort (78,630 women) completed these questions and were included in analyses. Among these women who were followed for 14 years, 307 were diagnosed with epithelial ovarian cancer. After adjusting for confounding variables, the *relative risk (RR)* of developing ovarian cancer (*the likelihood of ovarian cancer in talc users compared to nonusers, with higher RR meaning increased risk stronger association*) among daily users of talc was RR 1.12 (95% confidence interval [CI] 0.82, 1.55, *a measure of statistical uncertainty, with wider ranges indicating greater uncertainty*), which was not statistically significant. However, when results were classified by histologic subtype, the RR of invasive serous cancers was significantly elevated among any users of talc (RR 1.40, 95% CI 1.02, 1.9) and the RR of invasive serous cancer among daily users of talc was higher at RR 1.49 (95% CI 0.98, 2.3).

In this cohort study, the researchers assessed talc exposure before cancer diagnosis, avoiding the possibility of the recall bias of case-control studies. This was a strong strength of this study. A potential weakness was that frequency (i.e. daily) but not duration (number of years) of talc use was measured, so a clear lifetime exposure measure was missing. The researchers nonetheless quantified exposure at the time the talc questions were asked, which was probably strongly associated with prior use (i.e. an approximation on ongoing use). **This study provides strong evidence that perineal exposure to talc increases the risk of invasive serous ovarian cancer, particularly among daily users of talc, with about a 50% increased risk,** which is substantial and meaningful.

Cohort 2: Gates (2010) ²⁴

This study assessed the association between ovarian cancer risk factors and incidence of ovarian tumors by histological type using data from the US Nurses' Health Study combined with data from the Nurses' Health Study II, which included a second period of enrolling participants. Unfortunately, talc use was assessed only on the first survey and not assessed among patients enrolled in the Nurses' Health Study II. Thus, this extends the period of follow up from the initial NHS but does not include greater information about risk factors. Results were presented for any talc powder products use and not for frequency of use. **Thus, this report does not add to a meaningful assessment of the relationship between talc use and ovarian cancer because it used exactly the same patient group as Gertig (2000) but provided less information to quantify the frequency of talc use.**

Cohort 3: Houghton (2013) ⁶⁵

This study assessed perineal talc powder products use and risk of ovarian cancer in the Women's Health Initiative Observational study, in which postmenopausal women aged 50–79 were enrolled in a prospective cohort of women from 40 clinical centers across the United

States in 1993–1998. Overall, 61,576 women were included in analyses, including 429 diagnosed with ovarian cancer. Perineal powder use was assessed at the start of the study. Participants were asked if they **ever used talc powder products** on their private parts (genital areas). Those who responded yes were asked about duration (years) of use. Women were followed for a mean of 12 years and the median age of participants was 63. **Talc powder products use was associated with a 12% increase in risk of ovarian cancer after accounting for covariates** (RR 1.12, 95% CI 0.92, 1.36). When limited to women who used perineal powder for 20 years or more, the RR was 1.10 (95% CI 0.82, 1.48). When limited to serous ovarian cancer, the RR was 1.13 (95% CI 0.84, 1.51.) **The primary limitation of the study was that frequency of talc powder products use was not assessed—and thus the authors could focus only on any talcum powder use.** The imprecision in estimation of talcum powder exposure makes the results not terribly meaningful. The second limitation was the relatively short follow-up of 12 years to identify ovarian cancer diagnoses.

Cohort 4: Gonzalez (2016) ⁶⁶

The Sister Study (2003–2009) followed 50,884 women ages 35 to 75 years in the US and Puerto Rico who had a sister diagnosed with breast cancer. After excluding participants who had bilateral oophorectomies, ovarian cancer, or were lost to follow-up, 41,654 participants were included. At baseline participants were asked about douching and talc use during the previous 12 months, and during follow-up (median of 6.6 years) 154 participants reported a diagnosis of ovarian cancer. The authors computed adjusted hazard ratios (HR) and 95% confidence intervals (CI) for ovarian cancer risk using the Cox proportional hazards model. The authors found no significant association between baseline perineal talc use and subsequent ovarian cancer (HR: 0.73 CI: 0.44, 1.2). **The primary limitations of this study are that the authors combined a large number of potential talc exposures into a single category, including genital talc use in the form of powder or spray applied to a sanitary napkin, underwear, diaphragm, cervical cap, or vaginal area. Further, the authors categorized the exposure based on the 12 months prior to enrollment as a dichotomous ever/never.** Thus not only was it an ever versus never category, the ever category was extremely broad, making the lack of association less meaningful. Further, there are several other factors that make the results questionable, including lower than expected proportion of women who report any exposure to talc powder products, and the lack of a validated approach to ascertainment of ovarian cancer.

Cohort Studies: Summary

Analyses of data from the US Nurses' Health study and the Women's Health Initiative estimated that women who report any exposure talc powder products will have a 12% increase in ovarian cancer compared to women who never report talc powder products use, although this estimate was not statistically significant. The primary limitation of this estimate is that it is based on *any talc powder products* use, which is a weak, crude predictor. Similarly, while the results from the Sisters study did not identify a significant association between talc powder products use and ovarian cancer, they too used a measure of ever use, and included a large number of different types of exposures that would not be expected to measure a single exposure. The most important and meaningful conclusion that I draw from the cohort studies

is from the Gertig 2000 study using data from the US Nurses' Health study: That women who are **daily users of talc have an approximately 50% increase (OR 1.49) in their risk of invasive serous** cancer, the most lethal and frequent type of ovarian cancer.

Systematic Reviews

I found nine systematic reviews that summarized the relationship between talc and ovarian cancer, summarized below. These reviews were completed using various subsets of the full list of publications. The systematic reviewers are presented with the most recent first, because the more recent studies tended to be more complete, comprehensive and the most methodologically rigorous.

Systematic Review 1: Penninkilampi (2018) ⁶⁷

This comprehensive systematic review of the association between any genital use of talcum powder products and ovarian cancer conducted a stratified analyses showing the association by frequency of talc use and histologic cancer subtype. The methods of the study are well described. The researchers identified studies using six electronic databases and reviewed publications with 50 or more cases of ovarian cancer. They identified 24 case-control studies describing 13,421 cases and the three cohort studies (890 cases, 181,860 person-years) described above. Any reported use of perineal talc powder products was associated with increased risk of ovarian cancer compared to no use (OR = 1.31; 95% CI 1.24, 1.39). Women with more than 3600 lifetime applications had slightly higher risks (OR = 1.42; 95% CI 1.25, 1.61). Women who reported long-term (>10 years) talc use also had an increased risk (OR 1.25; 95% CI = 1.10, 1.43). The association between any talcum powder product exposure and ovarian cancer was limited to studies that used a case-control design. The cohort studies showed an increased risk of serous invasive cancer subtypes for perineal talc use compared to no use (OR = 1.25; 95% CI = 1.01, 1.55). While serous and endometrioid cancer were associated with talcum powder products use, no association was seen with mucinous or clear cell cancers. The review authors concluded, from the data, that perineal talcum powder use and ovarian cancer were consistently associated, with a slightly higher risk in women who report greater usage. Some variation in the magnitude of the effect of talcum powder products was found when considering the study designs and ovarian cancer subtypes. Several small methodological issues are that Penniniklampi may have included some groups of patients more than once in analyses and did not include updated data or previously unpublished data available from a research consortium on ovarian cancer. However, these concerns are unlikely to have had a significant impact on their estimates.

Table 3. List of Included Studies, sorted by study design

	Study Type	Year	Author	Journal	Title

Odds ratio, likelihood (odds) that an outcome will occur because of a particular exposure compared to the likelihood it will occur without the exposure. 95% CI, 95% confidence interval, a measure of statistical uncertainty that says with about 95% of the time that the true value is within the range of numbers. The wider the range, the higher the uncertainty. NR, not reported.

* crude unadjusted estimate

** approximate, unadjusted estimate

*** assessed perineal or thigh use, and controls all have cancer

Berge (2018) ⁶⁸

This large, comprehensive systematic review of the association between genital use of talc powder products and ovarian cancer also had well-described methods. Berge reviewed and abstracted data for 27 publications and reported an overall summary estimate of the association between talc exposure and ovarian cancer. For six of the reviewed studies, Berge included data published in a pooled data analysis, from Terry ⁶⁹ described below) that had not been previously included in the original publications. Overall, data on 15,230 women with ovarian cancer were analyzed (a number that is incorrectly reported in the paper). This is slightly higher than the number included in Penninkilampi because of the additional patients from the Terry publication. The summary estimate for risk of ovarian cancer for women who ever used genital talc was RR 1.22 (95% CI 1.13, 1.30). When stratified by histologic type, serous carcinoma was the only type with a significant association to talc use (RR 1.24, 95% CI 1.15, 1.34). There was no difference in risk when tumors were categorized as invasive versus borderline.

To assess relationships among ovarian cancer and intensity and duration of use, these measures were analyzed separately rather than as a combined measure that would give an estimate of the total number of exposures; the analyses did not demonstrate a significant dose response. Importantly, these measures were assessed only in five studies with the results on frequency of use presented as increased risk per additional day per week of talc use, which assumes a very linear association. I was not able to identify the original studies used in the review that reported the results with this level of granularity. Because of the small number of studies, the results (3% increase in risk per additional day of talc used, with high statistical uncertainty) were not surprising.

The authors also stratified the results by the study design (as did Penninkilampi) and found that the association between talc exposure and ovarian cancer was significant only for the case-control studies, although, as above, the cohort studies had the weakest definition of exposure. The primary limitation of the review is defining exposure as ever having used talc. As described above, this is a broad, vague definition that probably dilutes any estimated association, as it includes both women with trivial use and with regular use. A second limitation is that the included studies adjusted for a variety of covariates although this is unavoidable in this type of summary. The large difference in general between adjusted and crude results emphasizes the importance of adjustments when estimating particular risk.

Langseth (2008) ⁷⁰

This systematic review of the association between genital use of talc powder products and ovarian cancer included 21 publications. The overall pooled odds of cancer were OR 1.35 across all studies. Several authors of this systematic review were involved in an IARC report on talc exposure. They analyzed a subset of eight studies used in the IARC report that were considered to be the most informative for estimating ovarian cancer risk. Analysis of these more relevant, higher quality studies, produced an increased ovarian cancer risk of 30 to 60% (presumably OR 1.3–1.6) associated with talcum powder use. This subset analysis did not document a dose response or assess associations by cancer types.

Huncharek (2007) ⁷¹

Huncharek summarized the results of nine studies that reported on the association between talc used on contraceptive diaphragms and ovarian cancer. No data on perineal talc exposure were analyzed and the data are not included herein. Of note, the reported methodological details suggest a very poorly designed and conducted study. Some of the included papers do not even mention talcum powder products used with diaphragms. This systematic review is poor quality.

IARC (2006) ⁶²

Beginning in 1969 the International Agency for Research on Cancer (IARC) began a program to critically review the data on the carcinogenic risk of chemicals to humans. They subsequently expanded their reviews to include evaluation of carcinogenic risks associated with a range of exposures (including risks associated with biological and physical agents, lifestyle factors, complex mixtures of exposures, occupations, etc.) The purpose of the IARC program is to elaborate and publish detailed monographs including critical review of data, to evaluate human risks, and to indicate where uncertainty exists and where additional data are needed. They also give an overall assessment of the strength of the associations. It is worth noting that the individuals who contribute to IARC reports (the Working Group) include extremely knowledgeable and unbiased scientists who have specific content expertise and who have no apparent conflicts of interest. Invited specialists and representatives from international health agencies are brought in to supplement the scientific experts. In their evaluation, they heavily weight whether data support a conclusion of causality. They score evidenced into four categories, ranging from a) evidenced suggesting lack of carcinogenicity; b) inadequate evidence of carcinogenicity c) limited evidence of carcinogenicity and d) sufficient evidence of carcinogenicity. Category c is used when there is possibly carcinogenicity, and this category is not used lightly. An exposure meets category c if there is a positive association between observed exposure to the agent and cancer for which a causal interpretation is considered by the Working Group to be credible, but chance of bias or confounding could not be ruled out. They further categorize agents into 3 groups: Group 1, corresponding to d above (sufficient evidence), the agent is carcinogenic to humans; Group 2, which includes 2A (the agent is probably carcinogenic) and 2B: the agent is possibly carcinogenic to humans. A review focused on the risks associated with carbon black, titanium oxide and talc was published in 2006. The review included a detailed review of the individual studies examining perineal talc use as a risk factor for cancer. IARC concluded that perineal use of talc-based body powder is possibly carcinogenic to humans (Group 2B)

Huncharek (2003) ⁷²

This review of 16 studies assessed the relationship between genital exposure to talc and ovarian cancer using data for 5260 women with cancer and 6673 controls. The pooled OR for ever being exposed to perineal talc powder products was 1.33 (95% CI 1.16, 1.45). Small differences were observed in the estimated ORs by whether controls in the case-control studies were from hospital populations (OR 1.19, 95% CI 0.99, 1.4), or the general population (OR 1.38, 95% CI 1.25, 1.52). I believe these differences are small. In general, in case-control

studies, population controls are likely more relevant and valid. However, as with several of the other reviews, talcum powder exposure was assessed as any exposure rather than quantifying by intensity. No stratification by tumor subtype or invasiveness was performed.

Gross (1995) ⁷³

Gross reviewed 10 studies on the association between talc exposure and ovarian cancer using data on 1333 women with cancer and 2362 without cancer. To summarize the RR of malignant epithelial cancer types due to any exposure to talc, adjusting for ovarian cancer risk factors, the authors combined results from five studies for OR 1.29 (95% CI 1.02, 1.63). For an analysis of all cancers (borderline and invasive), they included data from seven studies for a similar OR of 1.31 (95% CI 1.08, 1.58). Notably, the authors did not provide any methodological details of how they identified, assessed, and combined studies, making the results difficult to fully interpret. As with several of the other reviews, they assessed any exposure to talc.

Harlow (1992) ⁷⁴

Harlow reviewed five previously published studies and summarized an OR, not adjusted for confounding factors, and added his own data for a crude estimated OR of 1.3 (95% CI 1.1, 1.6). Unfortunately, no methodological details were provided on how studies were identified, assessed, and combined or how exposure was defined, making the results difficult to fully interpret. Further, only the combined, estimated, non-adjusted crude OR was reported. Of note, the results of the five published studies used in the review (in contrast to the summary) are well described and of good methodological quality.

Systematic Reviews: Summary

The systematic reviews provide a remarkably consistent estimate of an approximately 30% increase in the risk of ovarian cancer associated with any talc powder products use. The studies summarized in the systematic reviews reported consistent results with little variability and closely overlapping estimates for ovarian cancer risk due to talc use. Further, the reviews suggest that the risks are greater for invasive serous cancer. I believe Penninkilampi provides a comprehensive and high quality review and his estimate is that women who regularly use talc powder products, defined as >3600 lifetime applications, have a 40% increased risk of ovarian cancer compared to women with no regular talc powder product use. The association was significant for serous cancers.

While the methodological approaches of these systematic reviews were generally valid, I believe they all shared the weakness of focusing on any talcum powder use rather than daily talcum powder use, and this motivated my own review (below).

Pooled Data

Two large studies pooled data from several studies. They are worth describing because of their larger sample size and strong methodology in comparison to the individual case-control studies.

Pooled Data 1: Terry (2013)⁶⁹

This report pooled data on ovarian cancer patients from a national research consortium and assessed the relationship between talc powder products exposure and ovarian cancer by histologic subtype and invasiveness. Data were from eight case-controlled studies and importantly included previously unpublished data. The authors tried to unify definitions across the studies, but the definitions nonetheless varied widely. The prevalence of genital powder use in the controls varied widely across participating study sites, ranging from 15%–45%, suggesting either large variations in the underlying populations or, probably more likely, variation in the definition of powder use that led to these differences.

The data were for a total of 8525 cases and 9859 controls in the primary analysis. The authors found that **genital talcum powder use was associated with an approximately 24% increased risk of epithelial ovarian cancer (OR 1.24, 95% CI 1.15, 1.33)**. When stratified by cancer type, the risk was increased for all cancers except mucinous cancer. Risks were approximately equally elevated for invasive and borderline tumors. They used a subset of patient data to determine RR of ovarian cancer for the highest talcum powder users, measured as cumulative lifetime perineal applications (defined as applications per month and months of the year). They also considered age (inclusion in the highest user group required more use at age 70 than age 40) and assessed risk of cancer among the highest users. **The odds of cancer in the highest talc exposure category was higher than for women who ever used talc (OR 1.37, 95% CI 1.19, 1.58)**. A significant dose response was seen when data on all patients were analyzed, with greater exposure leading to greater risk.

Pooled Data 2: Cramer (2016)⁷⁵

Cramer conducted several case-control studies on the relationship between genital talc powder use and ovarian cancer. He pooled data from a large number of these studies, described as reflecting study enrollment in 1992–1997, 1998–2002, and 2003–2008. This publication reports the analysis of pooled data from these separate enrollment phases and a more detailed characterization of those data. Cases were women who resided in Eastern Massachusetts and New Hampshire diagnosed with epithelial ovarian cancer between the ages of 18 and 80. Controls were women identified through random-digit dialing, driver's license lists and town resident lists. Women were interviewed in person, and details of talc use were elicited including the number of applications per month (allowing assessment of frequency of use), timing of use, and lifetime exposures. These descriptions gave far greater detail than most other reports and are thus an important contribution to the field. Further, more demographic and clinical history were obtained and described in these enrollments than for other reviewed studies. This report gave associations from pooled data for 2041 cases and 2100 controls. The larger size of the population, unified variables, and greater detail about cases and controls allowed a larger number of stratifications than other studies.

Overall, genital talc use was associated with an OR of 1.33 (95% CI 1.1.6, 1.52). An important observation was that risk decreased with time since last use. Thus, how often women regularly used talcum powder (daily, or weekly or monthly) was meaningful for predicting ovarian cancer risk, but not if the women had not used talcum powder for 5 or more years.

Women who reported using talcum powder daily (>30 applications per month) had an OR of 1.46 (95% CI 1.2, 1.78). Of note, among women in the ovarian cancer case group who used talcum powder, daily was the most commonly reported frequency of use. **When analysis used data on women who reported their total number of talcum powder applications, those in the highest group category (>7200 lifetime applications, the equivalent of 20 years of daily application) had an OR for ovarian cancer of 1.49 (95% CI 1.06, 2.1).**

Cramer conducted detailed analysis of factors that could influence/interact with the association between talcum powder and ovarian cancer. Some of the results are quite striking. First, a very strong interaction with race was noted. **African-American women seem to be at a particularly elevated risk of ovarian cancer following talcum powder exposure (OR 5.08, 95% CI 1.32, 19.6) compared with white women (OR 1.35, 95% CI 1.17, 1.55).** This finding calls for greater research given the higher incidence, and poorer outcomes among African American women. Asian women seem to be at reduced risk (OR 0.04, 95% CI 0.01, 0.34). **Analysis showed a strong relationship with menopausal status and use of hormone replacement therapy.** ORs were significantly increased in premenopausal women (OR 1.41, 95% CI 1.13, 1.75) and **postmenopausal women who used hormone treatment (OR 2.21, 95% CI 1.63, 3.0).** Postmenopausal women who did not use hormone therapy were not at increased risk of ovarian cancer (OR 1.0, 0.68, 1.49). **Interestingly, the risk of ovarian cancer among postmenopausal hormone-treatment users was elevated only if they used hormones before hysterectomy and tubal ligation but risk was substantial (OR 3.49, 95% CI 1.39, 8.75) if talcum powder was used before these surgeries (OR 5.85, 95% CI 2.89, 11.9) compared to talcum powder use both before and after surgery.**

These findings merit further assessment in other populations but raise the possibility that estrogen is important in ovarian carcinogenesis. The authors also stratified analyses by histologic type and found that the relationship between ovarian cancer and frequency of talcum powder use was significantly elevated for invasive and borderline serous cancer and invasive endometrioid cancer, but not for mucinous, clear cell or mucinous borderline cancer. **Among the most frequent users of talc the adjusted OR for invasive serous cancer is 1.54 (95% CI 1.15, 2.07).** This relationship was even stronger among premenopausal women (OR 1.85, 95% CI 1.21, 2.8) compared to postmenopausal women (OR 1.33, 95% CI 0.96, 1.85).

Pooled Data of Case-Control Studies: Summary

The increased risk of ovarian cancer associated with talc use was estimated at around 40% across these studies. The increased risk for serous cancer was even higher at 50%.

Case-Control Trials

A large number of case-control studies are published—too many to dedicate a paragraph to summarizing the methods of each.

21,24,36,40,74,76-99

I carefully read and abstracted data from each study. Without assessing the quality of the case-control studies, I included them in a table and sorted them by size of the reported effect

of talc on ovarian cancer risk. It's a way to get an overview of what they report – and Viewing them in this way is easy to see the general direction of the effect. All but two demonstrate a positive association ($OR > 1$) between any talc powder products use and ovarian cancer, with ORs ranging from 0.73–3.9 across studies, Table 5 .

V. Rationale for and Explanation of the New Systematic Review

In previous systematic reviews that I have conducted, I have obtained the most meaningful and consistent results by narrowly defining the research topic of the review, including only studies that provide data on this narrow topic in a well-defined population and stratifying my analysis of the studies' results by relevant factors such as age or race/ethnicity. The benefit of this approach is more accurate, precise, and meaningful results, while the potential tradeoff is a reduction in general applicability of the results, because many studies may be excluded for inadequate data. I believe greater accuracy is more important because I want to be certain about the data I am describing. For example, when I conducted a systematic review on the use of transvaginal ultrasound as a diagnostic test for endometrial cancer, I initially stratified

the results by patient use of hormone therapy. The reviewed studies had consistent results, but only if profoundly different diagnostic criteria were applied for women who did and did not use hormone therapy. For this reason, I completed one review on hormone users and another on non-users. In this case, I had sufficient data to assess both groups.

In this review on talcum powder use, I had sufficient data to summarize results for regular users of talcum powder (as close to daily but reflecting use of talc powder products several times per week) and risks of serous cancer; I did not have sufficient data to summarize results for occasional users or risk of other cancer types. I believe the most important research question to answer in this review is whether regular exposure to talcum powder is associated with ovarian cancer. I want to point out that this does not mean that other uses (i.e. less than approximate daily use) does not cause ovarian cancer, nor that talc powder products does not cause other types types of ovarian cancer (e.g. endometrioid cancer). Thus, for the systematic review below of case-control studies on the relationship between perineal exposure to talcum powder products and ovarian cancer, I focused on whether regular use of perineal (genital) talc increases the risk of the ovarian cancer. When possible, I focused on the most common and serious type, invasive serous ovarian cancer.

VI. New Systematic Review of Literature Quantifying Association Between Regular Frequent Genital (Perineal) Talcum Powder Products Application and Ovarian Epithelial Cancer Risk with A Focus on Invasive Serous Cancer.

Literature Search

I performed a literature search to identify primary research studies (not reviews) that included patient-level data on the association between talc and ovarian cancer. The literature search was performed in the Medline, Embase, and Scopus databases using keywords “ovarian cancer,” “talc,” “perineal powder” and “genital powder.” Abstracts of resulting publications were reviewed to identify if they addressed the topic and included data. Only English-language articles were reviewed. The references of identified articles and reviews were scanned to identify additional publications. Review articles, editorials, letters to the editor were excluded.

Article Selection

Articles were included based on relevance to the question: **Does the regular (as close to approximately daily) use of genital (perineal) talcum powder increase invasive epithelial ovarian cancer?** Because daily use was the most dominant use category, when studies stratified their results into quartiles of use, or lifetime applications, I included the highest use category that had a reasonable number of data points to reflect daily use. Wherever possible, data on invasive serous cancer were abstracted separately. When I found duplicate reports on the same patient group, the largest and most detailed publication was included. This usually meant the most recent publication, but not always. An important caveat is that I could not always identify duplicative results. I included data from the Terry 2013 pooled data study because it included new data from previous studies. I also included data from the Cramer

2016 pooled analysis and earlier publications with duplicative patients were not included. But I calculated the results both including and excluding these studies.

Exclusion

Studies were not included if they reported only crude ORs unadjusted for confounding factors. A few studies were excluded because, the research methods were poorly defined, even though they reported on women who frequently used talcum powder. Studies that asked participants a single question about ever use of talcum powder, without further quantification of exposure, were not included in the summary.

Defining Talcum Powder Products Use

Regular use was defined ideally as daily or at least more than 3 uses per week. I also accepted studies that defined use as “regular” where the description made it clear that this was regular use. Studies that reported “regular use” but defined it as use of less than this frequency, were not included. Regular use was selected to differentiate occasional use (which may include one-time or infrequent use or use during only a particular time of a woman’s menstrual cycle) from sustained regular use. Studies that asked participants a single question about ever use of talc, without further quantification of exposure, were not included in the summary. For example, Purdie reported that 52–57% of women reported ever using talc without further quantification and was not included. Several studies asked about *regular use* defined as at least once a month. These studies were not included unless they further characterized women into different categories of use; if so, I included data for women in the highest use category as long as this was group was large enough to be meaningful. When studies asked about ever use but defined use and stratified results by use, I included any data that may have reflected daily use. This measure of regular use is imprecise but is more accurate and meaningful than evaluating talcum powder exposure as any use.

Stratification of Analyses: Focus on a Single Histologic Type Where Possible

My review focused on invasive serous cancer where possible, but also included all invasive cancer. The decision to focus on a single histologic cancer type was in part because ovarian cancers include a broad range of types and association of talc and ovarian cancer might differ by type. I chose serous cancers because they are most common invasive ovarian cancer type. Importantly, serous ovarian cancer is the only histologic type for which most individual research studies accumulated sufficient cases for valid statistical analysis. This cancer type also has the least uncertainty in pathological diagnosis (see Section III, Histologic Types). Further and most importantly, serous ovarian cancer is the most aggressive histologic type, so identifying causal factors is important. Finally, I focused on invasive cancer (as opposed to borderline cancer) because the risk of death from invasive serous tumors is far higher than for noninvasive types, with growing consensus that borderline tumors may not be malignant.

Type of Exposures

Studies were included if they reported on perineal exposure (rather than exposure through sanitary napkins, diaphragms, or condoms) as this is the most common exposure type and is

likely to reflect the most consistent exposure. I did not exclude studies if they reported combined use, as long as the exposure included perineal use.

Statistical Analysis

Two individuals (Smith-Bindman and a consultant biostatistician) reviewed an abstracted data from each publication. Differences were resolved by consensus. The focus of the review was on quantifying the association between regular talcum powder products use and ovarian cancer, with a sub analysis on serous cancer and invasive cancer. Meta-analysis was performed using the metafor package in R (Version 3.5.1). The rma function was used to apply linear mixed effects models to study results and calculate summary statistics on effect size. Due to varying amounts and types of available data from each included publication, adjusted odds ratios (OR) and standard errors were used as the model inputs. Standard error (SE) was estimated using the relationship: 95% confidence interval = Effect size \pm 1.96*SE, assuming a roughly normal distribution of data and roughly symmetrical upper and lower confidence interval bounds. Incorporating adjusted ORs and SE into models in this way provides the added benefit of allowing model use of covariate-adjusted data (versus crude OR data). Weighting was done based on estimates of inverse variance. Study result heterogeneity was estimated based on maximum likelihood methods and was summarized via an I² statistic and associated p-value. The decision to include results from the cohort study by Gertig and colleagues (2000), which reported relative risk (RR), was based on the estimation that the RR value was only nominally different from the OR, a safe assumption in a study sample where less than 0.4% of the cohort developed the condition-of-interest.

Results

Overall 10 studies reported on daily talc powder products use and the risk of ovarian cancer. These studies were homogenous, and the odds of ovarian cancer associated with regular use was 1.43 (95% CI 1.15 1.71). The included studies with associated point estimates are shown in a Forrest Plot in Figure 2

Figure 2. Forrest plot showing odds of ovarian cancer associated with regular use of talcum powder products.

The primary analysis of this excluded Terry, but the results were nearly identical if Terry was included

There were studies reported on regular talcum powder use and invasive serous cancer (or all invasive cancer if serous not reported) These studies were homogenous. The odds of invasive serous cancer associated with regular use was 1.52 (95% CI 1.15, 1.88). The results were similar when assessing the odds of all serous cancer.

Figure 3 Forrest plot showing odds of ovarian cancer associated with regular use of talcum powder products and invasive serous cancer.

New Systematic Meta-Analytic Review: Summary

The results of my systematic review of case-control studies on talcum powder use and ovarian cancer risk were consistent and indicate a **50% increase in risk of serous invasive cancer related to routine talcum powder exposure compared to no exposure**. This review had limitations including that study results were self-reported. I tried to be consistent in defining exposure, but this factor was subjectively determined by the individual studies. I tried to eliminate overlap of participant populations used in the included studies, but some patients may have contributed data to more than one study.

Overall Summary of the Epidemiology Data Describing the Association Between Talcum Powder Products and Serous Ovarian Cancer

I conclude, based on the review of the available primary studies, systematic reviews and my own quantitative review, that regular exposure to talcum powder products increases ovarian cancer risk by around 50%. The existing systematic reviews (in particular Penninkilampi and Berge) also concluded a significant increase in ovarian cancer risk following talcum powder exposure.

VII. Other Relevant Factors

Research Supporting Talcum Association with Ovarian Cancer: Transit to Ovary and Risk Reduction on Interruption

Evidence from relevant studies is clear that talcum powder particles applied to the genital region will ascend through the vagina and fallopian tubes and enter the pelvic cavity, reaching fallopian tubes and ovaries. In humans, this route has been established experimentally by labelling inert particles, applying them to the perineum just prior to planned hysterectomy, and then recovering them from the fallopian tubes following surgery. [Egli Fertil Stwriil 1961]

Further, talc particles have been found in normal and malignant ovarian tissue. Henderson found that in 10 of 13 tested epithelial ovarian cancer tumors, 75% had talc embedded in the tissue. This result confirms that talc reached to the areas with cancerous tissue, but not that it caused the cancer. Histological evaluation of ovaries removed because of ovarian cancer or benign conditions have identified both talc particles and asbestos fibers in the ovarian tissue, further supporting that particles applied to the perineum reach the ovaries.^{60,100} Heller found that in all women in a study who were having ovaries removed for benign ovarian growth had talc in their ovaries. These results confirm that talcum powder applied to the perineum may be absorbed into the vagina and migrate or be transported to the tubes and ovaries.¹⁰¹⁻¹⁰⁴ In 1967, Graham and Graham demonstrated that intraperitoneal application of asbestos in guinea pigs and rats results in overgrowth of ovarian epithelial cells comparable to the histologic changes in epithelial ovarian tumors in women. The greater frequency at which talc particles are discovered in ovarian cancerous tissue than in normal ovarian tissue further supports that these particles may be causing cancer.

Several epidemiological studies evaluated the risk of ovarian cancer associated with talcum powder products before and after women had tubal ligation or hysterectomy, which surgically removes the route by which talc reaches the ovaries. The studies strongly suggest that the increased risk of ovarian cancer associated with talcum powder products use is reduced or eliminated after tubal ligation or hysterectomy. The results support that the risk from talcum powder products is elevated when women have an open pathway from the perineum to the ovary that enables powder components to reach the ovaries via unobstructed fallopian tubes., The collective results demonstrate that talcum powder products are carcinogenic through direct transport/migration to the fallopian tubes and ovaries.

Variation in Risk when Talc Use is Discontinued

Several studies showed that the risk of ovarian cancer associated with talc powder products decreases as the time from discontinuation of powder use increases. For example, Cramer found an elevated risk of ovarian cancer with talc powder products use and the risk decreased as time since last use increased.⁷⁵

VIII. Consideration of Causality of Talc Powder Products and Ovarian Cancer : Bradford Hill Analysis

Causality is easiest to determine in studies such as randomized controlled trial, in which participants are randomized to receive or not receive a treatment, then their health is followed to see their response. However, people cannot ethically be randomized to be exposed to a potentially cancer-causing agent. Therefore, when assessing risk factors for cancer, the Bradford Hill Factors are often used. They provide a framework for assessing the weight of evidence to help decide if causality is likely, given a particular association, such as between talcum powder and ovarian cancer. The guidelines are imperfect and provide a framework as compared with an absolute set of criteria.

I address each of the Bradford Hill factors below, with my understanding of how the evidence of talcum powder products exposure supports or refutes causality. While the Bradford Hill Factors include nine aspects of association, they should not be used as a checklist for causation. Instead, they can help interpret associations and aid in inferring causality. For each factor, I have highlighted why I believe this factor is more or less important.

A) Strength of Association

It is frequently argued that the larger an apparent association, the more likely the association is to be real (causal) and important for epidemiological assessment. This would suggest that an OR of 2.0 is more likely to indicate causality and importance than an OR of 1.5. While this is often argued, I do not believe this is necessarily the case. If a risk factor increases the risk of disease by 50%, and the exposure is common, it will have a far greater impact on a number of people, in comparison to a rare exposure that has a higher associated OR. And if the association is truly one that increases risk by 50%, then this is the magnitude of the association that will be detected. It is not intuitive that if an exposure increases a risk by 50%, this difference is not discoverable compared with an exposure that increases risk by 100%. A larger association between exposure and disease may be easier to identify, but I do not believe it is more likely to indicate causality or importance.

As an example, Table 6 shows an overview of the relationship between bladder cancer and two of its known risk factors; occupational industrial chemicals and smoking. Several industrial chemicals such as 2-naphthylamine are strongly associated with bladder cancer risk. In 1954, Case et al. reported a 200-fold increased bladder cancer risk for workers exposed to 2-naphthylamine. In cohort studies of rubber industry workers, elevated standardized mortality ratios (SMRs) as high as 253 (95% CI 93, 551) were reported. Use of some of these chemicals are now prohibited in Europe and their use is regulated in the United States because they cause cancer.(OSHA, 2011).

Cigarette smoking is also a known bladder cancer risk factor. However, the RR for smoking and bladder cancer is around 3, and therefore about 100 times lower than the RR for exposure to industrial chemicals. Yet bladder cancer is the second most common cancer attributed to smoking in the United States. It impacts a very large number of individuals. Of the 70,000 cases of bladder cancer diagnosed each year, as many as 60% are estimated as attributable to smoking.

Using the RR magnitude to quantify the “importance” of these two risk factors, industrial chemicals and smoking, would be misleading. Smoking will result in far more cancers than industrial chemicals, even though the RR is much lower. In the crude data in Table 6, of the approximately 70,000 bladder cancers diagnosed annually in the United States, 50,000 are thought to result from cigarettes while fewer than 1000 result from occupational exposures. A 50% reduction in smoking exposure will save 25,000 men from getting bladder cancer. Reducing industrial chemical exposures will saving around 500 men from getting bladder cancer. Thus, any impact on reducing known exposures for bladder cancer has the potential to be around 50 times more impactful if directed at smoking.

Table 6. An example showing the number of individuals who might be impacted through exposure to an occupational chemical that leads to bladder cancer as opposed to smoking.

	Occupational Exposure	
	2-naphthylamine	Smoking
Estimated odds ratio associated with exposure	200	3
Number of individuals exposed annually	10,000	50,000,000
Bladder cancers due to exposure annually	1000	50,000
Impact on number of cancers diagnosed annual if exposure reduced by 50%	500	25,000

The bladder cancer example highlights that a factor that increases risk by 50% will have an enormous impact on population mortality if the exposure is common or if the cancer is particularly lethal. This is certainly the case for talcum powder products, which are used by as many as half of all women in the U.S. Women’s use of talcum powder products is so widespread that even a relatively modest increase in risk would pose a sizeable health risk to the population. Further, a 50% risk increase is particularly important for ovarian cancer, which has a high mortality rate, with rare early detection.

Defining a “strong” association is critical for assessing potentially causal relationships. A current concept in epidemiology is that considerations about whether a factor causes a disease should weigh statistical validity and significance and the multiple factors that influence the disease. Thus, assessing *strength of association* when inferring causality requires examining underlying research and analytic methods, comparing the weight of evidence in the literature, and considering other contextual factors. The data supporting the causality of talcum powder products exposure for ovarian cancer is extremely strong.

Using the existing evidence, I reviewed and assembled for this report, I estimated how many ovarian cancers that occur each year in the United States are likely to be caused by exposure to talcum powder products in comparison to other risk factors for ovarian cancer, Table 7. This is a relatively simple analysis, but nonetheless is informative. The total number of ovarian cancers that are estimated to occur in the US annually is 22,240, and these will occur among

the 50.8 percent of the U.S. population of 311 million who are women. Of these ovarian cancer cases, approximately half (11,120) will reflect invasive serous carcinoma. For the purpose of this simple analysis, I have assumed that the elevation in ovarian cancer risk associated with talcum powder product exposures occurs only with invasive serous carcinoma. This is not true, but the data are the most certain for these cancer and this is a conservative assumption (meaning the true number of cancer and proportion of cancers caused by talcum powder product users will be even higher than my calculation). A proportion of ovarian cancers will occur among women who regularly use talcum powder products, and the remainder will occur in women who do not regularly use talcum powder products. If we estimate that women who use talcum powder products regularly have a 50% elevated risk of invasive serious cancer and we estimate the number of women who are exposed to daily talcum powder products is between 10% and 30% (this proportion is fewer than ever users of talcum powder products), then between 1,589 and 4,351 women will be diagnosed each year with invasive serous cancer caused by the exposures, reflecting between 14% and 39% of all invasive serous cancers and reflecting between 7% - 20% of all ovarian cancer diagnosed each year. This is a tremendous risk. This is a very large number of cancers to be caused by a product that provides no medical benefit. This Bradford Hill Factor of the Strength of the association is important and is met.

Table 7 An estimate of the number of ovarian cancers and invasive serous cancers caused by regular use of perineal talc powder products.

Proportion of women who regularly use Talcum powder products	Annual Invasive Serous Cancer in Women Exposed to Talcum Powder Products	Annual Invasive Serous Cancer in Women Not Exposed to Talcum Powder Products	% Invasive Serous Cancer in Women Exposed to Talcum Powder Products	% of all ovarian Cancer in Women Exposed to Talcum Powder Products
10%	1,589	9,531	0.14	0.07
20%	3,033	8,087	0.27	0.14
30%	4,351	6,769	0.39	0.20

B) Consistency of Associations in Different Populations and Studies

Another consideration for association and causality is consistency of the data. The data on the association between genital talc and ovarian cancer are highly consistent. The relative stability in the estimated increase in the risk of ovarian cancer associated with talc powder products use (50% increase for regular users of talcum powder and serous cancers; around 40% increase for all epithelial ovarian cancer and regular users of talcum powder products), as assessed across time and in diverse populations with diverse study designs, strongly argues that the causal association is real and satisfies the Bradford Hill guideline for consistency of associations across populations and studies.

C) Specificity Between Cause and Effect

The Bradford Hill factors suggest that associations are more likely to be causal when an exposure causes only one disease. While some examples of highly specific exposures and outcomes exist, many exposures and health concerns involve complex chemical mixtures and low-dose environmental and occupational exposures complicated by a variety of personal risk factors. A recent review stated, "The original criterion of *specificity* is widely considered weak or irrelevant from an epidemiologic standpoint."¹⁰⁵ Asbestos, for example, is associated with a range of cancers and various exposures. Regardless of doubts about the meaningfulness of this factor, talcum powder products are primarily associated with ovarian cancer and thus fulfills the specificity consideration, although this consideration is not one of the most important considerations for causality in my expert opinion.

D) Temporality

An exposure must come before an outcome for the exposure to be causal. Bradford Hill explained that for an exposure-disease relationship to be causal, exposure must precede the onset of disease. While this is self-evident, in epidemiological studies, reverse causality, in which behavior related to a health issue is influenced by knowledge or events about the issue, is always a concern. For example, women who undergo ovarian cancer treatment may begin using talcum powder products during their pre- and post-operative period because of symptoms or side effects perceived to be alleviated by talcum powder products use. Assessing talcum powder use without specifying the time of use might lead to women with ovarian cancer being more likely to report talcum powder products use. In this example, talcum powder may not have caused the cancer; rather, use of talcum powder products was caused by the cancer (and treatments). The importance of this issue led to Bradford Hill's consideration of temporality when assessing causality.

In essentially all of the case-control studies that assessed use of talcum powder products, women were specifically asked to report talc powder products only during past, not current periods; thus, the studies explicitly assessed exposure to talcum before cancer. Typically, questions were phrased "Did you ever use talc, but not in the last year before cancer diagnosis?" to exclude the year prior to diagnosis. This issue is not relevant for the included cohort studies, as women were surveyed about their exposures prior to cancer ascertainment. Thus, the temporality consideration is important for my consideration and is satisfied.

E) Dose Response

In general, when risks are proportional to exposure (e.g., doubling exposure doubles risk) this dose-response evidence is considered to support causality. Many of the reviewed studies did not collect sufficient data to carefully quantify the dose response, and many limited their comparisons to an ever/never comparison. This is in part what motivated me to complete my separate quantitative review to at least be able to dis-entangle ever into regular versus not regular use. The reviewed studies that did provide data that could be used to assess the

potential for dose response had mixed results in quantifying dose response. While most studies showed evidence of a dose response, others did not. For example, Schildkraut showed that >20 years of any genital powder use (OR 1.51, 95% CI 1.11, 2.06) showed a stronger association with ovarian cancer than <20 years of use (OR 1.33, 95% CI 0.95, 1.86).⁹⁹ Terry and Harlow showed significant dose responses, where ORs increased as exposures increased.^{69,74} The adjusted ORs increased from 1.3, to 1.5 to 1.8 with <1000, 1000–10,000, and >10,000 lifetime applications. Overall, any exposure to talcum powder resulted in an OR of 1.5; direct perineal application had an OR of 1.7 (95% CI 1.1, 2.7), daily exposure had an OR of 1.8 (95% CI 1.1, 3.0) and women with an intact genital tract who were estimated to have had more than 10,000 applications during ovulating years had the highest risk (OR 2.8 95% CI 1.4, 5.4). This exposure was found in 14% of women with ovarian cancer. Penninkilampi⁶⁷, the most comprehensive of the systematic reviews, also showed a dose response where women with more than 3600 lifetime applications had slightly higher risks as did women who reported long-term (>10 years) talc use. In contrast, Whittemore⁷⁷ showed no dose response, and Booth⁷⁸ demonstrated the reverse—the higher the dose, the lower the risks. The data from reviewed studies were too diverse to summarize a dose-response relationship. The measures of exposure frequency and duration varied, and the studies used different thresholds for quantifying exposures. Further, the measures to quantify dose tended to be crude, making the response even more difficult to establish.

In summary, most but not all studies of talcum powder products and ovarian cancer show a dose response, but the results are inconsistent, and more importantly, are not considered or assessed in most of the published studies. A dose-response relationship is not required for causality and in large part because data were not consistently available, this factor does not weight heavily in my consideration. Further, this factor did not weight heavily in my considerations in that not all exposures will have a dose response, and some will indeed have a threshold effect. This is important here because asbestos is believed to exhibit a threshold, rather than a linear, dose-response.

F) Biologic Plausibility: Factors Linking Talc and Ovarian Cancer

The epidemiological evidence suggests a strong and positive association between exposure to talcum powder products and invasive ovarian cancer. However, epidemiological evidence alone does not provide a mechanism or pathophysiological process that accounts for the increased risk. Nor does the epidemiological evidence confirm the specific component or ingredient in talc powder products that is responsible for carcinogenesis. Nonetheless, the data are persuasive that particles contained in talcum powder reach the tubes and ovaries, inflammation initiate a causal pathway, and that several components of talc powder products including asbestos, asbestiform fibers in talc, and heavy metals can contribute to the carcinogenicity of the products. This was a strong factor in my consideration of the evidence because there is extremely strong evidence that the components of talc powder products are known to be highly carcinogenic in other settings.

G) Coherence and Consistency with Understood Biology

The guideline of coherence is considered similar to biological plausibility. For both, the cause-and-effect explanation should be consistent with all knowledge available. For talcum powder and ovarian cancer, this consideration is easily satisfied.

H) Experimental Evidence

The evidence in humans of the impact of talcum powder products exposure and ovarian cancer development is based on a large number of observational studies. Direct experimental evidence in the form of randomized controlled trials in humans is simply not possible to generate, for ethical reasons. The experimental evidence in humans that talc particles can migrate to the ovary and be incorporated into ovarian tissue is relevant to developing a causal model but does not directly prove that that exposure causes cancer. There is also human data relating to the inflammatory nature of ovarian cancer. There is compelling in vitro research delineating the inflammatory mechanism by which talcum powder causes cancer. Animal studies showing inflammatory tissue effects and tumor formation with talcum powder exposure are also supportive.

I) Analogy

Bradford Hill implied that when evidence is strong of a causal relationship between a risk factor and disease, researchers should be more accepting of weaker evidence that a similar risk factor may cause a similar disease. Thus, analogy has been interpreted to mean that when one causal agent is known, the standards of evidence are lowered for a second causal agent that is similar. The strong evidence for the association between asbestos and lung cancer, and the chemical similarity between these minerals, as well as their fibrous nature, supports the analogy consideration and causal inference.

Summary: Consideration of Causality of Talc Powder Products and Ovarian Cancer using Bradford Hill

In consideration of Bradford Hill, the clear strength of the association (A), remarkable consistency in the published literature across a large number of populations and research studies (B), temporality (D) considered in all of the published studies, and perhaps most importantly, biological plausibility (F) were the criteria that I considered of paramount importance when assessing the causality of exposures of talc powder products and epithelial ovarian cancer

IX. Conclusion

In conclusion, substantial evidence supports a strong, positive and causal association between ovarian cancer and genital exposure to talcum powder products. Regular exposure to talcum powder products causes ovarian cancer in some women. This opinion is based on my extensive review of the medical and scientific literature, my own independent meta-analysis of the data, and my experience and expertise in the areas of epidemiology and women's health, including ovarian cancer.

All opinions are made to a reasonable degree of medical and scientific certainty. I reserve the right to amend or supplement this report as new information becomes available.

Exhibit A

CURRICULUM VITAE
REBECCA SMITH-BINDMAN, MD

Title Professor, Radiology and Biomedical Imaging, Epidemiology and Biostatistics,
Obstetrics, Gynecology and Reproductive Sciences, Phillip R. Lee Institute for Health Policy
Director, Radiology Outcomes Research Lab, University of California San Francisco

Address: Department of Radiology and Biomedical Imaging
350 Parnassus Ave, Suite 307
San Francisco, CA 94117
Voice: 415 353-4946; Fax: 415 353-2790
Email: Rebecca.Smith-Bindman@ucsf.edu

EDUCATION

1980 - 1985	Princeton University	BSE	Engineering / Architecture
1985 - 1986	Columbia University		Post Bacc Pre-Med
1987 - 1991	University of California, San Francisco	MD	Medicine
1991 - 1992	University of California, San Francisco	Intern	Pathology
1992 - 1996	University of California, San Francisco	Resident	Radiology
1996 - 1997	University of California, San Francisco	Clinical Instructor	Radiology, Ultrasound
1996 - 1998	University of California, San Francisco	Fellow	Epidemiology & Biostatistics

LICENSES, CERTIFICATION

1992	California Medical License # G76462
1993	California X-ray Supervisor and Operator License RHL 143658
1996	Board Certification, American Board of Radiology

PRINCIPAL POSITIONS HELD

1998 - 2003	UCSF, Radiology and Biomedical Imaging, Epidemiology and Biostatistics, Obstetrics, Gynecology and Reproductive Sciences	Assistant Professor
2003 - 2009	UCSF, Radiology and Biomedical Imaging, Epidemiology and Biostatistics, Obstetrics, Gynecology and Reproductive Sciences	Associate Professor
2009 - current	UCSF, Radiology and Biomedical Imaging, Epidemiology and Biostatistics, Obstetrics, Gynecology and Reproductive Sciences	Professor
2014 - current	UCSF, Phillip R. Lee Institute for Health Policy Studies	Member
2000 - current	UCSF, Radiology Outcomes Research Lab	Director

OTHER POSITIONS HELD CONCURRENTLY

1999 - 2000	St Bartholomew's and The Royal London School of Medicine	Research Fellow
2009 - 2010	NIH, National Cancer Institute, Radiation Epidemiology Branch	Research Scientist

HONORS AND AWARDS

1985	Cum laude, Princeton University
1985	Senior Thesis Prize, Princeton University
1991	Student Summer Research Fellowship, Institute for Health Policy Studies, UCSF
1999, 2000	Nycomed Amersham Fellow, Radiologic Society of North America
2007	Nomination, Clinical Research Mentor of the Year, Bay Area Symposium on Clinical Research
2010	Nomination, CTSI Consultant of the Year, Impact Award
2010	Scientific Paper of the Year, Minnies, Auntminnie.com
2010	Finalist, Most Influential Radiology Researcher, Minnies, Auntminnie.com
2011	Leader in Imaging, Auntminnie.com
2012	Finalist, Scientific Paper of the Year, Auntminnie.com, Minnies
2012	Semifinalist, Scientific Paper of the Year, Auntminnie.com, Minnies
2012	Winner, UCSF Center for Health Care Value, Medical Center Initiative, Innovation Award
2013	Finalist, Scientific Paper of the Year, Auntminnie.com, Minnies
2013	Runner-up, Scientific Paper of the Year, Auntminnie.com, Minnies
2013	Paper honored as 1 of the top 10 publications Funded by NCI's Epidemiology and Genomics Research Program
2014	Invited Editor, J of the American College of Radiology, March 2014, Radiation Dose Optimization
2014	Among Philip R. Lee Institute for Health Policy Studies faculty videos on UCTV, "Is Medical Imaging Harmful to Health: Opportunities to Influence Health Policy", most popular, N = 409,937
2015	Academy of Radiology Research, Distinguished Investigator Award
2015	Election to Fellowship, Society of Radiologists in Ultrasound

KEYWORDS AND AREAS OF INTEREST

Health Services Research, Outcomes Research, Disparities Research, Women's Imaging, Comparative Effectiveness Research, Quality Improvement, Dissemination and Implementation Sciences, Evidenced Based Radiology, Assessment of Population Impact of Screening Tests, Radiation Associated with Medical Imaging, Radiation as an Environmental Cause of Cancer, Management of Incidental Findings on Diagnostic Testing

OVERVIEW

Narrative

Dr. Smith-Bindman is a clinical researcher with expertise in health services research, epidemiology, outcomes research, comparative effectiveness research, and dissemination and implementation sciences focused on diagnostic imaging. Her research has focused on evaluating the quality, utilization, accuracy, predictive values and impact of diagnostic testing on patient health, and has quantified both the risks and benefits of medical imaging when used in different contexts and by different populations. One area of focus has been on evaluating racial and ethnic differences in access and utilization of screening mammography and how that contributes to higher breast cancer mortality among African American women, and on factors that influence the quality and access to screening among vulnerable populations (see references 33, 34, 37, 43, 46, 48, 61, 67 at the end of CV). A separate area of focus has been on quantified the variation in radiation dose associated with medical imaging across patients and institutions, and quantified the impact of radiation, particularly from computed tomography, as an environmental carcinogen. (see references 53, 58, 60, 62, 65, 68, 69, 72, 76, 78, 79., 81, 87, 89, 91, 97, 102, 107.) Separate from her research activities, she has been actively involved in translating evidence into changes in practice and policy. She has *informed policy leaders, practitioners and the public about* the safety concerns surrounding the use of radiation in imaging by describing the issue in main stream media, testifying before the US Congress, and by advising the FDA, The Joint Commission, the International Atomic Energy Agency, the International Council on Radiation Protection and leading professional societies. She has also written quality measures focused on radiation safety, and her work has resulted in organizations which monitor health care quality to adopt measures of diagnostic imaging safety.

PROFESSIONAL ACTIVITIES

CLINICAL

Attending physician, Ultrasound Section, Department of Radiology and Biomedical Imaging, UCSF, 25%. Includes supervised instruction of residents and fellows. My teaching focuses on how to use evidence to help inform interpretation of clinical examinations.

PROFESSIONAL ORGANIZATIONS

Memberships

1997 - 2018	Society of Radiologists in Ultrasound (SRU)
1997 - 2018	Radiology Alliance for Health Services Research in Radiology (RAHSR)
2013 - 2018	American College of Radiology (ACR)
2014 - 2018	American Roentgen Ray Society (ARRS)
2014 - 2018	Association of University Radiologists (AUR)

Service to Professional Organizations (selected)

2010 - 2011	American Board of Medical Specialties, American Board of Radiology, American College of Radiology, and Physician Consortium for Performance Improvements. Patient Radiation Dose Work Group
2011 - 2012	Institute of Medicine Committee on Breast Cancer and the Environment, commissioned report "Temporal Changes in Ionizing Radiation and Estimate of Contributions to Breast Cancer," contributing author
2012	Centers for Disease Control and Prevention, Cancer Prevention Work Group
2012 - 2014	The Joint Commission, Diagnostic Ionizing Radiation and Magnetic Resonance work group focused on issues of safety and guideline development
2012 - Present	International Council on Radiation Protection (ICRP) Task Group #79 on Defining Effective Dose Use in Medicine
2014	International Atomic Energy Agency (IAEA) United Nations General Assembly and Security Council. Special Committee Considering Population Impact of Low Dose Radiation
2015	Council of Distinguished Investigators of the Academy of Radiology Research

Service to Professional Publications (selected)

2000 - 2018	Journal of the American Medical Association (JAMA)
2000 - 2018	JAMA Internal Medicine
2000 - 2018	New England Journal of Medicine (NEJM)
2000 - 2018	Radiology
2000 - 2018	American Journal of Radiology
2000 - 2011	Journal of the National Cancer Institute
2000 - 2011	Health Affairs

2000 - 2015	Health Services Research
2000 - 2010	American Journal of Obstetrics & Gynecology
2000 - 2010	American Journal of Public Health
2000 - 2010	Annals of Internal Medicine
2000 - 2010	Journal of Medical Screening
2000 - 2010	Journal of Women's Health
2000 - 2010	Medical Care
2000 - 2010	Medical Decision Making
2000 - 2010	Obstetrics and Gynecology
2000 - 2010	Ultrasound in Obstetrics & Gynecology

INVITED PRESENTATIONS

International

2014	UCSF, Endocrine Grand Rounds, San Francisco, CA
2015	California Society of Radiology Technologists, Annual Meeting, San Francisco, CA Keynote Address. Radiation from CT: A Hidden Epidemic. Strategies to minimize doses: What technologists can do?
2016	Society of Radiology in Ultrasound, Annual Meeting, Baltimore Maryland. Risk of Thyroid Cancer Based on Thyroid Ultrasound Imaging Characteristics
2016	UCSF, Breast Oncology Program, Radiation from Medical Imaging: A Hidden Epidemic and Approaches for Improving.
2016	UCSF Mini-Medical School Radiation Safety and Medical Imaging
2017	University of California Davis, Radiology Grand Rounds, Radiation from Medical Imaging; A Hidden Epidemic
2017	UCSF: Stand Up for Science: Panel Discussant

GOVERNMENT AND OTHER PROFESSIONAL SERVICE (selected)

2002 - 2003	CDC, National Breast and Cervical Cancer Early Detection Program, Planning Committee
2002 - 2005	Cochrane Collaboration Screening and Diagnostic Tests, Methods Working Group
2003 - 2003	Radiology National Boards, Examination Question Writer
2003 - 2010	National Cancer Institute, Physician Data Query (PDQ)

2004 - 2005	CDC, National Breast and Cervical Cancer Early Detection Program, Panelist, Committee on Assessment of Covered Benefits, Expert
2007 - 2010	California Health Benefits Review Program (CHBRP)
2008 - 2011	Center for Scientific Review, NIH, Health Services Organization and Delivery Study Section
2010 - 2011	American Board of Medical Specialties, American Board of Radiology, American College of Radiology, and Physician Consortium for Performance Improvements. Patient Radiation Dose Work Group
2010	Congressional Hearing, US House of Representatives, Energy and Commerce, Subcommittee on Health. Medical Radiation: An Overview of the Issues. Expert Witness
2010	Food and Drug Administration, Center for Devices & Radiological Health, National Meeting Focus on Radiation Safety, Presenter
2010 - 2011	National Quality Forum, Imaging Efficiently Steering Committee
2011 - 2012	Institute of Medicine Committee on Breast Cancer and the Environment, commissioned report "Temporal Changes in Ionizing Radiation and Estimate of Contributions to Breast Cancer," contributing author
2010 - 2011	Lung Cancer Screening with CT Evidence Review Committee. Multidisciplinary collaboration, including American Cancer Society, American College of Chest Physicians; American Society of Clinical Oncology & The National Comprehensive Cancer Network
2011 - 2016	International Council on Radiation Protection (ICRP), Task Group 79 on Defining Effective Dose Use in Medicine
2012	Congressional Hearing, US House of Representatives, Energy and Commerce, Subcommittee on Health, hearing on the Consistency, Accuracy, Responsibility, and Excellence in Medical Imaging and Radiation Therapy (The CARE Bill), Expert Witness
2012	Centers for Disease Control and Prevention, Cancer Prevention Work Group
2012 - 2014	The Joint Commission, Diagnostic Ionizing Radiation and Magnetic Resonance work group focused on issues of safety and guideline development
2013	Government Accountability Office: Medicare Imaging Accreditation Establishing Minimum National Standards and an Oversight Framework to Ensure Quality and Safety of Advanced Diagnostic Imaging Services, May 2013, Contributor
2014	International Atomic Energy Agency (IAEA) United Nations General Assembly and Security Council. Special Committee Considering Impact of Low Dose Radiation
2015	Council of Distinguished Investigators of the Academy of Radiology Research

UNIVERSITY AND PUBLIC SERVICE

Service Narrative

There are several activities to which Dr. Smith-Bindman has contributed. For seven years she participated in the NCI sponsored Physicians Data Query (PDQ), an NCI committee charged with presenting evidenced based, on-line, widely accessible and widely disseminated guidelines relating to cancer screening and diagnosis. She

participated in several activities related to breast cancer screening including acting as a reviewer for the CDC on assessing the guidelines for the National Breast and Cervical Cancer Detection Program, participating in coverage decisions, acting as reviewer and content expert for the CA Health Benefits Review Program analyzing several bills before the state legislature that would expand breast cancer screening to include MRI, and participating in the creation of several IOM Reports. She has participated in several community projects, such as acting on the board of an African American breast cancer advocacy group, and as a consultant to the Metropolitan Breast Cancer Task Force, charged with improving breast cancer mortality rates and racial disparities. During the last five years She has been very active in local, statewide and national efforts around improving radiation safety, including invited presentations to the FDA, testifying before the US Congress on two occasions, working with innumerable societies and government organizations on guidelines and submitting two endorsed quality measures on radiation safety to the National Quality Forum. Her involvement in service activities within the University have focused on increasing the quality and quantity of translational research through participation in several University-wide task forces. Dr. Smith-Bindman serves on several Medical Center Committees, focusing on improved oversight and stewardship around radiation, and projects to improve the efficiency and effectiveness with CT.

UNIVERSITY SERVICE (selected)

2001 - 2015	UCSF School of Medicine, Faculty Recruitment Committees, Radiology, Rad Onc, Medicine
2002	UCSF School of Medicine Dean's Leadership Retreat, Santa Cruz
2003	University of California, Blueprint for Regional Excellence in Breast Cancer Care
2003	UCSF School of Medicine Task Force, Future of UCSF and Mission Bay
2003	UCSF Medical Center, Hospital Exceptional Physician Award, Committee Co-Chair
2003 - 2004	UCSF School of Medicine Task Force, Physician Scientist Program Clinic-Based
2003 - 2005	UCSF School of Medicine Faculty Council
2005	UCSF School of Medicine, Dean's Leadership Retreat, Santa Cruz, CA
2005 - 2006	UCSF Department of Radiology Seminars and Presentation Committee
2005 - 2008	UCSF Department of Radiology Annual Research Symposium Abstract Review Committee
2005 - 2009	UCSF Department of Radiology, SEED Grant Review Committee
2006 - 2007	UCSF Pathways for Clinical and Translational Research
2008 - 2010	UCSF Pathways to Discovery, Clinical and Translational Research, Advisory Council
2007 - 2010	University of California, Office of the President, CA Health Benefits Review Program
2009 - 2017	UCSF, Radiation Safety Committee
2012 - 2014	UCSF Department of Radiology, Maintenance of Certification Committee
2012 - 2015	UCSF Medical Center, Center for Health Care Value
2013 - 2017	UCSF School of Medicine, Conflict of Interest Advisory Committee
2014 - 2016	UCSF Clinical Enterprise, Strategic Plan, Committee for Continuous Process Improvement
2015 - 2017	UCSF Clinical Enterprise, Utilization Management Committee

PUBLIC SERVICE

2003 – 2007	SF Sisters, an African American breast cancer advocacy group, board member
2008 - 2008	Metropolitan Chicago Breast Cancer Task Force, Chicago IL, unpaid consultant
2011 - 2014	National Quality Form, National Consensus Standard for Patient Safety. Measure Developer "UCSF CT Radiation Dose Patient Safety Measure" Measure endorsed
2015	National Quality Forum, Pediatric Measures. Measure Developer, "Pediatric Computed Tomography Radiation Dose" Measure endorsed

TEACHING AND MENTORING

Teaching Narrative

Dr. Smith-Bindman spends substantial time mentoring trainees in clinical research. The trainees have ranged in experience from high school students through mid-career UCSF faculty. The individuals have come from a broad range of departments at UCSF including Radiology, Internal Medicine, Hospital Medicine, Emergency Medicine, Obstetrics and Gynecology, and Urology, and have also come from the UCSF Medical School, The University of California Berkeley, and local SF high schools. On average, she meets with each trainee 1-2 hours per week while collaborating. An NIH Mid-Career Investigator Award (K24) supported her time mentoring these individuals.

She teaches in several formal classes in the department of Epidemiology and Biostatistics primarily targeted to post graduate students who are completing a master's degree in clinical research. She is actively engaged in teaching the Radiology residents and fellows while attending on the clinical service and provides frequent lectures to the Radiology residents focused at research methods; frequently teaches in courses organized by the UCSF Office of Continuing Medical Education for both radiology courses and courses within other medical specialties. The radiology courses focus on using evidence to interpret our studies (usually focused on ultrasound topics), the lectures for other medical specialties focused on how to use imaging more appropriately. As listed above, she also frequently gives grand rounds within UCSF, and nationally on using imaging more appropriately. Lastly, she organized and ran a large, ongoing, virtual symposium on Radiation Safety described below. Both the content and format of this meeting were novel.

TEACHING

Formal scheduled classes for UCSF students.

The first class listed is a course for UCSF Medical Students. The remaining are part of the coursework offered within the UCSF Masters in Clinical Research Program, Department of Epidemiology and Biostatistics

Year	Title	Role	Class Size
2002 - 2005	Epidemiology and Biostatistics, UCSF School of Med	Section Leader	20
2005	Introduction to Diagnostic Testing	Lecturer	18
2007 - 2008	Clinical Performance and Health Outcome Measurement	Lecturer	20
2011 - 2014	Translating Evidence into Policy: Theory and Design	Lecturer	30
2010 - 2015	Framing Research to Influence Policy	Lecturer	25

Post Graduate CME courses (1-5 lectures/meeting)

2001	UCSF Obstetrics and Gynecology Update, San Francisco, CA
2001	UCSF Primary Care Medicine, Aspen, CO
2001	Primary Care Medicine, Maui, HI
2001	Management of the Hospitalized Patient, San Francisco, CA
2001	Controversies in Women's Health, San Francisco, CA
2001	Diagnostic Imaging in Women's Health, San Francisco, CA
2001	MRI & Ultrasound Imaging, Lake Tahoe, CA
2002	Obstetrics and Gynecology Update, San Francisco, CA.
2002	17th Annual Primary Care Medicine: Concepts and Controversies, Aspen, CO
2002	10th Annual Controversies in Women's Health, San Francisco, CA
2002	Diagnostic Imaging in Women's Health, San Francisco, CA
2002	Diagnostic Imaging, Maui, HI
2002	Obstetrical, Gynecological and Abdominal Ultrasound, San Francisco, CA
2003	Primary Care Medicine, Diagnostic Imaging in Women's Health, Maui, HI
2003	11th Annual Controversies in Women's Health, San Francisco, CA
2003	Diagnostic Imaging for Disease Prevention, San Francisco, CA
2003	46th Annual Diagnostic Radiology Postgraduate Course, San Francisco, CA
2003	OB/GYN and Abdominal Ultrasound, San Francisco, CA
2003	MRI and Ultrasound by the Lake, Lake Tahoe, CA
2004	Women's Imaging, Sonoma, CA
2004	Primary Care Medicine, Maui, HI
2004	Diagnostic Imaging in Clinical Practice, San Francisco, CA
2005	Obstetrical and Gynecologic Sonography, San Francisco, CA
2005	Radiology Spring Training, Scottsdale, Arizona
2005	Abdominal Imaging, Montreal and Quebec, Canada
2006	Controversies in Women's Health, San Francisco, CA
2006	Controversies in Breast Cancer Screening and Diagnosis, San Francisco, CA
2006	Cutting Edge Radiology, Diagnosis and Intervention, Vancouver, Canada
2008	Primary Care Medicine: Update 2008, San Francisco, CA
2008	Diagnostic Imaging in Women's Health, San Francisco, CA
2008	Obstetrical/Gynecological and Abdominal Sonography, San Francisco, CA
2009	Primary Care Medicine: Update 2008, San Francisco, CA

2009	Obstetrical/Gynecological and Abdominal Sonography Update, San Francisco, CA
2011	Imaging of Kidney Stones, San Francisco, CA, Director
2011	Primary Care Medicine, Principles & Practice, San Francisco, CA, Keynote
2011	39th Annual Advances in Internal Department of Medicine, San Francisco, CA, Keynote
2011	Controversies in Women's Health, Department of Medicine, San Francisco, CA, Keynote
2012	Updates on Imaging, Maui, Hawaii
2013	UCSF Otolaryngology Annual Conference, San Francisco, CA
2017	UCSF Practical Body Imaging, Kona, Hawaii

Other Teaching

Radiation Safety and CT: Virtual Symposium. Innovative on-line Interactive CME course targeted to physicians (radiologists and those who order imaging), technologists, medical physicists, and trainees. This was created as an on-line, free, virtual meeting focuses on radiation safety. The initial creation of this virtual meeting began in 2013. Creating the meeting involved creating a multidisciplinary, on line, virtual meeting with over 100 lectures (see list of lectures, now offered freely on line - <http://rorl.ucsf.edu/speakers>), 10 live interactive sessions/chat rooms and over 500 registrants enrolled in the meeting during the “live days”, and ongoing attendees attend each month. The speakers at the meeting included numerous department chairs, the director of the Agency for Health Care Policy at the time, a US Congressman, leaders from numerous societies, The Joint Commission, The American Board of Internal Medicine Foundation, and innumerable scientific experts on diverse patient safety issues, and the meeting was an integration of diverse viewpoints and perspectives. Dr. Smith-Bindman directed this meeting and personally wrote and delivered 7 lectures for the meeting. The meeting was novel in format and content.

MENTORING

Pre-doctoral students directly supervised

Dates	Name	Program or School	Current Position
2004 - 2005	C. Kagay	UCSF Medical School	Radiologist, Private Practice
2005 - 2006	A. Ding	UCB/ UCSF MD/MPH	MGH
2005 - 2008	A. Venkatesan	UCSF Medical School	Resident, Stanford
2006 - 2007	E. Dinkelspiel	Urban High School	Student, Univ. of Chicago
2011 - 2015	J. Keegan	Lick Wilmerding High	San Luis Obispo College
2010 - 2015	P. Mehta	UC Berkeley/UCLA Med School	UCLA Medical School
2012 - 2013	J. Zhang	UC Berkeley	Senior
2014 summer	A. Fraser	University High	Georgetown College

Postdoctoral fellows and residents directly supervised

Dates	Name	Position	Current Position
1998 - 2000	M. Copanigro, MD	Radiology Resident / Fellow	Private Practice

1998 - 2000	N. Vincoff, MD	Radiology Resident / Fellow	Private Practice
2003 - 2004	E. Weiss, MD	OB GYN Resident	Private Practice
2003 - 2005	K. Schueler, MD	RORL Research Fellow	Private Practice
2003 - 2005	D. Haggstrom, MD	Internal Medicine Fellow	Indiana University, Faculty
2005 - 2006	K. Reid, MD	Internal Medicine Fellow	Emory Faculty
2005	A. Jensen	PhD student, Copenhagen	Faculty
2005 - 2006	B. Ching, MD	Radiology Fellow	Private Practice,
2005 - 2006	A. Cole, MD	Radiology Fellow	Private Practice
2005 - 2007	L. Goldman, MD	Internal Medicine Fellow	UCSF Faculty
2006 - 2010	J. Lipson, MD	Radiology T32 Scholar	Stanford Faculty
2007 - 2008	J Stengel, MD	Radiology Fellow	Private Practice
2007 - 2008	A. Heath, MD	RORL Research Fellow	Private Practice
2007 - 2009	R. Cho, MD	Radiology Fellow	Private Practice
2007 - 2009	D. Sellami, MD	Radiology Resident / Fellow	Private Practice
2008 - 2009	A. Kamath, MD	Radiology T32 Scholar	NYU Faculty
2009 - 2010	J Ching, MD	OB GYN Resident	Faculty
2009 - 2011	N, Brasic, MD	Radiology Fellow	UCSF Faculty
2010 - 2011	D. Sridhar, MD	Radiology Resident	Private Practice
2010 - 2012	P. Lebda, MD	Radiology Fellow	Cleveland Clinic Faculty
2010 - 2013	I. Burger, MD	Radiology Resident	Private Practice
2010 - 2013	G. Merry, MD	Radiology Resident	Private Practice
2011 - 2014	J. Mongan, MD PhD	Rad Resident / Fellow	UCSF, Faculty
2013 - 2014	S. Hou, MD	Radiology Resident	NYU Faculty
2013 - 2014	C. Lee, MD	Radiology Resident	UCSF Faculty
2013 - 2014	T. Morgan, MD	Radiology Resident	UCSF Faculty
2013 - 2015	LA Hampton, MD	Urology Resident / Fellow	Fellow, Wash U
2013 - 2015	V. Arasu, MD	Radiology Resident	Resident
2013 - 2015	N. Benedetti, MD	Radiology Resident	University of Wash Faculty
2014 - 2015	B Carpenter, MD	Radiology Fellow	UCSF Faculty
2014 - 2015	J. Hsu, MD	Radiology Fellow	Private Practice
2014 - 2018	J. Demb	Epidemiology	UCSF

Faculty Mentoring

Dates	Name	Department / Section	Current Position
2002 - 2005	John Shepherd, MD	Radiology / Musculoskeletal	UCSF, Faculty, Radiology
2004 - 2005	Elaina Curtis, MD	UCSF Visiting Fellow	Univer. of Auckland Faculty
2005 - 2006	John Stein, MD	Emergency Medicine	UCSF Faculty, Emerg Med
2005 - 2006	Max Wintermark, MD	Radiology / Neuro	UVA, Faculty, Radiology
2007 - 2013	Lauren Goldman, MD	Internal Medicine	UCSF, Faculty, Medicine
2008 - 2011	Larry Rand, MD	OBGYN / Maternal Medicine	UCSF, Faculty, OBGYN
2008 - 2014	Antonio Westphalen, MD	Radiology / Abdominal Imaging	UCSF, Faculty, Radiology
2009 - 2017	Liina Poder, MD	Radiology / Abdominal Imaging	UCSF, Faculty, Radiology
2010 - 2018	Ralph Wang, MD	Emergency Medicine	UCSF Faculty, Emerg Med
2014 - 2018	John Mongan, MD, PhD	Radiology / Abdominal Imaging	UCSF, Faculty, Radiology
2014 - 2017	Cindy Lee, MD	Radiology / Abdominal Imaging	UCSF, Faculty, Radiology
2014 - 2017	Tara Morgan, MD	Radiology / Abdominal Imaging	UCSF, Faculty, Radiology
2014 - 2018	Maureen Kohi, MD	Radiology / Interventional	UCSF, Faculty, Radiology
2015 - 2018	Ben Franc, MD PhD	Radiology / Nuclear Medicine	UCSF, Faculty, Radiology
2017 - 2018	Brian Haas MD	Radiology	UCSF, Faculty, Radiology

RESEARCH AND CREATIVE ACTIVITIES

Research Narrative

Dr. Smith-Bindman's research focuses on understanding the impact of diagnostic testing on patient outcomes. She is the director of the UCSF Radiology Outcomes Research Laboratory, and her team includes several programmers, biostatisticians, a developer, and a handful of epidemiologists who serve as project managers for the funded grants below. Her research expertise is in areas of epidemiology, technology assessment, outcomes research, comparative effectiveness research, health services research, and dissemination and implementation sciences focused on imaging. The research has focused on evaluating the quality, utilization, accuracy, predictive values and impact of diagnostic testing on patient health, and has quantified both the risks and benefits of medical imaging when used in different contexts and by different populations. I am leading several studies that assess and standardize the radiation dose used for CT scanning, in order to minimize doses, without loss of diagnostic accuracy. Additional current research is focused on putting systems-based solutions in place to standardize the use of imaging. For example, ongoing projects focus on improving decision support provided to physicians to help improve the use of testing, using evidence to drive and guide the change in practice, and determining the optimal surveillance strategy for the follow up of incidental findings seen on CT imaging. The research projects she leads, listed below, are typically collaborative, involving researchers from diverse clinical areas and who offer diverse methodological expertise.

RESEARCH AWARDS

Current

PI	07/02/2014 - 06/30/2019
NIH	\$1,140,000 direct/yr1
CT DOSE Collaboration: Partnership for Dose	\$7,900,000 total

Collaboration across the US and Europe to standardize and optimize the doses used for CT. The study uses a novel randomized controlled trial design to compare simple feedback to a multicomponent intervention as strategies to optimize doses. There are approximately 125 hospitals participating in the trial.

PI	09/02/2013 - 08/31/2016
PCORI (Patient Centered Outcomes Research Institute)	\$492,163 direct/yr1
CT Radiation Dose Registry to Ensure a Patient Centered Approach for Imaging	\$2,069,365 total

Collaboration across the US and Europe to create benchmarks and standards for CT by pooling data from a large number of hospitals and outpatient facilities

PI	3/01/2015- 02/28/2020
NIH	\$1,834,410 direct/yr1
Risk of Cancer in Childhood Associated with Medical Imaging	\$10,600,000 total

Retrospective cohort across large integrated health care systems to assess imaging in pregnant women and children and to quantify the risk of childhood and adolescent cancer associated with these exposures.

PI (co-PI with Gould, Kaiser Foundation Research)	4/01/2015- 03/30/2020
PCORI	
Pragmatic Trial of More versus Less Intensive Strategies for Surveillance of Patients with Small Pulmonary Nodules	\$14,458,936 total

Prospective comparative effectiveness study across 15 health care systems to compare different strategies for the surveillance of lung nodules. The study is novel in that patients will be recruited with routine clinical care at imaging and the creation of systematic quality improvement strategies to ensure no loss to follow up.

Past

PI	10/01/2010 - 09/30/2013
AHRQ	\$4,830,368 direct/yr1
RCT of US versus CT for Patients with Suspected Renal Colic	\$9,210,000 total

15 Center randomized pragmatic comparative effectiveness trial comparing different strategies for imaging patients with suspected kidney stones. The study exceeded enrollment and follow up targets, and the primary results were published in the NEJM in 2014. Many additional analyses are ongoing using these data.

PI	09/01/2008 - 07/31/2015
NIH K24	\$172,000 direct/yr1
Mid-Career Development Award: Risk of Cancer Associated with Incidental Findings	\$868,632 total

PI	07/01/2011 - 07/01/2014
University of California Office of the President, CHQI	\$250,000 direct/yr1
Standardization and Optimization of CT Radiation Dose	\$750,000 total

Across the University of California Medical Centers.

Five-center observational study to collect radiation data across the five University of California campuses using automated techniques, analyze the sources of variation in dose, and conduct quality improvement initiatives to standardize practice

PI	09/30/2012 - 09/29/2014
CDC (Centers for Disease Control and Prevention)	\$250,000 direct/yr1
PEDS CT-DOSE: Pediatric CT Dose Optimization and Standardization Endeavor	\$500,000 total

Ten center observational study to collect radiation data and create benchmarks in children

Co-Investigator (PI Solberg, Health Partners)	07/01/2012 - 06/30/2014
PCORI (Patient Centered Outcomes Research Institute)	\$250,000 direct/yr1
Measuring Patient Outcome from High Tech Imaging Studies	\$500,000 total

Mixed methods study to understand imaging use, positive rates of imaging and patient perspectives on imaging, with respect to identifying patient centered outcomes important to patients.

PI	04/01/2009 - 03/31/2011
NIH / R21	\$317,000 total
Risk of Cancer with Incidental Findings Identified on US Imaging	

Retrospective cohort to understand cancer risks of incidental findings

PI	09/01/2008 - 08/31/2010
NIH / R21	\$317,000 total
Radiation Exposure from Imaging: are Doses in a Carcinogenic Range	

Retrospective cohort to understand use of medical imaging within integrated health care systems

PI	10/01/1999 - 07/01/2005
DOD	\$725,515 total
Outcomes of Screening Mammography in Elderly Women	

Medicare Data were analyzed to determine utilization of mammography and factors influencing survival

PI	09/01/1999 - 06/01/2005
NIH K07	\$635,687 total
Outcomes of Screening Mammography in Elderly Women	

NIH Career development award to study breast cancer screening among elderly women.

PI	07/01/2003 - 02/01/2007
California Breast Cancer Research Program	\$583,287 total
Racial Disparity in Breast Cancer Mortality	

Retrospective cohort to understand the causes for racial disparity in breast cancer outcomes

Co-Investigator (PI Kerlikowske UCSF) 04/01/2000 - 03/31/2005
NIH, U01 **\$3,100,000 total**
San Francisco Mammography Registry: A Research Resource

Dr. Smith-Bindman project lead on 1) Physician Predictors of Mammography Accuracy and 2) Validation of the Medicare Screening Algorithm

Co-Investigator (PI – McCune, UCSF) 09/30/2006 - 06/30/2011
NIH
Clinical and Translational Science Institute (CTSI)

The grant is to enhance training and infrastructure across UCSF. I participate in the Biomedical Informatics Program to educate trainees about imaging, epidemiology and study design

Co-Investigator (PI- Lu, UCSF) 04/01/2006 - 03/01/2009
NIH
Statistical Methods for Evaluation and Validation of Tests

Co-Investigator (PI Tlsty, UCSF)) 10/01/2005 - 09/30/2010
NIH
Biological Basis of Breast Density and Breast Cancer Risk

Co-Investigator (PI Esserman, UCSF) 05/01/2003 - 04/30/2007
Department of Defense/USAMRC **\$6,900,000 total**
Blueprint for Regional Excellence in Breast Cancer Care

PI 01/01/2002 - 12/01/2006
Women's Health Research Center, UCSF **\$70,000 total**
Down Syndrome Screening in the US

PI 04/01/2001 - 04/01/2003
Society of Radiologists in Ultrasound **\$40,000 total**
Prenatal Ultrasound for Detection of Birth Defects and Chromosome Abnormalities

PI 04/01/2001 - 04/01/2004
Society of Radiologists in Ultrasound **\$30,000 total**
Physician Variation in Ultrasound Accuracy

PI 07/01/2000 - 06/01/2001 **\$40,000 direct/yr**
Society of North America
U.S. U.K Comparison of The Accuracy of Screening Mammography

P
I 07/07/1999 - 06/01/2000 **\$35,000 direct**
Radiologic Society of North America
Prenatal diagnostic ultrasound for the detection of chromosomal Abnormalities

MOST SIGNIFICANT RESEARCH PUBLICATIONS

- 1) **Smith-Bindman et al. Endovaginal ultrasound to evaluate endometrial abnormalities JAMA 1999**
Vaginal bleeding affects 7% of post-menopausal women, and historically women have undergone an invasive endometrial biopsy to exclude a diagnosis of cancer. This meta-analytic review found that endovaginal ultrasound is an easily tolerated non-invasive test that is accurate for the diagnosis of cancer, so that most women can avoid the need for an endometrial biopsy if they have a normal ultrasound test result. These results have been integrated into clinical practice guidelines in the US, Scotland, England, Germany, and Hong Kong. The publication has been cited 427 times based on SCOPUS accessed in 2015.
- 2) **Smith-Bindman et al. Second-trimester ultrasound to detect fetuses with Down syndrome: a meta-analysis. JAMA. 2001.**
Prenatal ultrasound is widely used to screen for Down syndrome, but the impact on patients has not been well studied. This meta-analytic review suggests that the use of ultrasound for the detection of fetuses affected by Down syndrome may be associated with more harm than benefit, as it can lead to large numbers of unnecessary amniocenteses and subsequent fetal losses with little evidence of benefits. This article was accompanied by extensive media coverage (AP, Reuters, NY Times), and controversy, and prompted discussion regarding the role of ultrasound in prenatal diagnoses. The manuscript has been cited 217 times based on SCOPUS accessed in 2015.
- 3) **Smith-Bindman R et al. US-UK Comparison of Screening Mammography. JAMA 2003.**
Screening mammography is an imprecise test, and there are considerable differences between physicians and programs in the accuracy of screening. This international comparison of screening mammography described 5.5 million mammograms obtained between 1996 to 1999 within three large-scale mammography registries or screening programs. Recall rates and open surgical biopsy rates were twice as high in the U.S. as in the U.K., although cancer rates were nearly identical. There was extensive media coverage (AP, Reuters, NY Times, Wall Street Journal, National Public Radio). These results have been widely cited, and were included in the IOM Report, "Saving Women's Lives." The publication was cited 223 times based on SCOPUS accessed in 2015.
- 4) **Smith-Bindman et al. Physician Predictors of Mammographic Accuracy. J Natl Cancer Inst 2005.**
Beyond the issues raised about the collective quality of mammographic screening in the United States, even more pronounced concern is the glaring variation among U.S. physicians in the ability to accurately interpretation their patients' mammograms. Dr. Smith-Bindman studied the accuracy of mammographic screening among 208 U.S. physicians, who collectively interpreted 1.2 million mammograms, and she found extraordinary variation in the interpretive abilities of radiologists; the sensitivity spanned 29% to 97%, while the false positive rate (the percentage of women who did not have cancer, but who underwent additional diagnostic testing or biopsy at their physician's recommendation) ranged from 1 to 29%. The difference in accuracy was principally due to differences in their training, experience and dedication to screening mammography; in short, the more experienced mammographers - and those who read more than the minimum number of mammograms required by MQSA guidelines - did substantially better. These findings have already been integrated into the Institute of Medicine's report on Mammography Quality Standards, regarding Enhancement of Interpretative Performance. The manuscript was cited 82 times based on SCOPUS accessed in 2015.
- 5) **Smith-Bindman et al. Does Utilization of Screening Mammography Explain Racial and Ethnic Differences in Breast Cancer? Ann Intern Med, 2006**
Racial and ethnic minorities tend to have larger, more advanced stage breast cancers at diagnosis than white women, and African American women have significantly higher breast cancer mortality. It has not been clear, however, if this is due to inherent differences in biology or the utilization of screening mammography. This paper sought to disentangle whether biology or the use of screening was largely responsible for the known racial and ethnic differences in breast cancer. This study was

unique in that detailed cancer information was available from tumor registries that were linked with detailed information regarding mammography utilization. The results were striking. Most of the racial and ethnic differences in breast cancer features were reduced or eliminated after accounting for the frequency of mammography screening. The manuscript was cited 175 times on SCOPUS.

6) **Smith-Bindman et al. Second trimester prenatal ultrasound for the detection of pregnancies at increased risk of Down syndrome. Prenat Diagn 2007** *Prenatal ultrasound is widely used to screen for Down syndrome, but the impact on patients has not been well studied. Our meta-analytic review found that ultrasound was not useful and this prompted our large prospective study which evaluated ultrasound in a larger cohort, including nearly 20,000 women, in whom nearly 500 had fetuses affected by Down syndrome. This large study confirmed these preliminary results. The manuscript was cited 51 times on SCOPUS.*

7) **Smith-Bindman et al. Radiation dose associated with common computed tomography examinations and the associated lifetime attributable risk of cancer. JAMA Internal Medicine 2009** *This paper documented the variation in doses associated with routine CT. The widespread media attention that this paper received contributed to active policy discussion in this area. I was invited to present and discuss the results at the FDA, at a Congressional Hearing sponsored by the Health Subcommittee of the Committee on Energy and Commerce, and innumerable professional society meetings, and submitted (and had endorsed) a measure of quality around CT imaging by the National Quality Forum. The manuscript was cited 857 times based on SCOPUS accessed in 2015.*

8) **Smith-Bindman R, Appendix F. Ionizing Radiation Exposure to the US Population, with a Focus on Radiation from Medical Imaging, in Breast and the Environment: A Life Course Approach. The Institute of Medicine. 2012** *The IOM was commissioned to write a report on environmental causes of breast cancer. The Komen Foundation commissioned the report. I was asked to summarize what is known about the harmful effects of ionizing radiation on breast cancer risks. The IOM concluded that ionizing radiation is one of the largest, and the most preventable causes of breast cancer.*

9) **Miglioretti DL et al. Smith-Bindman senior author. The use of computed tomography in pediatrics and the associated radiation exposure and estimated cancer risk. JAMA Pediatr. 2013** *Using a retrospective cohort design, this paper quantified the use of imaging among children within one of 7 large integrated health care systems, quantified the radiation exposure associated with these examinations, and estimated the likely impact of improved standardization of the conduct of CT on the risks of cancer. The manuscript concluded that if the top outlying radiation exposures could be reduced to the average (a modest goal) that 40% of expected cancer could be eliminated. The manuscript was cited 150 times based on SCOPUS accessed in 2015*

10) **Smith-Bindman R, et al. Risk of Thyroid Cancer based on Thyroid Ultrasound Imaging Characteristic: Result of A Population Based-Study. JAMA Internal Medicine. 2013.** *This retrospective observational study documented the risk of cancer associated with specific thyroid imaging findings. This is the first study that links a large cohort of patients with detailed imaging findings, with a comprehensive tumor registry to permit the quantification of the risk of cancer associated with specific findings. The results suggest that the number of biopsies can be reduced by up to 90%, with a relatively small impact on cancer detected. The results are being rapidly embraced by endocrinologists, surgeons and radiologists.*

11) **Smith-Bindman et al Ultrasound versus Computed Tomography for Suspected Nephrolithiasis NEJM. 2014.** *This 15-center randomized comparative effectiveness study assessed whether ultrasound or CT should be the first imaging test in patients with suspected kidney stones. The study is unique in using a rigorous randomized trial design to assess a diagnostic imaging test, and in assessing a broad range of outcomes other than diagnostic accuracy. Emergency department patients with abdominal pain and suspected nephrolithiasis*

were randomly assigned to one of three arms for imaging: ultrasound performed by an emergency medicine physician, ultrasound provided by a radiologist, or computerized tomography (CT). No significant differences were observed over the next 6 months in rates of severe serious adverse events (SAEs), related SAEs, or total SAEs, or ED or hospital admission rates at 7 or 30 days; however, initial imaging with ultrasound was associated with lower 1 day and 6-month cumulative radiation exposures than initial imaging with CT. The manuscript was cited 45 times based on SCOPUS accessed in 2015

Abstract Presentations at Scientific Meetings

Current CT doses from a Computed Tomography Dose Registry, presented at the *Conference on Radiation in Health, Radiation Research Society*, Kona, HI, 10/15-17, 2016

Current Exposure to Computed Tomography Imaging in US Integrated Health Care Systems, presented at the Conference on Radiation in Health by the Radiation Research Society, Kona, HI, 10/15-17, 2016

Current CT doses from a Computed Tomography Dose Registry in Pediatric Patients, Presented at the American Academy of Pediatrics Annual Meeting, San Francisco, CA, 10/22-25/2017

European Congress of Radiology, European Society of Radiology, 2017
Practical Strategies for Optimizing Dose, A Dose of Reality

European Congress of Radiology, European Society of Radiology, 2018
An International Randomized Controlled Trial of Two Interventions for Reducing Doses for Computed Tomography (CT) Through Audit Feedback and Sharing Best Practices

European Congress of Radiology, European Society of Radiology, 2018
International Variation in Radiation Dose for Computed Tomography (CT)

ZELLERS:</p> <p>7 Q State your name.</p> <p>8 A Rebecca Smith-Bindman.</p> <p>9 Q Dr. Bindman, we are here today to take</p> <p>10 your deposition in the talcum powder MDL litigation.</p> <p>11 Are you aware of that?</p> <p>12 A I am.</p> <p>13 Q Have you been deposed before?</p> <p>14 A I have.</p> <p>15 Q On how many occasions?</p> <p>16 A Three to four times.</p> <p>17 Q Have you ever testified at trial?</p> <p>18 A I have.</p> <p>19 Q On how many occasions?</p> <p>20 A One.</p> <p>21 Q You are generally familiar with the rules</p> <p>22 we're going to follow here today?</p> <p>23 A I am.</p> <p>24 Q If at any time I ask you a question or any</p> <p>25 counsel asks you a question that you don't</p>
Page 11	Page 13
<p>1 San Francisco, California</p> <p>2 February 7, 2019</p> <p>3 9:20 a.m.</p> <p>4</p> <p>5 REBECCA SMITH-BINDMAN, M.D.,</p> <p>6 being first duly sworn or affirmed to testify to the</p> <p>7 truth, the whole truth, and nothing but the truth,</p> <p>8 was examined and testified as follows:</p> <p>9 THE VIDEOGRAPHER: We are now on the</p> <p>10 record. My name is Joseph morgue. I'm a</p> <p>11 videographer for Golkow Litigation Services.</p> <p>12 Today's date is February 7, 2019. The</p> <p>13 time on the video monitor is 9:20 a.m.</p> <p>14 This video deposition is being held at</p> <p>15 1700 Montgomery Street, Suite 250, San Francisco,</p> <p>16 California, in the matter In Re: Johnson & Johnson</p> <p>17 Talcum Powder Products Marketing, Sales Practices,</p> <p>18 and Products Liability Litigation, for the United</p> <p>19 States District Court, for the District of</p> <p>20 New Jersey.</p> <p>21 The deponent is Dr. Rebecca Smith-Bindman.</p> <p>22 Counsel will be noted on the stenographic record.</p> <p>23 The court reporter is Mary Goff. She will now</p> <p>24 administer the oath.</p> <p>25</p>	<p>1 understand, please don't answer it. Tell us you</p> <p>2 don't understand, and we'll rephrase the question or</p> <p>3 repeat it so it's clear to you.</p> <p>4 Can you do that?</p> <p>5 A I can.</p> <p>6 Q If you answer a question, is it fair for</p> <p>7 us to assume that you understood it?</p> <p>8 A It is.</p> <p>9 Q Please don't guess or speculate as to any</p> <p>10 answers. If you don't know the answer to a question</p> <p>11 or it would call you to guess or speculate, tell us.</p> <p>12 Can you do that?</p> <p>13 A I can.</p> <p>14 Q If at any time you need to take a break as</p> <p>15 we proceed through the day, please tell us. And</p> <p>16 once we finish whatever line of questioning we're</p> <p>17 involved with, then we will take a break.</p> <p>18 A Okay.</p> <p>19 Q Tell us the times that you have been</p> <p>20 deposed. When is the last time you were deposed?</p> <p>21 A I think approximately six years ago.</p> <p>22 Q What was the litigation or the matter?</p> <p>23 A I have been deposed a few times. I'm not</p> <p>24 sure which happened when --</p> <p>25 Q That's fine.</p>

4 (Pages 10 to 13)

Rebecca Smith-Bindman, M.D.

Page 14	Page 16
<p>1 A -- but I can tell you in general what they 2 were about. 3 Q Tell us -- the three to four times that 4 you have been deposed, will you tell us what each of 5 those matters was? 6 A Yes. I am in addition to being an 7 epidemiologist, I'm a clinical radiologist. And 8 each of those cases had to do with diagnosis and 9 communication within medical malpractice cases. 10 One case had to do with a delayed 11 diagnosis of breast cancer and not communicating 12 results. 13 One case had to do with a misdiagnosis of 14 a first trimester pregnancy loss. 15 One case had to do with misdiagnosis of a 16 complication of a twin/twin pregnancy. I think 17 those are the cases I was deposed in. 18 Q All of the cases in which you have been 19 deposed previously have been medical malpractice 20 cases? 21 A Yes. 22 Q Were those cases in which you had provided 23 treatment to a patient or were they cases in which 24 you were an expert witness independent of that 25 particular plaintiff?</p>	<p>1 A And -- and I was deposed. 2 MS. O'DELL: Excuse me. 3 Q (BY MR. ZELLERS) Yes. So three prior 4 litigations in which you served as an expert and you 5 were deposed; is that right? 6 A I -- 7 MS. O'DELL: Object to the form. I think 8 she said four, but -- 9 MR. ZELLERS: Well, she said three to 10 four. But then when she was telling us about those 11 cases -- 12 A -- so I remember what was fourth case was. 13 Q (BY MR. ZELLERS) All right. What was the 14 fourth case? 15 A There was a case of delay in the diagnosis 16 of an ovarian cancer. 17 Q Where was that case? 18 A Somewhere in the middle of the country. 19 Q When did you testify in that case? 20 A I -- I only testified in a single case. 21 So it -- do you mean deposed? 22 Q Yes. When were you deposed in that case? 23 A I -- sometime between -- all of the cases 24 were sometime between six and 12 years ago. I'm 25 not --</p>
Page 15	Page 17
<p>1 A For each of those cases, I was an expert 2 witness. I had never personally been involved in a 3 medical malpractice cases. 4 Q Were each of those cases in the 5 San Francisco area or where were they located? 6 A None of those cases were in the 7 San Francisco area. One of them was in Huntsville 8 Alabama, one was in Northern California, and one was 9 in Southern California. 10 Q Do you remember the names of any of those 11 cases? 12 A I do not. 13 Q Do you remember the name of the lawyer or 14 lawyers that you worked with in those cases? 15 A I do not. 16 Q Did you testify in those cases on behalf 17 of the plaintiff or on behalf of a defendant? 18 A They were split. So I have been involved 19 in cases on both sides. 20 Q Well, my understanding is you have been 21 involved in three prior litigations; is that right 22 -- 23 MS. O'DELL: Object to the form. 24 Q (BY MR. ZELLERS) -- in which you served as 25 an expert witness and were deposed?</p>	<p>1 Q All right. Did -- 2 A -- sure I remember the years. 3 Q The case in which you testified as an 4 expert witness in the delay of diagnosis of ovarian 5 cancer, were you testifying for the defense or for 6 the plaintiff? 7 A I believe that case was for the defense. 8 Q Do you remember the name of the plaintiff? 9 A I do not. 10 Q Do you remember the name of the defendant? 11 A I do not. 12 Q Do you remember the name of the attorney 13 who retained you? 14 A I do not. 15 Q Do you remember where in the middle of the 16 country that case was pending? 17 A I do not. 18 Q You stated that you have testified one 19 time at trial; is that right? 20 A Yes. 21 Q Where did you testify at trial? 22 A That was Huntsville -- the Fayetteville, 23 Alabama case. 24 Q In that case, did you testify for the 25 plaintiff or the defense?</p>

5 (Pages 14 to 17)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 18</p> <p>1 A For the plaintiff.</p> <p>2 Q Do you remember how long ago it was?</p> <p>3 A In the ballpark of seven or eight years</p> <p>4 ago.</p> <p>5 Q The Northern California case that you gave</p> <p>6 deposition testimony in that -- in, was that for the</p> <p>7 plaintiff or the defense?</p> <p>8 A I don't remember.</p> <p>9 Q Southern California, that medical</p> <p>10 malpractice case, did you testify for the plaintiff</p> <p>11 or the defense?</p> <p>12 A Can I go back? I -- I do remember.</p> <p>13 So the Northern California case was the</p> <p>14 plaintiff. The Southern California case was the</p> <p>15 defense.</p> <p>16 Q Do you remember the attorneys that you</p> <p>17 worked with in the Northern California case?</p> <p>18 A I do not.</p> <p>19 Q The Southern California case?</p> <p>20 A I do not.</p> <p>21 Q Do you remember the name of any of the</p> <p>22 parties in any of the cases in which you have either</p> <p>23 given deposition testimony in or trial testimony in?</p> <p>24 A I do not.</p> <p>25 Q Today I'm going to ask you questions about</p>	<p style="text-align: right;">Page 20</p> <p>1 A Yes.</p> <p>2 Q You are not testifying here today as a</p> <p>3 radiologist; is that right?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 A I think some of my experiences as a</p> <p>6 radiologist are highly relevant to my expertise, and</p> <p>7 so there are some questions that I think that that</p> <p>8 is very relevant.</p> <p>9 Q (BY MR. ZELLERS) Are there any areas in</p> <p>10 which you anticipate providing expert testimony in</p> <p>11 this litigation, other than in the areas of</p> <p>12 epidemiology and radiology?</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 A I mentioned ovarian cancer. So risk</p> <p>15 factors for ovarian cancer falls into epidemiology.</p> <p>16 The mechanism of ovarian cancer, the</p> <p>17 pathophysiology, the biological processes are not</p> <p>18 technically epidemiology. They're related, and so</p> <p>19 some of my opinions, I think, would fall into that</p> <p>20 category.</p> <p>21 Q (BY MR. ZELLERS) How would you define that</p> <p>22 area of expertise for which you are providing expert</p> <p>23 opinions?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 Q (BY MR. ZELLERS) We have got that you are</p>
<p style="text-align: right;">Page 19</p> <p>1 talcum powder or baby powder. Can we agree that</p> <p>2 when I refer during the deposition to products, to</p> <p>3 talc products, talcum powder products, baby powder,</p> <p>4 or Shower to Shower at issue in this MDL, that I am</p> <p>5 referring to the baby powder product manufactured by</p> <p>6 Johnson & Johnson Consumer Products, Inc., and the</p> <p>7 Shower to Shower product that was formerly</p> <p>8 manufactured by Johnson & Johnson Consumer Products,</p> <p>9 Inc.?</p> <p>10 A Yes.</p> <p>11 Q How would you define the area of expertise</p> <p>12 in which you were offering opinions in this case,</p> <p>13 "this case" being the talc MDL?</p> <p>14 A I was asked to provide an expert review in</p> <p>15 the area of epidemiology, ovarian cancer and its</p> <p>16 causes, the health effects of talc powder products.</p> <p>17 I think those are the main areas.</p> <p>18 Q Are -- are you testifying today as an</p> <p>19 epidemiologist?</p> <p>20 A Yes.</p> <p>21 MS. O'DELL: Object to --</p> <p>22 A Am --</p> <p>23 MS. O'DELL: -- the form.</p> <p>24 A -- I bringing expertise to that?</p> <p>25 Q (BY MR. ZELLERS) Yes.</p>	<p style="text-align: right;">Page 21</p> <p>1 going to provide expert opinions relating to</p> <p>2 epidemiology. You're going to provide expert</p> <p>3 opinions relating to radiology.</p> <p>4 Are there any other areas that you intend</p> <p>5 to provide expert opinions in?</p> <p>6 MS. O'DELL: Other than what she has just</p> <p>7 described?</p> <p>8 Q (BY MR. ZELLERS) Well, other than</p> <p>9 epidemiology and radiology.</p> <p>10 MS. O'DELL: Object to the form. She gave</p> <p>11 another -- a host -- a suite of things she expected</p> <p>12 to testify on, but --</p> <p>13 MR. ZELLERS: And so --</p> <p>14 MS. O'DELL: -- I'll object to the form.</p> <p>15 MR. ZELLERS: -- yeah, thank you.</p> <p>16 A Could you repeat back to me what I have</p> <p>17 already said?</p> <p>18 Q (BY MR. ZELLERS) No. I'm asking you what</p> <p>19 you are going to provide expert testimony in, what</p> <p>20 you consider yourself to be an expert in.</p> <p>21 I understand epidemiology, and I</p> <p>22 understand the epidemiology opinions you are going</p> <p>23 to give, relate to whether or not talcum powder is</p> <p>24 associated with ovarian cancer, whether or not</p> <p>25 talcum powder causes ovarian cancer, so I believe</p>

6 (Pages 18 to 21)

Rebecca Smith-Bindman, M.D.

Page 22	Page 24
<p>1 those are epidemiology-based opinions. 2 I also understand that you have a -- your 3 training and your background is in radiology and 4 that you will provide, to the extent relevant, 5 radiology opinions. 6 But you're not testifying here today as a 7 gynecologic oncologist, are you? 8 A I am not. 9 Q You are not testifying here today as an 10 expert in asbestos; is that fair? 11 MS. O'DELL: Object to the form. 12 A I am going to provide opinions, if asked, 13 about the health effects of asbestos. 14 Q (BY MR. ZELLERS) Are you an expert or do 15 you consider yourself to be an expert in asbestos? 16 MS. O'DELL: Object to the form. 17 A The question is about asbestos, in 18 general, and I consider myself an expert on the 19 health effects of asbestos. 20 Q (BY MR. ZELLERS) Does that mean that you 21 are an expert in asbestos or simply looking at 22 studies that have evaluated the epidemiology of 23 asbestos and asbestos exposure to certain 24 conditions? 25 MS. O'DELL: Object to the form.</p>	<p>1 Q -- not an expert -- well -- and let me 2 withdraw that. 3 You have produced an expert report in this 4 case; is that right? 5 A I have. 6 Q Let's mark a couple of things at the 7 outset. 8 Deposition Exhibit 1 is copy of the Notice 9 of Deposition. 10 (Exhibit 1 was marked for identification 11 and is attached to the transcript.) 12 MS. O'DELL: Thank you. 13 Q (BY MR. ZELLERS) Have you seen the Notice 14 of Deposition prior to today? 15 A Yes, I have. 16 Q Have you either brought with you or 17 through counsel have they brought all of the 18 materials that you believe are responsive to the 19 Deposition Notice? 20 MR. ZELLERS: And, Ms. O'Dell, I recognize 21 that you have objected to the Deposition Notice and 22 the record will reflect that. 23 MS. O'DELL: And just so I have a chance 24 to say something, we'll just reassert those 25 objections now.</p>
Page 23	Page 25
<p>1 A I think there are a lot of acts -- aspects 2 of asbestos, so I would absolutely not consider 3 myself an expert on the geology of asbestos or in 4 the mechanism of mining asbestos. 5 But I would consider myself an expert on 6 the changes to the body that can be the result of 7 exposure to asbestos in the context of epidemiology 8 studies, but also in the context of molecular 9 changes, cellular changes like that. 10 And -- and those technically are probably 11 not in the category of epidemiology, but would 12 overlap other areas of my training and experience, 13 such as pathology and... 14 Q You are not an expert in the testing of 15 asbestos; is that fair? 16 A I -- I would, yes, agree. 17 Q You are not an expert in the different 18 forms and types of asbestos -- 19 A I -- 20 Q -- correct? 21 A -- I -- correct. 22 Q Okay. 23 A I'm not an expert in those types of -- 24 Q You are -- 25 A -- asbestos.</p>	<p>1 Dr. Smith-Bindman has brought with her 2 documents subject to our objections. 3 MR. ZELLERS: And I would really like 4 Dr. Smith-Bindman to answer the question. 5 MS. O'DELL: I'm sure she's ready to do 6 that. 7 A To the best of my knowledge, I have 8 responded or brought or provided all of -- 9 Q (BY MR. ZELLERS) You -- 10 A -- those items. 11 Q -- you are not aware of items that are 12 called for in the Deposition Notice, what we have 13 marked as Exhibit 1 that have not been produced or 14 not available here today; is that right? 15 A That's correct. 16 Q Ms. O'Dell and I spoke earlier about your 17 invoices, and apparently you do have some invoices 18 relating to your work in this matter. At some point 19 today we'll collect those and we will mark those. 20 (Exhibit 2 was marked for identification 21 and is attached to the transcript.) 22 Q (BY MR. ZELLERS) Deposition Exhibit 2 is 23 your report in this matter; is that right? 24 MS. O'DELL: Thank you. 25 A Okay. Yes.</p>

7 (Pages 22 to 25)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 26</p> <p>1 Q (BY MR. ZELLERS) Does your report in this 2 matter, Deposition Exhibit 2, contain all of the 3 opinions that you intend to offer at trial or at any 4 hearing in this matter? 5 A The report summarizes my opinions. I have 6 written in the report. As new information comes 7 available, I may take that into account as well. 8 So when we began, counsel mentioned a few 9 additional papers that I had seen since the time my 10 report was written. And so those are -- are -- 11 won't -- have not changed my views, but those are 12 not necessarily referenced in this report. 13 Q In terms of your opinions and the opinions 14 that you expect to render in this matter, either at 15 trial or any hearing, those opinions are contained 16 in your report which we marked as Exhibit 2, 17 correct? 18 MS. O'DELL: Object to the form. 19 A I have not, since writing my report, seen 20 any documents that have changed my opinions. 21 But as I continue to keep up with the 22 published literature, my opinions may reflect 23 changing documents that I have seen since the time 24 my report was generated. 25</p>	<p style="text-align: right;">Page 28</p> <p>1 Q Okay. Right now all I want to do is get a 2 list of what you have looked at and considered since 3 you prepared your report. 4 A I have seen an updated testing report by 5 Mr. Longo. 6 I have seen a report and deposition by 7 Mr. Cooke. I -- I think those are the... 8 Q You -- counsel for Plaintiffs, Ms. O'Dell, 9 told me before the deposition that you also have 10 looked at a health assessment from Health Canada or 11 a risk assessment; is -- is that correct? 12 A Yes, that's correct. 13 Q All right. Did you also look at a 14 meta-analysis that was performed or at least the 15 draft of a meta-analysis by the first name, author, 16 Thayer (phonetic)? 17 A I -- I saw that report briefly. 18 Q Anything else that you have reviewed 19 and/or considered that is not included in the 20 materials that you reference either in your list of 21 references or in your Materials Considered List? 22 A There was also a series of reports in -- 23 in The New York Times and Reuters and a summary of 24 that in the BMJ, which I have seen since I have 25 issued my report.</p>
<p style="text-align: right;">Page 27</p> <p>1 Q (BY MR. ZELLERS) All I can do is ask you 2 questions today. As of today, does your report 3 contain the opinions that you expect to provide at 4 any trial or hearing in this matter? 5 A Yes, they do. 6 Q My understanding from one of your prior 7 answers is that you have reviewed some additional 8 materials since you prepared and signed your report 9 on or about November 15 of 2018; is that right? 10 A That is correct. 11 Q Those materials, you believe, support the 12 opinions that you have put in your report, but have 13 not changed your opinions; is -- 14 A It -- 15 Q -- that right? 16 A -- that's correct. 17 Q What new or additional materials have you 18 reviewed and considered since preparing your report 19 on November 15, 2018? 20 A So I have seen a draft of a publication -- 21 submitted for publication by Dr. Saed about the 22 cellular and molecular changes to cell lines of 23 being exposed to various talcum powder products, 24 which I think is an important paper that has 25 influenced my views.</p>	<p style="text-align: right;">Page 29</p> <p>1 Q Are you basing any of your opinions on the 2 Reuters or New York Times articles? 3 A Those reports support my opinions, but no, 4 I'm not basing my report on -- on those. 5 Q Ms. O'Dell also provided me with a list 6 materials that she has represented that you have 7 reviewed since you prepared your report. 8 It's a series of Imerys documents. It's 9 one J&J produced document. And then the last item 10 listed is an Amended Expert Report of Robert Cooke. 11 Have you reviewed those materials since 12 preparing your report? 13 A So yes, the -- the Mr. Cooke report, which 14 is one I mentioned. Yes, I have seen the Imerys 15 report. And I can't remember what you said, the 16 Johnson & Johnson? 17 Q Are those additional documents or 18 materials that you have reviewed since preparing 19 your report? 20 A I'm sorry. I understand the question. I 21 don't remember what the Johnson & Johnson material 22 was. 23 Q I -- 24 A You listed it. I just don't -- 25 Q -- well, I didn't --</p>

8 (Pages 26 to 29)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 30</p> <p>1 A -- remember that.</p> <p>2 Q -- list it. This was a list that was</p> <p>3 prepared and provided to me by counsel for</p> <p>4 Plaintiffs so --</p> <p>5 MS. O'DELL: But I don't think he</p> <p>6 characterized the documented in any way other than</p> <p>7 the Bates number, so -- so it's a J&J document --</p> <p>8 A What is that item?</p> <p>9 MS. O'DELL: -- that's just the Bates</p> <p>10 number for that particular document. And it's</p> <p>11 the -- the test results that you reviewed yesterday.</p> <p>12 A Yes.</p> <p>13 (Exhibit 3 was marked for identification</p> <p>14 and is attached to the transcript.)</p> <p>15 Q (BY MR. ZELLERS) Are all of the documents</p> <p>16 contained on Exhibit 3, the -- a listing that was</p> <p>17 put together by counsel for the Plaintiffs,</p> <p>18 documents that you reviewed yesterday in preparation</p> <p>19 for your deposition today?</p> <p>20 A Yes.</p> <p>21 Q Are those documents that were selected by</p> <p>22 plaintiffs' counsel to show you to help prepare you</p> <p>23 for the deposition?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 A The document are ones that I asked for to</p>	<p style="text-align: right;">Page 32</p> <p>1 is that right?</p> <p>2 A Yes, I did.</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 Q (BY MR. ZELLERS) You asked for documents</p> <p>5 that were both positive and negative relating that</p> <p>6 testing; is that right?</p> <p>7 A Yes.</p> <p>8 Q Do you believe that you have now seen, as</p> <p>9 part of your review, all documents relating to the</p> <p>10 testing of Johnson's baby powder and/or Shower to</p> <p>11 Shower powder?</p> <p>12 A I --</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 A -- I do not believe I have seen the</p> <p>15 entirety of the testing results.</p> <p>16 Q (BY MR. ZELLERS) Was it your request that</p> <p>17 you see whatever pertinent documents that were</p> <p>18 relating to the testing of the baby powder?</p> <p>19 A It was not my request. I wanted to</p> <p>20 understand, in general, what kind of testing had</p> <p>21 been done. I -- I was not planning to delve into</p> <p>22 the entirety of testing.</p> <p>23 Q Any other materials that you have reviewed</p> <p>24 prior -- strike that -- subsequent to preparing your</p> <p>25 report, which we marked as Exhibit 2?</p>
<p style="text-align: right;">Page 31</p> <p>1 see testing results, both positive and negative,</p> <p>2 from Johnson & Johnson. So I requested documents</p> <p>3 that would show that, and I believe that's what each</p> <p>4 of these were provided for.</p> <p>5 Q When did you make that request to</p> <p>6 plaintiffs' counsel?</p> <p>7 MS. O'DELL: And Mr. Zellers is -- he can</p> <p>8 ask you when you made the request. In terms of the</p> <p>9 specifics of the request or conversations with</p> <p>10 counsel, those would be protected, and I would</p> <p>11 instruct you not to -- to disclose those.</p> <p>12 A To not say when I read the request?</p> <p>13 MS. O'DELL: You can say when you gave the</p> <p>14 request. But the substance of the request or the</p> <p>15 substance of the discussions, I would have ask you</p> <p>16 not to --</p> <p>17 A Okay.</p> <p>18 MS. O'DELL: -- testify to those.</p> <p>19 Q (BY MR. ZELLERS) My question again is:</p> <p>20 When did you make the request for the documents that</p> <p>21 are identified on Exhibit 3?</p> <p>22 A I believe it was a few weeks ago.</p> <p>23 Q You made a request for testing documents</p> <p>24 of talcum powder used in Johnson & Johnson Consumer,</p> <p>25 Inc., baby powder or former Shower to Shower powder;</p>	<p style="text-align: right;">Page 33</p> <p>1 A None that come to mind.</p> <p>2 Q You have brought with you here today</p> <p>3 several notebooks and it looks like a blue folder;</p> <p>4 is that right?</p> <p>5 A Yes.</p> <p>6 Q What is contained in the blue folder that</p> <p>7 you brought here today?</p> <p>8 A Primarily in the blue folder are either</p> <p>9 additional documents that I have reviewed since I</p> <p>10 wrote my report, but also a few documents that -- in</p> <p>11 preparation for the deposition, I went through my</p> <p>12 report and pulled some articles to look at in</p> <p>13 greater depth, and so I brought those with --</p> <p>14 Q So --</p> <p>15 A -- me.</p> <p>16 Q -- in the blue folder are materials that</p> <p>17 you pulled out to have available for the deposition</p> <p>18 today for your use as needed in responding to</p> <p>19 questions that were asked?</p> <p>20 A Yes, that's correct.</p> <p>21 Q Can I see you blue folder, please? And,</p> <p>22 Dr. Smith-Bindman, have you taken any medications</p> <p>23 that impair your ability to answer questions today?</p> <p>24 A I have not.</p> <p>25 Q All right. The first document in your</p>

9 (Pages 30 to 33)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 34</p> <p>1 blue folder is a document, "Reproductive Sciences"</p> <p>2 at the top, "Molecular basis Supporting the</p> <p>3 Association of Talcum Powder Use with Increased Risk</p> <p>4 of Ovarian Cancer."</p> <p>5 The first named author is Nicole Fletcher.</p> <p>6 And is this the article by Dr. Saed that</p> <p>7 you sold me about?</p> <p>8 A Yes, it is.</p> <p>9 Q There are a number of notes and</p> <p>10 highlighting that are contained in the document.</p> <p>11 Are all of those your notes and highlighting?</p> <p>12 A They are.</p> <p>13 Q We'll mark your copy of Dr. Saed's paper</p> <p>14 as Exhibit 4.</p> <p>15 (Exhibit 4 was marked for identification</p> <p>16 and is attached to the transcript.)</p> <p>17 Q (BY MR. ZELLERS) The next paper in your</p> <p>18 blue folder that you brought here today is a</p> <p>19 document with the first named author, Fiume,</p> <p>20 F I U M E. The title is "Safety Assessment of Talc</p> <p>21 as Used in Cosmetics."</p> <p>22 It appeared in the International Journal</p> <p>23 of Toxicology. Again, there's highlighting in the</p> <p>24 document and underlying lining.</p> <p>25 Did you do the highlighting and did you do</p>	<p style="text-align: right;">Page 36</p> <p>1 Are those your notations?</p> <p>2 A Yes, they are.</p> <p>3 Q All right. We'll mark that as Exhibit 7.</p> <p>4 (Exhibit 7 was marked for identification</p> <p>5 and is attached to the transcript.)</p> <p>6 (Exhibit 8 was marked for identification</p> <p>7 and is attached to the transcript.)</p> <p>8 Q (BY MR. ZELLERS) Exhibit 8 are the</p> <p>9 classifications of the International Agency for</p> <p>10 Research on Cancer or IARC.</p> <p>11 Are you generally familiar with the IARC</p> <p>12 classifications relating to the carcino --</p> <p>13 carcinogenicity of different agents?</p> <p>14 A I am.</p> <p>15 Q The next document in your folder that also</p> <p>16 has some underlining and highlighting is on "Talc</p> <p>17 Translocation from the Vagina to the Oviducts and</p> <p>18 Beyond."</p> <p>19 (Exhibit 9 was marked for identification</p> <p>20 and is attached to the transcript.)</p> <p>21 Q (BY MR. ZELLERS) This is an article that</p> <p>22 was published in 1985. The first named author is</p> <p>23 A.P. Wehner.</p> <p>24 Is this also a document that you brought</p> <p>25 here today?</p>
<p style="text-align: right;">Page 35</p> <p>1 the underlining in this document?</p> <p>2 A Yes, I did.</p> <p>3 Q We'll mark that document, your copy, as</p> <p>4 Exhibit 5.</p> <p>5 (Exhibit 5 was marked for identification</p> <p>6 and is attached to the transcript.)</p> <p>7 Q (BY MR. ZELLERS) I see here that there is</p> <p>8 the IARC monograph dated 2010 on the evaluation of</p> <p>9 carcinogenic risk to humans.</p> <p>10 The bottom part of page 1 is torn off. Do</p> <p>11 you know why that is?</p> <p>12 A I do not.</p> <p>13 Q All right. So the first page gives a date</p> <p>14 reference of 2010. The second page gives -- well,</p> <p>15 it also lists a 2006 date and a 2010 date. There is</p> <p>16 highlighting throughout.</p> <p>17 Whose highlighting is contained in the</p> <p>18 document that we'll mark as Exhibit 6?</p> <p>19 A That would be mine.</p> <p>20 (Exhibit 6 was marked for identification</p> <p>21 and is attached to the transcript.)</p> <p>22 Q (BY MR. ZELLERS) We then have a news</p> <p>23 article from the British Medical Journal that was</p> <p>24 published December 28 of 2008. It's just a one-page</p> <p>25 document with underlining and writing on it.</p>	<p style="text-align: right;">Page 37</p> <p>1 A It is.</p> <p>2 Q The highlighting in the document, is that</p> <p>3 your document -- strike that.</p> <p>4 Is that your highlighting?</p> <p>5 A It -- it is.</p> <p>6 Q Are all of these documents either on your</p> <p>7 reference list or on your Materials Considered List,</p> <p>8 other than what you told us about at the start of</p> <p>9 the deposition?</p> <p>10 A Yes.</p> <p>11 Q We have Deposition Exhibit 47 from the</p> <p>12 Pier deposition. I will not mark that.</p> <p>13 We have an article here by Shukla,</p> <p>14 S H U K L A, "Alterations in Gene Expression in</p> <p>15 Human Mesothelial Cells Correlate with Mineral</p> <p>16 Pathogenicity."</p> <p>17 (Exhibit 10 was marked for identification</p> <p>18 and is attached to the transcript.)</p> <p>19 Q (BY MR. ZELLERS) Is that a document that</p> <p>20 you brought here today?</p> <p>21 A Yes, it is.</p> <p>22 Q Are the highlights and writing on that</p> <p>23 document yours?</p> <p>24 A Yes, they are.</p> <p>25 Q You have an article by Biz'Zard that was</p>

10 (Pages 34 to 37)

Rebecca Smith-Bindman, M.D.

Page 38	Page 40
<p>1 published in -- is that -- Phytotherapy Research, 2 2007; is that right? 3 A Yes. 4 Q There do not appear to be any handwriting 5 on that document, so I won't mark it. 6 We have got the Hopkins Deposition 7 Exhibit 28. There's no highlighting on that 8 document. 9 And then we have the "Draft Screening 10 Assessment" from Health Canada dated December 2018. 11 Is the highlighting in that document 12 yours? 13 A Yes, it is. 14 Q All right. We'll mark that as 15 Deposition Exhibit 11. 16 (Exhibit 11 was marked for identification 17 and is attached to the transcript.) 18 Q (BY MR. ZELLERS) Have we covered all of 19 the documents that you have brought with you today 20 in your blue folder? 21 A Yes. 22 Q All right. Let me see your two notebooks 23 that you also have brought with you today. One 24 notebook is "Talc Articles I." The second notebook 25 is "Talc Articles II."</p>	<p>1 Q Did you have any staff that helped you in 2 terms of your review of materials and preparation of 3 your report other -- other than Dr. Hall? 4 A I had a copy editor -- once I had a draft 5 of my report -- review it. 6 Q Who is your copy editor? 7 A Her name is Chris Tachibana. 8 Q And where is she employed? 9 A She is a freelance medical copy editor. 10 Q What role did she play in your review and 11 analysis of materials and your -- the preparation of 12 your report? 13 A So she played no role in the review -- or 14 the drafting of the report, but she reviewed a draft 15 near the end for grammatical issues to remove 16 redundancy. 17 She's someone I work with a great deal for 18 my medical publications, and so -- 19 Q You have worked with her in the past -- I 20 -- 21 A That's right -- 22 Q -- is that right? 23 A -- yes. 24 Q Is she here in the San Francisco area? 25 A She is not.</p>
Page 39	Page 41
<p>1 Are all of the articles that are contained 2 in these two notebooks, articles that are contained 3 either on your reference list or on your reliance 4 materials list? 5 A Yes, they are. 6 Q As I go through this quickly, it appears 7 that there is underlining and highlighting of the 8 articles that you have brought here today; is that 9 right? 10 A Yes, it is. 11 Q Is all of the highlighting and underlining 12 and marking, are those your highlights and marking? 13 A Yes, they are. 14 Q Who prepared the notebooks? And let's 15 mark Talc Articles I, the entire notebook as 16 Exhibit 12. 17 (Exhibit 12 was marked for identification 18 and is attached to the transcript.) 19 Q (BY MR. ZELLERS) Talc Articles II, the 20 entire notebook, as Exhibit 13. 21 (Exhibit 13 was marked for identification 22 and is attached to the transcript.) 23 Q (BY MR. ZELLERS) Who prepared Exhibits 12 24 and 13 for you? 25 A I did.</p>	<p>1 Q Where is she located? 2 A She splits her time between Seattle, 3 Washington, and Germany. 4 Q She charges for her services; is that 5 right? 6 A She does. 7 Q Are those charges that you paid or that 8 were paid by plaintiffs' counsel? 9 A They have not yet been paid, but the plan 10 is for her to submit those invoices. And it will 11 come out of my fees, but will be paid by the 12 counsel. 13 Q All right. When you submit invoices, 14 will -- the charges for the copy editor, will those 15 be included in your invoice to plaintiffs' counsel? 16 A My plan is for it to come out of my fee. 17 So I am paying for it, but it should be literally 18 paid by counsel, since I'm not able to pay and 19 deduct taxes or pay taxes or -- or so -- or... 20 Q All right. You will pay it out of your 21 pocket and will not include it on your statement to 22 plaintiffs' counsel; is that right? 23 A That's correct. 24 Q Approximately how much have you paid or 25 will you pay to your copy editor?</p>

11 (Pages 38 to 41)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 42</p> <p>1 A I believe the total is in the ballpark of 2 about 1,500 or \$1,700. 3 Q How about Dr. Hall? Are her fees being 4 paid by you or are they being paid by plaintiffs' 5 counsel? 6 A Her fees are being paid by counsel. 7 Q Dr. Hall either has or will submit her own 8 separate invoice relating to her work on this 9 matter? 10 A Yes. 11 Q Has she already done that? 12 A I believe she has submitted it. I -- I'm 13 not 100 percent sure. 14 Q Do you know what Dr. Hall's fees are at 15 least through the present time relating to her work 16 on this matter? 17 A I believe the amount is in the ballpark of 18 the same 1,500 to \$2,000. 19 Q You believe, though, that Dr. Hall either 20 has or will be submitting invoice -- an invoice 21 separately for her work to plaintiffs' counsel; is 22 that right? 23 A Yes. 24 Q You have submitted invoices; is that 25 right?</p>	<p style="text-align: right;">Page 44</p> <p>1 Q What did that lawyer tell you or ask you 2 about this engagement? 3 A They told me that there was a -- a case 4 that they would like some epidemiology research on 5 and that they thought I would be a very good fit and 6 would I be willing to speak with them. 7 I don't believe they even told me what the 8 content of -- of the case was about, but rather, 9 that it was a case. And the role that they were 10 seeking was as an epidemiologist, not as a 11 radiologist or on the medical care. 12 Q Was this a phone call or an e-mail or how 13 did they contact you? 14 A I believe it was a short e-mail followed 15 by a short phone call. 16 Q I mean, do you keep those e-mails? And if 17 at some point we ask for them to be produced, is 18 that something you could do? 19 A For the particular e-mail that you are 20 asking about, I cannot find it. So I don't have 21 that. I looked. 22 Q You were contacted by a lawyer or law 23 firm, asked if you would be willing. 24 You said you would be willing without even 25 knowing what the matter related to?</p>
<p style="text-align: right;">Page 43</p> <p>1 A I have. 2 Q When were you first retained in this 3 matter -- well, strike that. 4 When were you first contacted with 5 respect to this litigation, the talcum powder MDL? 6 A My recollection is mid-2017. 7 Q Who contacted you in mid-2017? 8 A I was initially contacted by a law firm 9 that I believe was helping the law firms find expert 10 witnesses and asked if I would be willing to speak 11 with them to see if this could be something that I 12 would be interested in doing. 13 Q What law firm or lawyer contacted you 14 initially in mid-2017? 15 A I -- I don't remember that initial 16 contact. 17 Q You don't remember the name of the lawyer 18 or the law firm that initially contacted you in this 19 matter? 20 A The initial law firm basically asked me if 21 I would be willing to speak to these lawyers, and I 22 do not know the name of that lawyer who originally 23 contacted me. 24 Q Did you ever speak to that lawyer again? 25 A No.</p>	<p style="text-align: right;">Page 45</p> <p>1 A I didn't say I would be willing to be an 2 expert. I said I would be willing to have a 3 conversation with the lawyers to learn about the 4 case. 5 Q Were you told at that time that the case 6 related to talcum powder? 7 A I was not. 8 Q Were you told at that time that the 9 medical issue in the case related to ovarian cancer? 10 A I do not believe I was. 11 Q What is the next contact then that you had 12 with any lawyer relating to this matter? 13 A So then a phone call was set up between 14 myself and, I believe it was, three lawyers involved 15 in this litigation and told about the -- what the -- 16 what the case was about and told what they were 17 looking for to see if I would be interested in 18 speaking with them. 19 And that lead to an in-person meeting 20 where we then discussed what the case was about. 21 Q When was the phone call with the three 22 attorneys? 23 A All of this was in mid-2017, June-July 24 time frame. 25 Q The same question. When was the in-person</p>

12 (Pages 42 to 45)

Rebecca Smith-Bindman, M.D.

Page 46	Page 48
<p>1 meeting?</p> <p>2 A Within that same -- maybe a month later,</p> <p>3 but same time frame.</p> <p>4 Q Was the in-person -- strike that.</p> <p>5 Where was the in-person meeting?</p> <p>6 A It was in my office in San Francisco.</p> <p>7 Q Who were the three attorneys that you</p> <p>8 spoke with initially over the phone and then met</p> <p>9 with in person?</p> <p>10 A So Dr. Thompson was one; John Restaino was</p> <p>11 one; and a third lawyer whose name is alluding me.</p> <p>12 Q Was it a man or a woman?</p> <p>13 A A woman.</p> <p>14 Q Is it a lawyer that you have had any</p> <p>15 further contact with or communications with?</p> <p>16 A Yes.</p> <p>17 Q But you can't remember her name?</p> <p>18 A I can't. But if we give it a minute, I</p> <p>19 think I will be able to.</p> <p>20 Q Well, if you do remember it at some point</p> <p>21 today, let us know.</p> <p>22 When you had the phone call with</p> <p>23 Ms. Thompson and with Mr. Restaino and this third</p> <p>24 lawyer in the in-person meeting, what did they ask</p> <p>25 you to do?</p>	<p>1 Q (BY MR. ZELLERS) You understood they</p> <p>2 represented the Plaintiffs in this litigation --</p> <p>3 A Yes.</p> <p>4 Q -- is that right?</p> <p>5 A Yes.</p> <p>6 Q You told them that you would be willing to</p> <p>7 do the review. You did not at that point agree to</p> <p>8 serve as an expert witness for the Plaintiffs; is</p> <p>9 that fair?</p> <p>10 A That's fair.</p> <p>11 Q Did you then go and do your review,</p> <p>12 literature review?</p> <p>13 A Yes, I did.</p> <p>14 Q You, at least at that point in time, had</p> <p>15 never previously done any research or review</p> <p>16 relating to talcum powder or relating to any</p> <p>17 potential association between talcum powder,</p> <p>18 perineal talcum powder use, and ovarian concern; is</p> <p>19 that right?</p> <p>20 A That's correct.</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 Q (BY MR. ZELLERS) You went out and reviewed</p> <p>23 the literature; is that right?</p> <p>24 A Yes.</p> <p>25 Q Did plaintiff's counsel, the two lawyers</p>
Page 47	Page 49
<p>1 A They asked me if I would be willing to do</p> <p>2 a comprehensive and unbiased review of the</p> <p>3 literature around talcum powder products and ovarian</p> <p>4 cancer.</p> <p>5 Q Did they ask you to do anything else?</p> <p>6 A Well, they asked if I would be willing to</p> <p>7 be an expert witness in this case.</p> <p>8 Q Anything else?</p> <p>9 A Nothing else that I can recall.</p> <p>10 Q You said you would do a review of the</p> <p>11 literature, correct?</p> <p>12 A I -- yes --</p> <p>13 Q You --</p> <p>14 A -- I did.</p> <p>15 Q -- you said that you would be willing to</p> <p>16 serve as an expert for Plaintiffs, correct?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 A I -- I hesitated on the last question</p> <p>19 because I was very upfront and clear that I was</p> <p>20 willing to do a review, but that I did not know this</p> <p>21 field in any great depth and that I would only be</p> <p>22 interested in doing that if I was permitted to do</p> <p>23 the review the same as I do in my other scientific</p> <p>24 work and that I didn't know if my conclusion would</p> <p>25 support my becoming an expert on their behalf.</p>	<p>1 that you met -- well, strike that.</p> <p>2 The three lawyers you met with, did they</p> <p>3 provide you with some articles to get started with?</p> <p>4 A They provided access to a database, a</p> <p>5 Dropbox, where they had a large number of articles</p> <p>6 that they made available to me.</p> <p>7 Q You reviewed those articles. Did you then</p> <p>8 have another meeting or communication with the</p> <p>9 plaintiffs' lawyers?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 A I had several meetings with the lawyers</p> <p>12 over the subsequent year.</p> <p>13 Q (BY MR. ZELLERS) Eventually were you</p> <p>14 asked, you know, to render an opinion on a topic or</p> <p>15 topics?</p> <p>16 MS. O'DELL: Object to the form.</p> <p>17 A I -- I was asked to draft a report of my</p> <p>18 review of the -- the literature and the data that</p> <p>19 were available.</p> <p>20 Q (BY MR. ZELLERS) At this time were there</p> <p>21 any new lawyers that you were meeting with on the</p> <p>22 plaintiffs' side or was it still the three original</p> <p>23 lawyers?</p> <p>24 A They were -- I -- I believe those would</p> <p>25 be -- I think there was one additional lawyer</p>

13 (Pages 46 to 49)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 50</p> <p>1 that --</p> <p>2 Q Do you remember his or her name?</p> <p>3 A Her name. Breanne was her first name.</p> <p>4 Q Do you know Breanne's last name?</p> <p>5 A Maybe Cope or something that's similar to</p> <p>6 Cope.</p> <p>7 Q You reviewed the articles. You were asked</p> <p>8 then by Plaintiffs to write up something relating to</p> <p>9 the articles; is that right?</p> <p>10 A Yes.</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 Q (BY MR. ZELLERS) At some point did either</p> <p>13 you suggest or the plaintiff lawyers ask you to form</p> <p>14 certain opinions relating to this matter?</p> <p>15 MS. O'DELL: Object to the form.</p> <p>16 A I'm not -- I'm not sure what you mean,</p> <p>17 "form opinions."</p> <p>18 Q (BY MR. ZELLERS) You met with the lawyers;</p> <p>19 is that right, after you had done your literature</p> <p>20 review?</p> <p>21 A Yes.</p> <p>22 Q You had not yet agreed to be an expert</p> <p>23 witness for the Plaintiffs; is that right?</p> <p>24 A Yes.</p> <p>25 Q After you had done your literature review,</p>	<p style="text-align: right;">Page 52</p> <p>1 better than what you have already done?</p> <p>2 A No.</p> <p>3 Q As part of serving as an expert for</p> <p>4 Plaintiffs, you did an -- either A -- do you call it</p> <p>5 a systematic review or a meta-analysis? What do you</p> <p>6 call that?</p> <p>7 A I call it a systematic review.</p> <p>8 Q What's the difference between a systematic</p> <p>9 review and a meta-analysis?</p> <p>10 A I -- I don't think there's any difference.</p> <p>11 They're -- they're both trying to describe an</p> <p>12 unbiased, quantitative review of the medical</p> <p>13 literature.</p> <p>14 Q Did -- your systematic review that you</p> <p>15 did, you did that after you had done this review of</p> <p>16 the literature, fair?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 A My systematic review grew out of my</p> <p>19 reading the literature and realizing that there was</p> <p>20 a real gap, which I thought needed to be filled.</p> <p>21 And I chose to do that.</p> <p>22 Q (BY MR. ZELLERS) I will today, you know,</p> <p>23 ask you some more detailed questions about that.</p> <p>24 Let me make sure I have covered by basics here.</p> <p>25 Your report includes as attachments, a</p>
<p style="text-align: right;">Page 51</p> <p>1 did the plaintiffs' lawyer say: Well,</p> <p>2 Dr. Smith-Bindman, do you have an opinion as to</p> <p>3 whether or not there's an association between</p> <p>4 perineal talcum powder use and ovarian cancer?</p> <p>5 A I don't remember any such conversation.</p> <p>6 I -- I think from the very beginning the lawyers</p> <p>7 were guessing that I was going to feel strongly that</p> <p>8 there's a strong association. So I don't remember</p> <p>9 being retained as an expert after my report came</p> <p>10 out.</p> <p>11 At -- at some point I think it became</p> <p>12 clear to them when I explained my views that they</p> <p>13 would like to have me be an expert.</p> <p>14 But I don't remember a particular</p> <p>15 conversation where they asked me to -- where they</p> <p>16 linked my being an expert to the finished product of</p> <p>17 the report. By the time I drafted the report, they</p> <p>18 knew that they had wanted me to be an expert in this</p> <p>19 case.</p> <p>20 Q All right. At -- at some point after you</p> <p>21 had reviewed the literature and you sat and you</p> <p>22 talked with plaintiffs' counsel, you became an</p> <p>23 expert witness for the Plaintiffs; is that right?</p> <p>24 A Yes.</p> <p>25 Q Are you able to time that for us any</p>	<p style="text-align: right;">Page 53</p> <p>1 list of references; is that right?</p> <p>2 A Yes, it does.</p> <p>3 Q What is meant to be included in the</p> <p>4 references that appear and are attached to your</p> <p>5 report, pages 42 through 47?</p> <p>6 A Those are references that I have cited</p> <p>7 specifically in my report.</p> <p>8 Q In addition along with your report, you</p> <p>9 provided a curriculum vitae; is that right?</p> <p>10 A Yes.</p> <p>11 Q We'll mark that as Exhibit 14.</p> <p>12 (Exhibit 14 was marked for identification</p> <p>13 and is attached to the transcript.)</p> <p>14 MS. O'DELL: Thank you.</p> <p>15 Q (BY MR. ZELLERS) The curriculum vitae that</p> <p>16 is attached as -- strike that -- that you provided</p> <p>17 with your report and that we have marked as</p> <p>18 Exhibit 14, is that complete and up to date?</p> <p>19 A Yes, it is.</p> <p>20 Q Any additions or corrections that need to</p> <p>21 be made to that?</p> <p>22 A There are some details of recent</p> <p>23 publications that are not provided in this, but</p> <p>24 those are relatively minor changes.</p> <p>25 Q Are any of -- the details to publications</p>

14 (Pages 50 to 53)

Rebecca Smith-Bindman, M.D.

Page 54	Page 56
<p>1 that you would update your curriculum vitae to, do 2 any of those relate to this matter or to the 3 opinions you're giving here today? 4 A They do not. 5 Q Deposition Exhibit 15 is also a document 6 that was provided along with your report. It 7 appears to be a reliance list; is that right? 8 MS. O'DELL: Object to the form. Thank 9 you. 10 (Exhibit 15 was marked for identification 11 and is attached to the transcript.) 12 A Yes, it is. 13 Q (BY MR. ZELLERS) What is included on the 14 reliance list which we have marked as a Exhibit 14? 15 A This is a broad list of -- 16 THE COURT REPORTER: 15. 17 Q (BY MR. ZELLERS) Oh, I'm sorry. Yes let 18 me ask that question again. 19 What documents are listed and included on 20 the reliance list which we have marked as 21 Exhibit 15? 22 A That is a broader list of documents. It 23 includes documents that I may have read, but I 24 didn't believe needed to be cited. 25 It also includes documents that counsel</p>	<p>1 the report in that manner, but just to clarify. 2 A No, I could not easily go through and pick 3 out which ones were ones that I provided to them or 4 which ones they provided to me. 5 Q (BY MR. ZELLERS) All right. Are you aware 6 -- do you know who Dr. Judith Wolf is? 7 A No, I do not. I know the name, but not 8 the person. 9 Q Are you aware that your reliance list or 10 additional Materials Considered List, what we have 11 marked as Exhibit 15, is identical to the Materials 12 Considered List that was attached to Dr. Wolf's 13 report? 14 A I -- I don't know who Dr. Wolf is, nor do 15 I know her reliance list. 16 Q All right. Exhibit 15 is a reliance list 17 or Materials Considered List that was prepared by 18 counsel for Plaintiffs; is that right? 19 A It was the list provided to me. 20 Q You may have reviewed some of these 21 documents -- or you have reviewed some of these 22 documents, but potentially not all of these 23 documents -- 24 MS. O'DELL: Object to the form. 25 Q (BY MR. ZELLERS) -- fair?</p>
Page 55	Page 57
<p>1 provided to me that -- that may or may not have been 2 closely read. 3 So it includes both articles I know very 4 many, as well as additional documents I may not have 5 as deep of a knowledge of. 6 Q Was -- Deposition Exhibit 15, was that 7 prepared by you or was that prepared by counsel? 8 A That was prepared by counsel. 9 Q Have you reviewed all of the references 10 and materials that are listed out on Deposition 11 Exhibit 15? 12 A I -- I do not know. I would have to go 13 through them one at a time to know if I had reviewed 14 all of them. 15 Q Can you easily tell us which of the 16 materials listed on Exhibit 15, your reliance list, 17 were provided by you and which were provided by 18 counsel? 19 MS. O'DELL: Objection. Objection to 20 form. I think the documents and materials 21 considered -- materials and data considered list. 22 MR. ZELLERS: Well, there's no caption at 23 the top. I have tried to be as descriptive as I can 24 with the witness on it. 25 MS. O'DELL: I think it's referred to in</p>	<p>1 A Yes. 2 Q Looking at your report, Deposition 3 Exhibit 2 -- and let me withdraw that. 4 Have we covered now all of the documents 5 that you have either reviewed and relied upon in 6 preparing your opinions in this matter and your 7 report, which we marked as Exhibit 2, or that were 8 made available to you and you may or may not have 9 looked at them? 10 MS. O'DELL: Object to the form. 11 A Yes. 12 Q (BY MR. ZELLERS) Is your report, 13 Exhibit 2, accurate? 14 A Yes, it is. 15 Q Is your report, Exhibit 2, complete, other 16 than perhaps citing to some of the documents that 17 you reviewed after preparing your report that we 18 identified earlier today? 19 A Yes, it is. 20 Q There were -- withdraw that. 21 You have a fee schedule. You're charging 22 a thousand dollars an hour to review materials and 23 talk with the lawyers in this matter and provide 24 opinions; is that right? 25 A Yes.</p>

15 (Pages 54 to 57)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 58</p> <p>1 Q I kind of got sidetracked in terms of 2 asking you about the Plaintiff lawyers that you met 3 with. 4 We had gotten up to your meeting with 5 Ms. Thompson, with Mr. Restaino, with a lawyer 6 perhaps with the first name of Breanne; is that 7 correct? 8 A Yep. 9 Q Have you remembered the fourth lawyer yet? 10 A I -- I have not. Can -- can I call a 11 friend? 12 Q No. No, need to call a friend. 13 What other Plaintiff lawyers have you met 14 with relating to your work as a plaintiff expert for 15 the MDL litigation? 16 A There are no others that I recall. 17 Q We have other lawyers here today. You met 18 them -- 19 A I apologize. 20 Q -- at least in the last day or two? 21 A Yes. 22 Q Well, don't apologize to me. You probably 23 hurt their feelings. 24 Did you meet all of the lawyers who are 25 here today at some point?</p>	<p style="text-align: right;">Page 60</p> <p>1 most of the day yesterday, did you have any other 2 meetings or conversations with the lawyers for the 3 Plaintiffs to prepare for your deposition? 4 A Yes, I did. So today is Thursday. 5 Wednesday, we met for most of the day. And I met 6 with Dr. Thompson for an hour or so on Wednesday as 7 well. 8 Q All right. Any other -- 9 MS. O'DELL: I think the days may be mixed 10 up. You said "Wednesday" twice. 11 A I apologize. So Tuesday, we met at the 12 end of the day for an hour and then most of the day 13 yesterday, Wednesday, and then today. Thank you. 14 Q (BY MR. ZELLERS) Any other meetings or 15 communications with counsel for Plaintiffs to 16 prepare for the deposition here today? 17 A Any other in-person meetings or -- 18 Q Or phone calls in which there was, you 19 know, discussion about preparing for the deposition. 20 A I believe over -- well, I had asked to 21 reschedule this deposition. So there were a couple 22 of e-mails related to that. 23 I also had asked for a couple of 24 additional documents to help ensure that I was 25 seeing all materials that I felt were relevant to</p>
<p style="text-align: right;">Page 59</p> <p>1 A Yes, I did. 2 Q Some of them you have met just in the last 3 couple of days as you prepared for the deposition; 4 is that right? 5 A That's correct. 6 Q Other than the lawyers who are present in 7 the room today for Plaintiffs, have you met with any 8 other lawyers or communicated with any other lawyers 9 that you believe represent the Plaintiffs in this 10 litigation? 11 A I have not. 12 Q What did you do to prepare for your 13 deposition here today? 14 A My primary preparation was to review my 15 report and to reaccess references that I included in 16 my report to make sure that I was aware of the 17 details or -- or relevant... 18 Q What else did you do to prepare for your 19 deposition here today? 20 A I also met with the lawyers yesterday to 21 review the process of the deposition and so forth. 22 Q How long did you meet with the lawyers 23 yesterday? 24 A We met most of the day yesterday. 25 Q Other than meeting with the lawyers for</p>	<p style="text-align: right;">Page 61</p> <p>1 the case. 2 Q Are those the materials that were on 3 Exhibit 3 that we talked about at the very 4 beginning? 5 A Yes, they are. 6 Q Anything else that you did with the 7 lawyers in terms of preparing for your deposition 8 here today? 9 A No. 10 MS. O'DELL: Dr. Smith-Bindman, feel free 11 to testify regarding meetings, when they happened, 12 phone calls, et cetera, but not the substance of 13 those discussions. 14 A Okay. 15 MS. O'DELL: Thank you. 16 Q (BY MR. ZELLERS) Any others? 17 A None that I can remember. 18 Q Ms. Thompson -- did you know Ms. Thompson 19 before she initially called you and then came and 20 sat down to meet with you? 21 A Initially, you -- 22 Q Yes. 23 A -- mean? No, I did not. 24 Q Had you ever worked with Ms. Thompson on 25 any other litigation?</p>

16 (Pages 58 to 61)

Rebecca Smith-Bindman, M.D.

Page 62	Page 64
<p>1 A No.</p> <p>2 Q Other than the talcum powder litigation</p> <p>3 that we're here deposing you in, have you worked on</p> <p>4 other litigations for either defendants or</p> <p>5 plaintiffs?</p> <p>6 MS. O'DELL: Other than the ones she has</p> <p>7 testified to?</p> <p>8 Q (BY MR. ZELLERS) Well, other than, yes,</p> <p>9 the cases.</p> <p>10 A No, I have not.</p> <p>11 Q You have served as an expert witness in</p> <p>12 other matters in which you did not provide</p> <p>13 deposition testimony; is that right?</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 A There are a small number of additional</p> <p>16 medical malpractice cases that I was also involved</p> <p>17 with which would have settled before I was asked to</p> <p>18 take a deposition.</p> <p>19 Q (BY MR. ZELLERS) My question is: Have you</p> <p>20 ever testified or consulted with either plaintiffs</p> <p>21 or defense in -- in a product liability litigation</p> <p>22 like this?</p> <p>23 A I have not.</p> <p>24 Q Have you ever provided testimony in a</p> <p>25 matter relating to a consumer product?</p>	<p>1 Q Do the invoices go through the time that</p> <p>2 you prepared your opinions and report as of</p> <p>3 November 15 of 2018?</p> <p>4 A Yes, they will.</p> <p>5 Q All right. Is that where they end?</p> <p>6 A They would also include some hours that I</p> <p>7 have worked reviewing the material since that time.</p> <p>8 Although, I don't believe I have submitted those</p> <p>9 reports -- those invoices, but I certainly can.</p> <p>10 Q So my question is: How much time have you</p> <p>11 spent on this matter since your last invoice? Can</p> <p>12 you estimate that for us?</p> <p>13 A I would guess in the ballpark of 10 hours,</p> <p>14 not including the time I met with the lawyers</p> <p>15 yesterday -- not this week. Excluding the time this</p> <p>16 week.</p> <p>17 Q How much time did you spend this week in</p> <p>18 addition to that 10 hours with the lawyers in</p> <p>19 preparing yourself to provide deposition testimony?</p> <p>20 A In the ballpark of another 10 hours.</p> <p>21 Q Have you been served or been asked to</p> <p>22 serve as an expert witness or consultant in any</p> <p>23 other talcum powder litigation or matters?</p> <p>24 A I have not.</p> <p>25 Q What percent of your professional time do</p>
Page 63	Page 65
<p>1 A I have not.</p> <p>2 Q Have you ever been retained as an expert</p> <p>3 or provided testimony in a matter relating to</p> <p>4 asbestos?</p> <p>5 A I have not.</p> <p>6 Q Mr. Restaino -- had you ever met</p> <p>7 Mr. Restaino before that initial phone call and</p> <p>8 meeting back in mid-2017?</p> <p>9 A I had not.</p> <p>10 Q When I look at your invoices, will they</p> <p>11 generally outline the times that you had meetings</p> <p>12 and communications with Plaintiff lawyers?</p> <p>13 A Yes, they will.</p> <p>14 Q Will they also outline whatever work</p> <p>15 that -- and I don't mean work, but at least dates as</p> <p>16 to when you began your systematic review or</p> <p>17 meta-analysis?</p> <p>18 A The work that I did will be itemized. I'm</p> <p>19 not sure if I break down writing the report versus</p> <p>20 doing the systematic review into separate buckets,</p> <p>21 but it might.</p> <p>22 Q The invoices will start with sometime in</p> <p>23 mid-2017, when you started meeting with the lawyers;</p> <p>24 is that right?</p> <p>25 A Yes.</p>	<p>1 you spend working as a consultant?</p> <p>2 A A small amount. Probably less than</p> <p>3 5 percent.</p> <p>4 Q What percent of your income is from</p> <p>5 consulting on litigation matters?</p> <p>6 MS. O'DELL: For a particular year or time</p> <p>7 period or average, just --</p> <p>8 Q (BY MR. ZELLERS) Well, the last couple of</p> <p>9 years.</p> <p>10 A In the last couple of years, a -- a small</p> <p>11 amount. Probably 5 or 10 percent.</p> <p>12 Q What is the largest percent of your income</p> <p>13 that has related to consulting on litigation</p> <p>14 matters?</p> <p>15 And what I'm asking you to do is to look</p> <p>16 back. And what was the high point in terms of</p> <p>17 income that you received from consulting on</p> <p>18 medical/legal matters?</p> <p>19 A Probably the 10 percent that I cited.</p> <p>20 Q Have you ever attended a convention or a</p> <p>21 meeting with plaintiff lawyers and other plaintiff</p> <p>22 experts?</p> <p>23 A I have not.</p> <p>24 Q Never?</p> <p>25 A A meeting of lawyers?</p>

17 (Pages 62 to 65)

Rebecca Smith-Bindman, M.D.

Page 66	Page 68
<p>1 Q Yes, a meeting of lawyers --</p> <p>2 A Never.</p> <p>3 Q -- and plaintiff experts.</p> <p>4 A Never.</p> <p>5 Q All right. Have you --</p> <p>6 A I didn't know there was such a thing.</p> <p>7 Q Do you know any of the experts that have</p> <p>8 also been retained by the Plaintiffs in this</p> <p>9 litigation?</p> <p>10 A I don't know them personally, but I -- I</p> <p>11 have seen their names. And their names are the</p> <p>12 same -- some of the names are names that are</p> <p>13 familiar to me.</p> <p>14 Q Have you communicated with any of the</p> <p>15 other experts for Plaintiffs?</p> <p>16 A I have not.</p> <p>17 Q Have you reviewed reports from any of the</p> <p>18 experts for Plaintiffs?</p> <p>19 A I have reviewed a handful of them --</p> <p>20 Q What --</p> <p>21 A -- yes.</p> <p>22 Q -- reports of other plaintiff experts have</p> <p>23 you reviewed?</p> <p>24 A I reviewed Dr. Cooke's report. I reviewed</p> <p>25 Mr. Longo's report. I reviewed an ob --</p>	<p>1 Q What others?</p> <p>2 A Mr. Cooke's deposition, I believe.</p> <p>3 Q What others? Did you put in your report,</p> <p>4 the names of other experts that you reviewed their</p> <p>5 deposition testimony of?</p> <p>6 A I -- I -- I'm checking if -- if I have.</p> <p>7 I...</p> <p>8 Q Well, you have a recollection of reviewing</p> <p>9 --</p> <p>10 A -- I -- I don't have a recollection of any</p> <p>11 others that I have looked at.</p> <p>12 Q Do you know who David Kessler is?</p> <p>13 A I do.</p> <p>14 Q How do you know Dr. Kessler?</p> <p>15 A I --</p> <p>16 MS. O'DELL: Object to the form.</p> <p>17 A -- Dr. Kessler is a faculty member at</p> <p>18 UCSF.</p> <p>19 Q (BY MR. ZELLERS) Do you know him</p> <p>20 personally?</p> <p>21 A Not well, but enough to say hello.</p> <p>22 Q Been at meetings with him?</p> <p>23 A I have.</p> <p>24 Q You understand that he's an expert for the</p> <p>25 Plaintiffs?</p>
Page 67	Page 69
<p>1 obstetrician gynecologist report.</p> <p>2 Q Do you remember who?</p> <p>3 A Clarke perhaps or something like Clarke.</p> <p>4 MS. O'DELL: If you need to refer to your</p> <p>5 report or your materials, feel free to do that.</p> <p>6 A Okay. I think Mr. Cralley's (phonetic)</p> <p>7 report.</p> <p>8 Q (BY MR. ZELLERS) Do you know any of those</p> <p>9 experts personally?</p> <p>10 A I do not.</p> <p>11 Q All right. You have never communicated</p> <p>12 with any of those experts; is that right?</p> <p>13 A I have not.</p> <p>14 Q You have just reviewed their reports; is</p> <p>15 that right?</p> <p>16 A That's correct.</p> <p>17 Q Have you reviewed any deposition testimony</p> <p>18 or portions of depositions of plaintiff experts in</p> <p>19 this matter?</p> <p>20 A I have reviewed small pieces of several of</p> <p>21 them.</p> <p>22 Q Okay. What experts have you reviewed a --</p> <p>23 small pieces of their deposition?</p> <p>24 A Dr. Moorman's testimony or deposition, I</p> <p>25 saw some of.</p>	<p>1 A I -- I have been told that.</p> <p>2 Q Have you had any discussions with</p> <p>3 Dr. Kessler at all relating to this matter, the</p> <p>4 talcum powder matter?</p> <p>5 A I have not.</p> <p>6 Q Have you participated in any projects --</p> <p>7 medical/legal projects with Dr. Kessler --</p> <p>8 A I --</p> <p>9 Q -- in the past?</p> <p>10 A -- I have not.</p> <p>11 Q Have you heard of a documentary called</p> <p>12 "The Bleeding Edge"?</p> <p>13 A I have.</p> <p>14 Q Did you participate in the documentary</p> <p>15 called "The Bleeding Edge"?</p> <p>16 A I did.</p> <p>17 Q You understand that Dr. Kessler also</p> <p>18 participated in that; is that right?</p> <p>19 A I -- yes.</p> <p>20 Q That is a documentary related to what?</p> <p>21 A A medical devices, primarily.</p> <p>22 Q Have you served as a consultant or expert</p> <p>23 in medical device matters?</p> <p>24 A I have not.</p> <p>25 Q Pharmaceutical matters?</p>

18 (Pages 66 to 69)

Rebecca Smith-Bindman, M.D.

Page 70	Page 72
<p>1 A I have not.</p> <p>2 Q How was it then that you were retained or</p> <p>3 ended up participating in "The Bleeding Edge"</p> <p>4 documentary?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A I -- I'm not sure if you have had a chance</p> <p>7 to see the documentary or not, but my role in it</p> <p>8 is -- is pretty off topic.</p> <p>9 And so at an initial incarnation of that</p> <p>10 documentary, they had thought about focusing on an</p> <p>11 issue where I do do research, radiation for medical</p> <p>12 imaging.</p> <p>13 It no longer fits into their new topic,</p> <p>14 but somehow they kept a quote of me in that film.</p> <p>15 Q Did -- Dr. Kessler, was he the one</p> <p>16 responsible for putting that documentary together?</p> <p>17 A I -- no, I don't -- I don't believe he</p> <p>18 was.</p> <p>19 Q Were you paid for your work in</p> <p>20 participating in that documentary?</p> <p>21 A No I was not.</p> <p>22 Q All right. Jane Hall, she assisted you</p> <p>23 with your systematic review. Is -- is that the</p> <p>24 right way you would characterize it, a systematic</p> <p>25 review?</p>	<p>1 A I had --</p> <p>2 Q -- in this case --</p> <p>3 A -- not.</p> <p>4 Q -- is that right?</p> <p>5 A That's correct.</p> <p>6 Q Have you worked with other</p> <p>7 biostatisticians in the past?</p> <p>8 A I have.</p> <p>9 Q Why did you decide you needed to work with</p> <p>10 a new biostatistician for this litigation?</p> <p>11 A The primary work that I needed was to do a</p> <p>12 few graphs and figures, and so I wanted someone who</p> <p>13 was both an expert in that and who I thought could</p> <p>14 respond relatively quickly.</p> <p>15 I have on my team, several</p> <p>16 biostatisticians who are part of my research group,</p> <p>17 but they don't have particularly relevant expertise</p> <p>18 in generating these graphs.</p> <p>19 And it would have required them to acquire</p> <p>20 some skills, and so I wanted someone who focuses</p> <p>21 specifically on this who could do that.</p> <p>22 Q Did you review any work from Dr. Hall</p> <p>23 before you hired her?</p> <p>24 A I have been involved in systematic reviews</p> <p>25 that she contributed to that I was very impressed</p>
Page 71	Page 73
<p>1 A Yes, the systematic review -- you asked</p> <p>2 the difference between a meta-analysis. It sort of</p> <p>3 implies a certain scientific review -- rigor when</p> <p>4 you call it a systematic review, so that's how I</p> <p>5 like to think about it.</p> <p>6 Q You think systematic review implies more</p> <p>7 scientific rigor than meta-analysis?</p> <p>8 A I think it's a subtle distinction, but</p> <p>9 yes, I do.</p> <p>10 Q Well, you communicated and hired Jane hall</p> <p>11 to assist you; is that right?</p> <p>12 A Yes, I did.</p> <p>13 Q Have you produced all of your</p> <p>14 communications and materials with Jane Hall?</p> <p>15 A I have.</p> <p>16 Q How did you come in contact with Dr. Hall?</p> <p>17 A I work closely with an emergency medicine</p> <p>18 researcher, and I have assisted him in several</p> <p>19 systematic reviews.</p> <p>20 And I knew he had a biostatistician who</p> <p>21 generated the kind of graphics and analysis that I</p> <p>22 wanted. And so I reached out to him, and he</p> <p>23 introduced me to Dr. Hall.</p> <p>24 Q You had never worked with Dr. Hall prior</p> <p>25 to performing your systematic review --</p>	<p>1 with. And so --</p> <p>2 Q So what other --</p> <p>3 A -- I reached out.</p> <p>4 Q -- sorry. I didn't mean to interrupt you.</p> <p>5 What other systematic reviews have you</p> <p>6 been involved with Dr. Hall?</p> <p>7 A Actually, two of them. One of them is on</p> <p>8 a treatment for kidney stones. Ralph Wang is the</p> <p>9 senior author.</p> <p>10 And the second was a systematic review</p> <p>11 around the diagnosis of and treatment for pulmonary</p> <p>12 embolism that also Dr. Wang was the leader on.</p> <p>13 Q Did you ever meet with Dr. Hall with</p> <p>14 respect to this work in person?</p> <p>15 A I never met with her related to anything.</p> <p>16 It was all by electronic communication.</p> <p>17 Q Did you ever talk with her over the phone?</p> <p>18 A Yes. We spoke a few times.</p> <p>19 Q Did you take notes of your conversations</p> <p>20 with Dr. Hall?</p> <p>21 A Not that I recall.</p> <p>22 Q You did have e-mails with Dr. Hall --</p> <p>23 A Yes.</p> <p>24 Q -- is that right?</p> <p>25 A Yes.</p>

19 (Pages 70 to 73)

Rebecca Smith-Bindman, M.D.

Page 74	Page 76
<p>1 Q Do you have receipts for the work that 2 Dr. Hall performed for you? 3 MS. O'DELL: Object to the form. 4 A Like an invoice receipt? 5 Q (BY MR. ZELLERS) Yes, an invoice receipt. 6 A No, I do not. 7 Q You ended up paying her rush fees so that 8 she would do the work and the analysis more quickly; 9 is that right? 10 MS. O'DELL: Object to the form. 11 A I -- I remember telling her I didn't mind 12 her rush fee. But -- but all of the invoicing was 13 done directly with counsel. 14 Q (BY MR. ZELLERS) Well, Dr. Hall came to 15 you and said: You know, it's going to take X amount 16 of time to do a thorough analysis? 17 A Yes. 18 Q She did offer to rush the analysis -- 19 A Yes. 20 Q -- when you told her you needed it? 21 A Yes. 22 Q And your recollection is she, you know, 23 did rush the analysis and -- and got it done within 24 a couple of days? 25 MS. O'DELL: Object to the form.</p>	<p>1 time is 11:10 a.m. 2 Q (BY MR. ZELLERS) Dr. Smith-Bindman, I'm 3 handing you Deposition Exhibit 16, which is an 4 e-mail chain. The very first e-mail, meaning the 5 last e-mail at the top of page 1, is Jane Hall -- 6 from Jane Hall, September 24, 2018, at 8:04 a.m. to 7 you. 8 (Exhibit 16 was marked for identification 9 and is attached to the transcript.) 10 Q (BY MR. ZELLERS) Will you take a look at 11 that and tell us if that is a printout of some of 12 your e-mail exchanges with Dr. Hall? 13 A Yes. 14 Q If we go to the very first e-mail in the 15 chain, it appears that you contacted Dr. Hall on 16 Wednesday, September 19, 2018, in the afternoon, 17 3:21 p.m., and told her that you were interested 18 primarily in generating a forest plot with a summary 19 estimate and test for heterogeneity; is that right? 20 A Yes. 21 Q That was your initial contact with 22 Dr. Hall; is that right? 23 A Yes. 24 Q You contacted your referring person, 25 Ralph, on the e-mail; is that right?</p>
Page 75	Page 77
<p>1 A I believe the analysis actually took a 2 couple of weeks. 3 But I was very open to paying her rush 4 fee. I thought her fee was extraordinarily 5 reasonable, and so it just made it easier for me to 6 get it done quickly rather than to delay. 7 Q (BY MR. ZELLERS) You defer to the e-mails 8 and the documents as to the timing of when you 9 requested that she rush the analysis and when she 10 provided it to you; is that right? 11 MS. O'DELL: Object to the form. 12 A I believe my documents would be correct 13 about when I asked for stuff and when it was done, 14 yes. 15 MS. O'DELL: Excuse me, Mike. We have 16 been going about an hour and 20 minutes. Is this a 17 good time to take a quick break? 18 MR. ZELLERS: Absolutely. 19 THE VIDEOGRAPHER: We are off the record. 20 The time is 10:40 a.m. This is the end of Disc 1. 21 (A break was taken from 10:40 a.m. to 22 11:10 a.m.) 23 THE VIDEOGRAPHER: We are back on the 24 record. This marks the beginning of Disc No. 2 in 25 the deposition of Dr. Rebecca Smith-Bindman. The</p>	<p>1 A Yes. 2 Q All right. You told -- the next day you 3 had some exchanges of e-mails with Dr. Hall. You 4 told Dr. Hall that because you were doing a review 5 for a legal case, you did not need the detail that 6 you would need for a paper; is that right? 7 MS. O'DELL: Object to the form. 8 A Can you tell me where you're reading? 9 Q (BY MR. ZELLERS) Sure. I'm reading on 10 page 2 of Exhibit 16, the very last e-mail. This is 11 from you on September 20 of 2018. 12 You thanked Dr. Hall for her willingness 13 to help. 14 "As Ralph mentioned, I am doing a review 15 for a legal case and don't need quite the detail I 16 would usually need for a paper." 17 Is that what you told Dr. Hall? 18 A Yes, it is. 19 Q As of -- well, you communicated with 20 Dr. Hall on Friday, September 21st, in the 21 morning. This is the very last e-mail on page 1 of 22 Exhibit 16. 23 You asked her to send you whatever she was 24 doing sooner rather than later because you needed to 25 get your report finished ASAP; is that right?</p>

20 (Pages 74 to 77)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 78</p> <p>1 MS. O'DELL: Object to the form. I think 2 you misstated date on the e-mail but -- 3 Q (BY MR. ZELLERS) Well, I'm sorry. Let me 4 ask that question again. On Friday morning, 5 September 21, 2018, you told Dr. Hall that you 6 needed her information as soon as possible because 7 you had to finish your report ASAP; is that right? 8 A Yes. 9 Q Dr. Hall got back to you that day and 10 said, you know, I'll do my best. But if you want, I 11 can rush the work, if you're willing to pay time and 12 a half. 13 You then got back to her on Monday 14 morning, September 24, and said: Yes, I'll pay the 15 rush fee, and I would like your work as soon as 16 possible. 17 Is that right? 18 MS. O'DELL: Object to the form. Object 19 to the form. 20 A I -- I think you're paraphrasing what it 21 says. The -- the idea was she said that if I paid 22 the rush, she could have some money to defray 23 childcare cost during -- 24 Q (BY MR. ZELLERS) Right. And -- 25 A -- that time, and I agreed to do that.</p>	<p style="text-align: right;">Page 80</p> <p>1 A Yes. 2 Q Have you communicated about this 3 litigation with anyone other than the plaintiffs' 4 counsel that you have told us about with Dr. Hall? 5 Anyone else? 6 MS. O'DELL: Object to the form. 7 A I -- you asked me if I have mentioned this 8 litigation to anyone else? 9 Q (BY MR. ZELLERS) Well, let's start there. 10 Have you mentioned this litigation to anyone else? 11 A I have. 12 Q Who have you mentioned this litigation to? 13 A I have certainly mentioned it to my 14 husband. 15 Q Other than your husband? 16 A And then I have mentioned it to several 17 close friends. 18 Q Your husband is a physician; is that 19 right? 20 A He is. 21 Q Did he provide any professional input to 22 you related to your review of this matter? 23 A No, he did not. 24 Q The close friends that you mentioned this 25 to, did they provide any input or assistance or</p>
<p style="text-align: right;">Page 79</p> <p>1 Q Exactly. And she said back to you: Okay. 2 By the end of -- so this is on a Monday. She said 3 you'll have the work product from her Wednesday at 4 the earliest, probably Thursday. 5 "I should have at least two sets of plots 6 today, and I'll send them to you as they are 7 output." 8 Is that right? 9 A Yes. 10 Q You have produced all of your e-mails and 11 communications with Dr. Hall in this matter; is that 12 right? 13 A I have. You're not showing me all of 14 those communications; is that right? 15 Q I haven't yet. 16 A Okay. 17 Q I'm going to show you some more. 18 A Yes. 19 Q But my question to you is: Included in 20 the production, at least you have included all of 21 your communications -- 22 A Yes. 23 Q -- with Dr. Hall -- 24 A Yes. 25 Q -- is that right?</p>	<p style="text-align: right;">Page 81</p> <p>1 direction to you relating to this matter? 2 A No. 3 Q I asked you before if you read any of the 4 depositions of the plaintiff experts. Have you 5 discussed generally with plaintiffs' counsel, the 6 deposition testimony that's been given by other 7 plaintiff experts in this litigation? 8 MS. O'DELL: I would instruct you not to 9 answer that question. 10 MR. ZELLERS: I disagree, but we'll 11 reserve that issue. 12 Q (BY MR. ZELLERS) Was there anything that 13 you asked plaintiffs' counsel to provide to you in 14 connection with your review or for preparation of 15 your report that you were not provided with? 16 A So most of the documents that I included 17 in my report, I found by doing an independent search 18 online. 19 There were several items that I didn't 20 find that I wanted to review as well. And so some 21 of the items that I asked counsel for were items 22 that I couldn't find through scientific research 23 that I asked them to provide. 24 Q And you have told us about those 25 documents, and those are listed out on Exhibit 3; is</p>

21 (Pages 78 to 81)

Rebecca Smith-Bindman, M.D.

Page 82	Page 84
<p>1 that right?</p> <p>2 A That's correct.</p> <p>3 Q My question was a little bit different.</p> <p>4 Is there anything that you asked for from</p> <p>5 plaintiffs' counsel that they were not able or did</p> <p>6 not provide to you?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 A I -- I can't think of anything that fits</p> <p>9 into that question.</p> <p>10 Q (BY MR. ZELLERS) Take a look at your</p> <p>11 reliance list, which we have marked as Deposition</p> <p>12 Exhibit 15.</p> <p>13 Do you have that in front of you?</p> <p>14 A I have my copy of the reliance list. I</p> <p>15 don't have your Exhibit 15 in front of me.</p> <p>16 Q If you have your copy -- does it start</p> <p>17 with page 1?</p> <p>18 A Yes, it does.</p> <p>19 Q At the very top --</p> <p>20 A Yes.</p> <p>21 Q -- the first item is "A Survey of The</p> <p>22 Long-Term Effects"?</p> <p>23 A Yes.</p> <p>24 Q If you turn to pages 11 and 12, there's a</p> <p>25 series of documents that begin with "IMERY'S"</p>	<p>1 MR. ZELLERS: Sure. Exhibit 3 is the list</p> <p>2 you gave me today of -- of the documents that</p> <p>3 Dr. Smith-Bindman reviewed in addition to whatever</p> <p>4 else is marked.</p> <p>5 MS. O'DELL: -- I see. I see.</p> <p>6 MR. ZELLERS: So there's a -- it's a list</p> <p>7 of Bates-stamped documents.</p> <p>8 MS. O'DELL: Yes.</p> <p>9 MR. ZELLERS: There's 10 or 12 Imerys</p> <p>10 documents. There's one J&J Bates-stamped document</p> <p>11 --</p> <p>12 MS. O'DELL: Right.</p> <p>13 MR. ZELLERS: -- and then there's the, I</p> <p>14 think, expert report or --</p> <p>15 MS. O'DELL: Right.</p> <p>16 MR. ZELLERS: -- deposition of Dr. Cooke</p> <p>17 listed?</p> <p>18 MS. O'DELL: Right. Okay. I just object</p> <p>19 to the form of the question. And -- and --</p> <p>20 A Could I --</p> <p>21 MS. O'DELL: -- then --</p> <p>22 A -- see Exhibit 3?</p> <p>23 MS. O'DELL: -- yes. And then I would --</p> <p>24 Counsel, permit me -- there was a question related</p> <p>25 to Exhibit 3. I thought you were referring to the</p>
Page 83	Page 85
<p>1 followed by numbers.</p> <p>2 Do you see that?</p> <p>3 A I do.</p> <p>4 Q Do you know whether or not you reviewed</p> <p>5 some or all of those Imerys-produced documents as</p> <p>6 part of your review in this matter?</p> <p>7 A If those reflect Imerys testing documents</p> <p>8 then yes, I did review at least some of them. I</p> <p>9 can't be sure all of them.</p> <p>10 Q Do you know whether or not these documents</p> <p>11 relate to Imerys testing?</p> <p>12 A I have reviewed at least a half dozen</p> <p>13 Imerys testing documents.</p> <p>14 Q In --</p> <p>15 A I believe that's what these are, but I --</p> <p>16 I'm not sure.</p> <p>17 Q There are a number of Imerys documents</p> <p>18 that are listed on Exhibit 3, which you identified</p> <p>19 as testing documents; is that right?</p> <p>20 A Yes.</p> <p>21 Q Do you know if you reviewed any Imerys</p> <p>22 documents other than the documents that are listed</p> <p>23 out on Exhibit 3?</p> <p>24 MS. O'DELL: Can you just make a --</p> <p>25 Exhibit 3, would you remind --</p>	<p>1 materials list, and so I'm going to assert my</p> <p>2 objection a little bit late.</p> <p>3 MR. ZELLERS: Okay. I just want to move</p> <p>4 forward.</p> <p>5 MS. O'DELL: I know that you do.</p> <p>6 MR. ZELLERS: Yes.</p> <p>7 MS. O'DELL: I just want to be clear.</p> <p>8 Because Exhibit 3 that we provided were additional</p> <p>9 materials that Dr. Smith-Bindman asked for and</p> <p>10 reviewed in addition to the Materials Considered. I</p> <p>11 don't want the record to be unclear. So --</p> <p>12 MR. ZELLERS: Well --</p> <p>13 MS. O'DELL: -- I have noted my objection.</p> <p>14 MR. ZELLERS: -- and the record is clear</p> <p>15 that Dr. Smith-Bindman did not review all of the</p> <p>16 materials listed in the Materials Considered List,</p> <p>17 Exhibit 15. But that testimony will stand as it is.</p> <p>18 My question just is: In addition to the</p> <p>19 documents that I was told about this morning that</p> <p>20 you believe are testing documents, do you know</p> <p>21 whether you reviewed any other Imerys-produced</p> <p>22 documents, and specifically the ones that are</p> <p>23 itemized on pages 11 and 12 of your Materials</p> <p>24 Considered List?</p> <p>25 A I would need to see those documents to</p>

22 (Pages 82 to 85)

Rebecca Smith-Bindman, M.D.

Page 86	Page 88
<p>1 know if I reviewed them. The names are awfully 2 nonspecific.</p> <p>3 Q With respect to the Imerys documents -- or 4 Imerys-produced documents that are identified in 5 Exhibit 15, which is your Materials Considered List, 6 do you know how those were compiled?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 A You're asking me where this list came 9 from?</p> <p>10 Q (BY MR. ZELLERS) I think you have told us 11 the list came from plaintiffs' counsel; is that 12 right?</p> <p>13 A Yes.</p> <p>14 Q My question then, I guess, is more 15 precise. Do you know how plaintiffs' counsel 16 compiled this list of Imerys-produced documents or 17 how they selected those documents?</p> <p>18 A I know I had a lot of back and forth in 19 generating this list with actually Breanne at the 20 time. I sent her a lot of documents that I had 21 looked at that I hadn't cited that she added to the 22 list.</p> <p>23 These were ones that she added to the 24 list, and I don't remember what they were.</p> <p>25 Q I'm going to ask my question again. Do</p>	<p>1 litigation -- so when you do your research work or 2 when you do your publishing work -- do you rely on 3 documents that are picked by someone else that may 4 not represent the full body of evidence?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A In my work, I review whatever data are 7 available. And sometimes those data are identified 8 by me and sometimes they have been given to me by 9 other sources to review.</p> <p>10 Q (BY MR. ZELLERS) Is that a -- a yes or a 11 no? And let me withdraw that.</p> <p>12 The documents that we have looked at in 13 your reliance list Materials Considered List that 14 begin with Imerys and begin with J&J, your 15 understanding, those are documents that have been 16 produced by the Defendants in this litigation; is 17 that right?</p> <p>18 A Yes.</p> <p>19 Q Do you know what percentage of the overall 20 documents that have been produced by Johnson & 21 Johnson companies and by Imerys, these documents 22 that are listed in Exhibit 15, represent?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A Are you asking me if the handful of 25 documents from Johnson & Johnson that are in this</p>
Page 87	Page 89
<p>1 you know how -- these documents, the documents that 2 are on pages 11 and 12 of your Materials Considered 3 List that begin with the "Imerys" name, do you know 4 how they were compiled?</p> <p>5 A No.</p> <p>6 Q All right. The same question. If you 7 look on page 13 of your Materials Considered List, 8 there's a series of documents that have J&J and then 9 a number; is that right?</p> <p>10 A Yes.</p> <p>11 Q You, as we sit here, do not know what 12 those documents relate to; is that right?</p> <p>13 A That's correct.</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 Q (BY MR. ZELLERS) You do not know how this 16 listing of J&J documents was compiled; is that 17 right?</p> <p>18 A That's correct.</p> <p>19 Q These are documents produced by Imerys and 20 by Johnson & Johnson companies as part of this 21 overall list of materials that were available, you 22 know, for you to review; is that right?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A Yes.</p> <p>25 Q (BY MR. ZELLERS) Outside of your work in</p>	<p>1 list reflect all of the documents ever created at 2 Johnson & Johnson or all relevant documents or --</p> <p>3 Q (BY MR. ZELLERS) Do you have any idea?</p> <p>4 A No, no idea.</p> <p>5 Q This is a handful of documents that have 6 been listed out by plaintiffs' counsel for you; is 7 that right?</p> <p>8 A Yes.</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 A Yes.</p> <p>11 Q (BY MR. ZELLERS) All right. In your 12 report you cite two exhibits from the depositions of 13 several witnesses. There's an exhibit from a 14 deposition of John Hopkins.</p> <p>15 Do you know who John Hopkins is?</p> <p>16 A I know what the document is, but I -- I 17 don't know what -- who John Hopkins is.</p> <p>18 Q Do you know what company he works for?</p> <p>19 A I do not.</p> <p>20 Q Do you know what his position or title is?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 Q (BY MR. ZELLERS) You're looking in your 23 materials at the exhibit that you were provided from 24 his deposition; is that right?</p> <p>25 A Yes. I -- I -- I do not --</p>

23 (Pages 86 to 89)

Rebecca Smith-Bindman, M.D.

Page 90	Page 92
<p>1 Q Have --</p> <p>2 A -- see.</p> <p>3 Q -- you read any portion of the deposition</p> <p>4 of John Hopkins?</p> <p>5 A I have not.</p> <p>6 Q Have you reviewed any other exhibits from</p> <p>7 the deposition of John Hopkins?</p> <p>8 A I have not.</p> <p>9 Q Do you know who Julie Pier is?</p> <p>10 A I believe I do.</p> <p>11 Q Who is Julie Pier?</p> <p>12 A I -- I'm just checking. I -- I -- I got a</p> <p>13 few names wrong earlier, so I want to just check</p> <p>14 if --</p> <p>15 Q Well, you're going back now and you are</p> <p>16 looking at your report?</p> <p>17 A Yes.</p> <p>18 Q And you have annotated your report, I</p> <p>19 guess, that you are using here today; is that right?</p> <p>20 A Yes.</p> <p>21 Q Why don't we -- just so we have a complete</p> <p>22 record, we'll mark your annotated report as</p> <p>23 Exhibit 17.</p> <p>24 A Yes.</p> <p>25 (Exhibit 17 was marked for identification</p>	<p>1 Q All right. You were provided -- just as</p> <p>2 you were for the exhibit from the deposition of John</p> <p>3 Hopkins, you were provided with the exhibit that you</p> <p>4 are reviewing from Julie Pier's deposition; is that</p> <p>5 right?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 A No, I don't -- well, I -- I don't believe</p> <p>8 that's why I know who she is.</p> <p>9 I -- I believe The New York Times story</p> <p>10 and the Reuters story discussed her deposition. So</p> <p>11 I don't remember reading her deposition. But I --</p> <p>12 if I'm not confusing her with someone else, I think</p> <p>13 that's where I learned about her testing.</p> <p>14 Q (BY MR. ZELLERS) Okay. You're a couple of</p> <p>15 questions ahead of me here. No. 1, the exhibit</p> <p>16 that's in your blue folder from the deposition of</p> <p>17 Julie Pier, that was provided to you for review by</p> <p>18 counsel for Plaintiffs; is that right?</p> <p>19 A Thank you for that reminder. That's the</p> <p>20 Imerys document. Yes. Yes.</p> <p>21 Q I'm going to go back to my question.</p> <p>22 A Yes.</p> <p>23 Q The exhibit from Julie Pier's deposition,</p> <p>24 that was provided to you for review by plaintiffs'</p> <p>25 counsel; is that right?</p>
Page 91	Page 93
<p>1 and is attached to the transcript.)</p> <p>2 A And -- and I would like to clarify based</p> <p>3 on some of my notes. But -- so I think Dr. Hopkins</p> <p>4 oversaw testing for -- for talc products at J&J.</p> <p>5 Q (BY MR. ZELLERS) Is that a note that you</p> <p>6 have on your report?</p> <p>7 A It is.</p> <p>8 Q All right. That's a note that you put on</p> <p>9 your report in preparation for your deposition</p> <p>10 today?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 A It's a note I put on my report when I was</p> <p>13 reviewing my report and the documents I'm citing and</p> <p>14 so forth.</p> <p>15 Q (BY MR. ZELLERS) Who is Julie Pier? Do</p> <p>16 you know who she is?</p> <p>17 A I'm -- what I believe -- although, I don't</p> <p>18 see that I made a note of it -- is that she was</p> <p>19 someone who did testing from one of the New York</p> <p>20 hospitals of -- of the talc powder products.</p> <p>21 Q Do you know anything more than that about</p> <p>22 Julie Pier or who she worked for or what her role</p> <p>23 with respect to talcum powder was?</p> <p>24 A Now that I am remembering where I -- I --</p> <p>25 no, I don't really know those things.</p>	<p>1 A Yes.</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 Q (BY MR. ZELLERS) You have not reviewed the</p> <p>4 deposition transcript of Ms. Pier; is that right?</p> <p>5 A Not that I recall.</p> <p>6 Q You have not reviewed any exhibit -- other</p> <p>7 exhibits to her deposition; is that right?</p> <p>8 A That is correct.</p> <p>9 Q Are you aware that the two exhibits that</p> <p>10 you were provided by counsel for Plaintiffs -- one</p> <p>11 from the deposition of John Hopkins and one from the</p> <p>12 deposition of Julie Pier -- that those exhibits were</p> <p>13 prepared by plaintiffs' experts for this litigation?</p> <p>14 MS. O'DELL: Object to the form. I think</p> <p>15 you referred to plaintiffs' experts. I think you</p> <p>16 misspoke. You said they were prepared by</p> <p>17 plaintiffs' experts.</p> <p>18 MR. ZELLERS: Well -- and I will ask it</p> <p>19 again then.</p> <p>20 Q (BY MR. ZELLERS) Are you aware that the</p> <p>21 exhibits that were provided to you -- one from</p> <p>22 Ms. Pier's deposition and one from the Hopkins</p> <p>23 deposition -- are exhibits that were prepared by</p> <p>24 Plaintiffs in this litigation?</p> <p>25 MS. O'DELL: Object to the form.</p>

24 (Pages 90 to 93)

Rebecca Smith-Bindman, M.D.

Page 94	Page 96
<p>1 A I was provided these documents from a 2 prior case. I don't know who prepared them or where 3 they came from. I -- they were provided to me by 4 counsel. 5 Q (BY MR. ZELLERS) Let me ask you just a 6 couple of background questions from your review of 7 the literature in this case. You have reviewed a 8 lot of literature relating to talcum powder and 9 talcum powder use by women in the perineal region; 10 is that right? 11 A Yes, I have. 12 Q I think you say in your report that you 13 reviewed upwards of 40 studies in papers relating to 14 that. Does that sound about right? 15 MS. O'DELL: Object to the form. 16 A Upward of 40 studies that provided primary 17 new data. There were probably hundreds of papers I 18 reviewed on the topic. 19 Q (BY MR. ZELLERS) From that review, do you 20 agree that most women who use talcum powder in their 21 perineal region begin that use before age 30? 22 A I don't know the -- when -- I -- I think a 23 lot of women start use when they're young. I would 24 have to check my report if I have cites as to when 25 they began using talcum powder products.</p>	<p>1 Q And if we looked at the data for when and 2 the age that women were when they first used genital 3 powder, at least from this study by Dr. Cramer, it 4 appears that the vast majority of women began using 5 talcum powder in their genital area before age 30; 6 is that right? 7 A In this publication. 8 Q Do you recall any other publications 9 that -- that you reviewed that provided contrary 10 information? 11 A The question you're asking me is not one 12 that I spent a lot of time thinking about and so 13 can't recall -- sort of across the hundreds of 14 papers I read and 50 that talked about the 15 association -- what time the age of first use was. 16 I -- I see Dr. Cramer's experience is that 17 women do report beginning use earlier, but I -- 18 there's no way for me to know if that's a reflection 19 of his sampling, the place he studied the women, and 20 so forth. 21 Q At least on that point, you would refer to 22 Dr. Cramer, fair? 23 MS. O'DELL: Object to the form. 24 A I -- I would defer to a comprehensive 25 review of the literature to come up with that view.</p>
Page 95	Page 97
<p>1 Q (BY MR. ZELLERS) Well, take a look, if you 2 will, at Deposition Exhibit 18, which is a report by 3 Cramer. 4 (Exhibit 18 was marked for identification 5 and is attached to the transcript.) 6 Q (BY MR. ZELLERS) He's the first named 7 author. This is the 2016 study -- 8 MS. O'DELL: Thank you. 9 Q (BY MR. ZELLERS) -- report. Are you -- 10 MS. O'DELL: Are we at 18? 11 MR. ZELLERS: 18. 12 Q (BY MR. ZELLERS) You're familiar with the 13 paper we have marked as Deposition Exhibit 18; is 14 that right? 15 A Yes, I am. 16 Q I do want to ask you questions a later 17 about that. But for purposes of this question when 18 do most women who use talcum powder -- powder in 19 their perineal region begin, go to page 336 of 20 Exhibit 18 and specifically Table 1. 21 A Yes. 22 Q One of the categories that is reported 23 here in Table 1 is "Age First Used Genital Powder"; 24 is that right? 25 A Yes.</p>	<p>1 My -- my guess would be that Dr. Cramer 2 believes his numbers in his population, but I -- but 3 I don't know that that's the truth in other 4 populations. 5 Q (BY MR. ZELLERS) Well, let me ask you 6 another question. On average from the studies that 7 you reviewed, do women who use talcum powder in 8 their perineal region continue that use for over 9 20 years? 10 MS. O'DELL: Object to the form. 11 A My recollection of the literature is that 12 most publications could not assess or did not ask in 13 detailed enough form of how long women used it. 14 I -- I -- again, it's possibly a question 15 that could be answered from the literature, but I 16 don't recall knowing that answer from my review of 17 the literature. 18 Q (BY MR. ZELLERS) Did you review the Wu 19 2015 paper? 20 A I did. 21 Q Do you have that in one of your notebooks? 22 A I will have it in here. 23 Q That makes it easy. 24 A 2009 or -- 25 Q '15. No. The 2015 Wu paper.</p>

25 (Pages 94 to 97)

Rebecca Smith-Bindman, M.D.

Page 98	Page 100
<p>1 A Yes, I do.</p> <p>2 Q Turn to page 1097, Table 2.</p> <p>3 A Could you -- unfortunately, the page --</p> <p>4 the version I have is a free download, and it</p> <p>5 doesn't have the same page --</p> <p>6 Q How --</p> <p>7 A -- numbers.</p> <p>8 Q -- about -- can you find Table 2? It's</p> <p>9 the a table that's captioned "Prevalence of Risk</p> <p>10 Factors in Non-Hispanic white, Hispanic, and</p> <p>11 African-American Control."</p> <p>12 A Yes, I have that paper.</p> <p>13 Q All right. So if you look at the</p> <p>14 controls, at the very bottom of that section, it</p> <p>15 gives a mean number of years of talc use among</p> <p>16 users; is that right?</p> <p>17 A Yes.</p> <p>18 Q And whether we're looking at non-Hispanic</p> <p>19 whites, Hispanics, or African-Americans, at least</p> <p>20 the number of years of talc use that's reported is</p> <p>21 greater than 20 years for each of those groups; is</p> <p>22 that right?</p> <p>23 A In --</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 A -- in Dr. Wu's paper, there is reported</p>	<p>1 A Yes.</p> <p>2 Q (BY MR. ZELLERS) Are you able to tell us</p> <p>3 how far before you prepared your report, November 15</p> <p>4 of 2018, that you formed those conclusions?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A I spent considerable hours during 2018</p> <p>7 reviewing the literature. And over the course of</p> <p>8 that year, my opinions started to solidify when I</p> <p>9 saw the evidence that strongly supported that</p> <p>10 ovarian cancer is caused by talcum powder products.</p> <p>11 I --</p> <p>12 Q (BY MR. ZELLERS) And --</p> <p>13 A -- I -- I believe that my final systematic</p> <p>14 review was for me important to -- to confirm that</p> <p>15 association. And that wasn't done -- that wasn't</p> <p>16 completed until my report was basically -- close to</p> <p>17 when my report had to be drafted.</p> <p>18 Q The systematic review that you did was in</p> <p>19 and around September and October of 2018; is that</p> <p>20 right?</p> <p>21 A I believe the final statistical analysis</p> <p>22 was then, but my -- my systematic review went on for</p> <p>23 many months.</p> <p>24 Q Well, your systematic review, at least</p> <p>25 insofar as Dr. Hall assisted you, was in September</p>
Page 99	Page 101
<p>1 that the mean number of years is greater than 20.</p> <p>2 Q (BY MR. ZELLERS) If we look down at the</p> <p>3 group below, the number of cases, the mean number of</p> <p>4 years of talc use among users is greater than</p> <p>5 20 years, also for each of those groups; is that</p> <p>6 right?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 A Dr. Wu found that the average number of</p> <p>9 years was greater than 20, yes.</p> <p>10 Q (BY MR. ZELLERS) All right. You have</p> <p>11 never published on, you know, any topic relating to</p> <p>12 talcum powder or any association between talcum</p> <p>13 powder and ovarian cancer; is that right?</p> <p>14 A I have not.</p> <p>15 Q Your opinion is that women exposed to</p> <p>16 perineal talcum powder products on a regular basis</p> <p>17 have about a 50 percent increase in their subsequent</p> <p>18 risk of developing serous invasive cancer; is that</p> <p>19 correct?</p> <p>20 A Yes, that is my opinion.</p> <p>21 Q You also opine in your report that there</p> <p>22 is a causal association between genital talcum</p> <p>23 powder use and ovarian cancer generally; is that</p> <p>24 right?</p> <p>25 MS. O'DELL: Object to the form.</p>	<p>1 of 2018; is that right?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 A The systematic review that I described in</p> <p>4 my report has a lot of components. So one component</p> <p>5 is to do a complete comprehensive review of -- of</p> <p>6 what's been published.</p> <p>7 And that involved doing the search,</p> <p>8 according -- obtaining all the papers, and then</p> <p>9 reviewing the bibliography of all of those papers.</p> <p>10 Then reviewing all those papers critically</p> <p>11 and then abstracting data for those papers. Kind of</p> <p>12 towards the tail end of that review is to</p> <p>13 statistically combine the studies.</p> <p>14 Dr. Hall was involved both in abstracting</p> <p>15 the data as a second set of eyes and in doing the</p> <p>16 statistical summary. But I reached out to her after</p> <p>17 all of those initial points were completed. So that</p> <p>18 went on for many months.</p> <p>19 Q (BY MR. ZELLERS) Is it the objective of a</p> <p>20 systematic review to bring clarity to a research</p> <p>21 question by combining like-with-like data?</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 A The purpose of the systematic review is to</p> <p>24 take individual papers that may not have enough</p> <p>25 statistical power to provide by themselves,</p>

26 (Pages 98 to 101)

Rebecca Smith-Bindman, M.D.

Page 102	Page 104
<p>1 individual results that are meaningful. And if the 2 methodology is combinable, to pool the sample size 3 to get greater statistical power to come up with a 4 conclusion. 5 But your question about combining like 6 with like is -- is -- is very important. 7 Q (BY MR. ZELLERS) In order for research to 8 be useful, it must be valid, correct? 9 A Yes. 10 Q Inaccurate and incomplete reporting of 11 methods can make research unreasonable and unusable; 12 is that right? 13 MS. O'DELL: Object to the form. 14 A I -- I -- I think there are separate 15 phases of research that need happen. I think the 16 reporting of methodology is so that other people can 17 duplicate your results, understand your results. 18 But in and of themselves, the reporting 19 does not influence the reliability of the -- of the 20 research. 21 Q (BY MR. ZELLERS) Is reporting of 22 methodology important? 23 A I -- I think reporting of methodology so 24 that other people can duplicate the results is 25 important.</p>	<p>1 been done, I tried, in writing my report, to 2 highlight the details of what would be needed to 3 understand my result. 4 But I have not, for example, included 5 certain details that you would typically put in a 6 journal article. 7 So in a journal article, you would always 8 publish the version of SAS or R that was used for 9 the report. I -- I would not have included that. 10 And -- and I believe some of the documents 11 I shared with you that Dr. Hall provided to me on 12 the methodology were included in the e-mail to me. 13 And I may not have included it in the 14 report, thinking that the reader would not -- you, 15 for example, would be interested in some of those 16 biostatistical nuances. 17 But when I publish it, I would put those 18 in because the readership might care about them. 19 Q You talked, I believe, a minute ago about 20 abstracting data; is that right? 21 A Yes. 22 Q Is data abstraction one of the most 23 important steps in conducting a meta-analysis or a 24 systematic review? 25 Would you agree with that?</p>
Page 103	Page 105
<p>1 So if -- if I move ahead as I'm planning 2 to publish my systematic review, then I would 3 include greater details about the methodology so 4 that other investigators could duplicate my work, 5 should -- should they so choose. 6 Q At least as of now, other scientists or 7 epidemiologists would not be able to reproduce what 8 you have done based upon your report -- 9 MS. O'DELL: Object -- 10 Q (BY MR. ZELLERS) -- correct? 11 MS. O'DELL: -- object to the form. 12 A I am -- I am not sure that that's the 13 case. 14 Q (BY MR. ZELLERS) Do you think that all of 15 the steps that you followed in terms of preparing 16 your systematic review are set forth in your report? 17 MS. O'DELL: Object to the form. 18 A I think the path that I followed in this 19 review and the method that I used is a method that I 20 have used in a number of other published systematic 21 reviews. 22 And so to the degree that people could 23 sort of say: Well, this is what Dr. Smith-Bindman 24 does in a review -- she focuses on stratified 25 results -- these are the methods that have done --</p>	<p>1 A I would agree with that. 2 Q Would you agree that the accuracy of the 3 data abstraction is very important to the validity 4 of the analysis? 5 A I think one of the hallmarks of doing a 6 systematic review is, in fact, to have several 7 people abstract the data points so that you can be 8 assured that there are -- that they're done as 9 accurately as possible, with the understanding of a 10 single data abstraction by a single person can never 11 be perfect. 12 And so the more people that abstract and 13 review, the greater the accuracy of the data. 14 Q Your data abstraction was not perfect, 15 correct? 16 A It was not. 17 MS. O'DELL: Object to the form. 18 Q (BY MR. ZELLERS) The data abstraction that 19 was done by Dr. Hall was not perfect; is that right? 20 MS. O'DELL: Object to the form. 21 A That is correct. 22 Q (BY MR. ZELLERS) If data is misrepresented 23 -- well, strike that. 24 Are you familiar with the 25 term "misrepresentation"?</p>

27 (Pages 102 to 105)

Rebecca Smith-Bindman, M.D.

Page 106	Page 108
<p>1 MS. O'DELL: Object to the form.</p> <p>2 A I -- I will admit I'm not sure what the</p> <p>3 context is you're asking --</p> <p>4 Q (BY MR. ZELLERS) Well --</p> <p>5 A -- about.</p> <p>6 Q -- let me try to put it in another context</p> <p>7 or at least ask a question that may get to what I am</p> <p>8 trying to get to.</p> <p>9 If data is misrepresented from the</p> <p>10 original study, the analysis -- the systematic</p> <p>11 review or the meta-analysis can be comprised,</p> <p>12 correct?</p> <p>13 A Yes, I agree.</p> <p>14 Q Inaccuracy and misrepresentation of data</p> <p>15 are considered violations of generally accepted</p> <p>16 standards of research; is that right?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 A Misrepresentation of data suggests to me</p> <p>19 that there's some malicious or devious attempt where</p> <p>20 occasionally there are sometimes simple errors in</p> <p>21 abstraction when you write down the No. 5 and, in</p> <p>22 fact, the number really is .5.</p> <p>23 And often when abstracting data, it's not</p> <p>24 so much an error of writing down 5 or .5, but it's</p> <p>25 choosing which number in that manuscript reflects</p>	<p>1 MS. O'DELL: -- form.</p> <p>2 Q (BY MR. ZELLERS) Go back to my question.</p> <p>3 And -- and with the background that you have given</p> <p>4 and with your qualification, do you agree that</p> <p>5 inaccuracy and misrepresentation are considered</p> <p>6 violations of generally accepted standards of</p> <p>7 research?</p> <p>8 MS. O'DELL: Object to the form. If you</p> <p>9 don't understand the question, you may ask him to</p> <p>10 rephrase it. If --</p> <p>11 A I --</p> <p>12 MS. O'DELL: -- you understand --</p> <p>13 A -- I --</p> <p>14 MS. O'DELL: -- the question, feel free to</p> <p>15 answer it.</p> <p>16 A -- I felt like I had answered the question</p> <p>17 that I understood, so it -- perhaps I'm not</p> <p>18 understanding your question.</p> <p>19 Q (BY MR. ZELLERS) Are you able to answer</p> <p>20 that question?</p> <p>21 A Yes. I think that misrepresentation of</p> <p>22 data is not how I would describe an error in</p> <p>23 abstraction of data or in a difference of opinion</p> <p>24 about what value reflects the data point you were</p> <p>25 looking for. I wouldn't consider that a</p>
Page 107	Page 109
<p>1 what you are really trying to capture and get at.</p> <p>2 So typically there are more than one way</p> <p>3 to abstract data. It's why it's not -- it -- it's</p> <p>4 why it's not simply having multiple people so they</p> <p>5 don't make typos or small extraction mistakes, but</p> <p>6 rather, that they're making similar choices.</p> <p>7 And so misrepresentation, the way you have</p> <p>8 asked it, makes it sound like there's some malicious</p> <p>9 attempt to get it wrong or to -- to manipulate it</p> <p>10 rather than the wrong number was chosen for either a</p> <p>11 simple error or because there was a choice and the</p> <p>12 choice was not made in a way that two people would</p> <p>13 agree. And so...</p> <p>14 Q (BY MR. ZELLERS) There can be differences</p> <p>15 in the way different folks go about doing a research</p> <p>16 project or a meta-analysis or a systematic review;</p> <p>17 is that right?</p> <p>18 A Yes.</p> <p>19 Q In order for someone to reproduce or</p> <p>20 replicate what another epidemiologist or scientist</p> <p>21 has done, they need to see the steps that the</p> <p>22 scientist or epidemiologist followed; is that right?</p> <p>23 A That is --</p> <p>24 MS. O'DELL: Object to the --</p> <p>25 A -- correct.</p>	<p>1 misrepresentation of data.</p> <p>2 Q Understood. Let me ask my question once</p> <p>3 more.</p> <p>4 A Okay.</p> <p>5 Q Misrepresentation of data would be a</p> <p>6 violation of generally accepted standards of</p> <p>7 research, correct?</p> <p>8 A I agree that misrepresentation of data</p> <p>9 would be a violation of research.</p> <p>10 Q A causal analysis cannot be determined</p> <p>11 based on a single piece of evidence, but requires</p> <p>12 consideration of the totality of relevant evidence.</p> <p>13 Do you agree with that?</p> <p>14 A I would say in the field of epidemiology,</p> <p>15 it's unusual to have a single piece of evidence.</p> <p>16 But I think in some circumstances a single piece of</p> <p>17 evidence can establish causality. Not typically in</p> <p>18 epidemiology work.</p> <p>19 Q What do you mean in your report by "causal</p> <p>20 association"?</p> <p>21 A So in my report, I did research as -- sort</p> <p>22 of as I outlined in my Table of Contents of, you</p> <p>23 know, number of different areas.</p> <p>24 Q Okay. And I'm going to ask you about</p> <p>25 those. Right now my question just --</p>

28 (Pages 106 to 109)

Rebecca Smith-Bindman, M.D.

Page 110	Page 112
<p>1 A No.</p> <p>2 Q -- is --</p> <p>3 A I understand. I --</p> <p>4 Q What --</p> <p>5 A -- understand.</p> <p>6 Q -- do you mean when you say "causal</p> <p>7 association"?</p> <p>8 A No. I -- I understand. I -- I apologize.</p> <p>9 I was not getting there quite quickly enough.</p> <p>10 Q That's all right.</p> <p>11 A So I did research on several topics that I</p> <p>12 thought were highly relevant to coming up with a</p> <p>13 causal determination, and I put those different</p> <p>14 pieces of research and expertise together in terms</p> <p>15 of the causality by specifically looking at the</p> <p>16 Bradford Hill criteria.</p> <p>17 Q I -- and I'm going to get to eventually, I</p> <p>18 hope, why you came up with whatever opinion you came</p> <p>19 up with.</p> <p>20 Right now I'm just trying to understand</p> <p>21 what you mean when you use the words "causal</p> <p>22 association."</p> <p>23 MS. O'DELL: Object to the form. Is there</p> <p>24 a specific case in her report that --</p> <p>25 Q (BY MR. ZELLERS) Sure. "Conclusion."</p>	<p>1 Q Is that what you mean by "causal</p> <p>2 association"?</p> <p>3 A Yes, it is.</p> <p>4 Q What are the other causes of ovarian</p> <p>5 cancer?</p> <p>6 A So there's a whole long list of risk</p> <p>7 factors for ovarian cancer.</p> <p>8 Q What is the difference between a risk</p> <p>9 factor and a cause?</p> <p>10 A A risk factor is something that puts you</p> <p>11 at increased risk, increases the probability that</p> <p>12 you will get ovarian cancer. And there are</p> <p>13 innumerable mechanisms and ways that that can go</p> <p>14 about.</p> <p>15 But often -- not entirely, but often, you</p> <p>16 don't think of risk factors as being things that you</p> <p>17 can alter. That's not entirely true.</p> <p>18 There are some risk factors. For example,</p> <p>19 the use of -- well, the -- the most commonly cited</p> <p>20 risk factor for cancer in general is smoking, and</p> <p>21 that's clearly something that can be started or</p> <p>22 ended, that can be changed.</p> <p>23 But often you think of risk factors as</p> <p>24 things that can't be changed. So elevation in age,</p> <p>25 inherited genetics.</p>
Page 111	Page 113
<p>1 Page 41 of the report, In conclusion, substantial</p> <p>2 evidence supports a strong, positive, and causal</p> <p>3 association between ovarian cancer and genital</p> <p>4 exposure to talcum powder products.</p> <p>5 I just want to know what you mean when you</p> <p>6 say "causal association."</p> <p>7 MS. O'DELL: I think she answered your</p> <p>8 question.</p> <p>9 But you may answer him, if you understand</p> <p>10 it.</p> <p>11 A I -- I think that the -- the four</p> <p>12 sentences just above that says that, Summary</p> <p>13 consideration of causality of talc powder products</p> <p>14 and ovarian cancer using the Bradford Hill.</p> <p>15 So I -- I -- I believe, using this</p> <p>16 framework, the Bradford Hill, the components of the</p> <p>17 Bradford Hill demonstrate that ovarian cancer is</p> <p>18 caused by regular talcum powder exposure based on</p> <p>19 the strength of the association, based on the</p> <p>20 consistency, the temporality of -- of the components</p> <p>21 of my analysis.</p> <p>22 Q (BY MR. ZELLERS) Do you believe that</p> <p>23 perineal use of talcum powder by women on a regular</p> <p>24 basis causes ovarian cancer?</p> <p>25 A Yes, I do.</p>	<p>1 So those things lead to ovarian cancer,</p> <p>2 the risk factors that I describe in my report. But</p> <p>3 most of them are not things that you can influence.</p> <p>4 Some of them are, but most of them are not.</p> <p>5 Where talcum powder products -- the use of</p> <p>6 perineal talcum powder products -- products is</p> <p>7 something that can be changed. That -- that is a</p> <p>8 behavior, and so I think that's the distinction that</p> <p>9 I would make.</p> <p>10 Q A risk factor is something that increases</p> <p>11 the potential risk of a disease, but cannot be</p> <p>12 changed, correct?</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 A I -- I said that it's often something that</p> <p>15 can't be changed. But -- but again, there are risk</p> <p>16 factors that, by convention, we consider risk</p> <p>17 factors, but that are modifiable.</p> <p>18 Q (BY MR. ZELLERS) All right.</p> <p>19 A And I gave smoking as an example.</p> <p>20 Q A cause of a disease is something that can</p> <p>21 be modified; is -- is that correct?</p> <p>22 A It --</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A -- again, it is often used that way.</p> <p>25 Q (BY MR. ZELLERS) What makes a factor cross</p>

29 (Pages 110 to 113)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 114</p> <p>1 the line from being a risk factor to being a cause?</p> <p>2 A I -- I think what I was suggesting is it's</p> <p>3 a blurry distinction. I think it's by convention</p> <p>4 things that cannot be modified are typically thought</p> <p>5 as risk factors. Things that can be modified are</p> <p>6 generally thought about as being in the causal</p> <p>7 family -- pathway.</p> <p>8 But there's no distinction that you can</p> <p>9 separate something that increases your risk of</p> <p>10 something versus something that causes it. The --</p> <p>11 the causal pathways could be the exact same causal</p> <p>12 pathways in both situations.</p> <p>13 Q What other causes are there of ovarian</p> <p>14 cancer?</p> <p>15 A So I'm guessing from what I have just said</p> <p>16 that you are asking about causes and risk factors or</p> <p>17 would you like them to be --</p> <p>18 Q Well, do you use "risk factor" and "cause"</p> <p>19 interchangeably or are they different?</p> <p>20 MS. O'DELL: Object to the form; asked and</p> <p>21 answered.</p> <p>22 A I -- I believe that by convention we</p> <p>23 typically describe risk factors that are things that</p> <p>24 cannot be altered.</p> <p>25 But technically there is no difference</p>	<p style="text-align: right;">Page 116</p> <p>1 Smoking is a possible risk factor.</p> <p>2 So all of those are in the category of</p> <p>3 risk factors for ovarian cancer.</p> <p>4 Q My question goes to cause. Based upon</p> <p>5 your review of the literature over the past year,</p> <p>6 what other causes of ovarian cancer have you</p> <p>7 identified, if any?</p> <p>8 MS. O'DELL: Objection to form; asked and</p> <p>9 answered.</p> <p>10 A There are other contributors to ovarian</p> <p>11 cancer like pelvic inflammatory disease, which I</p> <p>12 think was on the list of what I just noted.</p> <p>13 There are no other modifiable factors that</p> <p>14 I would put on the list of things that cause ovarian</p> <p>15 cancer other than exposure to talc powder products.</p> <p>16 Q (BY MR. ZELLERS) Based upon your review of</p> <p>17 the literature in terms of a cause for ovarian</p> <p>18 cancer, the only cause that you have identified is</p> <p>19 the regular perineal use of talcum powder by women,</p> <p>20 correct?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 Misstates her testimony.</p> <p>23 A I believe I just said that pelvic</p> <p>24 inflammatory disease increases the risk of ovarian</p> <p>25 cancer.</p>
<p style="text-align: right;">Page 115</p> <p>1 between factors, covariants that influence your</p> <p>2 cancer risk that you can change or not. So I can</p> <p>3 tell you the list of things that fall into those two</p> <p>4 categories.</p> <p>5 Q (BY MR. ZELLERS) All right. What I want</p> <p>6 to know is: Based upon your review and your</p> <p>7 research over the past year or so, other than</p> <p>8 perineal use of talcum powder on a regular basis,</p> <p>9 what other causes of ovarian cancer are there?</p> <p>10 A So in my report on page 11, I write that,</p> <p>11 Numerous risk factors are identified for ovarian</p> <p>12 cancer. Unfortunately, few can be modified by</p> <p>13 therapies or lifestyle changes. Risk factors</p> <p>14 include personal or family history of -- of cancer,</p> <p>15 inherited mutations, BRC1 and BRC2, advanced age,</p> <p>16 white, race, education, endometriosis.</p> <p>17 Other factors that may increase --</p> <p>18 increase ovarian cancer due to estrogen exposure</p> <p>19 include having no pregnancies or advanced age at</p> <p>20 first birth, obesity, post menopausal hormone</p> <p>21 therapy.</p> <p>22 Several factors I list are associated with</p> <p>23 a decreased risk of ovarian cancer such as breast</p> <p>24 feeding or multiple pregnancies, oral</p> <p>25 contraceptions, tubal ligation, or hysterectomy.</p>	<p style="text-align: right;">Page 117</p> <p>1 Q (BY MR. ZELLERS) Is pelvic in --</p> <p>2 MS. O'DELL: Excuse me. I'm sorry. Were</p> <p>3 you finished, Dr. Smith-Bindman? I mean, if you're</p> <p>4 not, you -- you may continue. If so, I apologize --</p> <p>5 A I --</p> <p>6 MS. O'DELL: -- for interrupting you both.</p> <p>7 A -- I was going to add that endometriosis</p> <p>8 has been noted also as a contributor to --</p> <p>9 Q (BY MR. ZELLERS) Is -- are you finished?</p> <p>10 A -- I am.</p> <p>11 Q Okay. Is pelvic inflammatory disease a</p> <p>12 cause of ovarian cancer?</p> <p>13 A I -- I -- you -- you keep asking me the</p> <p>14 same question, and I don't understand the</p> <p>15 distinction that you are asking me to make between</p> <p>16 something that causes cancer and something that's a</p> <p>17 risk factor.</p> <p>18 In both situation -- situations there is a</p> <p>19 probability of getting a disease versus not getting</p> <p>20 a disease. There's no 100 percent association, and</p> <p>21 so most people, as an analogy who smoke cigarettes,</p> <p>22 do not get lung cancer. It's fewer than 15 percent.</p> <p>23 Does smoking cause lung cancer? Yes. Is</p> <p>24 it a risk factor for lung cancer? Yes. Is it a</p> <p>25 single pathway that everyone who smokes, gets lung</p>

30 (Pages 114 to 117)

Rebecca Smith-Bindman, M.D.

Page 118	Page 120
<p>1 cancer? No.</p> <p>2 So I -- you're asking me to make a</p> <p>3 distinction that I don't make in my head, so I'm --</p> <p>4 I'm not sure -- all of the things I suggested as</p> <p>5 risk factors in some women will cause them to have</p> <p>6 cancer.</p> <p>7 Q You are opining in this case that the</p> <p>8 regular perineal use of talcum powder causes ovarian</p> <p>9 cancer, correct?</p> <p>10 A Yes, I am.</p> <p>11 Q My question is: Does pelvic inflammatory</p> <p>12 disease cause ovarian cancer?</p> <p>13 A In some women, pelvic inflammatory disease</p> <p>14 will cause cancer.</p> <p>15 Q You -- you would list a pelvic</p> <p>16 inflammatory disease as a cause of ovarian cancer;</p> <p>17 is that your testimony?</p> <p>18 MS. O'DELL: Objection, asked and</p> <p>19 answered.</p> <p>20 A I would include pelvic inflammatory</p> <p>21 disease with all the other ovarian cancer risk</p> <p>22 factors like BRCA1 and 2 as being one of a large</p> <p>23 number of contributors and risk factors for ovarian</p> <p>24 cancer.</p> <p>25 There -- there is not -- no other</p>	<p>1 Q (BY MR. ZELLERS) Have you done anything to</p> <p>2 advise the health community about your belief that</p> <p>3 there is a causal association between talcum powder</p> <p>4 use and ovarian cancer?</p> <p>5 A I have mentioned to you that I have spoken</p> <p>6 about my review to several individuals, several</p> <p>7 close mentors of mine in leadership roles within the</p> <p>8 healthcare community. So I --</p> <p>9 Q Who?</p> <p>10 A -- not -- not individuals I am willing to</p> <p>11 name.</p> <p>12 Q You won't tell me who you have talked to</p> <p>13 about your belief or your theory that there's a</p> <p>14 causal association between genital talcum powder use</p> <p>15 and ovarian cancer?</p> <p>16 A I would prefer not to share that</p> <p>17 information.</p> <p>18 Q Have you contacted any public health</p> <p>19 authorities such as the FDA or the National Cancer</p> <p>20 Institute?</p> <p>21 A I have not.</p> <p>22 Q Have you written any type of an op-ed or</p> <p>23 other news article on this topic?</p> <p>24 A Not yet. I have not.</p> <p>25 Q You have done that in the past; is that</p>
Page 119	Page 121
<p>1 exposure -- a modifiable exposure that I can think</p> <p>2 of that leads to getting ovarian cancer or causing</p> <p>3 ovarian cancer.</p> <p>4 Q (BY MR. ZELLERS) In -- in your practice as</p> <p>5 a radiologist, you do not evaluate what caused an</p> <p>6 individual patient's ovarian cancer; is that right?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 A As a -- a radiologist, I do not.</p> <p>9 Q (BY MR. ZELLERS) You don't diagnose what</p> <p>10 caused any individual patient's ovarian cancer; is</p> <p>11 that right, in your practice -- your medical</p> <p>12 practice.</p> <p>13 MS. O'DELL: Objection, asked and</p> <p>14 answered.</p> <p>15 A I -- I -- I do not. I diagnose ovarian</p> <p>16 cancer. I diagnosis pelvic inflammatory disease.</p> <p>17 But in an individual patient, I wouldn't tell a</p> <p>18 patient why they got ovarian cancer.</p> <p>19 Q (BY MR. ZELLERS) You -- you have not, at</p> <p>20 least as of this time, published on your theory that</p> <p>21 there is a causal association between genital talcum</p> <p>22 powder exposure and ovarian cancer; is that right?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A I have not published on my conclusion that</p> <p>25 talcum powder products causes ovarian cancer.</p>	<p>1 right?</p> <p>2 A Had -- you're asking if I have written</p> <p>3 op-eds on areas I have done research?</p> <p>4 Q Yes.</p> <p>5 A Yes, I have.</p> <p>6 Q Back in 2014, you did an op-ed in The New</p> <p>7 York Times relating to CT scans; is that right?</p> <p>8 A Yes, I did.</p> <p>9 Q All right. You concluded or at least put</p> <p>10 in the op-ed, In 2007, CT scans will cause 29,000</p> <p>11 excess cancer cases and 14,500 excess deaths; is</p> <p>12 that right?</p> <p>13 A I don't have it in front of me. But it</p> <p>14 looks like you do, and so I'm going to guess that</p> <p>15 that's correct.</p> <p>16 Q Well, does that sound right to you?</p> <p>17 A It does sound right.</p> <p>18 Q You put in that editorial or op-ed that in</p> <p>19 your opinion, 3 percent to 5 percent of all future</p> <p>20 cancers may result from exposure to medical imaging</p> <p>21 such as CT scans; is that right?</p> <p>22 MS. O'DELL: And if you have a</p> <p>23 recollection and -- and you -- and your memory</p> <p>24 confirms those -- those facts, please feel free to</p> <p>25 testify to it. If you need to see the op-ed, then</p>

31 (Pages 118 to 121)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 122</p> <p>1 I'm sure counsel would be willing to put it in front 2 of you. 3 A That particular statistic, I don't have to 4 see. I know that static -- 5 Q (BY MR. ZELLERS) All right. 6 A -- so yes. 7 Q You are familiar with the Center for 8 Disease Control, correct? 9 A Yes, I am. 10 Q The CDC or Center for Disease Control is a 11 reputable organization; is that right? 12 MS. O'DELL: Object to the form. 13 A I think they're a very reputable 14 organization. 15 Q (BY MR. ZELLERS) You have served on 16 several committees for the CDC in the past; is that 17 right? 18 A I currently work on several committees 19 with them. 20 Q Do the doctors and scientists in the CDC 21 work hard to protect women's health, based on your 22 experience? 23 A Yes, they do. 24 Q In forming your opinions in this case, did 25 you consider the risk factors that the CDC</p>	<p style="text-align: right;">Page 124</p> <p>1 of many pieces of information I used. 2 Q (BY MR. ZELLERS) Are you aware that in 3 their patient-facing websites, as well as their 4 publicly available information about ovarian cancer, 5 the CDC does not identify perineal use of talcum 6 powder as a risk factor for ovarian cancer? 7 A Yes, I do remember seeing that. 8 Q You don't have any reason to believe that 9 the folks at the CDC have not kept up to date with 10 talc and ovarian cancer epidemiology, do you? 11 MS. O'DELL: Object to the form. 12 A I believe that the comprehensiveness of 13 the review that I did and the amount of time that I 14 put into this review, as I have in -- in many other 15 reviews, requires a very deep dive into the 16 literature. 17 And I do not believe that the CDC has 18 funding or resources to do that kind of deep dive. 19 And so typically what they do is sort of review some 20 things that have been published. Most things, they 21 don't end up reviewing. 22 And so I have no reason to believe anyone 23 at the CDC deliberately didn't do a comprehensive 24 review of the literature, but -- nor do I have any 25 evidence that they did a comprehensive review of the</p>
<p style="text-align: right;">Page 123</p> <p>1 recognizes for ovarian cancer? 2 A From my report, I read an enormous number 3 of articles, and I spent considerably time 4 considering those articles from a data point of 5 view. 6 And I did not, for the most part, weigh 7 other organization's summaries if they were not 8 quantitative and very explicit in what reviews they 9 did, what literature they included. 10 And sometimes they -- organizations did do 11 that, but did not do nearly as -- a comprehensive 12 job. So I -- I would not have relied on any 13 professional organization's reviews unless they were 14 quantitative the way -- the way my own were? 15 MR. ZELLERS: Move to strike as 16 nonresponsive. 17 Q (BY MR. ZELLERS) Let me ask the question 18 again. In forming your opinions in this case, did 19 you consider the risk factors that the CDC 20 recognizing for ovarian cancer? 21 MS. O'DELL: Object to the form. 22 A I saw documents on their websites that 23 list risk factors, and no individual organization's 24 summaries, either for patients or for clinicians, 25 formed a very large piece of my opinion. It was one</p>	<p style="text-align: right;">Page 125</p> <p>1 literature. 2 Q (BY MR. ZELLERS) Do you have any personal 3 knowledge one way or the other as to the extent of 4 the review of the science and literature that the 5 CDC did in compiling its list of risk factors for 6 ovarian cancer? 7 A I -- 8 MS. O'DELL: Object to the form. 9 A -- I would have to refresh my memory by 10 looking at their -- their website and documents. If 11 you provided those, I could. 12 Q (BY MR. ZELLERS) My question is: Do you 13 have any personal knowledge one way or the other as 14 to what the CDC has done with respect to a review of 15 the scientific literature in compiling its list of 16 risk factors for ovarian cancer? 17 A I don't know offhand what they did. And I 18 don't recall when looking at their website, what 19 references they listed. 20 I think if their reference list included a 21 very short -- small number of references, I would 22 have concluded that they had not done a very 23 comprehensive review. 24 Q (BY MR. ZELLERS) My question is: Do you 25 have any personal knowledge as to what the CDC did</p>

Rebecca Smith-Bindman, M.D.

Page 126	Page 128
<p>1 or did not do with respect to its review of the 2 literature? 3 A Again, I don't know off the top of my 4 head. But I know I went to their website, and I 5 don't -- 6 Q Other than looking at their website, do 7 you have any personal knowledge? 8 A No, I do not. 9 Q All right. Have you communicated to 10 anyone at the CDC that you disagree with their 11 position? 12 A I -- I'm laughing at the nature of the 13 question. There wouldn't be anyone at the CDC to 14 disagree with. 15 Q There -- there's no one at the CDC that 16 you, as a concerned radiologist, could go to and 17 say: Hey, I think that you should list perineal 18 talc use as a risk factor for ovarian cancer? 19 MS. O'DELL: Object to the form. 20 Q (BY MR. ZELLERS) There's no one you could 21 talk to at the CDC about that? 22 A I -- I would -- I would have to confirm 23 that that -- I have been -- I -- I study 24 environmental carcinogens. 25 And you pointed out my New York Times</p>	<p>1 MS. O'DELL: Object to the form. 2 A Naive to suggest that a single person 3 could just call them and say: I have looked at this 4 topic, and you should change what you are doing. 5 Q (BY MR. ZELLERS) Are you familiar with the 6 National Institute of Health? 7 A I am. 8 Q You have received funding from the 9 National Institute of Health; is that right? 10 A I have. 11 Q Do you know that the National Institute of 12 Health does not list talc use as a risk factor for 13 ovarian cancer? 14 MS. O'DELL: Object to form. 15 A Again, I -- yeah, I know that the NCI, PDQ 16 that writes reports for patients and clinicians 17 about risk factors for cancer has a report on risk 18 factors for ovarian cancer and that they conclude 19 that there's inadequate evidence for talc. 20 Q (BY MR. ZELLERS) Inadequate evidence, 21 correct? 22 A I -- I -- I wasn't finished. 23 Q Please finish. 24 A So they don't stand -- just to clarify, 25 for the National Institute of Health. It's a very</p>
Page 127	Page 129
<p>1 op-ed that put a message out there that said: I 2 think this is an environmental carcinogen. 3 And I have spoken about that topic in many 4 forms. I have testified before Congress several 5 times. I testified to the FDA. I have spoken to 6 CMS. 7 All of that took years to get people to 8 hear those messages. It was not that: Oh, I see 9 there's a problem here. Let me just tell the top 10 person to do that. 11 And -- and so I'm -- you're suggesting 12 there's someone at the CDC that I could call and 13 say: Oh, by the way, I think that's an important 14 topic. I appreciate your giving me that idea. I 15 will move forward once I publish a paper on this 16 topic. 17 But -- but that's not nearly as -- as 18 simple as you're suggesting in your question. 19 There's a naiveness there that there's someone at 20 the CDC who would -- who takes responsibility for 21 what they do and -- on all of their websites and you 22 can sort of give them feedback on that. 23 Q You believe I'm being naive to think that 24 there's a person responsible at the CDC for 25 compiling a list of risk factors for ovarian cancer?</p>	<p>1 prestige body. It's an organization within a small 2 part of the NCI. 3 I know it well, because I served on that 4 committee for many years. I know the process 5 whereby they review the literature and created a 6 whole a bunch of standards within what they do 7 around that. 8 And I looked and saw that they updated 9 their summary of talc in 2018. And -- and yet, 10 within that summary, they do list the references 11 that they cite, and they omit a large number of 12 references that are recent. 13 So I do know their conclusion. I do not 14 agree with their conclusion. And there were large 15 gaps in their literature. And that update was very 16 recent. 17 I -- I told you I don't know the 18 leadership at the CDC, and they don't have a 19 process. But I do know the leadership on this 20 committee and -- and will point out their omissions 21 to this committee. 22 Q Well, I haven't gotten to the National 23 Cancer Institute yet. 24 My question was: Do you know that NIH, 25 the National Institute of Health, does not list use</p>

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 130</p> <p>1 of talcum powder as a risk factor for ovarian 2 cancer? 3 A So I -- I -- I don't know what -- I'm 4 sorry. I don't know what you're talking about, 5 the -- 6 Q All right. 7 A -- NIH. 8 Q Take a look, if you will, at Deposition 9 Exhibit 19, which is captioned NIH steer -- or 10 "SEER, S E E R, Training Modules" and has got "Risk 11 Factors" at the top. 12 (Exhibit 19 was marked for identification 13 and is attached to the transcript.) 14 MS. O'DELL: Thank you. 15 A So SEER is also a part of National Cancer 16 Institute. It's the surveillance epidemiology -- 17 MR. LAPINSKI: Have her wait for a 18 question. 19 MS. O'DELL: Sorry. Just wait for his 20 question. Yeah, thanks, Dan. 21 Q (BY MR. ZELLERS) You recognize Exhibit 19 22 as a training module from NIH and specifically from 23 the National Cancer Institute; is that right? 24 A So this says at the top "SEER Training 25 Modules."</p>	<p style="text-align: right;">Page 132</p> <p>1 include modifiable and nonmodifiable parameters. 2 Is that right? And then it lists out 3 nonmodifiable parameters and modifiable parameters; 4 is that right? 5 A Yes, that's what this -- 6 Q Talcum -- 7 A -- says. 8 Q -- powder use is not listed, correct? 9 A Correct. 10 Q All right. Take a look, if you will -- 11 and this is the document that you were talking about 12 a moment ago -- at Deposition Exhibit 20. 13 (Exhibit 20 was marked for identification 14 and is attached to the transcript.) 15 Q (BY MR. ZELLERS) This is the "National 16 Cancer Institute Review of Ovarian, Fallopian Tube, 17 and Primary Peritoneal Cancer Prevention PDQ"; is 18 that right? 19 A Yes, it is. 20 Q This is the document that you told us a 21 few minutes ago that you disagree with the 22 conclusion; is that right? 23 And specifically if you go to page 5 of 9 24 under "Perineal Talc Exposure," the statement from 25 the National Cancer Institute in this document is</p>
<p style="text-align: right;">Page 131</p> <p>1 I don't know what this is. I know SEER 2 quite well. It's the National Cancer Registries. 3 But I -- I don't -- don't know what this training 4 module is. But I do see that you are showing me 5 some risk factors. 6 Q Talc is not listed as a risk factor for 7 ovarian cancer in this document, Exhibit 19, that 8 was updated in June of 2018 from NIH and the 9 National Cancer Institute; is that right? 10 A I -- I want to sort of explain my 11 confusion. The SEER, Surveillance, Epidemiology, 12 and End Result, program does not train or educate 13 individuals typically using documents like this. 14 Often this is for cancer abstractors to 15 know what information they're asking their 16 abstractors to collect. 17 I -- I don't know what this is, but it 18 doesn't look to me like something that's identifying 19 risk factors as much as asking medical chart 20 abstractors to write down information that they're 21 collecting as part of their data. 22 Q My question is very simple. This is a 23 list that at the top says "Risk Factors." 24 The introductory statement says, The main 25 risk and protective factors for ovarian cancers</p>	<p style="text-align: right;">Page 133</p> <p>1 that the weight of evidence does not support an 2 association between perineal talc exposure and an 3 increased risk of ovarian cancer. Results from 4 case-control and cohort studies are inconsistent. 5 Is that right? 6 A That is what they conclude. 7 Q This was updated, if you looked at the 8 last page, page 9 of 9, on January 4 of 2019; is 9 that right? 10 MS. O'DELL: Object to the form. 11 A Can you show me where it's been updated? 12 Q (BY MR. ZELLERS) Sure. Look at the very 13 last page. In bold, "Updated January 4, 2019"; is 14 that right? 15 A It does say that -- 16 Q All right. 17 A -- yes. 18 Q Are there limitations on epidemiological 19 data? 20 A Yes, there are. 21 Q Do you agree that epi -- epidemiologic 22 data alone cannot permit a determination regarding 23 causation? 24 A I'm sorry. Can you just -- 25 Q Do you need me to say it again or can you</p>

34 (Pages 130 to 133)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 134</p> <p>1 read it off the screen?</p> <p>2 A I can read it off the screen. I think</p> <p>3 epidemiologic data can provide an enormous amount of</p> <p>4 information about causation. But there are other</p> <p>5 considerations that would have to be also taken into</p> <p>6 account to also support that.</p> <p>7 Q Can epidemiologic data alone permit a</p> <p>8 determination regarding causation?</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 A I think epidemiologic data can be used in</p> <p>11 combination with other data to determine causality,</p> <p>12 but by itself cannot be used alone to determine</p> <p>13 causality.</p> <p>14 Q (BY MR. ZELLERS) The current epidemiologic</p> <p>15 data, as it exists, does not enable someone to</p> <p>16 distinguish between brands of cosmetic talc</p> <p>17 products; is that right?</p> <p>18 MS. O'DELL: Object to the form.</p> <p>19 A I would agree.</p> <p>20 Q (BY MR. ZELLERS) You can't tell in any of</p> <p>21 the 40 plus studies that you reviewed, that the</p> <p>22 women who were involved in those studies used talc</p> <p>23 products manufactured by Johnson & Johnson</p> <p>24 Consumer, Inc., or by another company; is that</p> <p>25 right?</p>	<p style="text-align: right;">Page 136</p> <p>1 awful lot of Johnson & Johnson baby powder over the</p> <p>2 last 50 plus years. And -- and I am --</p> <p>3 Q (BY MR. ZELLERS) And --</p> <p>4 A -- not sure whether there's lots of other</p> <p>5 dominant players in the space. I -- I don't know</p> <p>6 that.</p> <p>7 My impression is that Johnson -- baby</p> <p>8 powder baby is a Johnson & Johnson a product very,</p> <p>9 very often.</p> <p>10 Q But you have not done any type of survey</p> <p>11 --</p> <p>12 A I have --</p> <p>13 Q -- or analysis?</p> <p>14 A -- I have not.</p> <p>15 Q If the biological mechanism by which a</p> <p>16 talcum powder product can increase the risk of</p> <p>17 ovarian cancer is because of a particular</p> <p>18 contaminant or collection of contaminants, but that</p> <p>19 contaminant or collection of contaminants does not</p> <p>20 exist in all talcum powder products, will the</p> <p>21 epidemiologic evidence that exists today allow you</p> <p>22 to see that distinction?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A You're asking about contaminants of talcum</p> <p>25 powder products. My understanding from what I have</p>
<p style="text-align: right;">Page 135</p> <p>1 MS. O'DELL: Object to the form.</p> <p>2 A I -- I would agree that most of the papers</p> <p>3 that I read did not specify what the source of the</p> <p>4 baby powder was.</p> <p>5 Q (BY MR. ZELLERS) Based on the analysis</p> <p>6 that you have done, you're not able to draw an</p> <p>7 opinion specifically about an increased risk of</p> <p>8 ovarian cancer that is tied to a particular brand of</p> <p>9 talcum powder, correct?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 A My impression is that a large proportion</p> <p>12 of the talcum powder products that are available</p> <p>13 happen to be made by Johnson & Johnson, but I do not</p> <p>14 know for any given study -- for most of the studies,</p> <p>15 at least, what kind of talcum powder it was.</p> <p>16 Q (BY MR. ZELLERS) Okay. Is your impression</p> <p>17 that you just shared with us, you know, based on</p> <p>18 information you have received from plaintiffs'</p> <p>19 counsel?</p> <p>20 MS. O'DELL: Object to the form. Don't --</p> <p>21 don't discuss what's been provided by -- let me say</p> <p>22 that again.</p> <p>23 Don't -- don't discuss conversations with</p> <p>24 plaintiffs' counsel. Thank you.</p> <p>25 A I -- my impression is based on seeing an</p>	<p style="text-align: right;">Page 137</p> <p>1 reviewed is that the components of talcum powder</p> <p>2 products include asbestos, include fibrous talc,</p> <p>3 include heavy metals, include fragrances.</p> <p>4 Let's get rid of the header -- the --</p> <p>5 the fragrances. Just the heavy metals, the</p> <p>6 asbestos, and the fibrous talc. My understanding is</p> <p>7 that those are in the same mines as the platy talc,</p> <p>8 which is the desired part of talc.</p> <p>9 To the degree that those are all part and</p> <p>10 parcel of the same product, they're not -- I</p> <p>11 wouldn't think of them as contaminants. I would</p> <p>12 think of them as just part of the product.</p> <p>13 And so to the degree that that product</p> <p>14 cannot be separated, I would be concerned that any</p> <p>15 talcum powder products have all of the above.</p> <p>16 I separated fragrance, because that's</p> <p>17 something that's added. That's not mined directly.</p> <p>18 But the other items, my understanding is that's part</p> <p>19 of the talc.</p> <p>20 Q You don't know one way or the other</p> <p>21 whether talcum powder products contain asbestos, do</p> <p>22 you?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A You're asking me to opine whether talcum</p> <p>25 powder products contain asbestos?</p>

35 (Pages 134 to 137)

Rebecca Smith-Bindman, M.D.

Page 138	Page 140
<p>1 Q (BY MR. ZELLERS) Yes.</p> <p>2 A Yes, I -- I feel very certain that talcum</p> <p>3 powder products, at least over many years, contained</p> <p>4 asbestos.</p> <p>5 Q Is that part of your opinion in this case?</p> <p>6 A Yes, it is.</p> <p>7 Q Is it your opinion in this case that</p> <p>8 talcum powder products contain trace amounts of</p> <p>9 heavy metals?</p> <p>10 A Yes, it is.</p> <p>11 Q Is it also part of your opinion in this</p> <p>12 case that talcum powder products contain different</p> <p>13 fragrance chemicals?</p> <p>14 A Yes, it is.</p> <p>15 Q Do you have any opinion as to how many</p> <p>16 fragrance chemicals are contained in talcum powder</p> <p>17 manufactured by a Johnson & Johnson company at any</p> <p>18 time?</p> <p>19 MS. O'DELL: Object to the form. With</p> <p>20 regard to "opinion."</p> <p>21 A I have seen long lists of chemicals and</p> <p>22 fragrances that are contained.</p> <p>23 I'm not familiar enough with -- with the</p> <p>24 testing that was done to understand how that's</p> <p>25 changed over time in a Johnson & Johnson product</p>	<p>1 manufactured by Johnson & Johnson?</p> <p>2 MS. O'DELL: Object to the form. to the</p> <p>3 form.</p> <p>4 A So unlike the question about heavy metals</p> <p>5 where it sort -- there are traces of heavy metals in</p> <p>6 other things to which we're exposed regularly, like</p> <p>7 water. We don't expect any concentrations of</p> <p>8 asbestos in products that we're exposed to.</p> <p>9 And so put in that context, while I'm not</p> <p>10 an expert in the mineralogy, the numbers that I have</p> <p>11 seen are tens of thousands to millions of fibers</p> <p>12 that might be in grams of product seem like an awful</p> <p>13 lot of units or dose of -- of asbestos or fibrous</p> <p>14 talc.</p> <p>15 MR. ZELLERS: Move to strike as</p> <p>16 nonresponsive.</p> <p>17 Q (BY MR. ZELLERS) You do not have personal</p> <p>18 knowledge as to any amounts or concentrations of</p> <p>19 asbestos in talcum powder manufactured by Johnson &</p> <p>20 Johnson --</p> <p>21 MS. O'DELL: Objection.</p> <p>22 Q (BY MR. ZELLERS) -- correct?</p> <p>23 MS. O'DELL: Objection, asked and</p> <p>24 answered.</p> <p>25 A I have seen several reports of Johnson &</p>
Page 139	Page 141
<p>1 versus other talcum powder products.</p> <p>2 Q (BY MR. ZELLERS) Do you have any opinion</p> <p>3 or knowledge as to the amount or concentration of</p> <p>4 particular fragrance chemicals that are contained in</p> <p>5 talcum powder manufactured by Johnson & Johnson?</p> <p>6 A I -- I do not.</p> <p>7 Q Do you have any opinion or knowledge as to</p> <p>8 the amount or concentration of trace chemicals</p> <p>9 -- strike that -- trace heavy metals that may be</p> <p>10 contained in talcum powder manufactured by Johnson &</p> <p>11 Johnson?</p> <p>12 A I have seen reports of the amounts that --</p> <p>13 you know, sort of in the ballpark of hundreds to</p> <p>14 thousands of parts per million.</p> <p>15 But I'm not an expert in understanding</p> <p>16 those numbers in comparison to the concentrations in</p> <p>17 other things that we're exposed to. They're much</p> <p>18 higher. They're orders of magnitudes higher, but</p> <p>19 I'm not an expert to understand how those different</p> <p>20 concentrations might be expected to have an</p> <p>21 influence on talc.</p> <p>22 Q The same question with respect to</p> <p>23 asbestos. Do you have any opinion or knowledge as</p> <p>24 to the amount or concentration of asbestos that you</p> <p>25 believe is contained in any talcum powder</p>	<p>1 Johnson products that have been tested for</p> <p>2 concentrations of asbestos or asbestiform talc that</p> <p>3 have concentrations shown kind of in ranges of a</p> <p>4 tenth of a percent or, as I mentioned, tens of</p> <p>5 thousands or mid -- millions of fibers.</p> <p>6 And those have been tested by -- by</p> <p>7 several different people, but coming up with units</p> <p>8 of dose within Johnson & Johnson talcum powder</p> <p>9 products.</p> <p>10 Q (BY MR. ZELLERS) You're not a geologist,</p> <p>11 correct?</p> <p>12 A I am not a geo --</p> <p>13 Q You're --</p> <p>14 A -- logist.</p> <p>15 Q -- not a mineralogist, correct?</p> <p>16 A I am not.</p> <p>17 Q You have reviewed some expert reports from</p> <p>18 Dr. Longo; is that right?</p> <p>19 A Among others, yes.</p> <p>20 Q You have reviewed some testing reports.</p> <p>21 Some purportedly show that there is asbestos present</p> <p>22 in talcum powder and some that show that there's not</p> <p>23 asbestos in talcum powder; is that right?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 A I have seen a lot of reports that have</p>

36 (Pages 138 to 141)

Rebecca Smith-Bindman, M.D.

Page 142	Page 144
<p>1 shown the presence of talcum powder containing</p> <p>2 asbestos and fibrous talc.</p> <p>3 You listed some of those, the Longo</p> <p>4 reports, a bunch of publications in the literature</p> <p>5 such as Blount's.</p> <p>6 I have seen some testing from Dr. Hopkins,</p> <p>7 from Imerys, from Cooke. I have also seen some</p> <p>8 negative reports.</p> <p>9 Q (BY MR. ZELLERS) The answer to my question</p> <p>10 is: Yes, you have seen testing that purportedly</p> <p>11 shows there to be some asbestos in the J&J</p> <p>12 manufactured talcum powder and you have seen reports</p> <p>13 that, you know, indicate there's not asbestos in the</p> <p>14 talcum powder; is that fair?</p> <p>15 A The way that you have described it makes</p> <p>16 it seem like I have seen comprehensive reports that</p> <p>17 have shown in totality there is asbestos and reports</p> <p>18 that have shown there's not. I haven't seen that.</p> <p>19 Q All right.</p> <p>20 A I have seen reports that have shown in</p> <p>21 totality there are. I have seen individual samples</p> <p>22 that have shown there's not asbestos in those</p> <p>23 individual samples.</p> <p>24 But I haven't seen a systematic report</p> <p>25 that have shown in, for example, a large number of</p>	<p>1 off the record for a moment.</p> <p>2 THE VIDEOGRAPHER: We're off the record at</p> <p>3 1:36 p.m.</p> <p>4 (A break was taken from 1:36 p.m. to</p> <p>5 1:37 p.m.)</p> <p>6 THE VIDEOGRAPHER: We are back on the</p> <p>7 record. The time is 1:37 p.m.</p> <p>8 Q (BY MR. ZELLERS) Dr. Smith-Bindman, you</p> <p>9 had recalled, I believe, the name of the fourth</p> <p>10 plaintiff lawyer that you met with?</p> <p>11 A Carmen Scott.</p> <p>12 Q I want to ask you some questions about the</p> <p>13 systematic review that you did. You have not</p> <p>14 published that, correct?</p> <p>15 A I have not.</p> <p>16 Q If at any point you do publish your</p> <p>17 systematic review, would you disclose that you are a</p> <p>18 paid expert for the Plaintiffs in the talcum powder</p> <p>19 litigation?</p> <p>20 A Yes, I would.</p> <p>21 Q You would expect any expert who is paid to</p> <p>22 perform a review or who has a study funded by</p> <p>23 Plaintiffs to make that disclosure, correct?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 A My understanding from my experience is</p>
Page 143	Page 145
<p>1 specimens, none had asbestos. I haven't seen that.</p> <p>2 Q You have seen, at least in large part, the</p> <p>3 information that's been provided to you by</p> <p>4 plaintiffs' attorneys; is that right?</p> <p>5 MS. O'DELL: Object to the form. to the</p> <p>6 form.</p> <p>7 A I think some of the public -- published</p> <p>8 literature was not provided by plaintiff attorneys</p> <p>9 and some has been, such as the Longo reports.</p> <p>10 MR. ZELLERS: All right.</p> <p>11 MS. O'DELL: Mike, we have been going</p> <p>12 about an hour and 30 minutes. And our lunch is</p> <p>13 here, so is this a good time.</p> <p>14 MR. ZELLERS: Sure --</p> <p>15 MS. O'DELL: -- for a break?</p> <p>16 MR. ZELLERS: -- of course.</p> <p>17 THE VIDEOGRAPHER: This marks the end of</p> <p>18 Disc 2. We are off the record at 12:37 p.m.</p> <p>19 (A break was taken from 12:37 p.m. to</p> <p>20 1:36 p.m.)</p> <p>21 THE VIDEOGRAPHER: We are back on the</p> <p>22 record. This marks the beginning of Disc No. 3 in</p> <p>23 the deposition of Dr. Rebecca Smith-Bindman. The</p> <p>24 time is 1:36 p.m.</p> <p>25 MR. ZELLERS: Dr. Smith-Bindman, let's go</p>	<p>1 that different journals require different</p> <p>2 disclosures. So if you're paid by someone, you</p> <p>3 typically would have to disclose, but the detail</p> <p>4 would -- would vary by journal.</p> <p>5 Q (BY MR. ZELLERS) What methodology or</p> <p>6 methodologies did you use to arrive at your opinion</p> <p>7 that regular use of talcum powder increases a</p> <p>8 woman's risk of developing invasive serous cancer by</p> <p>9 about 50 percent?</p> <p>10 A So I would say there were two parts. The</p> <p>11 first part is my systematic review of the published</p> <p>12 literature. I think I mentioned earlier that I have</p> <p>13 published several systematic reviews.</p> <p>14 And the mechanism of perform -- performing</p> <p>15 those systematic reviews are both ones that I have</p> <p>16 personally used and ones that I was involved in</p> <p>17 developing the methodology as part of my work on the</p> <p>18 Cochrane collaboration.</p> <p>19 So it involves doing a very standardized</p> <p>20 search, creating an approach for abstracting data,</p> <p>21 abstracting the data. An approach that I used for</p> <p>22 summarizing the data, which usually is looking at</p> <p>23 stratified results, results in sort of specific</p> <p>24 categories as opposed to broad categories.</p> <p>25 Statistically summarizing the results and showing</p>

37 (Pages 142 to 145)

Rebecca Smith-Bindman, M.D.

Page 146	Page 148
<p>1 them.</p> <p>2 So part of my conclusion was based on my</p> <p>3 own systematic review. And then part of my</p> <p>4 conclusion was based on my review of the published</p> <p>5 literature on the actual epidemiology data, as well</p> <p>6 as other considerations that went into consideration</p> <p>7 of the Bradford Hill criteria such as mechanistic</p> <p>8 data and any other requirements of Bradford Hill.</p> <p>9 Q Tell us step by step how you performed</p> <p>10 your systematic review or analysis. And now I'm</p> <p>11 referring to the meta-analysis or meta-analysis-like</p> <p>12 review that you did.</p> <p>13 A Okay. So I would just like to do a slight</p> <p>14 preamble to that, which is that the direction that</p> <p>15 my review took was partly informed by having read</p> <p>16 through a number of articles on the topic. So</p> <p>17 determining sort of where there was a gap, what was</p> <p>18 the most important area to focus on. So that sort</p> <p>19 of was the background.</p> <p>20 And then for the review, the literature</p> <p>21 search is the first step. So you want to broadly</p> <p>22 identify all relevant literature, published and</p> <p>23 unpublished, to include.</p> <p>24 And that includes searching on several</p> <p>25 databases -- PubMed was -- Medline were -- Embase,</p>	<p>1 through those and to review to make sure that they</p> <p>2 had primary data.</p> <p>3 So I was only interested in studies that</p> <p>4 had primary data, which meant that review articles</p> <p>5 or editorials or letters to the editors or opinion</p> <p>6 pieces were dropped from that list.</p> <p>7 So then I had data that were -- I had</p> <p>8 studies that had primary data, so that became my</p> <p>9 list of articles.</p> <p>10 And -- and then I created a data</p> <p>11 abstraction form for what variables I wanted to</p> <p>12 include. So some variables are the number of cases;</p> <p>13 the number of controls; the kind of study design</p> <p>14 whether it was a case-control study or another</p> <p>15 design.</p> <p>16 It included -- included the groups that I</p> <p>17 cared most about. So you mentioned serous cancer,</p> <p>18 so I included what kind of histologies they looked</p> <p>19 at.</p> <p>20 I included in my initial data form,</p> <p>21 variables that I ended up not using in my review</p> <p>22 because I didn't have enough data.</p> <p>23 So in my initial draft of variables that I</p> <p>24 might like to abstract was the relationship in pre</p> <p>25 versus postmenopausal women.</p>
Page 147	Page 149
<p>1 Scopus were -- were databases that I started my</p> <p>2 search.</p> <p>3 I included in the report some of the</p> <p>4 keywords I used, keywords including "ovarian cancer,</p> <p>5 talc, perineal powder, genital powder."</p> <p>6 So I generated a long list of articles</p> <p>7 that I retrieved and then reviewed the references</p> <p>8 for each of those articles, which usually doesn't</p> <p>9 identify a lot more articles, but usually identifies</p> <p>10 a few that I may have missed in my search, but that</p> <p>11 other people have found in their reviews or</p> <p>12 systematic reviews. So the first step was to</p> <p>13 identify the literature.</p> <p>14 Q What was the next step? And again, I'm</p> <p>15 focused on your methodology for the systematic</p> <p>16 review or analysis that you did, as reflected in</p> <p>17 your report?</p> <p>18 A So the second step is: Identified a large</p> <p>19 number of publications, but some of them may not</p> <p>20 have been particularly relevant.</p> <p>21 For example, they may have sounded in the</p> <p>22 title like they were primary data, but they may have</p> <p>23 actually only been review data.</p> <p>24 So Step 2 is to review the abstracts for</p> <p>25 all of those identified articles and then to go</p>	<p>1 But when I ended up reviewing articles,</p> <p>2 there just was not -- not enough data there to make</p> <p>3 sense of, so I created a data abstraction form.</p> <p>4 I then went one by one through the</p> <p>5 articles which I organized and abstracted the data</p> <p>6 that I had set out to do.</p> <p>7 And in the course of doing that, I would</p> <p>8 ensure that the participants that were described in</p> <p>9 those reports were, in fact, unique subjects.</p> <p>10 So within this field, just like many</p> <p>11 fields, people sometimes publish an individual</p> <p>12 patient in more than one study. And -- and you</p> <p>13 don't want to include that, if you can.</p> <p>14 So as part of my review was to determine</p> <p>15 how independent the patients were and to make a note</p> <p>16 if there was overlap.</p> <p>17 I also didn't mention some of the features</p> <p>18 that I abstracted. But it wasn't just the primary</p> <p>19 result, which was what was the adjusted odds ratio</p> <p>20 or risk ratio associated with exposure to talcum</p> <p>21 powder products, but it was also -- what I was most</p> <p>22 interested in is quantifying that exposure to a</p> <p>23 degree that had not been present in all the</p> <p>24 individual reviews that I had previously said. So I</p> <p>25 was interested primarily in abstracting data on</p>

38 (Pages 146 to 149)

Rebecca Smith-Bindman, M.D.

Page 150	Page 152
<p>1 regular exposure to talcum powder.</p> <p>2 So when I went through the articles, I</p> <p>3 noted whether -- what the point estimates were, but</p> <p>4 also whether they had information on all of the</p> <p>5 things that were in my database.</p> <p>6 I went through and abstracted data several</p> <p>7 times.</p> <p>8 Q Okay. Well, that's --</p> <p>9 A Oh.</p> <p>10 MS. O'DELL: She may not be done but --</p> <p>11 Q (BY MR. ZELLERS) Well, I understand. So</p> <p>12 I'm just trying to go through your methodology here.</p> <p>13 So after you abstracted the data and</p> <p>14 included it or put it on your data abstraction form</p> <p>15 for each study, what was the next step in your</p> <p>16 systematic review?</p> <p>17 MS. O'DELL: So just continue on, Doctor,</p> <p>18 what your process was.</p> <p>19 A Okay. Well -- so the next step was to</p> <p>20 decide which -- which of those papers might have</p> <p>21 been missing data.</p> <p>22 So once I abstracted the data, there were</p> <p>23 gaps almost certainly in the data. And so I -- I</p> <p>24 just wanted to emphasize -- I was starting to say</p> <p>25 this earlier -- that I -- I went back to the papers</p>	<p>1 Q That's what Dr. Hall did; is that right?</p> <p>2 A That is what Dr. Hall did. I should have</p> <p>3 a caveat there. We -- she absolutely lead that part</p> <p>4 of the analysis, but I reviewed every step of that</p> <p>5 very carefully.</p> <p>6 And there were several places that I --</p> <p>7 I -- I saw errors in some of the calculations that</p> <p>8 we went back and forth on to correct those</p> <p>9 calculation errors.</p> <p>10 Q Have you completed your methodology or the</p> <p>11 different steps in your methodology?</p> <p>12 MS. O'DELL: In terms of the</p> <p>13 meta-analysis?</p> <p>14 Q (BY MR. ZELLERS) Yes. In terms of the</p> <p>15 systematic review or meta-analysis that you did.</p> <p>16 A I believe I have highlighted all the</p> <p>17 steps.</p> <p>18 Q You tried or did correct any errors in</p> <p>19 calculations or numbers by Dr. Hall; is that right?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 A Yes, I did.</p> <p>22 Q (BY MR. ZELLERS) Did anyone else review</p> <p>23 your calculations and Dr. Hall's calculations?</p> <p>24 A No. Just the two of us.</p> <p>25 You said something, that I corrected some</p>
Page 151	Page 153
<p>1 and tried to sort of ensure that I was consistently</p> <p>2 pulling the data in my database requirement for</p> <p>3 every study.</p> <p>4 After I did that, the next step would be</p> <p>5 to combine the data statistically. And that would</p> <p>6 be to pro -- perform steps to figure out how the</p> <p>7 data can be -- could be combined.</p> <p>8 And that required looking at issues of</p> <p>9 consistency across the studies or heterogeneity and</p> <p>10 then to make sure that the sub analysis that I</p> <p>11 wanted to do -- the stratified analysis that I</p> <p>12 wanted to do could be done based on whether I had</p> <p>13 data for each of those studies in the stratified</p> <p>14 category.</p> <p>15 So as an example, I wanted to make sure</p> <p>16 that I -- I had whatever information was in the</p> <p>17 paper that could then go to the next step of</p> <p>18 analysis.</p> <p>19 And so that's when, actually, I reached</p> <p>20 out to a biostatistician with -- expert in the</p> <p>21 biostatistical aspect to do two things: To both</p> <p>22 double-check my numbers and ensure that the numbers</p> <p>23 that -- had been abstracted correctly and then to do</p> <p>24 the biostatistical analysis and generate the</p> <p>25 graphical representation of the data.</p>	<p>1 of her numbers. I -- she also corrected some of my</p> <p>2 numbers.</p> <p>3 It was a bi-directional two set of eyes on</p> <p>4 all of the analysis --</p> <p>5 Q I --</p> <p>6 A -- and abstractions.</p> <p>7 Q -- essentially what you did is you</p> <p>8 analyzed the studies. You abstracted data on each</p> <p>9 of the studies on your Data Abstraction Form,</p> <p>10 correct?</p> <p>11 A Yes.</p> <p>12 Q Have you produced your Data Abstraction</p> <p>13 Forms to us for review?</p> <p>14 A I -- I believe I have.</p> <p>15 Q All right. You have them available; is</p> <p>16 that right?</p> <p>17 A Yes.</p> <p>18 Q And this would be a form for each of the</p> <p>19 studies in which you went through and you abstracted</p> <p>20 data; is that right?</p> <p>21 A It's --</p> <p>22 MS. O'DELL: Object to the form. Sorry.</p> <p>23 Go ahead.</p> <p>24 A -- yeah, it's -- it's an electronic</p> <p>25 database. It's an Excel file.</p>

39 (Pages 150 to 153)

Rebecca Smith-Bindman, M.D.

Page 154	Page 156
<p>1 Q (BY MR. ZELLERS) But there would be a form 2 or an Excel sheet for each of the studies where you 3 abstracted the data; is that right? 4 MS. O'DELL: Object to the form. 5 A There's an Excel sheet with each study 6 listed as a separate line of data and many, many 7 rows -- columns for each -- it's not a physical 8 piece of paper and... 9 Q (BY MR. ZELLERS) But it's something that 10 could be printed out; is that right? 11 A Yes. 12 Q All right. Did you develop any type of 13 protocol setting forth the different steps that you 14 followed to do your systematic analysis that you 15 have told us about? 16 A The protocol that I followed for these 17 steps is a very well-established, well-published -- 18 including by myself from any prior reviews -- 19 protocols. 20 Q My question is: Did you write down 21 anywhere, the protocol that you followed for doing 22 this particular systematic review? 23 MS. O'DELL: Object to the form. 24 A I did not specifically write down for this 25 review that I would do a literature search or</p>	<p>1 times week or more as possible and that I would 2 focus on invasive serous cancer wherever possible. 3 And so if that -- if that's what you mean 4 by my "protocol," then yes, that was written down 5 ahead of time. 6 Q (BY MR. ZELLERS) I'm confused. Do you 7 define -- well -- and No. 1, did you produce that 8 protocol? 9 A So I have -- I have my notes and -- which 10 was part of the documents that you saw earlier 11 today. 12 Q The notes, you would describe as your 13 protocol or an outline of your methodology? 14 A Yes. 15 Q All right. We'll mark your notes, which 16 are your protocol, as Exhibit 21. 17 (Exhibit 21 was marked for identification 18 and is attached to the transcript.) 19 Q (BY MR. ZELLERS) And it's just the one 20 side sheet; is that right? 21 A I believe I provided other documents in 22 the datasheet that also has the notes of what group 23 I was focusing on in e-mails that I have sent you. 24 Q That would be other materials that you 25 have produced; is --</p>
Page 155	Page 157
<p>1 abstract data and record points and then do the 2 analysis. 3 Q (BY MR. ZELLERS) What you have done in 4 your systematic review is a subgroup analysis of 5 those studies that you thought should be included; 6 is that fair? 7 A I call it a stratified analysis rather 8 than a subgroup analysis. Usually a subgroup 9 analysis is usually used to describe only limiting 10 to certain groups of patients as opposed to some 11 questions. So I -- I'm not sure that there's a 12 distinction but... 13 Q Well, you -- whether we call it a subgroup 14 or whether we call it a stratified analysis, you 15 went through the studies to try to find the studies 16 that would give you information on women who were 17 regular users, as you defined "regular users," and 18 who developed invasive serous ovarian cancer, 19 correct? 20 MS. O'DELL: Object to the form. 21 A Yes, that's what I did. 22 When you asked about whether I have a 23 protocol written down, I have written that I was 24 going to abstract information about regular use of 25 talc powder products defined as closely as three</p>	<p>1 A That's -- 2 Q -- the right? 3 A -- correct. 4 Q To your knowledge, there's nothing that 5 you have not produced -- 6 A No. 7 Q -- relating -- hold -- 8 A Okay. 9 Q -- on. Let me finish. 10 There's nothing, to your knowledge, that 11 you have not produced relating to your analysis; is 12 that right? 13 A That's correct. 14 Q I was confused. I thought you stated a 15 moment ago that you defined "regular use" as the use 16 of talcum powder three times a week or more. 17 Is that your definition of "regular use"? 18 A I -- 19 MS. O'DELL: Object to the form. 20 A -- I describe the definition in my report 21 on page 32. And -- 22 Q (BY MR. ZELLERS) My question just is: Is 23 that the correct definition or did you use a 24 different definition of "regular use"? 25 MS. O'DELL: Object to the form. You may</p>

40 (Pages 154 to 157)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 158</p> <p>1 describe your --</p> <p>2 A So I -- I --</p> <p>3 MS. O'DELL: -- definition.</p> <p>4 A -- have listed how I have defined it. And</p> <p>5 it's a little bit more -- more nuanced than what you</p> <p>6 have just asked me to confirm.</p> <p>7 Q (BY MR. ZELLERS) What is your definition</p> <p>8 of "regular use" with respect to the systematic</p> <p>9 review and analysis that you did?</p> <p>10 A So I have written, Regular use was defined</p> <p>11 ideally as daily or at least more than three uses</p> <p>12 per week.</p> <p>13 Q More than three uses a week; is that</p> <p>14 right?</p> <p>15 A I -- I wasn't finished. May I finish?</p> <p>16 Q Sure.</p> <p>17 A "I also accepted studies that defined</p> <p>18 "use" as regular where the description made it clear</p> <p>19 that this was regular use.</p> <p>20 A study that reported regular use, but</p> <p>21 defined it as less -- as used less frequency --</p> <p>22 at -- use of less than as -- frequency were not</p> <p>23 included.</p> <p>24 Regular use was selected to differentiate</p> <p>25 occasional use, which may include one-time</p>	<p style="text-align: right;">Page 160</p> <p>1 A -- page --</p> <p>2 MS. O'DELL: -- go ahead.</p> <p>3 A -- 32.</p> <p>4 Q (BY MR. ZELLERS) You have defined "regular</p> <p>5 use" in your report on page 32; is that right?</p> <p>6 A Yes.</p> <p>7 Q What is Dr. Hall's field of expertise?</p> <p>8 A She is a biostatistician who is -- does a</p> <p>9 lot of summaries of systematic review.</p> <p>10 Q You are not a biostatistician; is that</p> <p>11 right?</p> <p>12 A I did a two-year post-graduate fellowship</p> <p>13 in the Department of Epidemiology and Biostatistics,</p> <p>14 have taken many courses in biostatistician --</p> <p>15 biostatistics, and have thought classes in biostatistics</p> <p>16 --</p> <p>17 Q Do you con --</p> <p>18 A -- statistics.</p> <p>19 Q -- do you consider yourself to be an</p> <p>20 expert biostatistician?</p> <p>21 A I consider myself an expert in</p> <p>22 biostatistics.</p> <p>23 Q And Dr. Hall is also an expert in</p> <p>24 biostatistics; is that right?</p> <p>25 A Yes.</p>
<p style="text-align: right;">Page 159</p> <p>1 infrequent use or used along a particular time of a</p> <p>2 woman's menstrual cycle from sustained use.</p> <p>3 Studies that ask participants a single</p> <p>4 question about every use of talc without further</p> <p>5 quantification of exposure were not included for the</p> <p>6 summary.</p> <p>7 For example, Perdue reported that 52 to</p> <p>8 57 percent of women ever using talc without further</p> <p>9 quantification was not included."</p> <p>10 THE COURT REPORTER: Please slow down.</p> <p>11 Q (BY MR. ZELLERS) Okay.</p> <p>12 A Yes.</p> <p>13 Q Doctor, I just wanted to know your</p> <p>14 definition of "regular use."</p> <p>15 A I -- I -- I have spent considerable time</p> <p>16 both writing my definition and applying it to --</p> <p>17 Q What --</p> <p>18 A -- the papers.</p> <p>19 Q -- what page --</p> <p>20 MS. O'DELL: Excuse me, sir. If you were</p> <p>21 asking for the page, she can direct you to the page</p> <p>22 --</p> <p>23 Q (BY MR. ZELLERS) What page --</p> <p>24 A So --</p> <p>25 MS. O'DELL: Doctor --</p>	<p style="text-align: right;">Page 161</p> <p>1 Q Do you know -- well, did you conduct your</p> <p>2 systematic review and analysis using the PRISMA</p> <p>3 standards?</p> <p>4 A Yes.</p> <p>5 Q And those are the preferred reporting</p> <p>6 items for systematic reviews and meta-analyses; is</p> <p>7 that right?</p> <p>8 A Yes.</p> <p>9 Q What materials did you provide to Dr. Hall</p> <p>10 to assist you with your review?</p> <p>11 A I provided her with the data abstraction</p> <p>12 table that had information about each of the</p> <p>13 included studies.</p> <p>14 Q The data abstraction table that you</p> <p>15 prepared; is that right?</p> <p>16 A Yes.</p> <p>17 Q What specifically did Dr. Hall do to</p> <p>18 assist you?</p> <p>19 A She did two things. She personally</p> <p>20 reabstracted data from all of the publications.</p> <p>21 Most of those publications she found on her own.</p> <p>22 But for a couple, she was not able to find them, and</p> <p>23 I provided electronic versions of them.</p> <p>24 And then she statistically combined and</p> <p>25 compared the study to assess for heterogeneity to</p>

41 (Pages 158 to 161)

Rebecca Smith-Bindman, M.D.

Page 162	Page 164
<p>1 calculate forest plots and summary-weighted 2 estimates. 3 Q What could Dr. Hall do with respect to 4 your analysis that you could not? 5 A I did not know how to use the software to 6 generate the graphs. And I thought that by the time 7 I learned how to use that software, it would be a 8 lot more efficient for her to generate them. 9 Q What did you do to check Dr. Hall's work 10 to make sure it was accurate? 11 A Dr. Hall sent me back my data abstraction 12 database where she had double-checked all of my 13 numbers and sent -- I think there were several data 14 points where she had questions about either whether 15 I abstracted the right number or put it in the right 16 category. 17 And of all of the items that she had 18 suggestions -- I think it was a small number -- I 19 went back to the original article to -- to confirm 20 or refute whether I agreed with her changes or not. 21 Sort of a way to -- by consensus to decide what the 22 right answer was. That was part of what I did. I 23 -- 24 Q How -- did you finish? 25 A -- no.</p>	<p>1 A I would not do it in that order. I -- I 2 generated the research questions first. 3 Q (BY MR. ZELLERS) You generated the 4 research questions after doing the initial 5 literature review you told us about this morning, 6 correct? 7 A I -- 8 MS. O'DELL: Object to the form. 9 A -- yes. 10 Q (BY MR. ZELLERS) All right. You 11 identified ten studies that discuss what you define 12 as "regular talc powder product use and risk of 13 ovarian cancer," and those are what you list on a 14 page 33 of your report; is that right? 15 A That's close to correct. I would include 16 in that another study, the Terry study, which is a 17 large study that pulls data from a bunch of other 18 component studies -- you can see on the top of 19 page 34 -- whether or not Terry was included or 20 excluded. The results were basically identical. 21 Q I'm just looking at your report. Your 22 report, on page 33, in Figure 2, you identify ten 23 studies that discuss what you define as "regular 24 talc powder product use and risk of ovarian cancer," 25 correct?</p>
Page 163	Page 165
<p>1 Q All right. Well, finish. 2 A She also generated -- she -- we went back 3 and forth. She had a bunch of questions. 4 But she also generated summary estimates. 5 And there were a bunch of categories that I asked 6 her to do. Some of those summary estimates, to me, 7 seemed like they didn't totally make essence. 8 So one analysis used seven studies and one 9 used nine, but it had the same final odds ratio out 10 to three digits. And it should have been the same 11 result perhaps, but not out to three digits. 12 So I went through those and sort of said: 13 Look, can you redouble-check this to make sure that 14 the weighting was correct? 15 And in one or two cases she came back and 16 said: No, the weighting was not correct. 17 So I rechecked every graph and every 18 number that she generated. 19 Q Ultimately, you identified -- let me 20 withdraw that. 21 You reviewed the studies; you did your 22 data abstraction; and you formulated your research 23 question or questions for the systematic review, 24 correct? 25 MS. O'DELL: Object to the form.</p>	<p>1 MS. O'DELL: Object to the form. 2 A So that -- that paragraph is continued on 3 page 34, the next page at the top which says, The 4 primary analysis of this excluded Terry, but the 5 results were nearly identical if Terry was included. 6 Q (BY MR. ZELLERS) You could have included 7 Terry as part of Figure 2, and that would have been 8 an 11th study; is that right? 9 A Yes, that's correct. 10 Q Why did you not include Terry in your 11 analysis and -- in Figure 2? 12 A Terry included, within its -- within her 13 assembled papers, other patients that are already 14 included in Figure 2. 15 And including Terry would have listed -- 16 would have weighted some patients more than once. 17 Q Is there, to your knowledge, any 18 duplication or overlap in the patients for the ten 19 studies that you list in Figure 2 on page 33 of your 20 report? 21 A To the degree that I could eliminate 22 overlap, I did. 23 Q Is there overlap in some of the patients 24 and some of the studies? 25 A I would have to look at it again to remind</p>

42 (Pages 162 to 165)

Rebecca Smith-Bindman, M.D.

Page 166	Page 168
<p>1 myself if there is any overlap. I -- I don't 2 believe there is. 3 And any overlap, I made every effort to 4 get rid of. I would have to look at those papers a 5 little bit more closely to remember if there was any 6 overlap. 7 I -- I know there was a lot of overlap if 8 I included Terry, which is why that was an important 9 exclusion. 10 Q How did you identify these ten studies 11 that you list in Figure 2? 12 A So I -- I did not identify those studies. 13 That was what -- Dr. Hall used the data that I 14 provided -- to identify which studies had the -- the 15 appropriate data to look at -- look at this. 16 Q How did Dr. Hall identify these ten 17 studies as being the ones to include in Figure 2? 18 A These were the studies that had data on 19 daily talc powder -- powder products. 20 Q You only used subsets of data from these 21 ten studies -- those ten studies listed in 22 Figure 2 -- to reach your conclusions, correct? 23 MS. O'DELL: Object to the form. 24 A I don't remember offhand if I used all of 25 the data from these studies or subsets of data from</p>	<p>1 A I -- I would not -- the individual studies 2 are shown with the confidence interval around those 3 point estimates. 4 One way to establish statistical 5 significance is -- is that statistically different 6 within an individual study than one. 7 But I don't believe that only two of these 8 show statistical significance as a group of studies. 9 So if you're asking if two don't overlap one, then I 10 would agree with you. If you're asking if these 11 together show statistical -- 12 Q (BY MR. ZELLERS) I'm going to ask you -- 13 MS. O'DELL: Excuse me. Sorry. Let her 14 finish. Sorry. 15 Q (BY MR. ZELLERS) Did you finish? 16 A I -- I'm trying to understand if you're 17 asking me if the original studies here show -- or 18 if -- just each line by itself. 19 Q If we go line by line for these ten 20 studies, only two of these ten studies demonstrate 21 statistical significance; is that right? 22 A Yes. 23 Q Yet you conclude by looking at all ten of 24 the studies that there is statistical significance; 25 is that right?</p>
Page 167	Page 169
<p>1 these studies to reach my conclusion. 2 There were only data from these ten 3 studies included in this figure, but I'm not sure if 4 I used all of the data from those studies or 5 subsets, as you asked. 6 Q (BY MR. ZELLERS) Would you agree that only 7 two of the ten studies in Figure 2 demonstrates 8 statistical significance? 9 A I would agree that taken altogether, these 10 studies show statistical significance. But I think 11 you're asking if they weren't taken together, if the 12 original studies were used, would those individual 13 studies show statistical significance? Is that what 14 you are asking? 15 Q No. You have listed out ten studies in 16 Figure 2; is that correct? 17 A Yes. 18 Q You are not aware whether you used all of 19 data from those studies for your systematic review 20 and analysis or subsets of the data, correct? 21 MS. O'DELL: Object to the form. 22 A Yes, that is correct. 23 Q (BY MR. ZELLERS) Would you agree that only 24 two of the ten studies in Figure 2 demonstrate 25 statistical significance?</p>	<p>1 A So the way you're asking the question 2 suggests that when you're combining studies in a 3 systematic review, you care about the initial sample 4 size of the question. 5 And so I conclude taken as a group of 6 studies, the individual sample size or power of the 7 individual associations is not sufficient to come up 8 with a narrow confidence interval. 9 And the width of the confidence interval 10 suggests that while the point estimate is greater 11 than one, the confidence interval overlaps one, 12 meaning you can't be sure if it's significantly 13 significant. 14 But the purpose of the systematic review 15 is to combine those studies together. So combining 16 them together gives a very powerful, positive 17 estimate that's very different than one. 18 Q Okay. 19 MR. ZELLERS: Move to strike as 20 nonresponsive. 21 Q (BY MR. ZELLERS) My question is: When you 22 looked at the ten studies together, you determined 23 that there was statistical significance; is that 24 right? 25 A Yes.</p>

43 (Pages 166 to 169)

Rebecca Smith-Bindman, M.D.

Page 170	Page 172
<p>1 Q How did you make that calculation? How</p> <p>2 did you calculate statistical significance from</p> <p>3 those ten studies?</p> <p>4 MS. O'DELL: Object to the form. I</p> <p>5 believe she has already answered that, but you may</p> <p>6 describe that again, Doctor.</p> <p>7 A So the software that was used, is that</p> <p>8 what you are asking?</p> <p>9 Q (BY MR. ZELLERS) I want to know how it is</p> <p>10 that you calculated that these ten studies -- eight</p> <p>11 of which did not demonstrate statistical</p> <p>12 significance when they were looked at together --</p> <p>13 were statistically significant?</p> <p>14 A So I need to provide you with just a</p> <p>15 little background on the field of systematic reviews</p> <p>16 to answer that question.</p> <p>17 Q All right. Well, try to be as direct as</p> <p>18 you can, because I have only got a certain amount of</p> <p>19 time.</p> <p>20 Are you able to answer the question?</p> <p>21 A Absolutely.</p> <p>22 Q Then please tell us how you calculated</p> <p>23 statistical significance for the RE model.</p> <p>24 A So we looked at adjusted odds ratios of</p> <p>25 each of the studies. We weighted them based on the</p>	<p>1 interval around the odds ratio for each of these ten</p> <p>2 studies?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 A So most of the studies, if not all of</p> <p>5 those, would have had published adjusted odds ratios</p> <p>6 in the original calculations.</p> <p>7 I believe one of the studies, the Gertig,</p> <p>8 was an adjusted risk ratio, not an odds ratio, which</p> <p>9 had a bit of back-and-forth discussion with the</p> <p>10 biostatistician.</p> <p>11 And we decided they were essentially</p> <p>12 equivalent. But the other ones would have been</p> <p>13 extracted from the initial studies.</p> <p>14 Q The confidence intervals for the ten</p> <p>15 studies on -- in Figure 2, page 33 of your report</p> <p>16 came from the studies themselves?</p> <p>17 A Yes.</p> <p>18 Q Were there any other selection criteria</p> <p>19 that you used to identify these ten studies, other</p> <p>20 than what you have testified to?</p> <p>21 A No.</p> <p>22 Q Of the 43 or so studies that had primary</p> <p>23 data, are these the only studies, other than Terry,</p> <p>24 that discuss regular use of talc?</p> <p>25 A So I am just looking for where my fullest</p>
Page 171	Page 173
<p>1 standard errors for each of them and calculated sort</p> <p>2 of an overlying association when basically the size</p> <p>3 of each study, the point estimate of each study were</p> <p>4 taken into consideration.</p> <p>5 So taking them altogether, it allows the</p> <p>6 summary estimate, if you look, to have a much</p> <p>7 narrower confidence interval than the individual</p> <p>8 study.</p> <p>9 So you use the weight of all the studies</p> <p>10 to combine the -- to give you a summary estimate.</p> <p>11 Q Where can I see the weighting and the</p> <p>12 calculation that you did to come up with the</p> <p>13 statistically significant number?</p> <p>14 A So the -- the name of the software we used</p> <p>15 was in Metafor package in R. "R" is a program.</p> <p>16 The data set that I provided to you of the</p> <p>17 extracted database, if you put those numbers -- if</p> <p>18 anyone puts those numbers in the Metafor package in</p> <p>19 R and instructs the software that you want to apply</p> <p>20 a -- linear mixed models to study that data set, you</p> <p>21 will get the exact same estimate that I got.</p> <p>22 Q And I will be able to see that from the</p> <p>23 documents that you have produced; is that right?</p> <p>24 A Absolutely.</p> <p>25 Q How did you calculate the confidence</p>	<p>1 of studies is in the report. I think it's pages 23</p> <p>2 and 24.</p> <p>3 The fullest of studies that I looked at</p> <p>4 included -- I think there were seven systematic</p> <p>5 reviews. So the systematic reviews did not</p> <p>6 contribute to the -- they were not eligible for --</p> <p>7 for -- for my own review because they didn't have</p> <p>8 primary data, and they would overlap.</p> <p>9 And the same thing with -- well, the</p> <p>10 Terry, we know about. So it was only the other</p> <p>11 studies that were eligible.</p> <p>12 Q These ten studies that you list in</p> <p>13 Figure 2 are the only studies that you reviewed that</p> <p>14 discuss regular use of talc, and that's why you</p> <p>15 included them here; is that right?</p> <p>16 MS. O'DELL: Object to the form.</p> <p>17 A No, that's -- that's not what I said.</p> <p>18 The systematic reviews I read and had</p> <p>19 data, many of them, on regular use of talc.</p> <p>20 But those were not included in my</p> <p>21 systematic review because that would have had</p> <p>22 overlap of -- of -- of patients. So they were not</p> <p>23 included because it overlapped patients.</p> <p>24 Q (BY MR. ZELLERS) Which studies were those</p> <p>25 seven?</p>

44 (Pages 170 to 173)

Rebecca Smith-Bindman, M.D.

Page 174	Page 176
<p>1 A So they're listed on page 23 as systematic 2 reviews. So Penninkilampi and Berge and the IARC 3 and Langseth and Huncharek and Gross and Harlow. 4 The reason Terry was pulled out from that 5 to possibly include was because Terry provided new 6 data points that weren't included in the component 7 studies, and so I wanted to make sure not to miss 8 those patients. 9 But these other systematic reviews were 10 all covered in the other primary studies that I 11 included. 12 Q Why did you not include the Cramer study, 13 1999? 14 A Cramer was one of the authors that had a 15 lot of patients that kept appearing in subsequent 16 publications. So he published the same patients 17 more than once, so -- 18 Q What analysis did you do to determine that 19 there was overlap between any of the patients 20 reported on by Cramer in 1999 and any of the ten 21 studies that you did choose to include? 22 A I went through -- I think there's a 23 separate page in my data fields that's just 24 attributed to the Cramer studies -- and wrote down 25 what years of enrollment the patients were.</p>	<p>1 Q (BY MR. ZELLERS) If you turn to -- 2 MS. O'DELL: I'll take that. 3 Q (BY MR. ZELLERS) -- turn to Table 2 on 4 page 353, the bottom table -- at the bottom of the 5 table. 6 A Yes. 7 Q Do you see data with respect to "frequency 8 of use per month"? 9 A Yes. 10 Q That's the type of study and the type of 11 information that you did include in your systematic 12 review; is that right? 13 A Yes. 14 Q Is it fair to say that as you sit here 15 today, you just don't remember why you did not 16 include Cramer 1999? 17 MS. O'DELL: Object to the form. 18 A In looking at this, you have convinced me 19 it's not because he doesn't have frequency of use, 20 because there is frequency of use in here. I do not 21 know why it didn't make it into the final database. 22 But I'm looking at my paper from Cramer 23 from 2016, "The Association Between Talc Use and 24 Ovarian Cancer, a Retrospective Case-control Study." 25 He describes -- this is on page 334 of</p>
Page 175	Page 177
<p>1 And to the best I could, I identified the 2 cohorts and then pulled them out to only identify 3 all patients once, which -- which is the reason I 4 hesitated to say there was no overlap. 5 But I did my best to only include every 6 patient once. And -- 7 Q Okay. 8 A -- Cramer got his own worksheet because it 9 was trickier to figure out. 10 Q Cramer 1999 you did not include in your 11 systematic review because you analyzed that paper 12 and the other studies and determined that there was 13 overlap; is that right? 14 A I didn't quite say that. I'm saying that 15 I was very careful not to include overlap patients. 16 I don't know why Cramer 1999 didn't make it into the 17 review. 18 Q I-- 19 A I don't know if he didn't have regular use 20 of talc or -- I -- I -- you know, I would have to -- 21 to figure out why it wasn't included. 22 Q Well, take a look at the Cramer 1999 23 paper, which we'll mark as Exhibit 22. 24 (Exhibit 22 was marked for identification 25 and is attached to the transcript.)</p>	<p>1 that other article -- that data came from three 2 enrollment phases. 3 And my notes on the side say "minus Cramer 4 '99," suggesting -- I don't mind showing you my 5 notes -- showing that there's overlap with Cramer 6 '99 -- 7 Q Okay. 8 A -- so. 9 Q You -- do you believe that the reason you 10 did not include Cramer 1999 is because there was 11 overlap with the patients included in Cramer 2016 or 12 you're not sure? 13 A Yes. 14 MS. O'DELL: Object to the form. 15 Q (BY MR. ZELLERS) Which one is it? 16 MS. O'DELL: Object to the form. 17 A I -- I do not know why it wasn't included, 18 but I believe there was overlap with 2016, is why it 19 was not included. 20 Q (BY MR. ZELLERS) You also did not include 21 Rosenblatt 2011 in your systematic review; is that 22 right? 23 A Rosenblatt was included in the review. 24 But on much -- it looks like it didn't make it into 25 the final graph or the final group of ten.</p>

45 (Pages 174 to 177)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 178</p> <p>1 Q Why did it not make it into the final 2 graph or group of ten? 3 A So I don't -- let me just say I don't 4 remember why Rosenblatt was not included. 5 I specifically asked the biostatistician 6 to do the analysis with and without Rosenblatt, and 7 I believe the reason was -- I believe is that -- the 8 quality of Rosenblatt seems very poor, and I can't 9 remember why. 10 But I asked her to do the analysis with 11 and without Rosenblatt. I asked her to do, I think, 12 four different analyses with and without Terry, with 13 and without Rosenblatt. 14 My recollection is it had no impact. But 15 I do not remember why I asked her with the quality 16 issue -- I would have to go back to my database to 17 remember why I asked her to do it both ways. 18 Q Rosenblatt contained information over -- 19 or strike that -- including a lifetime number of 20 applications and included information on more than 21 10,000 lifetime applications, correct? 22 A Yes. 23 Q All right. 24 A Well, I -- I'm -- I'm looking for it. 25 Yeah, I'm guessing that --</p>	<p style="text-align: right;">Page 180</p> <p>1 Q -- the difference in result? 2 A It -- it had no impact on the overall -- 3 Q Was -- 4 A -- results. 5 Q -- it exactly the same? 6 A It was within a decimal fraction of a 7 percent the same. 8 Q Can you tell us what the result was with 9 Rosenblatt included? 10 A It was the same with and without 11 Rosenblatt included -- 12 Q Is -- 13 A -- within a hundredth of a percent. 14 Q Did you produce that calculation for us? 15 A Within the files that I shared, it is 16 included in the forest plot tables that Dr. Hall 17 generated. 18 Q Go to Figure 2, if you will, in your 19 report, page 33. Do you have that? 20 MS. O'DELL: If you need to see the -- the 21 data that you produced, Doctor, the Excel 22 spreadsheets -- 23 A Oh, that would be great. 24 MS. O'DELL: -- okay. And I -- I'm going 25 to hand you my computer. But it's --</p>
<p style="text-align: right;">Page 179</p> <p>1 Q Here is a -- 2 MS. O'DELL: Don't -- don't. Excuse me -- 3 yeah, don't guess. Just if you know. 4 A -- I -- 5 Q (BY MR. ZELLERS) Exhibit 23 is Rosenblatt. 6 A I have got the paper. 7 MS. O'DELL: Yeah. Feel free to take a 8 moment. And if you need your original spreadsheets 9 to answer any of these detailed questions, then we 10 can pull those out for you -- 11 A Okay. 12 MS. O'DELL: -- if counsel does not have a 13 copy for you. 14 Q (BY MR. ZELLERS) Just for the record, 15 Exhibit 23 is Rosenblatt. 16 (Exhibit 23 was marked for identification 17 and is attached to the transcript.) 18 Q (BY MR. ZELLERS) As you sit here, do you 19 know what the difference in results were if 20 Rosenblatt was included in your systematic review or 21 not? 22 A I -- I do. 23 MS. O'DELL: Object to the form. 24 Q (BY MR. ZELLERS) Okay. What is -- 25 A I do.</p>	<p style="text-align: right;">Page 181</p> <p>1 A Can I -- 2 MS. O'DELL: -- it's the data -- 3 A -- this is what I shared with you. 4 MS. O'DELL: -- and that's what she is 5 discussing. 6 Q (BY MR. ZELLERS) Yeah. I have a question 7 pending. If you can answer my -- if you need to 8 look at your counsel's computer to answer my 9 question, you can. 10 But my question is: Will you look at 11 Figure 2 on page 33 of your report. 12 MS. O'DELL: Just hang on. Just -- what 13 I'm showing the doctor is data that -- the tables 14 that she has been discussing, but you have not 15 provided to her, which would be the fair way to 16 examine here on them. 17 But this is the -- the information that 18 was produced to Defendants for purposes of 19 Dr. Smith-Bindman's, you know, deposition. So if 20 you need that, just -- you may refer to it. 21 Q (BY MR. ZELLERS) Are you ready, 22 Dr. Smith-Bindman? 23 A I'm close to ready, but not quite. 24 Q I -- I'm not sure what you are doing. 25 MS. O'DELL: Well, she is looking at the</p>

46 (Pages 178 to 181)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 182</p> <p>1 calculation that you were just asking her about. 2 Q (BY MR. ZELLERS) I have finished those 3 questions. She has answered those questions. I'm 4 asking a new question. Or I would like to. 5 A Okay. Thank you. 6 MS. O'DELL: You're welcome. If you need 7 to see any of the tables -- 8 A Okay. 9 MS. O'DELL: -- Doctor, I have all that 10 has been produced right here. 11 A Fantastic. 12 Q (BY MR. ZELLERS) Okay. 13 Dr. Smith-Bindman -- Bindman, looking at Figure 2, 14 looking at the confidence intervals that you have 15 listed for each of those ten studies, are you aware 16 that not one of those confidence intervals for any 17 of the ten studies are actually listed in or come 18 from the study publications? 19 MS. O'DELL: Object to the form. 20 A I am not aware of that. 21 Q (BY MR. ZELLERS) In fact, did you 22 recalculate the confidence interval for each of 23 these studies? 24 A The confidence intervals and the point 25 estimate are adjusted confidence intervals and odds</p>	<p style="text-align: right;">Page 184</p> <p>1 (Exhibit 24 was marked for identification 2 and is attached to the transcript.) 3 Q (BY MR. ZELLERS) Is this another e-mail 4 exchange between you and Dr. Hall? Is that yes? 5 A I'm so sorry. I didn't hear your 6 question. 7 Q Sure. My question is: Is this an e-mail 8 exchange between you and Dr. Hall? 9 A Yes. 10 Q If you look at the e-mail at the bottom of 11 the second-to-last page, Dr. Hall writes you on 12 Monday, September 24, 2018, at 11:42, and tells you 13 that she is encountering obstacles; is that right? 14 And I'm sorry. It's the third-to-last 15 page is where that e-mail starts. 16 A I see what you are saying. She has a note 17 at the bottom of the page. 18 Q She tells you she's encountering 19 obstacles? 20 A Yes. 21 Q She asks you a number of questions? 22 A Yes. 23 Q No. 1 is that there's missing proportion 24 information and the data is missing. 25 If you go down to 1B, she says, Where the</p>
<p style="text-align: right;">Page 183</p> <p>1 ratios, so you -- you can't recalculate them from 2 the data in the paper. 3 Q My -- my question is: Who calculated 4 these confidence intervals that appear in Figure 2? 5 Did you calculate those confidence intervals? 6 A To the best of my knowledge, these 7 confidence intervals came from the primary 8 publications. 9 Q And -- and I will represent to you that I 10 have looked at all of the primary publications and 11 the confidence intervals that you have listed in 12 Figure 2. None of those confidence intervals come 13 from the publication. 14 So do you have any idea as to how these 15 confidence intervals were calculated? 16 MS. O'DELL: If there's -- 17 A You would have to show me -- 18 MS. O'DELL: Yes. 19 A -- those -- those disagreements for me to 20 -- 21 Q (BY MR. ZELLERS) Well, let's -- 22 A -- to know what we're looking at. 23 Q -- let's -- I'll get to that in just a 24 second. Let me show you a couple of documents. 25 Deposition Exhibit 24.</p>	<p style="text-align: right;">Page 185</p> <p>1 raw numbers are not available, I would do my best to 2 estimate unless you have access to them and can send 3 them to me. 4 How did you respond to that question? 5 A Can't we see what my answers were? 6 Q Sure. Where are your answers? If you, in 7 any of the documents that have been produced, can 8 show us how you answered these questions, that would 9 be helpful. 10 MS. O'DELL: Object to the form. 11 A I would like to just clarify something in 12 her request, which is she is not asking me in this 13 case for an estimate of the odds ratios or the 14 confidence intervals, even although though it seems 15 like she is. 16 What she is asking for is an estimate of 17 the sample size in terms of the N of cases and N of 18 controls that can be used for weighting those 19 studies in generating the summary estimate. 20 So that's where she's trying to fill in 21 the blanks, not for the odds ratios or confidence 22 intervals, but to calculate -- calculate -- 23 calculate how -- how much weight it should be in the 24 summary statistic. 25 Q (BY MR. ZELLERS) How did you respond to</p>

47 (Pages 182 to 185)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 186</p> <p>1 her first question where she advised you that there 2 was missing proportion information and her proposal 3 that "where the raw numbers are not available, I'll 4 do my best to estimate, unless you have access to 5 them and can send them to me"? 6 MS. O'DELL: Object to the form; asked and 7 answered. 8 A I did not have, other than going to the 9 papers, any additional information to supplement. 10 Q (BY MR. ZELLERS) Okay. No. 2 -- 11 MS. O'DELL: Are you finished, Doctor? 12 A Say it again. 13 MS. O'DELL: Are you finished? 14 A No. 15 MS. O'DELL: Okay. 16 A And so, again, she's not asking me about 17 the abstraction. She's asking me if a study 18 reported, for example, that there were a hundred 19 patients with serous carcinoma or if there were 20 150 patients altogether, it reported the odds ratios 21 for serous carcinoma, but may not have specified in 22 the table how many cases of serous carcinoma there 23 were, could she estimate that proportion when we had 24 the point estimate we needed. 25 We had the odds ratio we needed, but she</p>	<p style="text-align: right;">Page 188</p> <p>1 MS. O'DELL: Object to the form. 2 A We discussed this at length, and she ended 3 up going with Option 3, using relative risk as an 4 underestimation of the odds ratios, but 5 approximately equal because of the rareness of the 6 disease. 7 Q (BY MR. ZELLERS) So she adopted, at your 8 suggestion, the option that she states, 9 understanding that relative risk may considerably 10 underestimate odds ratios; is that right? 11 A Yes, it is. 12 Q And you advised her -- for No. 3, how did 13 you advise her when she told you that she was unable 14 to calculate the true -- or truly estimate for any 15 talc use and suggested that you consider pooling the 16 results from rarely, monthly, weekly, and daily? 17 MS. O'DELL: Object to the form. Are you 18 talking about No. 3? It's not clear. 19 A So the option that we did for that choice 20 is actually neither Option 1 or Option 2. 21 The focus of the review that she completed 22 was, in fact, on daily talc use. It's not different 23 than she suggested. 24 But she used the numbers that were 25 incorrectly categorized as any talc use instead to</p>
<p style="text-align: right;">Page 187</p> <p>1 needed to know how many serous cancers there were to 2 weight it. 3 And I would have told her, when the raw 4 numbers for those missing proportions were not 5 available, to do her best to estimate those. 6 Q (BY MR. ZELLERS) Did you respond to this 7 e-mail? 8 A I sent you all of the documents that I had 9 for our correspondence. 10 Q Okay. 11 A I certainly could look again to see if I 12 have an answer to this. Or it could be that we 13 discussed the answers on the telephone. 14 Q No. 2 -- 15 A Let me just see if we have -- if it says. 16 I think we spoke on the telephone. 17 Q Do you have any notes of that telephone 18 conversation? 19 A No, I don't. 20 Q All right. No. 2, when she told you that 21 she was unable to calculate the associated 22 95 percent confidence intervals without the 23 variants, which is not reported and she gave you 24 three options, which option did you tell her to 25 follow, if any?</p>	<p style="text-align: right;">Page 189</p> <p>1 represent daily talc use, so that -- that data point 2 was moved for the daily talc use category. 3 Q Let me show you the Chang paper. This is 4 one of the papers that you cite both in Figure 2 and 5 again on Figure 3; is that right? 6 A Yes. 7 Q All right. Here's the Chang paper which 8 we have marked as Exhibit 25. 9 A Oh. 10 (Exhibit 25 was marked for identification 11 and is attached to the transcript.) 12 Q (BY MR. ZELLERS) Do you have that in front 13 of you? 14 A I do. 15 Q Okay. Show us -- you see in Figure 2, 16 that Chang is listed twice, and it has a confidence 17 interval of .51 to 1.39. 18 Do you see that? 19 A You said it's listed twice? 20 Q I'm sorry. It was -- it's listed in 21 Figure 2 and then you list it again in Figure 3; is 22 that right? 23 A Yes. 24 Q All right. The first question is: Where 25 in the Chang publication do you get a confidence</p>

48 (Pages 186 to 189)

Rebecca Smith-Bindman, M.D.

Page 190	Page 192
<p>1 interval of .51 to 1.39?</p> <p>2 A Hum? So the point estimate that I</p> <p>3 think -- I need to look at the paper a little more</p> <p>4 closely.</p> <p>5 So the number I see in this paper is</p> <p>6 instead of being .51 to 1.39 is .61 to 1.49 is about</p> <p>7 ten points higher.</p> <p>8 Q All right. You don't know where, for</p> <p>9 Figure 2, the confidence interval of .51 to 1.39</p> <p>10 came from, correct?</p> <p>11 A I -- I do not. It's so close to the</p> <p>12 publication -- the publication that I'm not sure if</p> <p>13 it reflects a data abstraction error or if it was --</p> <p>14 I think that's probably what it -- what it does, but</p> <p>15 I'm not sure.</p> <p>16 Q The Chang paper involved 450 patients with</p> <p>17 borderline and invasive ovarian carcinoma; is that</p> <p>18 right?</p> <p>19 A Say it one more time for me.</p> <p>20 Q Sure. The Chang paper --</p> <p>21 A Yeah.</p> <p>22 Q -- Exhibit 25, involved a total of</p> <p>23 450 patients with borderline and invasive ovarian</p> <p>24 carcinoma; is that right?</p> <p>25 A Yes.</p>	<p>1 notes here, but I believe what I did for Chang is</p> <p>2 that Chang's numbers are included in the Terry</p> <p>3 report where she used the data that were published,</p> <p>4 as well as the supplemental data that were provided</p> <p>5 by Chang.</p> <p>6 And within the supplemental data, Terry</p> <p>7 did a stratified analysis that provided additional</p> <p>8 information on serous cancer that was not actually</p> <p>9 in the original Chang report.</p> <p>10 And those are the data that made it into</p> <p>11 what is under Chang in this systematic review.</p> <p>12 Q (BY MR. ZELLERS) Okay.</p> <p>13 A So they're data from Chang's work and</p> <p>14 following Chang's methods. They happen not to be</p> <p>15 published in Chang's original report, but rather</p> <p>16 included in the Terry report from -- from 2013.</p> <p>17 And Terry -- the paper that I am talking</p> <p>18 about for Terry is genital powder use and risk of</p> <p>19 ovarian cancer, a pooled analysis of 8,500 cases and</p> <p>20 ninety-eight hundred fifty-nine controls.</p> <p>21 And then within that describes within the</p> <p>22 methods, getting extra data for studies describing</p> <p>23 the regular use and then breaking down the results</p> <p>24 into whether or not it was invasive borderline,</p> <p>25 invasive serous, and so forth --</p>
Page 191	Page 193
<p>1 Q You used or Dr. Hall used, in your</p> <p>2 analysis, only 41 of those 450 patients because</p> <p>3 those are the only ones that had greater than</p> <p>4 25 times of use per month, correct?</p> <p>5 A So I would need to look at my datasheet to</p> <p>6 know how many made it into the analysis, but I</p> <p>7 believe you're correct, that there were</p> <p>8 approximately 10 percent that were frequent users.</p> <p>9 Q How did you determine, just looking at the</p> <p>10 Chang paper, how many of those 41 had invasive</p> <p>11 serous ovarian cancer?</p> <p>12 MS. O'DELL: If you need to look at your</p> <p>13 datasheets --</p> <p>14 A Please.</p> <p>15 MS. O'DELL: Which --</p> <p>16 A That would be great.</p> <p>17 MS. O'DELL: -- which data -- tell -- data</p> <p>18 summary, is that what --</p> <p>19 A Yeah --</p> <p>20 MS. O'DELL: -- you are --</p> <p>21 A -- that should be it.</p> <p>22 MS. O'DELL: Okay. This is both --</p> <p>23 both -- both of the spreadsheets are there, so just</p> <p>24 --</p> <p>25 A Okay. So I don't have all of my detailed</p>	<p>1 Q So --</p> <p>2 A -- so that's where those numbers came</p> <p>3 from.</p> <p>4 Q You believe that if I looked at the Terry</p> <p>5 paper, I would be able to tell of these 41 cases</p> <p>6 that have greater than 25 uses per month, which of</p> <p>7 those cases involved invasive serous ovarian cancer,</p> <p>8 correct?</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 A I believe the -- I believe the number of</p> <p>11 cases is specified in the Terry paper that I would</p> <p>12 have to look at to find that -- that number.</p> <p>13 Q (BY MR. ZELLERS) All right. Let me ask</p> <p>14 you a few questions.</p> <p>15 A Yes.</p> <p>16 Q In the Chang paper --</p> <p>17 A Yes.</p> <p>18 Q -- the authors do not define "regular use"</p> <p>19 as daily, do they?</p> <p>20 A What Chang says in the original</p> <p>21 publication is questions about regular talc use and</p> <p>22 type of talc use, as well as duration and frequency</p> <p>23 could be derived or included; dusting or powdering</p> <p>24 behavior considered improved regular application of</p> <p>25 talc to the perineum after showering or bathing and</p>

49 (Pages 190 to 193)

Rebecca Smith-Bindman, M.D.

Page 194	Page 196
<p>1 dusting.</p> <p>2 And then that was categorized, I believe</p> <p>3 by Terry, as regular use when she got supplemental</p> <p>4 data.</p> <p>5 Q Okay. In the Chang paper, the authors do</p> <p>6 not define "regular use" as daily use, correct?</p> <p>7 MS. O'DELL: Object to the form; asked and</p> <p>8 answered.</p> <p>9 A The Chang paper explicitly says "regular</p> <p>10 use." In the original publication, they don't</p> <p>11 define it.</p> <p>12 Q (BY MR. ZELLERS) They do not include</p> <p>13 information in the Chang paper about how many times</p> <p>14 per week women used talcum powder, correct?</p> <p>15 MS. O'DELL: Object to the form.</p> <p>16 A In -- in Table 2 of Chang, they define it</p> <p>17 as less than ten, ten to 25, or greater than 25</p> <p>18 times per week.</p> <p>19 Q (BY MR. ZELLERS) Where do you see that?</p> <p>20 A In Chang?</p> <p>21 Q Yes. I'm looking at the same table, and I</p> <p>22 think it's per month.</p> <p>23 A Per month.</p> <p>24 Q Okay. And that's the only data that's</p> <p>25 provided with respect to use is the number of</p>	<p>1 of invasive besides just serous.</p> <p>2 Q Do you know that?</p> <p>3 A I -- I don't think they specify what's</p> <p>4 included in that. I have to add up the total to see</p> <p>5 if they are overlapping or not overlapping.</p> <p>6 Could you add -- could you add that for</p> <p>7 me? Actually, the total should be -- they're</p> <p>8 overlapping. 360, 460. Yeah, they're overlapping.</p> <p>9 Yeah.</p> <p>10 Q What do you mean, "they're overlapping"?</p> <p>11 A Invasive and borderline should add up to</p> <p>12 the total.</p> <p>13 And then serous mucin -- mucinous and</p> <p>14 endometrioid should add up to the total, except to</p> <p>15 the degree that they are missing information.</p> <p>16 Q Looking at the questions that Dr. Hall</p> <p>17 asked you --</p> <p>18 A Yes.</p> <p>19 Q -- in Exhibit 24, you would agree that</p> <p>20 there were number of assumptions that you and she</p> <p>21 made in order to complete your systematic review; is</p> <p>22 that right?</p> <p>23 A Absolutely.</p> <p>24 Q Is there anywhere that you have written</p> <p>25 down, you know, what the assumptions were that you</p>
Page 195	Page 197
<p>1 monthly applications, correct?</p> <p>2 A Yes.</p> <p>3 Q The authors of Chang did not arrive at a</p> <p>4 specific odds ratio for serous invasive cancer based</p> <p>5 on frequency of use, correct?</p> <p>6 A The Chang data was used by Terry to</p> <p>7 calculate frequency of use for serous and invasive</p> <p>8 by supplementing the original data that they had</p> <p>9 from additional data from Chang as a participant in</p> <p>10 the OCAC consortium.</p> <p>11 So additional data from that study was</p> <p>12 shared with Terry, which is what we used in our</p> <p>13 analysis.</p> <p>14 Q If we look at Chang in Table 3, they</p> <p>15 describe a histologic type of invasive; is that</p> <p>16 right, in Table 3, page 2399?</p> <p>17 A Yes.</p> <p>18 Q They also describe serous; is that right?</p> <p>19 A Yes.</p> <p>20 Q In the Chang data, what's the difference</p> <p>21 between invasive and serous?</p> <p>22 A I'm -- I'm sorry. In lot -- in Table 3</p> <p>23 you're asking what those different entries mean?</p> <p>24 Q Yes.</p> <p>25 A "Invasive" presumably includes other types</p>	<p>1 and Dr. Hall arrived at, at least in part in</p> <p>2 response to her questions?</p> <p>3 A So for some of the issues, it took me</p> <p>4 quite a bit of remembering to remember that we used</p> <p>5 some of the extracted data from more than one</p> <p>6 source.</p> <p>7 We have notes in our data form of what the</p> <p>8 source of the data was, so it would say in some of</p> <p>9 the data I said -- under Chang, it would say "in a</p> <p>10 column from Terry."</p> <p>11 Q My question --</p> <p>12 A So that -- that -- so to answer the</p> <p>13 assumption of where the data came from, it's in my</p> <p>14 data spreadsheet. I just -- I just didn't remember</p> <p>15 that we pulled data.</p> <p>16 Q My -- my question is a little different I</p> <p>17 --</p> <p>18 A Okay.</p> <p>19 Q -- think. In terms of all of the</p> <p>20 questions that Dr. Hall asked you and all of the</p> <p>21 assumptions that would need to be made so that</p> <p>22 estimates could be arrived at, do you have either</p> <p>23 your protocol or a listing of the assumptions that</p> <p>24 were made by you and by Dr. Hall in -- at least in</p> <p>25 part in response to the question she raised?</p>

50 (Pages 194 to 197)

Rebecca Smith-Bindman, M.D.

Page 198	Page 200
<p>1 MS. O'DELL: Objection, asked and</p> <p>2 answered. Respond.</p> <p>3 A I am under the impression that they're</p> <p>4 documented within our e-mail exchanges, but I do not</p> <p>5 have a protocol with each of these decisions that</p> <p>6 are laid out.</p> <p>7 Q (BY MR. ZELLERS) I -- my best source would</p> <p>8 be the e-mail exchanges that you had with Dr. Hall,</p> <p>9 correct?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 Q (BY MR. ZELLERS) Is that right?</p> <p>12 A Yes.</p> <p>13 Q Okay. Once you did your ten studies that</p> <p>14 are in Figure 2 -- and those were just the --</p> <p>15 the studies that you chose to include, as you have</p> <p>16 told us, showing odds of ovarian cancer associated</p> <p>17 with regular use of talcum powder -- you further</p> <p>18 refined the studies or narrowed down the studies to</p> <p>19 four which you state plot or who the odds of ovarian</p> <p>20 cancer associated with regular use of talcum powder</p> <p>21 and invasive serous cancer; is that right?</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 A With the caveat that when -- when I laid</p> <p>24 out our stratified analysis on page 32, it says, My</p> <p>25 review focused on invasive serous cancer where</p>	<p>1 confidence interval for the -- let's say the Chang</p> <p>2 data that you list in Figure 3?</p> <p>3 A I'm going to have to look into the exact</p> <p>4 calculation of the confidence interval.</p> <p>5 The question that you asked me about Chang</p> <p>6 for the first table is very close to the one that's</p> <p>7 published -- so close -- that I'm not sure how it</p> <p>8 would be different.</p> <p>9 I don't -- I thought these were abstracted</p> <p>10 from the paper. And I would have to go back and</p> <p>11 talk to Dr. Hall about how they were calculated.</p> <p>12 I thought they were calculated, but I -- I</p> <p>13 may be -- I may be wrong. They may have been in</p> <p>14 some way reestimated.</p> <p>15 So again, similar with this, these numbers</p> <p>16 are close to the ones that are in this paper, but</p> <p>17 are slightly off, and I'm not sure why.</p> <p>18 So I would have to go back to the data</p> <p>19 that I abstracted and then the data that she sent me</p> <p>20 back for the final tables to see why they were</p> <p>21 different.</p> <p>22 Q Okay.</p> <p>23 A But they're -- they're different to a --</p> <p>24 such a slight degree that -- and I'm not really sure</p> <p>25 where that difference came from.</p>
Page 199	Page 201
<p>1 possible, but also included all invasive cancer.</p> <p>2 Q (BY MR. ZELLERS) What did you do to get</p> <p>3 from the ten studies that you list in Figure 2 to</p> <p>4 the four studies that you list in Figure 3?</p> <p>5 A Figure 2 is ovarian cancer with regular</p> <p>6 use, and Figure 3 is invasive serous cancer.</p> <p>7 If there was not invasive serous but there</p> <p>8 was just invasive, they also might be in this. I</p> <p>9 would have to review these four studies to know if</p> <p>10 it was invasive or invasive serous.</p> <p>11 Q Do you know, as you sit here, what you did</p> <p>12 to go from the ten studies in Figure 2 to the four</p> <p>13 studies in Figure 3?</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 A In the data set that I sent to you and</p> <p>16 sent to Dr. Hall, they would -- there were different</p> <p>17 sets of complete data. And the Figure 3 had data</p> <p>18 for invasive or invasive serous cancer; whereas,</p> <p>19 Figure 2 had -- included invasive and noninvasive.</p> <p>20 So it would just be where there were data</p> <p>21 available in the data worksheet. I -- I was not</p> <p>22 involved in making the selection to go from one to</p> <p>23 the other. It was just where there were data that</p> <p>24 were abstracted from the papers.</p> <p>25 Q (BY MR. ZELLERS) Where did you get the</p>	<p>1 Q Were there any other analyses that you or</p> <p>2 Dr. Hall con -- conducted that are not included in</p> <p>3 your report?</p> <p>4 A I had asked Dr. Hall, I believe, to look</p> <p>5 at -- at several analyses that are all in the data</p> <p>6 that I shared with you.</p> <p>7 The sensitivity analysis for Terry and the</p> <p>8 sensitivity analysis for the Rosen [sic] study are</p> <p>9 in the data I sent you, but are not summarized in</p> <p>10 the report.</p> <p>11 MS. O'DELL: And by "the data," you're</p> <p>12 talking about the spreadsheets --</p> <p>13 A Yes.</p> <p>14 MS. O'DELL: -- that you provided?</p> <p>15 A Yes. There -- there are more analyses</p> <p>16 that were done that you haven't seen. But they --</p> <p>17 they were analysis for four analyses.</p> <p>18 I just see two here. So I -- there were</p> <p>19 two others. I think it was including Terry and</p> <p>20 including Rosenblatt, I think, are the other two.</p> <p>21 But you have all of the -- there were no</p> <p>22 other analyses except those four that she completed.</p> <p>23 MS. O'DELL: Excuse me, Mike. I'm sorry.</p> <p>24 We're right at 3:00 p.m. When you get to a stopping</p> <p>25 point, can we take a break?</p>

51 (Pages 198 to 201)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 202</p> <p>1 MR. ZELLERS: All right. Let's stop. 2 We're stopping for the day; is that right? 3 MS. O'DELL: Let's -- let me speak with 4 Dr. Smith-Bindman on the break and then I'll let you 5 know. 6 MR. ZELLERS: All right. 7 THE VIDEOGRAPHER: We're off the record at 8 2:59 p.m. 9 (A break was taken from 2:59 p.m. to 10 3:11 p.m.) 11 THE VIDEOGRAPHER: We are back on the 12 record. This marks the beginning of Disc No. 4 in 13 the deposition of Dr. Rebecca Smith-Bindman. The 14 time is 3:11 p.m. 15 Q (BY MR. ZELLERS) Dr. Smith-Bindman, what 16 methodology, if anything different, did you use to 17 arrive at your opinion that there was a causal 18 association between genital talcum powder use and 19 ovarian cancer? 20 A I used the Bradford Hill criteria. 21 Q Are you familiar with the Bradford Hill 22 criteria? 23 A I am. Yes, I am. 24 Q You're familiar that over time the FDA has 25 gone through and done various analyses with respect</p>	<p style="text-align: right;">Page 204</p> <p>1 Q The FDA, in 2014, reviewed the 2 epidemiology and etiology findings relating to 3 ovarian cancer and the genital application of talc; 4 is that right? 5 MS. O'DELL: Object to the form. 6 A Yes. 7 Q (BY MR. ZELLERS) The FDA noted that 8 selection bias and/or uncontrolled confounding 9 result in spurious positive associations between 10 talc use and ovarian cancer; is that right? 11 MS. O'DELL: Object to the form. 12 A The FDA concluded that some of the studies 13 had biases. Yes, they did. 14 Q (BY MR. ZELLERS) And if we look at No. 2, 15 the FDA states, No single study has considered all 16 the factors that potentially contribute to ovarian 17 cancer, including selection biased and/or 18 uncontrolled confounding that result in spurious 19 positive associations between talc use and ovarian 20 cancer risk. 21 Is that right? 22 A That is what the FDA concluded. 23 Q The FDA also noted that there was a lack 24 of consistency in the study results; is that right? 25 A That is what the FDA concluded.</p>
<p style="text-align: right;">Page 203</p> <p>1 to perineal talcum powder use and any association 2 with ovarian cancer; is that right? 3 MS. O'DELL: Object to the form. 4 A I -- I have seen some documents by the 5 FDA. 6 Q (BY MR. ZELLERS) And the FDA, back in 7 2014, did a review and analysis of the epidemiology 8 at that time; is that right? 9 MS. O'DELL: Object to the form. 10 A Could you show me that document? 11 Q (BY MR. ZELLERS) Sure. This is a document 12 that we'll mark as Exhibit 26. 13 (Exhibit 26 was marked for identification 14 and is attached to the transcript.) 15 Q (BY MR. ZELLERS) It's a document from the 16 FDA. It's got a date stamp at the top -- 17 MS. O'DELL: Thank you. 18 Q (BY MR. ZELLERS) -- April 1 of 2014. 19 Is this one of the documents that you have 20 reviewed in connection with your expert work in this 21 matter? 22 A Yes, it is. 23 Q Turn, if you will, to page 4 of that 24 document. Do you see that? 25 A Yes.</p>	<p style="text-align: right;">Page 205</p> <p>1 Q And specifically the FDA concludes, 2 Results of case-control studies do not demonstrate a 3 consistent, positive association across studies; is 4 that right? 5 MS. O'DELL: I think it says something 6 further than that. 7 A Can I just add something? This -- the FDA 8 did some review that I don't know the details of. 9 And this is their summary of that review, which I 10 don't know the details of, yes. 11 Q (BY MR. ZELLERS) The FDA, at least in this 12 review, stated that dose response evidence is 13 lacking; is that right? 14 And I am looking at the end of Point No. 3 15 on page 4. 16 A That is what the FDA concluded. 17 Q And looking at Point No. 4, the FDA found 18 that a cogent biological mechanism was lacking; is 19 that right? 20 A That is what the FDA concluded. 21 Q You have reviewed IARC; is that right? 22 And I think in your blue folder here you have 23 included some IARC documents? 24 A I have included IARC work reflecting 25 analysis through 2006 and then more recently</p>

52 (Pages 202 to 205)

Rebecca Smith-Bindman, M.D.

Page 206	Page 208
<p>1 through -- through 2010, each published a few years 2 after that.</p> <p>3 Q IARC has gone through and addressed the 4 Bradford Hill considerations with respect to the 5 classification of genital talc; is that right?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 A Can you remind me which analysis you're 8 referring to?</p> <p>9 Q (BY MR. ZELLERS) Well, let's start with 10 the classifications. Take a look at Exhibit 27, if 11 you will.</p> <p>12 (Exhibit 27 was marked for identification 13 and is attached to the transcript.)</p> <p>14 Q (BY MR. ZELLERS) Are these the IARC 15 classifications for its determination --</p> <p>16 MS. O'DELL: Thank you.</p> <p>17 Q (BY MR. ZELLERS) -- as to the 18 carcinogenicity -- carcinogenicity of different 19 agents?</p> <p>20 A Yes.</p> <p>21 Q And you're generally familiar with these 22 classifications; is that right?</p> <p>23 A I am.</p> <p>24 Q Group 1, these are the agents that IARC 25 has determined are carcinogenic to humans, correct?</p>	<p>1 prove that something is safe is -- is next to 2 impossible --</p> <p>3 Q (BY MR. ZELLERS) Right.</p> <p>4 A -- and so that's why that category is 5 not -- is used. Category 3 and four can, for the 6 sake of discussion, be considered the same.</p> <p>7 Q And that's why there's no Group 5, not 8 carcinogenic; is that right?</p> <p>9 A Yes.</p> <p>10 Q Correct? Now, with genital talc, IARC has 11 determined that it is appropriately placed in the 12 "to be" category; is that right?</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 A I -- I would take a slight pause to that 15 consideration. I think that in the first review 16 when they have looked at platy talc, they consider 17 it a "to be" possibly carcinogenic to humans.</p> <p>18 Whereas, in the report looking at asbestos 19 and fibrous talc, which also counts in the same 20 category as asbestos, the -- that is in the category 21 that's a Group 1 carcinogenic to humans.</p> <p>22 Q (BY MR. ZELLERS) IARC has determined that 23 genital talc is a group to be possibly carcinogenic 24 to humans; is that right?</p> <p>25 MS. O'DELL: Object to the form.</p>
Page 207	Page 209
<p>1 A Yes.</p> <p>2 Q And that's the only category in which IARC 3 finds sufficient evidence in humans; is that right?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 A That's how they define that category.</p> <p>6 Q (BY MR. ZELLERS) IARC puts 82 agents in 7 Group 2A probably carcinogenic to humans; is that 8 right?</p> <p>9 A That is correct.</p> <p>10 Q So IARC has gone through and has evaluated 11 many, many, many agents and has determined that 12 there are over 200 agents in both the Group 1 13 category and also the Group 2A category, correct?</p> <p>14 A Yes.</p> <p>15 Q There's only one agent in Group 4, 16 probably not carcinogenic to humans; is that right?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 A Yes, that's correct.</p> <p>19 Q (BY MR. ZELLERS) So out of the over a 20 thousand agents that IARC has reviewed, it's only 21 placed one agent in Group 4 probably not 22 carcinogenic; is that right?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A To be considered by IARC, there has to be 25 data to suggest there's some potential harm. And to</p>	<p>1 Misstates her testimony.</p> <p>2 A So in their initial review -- in their 3 earlier review, they concluded that genital talc is 4 possibly carcinogenic to humans.</p> <p>5 In the more recent 2012, they discuss that 6 cosmetics are the primary sources of exposure to 7 talc in the general population; that perineal 8 application is the primary route and that fibrous 9 talc, which is part of talc, is actually Group 1 10 carcinogenic.</p> <p>11 Q (BY MR. ZELLERS) All right. Show me the 12 IARC designation of genital talc as a Group 1 13 carcinogenic.</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 A Genital talc contains platy talc, as well 16 as fibrous talc, as well as asbestiform contaminated 17 talc, and they consider any fibrous talc to be a 18 Group 1 carcinogen.</p> <p>19 Q (BY MR. ZELLERS) Show me where the 20 perineal application of genital talc has been 21 determined by IARC to be a Group 1 carcinogen.</p> <p>22 MS. O'DELL: Object to the form. Would 23 you like to see the IARC?</p> <p>24 A Can you show me the IARC report?</p> <p>25 Q (BY MR. ZELLERS) No. I would like you --</p>

53 (Pages 206 to 209)

Rebecca Smith-Bindman, M.D.

Page 210	Page 212
<p>1 you're the one who is testifying.</p> <p>2 A I just don't have the document in front of</p> <p>3 me. How would you like me to show it to you?</p> <p>4 Q I -- I would like you to show me where</p> <p>5 genital talc has been found by IARC to be a Group 1</p> <p>6 carcinogen.</p> <p>7 MS. O'DELL: Object to the form. So was</p> <p>8 that not -- excuse me, Doctor. Is that not</p> <p>9 something you're going to put in front of her?</p> <p>10 Q (BY MR. ZELLERS) I -- I have my</p> <p>11 information. And my IARC review says that they have</p> <p>12 classified genital talc as a group to be possibly</p> <p>13 carcinogenic to humans.</p> <p>14 A Do you have the 2012 --</p> <p>15 MS. O'DELL: Yes. Let me just get it for</p> <p>16 you, Doctor. Give me a moment to see what number it</p> <p>17 is in your references.</p> <p>18 Q (BY MR. ZELLERS) As your counsel is</p> <p>19 looking for that document, can we agree that the "to</p> <p>20 be" designation with IARC is based on limited</p> <p>21 evidence in humans, which means IARC cannot rule out</p> <p>22 chance, bias, or confounding with reasonable</p> <p>23 confidence?</p> <p>24 A In their original assessment of talc in</p> <p>25 2010 where they classified it as to be, the "to be"</p>	<p>1 A So this is the monograph -- the</p> <p>2 monograph -- the IARC monograph on the evaluation of</p> <p>3 carcinogenic risks -- arsenic metals, fibrous and</p> <p>4 dust, volume 100C. So --</p> <p>5 Q I'm looking for perineal talc.</p> <p>6 A No. No. I know. I understand.</p> <p>7 Q Okay.</p> <p>8 A I'm just telling you where I'm -- I'm</p> <p>9 going to be pulling this from. And I'm looking at</p> <p>10 the section under "Asbestos." And under the Pier --</p> <p>11 the -- the section under "Asbestos, it talks, under</p> <p>12 1.C --</p> <p>13 Q What page?</p> <p>14 A -- 230. And I will read several sections</p> <p>15 of it. This section says, Talc particles are</p> <p>16 normally plate-like. These particles are viewed on</p> <p>17 edge under the microscope.</p> <p>18 THE COURT REPORTER: I have to have you</p> <p>19 slow down when you read.</p> <p>20 A I'm so sorry. May appear to be fibers.</p> <p>21 Talc may also form true mineral fibers that are</p> <p>22 asbestiform in habit.</p> <p>23 In some talc deposits, tremolite,</p> <p>24 anthophyllite, and actinolite may occur. Talc</p> <p>25 containing asbestiform fibers is a term that has</p>
Page 211	Page 213
<p>1 designation means that it's possibly carcinogenic,</p> <p>2 which is a very high bar for them to put them in</p> <p>3 that category, but could also be due to chance.</p> <p>4 Q Okay. Also, in class "to be" as possibly</p> <p>5 carcinogenic is ginkgo biloba; is that right?</p> <p>6 A I -- I have no idea.</p> <p>7 Q Occupational carpentry and joinery; is</p> <p>8 that right?</p> <p>9 A I -- I -- I have no idea.</p> <p>10 Q Pickled --</p> <p>11 A I --</p> <p>12 Q -- vegetables?</p> <p>13 A -- I think pickled vegetables are pretty</p> <p>14 carcinogenic, but I -- I don't know what IARC thinks</p> <p>15 of them.</p> <p>16 Q Do you believe that the standard for</p> <p>17 prove -- proving causation in the scientific</p> <p>18 literature is the same as the one that applies in</p> <p>19 litigation?</p> <p>20 A Yes, I do.</p> <p>21 Q Do you want to show me what your counsel</p> <p>22 has provided you?</p> <p>23 A Yes.</p> <p>24 Q And I am looking for the finding that IARC</p> <p>25 that genital talc use is a Group 1 carcinogen.</p>	<p>1 been used inconsistently.</p> <p>2 I'm -- I'm just seeing where the --</p> <p>3 Q (BY MR. ZELLERS) That's okay. And I am</p> <p>4 looking for the statement or the finding that</p> <p>5 genital talc -- cosmetic genital talc has been</p> <p>6 determined by IARC to be a Group 1 carcinogen.</p> <p>7 A So I'm in the section --</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 A -- on the talc and asbestiform talc. And</p> <p>10 under 1.65, "Human Exposure," under "A," it says,</p> <p>11 Exposure of the general population: Consumer</p> <p>12 products, cosmetics, pharmaceuticals are the primary</p> <p>13 source of exposure to talc for the general</p> <p>14 population. Inhalation and dermal contact through</p> <p>15 perineal application are the primary routes of</p> <p>16 exposure.</p> <p>17 Q (BY MR. ZELLERS) Where does IARC conclude</p> <p>18 that perineal talc use, cosmetic talc, is a Group 1</p> <p>19 carcinogen?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 A As late as 1973, talc products contained</p> <p>22 detectable levels of chrysotile asbestos, tremolite,</p> <p>23 or anthophyllite role. And it's possible they</p> <p>24 remained on the market in some places for some time</p> <p>25 after that. And these are asbestiform in habit.</p>

54 (Pages 210 to 213)

Rebecca Smith-Bindman, M.D.

Page 214	Page 216
<p>1 It goes on to cite a whole lot of other 2 places, Blount and so forth. 3 And then in this same document they 4 categorize the asbestos and asbestiform fibers as 5 being a Group 1 carcinogen. 6 Q (BY MR. ZELLERS) I'm going to ask you 7 about asbestos and I'm going to ask you about 8 asbestiform fibers. 9 What I want to know is: Where does IARC, 10 in the publication you're looking at, categorize 11 cosmetic talc applied perineal -- to the perineal 12 region as a Group 1 carcinogen? 13 MS. O'DELL: Object to the form. 14 A They're telling us in this document that 15 asbestos and asbestiform talc are Group 1 16 carcinogens. 17 They're telling us at the cite -- the -- 18 the most common exposure is consumer products. And 19 inhalation and dermal contact with perineal 20 application of talc powders are the primary routes 21 of exposure. 22 Q (BY MR. ZELLERS) Where does IARC state 23 that perineal use of cosmetic talc is a Group 1 24 carcinogen? 25 MS. O'DELL: Object to the form.</p>	<p>1 MS. O'DELL: As I'm not coaching the 2 witness. So you can ask the questions, but you 3 can't raise your voice and -- and continue -- 4 MR. ZELLERS: We have a video record. 5 MS. O'DELL: -- yes, we do. 6 MR. ZELLERS: No one here would say that 7 I'm raising my voice to the witness or behaving in 8 any way other than professionally. 9 A I'm looking for the executive summary. 10 It's just taking a while in this very large document 11 to -- I see the problem. 12 The copy of this document, I'm missing my 13 first few pages. 14 Q (BY MR. ZELLERS) Okay. 15 A It starts at 30 -- 31. 16 THE COURT REPORTER: Did you say "few" or 17 "first three"? 18 A I think I'm missing the first 30 pages. 19 Q (BY MR. ZELLERS) All right. Let -- 20 A So -- 21 Q -- me move on then. 22 A -- okay. 23 Q Strength of association is a Bradford Hill 24 criteria -- is that -- criterion; is that right? 25 A Yes, it is.</p>
Page 215	Page 217
<p>1 A So IARC is telling us which compounds are 2 Group 1 carcinogens. 3 Q (BY MR. ZELLERS) Where does it state that 4 the perineal use of cosmetic talc is a Group 1 5 carcinogen? 6 MS. O'DELL: Object to the form. She has 7 already stated that three times. 8 MR. ZELLERS: Well, I haven't heard it 9 yet -- 10 MS. O'DELL: Yes. 11 MR. ZELLERS: -- Counsel. 12 MS. O'DELL: Yes, you -- she has described 13 it to you three times or four times maybe. And so 14 she has -- 15 MR. ZELLERS: Counsel -- 16 MS. O'DELL: -- answered your question. 17 MR. ZELLERS: -- please don't coach the 18 witness. Just -- 19 MS. O'DELL: -- I'm not -- I'm not -- 20 MR. ZELLERS: -- object to form, if you 21 want to object to form. 22 MS. O'DELL: -- well, don't harass the 23 witness, which -- that's what I am -- 24 MR. ZELLERS: I'm not harassing the 25 witness.</p>	<p>1 Q You -- one of the studies you reviewed was 2 Langseth; is that right? 3 A Yes, it is. 4 Q Langseth reviewed the overall pooled odds 5 of cancer and found that there was an odds ratio of 6 1.35 across the studies; is that right? 7 A I'm going to look for it, but -- 8 Q Okay. I -- 9 A -- it sounds about right. 10 Q -- I will hand you Langseth. 11 A I have it. 12 Q If you take a look at page 359, 13 Figure 1 -- do you see that -- do you know Langseth? 14 A I do. 15 Q Langseth looks at the case-control 16 studies, both the population-based and the 17 hospital-based; is that right? 18 A He looked at the studies that had a -- he 19 had available when this was established a decade 20 ago, yes. 21 Q And -- and he lists out 20 case-control 22 studies, correct? 23 A 14? 24 Q I'm looking at the chart above Figure 1. 25 And you think there's only 14 studies there?</p>

55 (Pages 214 to 217)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 218</p> <p>1 A Oh, I apologize. I thought you were 2 talking about the population-based studies. 3 No. You're absolutely right. 20 studies. 4 Q And of those 20 studies, only ten have 5 statistical significance; is that right? 6 A The original studies with the sample size 7 they had, ten seemed to have difference than one. 8 Q Of the 20 studies -- the 20 case-control 9 studies that were available and were studied by 10 Langseth, only ten had statistically significant 11 results; is that right? 12 MS. O'DELL: Object to the form. 13 A Again, he is combining them together. But 14 in the original form when they were not combined, 15 there are ten in their original form that had 16 statistical differences than one. They could 17 exclude one. 18 Q (BY MR. ZELLERS) Half of the studies did 19 not have statistically significant results; is that 20 right? 21 A The original studies had wide confidence 22 intervals. And the original studies, before they 23 were combined, many of them overlapped one. 24 Q Is the answer yes to my question? 25 MS. O'DELL: She has answered your</p>	<p style="text-align: right;">Page 220</p> <p>1 a causal association between perineal use of talc 2 and ovarian cancer? 3 MS. O'DELL: Objection to form. 4 A The Langseth study is one review. And as 5 I describe in my report, it seems like a well-done 6 review, although it does not provide the kind of 7 details that I would hope it would provide given 8 sort of the stature of some of the people who were 9 involved in writing the report. 10 That being said, this systematic review 11 suggests that there's an association between 12 perineal talc exposure and ovarian cancer. 13 Q You -- 14 A By itself, I don't think it provides 15 enough data to have causality, but it provides good 16 evidence that there's an association. 17 Q You understand that your interpretation of 18 this study is different and broader than the 19 authors' interpretation of the data, correct? 20 MS. O'DELL: Object to the form. 21 A One of the author's conclusion that I 22 found quite compelling was in -- on page 358 in the 23 second paragraph -- in the second column -- 24 Q (BY MR. ZELLERS) Can you answer my 25 question?</p>
<p style="text-align: right;">Page 219</p> <p>1 question. 2 MR. ZELLERS: Well, I -- I don't know. I 3 haven't heard an answer. 4 MS. O'DELL: You have heard a complete 5 answer. 6 A You're asking me to look at the results in 7 Figure 1 -- 8 Q (BY MR. ZELLERS) Yes. 9 A -- which are meant to combine results. 10 But they also had the individual original study 11 sample size and show that about half of them overlap 12 one. 13 Q Half is no better than a coin toss, 14 correct? 15 MS. O'DELL: Object to the form. 16 A It's an interesting question. But if 17 you're looking for something, is there an 18 association with an exposure with cancer, a random 19 selection of that, you would expect to find very few 20 positive associations. 21 To find half is an enormous association to 22 find from random studies if there was no 23 association. 24 Q (BY MR. ZELLERS) Do you believe that based 25 upon the Langseth paper and analysis, that there is</p>	<p style="text-align: right;">Page 221</p> <p>1 MS. O'DELL: She has answered your 2 question. Don't -- 3 MR. ZELLERS: Well, I don't think she is 4 answering my question. 5 A I think you are asking me about what the 6 authors conclude. 7 Q (BY MR. ZELLERS) I asked if your 8 conclusion was broader than the authors' -- 9 MS. O'DELL: And she is telling you what 10 the authors' conclusions are. You may finish, 11 Doctor. 12 A What -- what Langseth says is that, Eight 13 of the population-based case-control studies were 14 identified by the Arforthinger (phonetic) as being 15 the most informative in terms of the size of the 16 studies, whether the studies were population-based 17 participation rates and adjustment for confounding 18 variables. These selected studies -- among these 19 eight studies, the prevalence of use of talc was 16 20 to -- 21 THE COURT REPORTER: I can't hear. 22 A -- sorry. The selected studies included 23 at least 188 cases and had participation rates 24 ranging up to 75 percent. Among these eight 25 studies, the prevalence of peritoneal use of</p>

56 (Pages 218 to 221)

Rebecca Smith-Bindman, M.D.

Page 222	Page 224
<p>1 talc-based body powder among controls ranged from 16 2 to 52 percent. 3 The relative risk of ovarian cancer among 4 body powder users were homogeneous across the set of 5 eight studies, each of which indicated a 30 to 6 60 percent increase in risk. 7 Among the other 12 case-control studies, 8 most also reported relative risk of this magnitude 9 or higher. 10 So I think the authors of this concluded 11 that the better studies showed a very strong 12 association. And -- and I -- I'm not sure what 13 conclusion of the authors you're asking me to 14 disagree with. 15 Q (BY MR. ZELLERS) Okay. Doctor, take a 16 look at "Proposal to Research Community" on the 17 right-hand side of page 359. 18 Do you see that? 19 A I do. 20 Q I'm going to read this, and you tell me if 21 I read it correctly. 22 "The current body of experimental and 23 epidemiological evidence is insufficient to 24 establish a causal association between perineal use 25 of talc and ovarian cancer risk.</p>	<p>1 as nonresponsive. 2 My question was: Did I read that 3 correctly? 4 A You read that text correctly. 5 Q All right. You conclude in your report 6 with respect to strength of association that because 7 a very large number of ovarian cancers are caused by 8 talcum powder and talcum powder provides no 9 better -- no medical benefit, the Hill criterion of 10 strength of association is important and met. 11 Is that right? 12 A I don't think that's exactly right. I -- 13 I think all of the things I believe are in there 14 somewhere, but that's not quite what I would be -- 15 Q I -- 16 A -- report. 17 Q -- I'm just reading from page 38 of your 18 report. Do you believe that because a very large 19 number of ovarian cancers are caused by talcum 20 powder and talcum powder provides no medical 21 benefit, the Hill criterion of strength of 22 association is important and is met? 23 MS. O'DELL: Object to the form. I don't 24 think you read that -- 25 A I --</p>
Page 223	Page 225
<p>1 Experimental research is needed to better 2 characterize deposition, retention, and clearance of 3 talc to evaluate the ovarian carcinogenicity of 4 talc." 5 Did I read that correctly? 6 A Not only did you read that correctly, I 7 would agree with that based on data available in 8 2008. 9 So you asked me if I thought this study by 10 itself evaluated causality. 11 And this study did not discuss the 12 deposition, the retention, or clearance. And I 13 think those factors are crucial to understanding the 14 causality. 15 Q Okay. 16 A And that's new since -- 17 MR. ZELLERS: Move -- 18 A -- 2008. 19 MR. ZELLERS: -- to strike as not -- 20 MS. O'DELL: She is -- 21 MR. ZELLERS: -- she finished. 22 MS. O'DELL: -- she did not finish. 23 MR. ZELLERS: Did you finish? 24 A I was close enough. 25 MR. ZELLERS: All right. Move to strike</p>	<p>1 MS. O'DELL: -- the report correctly. But 2 if you were intending to read from her report 3 verbatim, I don't believe that was correct. 4 MR. ZELLERS: Counsel, please, just object 5 to form, if you do have an objection. 6 MS. O'DELL: I have an objection. 7 A Could you -- again, you -- the -- what I 8 believe has been -- within your statement, but 9 that's not the reason I believe that the Bradford 10 Hill criteria are met. 11 Q (BY MR. ZELLERS) Well, let me ask you a 12 question. 13 A Yes. 14 Q In your discussion of the Bradford Hill 15 criterion of strength of association, you include 16 Table 7, which is entitled "An Estimate of the 17 Number of Ovarian Cancers and Invasive Serous 18 Cancers Caused by Regular Use of Perineal Talc 19 Powder Products"; is that right? 20 A Yes. 21 Q Is that a calculation that you did to try 22 to determine whether or not there is strength of 23 association? 24 A No, but that's not why I included that. 25 Q Well, is it included in your "Strength of</p>

57 (Pages 222 to 225)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 226</p> <p>1 Association" section?</p> <p>2 A It is included in the strength of</p> <p>3 association to demonstrate how -- an odds ratio of</p> <p>4 1.5, how many patients could be impacted on that.</p> <p>5 So one of the questions is: Is there a</p> <p>6 strong association? And the second, which is really</p> <p>7 quite a different question, is: What's the</p> <p>8 magnitude of that association?</p> <p>9 And sometimes the magnitude of the</p> <p>10 association is mistakenly used as an approximation</p> <p>11 of the strength of the association.</p> <p>12 And I was trying to disentangle the</p> <p>13 strength of the association. How truly do we know</p> <p>14 they're associated with -- if it is associated, how</p> <p>15 big of an impact would it have?</p> <p>16 And so the purpose of Table 7 is not in</p> <p>17 any way to demonstrate the strengths of the</p> <p>18 association, which is a requirement to assess for</p> <p>19 Bradford Hill --</p> <p>20 Q Would your --</p> <p>21 MR. LAPINSKI: She's not finished --</p> <p>22 A -- but how many --</p> <p>23 MR. LAPINSKI: -- Counsel.</p> <p>24 A -- but --</p> <p>25 MR. ZELLERS: Okay. Counsel, one lawyer</p>	<p style="text-align: right;">Page 228</p> <p>1 fine.</p> <p>2 MR. ZELLERS: Please don't interrupt</p> <p>3 the --</p> <p>4 MS. O'DELL: That's --</p> <p>5 MR. ZELLERS: -- deposition.</p> <p>6 MR. LAPINSKI: -- better. Thank you.</p> <p>7 MR. ZELLERS: Ms. O'Dell is doing a</p> <p>8 fabulous job of making objections --</p> <p>9 MR. LAPINSKI: Yes, she is.</p> <p>10 MR. ZELLERS: -- for all of you.</p> <p>11 Q (BY MR. ZELLERS) Okay. Doctor. You were</p> <p>12 trying --</p> <p>13 MS. O'DELL: Excuse me. I don't -- still</p> <p>14 don't think she was finished.</p> <p>15 MR. ZELLERS: Okay.</p> <p>16 MS. O'DELL: So you may continue, Doctor.</p> <p>17 If you were finished, great. If you weren't, you</p> <p>18 may finish your answer.</p> <p>19 A I -- I'm going to have to say I -- I -- so</p> <p>20 the -- the -- Table 7 is an illustration of the</p> <p>21 number of women who would be impacted.</p> <p>22 And the point was to explain that the</p> <p>23 strength of the association is separate from the</p> <p>24 number of women impacted. But indeed, it</p> <p>25 illustrates how important the number of women</p>
<p style="text-align: right;">Page 227</p> <p>1 can object. Okay. I don't want all of you</p> <p>2 objecting.</p> <p>3 MR. LAPINSKI: Don't -- don't raise your</p> <p>4 voice to me.</p> <p>5 MR. ZELLERS: No. I don't want all of you</p> <p>6 objecting.</p> <p>7 MR. LAPINSKI: Counsel, if you want to</p> <p>8 make a statement --</p> <p>9 MR. ZELLERS: Yeah --</p> <p>10 MR. LAPINSKI: -- make a statement.</p> <p>11 MR. ZELLERS: -- I'm making a statement</p> <p>12 that I do not want --</p> <p>13 MR. LAPINSKI: That's --</p> <p>14 MR. ZELLERS: -- the whole group of</p> <p>15 lawyers --</p> <p>16 MR. LAPINSKI: -- and you --</p> <p>17 MR. ZELLERS: -- on the Plaintiffs' side</p> <p>18 objecting.</p> <p>19 MR. LAPINSKI: -- I'm sitting directly</p> <p>20 across the table from you. And I can hear you, and</p> <p>21 I have heard you all day.</p> <p>22 MR. ZELLERS: Okay.</p> <p>23 MR. LAPINSKI: I have heard you carry on</p> <p>24 the way you have carried on all day. There's no</p> <p>25 reason to raise your voice to me. I can hear you</p>	<p style="text-align: right;">Page 229</p> <p>1 impacted is.</p> <p>2 Q Let's go through your math.</p> <p>3 A Yes.</p> <p>4 Q So the table, Table 7, includes several</p> <p>5 assumptions; is that right?</p> <p>6 A A great number of assumptions.</p> <p>7 Q You ran the data, assuming that 10 percent</p> <p>8 of the female population in the United States used</p> <p>9 talcum powder products regularly, as you define</p> <p>10 "regularly"; is that right?</p> <p>11 A Just to clarify, I -- I demonstrated what</p> <p>12 the impact would be if we estimated the number of</p> <p>13 women at 10 percent.</p> <p>14 Q You did the same calculation for</p> <p>15 20 percent and 30 percent; is that right?</p> <p>16 A Yes, I did.</p> <p>17 Q You don't actually know what percentage of</p> <p>18 women use talcum powder products regularly --</p> <p>19 A I --</p> <p>20 Q -- correct?</p> <p>21 A -- I do not.</p> <p>22 Q All right. The calculation -- or your</p> <p>23 conclusion is that .14 percent of women exposed to</p> <p>24 talcum powder products have invasive serous cancer.</p> <p>25 And I am looking at your 10 percent assumption that</p>

58 (Pages 226 to 229)

Rebecca Smith-Bindman, M.D.

Page 230	Page 232
<p>1 you make. 2 Did you mean .14 or did you mean for that 3 to be 14 percent? 4 A So I -- I take your correction as a -- as 5 correct. 6 Q Okay. 7 A I do mean 14 percent, but -- but it's not 8 the way you have interpreted it. 9 The -- the -- the calculation -- the 10 columns are the percent of invasive cancer that is 11 attributable to talcum powder, not the proportion of 12 cancer -- the proportion of women exposed who will 13 develop cancer. Those are very different. 14 Q I'm not sure I understand. Your column 15 here says, The percent of invasive serous cancer in 16 women exposed to talcum powder products; is that 17 right? 18 A That is correct. 19 Q Okay. The universe of talcum powder 20 products, which you're estimating here -- and I 21 understand it's an estimation -- is 10 percent of 22 the population; is that right? 23 MS. O'DELL: Object to the form. 24 A I -- I -- I -- I'm estimating in this 25 table that 10 percent of women use talcum powder --</p>	<p>1 women get ovarian cancer. That would be five 2 million women. 3 I'm saying if we look at the world of 4 invasive serous cancers in the United States, there 5 will be in the ballpark of 11,000 serous cancers 6 every year in the United States. 7 Of those, 14 percent of those will occur 8 in regular users of talc powders. 86 percent will 9 occur in nonregular talc users. 10 So you're interpreting what is listed as a 11 column percent. It says, Percent of invasive serous 12 cancer in women exposed to talc products. 13 You're interpreting that as if I'm saying 14 that the women exposed, that 15 percent of them will 15 get ovarian cancer. 16 Q And in fact, if -- if your caption is 17 right, if we really are looking at the percent of 18 invasive serous cancer in women exposed to talcum 19 powder products, it would be less than .01 percent, 20 right? 21 A Um -- 22 MS. O'DELL: Object to the form. 23 A -- you -- you're asking me how many women 24 with exposure will end up getting? 25 Q (BY MR. ZELLERS) Yes.</p>
Page 231	Page 233
<p>1 Q (BY MR. ZELLERS) Right. 2 A -- products in the U.S. 3 Q There are approximately -- what do you say 4 -- 30 -- 5 A 311 million. 6 Q -- all right. So 311 million. And you 7 are estimating for purposes of this exercise that 8 31,100,000 are regular users; is that right? 9 A Yes. 10 Q And what you are trying to determine is of 11 those 31,100,000, what percent of regular talc users 12 will have invasive serous cancer, correct? 13 A Yes. 14 Q And you have calculated 14 percent; is 15 that right? 16 A No. 17 Q It's wrong, right? 18 A The way you are describing it is wrong. 19 But I can give you an example to help you understand 20 that table. 21 Q Well -- 22 A The number of cancers, we're talking about 23 31 million women or women who were exposed to 24 cancers. 25 I'm not saying 13 -- 14 percent of those</p>	<p>1 A So that's a -- a good number. It's not 2 one I presented, but certainly one I can estimate, 3 which is -- if we're talking about 31 million women 4 who have regular exposure and of those who will 5 get -- I'm scribbling on my exhibit. I hope that's 6 okay. Is that okay? One, two, three -- one, two, 7 three. One -- one out of -- one out of 3,000 women 8 will get -- 9 Q So -- 10 A -- ovarian cancer. 11 Q -- approximately .01 percent, correct? 12 A That sounds pretty good, actually. 13 Q All right. Dose response. A significant 14 number of the talcum powder studies that you looked 15 at do not show a dose response or fail to account 16 for dose response altogether; is that right? 17 A In my summary of dose response on page 39, 18 I note that Penninkilampi, one of the large 19 meta-analyses, which I think is the most 20 comprehensive review, talks about dose response. 21 I didn't cite here -- and it was an 22 oversight -- Berge, another large comprehensive 23 meta-analysis, also shows dose response. 24 So the two systematic reviews showed dose 25 response. I also list Terry as showing dose</p>

59 (Pages 230 to 233)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 234</p> <p>1 response. That's the pool data of a large number of 2 studies. Those are, you know, both quite -- I -- I 3 have covered most of the publications, so those show 4 dose response. 5 There are a few others that I show. There 6 are definitely a bunch that do not address the issue 7 of dose response, but -- but I wouldn't characterize 8 it as most do not. 9 Q Well, you state on page 40 of your report 10 with respect to dose response, The results are 11 inconsistent and more importantly are not considered 12 or assessed in most of the published studies. 13 That was your conclusion with respect to 14 dose response; is that right? 15 A You are going to have to tell me where 16 you're reading. What I'm reading says, In summary, 17 most, but not all, studies of talcum powder products 18 in ovarian cancer show a dose response. 19 THE COURT REPORTER: Slow down when you 20 read, please. 21 A I'm so sorry. 22 In summary, most, but not all, studies of 23 talcum powder products in ovarian cancer show a dose 24 response. Most do. 25 But the results are inconsistent and more</p>	<p style="text-align: right;">Page 236</p> <p>1 A Yes. 2 Q Would you agree that generally when you 3 looked at the published studies, that they showed an 4 association of around 1.3 between perineal talc use 5 and ovarian cancer? 6 A I think many of the studies showed an 7 association of about 1.3 of any talc use. Not 8 quantifying the amount of exposure. 9 Q But would you agree that an -- that 10 epidemiologists generally consider a 1.3 odds ratio 11 in a case-control study to be a weak or modest 12 association? 13 MS. O'DELL: Object to the form. 14 A I am -- I am unaware what -- of what most 15 epidemiologists think. 16 Q (BY MR. ZELLERS) Have you seen any peer 17 reviewed literature on talc and ovarian cancer that 18 states that 1.3 is a strong association? 19 A I mean, Penninkilampi concludes there's a 20 consistent association between perineal talc -- talc 21 use and ovarian cancer. 22 And I'm just looking for how he quantifies 23 that. He concludes the results indicate that 24 perineal talc use is associated with a 24 to 25 39 percent increased risk of ovarian cancer.</p>
<p style="text-align: right;">Page 235</p> <p>1 importantly are not considered assessed in most -- 2 that -- that should not say "most." It should say 3 "in many of the published studies." 4 Q (BY MR. ZELLERS) All right. So you would 5 amend your report from "most" to "many; is that 6 right? 7 A I -- I used "most" twice in the same 8 sentence as meaning different things. So yes, I -- 9 Q Go -- 10 A -- it was an error. 11 Q -- Gertig 2000 study found that there was 12 no increase in risk of ovarian cancer with 13 increasing frequency of use; is that right? 14 A I would have to check that, but I'm happy 15 to do so. I believe that's correct. 16 Q Hunchcharek 2003 found that the data 17 showed a lack of clear dose response relationship, 18 making the relative risk of questionable validity; 19 is that right? 20 A Which -- which one? 21 Q Sure. Hunchcharek 2003, page 19 of 55. 22 A Wait. This one is 2011. I don't -- I 23 don't think I have that one. 24 Q All right. Consistency. Consistency is 25 another factor that you looked at; is that right?</p>	<p style="text-align: right;">Page 237</p> <p>1 He doesn't quantify it as weak or strong, 2 but there's a suggestion that a 39 percent increase 3 is important. But he -- he doesn't quantify it. So 4 I would have to look through the authors' 5 conclusions. 6 Q Do you know who Penninkilampi is? 7 A I do not. 8 Q Do you know that he is a medical student? 9 A I'm very impressed. He did a beautiful 10 review. 11 Q Do you know who Guy Eslick is, the other 12 author on that paper? 13 A I do not. 14 Q Do you know if he's an expert for the 15 Plaintiffs in the talc litigation? 16 A I -- I do not. 17 MS. O'DELL: Object to the form. 18 Q (BY MR. ZELLERS) Does Mr. Eslick disclose 19 or identify that he is working for or has worked for 20 Plaintiffs in the talc litigation? 21 A I might -- I don't know the answer to 22 that. 23 Q You would expect that if that was true, 24 that there would be a disclosure of that; is that 25 right?</p>

60 (Pages 234 to 237)

Rebecca Smith-Bindman, M.D.

Page 238	Page 240
<p>1 A I --</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 A -- it's published in a very high-impact,</p> <p>4 high-quality medical journal, and I would suspect</p> <p>5 that that would be required of that journal.</p> <p>6 But -- but I -- I -- I -- I don't -- I --</p> <p>7 I don't know that journal's requirements, but I</p> <p>8 would suspect that they would require reporting</p> <p>9 funding.</p> <p>10 Q You --</p> <p>11 A It says -- I'm sorry. It says, The</p> <p>12 authors report no conflicts of interest and have not</p> <p>13 reported funding.</p> <p>14 And typically when you have to reporting</p> <p>15 conflicts of interest in the same area, you also</p> <p>16 report funding, and I don't see any of that.</p> <p>17 Q The cohort studies. There are four cohort</p> <p>18 studies; is that right?</p> <p>19 A Yes.</p> <p>20 Q All right. You rely only on the Gertig</p> <p>21 study, the 2000 study; is that right --</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 Q (BY MR. ZELLERS) -- of those four?</p> <p>24 MS. O'DELL: Excuse me. Object to the</p> <p>25 form.</p>	<p>1 are summarized the way you summarized them. And I</p> <p>2 think if you look at them a little more closely, I</p> <p>3 would not make that conclusion. So --</p> <p>4 Q For the reasons set forth in your report?</p> <p>5 A It's in my report.</p> <p>6 MR. ZELLERS: All right. Let's take a</p> <p>7 break.</p> <p>8 THE VIDEOGRAPHER: We're off the record.</p> <p>9 The time is 3:58 p.m.</p> <p>10 (A break was taken from 3:58 p.m. to</p> <p>11 3:58 p.m.)</p> <p>12 (Next portion not on video record.)</p> <p>13 MR. ZELLERS: So we are back on the</p> <p>14 written record, but not the video record. My</p> <p>15 understanding is that, you know, we are taking a</p> <p>16 break as an accommodation to the witness, and that</p> <p>17 that's fine, but that, you know, you are not going</p> <p>18 to use this time to further meet and prepare the</p> <p>19 witness based upon the questions I asked today.</p> <p>20 MS. O'DELL: Correct. There's --</p> <p>21 there's -- Dr. Smith-Bindman is taking this break</p> <p>22 because she is still recovering from her concussion.</p> <p>23 There will be no meeting with</p> <p>24 Dr. Smith-Bindman. I do want to point out counsel</p> <p>25 for J&J seems to have dictated this requirement in</p>
Page 239	Page 241
<p>1 A My report summarizes all four of them, and</p> <p>2 that all went into the weight of my report.</p> <p>3 In terms of being included in any</p> <p>4 systematic review, only one of them was included in</p> <p>5 the systematic review.</p> <p>6 Q (BY MR. ZELLERS) If you looked just at the</p> <p>7 cohort studies --</p> <p>8 A Yes.</p> <p>9 Q -- you would not find a statistically</p> <p>10 significant association between perineal talc use</p> <p>11 and ovarian cancer, correct?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 A I --</p> <p>14 MS. O'DELL: Excuse me. When -- when you</p> <p>15 get to a good stopping point, it would be good to</p> <p>16 take a break --</p> <p>17 MR. ZELLERS: Okay.</p> <p>18 MS. O'DELL: -- but whenever you're -- if</p> <p>19 you have a few more minutes, that's fine, but</p> <p>20 whenever you get to a good point.</p> <p>21 A -- so I summarize my view of the cohort</p> <p>22 studies, which are not exactly what you -- what you</p> <p>23 just summarized -- the way you just summarized them</p> <p>24 on page 21.</p> <p>25 So I think that often the cohort studies</p>	<p>1 order to accommodate the witness's situation.</p> <p>2 But I would just note the deposition</p> <p>3 protocol has no such restriction, and -- and so</p> <p>4 that -- to that degree, I would say we have no</p> <p>5 intent to prepare the witness any further.</p> <p>6 But we're not restricted from talking to</p> <p>7 the witness, and I don't want the record to suggest</p> <p>8 otherwise.</p> <p>9 MR. ZELLERS: We will see you tomorrow.</p> <p>10 MS. O'DELL: Thank you.</p> <p>11 THE VIDEOGRAPHER: We are back on the</p> <p>12 record at 4:01 p.m, and this is the end of Disc</p> <p>13 No. 4 in today's testimony of Dr. Rebecca</p> <p>14 Smith-Bindman. The time is 4:01 p.m.</p> <p>15</p> <p>16 (TIME NOTED: 4:01 p.m.)</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>

Page 254	Page 256
<p>1 REBECCA SMITH-BINDMAN, M.D., VOLUME II, 2 being first duly sworn or affirmed to testify to the 3 truth, the whole truth, and nothing but the truth, 4 was examined and testified as follows: 5 EXAMINATION BY COUNSEL FOR THE DEFENDANTS 6 BY MR. ZELLERS: 7 Q Good morning. 8 A Good morning. 9 Q Dr. Smith-Bindman, did you do anything to 10 prepare -- or further prepare for your deposition 11 since the time we concluded yesterday and this 12 morning? 13 A I did two things. I reviewed my report 14 again, and I called the biostatistician who worked 15 on my meta-analysis to review a few of the details. 16 Q You called Dr. Hall? 17 A I did. 18 Q When was the last time that you had talked 19 with Dr. Hall before yesterday? 20 A Speaking to her at the time of -- that she 21 did the analysis. And I -- I think there was an 22 e-mail or two over the last several weeks asking for 23 her CV or something like that, but not any 24 meaningful conversation. 25 Q Have you produced the e-mails -- the</p>	<p>1 manuscript. 2 I was quite surprised that they weren't 3 exactly the same. They were not meaningfully 4 different, but there was a very slight shift in 5 the ones that are in my report. 6 I mean, I asked Dr. Jane why that was the 7 case. And in fact, the numbers are calculated using 8 the standard errors in the confidence intervals and 9 the sample size which very slightly shifts it from 10 the reported numbers. 11 So you were correct when you said the 12 numbers are not exactly the same, and she explained 13 that that's why that's the case. 14 Q Are the numbers that were contained in 15 Figure -- Figures 2 and 3 in your report, estimates? 16 MS. O'DELL: Object to the form. 17 A The numbers are calculated. So I -- I 18 think by that, you mean estimates. 19 Q (BY MR. ZELLERS) Did you do the 20 calculations? 21 A No. She -- she did them. 22 Q Do we -- 23 THE COURT REPORTER: Can you raise your 24 voice for me, please? 25 A Yes, I can. I apologize.</p>
Page 255	Page 257
<p>1 recent e-mails with Dr. Hall? 2 A I -- I'm not sure if I produced the one 3 asking for her CV, but the -- and actually, I don't 4 remember when I asked her for that. I might have 5 presented -- 6 MS. O'DELL: I think that's part of the 7 production -- 8 Q (BY MR. ZELLERS) How -- 9 MS. O'DELL: -- but -- excuse me. 10 Q (BY MR. ZELLERS) How long did you speak 11 with Dr. Hall yesterday? 12 A About 15 -- 10-15 minutes. 13 Q Did you make any written notes? 14 A I -- I think I scribbled in my usual 15 scribble place. 16 Q What notes did you make from your 17 conversation with Dr. Hall yesterday after the first 18 session of your deposition? 19 A So -- so I did -- I did -- I did jot some 20 notes on my meta-analysis. But mostly I asked her 21 to clarify how she did the calculations of the 22 numbers that are shown in the figures. 23 I was struggling to understand why the 24 numbers and the figures were not exactly the same as 25 the ones that you showed me in the published</p>	<p>1 Q (BY MR. ZELLERS) Do we have her work 2 product as to the calculations that were made? 3 A In the documents that I shared, she 4 specified the -- the software that she used, the 5 program that she used. 6 In fact, the way of estimating it, it's 7 actually in my report as well. And so yes, it's 8 explained there, and it's in all of the documents 9 that I shared with you. 10 Q Her calculations are contained in the 11 documents that are shared; is that right? 12 A Yes. 13 Q The numbers that you got from the Terry 14 study, those came from the Terry publication; is 15 that right? 16 A Yes. 17 Q Any additional notes you made from your 18 discussion with Dr. Hall, other than what you have 19 generally told us about? 20 A No. Just that. 21 Q The notes that you added to your annotated 22 report from your discussion with Dr. Hall, which we 23 marked as Exhibit 17, those notes are on which page 24 or pages? 25 A Page 33 and 34.</p>

4 (Pages 254 to 257)

Rebecca Smith-Bindman, M.D.

Page 258	Page 260
<p>1 Q It looks like you made those notes in an 2 aqua pen is -- is that right, or -- 3 A Yes. 4 Q -- I -- 5 A Yes. 6 Q Okay. 7 A Yes, absolutely. 8 Q Any -- 9 A I would say teal, but... 10 Q Well, I think you're probably more correct 11 than I am. 12 Any other notes that you had from your 13 discussion with Dr. Hall? 14 A No. 15 Q Any other communications that you had with 16 Dr. Hall, other than your 10- or 15-minute phone 17 conversation yesterday afternoon or evening? 18 A No. 19 Q Did you communicate with Dr. Hall via 20 e-mail or any way other than just the phone call? 21 A No. 22 Q Did you communicate with anyone else 23 between the time we finished yesterday and this 24 morning about the subject matter that we're here to 25 talk about?</p>	<p>1 Q What do you -- well, I will take that as a 2 yes, that at least through November 13, 2018, that 3 Deposition Exhibit 28 are all of your invoices -- 4 A Yeah. 5 Q -- is that right? 6 A Yes. 7 Q Those invoices total approximately 8 160 hours. Does that sound right? 9 A 160? 10 Q 160. 11 A I'm -- I'm going to believe you. 12 Q Well, and anyone can go and check my math. 13 How many hours do you estimate that you 14 have spent up until today on this matter both doing 15 additional work, reviewing those additional studies 16 and materials we talked about yesterday, preparing 17 for the deposition, meeting with counsel for 18 Plaintiffs? 19 MS. O'DELL: Since the last invoice? 20 MR. ZELLERS: Since the last invoice is 21 what I had intended to ask. 22 MS. O'DELL: Yeah. Thank you. 23 A I -- I think approximately 25 hours. 24 Q (BY MR. ZELLERS) In addition, we were 25 provided with a two-page exhibit which are two</p>
Page 259	Page 261
<p>1 A No. 2 Q At the start of the session today, counsel 3 for Plaintiffs, Ms. O'Dell, provided me with copies 4 of your invoices. 5 I'm going to hand you what we have marked 6 as Exhibit 28. It is a five-page exhibit. 7 The first page is a cover letter. It 8 looks like an engagement or general engagement 9 letter from you to -- you say Mr. Carmen Scott. 10 Is it a Ms. Carmen Scott? 11 (Exhibit 28 was marked for identification 12 and is attached to the transcript.) 13 A It is. 14 Q All right. That was on June 1 of 2017. 15 The last invoice is November 13 of 2018; is that 16 right? 17 A I'm sorry. What was the question? Is 18 this -- 19 Q The question is: Are those all of our 20 invoices that you have generated thus far in the 21 talcum powder MDL litigation? 22 A I -- I think I mentioned that there are -- 23 I haven't submitted anything beyond this, but that 24 there are additional hours that I recorded after 25 this.</p>	<p>1 invoices from Jane Hall, which total around \$3,000. 2 (Exhibit 29 was marked for identification 3 and is attached to the transcript.) 4 Q (BY MR. ZELLERS) Can you look at 5 Exhibit 29 and verify for us that those are the 6 e-mails -- strike that -- that those are the 7 invoices for the work that was done by Dr. Hall? 8 A I -- I -- I believe so. 9 Q Are you aware of any additional invoices 10 beyond that? 11 A I'm not. 12 Q Do you have any invoices from your copy 13 editor, Ms. Tachibana? 14 A She sent me an invoice, which I forwarded 15 to counsel. 16 Q All right. How much was that invoice for? 17 A I think it was about \$1,500. 18 Q How much an hour does Ms. Tachibana 19 charge? 20 A I think it's about a hundred dollars an 21 hour. 22 Q Was that for all of the work that she did 23 with respect to your report? 24 A Yes. There was no other work other than 25 that 15 -- it might have been \$1,700.</p>

5 (Pages 258 to 261)

Rebecca Smith-Bindman, M.D.

Page 262	Page 264
<p>1 MS. O'DELL: Excuse me. I'm sorry, Mike. 2 I apologize for not copying that. We're going to 3 make a copy, and I will provide it to your 4 momentarily at -- 5 MR. ZELLERS: Very good. We'll mark it 6 before the conclusion of the deposition. Thank you. 7 Q (BY MR. ZELLERS) Do you have your report 8 in front of you? You can use your annotated 9 version, No. -- Exhibit 17. We also marked your 10 report as Exhibit 2. 11 A Yes. 12 Q Do you have that in front of you? 13 A I do. 14 Q Go to page 17, if you will, please. 15 MR. LAPINSKI: Counsel, you said page 17? 16 MR. ZELLERS: Yes, page 17. 17 A Yes. 18 Q (BY MR. ZELLERS) On page 17, you make a 19 number of general statements about the advantages 20 and disadvantages of case control and cohort 21 studies; is that right? 22 A Yes. 23 Q There are no citations there. Is this 24 based and those statements based on your general 25 knowledge?</p>	<p>1 paragraph, Mike? I have lost track. 2 MR. ZELLERS: I was asking about the 3 specific statement in the middle paragraph of 4 page 17 relating to cohort studies and the 5 limitation that they rarely focus on a single 6 narrowly defined question. 7 MS. O'DELL: Yes. Thank you. 8 Q (BY MR. ZELLERS) But my question now is -- 9 A Yes. 10 Q -- whether or not Dr. Smith-Bindman, as 11 you sit here, can cite any published literature that 12 states the cohort studies are unlikely to detect a 13 real association -- or unlikely to detect real 14 associations for this reason. 15 A I -- 16 MS. O'DELL: Excuse me. Are you 17 quoting -- when you say "unlikely to detect real 18 associations for this reason," is that reading -- 19 are you reading from her report or is that just -- 20 MR. ZELLERS: No. That's my question. 21 MS. O'DELL: -- okay. Sorry. 22 MR. ZELLERS: And if it's not very 23 articulate -- 24 A I -- I think cohort -- cohort studies are 25 able to detect real associations, if they ask about</p>
Page 263	Page 265
<p>1 A Yes. This is based on Epi 101, sort of... 2 Q You make a statement in the middle 3 paragraph on page 17 where you talk about "cohort 4 studies." 5 And you state that they rarely focus on a 6 single narrowly defined question and that that's an 7 important limitation of cohort studies. 8 Do you see that? 9 A I do. 10 Q Can you cite to any other epidemiologists 11 who agree with you on that point? 12 A So it's very well known the cost of doing 13 a cohort study is often very large, and so the topic 14 that's often the central focus of the cohort study 15 is very, very well done. 16 It's the ancillary topics that often get 17 short shrift. And so that -- I -- I could probably 18 find this explained in any basic textbook. 19 And -- and I -- I apologize for not citing 20 it. This is sort of just very well-known general 21 concepts of study design. 22 Q Can you cite to any published literature 23 that states that cohort studies are unlikely to 24 detect real associations for this reason? 25 MS. O'DELL: Are you reading a particular</p>	<p>1 those associations. 2 If they don't ask about it, then it 3 can't -- then -- then it doesn't have an ability to 4 measure it. 5 So what I am saying here is that cohort 6 studies don't have the capacity to go in depth and 7 ask. 8 I think all of the cohort studies that I 9 reviewed for -- for this review discuss the lack of 10 detail in the cohort question, meaning that it's not 11 that the study design was the problem. It was that 12 they just didn't have the right predictor 13 information being assessed. 14 Q Despite this limitation -- or in your 15 view, limitation of cohort studies, you did include 16 the Gertig 2000 cohort study in your systematic 17 review; is that right? 18 A I did. I just want to clarify the answer. 19 Cohort studies are a very strong study design that I 20 like very much and that I have used and currently 21 I'm -- I'm using in study designs. 22 It's rather if the study design uses a 23 cohort, which is a good design, doesn't have enough 24 detail, because that's not the focus, that 25 doesn't -- it can't be used to answer other</p>

6 (Pages 262 to 265)

Rebecca Smith-Bindman, M.D.

Page 266	Page 268
<p>1 questions easily.</p> <p>2 So I think in general I like cohort</p> <p>3 designs very much, and I think it's a very powerful</p> <p>4 study design. But if you haven't asked the right</p> <p>5 questions, it's hard to the expand it.</p> <p>6 So I did -- I read all of the cohorts on</p> <p>7 this topic.</p> <p>8 Q And you concluded that the Gertig cohort</p> <p>9 study, you know, asked the right information or had</p> <p>10 sufficient information for you to include it both in</p> <p>11 your general systematic review and in your more</p> <p>12 focused systematic review which you set forth as</p> <p>13 Figures 2 and 3 in your report, correct?</p> <p>14 A That's correct. That -- those -- those</p> <p>15 were looking at regular use, and I thought the</p> <p>16 Gertig was the cohort that allowed me to understand</p> <p>17 regular use of perineal talc.</p> <p>18 Q Gertig was based on the Nurses' Health</p> <p>19 Study; is that right?</p> <p>20 A Yes.</p> <p>21 Q Gertig and the authors do recognize that</p> <p>22 the biologic evidence for the association of talc</p> <p>23 and ovarian cancer is incomplete, correct?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 A I -- I don't have it in front of me, but</p>	<p>1 yet they didn't report it that way.</p> <p>2 They only reported on any exposure to talc</p> <p>3 powder products. And that is a very vague</p> <p>4 definition as opposed to the frequency of use.</p> <p>5 And for that reason, I couldn't tell in --</p> <p>6 in nearly the same detail as I could for the earlier</p> <p>7 study, the -- the exposure. They just chose not to</p> <p>8 present it that way.</p> <p>9 Q The Gates 2010 cohort study did include</p> <p>10 over a hundred thousand women; is that right?</p> <p>11 A The Gates?</p> <p>12 Q Yes.</p> <p>13 A It was large, but I need to check the</p> <p>14 actual numbers.</p> <p>15 Q Here. Let me hand it to --</p> <p>16 A I have it. I have it.</p> <p>17 Q Do you have it?</p> <p>18 A Yeah.</p> <p>19 Q Okay. And I am looking at page 47. And</p> <p>20 it's quoting the Nurses' Health Study as involving</p> <p>21 close to 109,000 --</p> <p>22 A I'm not sure.</p> <p>23 Q -- women?</p> <p>24 A I'm not sure. I'm looking at the -- the</p> <p>25 Gates -- are you asking about Gates or Gertig?</p>
Page 267	Page 269
<p>1 it may be that they reported as of 2000, they didn't</p> <p>2 have evidence of the biologic mechanism. I --</p> <p>3 Q And I will ask you about biologic</p> <p>4 mechanism before we conclude here today.</p> <p>5 You did not, though -- well, let me</p> <p>6 withdraw that.</p> <p>7 There was a follow-up cohort study to</p> <p>8 Gertig 2000, and that was the Gates 2010 cohort</p> <p>9 study; is that right?</p> <p>10 A Yes.</p> <p>11 Q That had a longer follow-up than Gertig;</p> <p>12 is that right?</p> <p>13 A Yes.</p> <p>14 Q It was an analysis of the data collected</p> <p>15 in the Nurses' Health Study; is that right?</p> <p>16 MS. O'DELL: Object to the form.</p> <p>17 A It was analysis of some of the data</p> <p>18 collected in the -- in the Nurses' Health Study, but</p> <p>19 they did not report the variable in such a way that</p> <p>20 would allow you to understand or to quantify the</p> <p>21 exposure as opposed to the first cohort study which</p> <p>22 did.</p> <p>23 So the latter study, they -- they had the</p> <p>24 data, which is why I'm answering it this way. They</p> <p>25 clearly had it, because the data hadn't change, and</p>	<p>1 Q I'm asking about Gates 2010.</p> <p>2 A In mine it says \$221,000 woman with 924</p> <p>3 epithelial ovarian cancer.</p> <p>4 Am I looking in the wrong place?</p> <p>5 Q No. I -- and then if you look further, it</p> <p>6 talks about -- at least in the Nurses' Health Study,</p> <p>7 there being 108,870 women; is that right?</p> <p>8 A Yes.</p> <p>9 Q The women in the national health study,</p> <p>10 which was the basis for both the Gertig 2000 cohort</p> <p>11 study and Gates 2010 cohort study, those women were</p> <p>12 followed from 1976 to 2006, so for 30 years --</p> <p>13 A Yes.</p> <p>14 Q -- is that right?</p> <p>15 A Yes.</p> <p>16 Q And -- and after following these hundred</p> <p>17 thousand women -- or over hundred thousand women for</p> <p>18 three decades, the authors in Gates 2010 concluded</p> <p>19 that the data did not show a statistically</p> <p>20 significant relationship between talcum powder use</p> <p>21 and any type of epithelial ovarian cancer; is -- is</p> <p>22 that right?</p> <p>23 A The Gates authors concluded that there was</p> <p>24 no association between any talcum powder product</p> <p>25 use, and it was not significant in ovarian cancer,</p>

7 (Pages 266 to 269)

Rebecca Smith-Bindman, M.D.

Page 270	Page 272
<p>1 yes.</p> <p>2 Q Another short study that you did not</p> <p>3 include in your systematic review was the Houghton</p> <p>4 study; is that right?</p> <p>5 MS. O'DELL: Object to form.</p> <p>6 A Yes, that is true.</p> <p>7 Q (BY MR. ZELLERS) The Houghton study was</p> <p>8 based on -- or is also called the Women's Health</p> <p>9 Initiative Study; is that right?</p> <p>10 A Yes, it is.</p> <p>11 Q That involved 61,000 women; is that right?</p> <p>12 A That is correct.</p> <p>13 Q Houghton 2014 did not find a statistically</p> <p>14 significant relationship between perineal talc use</p> <p>15 and ovarian cancer among women who had ever used</p> <p>16 talc; is that right?</p> <p>17 A That is what they concluded.</p> <p>18 Q Or among women who had fewer than nine</p> <p>19 years of perineal talc use, correct?</p> <p>20 A Correct.</p> <p>21 Q Or among women who had more than 10 years</p> <p>22 of perineal talc use, correct?</p> <p>23 A Can you say that last part?</p> <p>24 Q Sure.</p> <p>25 A Sorry.</p>	<p>1 using it on a -- on a frequent basis, so I think the</p> <p>2 duration is very different measure.</p> <p>3 Q We talked yesterday about your definition</p> <p>4 of "regular use," and you pointed me to your report</p> <p>5 where you give an extensive discussion of that.</p> <p>6 Do you remember?</p> <p>7 A I do.</p> <p>8 Q Did -- your definition of "regular use,"</p> <p>9 was that every psychometrically tested to</p> <p>10 demonstrate any validity or reliability?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 A Of -- are you asking about the reliability</p> <p>13 of the way we defined it --</p> <p>14 Q (BY MR. ZELLERS) Yes.</p> <p>15 A -- or about the concept?</p> <p>16 Q No. About the way you defined it.</p> <p>17 A I believe we explained in the report that</p> <p>18 we tried to approximate regular use, frequency use</p> <p>19 by being at least three times a week and as close to</p> <p>20 daily as possible.</p> <p>21 But in terms of -- if that is -- I -- I'm</p> <p>22 not -- we have not validated that in different</p> <p>23 studies or --</p> <p>24 Q That's something that you came up with; is</p> <p>25 that right?</p>
Page 271	Page 273
<p>1 Q Houghton 2014, that cohort study --</p> <p>2 A Okay. No. I -- yes, that is correct.</p> <p>3 Q And also, they did not find a</p> <p>4 statistically significant relationship between</p> <p>5 perineal talc use -- strike that.</p> <p>6 They also did not find a statistically</p> <p>7 significant relationship between the use of talcum</p> <p>8 powder on sanitary napkins or diaphragms on -- and</p> <p>9 ovarian cancer; is that right?</p> <p>10 A That's correct.</p> <p>11 Q Houghton does report on duration of use at</p> <p>12 least more than 10 years of use; is that right?</p> <p>13 A Yes.</p> <p>14 Q But would you consider women who use</p> <p>15 talcum powder for more than 10 years to be frequent</p> <p>16 talc users?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 A So you're asking if duration of use can be</p> <p>19 equated with frequency of use, and -- and I would</p> <p>20 very strongly disagree that those are equivalent.</p> <p>21 And that is the primary reason that I</p> <p>22 discount the results of the Gonzalez and Houghton</p> <p>23 and Gates studies.</p> <p>24 Because frequency of use, meaning to use</p> <p>25 it once a month or once a year, is not the same as</p>	<p>1 A Yeah.</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 A Yes, it is.</p> <p>4 Q (BY MR. ZELLERS) Gonzalez. You criticize</p> <p>5 Gonzalez in your report for combining various types</p> <p>6 of use. Do you recall that generally? So that's</p> <p>7 page 21 where --</p> <p>8 A No. I'm -- I'm on my report. My -- my</p> <p>9 hesitation is it's not so much that I'm criticizing</p> <p>10 the study. It's rather it doesn't contribute to</p> <p>11 answering the question that I was asking, which was:</p> <p>12 Does regular perineal talc exposure increase the</p> <p>13 risk?</p> <p>14 It doesn't mean that the questions they</p> <p>15 have asked are not interesting questions. They were</p> <p>16 just not the ones I was focusing on.</p> <p>17 Q Why would combining various types of use,</p> <p>18 bias the results in favor of not detecting an</p> <p>19 association?</p> <p>20 I guess from your statement it -- it may</p> <p>21 well not bias the results; is that right? It just</p> <p>22 was just a different question --</p> <p>23 A It's just a different question.</p> <p>24 Q -- than what --</p> <p>25 A I --</p>

8 (Pages 270 to 273)

Rebecca Smith-Bindman, M.D.

Page 274	Page 276
<p>1 Q -- you were looking at?</p> <p>2 A -- I believe that you want to have as</p> <p>3 narrow a definition, in my belief, of meta-analysis</p> <p>4 as possible to understand when you're pooling</p> <p>5 results, make sure -- something you said -- you're</p> <p>6 combining apples to apples.</p> <p>7 And I think one would expect that any</p> <p>8 potential -- potential exposure to talcum powder</p> <p>9 would matter what skin or surface or cell line or</p> <p>10 tissue you're putting against, and you wouldn't</p> <p>11 necessarily expect the same result in a cervical</p> <p>12 exposure or a diaphragm exposure or a vaginal</p> <p>13 exposure.</p> <p>14 You -- you might have an association of</p> <p>15 those places. You might not. I just think it's a</p> <p>16 different question.</p> <p>17 Q All of the cohort studies were prospective</p> <p>18 as opposed to retrospective; is that right?</p> <p>19 A Yes.</p> <p>20 Q Prospective studies are not subject to</p> <p>21 recall bias like retrospective studies, correct?</p> <p>22 A Yes, that's true.</p> <p>23 Q They're also not subject to the same</p> <p>24 selection bias as retrospective studies, correct?</p> <p>25 MS. O'DELL: Object to the form.</p>	<p>1 absolutely that's a possibility.</p> <p>2 Q You also looked at both the hospital-based</p> <p>3 and the population-based case-control studies; is</p> <p>4 that right?</p> <p>5 A I did.</p> <p>6 Q None of the hospital-based case-control</p> <p>7 studies show a statistically significant association</p> <p>8 between talc use and ovarian cancer, correct?</p> <p>9 A I -- I'm not sure --</p> <p>10 Q Take a look at --</p> <p>11 A -- where you're getting that from.</p> <p>12 Q I will show you the Langseth paper from</p> <p>13 2008, which you cite and we talked about yesterday.</p> <p>14 Let's mark this as Exhibit 30.</p> <p>15 (Exhibit 30 was marked for identification</p> <p>16 and is attached to the transcript.)</p> <p>17 A I have it. I have it.</p> <p>18 Q (BY MR. ZELLERS) All right. Now -- and</p> <p>19 let me just -- I'll put it in the record there.</p> <p>20 MS. O'DELL: Thank you.</p> <p>21 Q (BY MR. ZELLERS) If you look at the</p> <p>22 Langseth paper, on the second page, Figure 1, they</p> <p>23 list out all of the population -- or at least a</p> <p>24 great number of the population-based and</p> <p>25 case-control studies and the hospital-based</p>
Page 275	Page 277
<p>1 A In general, case-control studies are often</p> <p>2 plagued with selection bias, but they don't have to</p> <p>3 be.</p> <p>4 Q (BY MR. ZELLERS) Well, recall bias can</p> <p>5 distort a scientific evaluation of whether an</p> <p>6 exposure is actually related to a disease, correct?</p> <p>7 A Yes.</p> <p>8 Q So for example, recall bias could distort</p> <p>9 results if women with ovarian cancer were more</p> <p>10 likely to remember their exposure to talc than women</p> <p>11 without ovarian cancer; is that right?</p> <p>12 A That is a theoretical risk.</p> <p>13 Q In fact, in your report on page 17, you</p> <p>14 acknowledge that the risk of bias is greater for</p> <p>15 case-control studies as opposed to cohort studies;</p> <p>16 is that right?</p> <p>17 A Yes.</p> <p>18 Q Recall bias could explain the fact that</p> <p>19 some retrospective case-control studies have found a</p> <p>20 statistically significant relationship between</p> <p>21 talcum powder and ovarian cancer, but the cohort</p> <p>22 studies have not, correct?</p> <p>23 A That is a theoretical risk. To do that</p> <p>24 you would need to have some knowledge in the</p> <p>25 population that influenced that recall bias, but</p>	<p>1 case-control studies; is that right?</p> <p>2 A Yes, they do.</p> <p>3 Q (BY MR. ZELLERS) At least among the</p> <p>4 hospital-based case-control studies that are</p> <p>5 identified by Langseth in Figure 1, it appears that</p> <p>6 there's six hospital-based case-control studies.</p> <p>7 None of those hospital-based case-control</p> <p>8 studies show a statistically significant</p> <p>9 association, correct?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 A We discussed this yesterday. But if</p> <p>12 you're asking if the individual hospital-based</p> <p>13 studies overlap one, then they overlap one.</p> <p>14 Q (BY MR. ZELLERS) They do not overlap one?</p> <p>15 A The -- the hospital-based studies do</p> <p>16 overlap one.</p> <p>17 Q Okay. The population-based case-control</p> <p>18 studies, which are up above in our</p> <p>19 Langseth Figure 1, some of those -- if we look at</p> <p>20 the individual studies -- show statistical</p> <p>21 significance, and some of those do not; is that</p> <p>22 right?</p> <p>23 A I'm -- I'm hesitant to be as definitive</p> <p>24 about using the confidence interval that are</p> <p>25 presented here as being a reflection of statistical</p>

9 (Pages 274 to 277)

Rebecca Smith-Bindman, M.D.

Page 278	Page 280
<p>1 significance.</p> <p>2 All of them are shifted to the right. All</p> <p>3 of them have a positive association. And the</p> <p>4 confidence interval for some of them overlap one.</p> <p>5 But taken as a group, there's statistical</p> <p>6 significance for the entirety of the population --</p> <p>7 of the population of studies that he looked at.</p> <p>8 Q As we did discuss yesterday, if you look</p> <p>9 at the population-based studies individually, at</p> <p>10 least based upon what's reported by Langseth in his</p> <p>11 Figure 1, some demonstrate statistical significance</p> <p>12 and some do not; is that right?</p> <p>13 A I -- again, it's -- they're slightly --</p> <p>14 it's -- it's not the only -- the confidence interval</p> <p>15 overlapping one is sort of what I consider a</p> <p>16 quick-and-dirty way to answer statistical</p> <p>17 significance.</p> <p>18 It's not exactly that way. But some of</p> <p>19 them clearly suggest statistical significance. I</p> <p>20 think ten of them. And four of them suggest not</p> <p>21 statistical significance. So the individual</p> <p>22 studies. But it's a little more complicated than</p> <p>23 that.</p> <p>24 Q Would you agree that if a study does not</p> <p>25 show statistical significance, that it could mean</p>	<p>1 tell if things are different or the -- or</p> <p>2 indistinguishable, the confidence interval for the</p> <p>3 pooled odds ratio for the population-based studies</p> <p>4 goes from 1.29 to 1.52, so the truth is likely in</p> <p>5 that range, where the truth for the hospital-based</p> <p>6 studies is 0.92 to 1.63. They overlap.</p> <p>7 And so I would interpret that using this</p> <p>8 sort of quick approach is that there's not a</p> <p>9 statistical difference between the summary of the</p> <p>10 pooled odd ratio based on the type of populations</p> <p>11 that were recruited.</p> <p>12 Again, the point estimates are a little</p> <p>13 bit different for sure, 1.4 versus 1.12. But the</p> <p>14 confidence intervals overlap, suggesting that</p> <p>15 they're not -- they're not different.</p> <p>16 Q You are familiar with selection bias; is</p> <p>17 that right?</p> <p>18 A I am.</p> <p>19 Q Would you agree that the hospital-based</p> <p>20 case-control studies may be less susceptible to</p> <p>21 selection bias than population-based case-control</p> <p>22 studies?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A I -- I would not agree with that. In</p> <p>25 general, you think about hospital-based studies as</p>
Page 279	Page 281
<p>1 that no risk exists?</p> <p>2 A If --</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 A -- an individual study shows no</p> <p>5 statistical significance, it means -- with all</p> <p>6 research -- that the most likely truth is the point</p> <p>7 estimate, which is whatever that point estimate is,</p> <p>8 but that you could not exclude chance as one of the</p> <p>9 possible causes for the results.</p> <p>10 Q (BY MR. ZELLERS) If we looked just at the</p> <p>11 population-based case-control studies and the</p> <p>12 hospital-based case-control studies that are shown</p> <p>13 by Langseth in Figure 1, there is an inconsistency</p> <p>14 between the two in that each of the individual</p> <p>15 hospital-based case-control studies have confidence</p> <p>16 intervals which overlap one, and many of the</p> <p>17 population-based or at least some of the</p> <p>18 population-based studies do not, correct?</p> <p>19 A I -- I do not believe there is</p> <p>20 inconsistency between the pooled odds ratio for</p> <p>21 population-based studies, which has a confidence</p> <p>22 interval that overlaps the confidence intervals for</p> <p>23 the pooled odd ratio for the hospital-based studies.</p> <p>24 So using the approach that you are</p> <p>25 suggesting of using confidence intervals, the way to</p>	<p>1 being potentially a great deal more bias.</p> <p>2 Now, that -- with that caveat, it depends</p> <p>3 on how you found your cases and your controls.</p> <p>4 But in general, you want to find</p> <p>5 population-based cases and controls, I believe,</p> <p>6 rather than hospital-based. But it matters how they</p> <p>7 are recruited.</p> <p>8 Q Hospital-based control studies are</p> <p>9 comparing hospitalized patients to hospitalized</p> <p>10 patients; is that right?</p> <p>11 A I -- I -- in this case, yes, I think</p> <p>12 that's --</p> <p>13 Q And --</p> <p>14 A -- how they define it.</p> <p>15 Q -- in population based studies, you're</p> <p>16 more likely to be comparing ill people to healthy</p> <p>17 people; is that right?</p> <p>18 A Again, it -- it depends on how you're</p> <p>19 selecting. If you're selecting patients who are</p> <p>20 sick in the hospital and comparing that to healthy</p> <p>21 patients who are outpatient population based, that</p> <p>22 would be the kind of bias that you are describing.</p> <p>23 That would be the worst.</p> <p>24 But if you're, in fact, comparing</p> <p>25 relatively comparable population-based cases and</p>

10 (Pages 278 to 281)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 282</p> <p>1 controls, then I don't agree that hospital-based 2 controls are -- are better. 3 Q Penninkilampi. One of the studies that 4 you talked to us about yesterday was Penninkilampi 5 2018; is that right? 6 A Yes. 7 Q Penninkilampi 2018 did not include the 8 Gates 2010 cohort study; is that right? 9 A That's correct. 10 Q Did you verify that the data that 11 Penninkilampi reports is accurate? 12 A I did not. Did I go back and validate 13 their individual abstracted data? 14 Q Yeah. 15 A I did not. 16 Q In determining that a study is of high 17 quality, would it be important to you that the 18 authors are accurately reporting the odds ratios and 19 confidence intervals? 20 A Data accuracy is important to me. And -- 21 and I would look towards the journal peer review 22 process to have done that, yes. 23 Q If -- if there were errors in reporting of 24 the odds ratios or the confidence intervals, that 25 could call into question the reliability of the</p>	<p style="text-align: right;">Page 284</p> <p>1 been established; is that right? 2 A That is what they say. 3 Q Meta-analyses or systematic analyses, that 4 can combine the work of other published studies into 5 one study; is that right? 6 A Yes. 7 Q If there are biases and confounding in the 8 underlying studies, the meta-analysis or the 9 systematic review or analysis will reflect the 10 biases and confounding; is that right? 11 MS. O'DELL: Object to the form. 12 A Any biases in the papers will not go away 13 by combining them. I'm not sure what you mean by 14 "the confounding." If -- if a paper has an 15 accounting for confounding? 16 Q (BY MR. ZELLERS) Let me ask you another 17 question. A proper meta-analysis or systematic 18 review must analyze the sources of heterogeneity 19 across the studies; is that right? 20 A Yes. 21 Q And a proper meta-analysis or systematic 22 review must examine the methodology of each of the 23 underlying studies, correct? 24 A Yes. 25 Q You have given some opinions -- or at</p>
<p style="text-align: right;">Page 283</p> <p>1 study; is that right? 2 MS. O'DELL: Object to the form. 3 A Yes, that's definitely possible. 4 Q (BY MR. ZELLERS) Penninkilampi 2018, that 5 study specifically states that a certain causal link 6 between talc use and ovarian cancer has not been 7 established, correct? 8 MS. O'DELL: Object to the form. 9 A I don't remember them concluding that. 10 But if you tell me where -- 11 Q (BY MR. ZELLERS) Sure. 12 A -- it is -- 13 Q Look at page 42, at the end of first 14 paragraph. 15 A Well, perineal talc use has not been shown 16 to be safe. In a similar regard, a certain causal 17 link between the use and ovarian cancer has not been 18 established -- 19 Q And you -- 20 A -- is what -- 21 Q -- okay. 22 A -- Penninkilampi says. 23 Q And I think you omitted the word "talc." 24 But their specific statement is, A certain causal 25 link between talc use and ovarian cancer has not yet</p>	<p style="text-align: right;">Page 285</p> <p>1 least you state some opinions relating to the 2 biological mechanisms of cancer; is that right? 3 A Yes. 4 Q The biological mechanisms of cancer are 5 not your area of expertise; is that correct? 6 MS. O'DELL: Object to the form. 7 A I'm knowledgeable about the biological 8 mechanism of cancer as a scientist, as a physician, 9 as a cancer epidemiologist. 10 Q (BY MR. ZELLERS) Would you agree that 11 there are others who are more closely involved in 12 the area of biologic plausibility as it relates to 13 the perineal use of talcum powder and ovarian 14 cancer? 15 MS. O'DELL: Object to the form. 16 A I believe there are others who have more 17 expertise directly in that area than I do. 18 Q (BY MR. ZELLERS) Your opinion is that 19 talcum powder travels from the perineal region to 20 the ovaries through the women's reproductive tract; 21 is that right? 22 A Yes. 23 Q If talcum powder can make this migration, 24 can other substances make the same migration? 25 A Yes.</p>

11 (Pages 282 to 285)

Rebecca Smith-Bindman, M.D.

Page 286	Page 288
<p>1 Q Sand from the beach?</p> <p>2 A I don't know if there's evidence of sand</p> <p>3 from the beach.</p> <p>4 Q Toilet paper particles?</p> <p>5 A I -- I -- I do not know if there's</p> <p>6 evidence of that.</p> <p>7 Q There are no human studies that</p> <p>8 demonstrate the migration of any particulate matter</p> <p>9 from outside the peri -- peritoneum to the ovaries,</p> <p>10 correct?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 A When you say "demonstrate," do you mean</p> <p>13 active demonstration or a suggestion that it has</p> <p>14 gone that route?</p> <p>15 Q (BY MR. ZELLERS) Active -- active</p> <p>16 demonstration.</p> <p>17 A So there are no studies that I know of</p> <p>18 that have taken talcum powder and then documented</p> <p>19 its movement through -- to the ovaries.</p> <p>20 Q Or any particulate from outside the</p> <p>21 perineum to the ovaries, correct?</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 A I -- I don't know of any sort of active</p> <p>24 studies that have watched it moved. It's rather the</p> <p>25 studies have found the particulate matter at its</p>	<p>1 are a lot of other factors such as sphincters or the</p> <p>2 type of mucosa that it is or mucous barriers that</p> <p>3 might have a very strong relationship to the</p> <p>4 concentration of talc.</p> <p>5 So the rectum and the bladder have</p> <p>6 sphincters, and the mucosa and the vagina and the</p> <p>7 bladder and rectum are very different than the</p> <p>8 mucosa of the ovary. The endometrium has different</p> <p>9 tissue.</p> <p>10 So I agree with you that you would expert</p> <p>11 proximity would be one factor that might affect</p> <p>12 concentration. But the characteristics of the</p> <p>13 tissue, the barriers, the physical or mucosal could</p> <p>14 be expected to have a much bigger impact.</p> <p>15 Q No studies that you're aware of show</p> <p>16 inflammation as a result of genital talc use in the</p> <p>17 rectal, vulvar, vaginal, cervical, and uterine</p> <p>18 tissues; is that right?</p> <p>19 A I do not know of those studies.</p> <p>20 Q And no studies show a link between</p> <p>21 external genital talc use and rectal, vulvar,</p> <p>22 vaginal, cervical, or uterine cancer; is that right?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 A That is correct.</p> <p>25 Q (BY MR. ZELLERS) You have not done an</p>
Page 287	Page 289
<p>1 destination and then have supposed it had to travel</p> <p>2 there in some way.</p> <p>3 Q (BY MR. ZELLERS) None of the studies that</p> <p>4 you cite in your report actually looked at whether</p> <p>5 talcum powder can migrate from perineal application</p> <p>6 through the fallopian tubes to the ovaries, correct?</p> <p>7 A Correct.</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 Q (BY MR. ZELLERS) You also cannot cite any</p> <p>10 article that shows granulomas, fibrosis, or</p> <p>11 adhesions anywhere up the reproductive tract of a</p> <p>12 women as result of her external genital talc</p> <p>13 application; is -- is that right?</p> <p>14 A Yes.</p> <p>15 Q If talcum powder migrates from the</p> <p>16 perineal region to the ovaries, shouldn't exposure</p> <p>17 to talc be far greater in concentration in the</p> <p>18 rectal, vulvar, vaginal, cervical, and uterine</p> <p>19 tissues which are closer to the area of initial</p> <p>20 exposure?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 A I think that assumes that proximity and</p> <p>23 concentration, which you would expect which would</p> <p>24 fall off with more distance, is the only factor that</p> <p>25 would determine concentrations when, in fact, there</p>	<p>1 expert review of the inflammation evidence yourself;</p> <p>2 is that fair?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 A I -- I have done a lot of reading of the</p> <p>5 inflammation literature. I'm not sure how I would</p> <p>6 define it as an expert or not an expert -- expert</p> <p>7 review.</p> <p>8 Q (BY MR. ZELLERS) You do know that not all</p> <p>9 inflammatory conditions lead to cancer, correct?</p> <p>10 A There's a lot of literature about certain</p> <p>11 inflammation that causes chronic -- in particular a</p> <p>12 lot of different kind of cancers, more publications</p> <p>13 about acute inflammation that does not lead to</p> <p>14 cancer.</p> <p>15 But yes, there are both cancers that are</p> <p>16 very susceptible to inflammation or caused by it and</p> <p>17 some that are not.</p> <p>18 Q Chronic inflammation. There are many</p> <p>19 chronic inflammatory conditions that do not lead to</p> <p>20 cancer; is that right?</p> <p>21 A Yes.</p> <p>22 Q Do you agree that an agent can be a</p> <p>23 carcinogenic for one type of cancer, but not for</p> <p>24 others?</p> <p>25 A Yes.</p>

12 (Pages 286 to 289)

Rebecca Smith-Bindman, M.D.

Page 290	Page 292
<p>1 Q Rheumatoid arthritis, that is a chronic 2 inflammation condition, but it does not increase the 3 risk of my ovarian cancer, correct? 4 A Correct. 5 Q The same with psoriasis; is that right? 6 A Not that I know of. 7 Q Page 41 of your report, you conclude that, 8 Regular exposure to talcum powder products causes 9 ovarian cancer in some women. 10 Do you see that? 11 A I do. 12 Q Is there a certain amount of talcum powder 13 that a product must contain to cause inflammation? 14 MS. O'DELL: Object to the form. 15 A I -- I -- I do not know of evidence that 16 quantifies the amount of exposure that's necessary 17 that a published literature supports the amount 18 women use is an amount that leads to cancer, but 19 I -- I don't know if there's a minimum threshold 20 or... 21 Q (BY MR. ZELLERS) Do you consider 22 cornstarch to be a talcum powder product that causes 23 inflammation? 24 MS. O'DELL: Object to the form. 25 A Talcum powder -- cornstarch -- talcum</p>	<p>1 A In a few of the papers I reviewed -- not 2 very many of them, but a few of them had a small 3 proportion of women who were exposed to cornstarch 4 rather than talc powder products. 5 I -- I think it -- they had negative 6 results, but they were small -- a small number of 7 women, so I wouldn't use that to prove that it's 8 safe. 9 But I don't know of any literature that 10 suggests cornstarch is carcinogenic. 11 Q Your opinion that talcum powder products 12 cause inflammation is not based on the determination 13 that there is a threshold amount of talcum powder 14 that will be required to be in the product before 15 you can conclude that the product will cause chronic 16 inflammation; is -- is that right? 17 MS. O'DELL: Object to the form. 18 A I -- I -- I think I would like to agree. 19 I'm just not sure exactly of -- what I am agreeing 20 to. So I -- I don't know any level -- 21 MS. O'DELL: That's always -- 22 A -- of -- 23 MS. O'DELL: -- a good sign you should -- 24 A -- I -- I can't -- 25 MS. O'DELL: -- be --</p>
Page 291	Page 293
<p>1 powder causes inflammation. Cornstarch can also 2 cause inflammation. 3 I believe cornstarch tends to be an acute 4 inflammatory process rather than a chronic 5 inflammation process. But -- 6 Q (BY MR. ZELLERS) You -- 7 A -- I -- I wouldn't consider cornstarch to 8 be a talcum powder -- 9 Q Is -- 10 A -- product. 11 Q -- is there a study that you can point me 12 to that states that any inflammation from cornstarch 13 is acute and not chronic? 14 MS. O'DELL: Object to the form. 15 A There's a literature about cornstarch 16 leading to acute inflammation, for example, in the 17 surgical literature when it was on surgical gloves 18 or on physical exams which has led to its being 19 removed so -- so as to reproduce acute inflammatory 20 processes. 21 Q (BY MR. ZELLERS) My question to you is: 22 Are you aware of any literature that states that 23 cornstarch is not associated with a chronic 24 inflammatory condition? 25 MS. O'DELL: Object to the form.</p>	<p>1 A -- I can't tell exactly what the -- what 2 the question is. 3 I -- there -- I don't know -- I don't know 4 an amount of talcum powder that would make a product 5 safe. 6 Q (BY MR. ZELLERS) Do you believe that 7 cornstarch is a superior alternative to talc? 8 A I believe that talcum powder products will 9 increase women's risk of cancer, and I would avoid 10 using it as a woman or as a doctor counseling my 11 patients. 12 Q Well -- 13 A I don't have views that cornstarch is a 14 carcinogenic product. So in terms of any potential 15 risk-benefit relationship of cornstarch has the same 16 value in terms of absorbency and much fewer risk of 17 harm, then if that's the question, then I think 18 cornstarch is preferable. 19 Q There are no reports in the literature of 20 externally applied talc leading to inflammation, 21 granulomas, fibrosis, or adhesions anywhere along a 22 women's reproductive tract, correct? 23 MS. O'DELL: Objection, asked and 24 answered. 25 A Not that I know of.</p>

13 (Pages 290 to 293)

Rebecca Smith-Bindman, M.D.

Page 294	Page 296
<p>1 Q (BY MR. ZELLERS) On page 12 of your report 2 you state, The most widely accepted mechanism for 3 initiation, promotion, and progression of ovarian 4 cancer is tissue inflammation, leading to a series 5 of responses that result in cancer. 6 Do you see that statement? 7 A I do. 8 Q You do not cite any support in your report 9 for that proposition, correct? 10 MS. O'DELL: Object to the form. 11 A I -- I think my -- that first paragraph 12 was sort of an introduction to that section. So 13 then I go on to cite, I -- I think, the supporting 14 evidence within the next few paragraphs. 15 Q (BY MR. ZELLERS) You would agree that 16 research regarding whether chronic inflammation can 17 cause ovarian cancer is ongoing, correct? 18 A It's an active area of research. 19 Q Are you familiar with a paper published by 20 Melissa Merritt in 2008, entitled "Talcum Powder 21 Chronic Pelvic Inflammation and NSAIDS in Relation 22 to Risk of Epithelial Ovarian Cancer"? 23 A I am. 24 Q It's included in your reliance materials 25 on page 17; is that right?</p>	<p>1 inflammation; is that right? 2 A Yes, they do. 3 Q If inflammation is a mechanism for ovarian 4 cancer, you would expect women who use NSAIDS or 5 aspirin to have a lower risk of ovarian cancer, 6 correct? 7 MS. O'DELL: Object to the form. 8 A Other things being equal, you might expect 9 that if you could measure inflammation or influence 10 it by using NSAIDS, that that might be associated. 11 That is true. 12 Q (BY MR. ZELLERS) The literature, though, 13 is mixed in terms of whether or not the use of 14 NSAIDS or aspirin actually reduce the risk of 15 ovarian cancer; is that right, or the incidence of 16 -- 17 A So -- 18 Q -- ovarian cancer? 19 A -- I have reviewed those papers and would 20 agree with you that some seem to suggest one 21 direction, some others. I haven't quantified them 22 together or tried to summarize them. 23 But I would agree. There doesn't seem to 24 be a consistent message in that literature. 25 Q One of those papers is -- that's included</p>
Page 295	Page 297
<p>1 A Can you tell me the title again? Yeah. 2 Okay. 3 Q Sure. Do you have that or I can -- 4 A No. 5 Q -- mark it? 6 A No, I have it. 7 Q If you go to page 174 of the Merritt 8 paper -- and tell me when you're -- 9 A I'm there. 10 Q -- there -- at the bottom of the first 11 paragraph of the discussion, the authors conclude, 12 These results, in combination with previous studies, 13 suggest that chronic inflammation is unlikely to 14 play a major role in the development of ovarian 15 cancer. 16 Is that right? Did I read that correctly? 17 A Using the results that they had available 18 on the data in 2007, that is what Dr. Merritt 19 concluded. 20 Q You also discuss in your report -- well, 21 let me withdraw that. 22 You're familiar with NSAIDS, nonsteroidal 23 antiinflammatory agents; is that right -- 24 A Yes, I am. 25 Q -- and aspirin? Those medicines reduce</p>	<p>1 in your reliance list is the Verdoodt 2017 paper; is 2 that right? That's V E R D O O D T. 3 A I am going to have to defer to seeing 4 that. 5 Q Okay. Let me -- 6 A I believe -- 7 Q -- show you -- 8 A -- it's on my list. 9 Q -- I will mark that paper as Exhibit 31. 10 (Exhibit 31 was marked for identification 11 and is attached to the transcript.) 12 A Thank you. 13 Q (BY MR. ZELLERS) And turn, if you will, to 14 page 5 under "Discussion" on the first paragraph. 15 A And just to confirm, this is -- I -- I 16 have read this. This is a review article, right? 17 Q Yes. 18 A Okay. 19 Q So on page 5 under "Discussion," the first 20 sentence, the authors state, The sparse and 21 equivocal results for the association between NSAID 22 use and mortality among ovarian and endometrial 23 cancer patients preclude any firm conclusions at 24 this point. 25 Is that right?</p>

14 (Pages 294 to 297)

Rebecca Smith-Bindman, M.D.

Page 298	Page 300
<p>1 A That is what this author concludes. I'm 2 trying to see what references he used for that, but 3 that is what he concludes. 4 Q Okay. And this is an article that was 5 published in 2017, correct? 6 A Yes. 7 Q Yesterday counsel for plaintiffs indicated 8 that you have -- in addition to the materials in 9 your report -- reviewed a 2018 chapter by Saed and 10 the Harper and Saed 2019 abstract; is that right? 11 A I -- I reviewed several of his abstracts 12 and -- and a recent paper, yes. 13 Q Do you know that Dr. Saed is a paid expert 14 for the Plaintiffs in this litigation? 15 A I know he's a very well-respected 16 scientist that they have supported in his research. 17 Q Is that a yes? 18 MS. BOCKUS: I object. Nonresponsive. 19 MS. O'DELL: Mike, excuse me. 20 MR. ZELLERS: Sure. 21 MS. O'DELL: You said the 2019 abstract. 22 Did you mean the abstract or the manuscript, just to 23 make sure I'm following the conversation? 24 MR. ZELLERS: I -- I believe I mean the 25 abstract. But we mean whatever the doctor has in</p>	<p>1 Q Have you spoken with Dr. Saed? 2 A I have not. 3 Q Have you requested any information from 4 Dr. Saed? 5 A I have not. 6 Q The Saed study just looked at immortalized 7 cell lines; is that right? 8 A Yes, I believe that's how the cell lines 9 were -- 10 Q Are -- 11 A -- defined. 12 Q -- are you -- are you aware that Dr. Saed 13 testified that the cells were modified with a virus 14 to make them keep undergoing division in vitro? 15 A I -- I'm aware that that's what happens to 16 cell lines. I -- I don't believe I saw his 17 deposition to say that. 18 Q Are you aware that Dr. Saed testified that 19 the P53 gene was turned off in those cells? 20 A No, I'm not aware. 21 Q Are you aware based upon your reading that 22 the loss of the P53 protein contributes to 23 unrestrained cellular proliferation? 24 MS. O'DELL: Object to the form. 25 A I -- I believe that the reason you have</p>
Page 299	Page 301
<p>1 her file that we marked yesterday. 2 THE COURT REPORTER: Who objected down 3 there? 4 MS. BOCKUS: Jane Bockus. 5 MS. O'DELL: I think what she had in her 6 file was the manuscript. So I think that's what you 7 marked as an exhibit, but I don't want there to be 8 confusion. 9 Q (BY MR. ZELLERS) You have reviewed several 10 publications within the last year or two from 11 Dr. Saed -- 12 A Yes. 13 Q -- is that right? 14 A Yes, I have. 15 THE COURT REPORTER: Wait. 16 MR. ZELLERS: All right. Are you okay, 17 Ms. Court Reporter? 18 THE COURT REPORTER: Yes. I just have to 19 have you wait until the end of the question, please. 20 Q (BY MR. ZELLERS) Let me re-ask my -- 21 A Please. 22 Q -- question. Did you know that Dr. Saed 23 is a paid expert for the Plaintiffs in this 24 litigation? 25 A Yes, I do.</p>	<p>1 controls in experiment is to account for the 2 underlying expression in turnover cells so you can 3 compare something you do to the cell versus the 4 baseline in order to account for the baseline, 5 whatever it is, proliferation of the cell or 6 apoptosis levels or expression of oxidants or 7 antioxidants. 8 So I -- I -- the way you're asking the 9 question is -- is: Are you comparing this cell line 10 to living cells in context? 11 And I would agree with you that this cell 12 line is different than living cells in context. 13 But if you're asking if it's a valid 14 comparison to do the experiment in this cell line, 15 it is because you are doing an intervention to those 16 cells that has a control group. 17 And so this cell line has a different 18 behavior than a -- a living cell does, but provides 19 a comparison group. 20 Q (BY MR. ZELLERS) What methodology did you 21 use to apply Dr. Saed's results to normal cells in 22 actual organs? 23 A So -- 24 MS. O'DELL: Object to the form. 25 A -- in some of the work that I do around a</p>

15 (Pages 298 to 301)

Rebecca Smith-Bindman, M.D.

Page 302	Page 304
<p>1 different environmental carcinogen -- radiation, for 2 example -- we look at changes of expression, certain 3 enzymes in cells to radiation to understand what 4 that damage does in terms of expression of relevant 5 genes, cell proliferation, and things like that. 6 So I take his research to mean that I can 7 understand the changes to pro oxidants to 8 antioxidants to apoptosis to gene expression in the 9 cell. Not that I can come up with the exact 10 quantification in a patient that would correspond to 11 it, but rather, what mechanisms will be stimulated 12 by the talc. 13 So to answer your question, I -- it tells 14 me what parts of the cell are sensitive to it, but 15 not the quantity that might lead to that 16 sensitivity. 17 Q (BY MR. ZELLERS) Can you cite any data 18 showing that the concentrations of exposure used in 19 the Saed study are the same as would be encountered 20 with the use of cosmetic talc in the perineal 21 region? 22 A I cannot. That's what I was trying to 23 express. 24 Q Can you cite any data showing that the 25 level of concentration of exposure used in the Saed</p>	<p>1 develop enough mutations to develop into cancer. 2 But the greater the oxidative stress for 3 cancer like ovarian cancer, the greater the chance 4 of inducing cancer. 5 Q Can you cite me to any study that says 6 that? 7 MS. O'DELL: Object to the form. 8 A Any study that says that there's a dose 9 response related to the amount of stress and the 10 member -- numbers of cancers? 11 Q (BY MR. ZELLERS) That supports, yes, your 12 statement and your position. 13 A I -- the data that I am thinking of -- and 14 I'm not sure if it's quite the same as the question 15 that you're asking -- is the number of gene 16 mutations is higher in cancer cells than it is in 17 noncancer cells. So -- 18 THE COURT REPORTER: In noncancer? 19 A In non -- cancer cells have many more 20 genetic mutations than noncancer cells. 21 Both have generic mutations. And the 22 environment of having more oxidative stress is 23 associated with getting more mutations -- 24 Q (BY MR. ZELLERS) If -- if it's -- 25 A -- but --</p>
Page 303	Page 305
<p>1 study has ever occurred in women with perineal talc 2 use? 3 MS. O'DELL: Object to the form. 4 A I want to clarify my answer. I don't know 5 those data. 6 Q (BY MR. ZELLERS) Would you agree that 7 reactive oxygen species are a normal part of cell 8 physiology? 9 A Yes. 10 Q Do all substances that cause oxidative 11 stress also cause cancer? 12 A I think you care about the balance of 13 oxidative, pro oxidative, antioxidative levels. 14 That being said, I do not know that every 15 instance where you have more pro oxidative leads to 16 cancer. I know of some where it does. I don't know 17 if it always does. 18 Q Does the presence of oxidative stress in a 19 tissue indicate that cancer will develop in that 20 tissue? 21 A I think I mentioned this yesterday, that 22 there's a sense of a probability. So the 23 probability will likely increase. 24 But most cells, thankfully, will repair 25 and -- that damage, and so most cells will not</p>	<p>1 Q -- are you finished? 2 A -- I -- I am. 3 Q Okay. If -- if exposure to a substance 4 causes oxidative stress in certain tissue, does that 5 mean that the substance will cause oxidative stress 6 in all types of tissues? 7 A No. 8 Q Does the body have a protective mechanism 9 that can limit tissue damage from oxidative stress? 10 A Yes. 11 Q Are there any publications that you are 12 aware of that indicate that oxidative stress is 13 involved in the development of ovarian cancer? 14 A We discussed earlier that inflammation 15 increases oxidative stress such as pelvic 16 inflammatory disease leads to oxidative stress. 17 And pelvic inflammatory disease is 18 associated and leads to ovarian cancer. But I'm not 19 sure if that's answers the question that you are... 20 Q Well, if I had more time, we would discuss 21 that at greater length. You're familiar with the 22 term "confounding" is that right? 23 A I -- I -- Yes, I'm -- 24 Q All right. 25 A -- familiar with that term.</p>

16 (Pages 302 to 305)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 306</p> <p>1 Q Confounding is where the presence of 2 another association confuses the relationship 3 between the exposure and the disease being studied; 4 is -- is that right? 5 A Yes. 6 Q Confounding can distort results in 7 epidemiological studies; is that right? 8 A Yes. 9 Q Would you agree that residual confounding 10 is possible in every observational study? 11 A Yes. 12 Q It's also -- strike that. 13 It's possible that unmeasured confounders 14 may be present in every observational study, 15 correct? 16 A Yes. 17 Q It's impossible to say that all known and 18 unknown confounding factors have been controlled for 19 in any given study; is that right? 20 A Yes. 21 Q Would you agree that there are new factors 22 that are being discussed that are possibly involved 23 with ovarian cancer that are just being published in 24 the literature such as a history of chlamydia 25 infection and a history of weight gain during</p>	<p style="text-align: right;">Page 308</p> <p>1 is unavoidable in this type of summary. The large 2 difference in general between adjusted and crude 3 results emphasizes the importance of adjustments 4 when estimating particular risk? 5 THE COURT REPORTER: When estimating? 6 MR. ZELLERS: Particular risk. 7 A Are you asking what I meant by that? 8 Q (BY MR. ZELLERS) Yes. What did you mean 9 by that? 10 A Okay. I -- I would say my sentence is not 11 as clear as it should have been. What I mean -- and 12 I'm not really sure why I pointed this out just for 13 Berge -- it's really a general -- is that the 14 studies they included, adjusted for different 15 covariates. 16 They didn't all adjust for the same 17 covariates. So a variety of covariates, meaning 18 they didn't all adjust for the exact same 19 covariates. 20 But this is unavoidable in this type of 21 study. So I was just saying that some of the 22 included studies adjusted for A, B and C; and others 23 were adjusted for B, C, and D; and others D, E, and 24 F. 25 Q Huncharek, page 26. Do you see that</p>
<p style="text-align: right;">Page 307</p> <p>1 adolescence? 2 MS. O'DELL: Object to the form. 3 A Chlamydia infection would be the most 4 common infection of PID, and so that's something 5 that I just mentioned. I'm not sure that that's 6 such a new one. 7 And weight gain during adolescence is 8 something that's of interest across a range of 9 cancers, like breast cancer. I don't know it 10 personally around ovarian cancer, but... 11 Q (BY MR. ZELLERS) Those factors that we 12 just talked about generally have not been controlled 13 for in any of the published talcum powder ovarian 14 cancer studies; is that right? 15 A I -- the PID, I -- I think, has it in a 16 paper or two. And -- and the weight gain, I -- I 17 don't -- I have never seen that one. 18 Q We talked yesterday about the Berge study. 19 Do you remember that? 20 A I do. 21 Q And you talk about Berge on page 25 of 22 your report. 23 What do you mean when you say, A second 24 limitation of Berge is that the included studies 25 adjusted for a variety of covariates, although this</p>	<p style="text-align: right;">Page 309</p> <p>1 reference where you talk about that study? 2 A Yes. 3 Q You say that the difference between a 4 relative risk of 1.19 and 1.38 is small; is that 5 right? 6 MS. O'DELL: You're talking about 2007 or 7 2003? 8 Q (BY MR. ZELLERS) Whichever -- 9 A Which page? 10 Q -- so page 26 -- 11 MS. O'DELL: They're both on the same 12 page. 13 Q (BY MR. ZELLERS) I think I'm looking at 14 the one at the bottom. 15 MS. O'DELL: Okay. All right. 2003? 16 MR. ZELLERS: Yes. 17 Q (BY MR. ZELLERS) So are you with me? Are 18 you looking at your last couple of lines there on 19 page 26? 20 A Yes. 21 Q And you do say that the difference between 22 a relative risk of 1.19 and 1.38 is small; is that 23 right? 24 A It -- odds ratios -- 25 Q Yeah.</p>

17 (Pages 306 to 309)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 310</p> <p>1 A -- but yes.</p> <p>2 Q All right. And -- and so a difference in</p> <p>3 odds ratios of .19, you would consider that to be a</p> <p>4 small difference?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A You're asking why I said those differences</p> <p>7 are small?</p> <p>8 Q (BY MR. ZELLERS) No. Well, what I guess</p> <p>9 what I want to know is: Would you agree that the</p> <p>10 difference between an odds ratio of 1.0 and 1.2 is</p> <p>11 small?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 A I think the question of whether or not you</p> <p>14 have a difference of absolute odds of .2 along</p> <p>15 different values means the same thing. And I would</p> <p>16 say it doesn't mean the same thing.</p> <p>17 So if you have an odds ratio as an example</p> <p>18 of 4.7 versus 4.9, they're kind of the same number.</p> <p>19 If you have a number that's 1.0 versus 1.2, those</p> <p>20 are not the same number.</p> <p>21 So I don't think you would want to assume</p> <p>22 the shift in the absolute magnitude of the</p> <p>23 difference in odds. I often published difference in</p> <p>24 odds ratios of .2 is stable.</p> <p>25 But I think is -- your point is well taken</p>	<p style="text-align: right;">Page 312</p> <p>1 A Yeah.</p> <p>2 Q -- yesterday?</p> <p>3 A So the most important -- as it points out</p> <p>4 here in -- in Huncharek, the next sentence of where</p> <p>5 we are, is that this review looked at any exposure</p> <p>6 rather than quantifying.</p> <p>7 And I think the primary concern that I had</p> <p>8 was that any exposure is a very vague definition.</p> <p>9 And I thought it was much more important to have a</p> <p>10 meaningful measure of exposure.</p> <p>11 So the studies that I primarily included</p> <p>12 were ones that had quantification of the exposure,</p> <p>13 but also had some other requirements.</p> <p>14 I -- I -- I want to say that my systematic</p> <p>15 review was one piece of the information that I</p> <p>16 considered, but my summary estimate in the</p> <p>17 systematic review that I completed had the same</p> <p>18 conclusion as all these other systematic reviews.</p> <p>19 In the ballpark, it just gave me greater</p> <p>20 confidence that we were truly looking at regular</p> <p>21 exposure rather than any exposure.</p> <p>22 Now, we know that the most common exposure</p> <p>23 is regular exposure. That's the -- the more</p> <p>24 important -- most common.</p> <p>25 Q Take a look at page 39 in your report</p>
<p style="text-align: right;">Page 311</p> <p>1 that that's not a trivial difference. I was just</p> <p>2 saying in the context of a systematic review, those</p> <p>3 are both very strong, positive associations, and</p> <p>4 that's a relatively minor difference.</p> <p>5 Q (BY MR. ZELLERS) An odds ratio range of</p> <p>6 1.19 to 1.38 is much closer to an odds ratio of 1.0</p> <p>7 to 1.2 than it is to an odds ratio of 4.5 to 4.7,</p> <p>8 correct?</p> <p>9 A I -- I think that's a valid -- a valid</p> <p>10 comparison.</p> <p>11 Q On page 26, 27, there's a carryover there,</p> <p>12 but you state that the population controls are more</p> <p>13 likely relevant and valid than hospital controls.</p> <p>14 What's your support for that?</p> <p>15 A It's what we discussed earlier. I -- I</p> <p>16 think population-based controls are -- are better</p> <p>17 than hospital-based controls.</p> <p>18 Q With respect to your systematic review,</p> <p>19 did you attempt to identify gaps or flaws in the</p> <p>20 underlying studies?</p> <p>21 A I reviewed the individual studies and set</p> <p>22 forth criteria that I thought were required for</p> <p>23 inclusion.</p> <p>24 Q What were those criteria? Are those</p> <p>25 contained in your forms that we talked about --</p>	<p style="text-align: right;">Page 313</p> <p>1 where you discuss temporality; is that right?</p> <p>2 A Yes.</p> <p>3 Q You say that women may use talc when</p> <p>4 undergoing ovarian cancer treatment.</p> <p>5 Do you see that?</p> <p>6 A Yes.</p> <p>7 Q What is your support for that or what is</p> <p>8 that statement based on?</p> <p>9 A I -- I think it's based on my clinical</p> <p>10 experience that postop patients often will use</p> <p>11 talcum powder products for systematic relief of</p> <p>12 symptoms that could be related to the surgical</p> <p>13 procedure itself.</p> <p>14 Q All right. Asbestos. Are your opinions</p> <p>15 in this case dependent on talcum powder containing</p> <p>16 asbestos?</p> <p>17 A No, they're not.</p> <p>18 Q Are your opinions in this case dependent</p> <p>19 on talcum powder containing trace amounts of metals?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 A No, they're not.</p> <p>22 Q (BY MR. ZELLERS) Are your opinions in this</p> <p>23 case dependent upon talcum powder containing any</p> <p>24 particular fragrance chemical?</p> <p>25 A No, they're not.</p>

18 (Pages 310 to 313)

Rebecca Smith-Bindman, M.D.

Page 314	Page 316
<p>1 Q Do you believe that talcum powder, which 2 does not contain asbestos, causes ovarian cancer? 3 A I don't have any data on which to conclude 4 based on epidemiologic evidence that there is such a 5 product, so I don't know that there is any product 6 that has been studied that doesn't contain asbestos 7 and fibrous talc. 8 I think in a laboratory setting, people 9 have studied products that they describe as being 10 asbestos free, and those products do cause cellular 11 damage. 12 But from an epidemiologic perspective, 13 which is primarily the data I looked at, all of the 14 products that have been studied, I believe contain 15 asbestos and fibrous talc. 16 Q You have made an assumption or it is your 17 belief that all talcum powder products contain 18 asbestos; is that right? 19 MS. O'DELL: Object to the form. 20 A My belief is that many talcum powder 21 products contain asbestos or -- 22 Q (BY MR. ZELLERS) If -- 23 A -- fibrous. 24 Q -- if your assumption about contamination 25 of talcum powder products with asbestos were not</p>	<p>1 A I -- I haven't seen any. 2 Q (BY MR. ZELLERS) Have you requested any? 3 MS. O'DELL: Object to the form. There 4 have been no defense expert reports in this case. 5 MR. ZELLERS: Counsel, please object to 6 form. There have been many defense expert reports 7 in the talcum powder litigation generally. 8 But my question was whether or not she has 9 seen anything, so she can -- I think she has already 10 answered. 11 Q (BY MR. ZELLERS) Is that right? Have you 12 answered the question? 13 MS. O'DELL: Object to the form. 14 A I have asked to see reports. No. I have 15 asked to see testing results. I have not asked to 16 see reports. 17 Q (BY MR. ZELLERS) Have you seen testing 18 results from the FDA and its testing of talcum 19 powder? 20 A I have. 21 Q The FDA did some testing in 2010. Did you 22 see those results? 23 A I did. 24 MS. O'DELL: Do you need a break or are 25 you good or --</p>
Page 315	Page 317
<p>1 true, would that change your opinions in this case? 2 MS. O'DELL: Object to the form. 3 A In -- in this case, it would not. I -- 4 I -- the epidemiologic evidence is very strong that 5 exposure to talcum powder products, whatever it 6 contains, is carcinogenic. 7 Q (BY MR. ZELLERS) You have looked at 8 several reports from Dr. Longo; is that right? 9 A I have. 10 Q You're aware he is a paid litigation 11 expert; is that right? 12 A Yes, I am. 13 Q You're aware he wrote his reports for the 14 purpose of this litigation and that those reports 15 have not been published; is that right? 16 A I -- I know that he has generated a report 17 for this, yes. 18 Q Do you know if any defense ex -- strike 19 that. 20 Do you know if any defense experts have 21 addressed or responded to Dr. Longo's litigation 22 reports? 23 MS. O'DELL: I would object to the form. 24 There's been no defense reports in this case, as you 25 know.</p>	<p>1 A I actually would love a -- a break. I 2 don't mind going a few more minutes, if that would 3 be good or -- but otherwise, I would love a break. 4 MS. O'DELL: Whenever is a good time. 5 MR. ZELLERS: Sure. I'll just finish 6 this. 7 Q (BY MR. ZELLERS) I'll hand you the 8 exhibit, Exhibit 32. 9 (Exhibit 32 was marked for identification 10 and is attached to the transcript.) 11 Q (BY MR. ZELLERS) Is that -- 12 A Thank you. 13 Q -- the -- at least some of the testing by 14 the FDA that you have seen? 15 A Yes, it is. 16 Q That testing was done by an independent 17 laboratory; is that right? 18 A I -- I -- I don't know that, but I believe 19 you. 20 Q Take -- 21 MS. O'DELL: Do you have a copy for me? 22 MR. ZELLERS: Oh, I'm so sorry. I have 23 that, yes. Sorry. 24 MS. O'DELL: Thanks. 25 Q (BY MR. ZELLERS) If you go to the second</p>

19 (Pages 314 to 317)

Rebecca Smith-Bindman, M.D.

Page 318	Page 320
<p>1 page, the second paragraph, We contracted with AMA 2 Analytical Services of Lanham, Maryland, to conduct 3 this laboratory service -- or strike that -- survey. 4 Do you see that? 5 A I don't. I'm on the right page. 6 Q On the second page. 7 A The second page. 8 Q The second paragraph, the second -- 9 A Yes. 10 Q -- sentence -- 11 A -- yes. Yes. Thank you. 12 Q All right. 13 A Yes. 14 Q And at least based upon this report, no 15 asbestos was detected in the talcum powder that was 16 tested; is that right? 17 A In the reports that they show, which 18 might -- my understanding is that they had two 19 samples of baby powder, talcum powder in this. And 20 that in those two specimens using the testing method 21 they used, they didn't find evidence of asbestos. 22 MR. ZELLERS: All right. Let's take a 23 break. 24 THE VIDEOGRAPHER: The time is 10:47 a.m. 25 We are now off the record.</p>	<p>1 would like -- she edits all of my publications 2 before I submit them. 3 Q (BY MR. ZELLERS) When we left the last 4 session, I asked you about asbestos and whether or 5 not asbestos is contained in talcum powder. 6 Is there any amount of asbestos that would 7 be safe in talcum powder products? 8 A And the simple answer would be no, I don't 9 think there's any amount that would be safe in 10 talcum powder products. 11 Q All right. Is there any amount of trace 12 metals that would be safe in talcum powder products? 13 MS. O'DELL: Object to the form. 14 A I believe there would be amounts of trace 15 metals that would be acceptable. 16 Q (BY MR. ZELLERS) Are there any amounts of 17 fragrance chemicals that would be safe in talcum 18 powder products? 19 A I believe there would be in certain 20 categories. And in others, there would not. 21 Q There have been no fragrance chemicals, to 22 your knowledge, that have been found in a study to 23 be associated with ovarian cancer, correct? 24 MS. O'DELL: Object to the form. 25 A I -- I know of no -- no such exploration.</p>
Page 319	Page 321
<p>1 (A break was taken from 10:47 a.m. to 1 2 11:00.) 3 THE VIDEOGRAPHER: It's 11:00 a.m. We are 4 now back on the record. Here begins Media No. 2 of 5 the deposition of Dr. Rebecca Smith-Bindman, Ph.D., 6 Volume II. 7 Q (BY MR. ZELLERS) Dr. Smith-Bindman, I was 8 handed the invoice for Chris Tachibana, which we 9 have marked as Exhibit 33. 10 (Exhibit 33 was marked for identification 11 and is attached to the transcript.) 12 Q (BY MR. ZELLERS) Is that the invoice that 13 your copy editor provided to you? 14 A Yes. 15 Q Are there any other invoices that you have 16 received from her? 17 A No. 18 Q Do you expect there to be any other work 19 that Ms. Tachibana does with respect to your report? 20 A Not with respect to my report. 21 If I move ahead to publish these results, 22 then I would likely reach out to her to help -- as 23 well. 24 THE COURT REPORTER: To help? 25 A If we choose to publish the results, I</p>	<p>1 Q (BY MR. ZELLERS) Do you have an opinion on 2 what type of asbestos is in talcum powder products? 3 A I believe asbestos is sort of a family of 4 chemicals. I think there are six that kind of get 5 grouped together. I think all of them have been 6 identified in talcum powder products, but I don't 7 know the distribution of the different kinds. 8 Q What type of asbestos is associated with 9 ovarian cancer? And by that question, you believe 10 that there's six subtypes of asbestos -- 11 MS. O'DELL: Object to the form. 12 Q (BY MR. ZELLERS) -- is that generally your 13 understanding? 14 A It's generally my understanding. 15 Q Are -- are you able to give us any 16 opinions with respect to what type or types of 17 asbestos is associated with ovarian cancer? 18 A The -- the strongest summary of the 19 relationship that I know about is in the IARC 2012 20 reports. 21 And those are from a number of different 22 studies, including some cohort studies and case 23 control studies. 24 To my knowledge, I don't know that they 25 have divided them by the type of mineral silicate</p>

20 (Pages 318 to 321)

Rebecca Smith-Bindman, M.D.

Page 322	Page 324
<p>1 fibers that were in those studies.</p> <p>2 Q What amount of asbestos exposure is</p> <p>3 associated with ovarian cancer?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 A To the best of my knowledge, the amount</p> <p>6 that's contained within talc powder products is</p> <p>7 probably associated with -- the amount that's in</p> <p>8 there is probably the -- cancer.</p> <p>9 Q (BY MR. ZELLERS) Can you be any more</p> <p>10 definitive?</p> <p>11 A The talcum powder products that women have</p> <p>12 used is associated with ovarian cancer. And I</p> <p>13 believe that to know how much asbestos it takes to</p> <p>14 cause cancer, the easiest way to answer that is to</p> <p>15 quantify how much asbestos is within the --</p> <p>16 the powder products.</p> <p>17 So I'm not in any way an expert on this.</p> <p>18 But in the Longo report, it talked about an average</p> <p>19 of 50,000 particles of asbestos being in each</p> <p>20 gram of -- on average in each gram of baby powder</p> <p>21 products.</p> <p>22 And he estimates that in a container, that</p> <p>23 would be millions of particles, which seems like a</p> <p>24 large number to me, but -- so I don't know the</p> <p>25 amount that would be required to be carcinogenic,</p>	<p>1 A I did not.</p> <p>2 Q Would you agree that research on the</p> <p>3 potential relationship between asbestos and ovarian</p> <p>4 cancer has only considered a small number of cases?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A I think the IARC review on the</p> <p>7 occupational exposures to asbestos had quite a</p> <p>8 number of cancers, but I would have to go back to</p> <p>9 those studies to remember the number.</p> <p>10 Q (BY MR. ZELLERS) Did you review the Reid</p> <p>11 2011 study?</p> <p>12 A I believe that's one that I -- I reviewed.</p> <p>13 Q Do you need me to hand that to you if --</p> <p>14 A Yes --</p> <p>15 Q -- ask you a couple of questions about it?</p> <p>16 A -- please.</p> <p>17 Q Now, in the Reid 2011 paper, which we will</p> <p>18 mark as Exhibit 34 --</p> <p>19 A And is that one of the studies that</p> <p>20 Camargo included in -- I think it is -- in his</p> <p>21 systematic review? Yeah. So this is a different</p> <p>22 systematic review.</p> <p>23 (Exhibit 34 was marked for identification</p> <p>24 and is attached to the transcript.)</p> <p>25 Q (BY MR. ZELLERS) Do you recognize</p>
Page 323	Page 325
<p>1 but that's the amount that they were exposed to that</p> <p>2 was carcinogenic.</p> <p>3 Q What type of ovarian cancer is asbestos</p> <p>4 associated with?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A I think the most stable estimate of the</p> <p>7 association of talcum powder products with ovarian</p> <p>8 cancer is for all ovarian cancer and the</p> <p>9 meta-analysis that others did. And my summary</p> <p>10 estimate was for all ovarian cancer -- epithelial</p> <p>11 ovarian cancer, I should say.</p> <p>12 In my more limited review, I focused on</p> <p>13 serous cancer, because I think as the most common</p> <p>14 cancer -- the most common invasive cancer, it's the</p> <p>15 one where there's enough statistical power to</p> <p>16 quantify the association, so I think the data are</p> <p>17 the most compelling for serous ovarian cancer.</p> <p>18 But the overall meta-analysis looks at any</p> <p>19 cancer, and that's what we did as well.</p> <p>20 Q You -- you looked at talcum powder,</p> <p>21 correct?</p> <p>22 A Talcum powder products, yes.</p> <p>23 Q You did not undertake a Bradford Hill</p> <p>24 analysis of the literature on asbestos and ovarian</p> <p>25 cancer, correct?</p>	<p>1 Exhibit 34?</p> <p>2 A No.</p> <p>3 Q Okay. Well, Exhibit 34 is a study and --</p> <p>4 and a review by the first named author, Allison</p> <p>5 Reid.</p> <p>6 "Does Exposure to Asbestos Cause Ovarian</p> <p>7 Cancer?"</p> <p>8 A I -- I have seen this paper.</p> <p>9 Q All right.</p> <p>10 A I'm sorry. I didn't remember. So sorry.</p> <p>11 Q If you look at her conclusions -- or the</p> <p>12 author's conclusions on the right-hand side of the</p> <p>13 first page -- so I'm --</p> <p>14 A Yes.</p> <p>15 Q -- looking right here --</p> <p>16 A Yes.</p> <p>17 Q -- the relationship between asbestos</p> <p>18 exposure and ovarian cancer is not well</p> <p>19 understood -- is not as well understood as -- as</p> <p>20 that of asbestos-related diseases. Studies that</p> <p>21 have examined this issue have been limited for two</p> <p>22 major reasons.</p> <p>23 No. 1, there's a small number of cases.</p> <p>24 And No. 2, there's difficulties with diagnosis and</p> <p>25 specifically distinguishing between peritoneal</p>

21 (Pages 322 to 325)

Rebecca Smith-Bindman, M.D.

Page 326	Page 328
<p>1 mesothelioma and ovarian cancer; is -- is that 2 right? 3 MS. O'DELL: Object to the form. 4 A So this -- those are the conclusions that 5 she makes. But I -- I want just to explain what she 6 means by "small number of cases." 7 She's comparing it to the number of men 8 exposed to asbestos. Just there -- there are many 9 more men exposed to asbestos than -- than women 10 exposed to asbestos. 11 So I think -- I mean, I -- I think it's a 12 challenge, but I -- wouldn't say that there are a 13 small number of cases. 14 MR. ZELLERS: Move to strike as 15 nonresponsive. 16 Q (BY MR. ZELLERS) Would you agree that most 17 of the studies that have been done and the data that 18 exists relates to occupational exposure of asbestos 19 and ovarian cancer? 20 A Yes. I -- 21 Q All right. 22 A -- yes. 23 Q You looked at the Camargo paper 2011; is 24 that right? 25 A Yes.</p>	<p>1 author state, Further limitation of our analysis was 2 its inability to account for nonoccupational risk 3 factors for ovarian cancer other than age? 4 A Yes, I do see that. 5 Q On page 25 -- I'm sorry -- 1215. So the 6 page before the second paragraph under "Discussion," 7 they talk about Edelman 1992; is that right? 8 A Yes. 9 Q And the authors state, They concluded, 10 however, that despite the positive and significant 11 association, there was insufficient information to 12 infer that ovarian cancers were caused by 13 occupational exposure to asbestos -- 14 A I -- I'm sorry. I -- 15 Q Sure. 16 A -- I -- I'm lost. Where are we? 17 Q Okay. So do you see under "Discussion" -- 18 A Yes. 19 Q -- the second paragraph -- 20 A Yes. 21 Q -- I believe the second sentence? It 22 says, They concluded. 23 Are you with me? 24 A Yes. They are describing another 25 meta-analysis --</p>
Page 327	Page 329
<p>1 Q That study points out that there's an 2 inability to account for nonoccupational risk 3 factors for ovarian cancer in these studies other 4 than age; is that right? 5 MS. O'DELL: If -- if you remember. If 6 you need to see -- 7 A I -- I don't remember. 8 Q (BY MR. ZELLERS) All right. Do you have 9 the Camargo paper in front -- 10 A I -- 11 Q -- of you or would you like me to give it 12 to you? 13 A -- please. 14 Q Camargo 2011, we will mark as deposition 15 Exhibit 35. 16 (Exhibit 35 was marked for identification 17 and is attached to the transcript.) 18 A Thank you. 19 Q (BY MR. ZELLERS) Do you have that in front 20 of you now? 21 MS. O'DELL: Thank you. 22 A Yes, I do. 23 Q (BY MR. ZELLERS) Camargo. Take a look, if 24 you will, you know, on page 1216. The second 25 paragraph above "Conclusion," does Camargo and the</p>	<p>1 Q Yes. 2 A -- they concluded, yes. 3 Q This -- this is a review of different meta 4 -- 5 A Yeah. 6 Q -- analyses; is that right? 7 A Yes. 8 Q And they're describing Edelman 1992. And 9 they state, They concluded, however, that despite 10 the positive and significant association, there was 11 insufficient information to infer that ovarian 12 cancers were caused by occupational exposure to 13 asbestos because of concerns about tumor 14 misclassification, inappropriate comparison 15 populations, and the failure to take into account 16 for known risk factors. 17 Is that right? 18 A You're reading from Camargo, who is 19 quoting from a discussion by Edelman, so that -- 20 that's what it says. I -- I don't -- I don't know 21 that that's what Edelman says, but -- but yes, 22 that's the... 23 Q Wouldn't you expect to find higher rates 24 of other cancers in women using talc, like 25 mesothelioma, if they are being exposed to</p>

22 (Pages 326 to 329)

Rebecca Smith-Bindman, M.D.

Page 330	Page 332
<p>1 substantial amounts of asbestos? 2 MS. O'DELL: Object to the form. 3 A I -- I'm confused. I'm confused. Are you 4 saying women exposed to asbestos are not getting 5 mesothelioma? 6 Q (BY MR. ZELLERS) Well, let me ask it this 7 way: Are -- are women who use talc in the perineal 8 region at greater risk of mesothelioma? 9 A I do not know studies that have said that. 10 Q Are women who use talc in the perineal 11 region at greater risk of asbestosis? 12 A In the lungs? 13 Q Yes. 14 A I -- I do not know those studies. 15 Q With respect to fragrance chemicals, you 16 have no evidence that the blood or tissue levels of 17 any trace metals are higher in genital talc users 18 compared to nonusers, correct? 19 A I -- I don't know that literature at all. 20 Q And you have no knowledge as to either the 21 amount or concentration of different fragrance 22 chemicals in the baby powder, correct? 23 A I -- I do not. 24 MR. ZELLERS: Okay. I have no further 25 questions. My colleagues may have some questions.</p>	<p>1 Q Okay. So when -- if you answered a 2 question, is it because you believe you understood 3 it and that you felt able to answer it? 4 A Yes. 5 MS. O'DELL: Object to the form. 6 Q (BY MS. BOCKUS) Okay. So before being 7 hired in this case, you had not really looked at the 8 association between talc and ovarian cancer; is that 9 fair? 10 A That's correct. 11 Q The person who wrote to you first, do you 12 remember if it was a male or a female, the attorney? 13 A I think it was a women. 14 Q Okay. And have you -- tell me what search 15 you have done to locate that person's name. 16 A I could probably search some more. I -- 17 I -- my correspondence with these lawyers that I 18 have a document of on my computer is from July. 19 But Mike reminded me that I must have met 20 with them in June. So I could go through -- there 21 are ways I can access older e-mails to look if 22 that's important to you. I'm happy to try and find 23 that person. 24 Q I just was curious. There -- because you 25 have nothing in the published literature about the</p>
Page 331	Page 333
<p>1 MS. BOCKUS: Could we go off the record 2 for just a minute to move the microphone down? 3 THE VIDEOGRAPHER: The time is 11:16 a.m. 4 We are off the record. 5 (A break was taken from 1:16 a.m. to 11:17 6 a.m.) 7 THE VIDEOGRAPHER: The time is 11:17 a.m 8 we are now back on the record. 9 EXAMINATION BY COUNSEL FOR THE DEFENDANTS 10 BY MS. BOCKUS: 11 Q Good morning, Doctor. I introduced myself 12 yesterday, I hope. I'm not sure I did. I'm Jane 13 Bockus. I represent Imerys in this matter. 14 How are you feeling today? 15 A I'm good. Thank you. 16 Q Have you gone back to work full time since 17 your skiing accident? 18 A I am primarily a researcher, so I get to 19 choose my own hours. So I have gone back to work 20 full time, but I often leave work a little earlier 21 and take a rest. 22 Q Has your injury from your skiing accident 23 affected your ability to answer all the questions 24 you have been asked in the last day and a half? 25 A It has not.</p>	<p>1 etiology of ovarian cancer, correct? 2 A I do not. And I will tell you I asked the 3 person who contacted me what the case was about, was 4 it an area of my expertise. 5 And the person who contacted me, I think, 6 was someone who knew of me from another case. And 7 it was my researching abilities, not my content 8 expertise, that led her to reach out to me. 9 Q Okay. So it was with the understanding 10 that you would start a whole new area of research in 11 order to answer the question; is that correct? 12 MS. O'DELL: Object to the form. 13 A Yes. 14 Q (BY MS. BOCKUS) Okay. In fact, when you 15 appeared before congress, you stated that you're a 16 clinical radiologist and you conduct research 17 focusing on -- or focused on assessing the risk and 18 benefits of medical imaging, correct? 19 A If -- if you have my testimony there, I'm 20 going to believe you. 21 Q And when you have given interviews or have 22 written opinion pieces, you identify yourself as 23 primarily a radiologist who focuses on evaluating 24 the risks and benefits of medical imaging, correct? 25 MS. O'DELL: Object to the form.</p>

23 (Pages 330 to 333)

Rebecca Smith-Bindman, M.D.

Page 334	Page 336
<p>1 A So I have given a lot of interviews, and I 2 often identify as a professor of epidemiology and 3 biostatistics. I'm not sure what interview that you 4 are looking at. 5 I often -- often introduce myself as a 6 professor of obstetrics, gynecology, and 7 reproductive sciences. 8 And my guess is that whomever is 9 publishing the interview will choose to present me 10 in a way that they think highlights my skill. 11 But -- but my -- I'm a professor in 12 radiology and epidemiology and biostatistics, 13 obstetrics, gynecology, and a member of the Philip 14 R. Lee Institute for Health Policies Studies. 15 So I -- I get presented with whichever of 16 those first the presenter thinks might highlight my 17 expertise. 18 Q Are you board-certified in obstetrics and 19 gynecology? 20 A I'm not. 21 Q The Bradford Hill criteria, the first 22 consideration is the "strength of the association"; 23 is that correct? 24 A First criteria? Yes. 25 Q What do you consider to be a strong</p>	<p>1 about a quantitative association, but rather, the 2 biases and legitimacy of the association. 3 Q Are you familiar with the text "Analysis 4 of Case-Control Studies" by Breslow and Day? 5 A I -- I -- yes. 6 Q Do you find that to be a reliable text on 7 the subject of the analysis of case-control studies? 8 MS. O'DELL: Object to the form. 9 A I -- I don't know that chapter or section 10 enough to answer that question without looking at 11 it. 12 Q (BY MS. BOCKUS) But you're familiar with 13 their work? 14 A Yes. 15 Q And they're well-respected 16 epidemiologists? 17 A Yes. 18 MS. O'DELL: Object to the form. 19 Q (BY MS. BOCKUS) You make a statement in 20 your report on page 12 that the most widely accepted 21 mechanism for initiation, promotion, and progression 22 of ovarian cancer is tissue inflammation leading to 23 a series of responses that result in cancer. 24 And you have talked about that sentence a 25 bit with Mr. Zellers already.</p>
Page 335	Page 337
<p>1 association? 2 A So it overlaps a little bit with the 3 second concept of Bradford Hill in the consistency 4 of -- of the data. 5 But where the association is meaningfully 6 and legitimately documented across study designs and 7 patient populations such that the association is 8 believable and meaningful, not necessarily 9 associated with a particular point estimate of 10 association, if that's the question. 11 I don't have any particular number. It's 12 rather the entirety of the relationship, that it's a 13 meaningful quantifiable association. 14 Q Do you teach epidemiology? 15 A I do. 16 Q Can you identify textbooks that you find 17 reliable on the subject of epidemiology? 18 A The textbook that I often use to teach 19 epidemiology is a book -- I -- I'm not sure if the 20 authorship has changed over the years, but by holly 21 Cummings that talks about principles of 22 epidemiology. It's sort of the clearest version 23 that I know. 24 And -- and they -- and I haven't looked 25 this particular question up, but they wouldn't talk</p>	<p>1 Did you do a survey of the literature to 2 determine what was the most widely accepted 3 mechanism for initiation of ovarian cancer? 4 A I did. 5 Q And did you do a survey of the cancer 6 biology literature? 7 MS. O'DELL: Object to the form. 8 A What was the first literature you asked me 9 about? 10 Q (BY MS. BOCKUS) The literature that 11 supported your statement that the most widely 12 accepted mechanism was inflammation. 13 And you said you did a survey on the 14 inflammation literature -- or I mean on the 15 etiology -- let me start all over again. 16 Have you done a survey on articles that 17 discuss the likely mechanism for the etiology of 18 ovarian cancer? 19 A Yes, I have . 20 Q Have you -- have you -- did your survey 21 include the literature on the cancer biology -- 22 A Yes. 23 Q -- of -- 24 A Yes, it did. 25 Q -- of ovarian cancer?</p>

24 (Pages 334 to 337)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 338</p> <p>1 A Yes, it did.</p> <p>2 Q And did you find that as the issue of</p> <p>3 inflammation as an initiator of ovarian cancer is</p> <p>4 not a settled question?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A I -- I would acknowledge that -- that none</p> <p>7 of it is settled. It's just the most widely</p> <p>8 accepted, most widely supported, most wide -- widely</p> <p>9 enhanced view supported by the data, but I don't</p> <p>10 think the issue is settled.</p> <p>11 Q (BY MS. BOCKUS) In fact, there's still</p> <p>12 considerable research going on on the subject --</p> <p>13 A Yes --</p> <p>14 Q -- correct?</p> <p>15 A -- I think there is.</p> <p>16 Q In the next paragraph you talk about, for</p> <p>17 example, this is the middle -- there are</p> <p>18 well-described and accepted causal pathways</p> <p>19 linking in -- linking inflammation to bladder</p> <p>20 cancer, gastric cancer, colon cancer, et cetera.</p> <p>21 You would agree and you identify the</p> <p>22 inflammatory sometimes virus or whatever that's --</p> <p>23 that's well described and accepted for all of the</p> <p>24 different cancers that you list there, correct?</p> <p>25 For example, you identify toxic chemicals</p>	<p style="text-align: right;">Page 340</p> <p>1 with body powder use and ovarian cancer, correct?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 A I -- I'm going to go back to say that I --</p> <p>4 I don't know what the strength of the association is</p> <p>5 with -- with these individual cancers.</p> <p>6 I -- I don't know if it's a 20 percent</p> <p>7 increase or a 500 percent increase, except for the</p> <p>8 one that I gave the example of of bladder cancer.</p> <p>9 So for bladder cancer, I gave two examples</p> <p>10 that cause inflammation of the bladder. One being</p> <p>11 toxic chemicals and the second being cigarette</p> <p>12 smoking.</p> <p>13 The toxic chemicals have a very strong</p> <p>14 relative risk of 200 or 300, where I think smoking</p> <p>15 has a relative risk of more like 1.3.</p> <p>16 And so I -- I -- I don't know it for these</p> <p>17 other cancers. But at least for bladder cancer,</p> <p>18 which I think is -- I think the second most common</p> <p>19 cancer and cigarette smoke is -- I think the</p> <p>20 association in the ballpark of 1.3.</p> <p>21 I think I have it in here. But -- so for</p> <p>22 most of these, I don't know what that number is.</p> <p>23 MS. BOCKUS: I'm going to object as</p> <p>24 nonresponsive.</p> <p>25 Q (BY MS. BOCKUS) Because the question I</p>
<p style="text-align: right;">Page 339</p> <p>1 for the etiology of bladder cancer, correct?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 Q (BY MS. BOCKUS) Do you see where I'm</p> <p>4 reading?</p> <p>5 A I -- I don't see where you're reading</p> <p>6 exactly, but -- but I agree with you that I have</p> <p>7 given examples where we know the cause of the</p> <p>8 inflammation for many of those cancers.</p> <p>9 Q (BY MS. BOCKUS) You would agree that there</p> <p>10 is no equivalent literature linking ovarian cancer</p> <p>11 to talcum powder use, correct?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 A I think there's a strong literature on</p> <p>14 components of the analysis. But I think for several</p> <p>15 of the examples I have given, the data are a little</p> <p>16 bit clearer and further along.</p> <p>17 So path -- HPV and cervical cancer has a</p> <p>18 longer historical data collection period when we</p> <p>19 have them --</p> <p>20 Q (BY MS. BOCKUS) And --</p> <p>21 A -- identified. So I think that's your</p> <p>22 question.</p> <p>23 Q -- so the strength of the association</p> <p>24 between HPV virus and cervical cancer is much, much</p> <p>25 stronger than any association that's been reported</p>	<p style="text-align: right;">Page 341</p> <p>1 asked was about the HPV virus and cervical cancer --</p> <p>2 A I don't --</p> <p>3 Q -- correct?</p> <p>4 A -- know the -- the relative --</p> <p>5 Q All right.</p> <p>6 A -- risk for that. But I -- I thought I</p> <p>7 said the only one I do know is the bladder cancer</p> <p>8 numbers.</p> <p>9 Q Has your methodology in determining what</p> <p>10 studies to include and what studies to exclude been</p> <p>11 peer reviewed in any way, shape, or form?</p> <p>12 A It has not.</p> <p>13 Q Has your math --</p> <p>14 A Oh, I'm sorry. Has my methodology been</p> <p>15 peer reviewed?</p> <p>16 Q In -- in this particular case, the method</p> <p>17 --</p> <p>18 A Okay. The method has been peer reviewed.</p> <p>19 But in this particular case, it has not.</p> <p>20 Q So no one has looked over your report and</p> <p>21 determined whether your decision -- and as I</p> <p>22 understand it, it was your decision alone, correct,</p> <p>23 as to whether to include data from a particular</p> <p>24 study or not --</p> <p>25 A Again --</p>

25 (Pages 338 to 341)

Rebecca Smith-Bindman, M.D.

Page 342	Page 344
<p>1 Q -- and --</p> <p>2 A -- it was a decision between myself and</p> <p>3 the -- and -- and -- and Dr. Hall --</p> <p>4 Q So --</p> <p>5 A -- just the two of us.</p> <p>6 Q -- okay. So did Dr. Hall participate in</p> <p>7 the decision-making process as to which of the</p> <p>8 case-control studies and the cohort studies to</p> <p>9 include and which to exclude?</p> <p>10 A It -- so it's -- it's a -- the answer is</p> <p>11 partly and partly not.</p> <p>12 So in terms of whether the studies were</p> <p>13 included in the final analysis, Dr. Hall was</p> <p>14 involved in that decision.</p> <p>15 But in terms of setting up the question to</p> <p>16 begin with, she was not involved in that. I -- I</p> <p>17 set that up.</p> <p>18 Q So other than you and Dr. Hall, has anyone</p> <p>19 been involved in the process of determining which</p> <p>20 studies were going to be involved -- in -- were</p> <p>21 going to be included in your systematic review and</p> <p>22 which were not?</p> <p>23 A Nobody else.</p> <p>24 Q Okay. And has anyone other than you and</p> <p>25 Dr. Hall even checked your work for transcription</p>	<p>1 Q Would you agree that you're -- at this</p> <p>2 point in time your report is not yet ready to be</p> <p>3 submitted for peer review?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 A I would agree that the description in this</p> <p>6 report needs more detail, more -- to submit it to</p> <p>7 peer review. Not necessarily different work, but</p> <p>8 definitely different detail and description.</p> <p>9 Q (BY MS. BOCKUS) Have you satisfied</p> <p>10 yourself that the studies that you did include do</p> <p>11 not overlap with regard to patients; that you</p> <p>12 haven't counted the same patients multiple times?</p> <p>13 A I -- I am comfortable that I did my best</p> <p>14 to do that. But I know there were some cases where</p> <p>15 I felt like I wasn't 100 percent sure.</p> <p>16 Q And you would agree that by -- including</p> <p>17 the same cases and controls multiple times could</p> <p>18 skew the -- the data?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 A I think that that theoretically is a</p> <p>21 concern of mine, which is why I try to you exclude</p> <p>22 them if there was overlap.</p> <p>23 On a practical level, the benefit of</p> <p>24 pooling data from multiple sources is that the final</p> <p>25 summary is less sensitive to any individual result,</p>
Page 343	Page 345
<p>1 errors?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 A No.</p> <p>4 Q (BY MS. BOCKUS) And has anyone other than</p> <p>5 you and Dr. Hall checked your work for mathematical</p> <p>6 errors?</p> <p>7 A No.</p> <p>8 Q You excluded all of the data from the</p> <p>9 cohort studies with the exception of the earliest</p> <p>10 reported data from the Nurses' Health Study; is that</p> <p>11 correct?</p> <p>12 A Yes.</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 Q (BY MS. BOCKUS) Did you run the -- the --</p> <p>15 the numbers to determine if there would be a</p> <p>16 difference if you included the data from all the</p> <p>17 cohort studies and if you excluded them?</p> <p>18 A So the requirement to be in our review was</p> <p>19 to have a measure of regular use of talcum powder</p> <p>20 products, and those other studies didn't have</p> <p>21 something to plug into that equation.</p> <p>22 So -- so I didn't have a number from those</p> <p>23 studies to include in a sensitivity analysis. They</p> <p>24 -- they didn't report regular use, so I -- I</p> <p>25 couldn't do what you are asking me to have done.</p>	<p>1 let alone some patients that might overlap.</p> <p>2 But I agree with you that you want to</p> <p>3 avoid that because of that concern.</p> <p>4 Q (BY MS. BOCKUS) All right. Would you turn</p> <p>5 to page 35 of your study. And I am looking at</p> <p>6 the -- right in the middle of the page, the</p> <p>7 paragraph that starts with the word, Further talc</p> <p>8 particles.</p> <p>9 But I'm going to the last sentence in the</p> <p>10 paragraph.</p> <p>11 "The greater frequency at which talc</p> <p>12 particles are discovered in ovarian cancerous tissue</p> <p>13 than in normal ovarian tissue further supports that</p> <p>14 these target -- particles may be causing cancer."</p> <p>15 You don't have a source for that. You</p> <p>16 don't cite to any study. And I would like to know</p> <p>17 where you got that information.</p> <p>18 MS. O'DELL: Objection to form.</p> <p>19 A I would have to review Heller and</p> <p>20 Henderson. No. Henderson is just cancer.</p> <p>21 So I would have to review -- review</p> <p>22 Heller, but that -- I -- I -- I don't remember what</p> <p>23 the -- cite of it. I would have to look at the</p> <p>24 articles that I cite in that paragraph and see if I</p> <p>25 could remember.</p>

26 (Pages 342 to 345)

Rebecca Smith-Bindman, M.D.

Page 346	Page 348
<p>1 Q (BY MS. BOCKUS) The next statement has to 2 do with the reduction in incidence of ovarian cancer 3 after tubal ligation or hysterectomy? 4 A Yes. 5 Q Is it not correct that that statement is 6 true for both women who have used talcum powder 7 product and who -- let me ask a better question. 8 Here you're talking about that the 9 elevated -- that studies that look at the risk of 10 ovarian cancer associated with powder products 11 report a reduction in risk after hysterectomy or 12 tubal ligation, correct? 13 A Yes. 14 Q Isn't that also true in the general 15 population for all women, that there -- whether they 16 have used talcum powder products or not, that their 17 risk of ovarian cancer is reduced by hysterectomy or 18 oophorectomy -- 19 A Yes. 20 Q -- or tubal ligation? I'm sorry. 21 A Yes. It's even more reduced by 22 oophorectomy. 23 Q Well, sure. I misspoke. 24 MS. BOCKUS: I believe that's all the 25 questions I have. Thank you.</p>	<p>1 attorney who represents Defendant Personal Care 2 Products Council. 3 So for purposes of this deposition when I 4 reference "Personal Care Products Council," I mean 5 PCPC or CPFA or any of its predecessors. Is that 6 okay? 7 A Yes. 8 Q So I want to turn to Exhibit 15, which is 9 your reference list. And that reference list is 10 Exhibit B of your expert report; is that correct? 11 A Yes. 12 Q And if you can turn to page 19 of that 13 reference list. And just let me know when you're 14 there. 15 A I am there. 16 Q And if you go about 75 percent of the way 17 down, there's a reference to a PCPC document. 18 Do you see that? 19 A Yes. 20 Q Do you happen to know what that document 21 is? 22 A I do not. 23 Q Did you rely on this document -- 24 A You would have to -- 25 MS. O'DELL: Object to the form. Excuse</p>
Page 347	Page 349
<p>1 MS. O'DELL: Why don't we go off the 2 record. I'm sorry. Do you -- 3 MR. ZELLERS: No. 4 MR. BILLINGS-KANG: I may have two or 5 three questions. 6 MS. O'DELL: Oh, sorry, James. Yeah, 7 please. 8 THE VIDEOGRAPHER: We are still on? 9 MS. O'DELL: Yes. 10 THE VIDEOGRAPHER: Do we want to go off? 11 MR. BILLINGS-KANG: Yeah. 12 MS. BOCKUS: We need to go off to move the 13 mic. 14 THE VIDEOGRAPHER: The time is 11:37 a.m. 15 We are going off the record. 16 (A break was taken from 11:37 a.m. to 17 11:40 a.m.) 18 THE VIDEOGRAPHER: The time is 11:40 a.m. 19 We are now back on the record. 20 EXAMINATION BY COUNSEL FOR THE DEFENDANTS 21 BY MR. BILLINGS-KANG: 22 Q Good morning, Dr. Smith-Bindman. How are 23 you? 24 A Good. 25 Q My name is James Billings-Kang. I'm an</p>	<p>1 me. Object to the form. If -- if -- 2 A -- you would have to tell me what it is to 3 know if -- 4 MS. O'DELL: -- or show it to her if 5 you -- 6 MR. BILLINGS-KANG: Sure. 7 MS. O'DELL: -- have a question about it. 8 Q (BY MR. BILLINGS-KANG) But for purposes of 9 formulating your opinion in the expert report, did 10 you rely on any PCPC-produced documents? 11 MS. O'DELL: Object to the form. 12 A You would have to show -- 13 MS. O'DELL: Put -- 14 A -- it to me. 15 MS. O'DELL: -- just put it in front of 16 her if you're going to ask her a question about it 17 so she can -- 18 Q (BY MR. BILLINGS-KANG) I'm just asking: 19 Based on your memory, do you recall using any 20 PCPC-produced document to formulate your opinion. 21 MS. O'DELL: I would -- I would just 22 object to the form. 23 Q (BY MR. BILLINGS-KANG) That's -- 24 MS. O'DELL: None of -- 25 Q (BY MR. BILLINGS-KANG) -- that's fine.</p>

27 (Pages 346 to 349)

Rebecca Smith-Bindman, M.D.

Page 350	Page 352
<p>1 You can answer --</p> <p>2 MS. O'DELL: None of that --</p> <p>3 Q (BY MR. BILLINGS-KANG) -- yes or no, if</p> <p>4 you remember.</p> <p>5 MS. O'DELL: -- none of us would be</p> <p>6 expected to remember a document based on a Bates</p> <p>7 number.</p> <p>8 Q (BY MR. BILLINGS-KANG) Well, I'm asking</p> <p>9 her just generally PCPC-produced documents, if she</p> <p>10 relied on any of those --</p> <p>11 MS. O'DELL: Objection.</p> <p>12 Q (BY MR. BILLINGS-KANG) -- to formulate her</p> <p>13 opinion?</p> <p>14 MS. O'DELL: Object to the form. I'm</p> <p>15 putting that --</p> <p>16 MR. BILLINGS-KANG: Sure.</p> <p>17 MS. O'DELL: -- that Bates number in front</p> <p>18 of her. And if you --</p> <p>19 MR. BILLINGS-KANG: Sure.</p> <p>20 MS. O'DELL: -- remember, you remember.</p> <p>21 A This is a document that lists different</p> <p>22 research studies that have been done over time. Is</p> <p>23 that the document that we're --</p> <p>24 Q (BY MR. BILLINGS-KANG) Well, I -- I'm not</p> <p>25 too sure. This is a document you listed in the</p>	<p>1 itself.</p> <p>2 Q Just --</p> <p>3 A I don't remember --</p> <p>4 Q -- the document --</p> <p>5 A -- seeing --</p> <p>6 Q -- itself.</p> <p>7 A -- this -- I don't remember seeing this</p> <p>8 document.</p> <p>9 Q Okay. You can -- you can put that away.</p> <p>10 And I will go to your expert report that's</p> <p>11 Exhibit 2, page 14. Just let me know when --</p> <p>12 A I'm there.</p> <p>13 Q -- you're there. And this -- the first</p> <p>14 paragraph under "Asbestos," it's about halfway in</p> <p>15 that first paragraph beginning with, Because of</p> <p>16 concern that asbestos was present in talcum powder</p> <p>17 products in the known carcinogenicity of asbestos,</p> <p>18 it has been reported that voluntarily guidelines</p> <p>19 were established by the cosmetic industry in 1976 to</p> <p>20 limit the content of asbestos fibers in commercial</p> <p>21 talc preparations.</p> <p>22 Did I read that correctly?</p> <p>23 A You did.</p> <p>24 Q And these are your words, correct?</p> <p>25 A Yes, they are.</p>
Page 351	Page 353
<p>1 reference list.</p> <p>2 A I -- I'm just trying to make sure that I'm</p> <p>3 looking at the document that you are --</p> <p>4 Q According to your counsel, this is what's</p> <p>5 been identified on page 19 of the reference list.</p> <p>6 A I -- I do not remember this document.</p> <p>7 This --</p> <p>8 Q Okay.</p> <p>9 A -- document is just a list of studies.</p> <p>10 Q So you do not recall whether you relied on</p> <p>11 this document in formulating your opinion?</p> <p>12 A My --</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 A -- opinion is not based on the -- on a --</p> <p>15 a list of studies.</p> <p>16 Q (BY MR. BILLINGS-KANG) Okay. So that's --</p> <p>17 that's a -- that's a yes, you do not -- you did not</p> <p>18 rely on this document in formulating your opinion?</p> <p>19 A I -- I don't remember seeing this</p> <p>20 document. As I'm going through this document, there</p> <p>21 are a lot of studies that I reviewed that I did rely</p> <p>22 on.</p> <p>23 So I don't know if you're asking me if I</p> <p>24 relied specifically on some of the items in here</p> <p>25 that I have relied on or the -- this document</p>	<p>1 Q And what did you mean by "voluntarily</p> <p>2 guidelines"?</p> <p>3 A I -- I have read a lot about the</p> <p>4 guidelines. And it -- the idea was that the</p> <p>5 industry decided to self-regulate and to do what</p> <p>6 they could to remove the asbestos, is my</p> <p>7 understanding of what that was as opposed to being</p> <p>8 required to submit testing to document that they had</p> <p>9 done so.</p> <p>10 Q And -- and what did you rely upon for this</p> <p>11 particular sentence?</p> <p>12 A This particular sentence is repeated in --</p> <p>13 in at least half of the papers that I have read that</p> <p>14 are epidemiology papers.</p> <p>15 It's repeated in all of the news studies.</p> <p>16 It's repeated in reports by consumer organizations,</p> <p>17 by the FDA, by the recent Canadian report, which I</p> <p>18 didn't have in hand.</p> <p>19 But it's something that I -- I have read a</p> <p>20 lot -- a great deal, that there were voluntarily</p> <p>21 standards that were established by the industry.</p> <p>22 Q And so did you read any publication or</p> <p>23 whatever reliance materials that you had that</p> <p>24 described these guidelines as anything else other</p> <p>25 than voluntarily guidelines?</p>

28 (Pages 350 to 353)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 354</p> <p>1 A I -- I -- I did not. I looked for 2 documents like that. I was not able to find them. 3 Required -- requirements, I was not able to find. 4 MR. BILLINGS-KANG: Okay. That's all I 5 have. 6 MS. O'DELL: Why don't we take a short 7 break. 8 THE VIDEOGRAPHER: The time is 11:45 a.m. 9 We are now off the record. 10 (A break was taken from 11:45 a.m. to 11 12:15 p.m.) 12 THE VIDEOGRAPHER: The time is 12:15 p.m. 13 We are now back on the record. 14 EXAMINATION BY COUNSEL FOR THE PLAINTIFFS 15 BY MS. O'DELL: 16 Q Dr. Smith-Bindman, I have just a few 17 questions for you. First, during all of your work 18 in this case, was it your understanding that you 19 were serving as an expert consultant? 20 A Yes. 21 Q And you know, throughout the early 22 meetings in June, I believe, of 2017, where you met 23 with Plaintiffs' counsel, did Plaintiffs' counsel 24 provide information regarding their theories of the 25 talcum powder litigation?</p>	<p style="text-align: right;">Page 356</p> <p>1 MR. ZELLERS: Objection, form. 2 Q (BY MS. O'DELL) Let me strike that and 3 start again. Did your meta-analysis replicate what 4 had been published in the literature? 5 A The -- 6 MR. ZELLERS: Form. 7 A -- the results of my meta-analysis and the 8 previous ones are nearly identical. So yes, it was 9 a very close replication. 10 Q (BY MS. O'DELL) And you have mentioned 11 your intent to publish your -- your meta-analysis, 12 your systematic review. And I believe you testified 13 that in the published version, you would add 14 additional detail. 15 What did you mean by that? 16 A So the analysis that I have done is 17 complete. But the presentation of the results in a 18 paper would require more beautiful graphics, would 19 require explaining our inclusion and exclusion 20 criteria more fully than I did in this published 21 report. Things like that. 22 And that actually is a substantial part of 23 the writing of a scientific paper, sort of 24 explaining every step of what you did, and so I 25 would have to do more of that to publish this study.</p>
<p style="text-align: right;">Page 355</p> <p>1 A Yes. 2 Q And have you been paid by Plaintiffs' 3 counsel for all the work that you have billed in 4 this case? 5 A Yes, I have. 6 Q Okay. You have been asked a number of 7 questions about the meta-analysis, the systematic 8 review that you performed on the regular use of -- 9 of talcum powder. 10 Would you have reached your opinions in 11 this case without having performed that analysis? 12 A My systematic review ended up with the 13 same estimates as essentially all of the other 14 well-done systematic reviews. 15 And it was very helpful for me to confirm 16 the results. But yes, it's the same as the other 17 studies, and so my -- my conclusion about the 18 causality of talcum powder products and ovarian 19 cancer would be exactly the same, even without mine. 20 It just made me a little more comfortable 21 that I was certain about the -- the results 22 presented by other people. 23 Q And in a sense, the analysis that you did 24 replicated the work that had been published in the 25 -- in the literature?</p>	<p style="text-align: right;">Page 357</p> <p>1 Q Is there sufficient detail in the -- in 2 your report regarding your methodology, as well as 3 in the documentation provided in the spreadsheets 4 to -- for someone to replicate the work that you 5 have done? 6 MR. ZELLERS: Objection, form. 7 A I believe that if someone used the 8 software that we said and had the inclusion criteria 9 that we led out -- set out, that they would get the 10 -- the same results as we got. 11 And I think the fact that our review 12 provides the same results as other systematic 13 reviews sort of, you know, also supports that. But 14 yes, I think someone could easily replicate our -- 15 our analysis. 16 Q (BY MS. O'DELL) Okay. You were asked a 17 number of -- before I do that, let me ask you: Can 18 there be multiple causes of ovarian cancer? 19 A Absolutely. I -- I describe in the 20 report, a whole number of different risk factors for 21 ovarian cancer. 22 Q And in a -- in a patient -- hypothetically 23 in a patient who has a BRCA1 mutation, possibly has 24 other risk factors for ovarian cancer, and also uses 25 talcum powder products, under those circumstances,</p>

29 (Pages 354 to 357)

Rebecca Smith-Bindman, M.D.

Page 358	Page 360
<p>1 would talcum powder products be a contributing cause 2 of her cancer? 3 MR. ZELLERS: Objection, form. 4 A I think patients can have multiple risk 5 factors and causes of -- of cancer. Some causes, 6 you would imagine, would be quite synergistic. 7 So having both together would be worse 8 than twice having either of those alone. So it 9 would be worse than having -- it -- it would be more 10 than double the initial, because they would be 11 basically enhancing. 12 So if -- if some risk factors caused lots 13 of oxidative stress and another enhanced that 14 oxidative stress and prevented repair or cell 15 apoptosis, you would get even more impact. 16 So yes, I would say multiple risk factors 17 for most diseases occur concurrently, and sometimes 18 they enhance or are synergistic. 19 Q (BY MS. O'DELL) Can asbestos be inhaled 20 and cause ovarian cancer? 21 MR. ZELLERS: Objection, form; foundation. 22 A Absolutely. The -- the IARC 2012 report 23 was primarily on the basis of inhalation of 24 asbestos. 25 Q (BY MS. O'DELL) Can fibrous talc be</p>	<p>1 not disclosed in Dr. Smith-Bindman's expert report. 2 A Can I read? Just on page 14, The results 3 were consistent, significant, and documented a 4 strong and compelling causal association between 5 exposure to asbestos and ovarian cancer largely 6 result in the association from cohort studies of 7 women with substantial occupational exposures. 8 That -- that was the -- 9 Q (BY MS. O'DELL) Okay. Let me -- let me 10 ask you to -- to turn, Dr. Smith-Bindman, to the 11 Langseth paper that was marked as Exhibit 30 by 12 counsel for J&J. 13 And specifically to turn to page 2 of the 14 paper to Figure 1. 15 A Yes. 16 Q You were asked a number of questions about 17 whether the studies that had confidence intervals 18 that cross one were essentially by chance. In other 19 words, they -- they did not speak to a potential 20 increased risk in ovarian cancer as a result of 21 talcum powder use. 22 Are the -- what's your analysis of those 23 studies and whether, as counsel put it, it was 24 equivalent to a coin toss? 25 A So if there was no relationship between</p>
Page 359	Page 361
<p>1 inhaled and cause ovarian cancer? 2 A I -- 3 MR. ZELLERS: Objection, form; foundation. 4 A -- yes. 5 Q (BY MS. O'DELL) And what's your basis for 6 that statement? 7 MR. ZELLERS: Same objections. None of 8 this was in her report. None of this has been in 9 her opinions. 10 These are all new opinions. So inhalation 11 has not been any part of her testimony or her 12 opinion. 13 MS. O'DELL: Inhalation is mentioned in 14 her report. 15 A I -- I -- you know, the -- the chapter on 16 asbestos and occupational exposure and IARC report 17 is -- is about inhalation. 18 I'm not sure if I -- I was explicit about 19 the route, but that is where the data come from for 20 asbestos, as well as fibrous talc. 21 And those articles talk about the fact 22 that there might be other exposures in addition, but 23 they're primarily inhalation studies. 24 MR. ZELLERS: Again, object to what the 25 defense views as a completely new opinion that was</p>	<p>1 ovarian cancer and exposure to talcum powder 2 products, you would expect the forest plot in 3 Figure 1 to have half of the point estimates be 4 above one, saying there's a risk; and half of the 5 point estimates being below one, saying there isn't 6 a risk. 7 In fact, every one of the studies on this 8 table is at or above one. It's to the right. So to 9 get that by chance is highly, highly, highly 10 unlikely. 11 The best estimate is -- the point estimate 12 in all of those are very different than one. 13 And so to call that by chance doesn't make 14 sense. The fact that for an individual study, the 15 confidence interval overlap one doesn't mean it's by 16 chance. 17 So again, by chance would mean half the 18 studies have a positive association, half have a 19 protective. 20 And in fact, every one of the studies has 21 a value that's either substantially greater than one 22 or just a little greater than one. 23 Q Okay. You were asked questions about 24 starting -- in reference to the Langseth paper you 25 were asked questions about the -- the pooled odds</p>

30 (Pages 358 to 361)

Rebecca Smith-Bindman, M.D.

Page 362	Page 364
<p>1 ratio for hospital-based studies and the focus on 2 that finding being that it was not a statistically 3 significant increased risk. 4 Did the Berge paper also look at a pooled 5 analysis of the hospital-based studies? 6 A She did. If you look at Table 2, Table 2 7 shows the results of the case-control studies that 8 were hospital based versus community based. 9 And those individual group of 10 hospital-based studies are statistically 11 significant. 12 But I would point out that in this case 13 the -- they report the relative risk of a hospital 14 based versus community based. They're relatively 15 similar. They're both significant, and they're 16 relatively similar, which is what I concluded from 17 Langseth. They're very similar. 18 Q Okay. You were asked about studies 19 relating to migration. And the specific -- the 20 specific question, as I wrote it down was: Is there 21 a study that demonstrates talc on the -- applied to 22 the perineum, traveling to the -- or migrating to 23 the ovary, and you said, No. 24 What evidence are you relying on to 25 support your opinion that talcum powder can migrate</p>	<p>1 There have been studies of sperm, both 2 living and dead, going in both directions. So it's 3 not just the mobile sperm, but the dead sperm. 4 Carbon particles -- you know, a tiny 5 study -- but have been shown to move -- radioactive 6 material has been seen to move. Material on gloves 7 has been seen. 8 So it's a wide-open system. The idea that 9 we think of that as being a barrier system is just 10 false. 11 Now, I don't know of an individual study 12 that has put talc on the perineum. I think that's, 13 unfortunately, not an ethical study to do. And I 14 don't know of such a study or why you would do such 15 a study. 16 But to think that there's any barrier 17 between the perineum and the vagina makes no sense 18 whatsoever. 19 Q Let me transition to talk about 20 inflammation for a moment, and specifically 21 inflammation as a cause of ovarian cancer first. 22 What evidence are you relying on to 23 support your opinion that inflammation -- chronic 24 inflammation causes ovarian cancer? 25 A Okay. So there's an enormous amount of</p>
Page 363	Page 365
<p>1 when applied -- applied to the genital area to the 2 ovary? 3 A So I was asked a very narrow question, is 4 there a study that talks about transport from the 5 perineum. 6 But in fact, there is extensive evidence 7 that particles from the perineum could get to the 8 ovary and do get to the ovary. 9 And part of that is the perineum is 10 basically equivalent to the vagina. It is one open 11 system to the ovary. 12 And so my evidence for that is 13 several-fold. First, I'm a clinical radiologist, 14 and I do a lot of procedures in women where I am 15 putting catheters in the vagina and injecting fluid 16 that goes to the uterus, to the tubes. I watch the 17 fluid spill. It's a wide-open system. 18 Occasionally patients have complications 19 that don't let me do that, and I might inject fluid 20 literally on the perineum to get a backlash to the 21 ovaries. And it's a wide-open connected system. 22 All of our textbooks talk about it being a 23 bi-directional system. You know, infection goes 24 both directions. Retrograde menstruation and 25 menstruation go both directions.</p>	<p>1 literature that understands what we see when there's 2 inflammation, what kind of changes you see on a 3 cellular level. 4 So you see increase in pro oxidation, a 5 reduction in antioxidation. You see increase in 6 cell turnover, reduction in cell death, expression 7 of inflammatory agents, cellular changes at the DNA 8 level that leads to greater expression. 9 We -- we understand those pathways. And 10 those pathways occur both with talc exposure and in 11 the setting of things that cause ovarian cancer. 12 So I -- in my reference list, I reference 13 a whole bunch of references -- Saed references, 14 Shawn (phonetic) references, Ness references. 15 There's really enormous numbers of references. 16 I -- in my documents I have Shukla 17 references, Buz'Zard references, Hamilton references 18 that talk away sort of these inflammatory pathways 19 and biologic mechanisms that lead to changes that go 20 along with inflammation. 21 Q I know you have reviewed Dr. Saed's 22 research in regard to whether talcum powder causes 23 inflammation in vitro. 24 First, let me ask you this: Does 25 Dr. Saed's work support the conclusion that</p>

31 (Pages 362 to 365)

Rebecca Smith-Bindman, M.D.

<p style="text-align: right;">Page 366</p> <p>1 Johnson's baby powder causes inflammation? 2 MR. ZELLERS: Objection, form. 3 A So Saed specifically looked at Johnson 4 baby powder, so his results specifically pertained 5 to Johnson baby powder. 6 He looked at several different measures 7 that -- I have just mentioned inflammation. So he 8 looked specifically at oxidative stress, the up 9 regulation or down regulation of -- 10 THE COURT REPORTER: The? 11 A -- up regulation or pro oxidants, down 12 regulation of antioxidants. He looked at cell 13 proliferation. He looked at SNPS point mutations 14 that are associated with this. 15 THE COURT REPORTER: Snips? 16 A S N P S, SNPS. 17 THE COURT REPORTER: Because you're facing 18 that way, and the mic is here. Thanks. 19 A And showed substantial changes to talcum 20 powder to all of these. I -- I was really quite 21 impressed with the consistency in these markers of 22 inflammation. 23 Some of them overlap clinical markers we 24 use. Like CA125 went up very strongly just like it 25 goes up for ovarian cancer.</p>	<p style="text-align: right;">Page 368</p> <p>1 do that. That's beyond me. But that's what this 2 whole model is, to try to help you understand what 3 the effect mechanistically is from these changes. 4 Q (BY MS. O'DELL) And is the use of that 5 model in scientific research generally accepted? 6 A Highly. 7 MR. ZELLERS: Objection, form. 8 A My understanding is that is the basis for 9 much of the research that comes -- that happens at 10 my research institution. 11 Q (BY MS. O'DELL) Just to make sure that the 12 record is clear, Dr. Smith-Bindman, in -- I asked 13 the question: Is the use of that model in 14 scientific research generally accepted? I'm not 15 sure your answer came through. What's your answer? 16 MR. ZELLERS: For your -- just objection, 17 form. Go ahead. 18 A Yes. I -- I said that that's a very 19 common model at UCSF. 20 Q Okay. 21 MS. O'DELL: I have nothing further. 22 Thank you. 23 MR. ZELLERS: Let's take a break for a 24 couple of minutes. 25 THE VIDEOGRAPHER: The time is 12:34 p.m.</p>
<p style="text-align: right;">Page 367</p> <p>1 So he very clearly showed this. And the 2 results he showed were not different than those that 3 Shukla showed, that Buz'Zard showed, that -- the 4 expression in genes. 5 He -- he just had it in a very compelling 6 experiment where he showed dose response, where he 7 showed the control didn't have the changes, but that 8 the talc powder products did have the changes. 9 And so he identified, in this cellular 10 cell line model, all of the changes that you would 11 expect from inflammation. So I think the results 12 were very compelling. 13 I -- I was asked if kind of that 14 experiment has any relevance in humans. And I would 15 say it would be nice to do that experiment in 16 humans. 17 But you can't do that experiment in 18 humans. And that's what -- 19 THE COURT REPORTER: Wait. 20 A -- you can't do such an experiment in 21 humans. So -- so that is what sort of cellular 22 studies are -- are meant to approximate. 23 There's no direct translation, so how much 24 you put in the cell versus how much you put in the 25 patient, I -- you know, I don't know how you would</p>	<p style="text-align: right;">Page 369</p> <p>1 We are now off the record. 2 (A break was taken from 12:34 p.m. to 3 12:41 p.m.) 4 THE VIDEOGRAPHER: The time is 12:41 p.m. 5 We are now back on the record. 6 EXAMINATION BY COUNSEL FOR THE DEFENDANTS 7 BY MS. BOCKUS: 8 Q Doctor, you made a comment about the fact 9 that there can be a synergistic effect between 10 different risk factors; is that correct? 11 A Yes. 12 Q That is something that can be studied, 13 correct? 14 A Yes. 15 Q There are studies that can be designed to 16 determine whether there's a synergistic effect 17 between, say, BRCA mutation carriers and women who 18 have regularly used talcum powder -- 19 A Yes. 20 Q -- correct? 21 That study has not been done, correct? 22 A Not that I know of. 23 Q In fact, are you familiar or aware of any 24 studies that have looked for a synergistic effect 25 between regular talc use and any other risk factors</p>

Rebecca Smith-Bindman, M.D.

Page 370	Page 372
<p>1 for ovarian cancer?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 A I would have to look through my papers</p> <p>4 with that question in mind. I know some of the</p> <p>5 papers have looked at BRCA, but I can't remember if</p> <p>6 they sort of stratified the results by -- with or</p> <p>7 without BRCA, so I -- I'm not sure of the answer to</p> <p>8 that.</p> <p>9 I was more speaking about, from work that</p> <p>10 I do, the idea of synergy between risk factors. And</p> <p>11 one of those is BRCA and radiation exposure. So</p> <p>12 I -- I -- I meant generally it can be the case. I</p> <p>13 didn't mean to suggest we know what it is for this.</p> <p>14 Q (BY MS. BOCKUS) Okay. Then you spoke</p> <p>15 about the female reproductive system being a</p> <p>16 wide-open system.</p> <p>17 What procedure are you doing when you are</p> <p>18 putting fluid on a women's perineum to see if it</p> <p>19 goes to the ovaries?</p> <p>20 A I apologize. So the primary procedures</p> <p>21 would be a hysterosonogram, which we're putting</p> <p>22 water into the uterus and the tubes mostly to look</p> <p>23 for patency.</p> <p>24 But it turns out we end up needing to do</p> <p>25 procedures in postop patients, not infrequently,</p>	<p>1 Q Do you know if anything about what you</p> <p>2 just described has any correlation to the way in</p> <p>3 which women use talcum powder in their perineal</p> <p>4 region?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 A I -- I don't know what -- how women use</p> <p>7 talcum powder on their perineum.</p> <p>8 Q (BY MS. BOCKUS) Do you know what</p> <p>9 percentage of sperm that are placed in a women's</p> <p>10 vagina make it to the ovaries?</p> <p>11 A Only from child cartoons that make it seem</p> <p>12 like it's a competitive race. But percentage-wise, I</p> <p>13 don't know.</p> <p>14 Q Do you have any reason to believe that</p> <p>15 talc makes it from the vagina to the ovaries in</p> <p>16 greater percentage than sperm?</p> <p>17 A I -- I -- I would guess that that's not</p> <p>18 the case.</p> <p>19 MS. BOCKUS: That's all I have.</p> <p>20 MR. ZELLERS: I have just a couple.</p> <p>21 EXAMINATION BY COUNSEL FOR THE DEFENDANTS</p> <p>22 BY MR. ZELLERS:</p> <p>23 Q Dr. Smith-Bindman, did you discuss with</p> <p>24 Plaintiffs' counsel, calling Dr. Hall on our break</p> <p>25 between yesterday's first session and today's</p>
Page 371	Page 373
<p>1 where we might be looking for connections between</p> <p>2 different structures, preop or postop.</p> <p>3 In the ballpark of 10 percent of women to</p> <p>4 20 percent have cervical stenosis, and you can't</p> <p>5 catheterize.</p> <p>6 Or there might be some reason we don't</p> <p>7 want to catheterize or put the tubes in the vagina.</p> <p>8 We might put the tube directly on the perineum and</p> <p>9 see if we can create kind of a -- a way to keep,</p> <p>10 let's say, a balloon in place and then inject in a</p> <p>11 retrograde fashion.</p> <p>12 So it feels like it comes out probably</p> <p>13 every couple of months. But we're actually pretty</p> <p>14 far from the cervix. And we're injecting usually</p> <p>15 water or sometimes contrast and then looking mostly</p> <p>16 with ultrasound, but sometimes with fluoroscopy.</p> <p>17 Q And when you say "inject," that means with</p> <p>18 some degree of pressure, you're putting the water or</p> <p>19 other fluid into the vagina?</p> <p>20 A There is some degree of pressure, yes.</p> <p>21 Q And when you do that, is the patient's</p> <p>22 head lower than her hips?</p> <p>23 A Not -- not usually, no.</p> <p>24 Q Is she on her back?</p> <p>25 A Yes.</p>	<p>1 session?</p> <p>2 MS. O'DELL: I'm going to ask -- ask</p> <p>3 you -- instruct you not to answer questions</p> <p>4 regarding discussions with counsel.</p> <p>5 MR. ZELLERS: The defense agreed to split</p> <p>6 this deposition of Dr. Smith-Bindman over two days</p> <p>7 on the expressed condition that the extended break</p> <p>8 not be used for preparation.</p> <p>9 The witness and Plaintiffs' counsel</p> <p>10 violated that understanding. Further, it's entirely</p> <p>11 inappropriate for an expert witness to consult with</p> <p>12 a consulting expert during a break.</p> <p>13 We move to strike all of</p> <p>14 Dr. Smith-Bindman's testimony and will take the</p> <p>15 issue to court.</p> <p>16 MS. O'DELL: The record is clear that</p> <p>17 counsel did not speak with Dr. Smith-Bindman last</p> <p>18 night. There was no preparation done between the</p> <p>19 conclusion of the deposition yesterday and the</p> <p>20 beginning of the deposition this morning. I think</p> <p>21 the record has been clear on that.</p> <p>22 That was -- we agreed to do that. We had</p> <p>23 not -- we were not compelled to do that. Because as</p> <p>24 counsel is aware, the deposition protocol allows</p> <p>25 both parties, when they're putting up their</p>

**RULE 26 EXPERT REPORT OF
JUDITH ZELIKOFF, PHD**

Date: November 16, 2018

A handwritten signature in blue ink, reading "Judith T. Zelikoff", is positioned above a horizontal line. The signature is written in a cursive style. To the right of the signature, there is a vertical dashed line with a blue dot at the bottom.

Judith Zelikoff, PhD

I. BACKGROUND AND QUALIFICATIONS

I received my Ph.D in Experimental Pathology and Immunology at Rutgers: NJ Medical School (formerly known as University of Medicine and Dentistry of NJ) in 1982, after receiving a Master's degree from Fairleigh Dickinson University in Microbiology. My post-doctoral training was in toxicology at the NYU School of Medicine, Department of Environmental Medicine as a National Heart Lung Blood Institute (NHLBI) fellow.

I am currently a tenured-professor in Toxicology at NYU. As part of the NYU NIEHS (National Institute of Environmental Health Science) Center of Excellence, I serve as Director of the Community Engagement Core. In this capacity, I engage with environmentally-impacted underserved communities throughout New Jersey and New York to better engage the community to achieve long-term and sustainable outcomes, processes, relationships, discourse, decision-making, and implementation regarding environmental health. These goals are carried out through town hall meetings, focus groups, listening sessions, forums on relevant environmental concerns, surveys, as well as outdoor and indoor measurements of toxic metals such as lead, cadmium, mercury, and arsenic in water, air, and soil. I also provide service to the NYU School of Medicine as a member of the Grievance Committee, Institutional Animal and Use Committee (IACUC) and as an NYU Senator representing the School of Medicine.

I have served in numerous leadership positions in the field of toxicology, including NIH Study Sections, United Nations Environmental Programme, NASA boards, and National Academy of Science Panels (i.e., Institute of Medicine, National Research Council and Engineering, and Medicine's Board on Earth Sciences and Resources), as well as Environmental Protection Agency study sections and advisory boards concerning the toxic effects of air pollution, metals, and alternative tobacco products. Furthermore, I served for two years (2010-2012) as a member of the National Toxicology Program (NTP) Board of Scientific Advisors. In this capacity, I reviewed documents and provided input and guidance on the toxicity of various chemicals that were nominated for review and sent to the NTP for study and/or discussion. In some cases, we also decided on the carcinogenicity of specific compounds. I was not part of the NTP 10 ROC or 12 ROC, both of which deferred the decision on talc.

In addition, I presented about 150 international/national papers in the areas of toxicology and environmental and public health. I have organized several international toxicology meetings, served as editor for several toxicology/environmental public health books and authored numerous book chapters in the same areas. I have over 125 publications and book chapters in the area of immunotoxicology (for which I received a Lifetime Achievement Award from the Society of Toxicology), air pollution toxicology, metal toxicology, immunotoxicology, and developmental and reproductive toxicology associated with inhaled metals, mixtures, nanomaterials, dusts (i.e., World Trade Center Dust), and tobacco/nicotine toxicology.

I have held numerous executive positions in the Society of Toxicology (SOT) which includes three years as Secretary on the SOT Executive Council and one year as Chair of the Education Committee and Committee for Diversity Initiatives Committees. I have also provided leadership for four individual SOT Specialty Sections (SS). I have served as President of the Immunotoxicology, Metals and Ethical, Legal, Forensic and Societal Issues Specialty Section and currently serve as Senior Councilor of the Inhalation and Respiratory Specialty Section. I have received three major SOT awards including the Mentorship Award from “Women in Toxicology”, Global Host award and in 2018, Education award for meritorious teaching skills in toxicology. As a teaching scholar, I have taught and continue to teach toxicology on a global level in such countries as Thailand, Nigeria, South Africa, Tasmania and New Zealand.

My education, training and publications are further set out in my Curriculum Vitae, which is attached to this report as an **Exhibit A**.

II. MANDATE AND METHODOLOGY

Mandate: I was asked to review the scientific literature and assess whether there is a biologically plausible explanation for the increased risk of ovarian cancer with the perineal use of talcum powder products.

The notion of biological plausibility is multi-factoral. As a part of my analysis, while considering the totality of the evidence, I evaluated the genital use of talcum powder products, the routes of exposure by which talcum powder could reach the ovaries, the composition of the talcum powder products, the biological and toxicological effects of talcum powder, and the potential mechanisms of carcinogenesis. Biological plausibility does not mean proof of mechanism, but rather whether what is known about the products is consistent with a cause and effect relationship.

I performed an independent, comprehensive literature review using research databases and search engines including PubMed, ToxLit and Google to identify relevant literature. The keywords/phrases used initially for searching, included: talc, talcum powder, talc and cancer, talc and toxicity, talc and toxicology, ovarian cancer, oxidative stress, talc and ovarian cancer, animal models and talc, talc powder and the immune response and talc chemical structure. Keywords and phrases expanded upon those terms in later searches.

More than 300 publications (research papers, reviews, abstracts, reports, documents) and book chapters from the 1960s to the present were identified as having some relevancy for the talc-ovarian cancer topic. Following closer scrutiny of these publications, between 200-250 research papers, scholarly reviews, abstracts, documents, reports were found critical for informing my opinion. Toxicological studies, including *in vivo*, *in vitro* and *ex vivo* investigations, were the topics most appropriate for my area of expertise. In addition, I have reviewed depositions and numerous documents, internal memorandum

and published and unpublished studies and testing results that I have found in my own searches, documents provided by attorneys, and documents that I requested. A list of materials and data considered for this report are attached as **Exhibit B**.

My opinions below are based upon my experience as a toxicologist and research scientist and have been reached through employing the same scientific methodology and rigor that I employ in my academic research and professional duties. To my knowledge, I considered and evaluated the majority of all available relevant studies in the process of evaluating the literature, including those that reported an elevated risk of ovarian cancer with exposure to talc and those where other chemicals were reported within talc-based body powders, including those that did not find an increased risk. The same approach was used in evaluating the animal data and the mechanistic data.

III. TALC

Primary talc deposits are found on almost every continent around the world¹. Talc is commonly formed by the hydrothermal alteration of magnesium- and iron-rich rocks (ultramafic rocks) and by low-grade thermal metamorphism of siliceous dolomites. Talc is the softest mineral on earth, mined around the world for use in a wide variety of products personal, cosmetic or industrial in nature. The word “talc” can refer to two things. The first is a mineral and the second is a commercially available product that can be used both industrially and in pharmaceuticals and cosmetics. For this report, when talking about the former, I use the term “mineral talc,” and when talking about the latter, I use the term “talcum powder products.” Johnson & Johnson talcum powder products are classified as cosmetic talc. Dermal contact (including perineal application of talcum powder products) is a primary route of human exposure, while inhalation also represents a route of exposure for talc/talcum powder products.

As a mineral, talc corresponds to the chemical structure of hydrous magnesium silicate with a formula of $\text{Mg}_3\text{Si}_4\text{O}_{10}(\text{OH})_2$ and a theoretical chemical composition, expressed as oxides, of 31.7% by weight magnesium oxide (MgO), 63.5% silicon dioxide (SiO_2) and 4.8% water (H_2O). Talc belongs to the silicate subclass phyllosilicates and is known as a sheet silicate. It is the softest mineral on Mohs’ hardness scale, and its structure and chemical bond arrangement is such that it is easily broken into thin sheets. The structure consists of three sheets that are octahedrally coordinated magnesium hydroxide groups (brucite layer) layered between 2 layers of tetrahedrally linked silica layers. The apical oxygen atom positions of the tetrahedral layers are shared with one of the oxygen atom positions of the octahedral layer. The composite sheets repeat every 9.4 angstroms and the triple-sheet crystalline units are held together by van der Waals forces. Talc particles are normally plate-like in shape, but may form mineral fibers, as discussed below.

¹ <https://minerals.usgs.gov/minerals/pubs/commodity/talc/mcs-2017-talc.pdf>

Small amounts of aluminum and ferric (III) iron can substitute for silicon in talc tetrahedral sites. Trace amounts of nickel and small to moderate amounts of ferrous (II) and ferric (III) iron, aluminum and/or manganese can substitute for magnesium in talc octahedral sites. Additionally, talc deposits may contain varying amounts of quartz, nickel, chromium and cobalt, as well as asbestos or asbestos-forming minerals including amphibole (tremolite, actinolite, antigorite and anthophyllite) and serpentine (chrysotile) (Cralley, 1968; Lockey, 1981; McCarthy 2006; Rohl, 1976). The pH of cosmetic talcs are usually alkaline (8.0-9.5) and are insoluble in water, cold acids or in alkalis.

Talc powder particle size depends on the process used to make the powder. Johnson and Johnson's analysis of particle size in talcum powder shows particles range on average from 0.8 μm to over 50 μm , with a median particle size of 11.39 μm , where approximately 43.9% of particles are less than 10 μm (JNJ TALC00878141).

A. Fibrous Talc

As a mineral, talc is most commonly found in plate-like form, but may also form as true mineral fibers that are asbestiform (IARC 2010, IARC 2012). Asbestiform talc (also known as fibrous talc) is different from talc containing asbestos. Fibrous talc fibers are very long and thin and occur in parallel bundles that are easily separated from each other by hand pressure (IARC Monographs, 2010). The 2010 IARC clearly states that the term 'asbestiform fiber' means any mineral, including talc, when it grows into an asbestiform habit. In its fibrous form, talc has been classified as a Group I, known carcinogen (IARC 1987 Supp 7; IARC 2010; IARC 2012). OSHA considered fibrous talc exposure limits to be equivalent to those of asbestos (OSHA, 1972). In 2010, IARC expanded the Group 1 designation ("known carcinogen") from "talc containing asbestiform fibers" to "talc containing asbestos or other asbestiform fibres." (IARC, 2010). Additionally, the American Conference of Governmental Industrial Hygienists (ACGIH) clarifies that "talc may also take the form of long thin fibers (fibrous talc) and can occur in bundles that are easily separated (asbestiform talc). Asbestiform talc should not be confused with talc containing asbestos..." (ACGIH, 2010).

Asbestiform talc fibers have been reported by Johnson & Johnson and Imerys to be found in: mines from which ore for Johnson & Johnson talcum powder products were sourced; in talcum powder used in Johnson & Johnson talcum powder products; and in the Johnson & Johnson talcum powder final product.²

Recent TEM testing on historic samples of Johnson's Baby Powder from 1978 showed the presence of fibrous talc in the product (Longo & Rigler, Feb 2018 MAS Report). Additional TEM testing of 30 samples of J & J baby powder and Shower to Shower dating from a span of many years resulted in a finding of fibrous talc in 15 samples (Longo & Rigler, Aug 2017 Expert Report).

² See also: IMERYS477879 (fibrous talc in Grade 66 Q1 composite); JNJ 000269848 (talc needles found in medicated powder 1971, see with TEM results in JNJ 000281921); JNJ 000245002 (Fibrous talc in Hammondsville mine 1970)) .

IV. ASBESTOS

Asbestos, like talc, is a naturally occurring silicate mineral, but with a different crystal structure (Mossman & Churg, 1998). Asbestos is a generic name referring to a group of naturally occurring mineral silicate fibers. It is recognized as a known human carcinogen by the U.S. Occupational Safety and Health Administration (OSHA), the U.S. Environmental Protection Agency (USEPA) and the National Toxicology Program (NTP)(OSHA, 2014; USEPA, 1995; NTP, 2016). The National Institute for Occupational Health (NIOSH) has stated there is no safe level of asbestos and the American Conference of Governmental Industrial Hygienists (ACGIH) characterizes it as a “confirmed human carcinogen” (NIOSH, 1980; ACGIH, 2017). All forms of asbestos are Group 1 carcinogens (carcinogenic to humans)(IARC, 2012).

The U.S. EPA defines asbestos by limiting the term to 6 specific fibrous minerals from two distinct groups: chrysotile (from the Serpentine group); and amosite, crocidolite, tremolite, actinolite and anthophyllite (from the Amphibole group). “Asbestiform” describes the pattern of growth of a mineral that is referred to as a “habit” (IARC, 2010). Minerals with a “non-asbestiform” habit have crystals that grow in two or three dimensions, and “cleave into fragments, rather than breaking into fibrils” (*Id.*). Chrysotile occurs in the asbestiform habit, whereas, of the amphiboles, amosite and crocidolite occur only in the asbestiform habit, and tremolite, anthophyllite and actinolite can occur in asbestiform or non-asbestiform habits. OSHA defines an asbestos fiber as having a length > 5mm and a length:width aspect ratio of 3:1, whereas the USEPA definition incorporates the aspect ratio of > 5:1 (OSHA, 1992; USEPA, 1987).

While amphibole and serpentine asbestos may have fibrous habits, they have very different forms. The amphiboles are double-chain silicates also called inosilicates. The basic structural unit is $(\text{Si}_4\text{O}_{11})^{6-}$ with side groups that are responsible for the overall amphibole structure. Amphiboles are distinguished from one another by the amount and positioning of metal atoms including: sodium, calcium, manganese, magnesium, iron(II), iron(III) and aluminum. Traces of these types of asbestos are extracted when other minerals are being mined and, due to inefficient or non-existent separation techniques, are ultimately incorporated into the final product. Even incidental contamination by amphibole forms of asbestos is hazardous enough to cause asbestos-related illnesses (Rohl & Langer, 1976).

The serpentine group of minerals has the formula $\text{Mg}_3\text{Si}_2\text{O}_5(\text{OH})_4$ and the structure resembles a bending sheet. Chrysotile is the only one in which the sheets are bent to form continuous tubes, which gives the mineral the fibrous habit related to asbestos. Chrysotile is very flexible and less likely to be “friable” than the amphiboles. Friability of asbestos is generally defined as the ability to easily be turned into a dust with finger pressure. It is this friability that can release asbestos fibers and potentially result in health problems.

A. Asbestos in Talc

Associated minerals found in commercial talc products vary from deposit to deposit depending on the formation conditions. The most common minerals associated with talc include chlorite, magnetite, dolomite, calcite, mica, quartz and fluoapatite (Fiume et al., 2015). In its natural form, some talc also contains asbestos, classified as a Group I, “known carcinogen” by IARC (IARC Monographs, 1973, 1977, 1987, 2012). Amphiboles and serpentine fibers have been associated with many talc deposits (Van Gosen, 2004; Marconi and Verdel, 1990; Lockey, 1981; Rohl and Langer, 1974; Gamble et al., 1979; Kleinfeld et al., 1973, 1974; Pooley, 1972 (JNJ000319762); Chidester, 1968). The close proximity of asbestos and talc in mineral deposits makes extraction of either material alone difficult, if not impossible. (Rohl and Langer, 1974; IARC, 2010; Dion et al. 2010³).

Cralley (1968) analyzed twenty-two commercially available cosmetic talcum products (manufacturers not reported). Authors reported the fiber content ranged from 8% - 30% (by count) with an average of 19% and that the fibrous material was predominantly fibrous talc. Pooley and Rowlands (1975) analyzed twenty-seven talc powders (cosmetic and industrial) and detected tremolite fibers in three samples.

Because asbestos is a known carcinogen, its presence in cosmetic talc is unacceptable (FDA, 2012; FDA 2015). The former Director of National Institute for Occupational Safety and Health (NIOSH) and former President of Industrial Minerals Association – North America (IMA-NA) stated in a recent deposition that if there were a fiber of asbestos in talcum-based products it would “certainly” provide a biologically plausible mechanism for increased lung disease, and that he suspected it would also have a “similar mechanism of disease in other tissues and organs” (Deposition of Robert Glenn, October 18, 2018, 341:15-342:3).

In 1976, specifications were developed for cosmetic talc requiring that no detectable fibrous, asbestos mineral be present (CTFA, 1990; Fiume, 2015). The talc industry, and specifically Defendants, developed a “zero tolerance” standard for asbestos in talc (IMERYS 170006; JNJ 000383662; JNJ 000001918). Despite this standard, the presence of asbestos in cosmetic talc has been reported in the literature, and Johnson and Johnson indicated in a letter in 1973 that “asbestos-form particles cannot be removed from talc” and that the “Johnson & Johnson process for beneficiating Vermont talc...will not guarantee a zero tolerance for elongated particles” (JNJ 000233691). In 1976, Rohl et al. tested 20 different talcs and powders including 20 body powders, baby powders, facial talcums, and also one pharmaceutical talc to determine their mineralogical and chemical composition. Where known, all were formulated prior to 1973. Of the 20 products, 9 contained detectable amounts of tremolite and anthophyllite, principally asbestiform, while some also contained fragmented forms of these minerals. The amounts ranged from tenths of a percent to over 14% by weight; two contained detectable amounts of chrysotile asbestos fiber. Eight samples contained quartz, seven ranging from 2 to 5%, with one as high as 35%. Analyses showed that the consumer products examined were rarely the pure mineral talc, but rather were mixtures of various minerals.

³ Available online at: <http://www.irsst.qc.ca/media/documents/PubIRSST/R-755.pdf>

In 1984, Paoletti et al. performed studies by electron microscopy to assess asbestos contamination in industrial and cosmetic talcs from the Italian market and the European Pharmacopoeia (Paoletti, 1984). Nine of the 25 pharmaceutical and cosmetic grade talcs contained tremolite fibers, with total percent asbestos concentrations ranging from 0.4% - 22%. About half of the talc powders revealed the presence of asbestos: in five samples chrysotile (a serpentine asbestos) was present, the others contained tremolite and anthophyllite (an amphibole asbestos).

Cosmetic and pharmaceutical talc products from deposits in Vermont, Montana, North Carolina and Alabama were examined and tested positive for asbestos (Blount, 1991). The investigator of that study recently affirmed the samples included Johnson & Johnson baby powder, purchased off the shelf (Deposition of Alice Blount, PhD, April 13, 2018). The early analytical methods used to measure asbestos fibers before 1990 were not very sensitive and thus it appears that extrapolation of the levels of asbestos from counts measured before this date could have been conservative (Blount, 1991).

In a study that examined the amphibole asbestos content of commercial talc deposits in the USA, Van Gosen et al. (2004) found that the talc-forming environment directly influenced the amphibole and amphibole-asbestos content of the talc deposit. Specifically, the study found that contact metamorphic talcs showed a strong tendency to contain amphiboles, and regional metamorphic talc bodies consistently contained amphiboles, which display a variety of compositions and habits (including asbestiform). In a German study (Mattenklott, 2007), the author examined the presence of asbestos in talc powder and found that in one-quarter of the 57 talc powder samples tested, asbestos could be detected. Two samples contained quantities exceeding 0.1 weight percent which could reach a value of 10,000 fibers/m³. This weight percent is, in some cases, half that reported by Johnson & Johnson in their internal documents, as seen in the corporate depositions reported below.

Defendants have claimed that asbestos has been “eliminated” from cosmetic talc products.⁴ However, there is substantial evidence that talcum powder products still contain asbestos, recognized as a Group 1 carcinogen. During the recent deposition of John Hopkins (Johnson and Johnson corporate representative), Mr. Hopkins affirmed testing results showing the presence of asbestos in mines from which talc ore was taken for use in Johnson & Johnson baby powder products, processed talc used in Johnson & Johnson baby powder products, and in complete Johnson & Johnson baby powder products. Those results may be found at Exhibit 28⁵ of Dr. Hopkins’ deposition. Additional examples of testing performed by and commissioned by Johnson and Johnson and Imerys may be found at Exhibit 47 to the deposition of Julie Pier, corporate representative of Imerys.⁶

In 1975, McCrone Associates also confirmed the presence of amphibole particles, alone and in bundles as seen in Defendants’ internal documents (JNJMX68_000012745). In 2004, a television station reported that Johnson’s Baby Powder had been analyzed and found anthophyllite asbestos at 0.2% (JNJ 000089413). A 1972 Johnson & Johnson document demonstrates the presence of up to 5% chrysotile in

⁴ PCPC Submission to FDA, July 2009 – “Since the early 1970’s, the relevant industries voluntarily eliminated asbestos contamination from talc products.”

⁵ Ex. 28, John Hopkins Dep. (Aug. 16 & 17, 2018; Oct. 17, 2018; and Nov. 5, 2018).

⁶ Ex. 47, Julie Pier Dep. (Sept. 12 & 13, 2018).

Johnson's Baby Powder and Shower to Shower samples (JNJ 000232996). These data clearly demonstrate the possibility for women who used talcum powder during these dates to have had exposure to this ovarian carcinogen.

Recent TEM testing on historic samples of Johnson & Johnson baby powder from 1978 showed the presence of fibrous anthophyllite in the product. (Longo and Rigler, 2018; Ex. 47, Pier Dep.). Additional TEM testing of 30 samples of Johnson & Johnson baby powder and Shower to Shower ranging in production date over a span of many years resulted in a finding of amphibole asbestos (tremolite, anthophyllite, richterite and actinolite) in 17 samples. (Longo and Rigler, 2017). Additionally, I have reviewed a recent report prepared by Dr. William Longo and Dr. Mark Rigler that reports that talcum powder products manufactured by Johnson & Johnson's Baby Powder and Shower to Shower have contained and continue to contain asbestos and talc containing asbestiform fibers (e.g. talc occurring in a fibrous habit).⁷ These results were obtained from testing talcum powder product samples manufactured during the period of the 1960s through the 1990s. Results showed 37 of 56 samples tested contained tremolite and/or anthophyllite asbestos, and 41 of 42 samples tested contained fibrous talc.

The substantial evidence of the presence of asbestos and fibrous talc in talcum powder products provides a biologically plausible explanation for the increased risk of ovarian cancer associated with the perineal use of talcum powder products.

V. HEAVY METALS

A. Properties of Heavy Metals

Nickel is classified by IARC as a human carcinogen (Group 1) (IARC, 1973, 1976, 1979, 1982, 1987, 1990). The exact mechanisms of nickel-induced carcinogenesis are not known, but likely involve genetic and epigenetic routes. Nickel (II)-induced genotoxicity may be aggravated through the generation of DNA-damaging reactive oxygen species (ROS) and the inhibition of DNA repair by this metal. Nickel exposure also causes a broad spectrum of epigenetic effects. Contact with nickel compounds can cause a variety of adverse effects on human health (Zambelli and Ciurli, 2013).

Nickel ions have been shown to cause single-strand DNA breaks and DNA-protein crosslinks (Patierno, 1985). In a study by Patierno (1985), Chinese hamster ovary cells were exposed to NiCl₂, and nickel-induced DA-protein crosslinking appeared in late S phase of the cell cycle (*Id.*). Authors associate these alterations as an early event in the process of nickel transformation (*Id.*).

Contact with nickel compounds can cause a variety of adverse effects on human health, such as nickel allergy in the form of contact dermatitis, lung fibrosis, cardiovascular and kidney diseases and

⁷ Expert Report of William E. Longo, PhD and Mark W. Rigler, PhD (Nov. 14, 2018).

cancer of the respiratory tract. Chronic non-cancer health effects may result from long-term exposure to relatively low concentrations of pollutants (Duda-Chodak and Blaszczyk, 2008). Although the accumulation of nickel in the body through chronic exposure can lead to a number of diseases, the most serious concerns relate to nickel's carcinogenic activity. Increased risks of malignant tumors, such as nasal and sinusoidal cancers, and cancers of the lung and larynx have been noted (IARC, 1987). The marked differences in the carcinogenic activities of various nickel compounds most likely reflect the differences in their uptake, transport, distribution and retention, and ultimately—the capacity to deliver nickel (II) ions to specific cells and target molecules.

In experimental animals, nickel compounds induce tumors at virtually all sites of application (Denkhaus, 2002; IARC, 1987; Zabmelli, 2013). The routes of administration that were shown to produce tumors include inhalation, intramuscular, intrarenal, intraperitoneal, intraocular, subcutaneous and the intra-articular space (*Id.*).

Chromium is a naturally occurring element found in rocks, animals, plants, soil, and volcanic dust and gases. It comes in several different forms, including trivalent chromium (chromium (III)) and hexavalent chromium (chromium (VI)). In contrast, chromium (VI) compounds cause cancer in humans and in experimental animals and exert genetic toxicity in bacteria and in mammalian cells *in vitro* (Fang, 2014; IARC, 2009). Adverse health effects, other than cancer, associated with chromium (VI) exposure include occupational asthma, eye irritation and damage, perforated eardrums, respiratory irritation, kidney damage, liver damage, pulmonary congestion and edema, upper abdominal pain, nose irritation and damage, respiratory cancer, skin irritation, and erosion and discoloration of the teeth. Some people with extensive dermal exposure can also develop an allergic skin reaction, called allergic contact dermatitis (Bruynzeel et al., 1988). Primary irritant dermatitis is related to the direct cytotoxic properties of chromium, while allergic contact dermatitis is an inflammatory response mediated by the immune system. During reduction to the trivalent form, chromium may interact with cellular macromolecules, including DNA (Wiegand et al., 1985), or may be slowly released from the cell. Complexes of chromium (III) that are bound to lower molecular weight ligands are most likely to be able to traverse cell membranes.

Chromium (III) has weak cell membrane permeability, allowing it to cross the cell membrane, where it can bind to DNA and cause lesions, resulting in genetic damage such as strand breaks and DNA-protein crosslinks (Nickens, 2010). This damage leads to genomic instability. Another study has shown that chromium (III) causes DNA damage in cells by interfering with base pair stacking in the cell's replication cycle, and chromium (VI) intercalates DNA – both directly cause genotoxicity *in vivo* (Fang, 2014).

Hexavalent chromium compounds are classified by IARC as carcinogenic to humans (Group 1)(IARC, 2009). Mechanistically, they have been shown to cause direct DNA damage after intracellular reduction to Cr(III), mutation, genomic instability, aneuploidy, and cell transformation (*Id.*). Chromium (VI) can cause damage leading to dysfunctional DNA replication, aberrant cell cycle, DNA strand breaks, dysfunctional DNA repair and DNA-protein crosslinks and directly causing genotoxicity (Nickens, 2010).

Besides direct genotoxic effects of chromium (VI), chromium compounds such as chromate can activate transcription factors involved in inflammation and tumor growth (IARC, 1990). Major factors

governing the toxicity of chromium compounds are oxidation state and solubility. These compounds, which are powerful oxidizing agents and thus tend to be irritating and corrosive, appear to be much more toxic systemically than chromium (III) compounds, given similar amounts and solubilities. Chromium (VI) enters many types of cells and, under physiological conditions, can be reduced by hydrogen peroxide (H₂O₂), glutathione (GSH) reductase and ascorbic acid to produce reactive intermediates, including chromium (V), chromium (IV), thiyl radicals, hydroxyl radicals, and ultimately, chromium (III). Any of these species could attack DNA, proteins and membrane lipids, thereby disrupting cellular integrity and functions (De Mattia, Bravi *et al.* 2004). Besides cancer, chromium is one of the most common skin sensitizers. It also causes toxicity of the kidney, liver, gastrointestinal tract, and cardiovascular, hematological and reproductive systems along with causing developmental effects.⁸ High doses of chromium (VI) compounds have been reported to cause developmental toxicity in mice and shown to potentiate the effects of other toxicants, including the nephrotoxins, mercuric chloride, citrinin, hexachlorobutadiene, and maleic acid.

Cobalt IARC declared that cobalt metal with tungsten carbide is *probably carcinogenic to humans (Group 2A)*, while cobalt metal without tungsten carbide is *possibly carcinogenic to humans (Group 2B)*. Two different mechanisms of genotoxicity, (1) DNA breakage induced by cobalt metal and especially hard metal particles, and (2) inhibition of DNA repair by cobalt (II) ions contribute to the carcinogenic potential of cobalt compounds (Lison *et al.*, 2001; IARC, 2006). Cobalt can also contribute to allergic reactions. In humans, gastrointestinal absorption of cobalt has been reported to vary between 5 and 45% and it has been suggested that absorption is higher in women than in men. Cobalt can be absorbed through intact human skin (IARC, 2006). Soluble cobalt salts interfere adversely with cell division, bind irreversibly to nucleic acids in the cell nucleus, induce chromosome aberrations in plants, and are weakly mutagenic in some *in vitro* tests. Injections or implantation of cobalt metal, alloys and compounds induced local and sometimes metastasizing sarcomas in rats, rabbits, and mice (*Id.*). Data indicating possible carcinogenic effects of cobalt alloys or compounds in human populations has arisen from medical use, use in hard-metal industries, and from cobalt production sites.

B. Metals in Talcum Powder Products

In an early paper by Cralley *et al.*, (1968), 22 cosmetic talcum products purchased off the shelf were analyzed for fibrous content, selected metals and quartz. In these studies, 19 samples contained cobalt under 25 parts per million (ppm) by weight, chromium under 22 ppm, nickel below 29 ppm and manganese under 78 ppm. Certain samples had a nickel content of 1270 ppm, chromium 340 ppm and 1210 ppm nickel; qualitative tests demonstrated that some of the chromium was hexavalent (carcinogenic form). All of these talcs had a considerable fiber content (suggesting the presence of asbestos) (*Id.*). Studies here suggest that women who used talcum powder in the 1960s could have been exposed to considerable amounts of toxic heavy metals depending on the type of talc used and frequency of use (*Id.*).

⁸ Accessible online at: <https://www.atsdr.cdc.gov/csem/csem.asp?csem=10&po=10>

In a 2013 study by Rehman, toxic and carcinogenic heavy metals were found to be present in small amounts in all 30 brands of cosmetic talcum powder tested; the concentrations of heavy metals differed dramatically depending upon the brand of talcum powder (Rehman, 2013). Heavy metals measured (and found in samples) included cadmium, chromium, copper, cobalt and lead. Authors found all levels to be within safe limits. However, authors caution that excess use of talcum powder affects the health of the consumer (*Id.*).

In a paper by Gondal et al. (2012), published in Applied Optics, lead and chromium were measured in talcum powder using laser-breakdown spectroscopy. Using this system, the authors were able to detect 15-20 parts per million (ppm) of lead and 20-30 ppm of total chromium in the talcum powder sample. This study, like that by Rehman, demonstrates the presence of toxic heavy metals associated with talcum powder. However, the levels of heavy metals in this study were significantly higher. The method used for measuring metals in this study was far more precise than that used by Rehman et al. (2013). This study supports the presence of toxic and potentially carcinogenic metals in some talcum powders.

According to Johnson & Johnson's corporate representative, the maximum amount of allowable nickel in the company's talcum powder products was 5 ppm (Deposition of John Hopkins, August 16, 2018, Ex. 3). Written specifications state that the maximum allowable nickel content is 10 ppm (JNJ 000629320; JNJ000488188; JNJMX68_000022920). Despite these limits, nickel in concentrations exceeding 2000 ppm were reported in Vermont talc used in talcum powder products for decades, greatly in excess of the product specification limit of 10 ppm (JNJ 000629320; JNJ 000488188; JNJMX68_000022920). Examples of testing results for heavy metals in Defendants' talcum powder products can be found in **Exhibit C**, attached to this report.

Over the years from 1972 to 2004, talc mined in Vermont had consistent, excessive levels of nickel, routinely exceeding 94 to 250 times the upper limit provided in J&J's specifications (Exhibit C). This is troubling considering nickel is a known carcinogen (IARC 2012).

Cobalt was found in Vermont talc ores in amounts ranging from 8 – 89 ppm from 1972 through 2004. Like nickel it, too, appears to occur routinely in talc products in amounts exceeding the 10 ppm upper limit for heavy metals in the talc product specifications (Exhibit C).

Internal documents outline Johnson & Johnson's concern regarding the potential carcinogenic nature of chromium (VI), a Group I carcinogen (JNJ 000131758; JNJ 000131754; JNJ 000378044; JNJ 000378046). A 2010 J&J memo written discusses raising the upper limit acceptable for total Cr to 7 ppm (JNJ 000131758). An accompanying memo also discusses the relationship between chromium (III) and chromium (VI) (JNJ 000131754), and a discussion of the inhalation of hexavalent chromium is contained in this document. Regardless of valence, Grade 66 analyses consistently show total chromium contents far in excess of 5-, 7-, or 10 ppm. During the period from 1972 thru 2004, the chromium content varied from 25 ppm to 569 ppm (Ex. 47, Pier Dep.), with typical levels around 200 ppm.

Interestingly, there is a significant difference between the reported chromium content of Grade 66 talc when the sample has been prepared by Johnson & Johnson (internal) method BPT 148 versus the

United States Pharmacopeia (USP) method which uses a total digestion technique (IMERYS-A_0015621). The levels reported using the USP method were much higher than the Johnson & Johnson method (*Id.*).

C. Fragrances

There are more than 150 different chemicals added to Johnson's Baby Powder and Shower to Shower products. I reviewed the expert report from Dr. Michael Crowley that concludes that some of these chemicals may contribute to the inflammatory response, toxicity, and potential carcinogenicity of Johnson & Johnson's talcum powder products.⁹ I concur with his opinion.

There is substantial evidence that talcum powder products contain excess levels of nickel, chromium, and cobalt, all known carcinogens and/or inflammatory agents. Moreover, a significant number of the fragrance chemicals added to talc elicit an inflammatory response. Each of these elements individually and together can contribute to an inflammatory response caused by the product. As will be explained in more detail below, inflammation is a known mediator of ovarian cancer. The presence of these inflammatory agents provides additional biologic evidence explaining the causal relationship between genital use of talc and ovarian cancer.

VI. EXPOSURE – TALC PARTICLE ACCESS TO THE BODY

A. Exposure Routes

Based on the tenets of toxicology, there are four basic routes of human exposure including: inhalation, ingestion, dermal and injection.

A common exposure route for cosmetic talc is via the dermal route, including vaginally after perineal application. Talc body powders are often applied to the perineum for hygienic purposes. It has been shown that glove powder and other materials can migrate upwards through the female reproductive tract (Venter & Iturralde, 1979; Iturre and Venter, 1981; Sjosten et al., 2004; Heller et al., 1995) and the data are supported by animal investigations (Wright et al., 1996; Edelstam et al., 1997; De Boer, 1972; Henderson et al., 1986), also reflective of a dermal exposure route.

Inhalation is the route of exposure that has been most commonly studied to assess talc toxicity. In one inhalation study, after talc exposure of hamsters, there was a consistent elevation in cytotoxic enzyme levels, and macrophage phagocytosis was persistently depressed (Beck et al., 1987). These results also indicated that, when a similar mass of talc and granite dust (12% quartz) was deposited in the lungs,

⁹ Expert Report of Michael Crowley, PhD (Nov. 12, 2018).

talc caused more lung injury than did granite (*Id.*). Based on its physical properties talc, in a powder form, can be inhaled while being applied (EPA, 1992; IARC, 2010). Additional evidence that application of talc body powder products results in inhalation exposure of talcum powder is provided in a 2017 study by Longo, et. al., and other studies (Longo, September 2017, “*Below the Waist Application of Johnson & Johnson Baby Powder*”; Wells, 1979; van Huisstede, 2010; Frank and Jorge, 2011; Jasuja, 2017).

1. Dermal - Migration Through the Upper Genital Tract

Animal models: Though animal studies have limitations due to the differences in anatomy, they provide evidence that talc can migrate through the reproductive system. Rats were exposed vaginally or via the perineum to either talc or no treatment for 3-mo on a daily basis (Keskin et al., 2009). In this study, there was evidence of foreign body reaction and genital infection, along with an increase in inflammatory cells in all the genital tissues. While no neoplastic changes were observed, the number of ovarian follicles in the talc groups were increased. No peritoneal changes were observed. The investigators concluded that talc by perineum exposure has adverse effects on the genital system in the form of foreign body reactions and infection (*Id.*).

In a series of two experiments, Henderson et al. (1986) demonstrated the presence of talc in the ovaries of two groups of animals following vaginal and intrauterine talc applications, whereas none was present in the ovaries of control animals. Particles were also seen in animals that had received intravaginal talc that were sacrificed after 4 days. (*Id.*)

Studies by Wright et al. (1995) also demonstrated the potential toxicity of retrograde uterine passage of particulate matter. Despite the aforementioned studies which demonstrate the plausibility of talc translocation, a study by Wehner et al. (1996) failed to demonstrate the same outcomes in a small sample of monkeys, which may have been due to the small sample size.

Human studies: A number of human studies over many years have observed migration of particles following vaginal administration: these studies began as early as 1961 when Egli and Newton studied the translocation of carbon particles following vagina application. In 1972, De Boer deposited colloidal carbon black (CB) suspension in the uterus, cervical canal or vagina in over 100 patients prior to surgery (De Boer, 1972). Subsequent observation revealed rapid translocation of CB to the oviducts and beyond. Some CB deposited in the cervical canal also translocated to the uterine passage, albeit in a lower percentage of patients (*Id.*). An early study by the National Institute of Occupational Safety and Health (NIOSH) in 1972 showed commercially available talc body powder samples contained fibers, and that exposure to fibers occurred during diapering (JNJ 000231304).

A study by Venter and Itteralde (1979) administered radiolabeled human albumin microspheres (no size provided) in the vagina of patients, followed by surgical removal of uterus, oviducts and ovaries. Results demonstrated that 9 out of 14 patients had radioactivity in their oviducts and ovaries. Recent studies have demonstrated the presence of talc particles in ovarian tumors (to be discussed in a later section). Another clinical study examined a total of 24 women undergoing oophorectomy (Heller et al.,

1995). In this case, women were questioned as to their use of perineal talc applications. Ovarian tissue was removed from each group and analyzed and quantitated for talc by polarized light and electron microscopy. These data support the ability of talc to migrate from the perineal region upward and reach the upper genital tract (*Id.*).

Further evidence for migration of particles to the upper genital areas comes from a document from the FDA to Dr. Epstein (Cancer Prevention Coalition, University of Illinois, Chicago) concerning Citizen Petitions dated 1994 and 2008 and requesting a cancer warning on cosmetic talc products. In this document, the FDA stated that “the potential for particulates to migrate from the perineum and vagina to the peritoneal cavity is indisputable” (JNJ 000488318).

In addition, a 2004 document from Luzenac America to Dr. Al Wehner (IMERYS 137677) recalls a 2004 published paper by Sjosten et al. (2004). Luzenac states that the paper “offers some compelling evidence **in support** of the ‘migration’ hypothesis.” The paper concluded that starch particles migrate from the vagina through the Fallopian tubes up to four days after examination with powdered gloves (*Id.*). The author of the Luzenac document goes on to state that combining this evidence with the theory that talc initiates epithelial inflammation and you have a “potential formula” for the NTP classification of talc as a carcinogen.

The most recent systematic review of the association between genital use of talcum powder products and ovarian cancer (Penninkilampi, 2018) reported an increased risk of ovarian cancer with increased perineal talcum powder use, with a slightly higher risk in women who report greater usage. Data was collected as “lifetime” usage – frequency of use over time. Any use was associated with increased risk of ovarian cancer as compared to no use, and women with long-term (> 10 years) talcum powder use had an increased risk. The authors concluded perineal talcum powder use and ovarian cancer were consistently associated, with a slightly higher risk in women who report greater usage.

Pathways that allow for the migration of particles to the lymph nodes are also available for that complex portion of the lymphatic system surrounding the ovaries. Importantly, studies by Chan et al. (2007) have demonstrated a positive association between lymphadenectomy and survival in stage 1 ovarian cancer patients. In support of this finding, Cramer et al. (2007) described the presence of talc particles in pelvic lymph nodes of a woman with ovarian cancer and long-term genital exposure to cosmetic talc.

Animal and human studies demonstrate that talcum powder products can migrate from the perineal region to the ovaries.

2. Inhalation

Effects of size on particle translocation and toxicity have been studied most extensively with inhaled particulate air pollutants and nanomaterials. These studies will be discussed to provide a scientific

premise for movement of particles of a certain size throughout the body. Small-sized particles can enter the bloodstream – translocation of particles and often toxicity are related to their size; perhaps because of the larger mass concentration of smaller vs. larger particles (Driscoll et al., 1997).

J&J's analysis of particle size in talcum powder products shows particles range on average from 0.8 μm to over 50 μm , with a median particle size of 11.39 μm , where approximately 43.9% of particles are less than 10 μm (JNJALC000878141).

Ultrafine particles (UFPs; $< 0.1 \mu\text{m}$) can directly affect the cardiovascular system by migration from the respiratory system to the systemic circulation (Nakane, 2012; Elder et al., 2006; Kreyling et al., 2006). Inhaled UFPs deposited in the lung can pass through the epithelial barrier because of their very small size; some particles may move into lung capillaries and then into the systemic circulation. Numerous studies and reviews have been written concerning the migration of these particles. In a systematic literature review (Nakane, 2012), particle size was shown to be a strong factor for migration. Particles that were translocated to various sites were observed to have the following sizes: $\leq 0.05 \mu\text{m}$ for remote organs, $\leq 1 \mu\text{m}$ for blood, and $\leq 10 \mu\text{m}$ for lung tissues. In order to be detected in the blood, particles that have passed through the epithelial barrier of the lungs must migrate into the capillaries. The largest chance for migration to the brain was observed at a 0.05- μm cutoff size. However, MnO_2 particles as large as 1.3 μm have also been detected in the cerebral cortex (Nakane, 2012). A categorical regression analysis based on currently available inhalation data showed that all of the effects of particle size, particle material, animal species, and exposure route were statistically significant (*Id.*). The effects were large for particle size and particle material, and small for exposure route and animal species. These results suggest that, in an experiment to evaluate the migration of solid particles, the characteristics of the particles (i.e., size and material) should be considered carefully.

Evidence from an internal document (1971) demonstrates rolled talc fibers between 0.1 - 3 μm in a Johnson and Johnson's commercial product (JNJAZ55_000005957). Other documents from Defendants have demonstrated that while median particle size is $\sim 10.5 \mu\text{m}$, sizes can be as small as 0.3 μm (IMERY5030347; IMERY5031791). V66 non-shear talc was approved for use in JNJ Shower to Shower products and the size of some of the particles had a diameter as small as 0.1 μm (JNJALC000878141). While the median particle size was $\sim 12 \mu\text{m}$, the standard deviation was very high ($\sim 9 \mu\text{m}$) demonstrating a large range of particle sizes. Fine-size particles such as those found in talc, can also translocate readily throughout the body (Peters et al., 2006), providing a strong basis for the ability of fine-size talc particles ($< 2.5 \mu\text{m}$ to migrate throughout the body).

Ultrafine and fine particles can penetrate through the different tissue compartments of the lungs and eventually reach the capillaries and circulating cells. These particles are then translocated by the circulation to other organs including the liver, the spleen, the kidneys, the heart and the brain, and the ovaries where they may be deposited. It remains to be shown by which mechanism(s) ultrafine particles penetrate through tissue and enter capillaries. Lymph capillaries remove the large protein molecules and other particulate matter from the tissue spaces of the lung. Thus, cellular debris and foreign particles inhaled into the lungs can be conveyed to the regional lymph nodes.

Talc particle size analyses for many inhalation studies demonstrated that most talc particles were between 1 and 8 μm ; 1 μm is considered ultrafine in size and thus particles could easily migrate from the lungs and throughout the body. Genofre et al., (2009) examined the effect of talc particle size on induced pleurodesis following intrapleural injection of rabbits with two different sizes of talc. One group contained mixed sizes of talc (mean size = 25.4 μm) and the other group small size talc only (mean size = 4.2 μm with 50% <6.4 μm) (*Id.*). Particles of both sizes migrated to the spleen, liver and kidney; more small talc particles (compared to mixed talc) was seen in the liver and kidneys. Both size particles produced an acute systemic inflammatory response, with small particle talc producing a more pronounced pleural and systemic response and resulting in greater particle deposition in the organs than the mixed talc (*Id.*). In addition, serum levels of the pro-inflammatory cytokine, IL-8 and VEGF were more markedly increased in the small talc group (*Id.*). Particles found in all systemic organs were <5 μm . A number of other studies have shown migration of talc particles from the pleural cavity to the systemic circulation (Ferrer, 2002; Rossi, 2010). It appears that small particles may be more easily taken up by the lymphatics than larger particles. The inflammatory effects observed showed a strong correlation with the small particle group. This study shows that size of talc particles matter and the smaller the size the greater the ability to translocate and increase the extent of the inflammatory response. As Defendants' internal documents demonstrate their talc particle size to cover a wide size range (100 μm to ~0.3 μm)¹⁰, there is extensive evidence that particles can be inhaled and transported through the blood and lymph to the ovaries.

In 1993, the National Toxicology Program (NTP) issued a report from a study concluding that there was "some evidence of carcinogenic activity" in male rats, "clear evidence of carcinogenic activity" in female rats, and no evidence of carcinogenic activity in male or female mice exposed to aerosols of talc reported as nonasbestiform cosmetic-grade (National Toxicology Program, 1993). Authors of that study speculated these effects could be due to cytokines released from macrophages or a nonspecific effect of the stress of inflammation (*Id.*).

In another study, rabbits were injected with normal size talc (Dmax = 8.36 μm) or larger particles talc (Dmax = 12 μm) (Ferrer et al., 2002). Pleural inflammation was greater with normal talc than large talc, and animals receiving normal talc had talc particles in the liver, supporting the premise that talc particles instilled into the pleural cavity can escape and migrate to extrapleural organs. Talc dissemination can be significant, and granulomas have been seen to develop in the interstitium after particles migrate from the lungs, with resultant pulmonary interstitial fibrosis (Hollinger, 1990). In another study illustrating talc dissemination (Werebe, 1999), talc was administered into the pleural space of rats. At both 24- and 48-hours, talc crystals were found in every organ of all animals, with the amount of talc being statistically different between the organs. Authors concluded there was a rapid absorption of talc through the pleural surface and a progressive systemic distribution of particles (*Id.*).

In addition to migration of ultrafine particles through tissue and movement to the lymph nodes, fine and coarse particles may be phagocytized by macrophages and dendritic cells which may carry the particles to lymph nodes in the lung or to those closely associated with the lungs (IARC, 2010). The uptake of fine particles (0.1–2.5 μm in diameter) by macrophages is a specific ligand-receptor mediated

¹⁰ IMERY346016; IMERY3030347; IMERY3031791; JNJAZ55_000005957.

actin-based process (phagocytosis), whereas the uptake of ultrafine particles ($<0.1\ \mu\text{m}$ in diameter) apparently occurs by other, non-specific mechanisms (Peters, 2006). These mechanisms are termed “adhesive interactions,” and include electrostatic, van der Waals and steric interactions (*Id.*). Particles with a diameter of $0.2\ \mu\text{m}$ and smaller appear to enter cells passively, that is by a mechanism which is different from phagocytosis. Larger particles are much more avidly taken up by macrophages, but by the specific receptor mediated, actin-dependent mechanism. Below the particle size of $0.2\ \mu\text{m}$, particles increasingly enter the macrophages by the non-specific “adhesive interaction” mechanisms mentioned above (*Id.*).

There is substantial evidence in the scientific and medical literature that support a conclusion that talc powder particles can reach the ovaries through inhalation.

VII. MECHANISM OF CANCER

A. Cancer - General

Tumorigenesis, the formation and growth of tumors, is a complex and multifactorial progressive process of transformation of normal cells into malignant ones (Pogribny and Rusyn, 2014). It is characterized by the accumulation of multiple cancer-specific heritable phenotypes, including persistent proliferative signaling, resistance to cell death, evasion of growth suppression, replicative immortality, inflammatory response, deregulation of energy metabolism, genomic instability, induction of angiogenesis, and activation of invasion ultimately resulting in metastases. It encompasses genetic, behavioral, and environmental factors that can all contribute to its development.

Mutations can occur as a result of the processes inside the cell, or alternatively, can be caused by external factors, such as chemicals. In addition, some people can inherit faults in particular genes that make them more likely to develop cancer. While normal cells obey signals indicating they have reached their growth limit, in cancer cells, the normal signaling system is disrupted. Mutations in particular genes may result in over- or under- production of proteins, or the production of abnormally formed proteins, all of which can lead to a lack of cellular regulation.

In general, cancer is an uncontrolled growth of abnormal cells in the body, which occurs when the body’s normal control mechanisms are disrupted. Excessive cellular division leads to a growth called a tumor. Mutations can happen by chance when a cell is dividing. Some mutations act by inhibiting normal controls over cell growth, leading to uncontrolled cell division. DNA may be damaged during routine cellular processes, and cells have mechanisms to repair that damage. However, over time, the damage may accumulate. Once cells exhibit increased cell growth, they are more likely to pick up additional mutations and are less likely to be able to repair the damaged genes.

If the DNA damage cannot be repaired, the cell can self-destruct, a process called apoptosis. In cancer cells, molecules in the repair pathway are faulty. For example, a protein called p53 normally determines whether genes can be repaired or if the cell should undergo apoptosis. Many cancers have a defective version of p53, and don't repair themselves properly. Thus, cancer cells can override self-destruct signals and don't undergo apoptosis when they should.

B. Genetic Mutations

Inherited mutations are passed down from parent to child and are present throughout a person's life in virtually every cell in the body. These mutations are also called germline mutations because they are present in the parent's egg or sperm (germ) cells. When an egg and a sperm cell unite, the resulting fertilized egg cell receives DNA from both parents. If this DNA has a mutation, the child that grows from the fertilized egg will have the mutation in each of his or her cells.

A genetic predisposition (sometimes also called genetic susceptibility) is an increased likelihood of developing a particular disease based on a person's genetic makeup. A genetic predisposition results from specific genetic variations that are often inherited from a parent. These genetic changes contribute to the development of a disease, but do not directly cause it. For example, mutations in the *BRCA* gene result in an increased risk for ovarian cancer. Some people with a predisposing genetic variation will never get the disease while others will, even within the same family. Genetic variations can have large or small effects on the likelihood of developing a particular disease. Although each of these variations only slightly increases a person's risk, having changes in several different genes may combine to increase disease risk significantly. Changes in many genes, each with a small effect, may underlie susceptibility to many common diseases, including cancer.

In people with a genetic predisposition, the risk of disease can depend on multiple factors in addition to an identified genetic change. These include other genetic factors (sometimes called modifiers) as well as lifestyle and environmental factors. Diseases that are caused by a combination of factors are described as multifactorial. Most disease-causing gene mutations are uncommon in the general population. However, other genetic changes occur more frequently. Genetic alterations that occur in more than 1 percent of the population are called polymorphisms.

Acquired (or somatic) mutations occur at some time during a person's life and are present only in certain cells, not in every cell in the body. These changes can be caused by environmental factors such as ultraviolet radiation from the sun, chemical exposure, or can occur if an error is made as DNA copies itself during cell division. Acquired mutations in somatic cells (other than sperm and egg cells) cannot be passed to the next generation.

Environmental and occupational exposures to natural substances, as well as man-made chemical and physical agents, play a causative role in human cancer. Acquisition of cancer-specific alterations may be triggered by the mutational and/or non-mutational (i.e., epigenetic) events in the genome which, in turn, affect gene expression and downstream phenotypes including persistent proliferative signaling, resistance to cell death, evasion of growth suppression, replicative immortality, inflammatory response,

deregulation of energy metabolism, genomic instability, induction of angiogenesis, and activation of invasion ultimately resulting in metastases.

Genotoxic carcinogens are agents that interact directly or after metabolic activation with DNA, causing mutations and leading to tumor formation. Non-genotoxic carcinogens are a diverse group of chemical compounds that are known to cause tumors by mechanisms other than direct damage to DNA. In a broad sense, carcinogenesis may be induced through either genotoxic or non-genotoxic mechanisms. However, both genotoxic and non-genotoxic carcinogens also cause prominent epigenetic changes (Pogribny and Rusyn, 2013). Disruption of epigenetic processes can lead to altered gene function and malignant cell transformation. Global changes in the epigenetic landscape are a hallmark of cancer.

The presence of talc particles in the ovaries (deep in the tumor) of some ovarian cancer patients and presence of talc in pelvic lymph nodes provides indirect evidence for talc carcinogenicity (Heller et al., 1996). Changes in signal transduction pathways that lead to increased and chronic inflammation are also associated with cancer, as are changes in cancer stem cells which have the ability to generate tumors through the processes of self-renewal and differentiation into multiple cell types. Cancer stem cells are thought to play a major role in tumor escape, chemoresistance/recurrence of ovarian cancer. Users of talcum powder have lower plasma levels of anti-MUC1 antibodies than non-users (Karageorgi et al., 2010). MUC1 is a protein highly expressed by ovarian, breast, and endometrial tumors, and low levels of anti-MUC1 antibodies are associated with poorer prognosis. Reducing immunity to MUC-1 could be one mechanism by which talc increases endometrial and/or ovarian cancer risk (Karageorgi et al. 2010).

C. Ovarian Cancer

There are two major categories of ovarian carcinogenesis based on the idea that tumors are heterogeneous: high-grade malignancies that tend to be fast growing and chemo-sensitive, and low-grade neoplasms which typically grow slowly, but are less sensitive to chemotherapy. The low-grade pathway is associated with a stepwise mutation process, whereas the high-grade develops through genetic instability (Lengyel, 2010). Ovarian cancer comprises at least five distinct histological subtypes, the most common and well-studied being high-grade serous ovarian cancer. The majority of these tumors arise from the distal end of the fallopian tube and evolve from premalignant lesions called tubal intraepithelial carcinoma (Saad, 2010). Several risk factors have been associated with increased risk of ovarian cancer and include: low parity, infertility, early age of menarche and late age of menopause.

Multiple mechanisms can explain the progression of ovarian cancer (Fleming et al., 2006; Fathalla, 2013; Saad, 2010; Smith and Xu, 2008). These mechanisms include: incessant ovulation- whereby repeated damage and trauma to the ovarian epithelium during ovulation increases the risk for genetic mutation and ovarian neoplasm during epithelium repair; pituitary gonadotropin changes- high levels of gonadotropins increase estrogen stimulation which can cause ovarian epithelial cells to become entrapped in inclusion cysts that undergo malignant changes; androgen/progesterone alterations- androgens stimulate ovarian cancer formation and progestins are protective; inflammation- factors that predispose to inflammation, such as endometriosis, PID, perineal talc use and hyperthyroidism could stimulate ovarian cancer. The molecular pathway in the inflammatory process involves intracellular

effectors implicated in malignant transformation such as VEGF, NF- κ B, nitric oxide synthase, and cyclooxygenase (Williams et al., 1999).

Genetic mutations also play a role in the development of ovarian cancer. For example, certain mutations in the *BRCA1* or *BRCA2* genes increase a person's risk of developing ovarian cancer. Both inherited and acquired gene mutations work together to cause cancer. Even if one has inherited a genetic mutation that predisposes one to cancer, that doesn't mean he or she is certain to get cancer. Rather, one or more additional gene mutations may be needed to cause cancer. The inherited gene mutation could instead make one more likely to develop cancer when exposed to certain cancer-causing substances.

D. Roles of the Immune System

It is well established that inflammation has paradoxical roles during tumor development (Coussens and Werb, 2002). While acute inflammation can be protective against tumors, chronic inflammation provides an environment for the tumor to thrive. The net outcome of tumor-associated inflammation depends on the dominance of either tumor-promoting or tumor-suppressive actions. Inflammation normally functions to maintain tissue homeostasis in response to tissue stressors such as infection or tissue damage. However, studies also suggest a close association between inflammation and tumorigenesis (Rakoff-Nahoum, 2006).

Two stages of inflammation exist, acute and chronic inflammation (Ingersoll, 2011). Acute inflammation is an initial stage of inflammation (innate immunity), which is mediated through the activation of the immune system. This type of inflammation persists only for a short time and is usually beneficial for the host. Acute inflammation (e.g., involving innate immunity, macrophages, natural killer cells, neutrophils) frequently precedes the development of protective adaptive immune responses to pathogens and cancer.

Chronic inflammation, by contrast, has been shown to contribute to tumorigenesis at all stages (Crusz and Balkwill, 2015). It contributes to cancer promotion by inducing cellular proliferation; and to cancer progression by enhancing angiogenesis and tissue invasion. Over time, chronic inflammation can cause DNA damage and lead to cancer. Inflammation initiated by genital application of talc is likely to be sustained, since studies indicate that women start using talcum powder at an early age and continue using it for decades.

E. Ovarian Cancer and Inflammation

Inflammation plays an important role in the progression of ovarian cancer, and it is a biologically plausible mechanism that mediates ovarian cancer. Recent clinical and prospective data suggest that C-reactive protein (CRP), a marker of global inflammation, is associated with increased ovarian cancer risk (Li, 2017; Poole, 2013; Jing, 2017). Other inflammatory markers may be important in ovarian carcinogenesis. In premenopausal women, ovarian epithelial cells secrete cytokines as part of ovarian function and some of these cytokines are also produced by ovarian cancer cells (Jammal, 2016). Epithelial

cells in proximity to ovulating follicles are likely exposed to these inflammatory mediators that may signal oxidative stress, and enhance the risk of mutagenesis. Importantly, cytokines involved in ovarian function, follicle rupture, and repair (physiologic processes before menopause) are suggested to remain activated in postmenopausal women and may play an etiologic role in ovarian carcinogenesis; these cytokines include: interleukin (IL)-1 α , IL-1 β , IL-2, IL-6, IL-8, IL-10, tumor necrosis factor alpha (TNF- α), interferon gamma (IFN- γ), granulocyte colony-stimulating factor (G-CSF), and granulocyte macrophage colony-stimulating factor (GM-CSF). Many inflammatory mediators, including prostaglandins, leukotrienes, and cytokines, are locally elevated during ovulation. Epithelial cells in proximity to ovulating follicles are likely exposed to these inflammatory mediators that may signal oxidative stress, and enhance the risk of mutagenesis. Moreover, IL-8, an important angiogenesis factor, is elevated in ovarian cancer patients and is believed to be a key factor for cancer growth and new vessel formation (Lane, 2011). Additionally, Saed et al. (2017) has reported that oxidative stress can play an important role in the pathogenesis, neoangiogenesis and dissemination of local or distant ovarian cancer.

Endometriosis is a pelvic disorder associated with inflammation and scarring. Studies also link endometriosis with the increased risk of epithelial ovarian carcinoma through pathways related to oxidative stress and inflammation (Melin, 2006; Worley, 2013). Studies indicate that women with endometriosis differ in the expression of inflammatory mediators, and changes in the cytokine network indicating immune dysregulation, which could contribute to the development of endometriosis (Pizzo, 2002). Wu et al. (2009) performed a study to determine the role of talc in the development of ovarian cancer, considering the history of endometriosis. Results demonstrated an increased risk of ovarian cancer with increasing frequency and duration of talc use; compared to never users, risk was highest among long duration, frequent talc users. A history of physician-diagnosed endometriosis was significantly associated with ovarian cancer in risks, and women who were talc users and had a history of endometriosis showed a 3-fold increased risk, and authors concluded risk of ovarian cancer is significantly associated with talc use and a history of endometriosis.

VIII. MECHANISM OF INFLAMMATION

Inflammation has long been associated with the development of cancer (reviewed by Heidland, 2006; Balkwill, Mantovani, 2001; Rakoff-Nahoum, 2006; Todoric, 2016). An inflammatory process begins when chemical mediators are released by the damaged tissue. The inflammatory response orchestrates host defenses and mediates tissue repair and regeneration in response to damage from chemical toxicants, foreign organisms or carcinogens. Epidemiological evidence points to a connection between inflammation and a predisposition for the development of cancer, i.e., long-term inflammation leads to the development of dysplasia (abnormal cell growth preceding cancer).

Inflammation is a well-established risk factor for all stages of carcinogenesis and tumor progression (Chow, 2012), including ovarian cancer (Maccio and Madeddu, 2012). Inflammation is a factor in a number of mechanisms regarding the etiology of epithelial ovarian cancer and a contributor to

ovarian tumor development and tumor progression (reviewed in Ness, 1999). Inhibition of inflammatory cytokines in the tumor milieu acts on inflammatory-induced angiogenesis and apoptosis and improves prognosis. In a review paper by Ness and Cottreau (1999), talc and asbestos are discussed as risk factors for ovarian cancer, along with endometriosis and pelvic inflammatory disease which are all associated with induction of local cancer.

A. Cytokine Networks

The cytokine networks are very active in producing pro-inflammatory cytokines, growth factors, and chemokines, all of which are molecules active in immune system signalling. There is evidence that inflammatory cytokines and chemokines, which are produced by tumor cells and/or tumor-associated leukocytes, may contribute directly to malignancy. Tumor necrosis factor (TNF)-alpha, a major mediator of inflammation, has actions directed towards both tissue destruction and recovery. TNF can be detected in malignant and/or stromal cells in human ovarian, breast, prostate, bladder and colorectal cancer, lymphomas and leukemias and often is associated with IL-1 and -6 and macrophage colony stimulating factor. TNF- α is also implicated in the induction of a chemokine called MCP-1 which can regulate the macrophage and lymphocyte infiltrate and of MMP-9 in the ovarian tumor microenvironment. There is also evidence for pro-cancer actions of TNF- α in animal models. The molecular basis is thought to involve induction of ROS in the form of NO synthase. NO can directly oxidize DNA, resulting in mutagenic changes, and may damage some DNA repair proteins. Inducible NO synthase has been detected in gynecological cancers, including ovarian cancer.

B. Macrophages

The neoplastic process which consists of proliferation, survival and migration is linked with the tumor microenvironment and synchronized with the influx of inflammatory cells, including neutrophils and macrophages which are a main source of exogenous reactive oxygen species (ROS) (Forman and Torres, 2002). Macrophages and the innate immune system can be responsible for tissue injury, when in excess or continuous.

This can also indicate macrophage activation leading to excess production of other macrophage-generated mediators, including cytokines. Macrophages can engulf talc particles and play a critical role in disease. Moreover, macrophages are the major constituents in granulomas. Talc can promote murine macrophage survival and DNA synthesis *in vitro* (Hamilton, 2001). Such enhancement of macrophage survival by talc, if it occurred *in vivo*, could lengthen the cells' tenure in a lesion with the result that more cells would be present to produce inflammatory mediators, such as cytokines, proteinases, and eicosanoids, perhaps potentiated by additional stimuli. This could be another mechanism as to how macrophage cell numbers increase in talc-induced granulomas and inflammatory reactions.

In a 2005 *in vitro* study (Bogatu and Contag, 2005), talc (as a fibrogenic dust) was shown to adsorb high density lipoprotein (HDL). The authors concluded that the adsorption of HDL could have a "causal relationship" with triggering of a fibrotic reaction. The adsorption on the surface of fibrogenic dust particles, including talc provides an opportunity for the intake of HDL by macrophages which then

release an increased amount of fibrogenic mediators. Coating of talc by HDL allows for more rapid uptake by the macrophage as it can use multiple receptors as points of entry into the cell. In general, surfaces of all fibrogenic particles, such as talc, have a specific property which is lacking in non-fibrogenic (inert) particles or is at least significantly less effective. However, even upon overloading, non-fibrogenic dusts cannot produce fibrosis.

In another study (Ghio et al., 2012), both mesothelial and airway epithelial cells exposed to talc significantly increased iron importation and concentration of the iron storage protein, ferritin. The production of pro-inflammatory cytokines was also induced by *in vitro* talc exposure relative to control lung tissue, and a time-dependent and concentration-dependent release of oxidants was observed in both cell types. Talc toxicity was also observed in an *in vitro* study comparing effects of micro-scale talc particles with those of smaller nanotalc particles on lung cells (Akhtar, 2010). Cell viability was decreased for all talc exposures, and decreased as a function of talc concentration, origin and particle size. Nanotalc particles differentially induced lipid peroxidation, reactive oxygen species and depletion of the anti-oxidant, glutathione. Further, data suggests that talc toxicity was mediated through oxidative stress.

A study by Khan et al. (2011) demonstrated that nanoscale talc, as opposed to larger talc particles enhanced its cytotoxicity. In this study, macrophages exposed to nanotalc increased the manufacture (transcription) of three macrophage-released pro-inflammatory cytokines and the phosphorylation of two signal transduction pathways. The authors indicated that the inflammatory potential of nano talc particles might be (at least partially) a potential mechanism in talc-mediated pathogenicity.

An early study (Davies et al., 1983) in which the cytotoxicity of seven talcs was evaluated using rat peritoneal macrophage demonstrated modest, but consistent macrophage cytotoxicity visualized by an increase in macrophage production of two enzymatic cell injury markers including lactate dehydrogenase (LDH) and B-glucuronidase (compared to *in vitro* treatment with a non-fibrogenic dust. This study points to the potential of talc to “activate” macrophage leading to increased production of macrophage-released mediators including pro-inflammatory cytokines. Some investigators have suggested such *in vitro* macrophage changes could predict fibrogenicity *in vivo*. Based on talc chemical analyses, the authors concluded that effects on macrophages were not due to contaminating minerals.

In a molecular cell study by Shukla et al. (2009), non-fibrous-containing talc at low concentrations caused increased expression of the gene Activating Transcription Factor (ATF genes modulates production of pro-inflammatory cytokines and growth factors in human lung cells) in cultured mesothelial cells at 8 hr and no changes at 24 hr, whereas expression levels of 30 genes were elevated at 8 hr at high talc concentrations.

Tumor necrosis factor (TNF)- α is a cell signaling protein produced by macrophages, primarily involved in the regulation of immune cells. Pre-diagnostic serum levels of 46-inflammation –related biomarkers were measured in 149 incident ovarian cancer cases and matched controls. As has been discussed in several aforementioned sections of this Report, C-reactive protein (CRP), IL-1- α and TNF- α proved to all be significantly elevated and associated with increased cancer risk. In analyses restricted to serous ovarian cancer (n=83), the associations with CRP and IL-8 remained or strengthened. Thus, IL-8

can also be considered an inflammatory biomarker of ovarian cancer (Trabert et al., 2014), again demonstrating talc's action as an inflammatory agent. Iron and its homeostasis are intimately tied to the inflammatory response (Wessling-Resnik, 2010). Talc has been shown to modulate TNF- α and IL-6 production by its binding to iron (Ghio, 2011). TNF- α , like CRP, is a marker of various inflammation processes. TNF- α has been shown to play a role in later steps of carcinogenesis. For example, NF- κ B activation by TNF- α is involved in neoplastic transformation, proliferation, and tumor survival. In addition, in ovarian cancer cells, TNF- α enhances cell migration and metastasis through the action of NF- κ B. TNF- α was positively associated with ovarian cancer in case-control studies using serum samples collected at diagnosis.

C. Role of Oxidants in Ovarian Cancer

The chronic inflammatory states associated with infection and irritation may lead to environments that foster genomic lesions and tumor initiation. One effector mechanism by which the host system responds to insult is production of free radicals such as reactive oxygen species (ROS), hydroxyl radical (OH \bullet) and superoxide (O₂- \bullet) and reactive nitrogen species (RNS), nitric oxide (NO \bullet) and peroxynitrite (ONOO). Primarily thought to be anti-microbial, these molecules form due to the activities of host enzymes such as myeloperoxidase, NADPH oxidase, and nitric oxide, which are regulated by inflammatory signaling pathways. Importantly, ROS and RNS lead to oxidative damage and nitration of DNA bases which increase the risk of DNA mutations.

During inflammation, macrophages, mast cells and neutrophils are recruited to the site of damage, which leads to a 'respiratory burst' due to an increased uptake of oxygen, and thus, an increased release and accumulation of ROS at the site of damage. A sustained inflammatory/oxidative environment leads to a vicious circle, which can damage healthy neighboring epithelial and stromal cells and over a long period of time may lead to carcinogenesis. Oxidative stress can also activate a variety of transcription factors. Activation of these transcription factors can lead to the expression of over 500 different genes, including those for growth factors, inflammatory cytokines, chemokines, cell cycle regulatory molecules, and anti-inflammatory molecules that can also be linked to cancer. Under a sustained environmental stress, ROS are produced over a long time, and thus significant damage may occur to cell structure and functions that could induce neoplastic transformation. In general, the longer the inflammation persists, the higher the risk of cancer.

Following an inflammatory stimulus, initiation of carcinogenesis mediated by ROS may be direct (oxidation, nitration, halogenation of nuclear DNA, RNA, and lipids), or mediated by the signaling pathways activated by ROS (Reuter, 2010; Saed, 2011; Saed, 2017). Hydrogen peroxide plays an important role in carcinogenesis because it is capable of diffusing through cell membranes and producing many types of cell injury. NO is another free radical implicated in carcinogenesis (Saed, 2017). iNOS, calcium-independent isoform, produces large amounts of NO and is only expressed during inflammation. ROS can specifically activate certain signaling pathways and thus contribute to tumor development through the regulation of cellular proliferation, angiogenesis, and metastasis.

1. Talc-Induced Inflammation and Oxidative Stress

Even a single dose of a carcinogen can produce effects that are adverse to cells and tissue at the site of exposure. *In vitro* studies provide a safe and effective vehicle by which to measure those effects in a controlled environment.

Carcinogenic potential of any compound can be determined by performing a well-established methodology called a neoplastic cell transformation assay. In a 2007 study by Buz'Zard, two human ovarian cell culture lines were treated in vitro with talc from 24 to 120 hr (Buz'Zard, 2007). Another group of talc-treated cells were also treated with a specific anti-inflammatory inhibitor to determine whether talc produced transformation through the production of inflammation. Following talc treatment of both ovarian cell types, the cells' ability to grow in suspension, a key characteristic of neoplastically transformed cells, was measured - non-neoplastically-transformed normal cells cannot grow in suspension. Results showed that treatment with talc can transform ovarian cells which further demonstrates the carcinogenic potential of talc. As anti-inflammatory treatment reduced formation of ROS and number of transformed colonies, a relationship between cell transformation and inflammation was demonstrated. Interestingly, exposure of ovarian cells to talc also increased ROS generation in this study in a time and dose-dependent manner. These effects could be linked with neoplastic changes as chronic inflammation is associated with cancer induction and ROS are often seen as a component of the tumor microenvironment. Human neutrophils exposed to talc in this study also increased ROS generation significantly compared to control phagocytes.

In a study carried out by Keskin in 2009, rats exposed to talc produced an increase in ovarian follicles which could be related to the "ovulation theory" associated with ovarian cancer, thus demonstrating a plausible mechanism for talcum powder-induced ovarian cancer.

Recent data demonstrates the importance of oxidative stress in ovarian cancer. The effects of talcum powder exposure on oxidative stress levels in normal ovarian epithelial cells, ovarian epithelial cells and cancerous ovarian epithelial cells were measured (Saed, 2017; Fletcher, 2018 (abstract)). Studies indicate that epithelial ovarian cancer manifests a persistent pro-oxidant state through alteration of the redox balance by the up-regulation of several oxidant enzymes in epithelial ovarian cancer tissues (Saed, 2018). Advancing similar work, in a recently accepted abstract, Harper and Saed report a mechanism by which talc enhances the pro-oxidant state in normal (ovarian and tubal) and ovarian cancer cells, through induction of gene point mutations (corresponding to known specific single nucleotide polymorphisms - SNPs) in key oxidant enzymes, altering their activities (Harper and Saed, 2018).

Emerging science by Fletcher (2018) demonstrated that talc-treated ovarian cancer cell lines and normal ovarian epithelial cells showed a marked increase in mRNA levels of pro-oxidant enzymes, including iNOS and MPO. This shift to a pro-oxidant environment indicates oxidative stress as early as 24 hours after exposure. These recent facts provide strong support for the ability of talc to produce an oxidant state that leads to inflammation and in turn epithelial ovarian cancer. This latter study shows that talcum powder enhances the redox state as part of the inflammatory cascade in both normal ovarian

epithelial cells and in ovarian cancer cells, revealing a plausible mechanistic underpinning for talc-induced ovarian cancer.

Another study by the same authors showed that talcum powder exposure increased levels of the cancer antigen, CA-125, in both normal ovarian cells and ovarian cancer cells. (Fletcher and Saed, 2018). CA-125 is an antigen that is elevated in some patients with specific types of cancers, and is used as a biomarker for ovarian cancer detection, providing further information about talcum powder's carcinogenic properties.

In a study by Shim et al. (2015), inhalation of talc revealed infiltration of macrophages and the increased expression of the antioxidant, superoxide dismutase indicating oxidative stress in rats. Moreover, in the same study inhalation of talc demonstrated macrophage aggregations and oxidative damage in the lungs. Intrapleural injection of talc particles produced an acute serum inflammatory response, more pronounced with smaller particles (Genofre et al., 2009). In addition, talc exposure induced vasoconstriction in the brain via the action of superoxide anions (Mori et al., 1995). Non-fibrous talc at low *in vitro* exposure concentrations caused increased expression of transcription factors associated with the inflammatory process in a time and dose-dependent manner (Shukla et al., 2009). Nano-talc exposure enhanced the production of pro-inflammatory cytokines by macrophages *in vitro* (Khan et al., 2011). Also, pre-treatment of macrophage (prior to talc exposure) with inflammatory signal transduction inhibitors reduced TNF mRNA stability demonstrating their role in TNF mRNA stabilization and expression (Khan et al., 2011).

In an epidemiological study, talc exposure was significantly associated with ovarian cancer in women who lacked a specific anti-oxidant genotype (glutathione-S transferase M1/T1) (Gates et al., 2008). Finally, talc exposure increases COX2, an enzyme that plays a critical role in inflammation (Pace et al., 2006).

At high concentrations or chronic exposure, ROS can damage cellular macromolecules and contribute to neoplastic transformation and/or tumor growth. Other likely manifestations of talc-induced inflammation include reduced fibrinolysis, activation of neutrophils and macrophages and increased production of cytokines and growth factors, and these have been suggested to occur in the peritoneum in response to contamination by surgical glove powder (Merritt et al., 2008).

In sum, inflammation is a primary mediator of ovarian cancer. As the scientific studies outlined above demonstrate, talcum powder products cause inflammation that can result in an elevation of biomarkers; changes in cell signaling; activation of chemokines and cytokines; changes in the oxidative environment; gene alterations and/or mutations; inhibition of apoptosis and induces neoplastic transformation and proliferation (i.e., cancer). This talcum powder-induced inflammatory cascade provides significant biologic and toxicologic support for a conclusion that talcum powder products can cause ovarian cancer.

D. Iron-Facilitated Inflammation

Talc particles can bind iron and iron facilitates inflammation and ROS production; surfaces of silicates including talc has a net negative charge on the surface which generates a capacity for the adsorption and exchange of cations like iron which has a high affinity for oxygen-donor ligands. According to J&J documents from Luzenac America Technical Center, heavy metal analyses on Grade 66 Non-Shear Disk Test Run samples demonstrated very high levels of iron (15,200 – 21,500 mg/kg) that could cause oxidative stress and an inflammatory response. Multiple studies have demonstrated that exposure to talc disrupts iron homeostasis, oxidative stress, and causes a fibro-inflammatory response (Akhtar et al., 2010; Ghio et al., 1992; Ghio et al., 2012). Talc exposure significantly increases iron importation and concentrations of ferritin (iron storage protein). The accumulation of iron, the accompanying oxidative stress, and inflammatory events after exposure to talc are comparable to those with other forms of particulate matter. The capacity of talc particles to support the *in vitro* generation of oxidants in an acellular environment was significantly affected by the concentration of associated iron, with talc-Fe producing a significantly greater signal for lipid peroxidation relative to talc alone (Akhtar, 2010). This relationship is supported by inhibition of the effect by addition of a metal chelator and a hydroxyl radical scavenger. The disruption of cell iron homeostasis is frequently associated with oxidative stress and inflammation.

IX. SUMMARY OF OPINIONS

I hold the following opinions to a reasonable degree of scientific certainty:

1. Based on the scientific literature and the testing results that I have seen by Defendants and Drs. Longo and Rigler, it is my opinion that talcum powder products, including Johnson's Baby Powder and Shower to Shower, may contain known carcinogens, including asbestos, fibrous talc, and heavy metals. In addition, these products contain fragrance chemicals, many of which are inflammatory agents, toxicants, or potential carcinogens.
2. Talcum powder can reach the ovaries through two routes with anticipated use: 1) perineal application (dermal) with migration/transport through the genital tract via the vagina, uterus, and fallopian tubes; and, 2) inhalation of talcum powder particles. Through either route, talcum powder and its constituents could reach the lymphatic system and bloodstream.
3. Exposure to talcum powder products causes an inflammatory tissue reaction which may result in the following:
 - a. Elevation of increased inflammatory markers;
 - b. Changes in cell signaling;
 - c. Activation and/or release of chemokines and cytokines;
 - d. Changes in the oxidative environment;
 - e. Gene alterations and/or mutations;
 - f. Inhibition of apoptosis; and

- g. Neoplastic transformation and proliferation
4. Based on knowledge of the carcinogenic components of talcum powder products, the potential of the powder, with its components, to reach the ovaries and the resultant inflammatory tissue response, it is biologically plausible for talcum powder products to cause ovarian cancer.

I reserve the right to amend or modify this report as new information becomes available. I have not testified in litigation over the previous 4 years. I am charging \$ 350 per hour for my work on this matter.

EDUCATION

- 1973:** Bachelor of Science (**Biology**)
Upsala College
East Orange, NJ
- 1976:** Master of Science (**Microbiology**)
Farleigh Dickinson University
Department of Biology
Teaneck, NJ,
in conjunction with,
UMDNJ-New Jersey Medical School
Department of Neuroscience
Newark, NJ
Thesis Dissertation: Herpes Simplex Virus-IgM Specific Antibodies in
Guillian-Barre Syndrome
- 1982:** Doctor of Philosophy (**Experimental Pathology**)
UMDNJ-New Jersey Medical School
Department of Pathology
Newark, NJ
Thesis Dissertation: Cytoskeletal Modifications of Human Fibroblasts
that Occur During a Complement-Dependent Cytotoxic Antibody
Response

PROFESSIONAL EXPERIENCE

1982-Present: **NEW YORK UNIVERSITY SCHOOL OF MEDICINE**
Institute of Environmental Medicine
Tuxedo, NY

2005- Present: Tenured Professor
Laboratory of Pulmonary & Systemic Toxicology

Developmental Immunotoxicology: Effects of fetal insults on later life
immune-related diseases in the offspring.

Pulmonary Immunotoxicology: Characterization of inhaled metal, gaseous,
and airborne pollutant mixtures including woodsmoke and tobacco smoke,
on pulmonary immune defense mechanisms and host resistance against
infectious disease and asthma.

Environmental Toxicology/Ecoimmunotoxicology: Effects of aquatic pollutants on the immune responses of fish; development of immune biomarkers. Alternate animal models for immunotoxicological studies.

1995-2005: Associate Professor (Tenured in 1997)

Laboratory of Systemic Toxicology

1989-1995: Assistant Professor

1986-1989: Research Assistant Professor

Laboratory of Pulmonary Biology

Laboratory of Environmental Toxicology

Environmental Toxicology: Characterization of aquatic pollutants and immune defense mechanisms of fish. Studies concerning drug bioaccumulation and metabolism in different fish species.

Inhalation/Pulmonary Toxicology: Effects of ambient pollutants on macrophage metabolism and immune function.

1984-1986: Associate Research Scientist

Laboratory of Environmental Toxicology

Genetic Toxicology: Clastogenic/mutagenic effects of complex environmental mixtures.

Cell Biology: Establishment of primary cultures for assessing the toxicity of environmental contaminants *in vitro*.

1982-1984: NIH (NHLBI) Post-Doctoral Fellow

Laboratory of Environmental Toxicology

Genetic Toxicology: Development of short-term *in vitro* bioassays to detect carcinogens, promoters and co-carcinogens in complex environmental mixtures.

1977-1978: PFIZER PHARMACEUTICAL

Laboratory of Chemical Carcinogenesis

Maywood, NJ

Assistant Research Scientist

Laboratory studies using animal models and *in vitro* mammalian cell systems to investigate chemical- and viral-induced carcinogenesis.

1974-1975: VA HOSPITAL /UMDNJ-NEW JERSEY MEDICAL SCHOOL

Department of Neuroimmunology

East Orange, NJ

Associate Research Scientist

Laboratory studies investigating the etiology of viral-induced neuropathologies

TEACHING EXPERIENCE - NATIONAL

1990-Present: *NEW YORK UNIVERSITY SCHOOL OF MEDICINE*

Department of Environmental Medicine
Tuxedo, NY

Graduate Courses

- Global toxicology & community health (NYU Global College of Public Health: Organizer/Director, Fall, 2018; offered every year)
- Environmental Immunotoxicology (Organizer/Director, 1993-present)
- Organ System Toxicology (Director, 2001-present)
- Toxicology (Biology-cross linked: Director, 2010 – present)
- Communication Skills (Lecturer; 2010-present)
- Principles of Toxicology (Lecturer; 1992-present)
- Environmental Physiology of the Respiratory Tract (Lecturer; 1992– 1994)

1979-1994: *WILLIAM PATERSON COLLEGE*

Department of Biology
Wayne, NJ

Adjunct Professor

Undergraduate Courses

- Microbiology lecture and laboratory (1979 - 1984)
- Human biology lecture and laboratory (1979 - 1994)

1991-1994: *ROCKLAND COMMUNITY COLLEGE*

Department of Biology
Suffern, NY

Adjunct Professor

Undergraduate Courses

- Microbiology lecture and laboratory

1979-1982: *SETON HALL UNIVERSITY*

Department of Biology
South Orange, NJ

Research Scientist/Graduate Assistant

-Laboratory studies in immunopathology, virology, viral immunology, and microbiology

- Undergraduate and Graduate Courses

- Bacteriology lecture and laboratory
- Advanced Microbiology
- Cell biology/Virology techniques

1976-1979: *FAIRLEIGH DICKINSON UNIVERSITY*

Department of Biology
Teaneck, NJ

Adjunct Professor

Undergraduate and Graduate Courses

- General biology lecture and laboratory

- Human genetics
- Immunology

TEACHING EXPERIENCE - INTERNATIONAL

2013-present *UNIVERSITY OF PORT HARCOURT (Port Harcourt, Nigeria)*

Dept. of Toxicology

Lecturer in graduate toxicology course

2002-present: *CHULABHORN RESEARCH & GRADUATE INSTITUTE (Professor, Course Director)*

Department of Toxicology

Bangkok, Thailand

Graduate Course (3 weeks- given every even year)

- Environmental Immunotoxicology and Reprotoxicology

1999

1999-2000: *UNIVERSITY OF TASMANIA (Adjunct Professor)*

Department of Environmental Toxicology

Tasmania, Australia

Graduate Course (2 weeks)

- Fish Immunology & Immunotoxicology (Organizer/Director; Lecture and Lab)

1999-2000: *LINCOLN UNIVERSITY*

Department of Environmental Health Sciences

Christ Church, New Zealand

Graduate Course (2 weeks)

- Fish Immunology & Immunotoxicology (Organizer/Director; Lecture and Lab)

HONORS AND AWARDS

- 2018 – Society of Toxicology (SOT), Education Award
- 2015 – SOT, Women in Toxicology Mentorship Award
- 2013 – West African SOT (WASOT), Distinguished Recognition
- 2012 - 2014, SOT, Distinguished Service as SOT Secretary
- 2012 - SOT, Global Senior Scholar Host Award
- 2012 – SOT, Career Achievement Award in Immunotoxicology
- 2008 – Mid-Atlantic Chapter Society of Toxicology, President

INVITED NATIONAL AND INTERNATIONAL LECTURES/PRESENTATIONS (Present – 2000, in descending order):

August 2018: International Society of Exposure Science (ISES); International Society for Environmental Exposure (ISEE). *Contamination of the Ramapough Nation: A toxic legacy. Environmental contamination and Indigenous populations symposia.* Ontario, Canada.

February 2018: Louisiana State University. Electronic cigarettes and pregnancy: Lessons learned from mice. Baton Rouge, LA

January 2018: Mt. Holyoke College. What's safer for the unborn child: electronic cigarettes or air pollution? MA.

December 2017: Texas A & M. Prenatal exposure to ambient particulate matter impacts cardiovascular development. TX.

December 2017: International Conference on Environmental Impacts. Air pollution and pregnancy. Deradun, India

November 2017: International Conference on "Impact of Environment on Women's Health: Amity University Uttar Pradesh. Maternal exposure to particulate air pollution during pregnancy and Impacts on fetal health: What are we learning from animal studies? Lucknow, India.

November 2017: American Public Health Assoc. (APHA) Annual Meeting. Identifying Environmental concerns, environmental exposures and health concerns in the Ramapough Lenape Tribe. Atlanta, GA.

October 2017: International Society of Exposure Science. A community in toxic crisis: Ramapough Native Americans. Durham, NC.

April 2017: Queensborough College. Neurocognitive effects of E-cigarettes. Queens, NY.

July 2016: NIOSH seminar. Reproductive implications of Nanomaterials. WV

July 2016: EPA seminar. Ambient particulate matter and cardiotoxicity. Chapel Hill, NC.

June 2016: Workshop on Nanomaterials and the fetal-placental unit. Prenatal Nephrotoxicity and Maternal Nanomaterial Inhalation. Boston, MA.

May 2016: NIH Tobacco Research. Toxicological assessment of smokeless tobacco products: A systematic ranking system. Bethesda, MD

April 2016: AHA, ATrac Meeting. Toxicity ranking of alternative tobacco products. Louisville, KY.

March 2016: Society of Toxicology: Course in Medical Education. Effects of fracking on reproductive and developmental health. New Orleans, LA

March 2016: Society of Toxicology: Symposia on Fracking and Health. Effects of fracking on reproductive and developmental health. New Orleans, LA

February 2016: American Association for Advancement of Science: Symposia on Alternative Tobacco Products and Health. Early life exposure to alternative tobacco products as a major risk factor of later life chronic disease. Washington, DC

October 2015: 7th International Symposia on Nanotechnology and Occupational and Environmental Health. Reproductive and developmental toxicity of gold nanoparticles in a mouse model of pulmonary exposure. Limpopo Province, South Africa.

May 2015: Amer. Assoc. Immunol. Maternal inhalation of ambient particulate matter causes alterations in immune profiles and anti-tumor mechanisms in juvenile murine offspring. New Orleans, LA.

April 2015: Wayne State University, CURES Seminar Series at Wayne State University's Institute of Environmental Health Sciences. Maternal exposure to particulate air pollution during pregnancy impacts fetal development and neonatal growth in a mouse model.

March 2015: Society of Toxicology. Symposia on: New and Emerging Tobacco Products—Biomarkers of Exposure and Injury (Chair). Reproductive/Developmental effects of exposure to new and emerging tobacco products and to nicotine delivery devices in a mouse model. San Diego, CA.

Dec. 2014: University of Illinois – Maternal exposure to ambient particulate matter during particular gestational windows produce developmental and reproductive consequences in a mouse model. Urbane, IL.

July 2014: Oregon State University – Early life nanoparticle exposure brings early and later life health consequences. Corvallis, OR.

March 2014: Society of Toxicology – Tobacco products and prenatal exposures. Phoenix, Arizona.

February 2014: West African Society of Toxicology – Air pollution in developing nations. Lagos, Nigeria.

January 2014: Ernst Strungmann (ES) Forum, (Rapporteur)- Heavy metals and infectious disease. Frankfurt Germany.

November 2013: American Chemical Council. Risk Assessment and Communication, Working Group. Washington, DC.

October 2013: First International Conference on Waterpipe Tobacco Research. Working Discussion Group Leader: Abu Dhabi.

October 2013: NIH-sponsored Workshop in South Asian Diversity Populations and Health Effects. Sloan Kettering Cancer Center. Working Group member on smokeless tobacco. NY, NY.

- June 2013: FDA, Center for Tobacco Control.** Public health impacts of fetal exposures to tobacco & environmental toxicants: From early life to adult disease and policy needs. MD
- March 2013: Society of Toxicology, Committee on Diversity Initiatives** – Exposure to smoked and smokeless tobacco *in utero*: Fetal injury and life long consequences. San Antonio, TX
- February 2013: Nigeria University** – Smokeless tobacco: A global look at the problem, Port Harcourt, NIGERIA
- February 2013: FDA: Center for Medical Devices** – Fetal basis of adult disease: early life exposure to environmental and occupational toxicants. Silver Spring, MD.
- October 2012: Memorial Sloan Kettering** – Arsenic contamination in Bangladesh. New York, NY
- May 2012: Memorial Sloan Kettering** – Toxicology of Smokeless tobacco. NY, NY.
- April 2012: University of Connecticut** – Tobacco products *in utero* are associated with later life disease outcomes. Storrs, CT.
- March 2012: Biomass Symposium** – Toxicological implications for domestic burning. Feb. 2012: NYU Medical Center, Dept. of Psychiatry - Chemical stressors *in utero* and later life disease outcomes. New York, NY.
- Jan 2012: British American Tobacco** – *In vitro* translational studies and the toxicology of smoking. Southampton, UK.
- Dec. 2011: FDA** – **The reproductive effects of cadmium nanoparticles.** Reston, VA.
- Dec. 2011: NYU Dept. of Bioethics** – Cigarette smoking & smokeless tobacco: Is there really a good choice? New York
- Oct. 2011: NorCal SOT** – **Fetal basis of adult disease – the role of maternal smoking.** Menlo Park, CA.
- Sept. 2011: European Aerosol Conference – Plenary Lecture:** The toxicology of biomass combustion emissions. Satellite Workshop on Biomass Combustion, Manchester, England.
- March 2011: NYU Ethics Forum** - Exposure to Cigarette Smoke *in Utero*: Fetal injury and Life Long Consequences. New York
- March 2011: NYU Medical Center, Dept. of Obstetrics and Gynecology Grand Rounds** – Early life insult by tobacco smoke and later life disease susceptibilities. March 15, 2011
- March 2011: Society of Toxicology, Committee for Diversity Interests** – Cigarette exposure *in utero*: You are what you breathe. Washington, DC. March, 2011.
- Nov. 2010: Texas A & M University** – Early life exposure to cigarette smoke suppresses anti-tumor immune defenses of the prenatally exposed offspring in a mouse model” College Station, TX.

- May 2003 - *Pollutant Responses of Marine Organisms (PRIMO)*** - Immunotoxicology in Fish. Tampa, FL.
- March 2003: *Society of Toxicology*** - Woodsmoke: Cozy Atmosphere or Public Menace? Salt Lake City, UT.
- Nov. 2002: *Society of Toxicology and Chemistry*** - Immune Biomarkers for Use in Ecological Risk Assessment. Salt Lake City, UT.
- Oct. 2002: *Padova University*** - Lessons Learned About Human Health From Aquatic Species. Padova, Italy.
- Oct. 2002 - *Slovenia Society of Toxicology*** - Biomarkers for Ecotoxicology. Ljubljana, Slovenia.
- Sept. 2002: *University of Florida*** - Effects and Mechanisms of Benzo(a)pyrene-induced Immunosuppression in Fish. Gainesville, FL.

June 2002: Yale University, Dept. of Occupational and Environmental Medicine -
Lessons on Human Health and Toxic Impact Learned from our Aquatic
Counterparts.

**Sept. 2001: Third International Meeting on Molecular Mechanisms of Metal
Toxicity and Carcinogenicity -** Immunodysfunction: An underlying Mechanism of
Metal Toxicity in Aquatic Organisms. Sardinia, Italy.

July 2001: Pollutant Responses in Marine Organisms - Immunotoxicology in fish -
Applications and Mechanisms of Response. Plymouth, England.

Oct. 2000: Conference on Women in Science - Aging: Good or Bad News for the
Immune Response. Rutgers University. New Brunswick, NJ.

**Oct. 2000: International Conference on Environmental and Occupational Lung
Disease -** Woodsmoke Impairs Host Resistance Against Pulmonary Infections in an
Animal Model. Lucknow, India.

May 2000: EPA-Duluth - Fish Immune Status: A Sensitive System for Assessing
Toxicological Impact of Aquatic Environments. Duluth, MN.

May 2000: University of Minnesota-Duluth - Processes and Mechanisms of
Woodsmoke-induced Immunosuppression. Duluth, MN.

March 2000: International Symposia on Medaka - Japanese Medaka: A Sensitive
Teleost Model for Assessing the Immunotoxic Effects of Potential Endocrine-
Disrupting Chemicals. Osaka, Japan.

Nov. 2000: The Fourth Princess Chulabhorn Science Congress- Immune System
Biomarkers for Predicting the Effects of Environmental Pollution. Bangkok, Thailand.

EDITOR/EDITORIAL BOARD APPOINTMENTS

Editor and Co-Editor:

Metal Toxicology, Co-Editor (Springer Publ.) – (2016)
Pulmonary Immunotoxicology (Klewar Publ.) - (2000)
Immunotoxicology of Occupational and Environmental Metals. (Taylor and Francis) -
(1998)
Ecotoxicology: Responses, Biomarkers and Risk Assessment. (SOS Publications) -
(1997)
Modulators of Immune Responses: A Phylogenetic Approach - Vol. 2 (SOS
Publications)-(1996)
Modulators of Immune Responses - Vol. 1 (SOS Publications) - (1994)
Toxicology and Ecotoxicology News (Taylor & Francis) - (1995-1998)
Book series on: Ecotoxicology (John Wiley & Sons) - (1995-1997)

Associate Editor-

Open Journal of Immunology (2015-2018)
Journal of Developmental Origins of Health & Disease (2012-2013; Themed Editor)
Journal of Toxicology and Applied Pharmacology – (2005-2014)
Journal of Toxicology and Environmental Health - Part A - (2001 - Present)
Biomarkers: Exposure, Effects and Susceptibility - (1995 – 2007)

Editorial Advisory Board-

Environmental Health Perspectives (2017-2020)
Open Journal of Toxicology (2015-present)
Inhalation Toxicology (2015-present)
Open Journal on Immunology (2009-present)
Journal of Immunotoxicology (2004 - 2016)

 Fish Immunology Technical Communications- Vols. 2-5 (1994 - 1997)

CHAired SESSIONS/MEETING ORGANIZER (1997 – present, descending order)

Outside University

- Organizer/Instructor of International Student & Faculty Workshop on "Fish Immunology" (Tasmania, Australia; February 1997)
- Organizer/Instructor of Student & Faculty Mini-workshop on "Fish Immunology" (Christ Church, New Zealand; February 1997)
- Chairperson at International Meeting on "Developmental and Comparative Immunology" (Williamsburg VA; July 1997)
- Organizer of Student & Faculty International Workshop on "Fish Immunotoxicology Techniques" (American College, Madurai India; February 1999).
- Organizer of Continuing Education Course on "Exposure Assessment: Methods and Applications" at Aquatic Toxicity Workshop Meeting (Edmonton, Canada; October 1999).
- Chairperson of Symposium on "Profiling Immunotoxicology" at Aquatic Toxicity Workshop Meeting (Edmonton, Canada; October 1999).
- International Conference on Environmental and Occupational Lung Disease (Lucknow, India; October, 2000)
- Symposium Coordinator/Chairperson at Society of Toxicology (1993, 1994, 1996-1999; 2005-2009)
- Continuing Education Coordinator/Chairperson at Society of Toxicology (1994, 1995, 2000, 2001)
- Slovenian Society of Toxicology (Nova Gorica, Slovenia; September 2004, 2005)
- Aerosol Dynamics and Health: Strategies to Reduce Exposure & Harm. (Chairperson, Public Health Issues Involving Environmental & Tobacco Aerosols; Cardiff, Wales 2008)
- SOT - Co-Chair, Symposia and Continuing Education Course, 2009, 2010, 2011, 2015, 2016, 2018, 2019
- ISEE/ISES – co-Chair, Symposia on Environmental Contamination and Indigenous populations. (Ontario, Canada, 2018)

FEDERAL & STATE ADVISORY BOARDS/PANELS/REGULATORY AGENCIES **(Contributions to Regulatory Guidelines)**

2018-2019: New York City Housing Authority, Advisory Board member for "Healthy Homes".

2017-2018: National Academy of Science, Engineering, Medicine –
-Board on Earth Sciences & Resources; Board on Environmental Studies & Toxicology; Board on Health Sciences Policy: Potential Human Health Effects of Surface Coal Mining Operations in Central Appalachia. 2017-2019.

2015: European Respiratory Society and Environment and Health Committee for American Thoracic Society. Position paper participant on “What constitutes an adverse health of air pollution?” Brussels, BE, March 2015.

2013: American Chemistry Council’s Center for Advancing Risk Assessment Science and Policy (ARASP) Workshop - Informing Risk Assessment: Understanding and Communicating Uncertainty in Hazard Assessment. (2013)

2011: Department of Defense

- Gulf War Illness Peer Review Panel (2011)

2013: FDA, Tobacco Control Division, Advisory Consultant (2013)

2013-2006: NASA

- Lunar Dust Exposure Standard Review Panel (2013)
- Lunar Science Institute, Moon Science Grant Review Panel (2008)
- Lunar Dust Non-Advocate Review Panel (Chair, 2006-2008)

2002-2012: National Academy of Science

- National Research Council (NRC): Committee on Low Level Lead in Ammunition (2011 – 2012)
- National Research Council (NRC): Peer Review of NRC Report on Acute Exposure Guideline Levels (2010)
- Institute of Medicine (IOM): Peer Review of IOM Report on Depleted Uranium final document (2008)
- National Research Council (NRC) - Committee on Toxicology/Subcommittee on Spacecraft Water Exposure Guidelines (2001 - 2008)
- Institute of Medicine (IOM): Committee on Gulf War and Health - Part 3 (2002 – 2004)
- Institute of Medicine (IOM): Reviewer for Agent Orange final document (2003)

2012-2010: National Toxicology Program, Science Advisory Board (2010-2012)

1996-2017: National Institute of Health (NIH) & National Institute of Environmental Health Science (NIEHS)

NIEHS, Member reviewer for Core Centers (2018)

-NIEHS, Study Section member (2015-2017)

- NIEHS KO1, K99, R23 reviewer (2014, 2015)
- NIEHS KO1, K99 Awards member (2013)
- NIEHS Immunotoxicology Center Program (2012, 2013)
- NIEHS Oceans Centers (2012)
- NIEHS Just-in-time Grants (**Chair**, 2012)
- NIH College of Scientific Reviewers (2010 – 2013)
- NIH Integrative & Comparative Endocrinology (2011)

- NIEHS Time Sensitive Grant (**Chair**; 2010)
- NIEHS P30 (NIEHS Centers of Excellence), (2008, 2009)
- NIEHS Challenge Grants, (2009)
- NIEHS K01 grant applications, (2008)
- NIH Innate Immunity and Inflammation (III) Study Section Full Member, (2005 – 2007)
- NIEHS Program Project grants, (2006)
- NIEHS ALTX – 4 (Alcohol and Toxicology) Study Section Full Member, (1996 – 2000)

2005: National Institute of Environmental Health Sciences (NIEHS) & U.S.EPA & NASA

- Expert Panel on “Global Earth Observations: Application to Air Quality and Human Health” (2005)

2005: National Institute of Allergy & Infectious Disease (NIAID) & Department of Defense (DOD)

- Expert Panel Workshop on Pulmonary Threat Agents (2005)

2013-210: New Jersey Department of Environmental Protection

- Human health Committee (2010 – 2013)
- Soil Standards Sub-committee (2010 – 2011)
- Aerosol Sub-committee (2011 – 2012)

2011-2011: United Nations Environmental Program (UNEP) Steering Committee (2006 – 2011)

- Atmospheric Brown Cloud Human Health Panel

2004-2005: U.S. EPA Science Advisory Board & Review Panel

- Metals Risk Assessment Framework Review Panel, (**Co-Chair** of Human Health Breakout Group, 2004 – 2005)
- Nanoparticle Review Panel (2005)

APPOINTMENTS/ELECTED OFFICES

Society of Toxicology (SOT)

Nominating Committee (2018-2020)

Committee for Diversity Initiatives (2014-2015, member; 2015-2016, Co-chair; 2015-2016; Chair, 2016--2017)

*Board of Councilors (2011 – 2014; **Secretary-elect**, 2011-2012; **Secretary**, 2012-2014)*

Nominating Committee (2007 - 2009)

Congressional Representative (2004 – 2005)

*Education Committee (2002 – 2005; **Chair**, 2004 – 2005)*

*Education Sub-Committee for Minority Initiatives (2001 - 2004; **Chair**, 2003-2004)*

*Continuing Education Committee (1998 - 2001; **Chair**, 1999 - 2000)*

Program Committee (1995-1998)

Inhalation & Respiratory Specialty Section

Councilor (2017-2019)

Ethical and Legal Specialty Section

President (2017-2018)
VP-elect (2016)

Immunotoxicology Specialty Section

President (1999-2000)
Vice-President (1998-1999)
Secretary/Treasurer (1995-1997)
Program Committee (1993-1999)
Awards Committee (1993, 1998, 2000)
Education Committee (Chair, 1992-1996; 2004-2009)
Nominating Committee (1998 - 2001, Chair, 1999-2000)
Councilor (2000-2001)

Metals Specialty Section

President (2003-2004)
Vice President (2002-2003)
Awards Committee (**Chair**, 2001 - 2004)
Program Committee (**Chair**, 2001 - 2004)
Nominating Committee (2001 – 2004, **Chair**, 2001-2003)

MidAtlantic (Chapter) Society of Toxicology (MASOT)

Nominating Committee (2009 [**Chair**], 2010, 2011)
Past president, Councilor (2009-2010)
President (2008-2009)
Vice President (2007-2008)
Vice President-elect (2006-2007)
Councilor (2001 - 2004)
Program Committee (2000 – Present; Chair 2006-2007)

NYU Langone School of Medicine

Faculty Council Representative (2010-2019; Vice President 2011-2012, 2014-2015);
Benefits and Tenure Sub-committee (2015-2016)
Academic Affairs Sub-committee (Chair, 2012-Present)
Basic Science Sub-committee (co-Chair, 2017-2019)

IACUC Review Board (2009-2011; 2017-2019)

Grievance Committee (2017-2020)

NYU Senate (alternate; 2018-2021)

Department of Environmental Medicine

Promotion & Tenure Committee (2008-2014; **Chair**, 2010-2012)
Search Committee (2010-2013)
Biological Safety Committee- (**Chair**, 1990-1999)
Graduate Steering Committee (1999- 2014; Interim **Co-chair** 2001-2002)
Toxicology Masters' Program (Director, 2002 – 2008; **Co-director**, 2008-2011)

GRANT REVIEWER *Ad hoc* (Federal [Non-NIH]/State/Private):

Federal

Scandinavian Research Program (2013, 2016)
NASA, Moon dust program (2008)
Canadian Centers for Research (2000 – 2004)
DOD (*Ad hoc*, 1999 - present)

EPA (*Ad hoc*, 2002 - present)
Natural Sciences and Engineering Research Council of Canada (*Ad hoc*, 2002 – present)

State/Private

Center for Indoor Air Research
Environmental and Occupational Science Health Inst. (Rutgers U.)
IFS Research Grants for Developing Nations
Johns Hopkins Pilot Projects
Michigan Sea Grant
New Jersey Sea Grant
New York Sea Grant
Philip Morris Foundation

ADJUNCT APPOINTMENTS, CONSULTING, ADVISORY BOARDS

- **Weill Cornell Medical School** (NY, NY) – External Advisory Board for NIH Diversity Grant (2013-2015)
- **Chulabhorn Research Institute & University** (Bangkok, Thailand) - Adjunct Professor (2003-present)
- **Cornell University, Inst. for Comparative and Environmental Toxicology** (Ithaca, NY) - Adjunct Professor (1996-2005)
- **American Lung Association** - Criteria Document on Woodsmoke (2001)
- **Fish and Wildlife Services** - Status of the Hudson River (2000)
- **International Life Sciences Institute** - Research strategy on age-related differences in susceptibility (1998)
- **Stratus Consulting Inc.** - Assessment of PCB-contaminated sites (1997 - 2000)
- **U.S. EPA** - Criteria document on the immunotoxicity of endocrine disruptors (1997)

MENTORING ON A GLOBAL LEVEL (6)

- Juliet Igbo (Doctoral student co-mentor – U. of Lagos, Nigeria – 2015-2019)
- Anishka Lewis (Masters student- Jamaica – 2014)
- LeighAnn Koekemoer (Masters student – South Africa-2014)
- Dr. Orish Orisakwe – University of Port Harcourt, Nigeria – 2013-present)
- Dr. Hari Jott Dosih (Nepal Health Research Council – Kathmandu, Nepal- 2014-present)
- Dr. Chanthana Tangjarukij (Chulabhorn Research Institute – Bangkok, Thailand- 2012-present)

STUDENT & JUNIOR FACULTY MENTORING

Research Advisor:

College and High School (15)

- Aaron Asiedu-Wiafe (2017-2018; Monroe-Woodbury High School, Monroe, NY)
- Aastha Parikh (2016-2017; Monroe-Woodbury High School, Monroe, NY)
- Daniel Smith (2013-2014; Fairlawn High School, Fairlawn, NJ)
- Alejandro Jorge (2012; Ramapo College, NJ)
- Eric Bloom (2011-2012; Highland Mills High School [Highland Mills, NY])
- Sujay Avencar (2009-2011; Suffern High School [Suffern, NY])
- Sam Openheim (2009-2011; Suffern High School [Suffern, NY])
- Monica Feldman (2007-2009; Spring Valley High School [Spring Valley, NY])

- George Markt (2005-2009; Ramapo High School [Ramapo, NY])
- Payal Roy (2006 – 2007; New York University [NY, NY])
- Rebecca Kurtzman (2005 – 2007; Spring Valley High School [Spring Valley, NY])
- Erica Stone (2006, Ramapo College [Mahwah, NJ])
- Elizabeth Nadziejko (2000; Washingtonville High School [Washingtonville, NY])
- Kevin Hazard (1999 – 2000; Spring Valley High School [Spring Valley, NY])
- Songeeta Pachachuria (1997-2000; Spring Valley High School, [Spring Valley, NY])

•

Post-Baccalaureate (2)

- *Parnavi Desai* (2015-present; NYU, Biology)
- *Tomas Dunne* (2014-2015; Penn State)

Masters (30)

- Arianna Schwartzer (2017-2019; NYU Environ. Health Sci)
- Kathryn Fetce (2016-2018; NYU Environmental Health Sciences)
- Nicholas Lawrence (2016-2018; NYU Environmental Health Sciences)
- Alexander Lucca (2017-2018; NYU Biology)
- Annie J. Thaikkatil (2016-2017; NYU Biology)
- Leena Babiker (2017-2018; NYU Biology)
- Patricia Costa (2014-2016; NYU Environ. Health Sci)
- Maria Putilina (2013-2014-NYU, Biology)
- Kirtan Kaur (2013-2015)
- Sarah Attreed (2013-2015)
- Sabina Sutjec (2013-2014-NYU, Biology)
- Kaitlyn Koenig (2012-2014)
- Heather Larkin (2012-2013-NYU, Biology))
- Dana Lauterstein (2011-2013) – 2 SOT student awards (2013)
- Yi-Chuh Chen (2010-2011 Incomplete-NYU Biology)
- Ya-Chien Yu (2010-2011-IncompleteNYU Biology)
- Yuan-Chun Hsiao (2010-2011-Incomplete NYU Biology)
- Lauren Rosenblum (2009-2011-NYU Biology)
- Sandra Perella (2008-2010)
- Kotaro Hoshido (2007-2009-NYU Biology)
- Jacqueline Grabowski (2006-2008)
- Elizabeth Vanza (2004 – 2006) – *SOT student award (2006)*
- Elizabeth Berg (2003 - 2005)
- Shannon Doherty (2002 - 2005)
- Colette Prophete (1998 - 2001)
- Jessica Duffy (1999 - 2001)
- Migali Jorge (1998 - 2000)
- Cheryl Premdass (1998 - 2000)
- Andrea Raymond (1997 - 2000) – *1 SOT award*
- Thomas McManus (1994 – 1996, Co-advisor)

Doctorate (9)

- Pamela Tijerna (2013-present) – *SOT CDI award (2014); SOT (1st place Hispanic Organization of Toxicology, 2015); SOT(Mary Amdur Inhalation Fellowship, 2015)*
- Dana Lauterstein (2013-present)- *SOT (Safety Assessment Specialty Section, 2015)*
- Juliett Igbo (2015-2016), Co-Advisor (U. of Lagos, Nigeria)
- Sheung Pui Ng (2004 - 2010) – *9 SOT student awards including Novartis Achievement Award (2008-2010)*
- Jessica Duffy (2001 – 2007) – *2 SOT awards (2004); 3 SETAC awards (2004, 2005, 2006)*
- Chanthana Settachan (Co-Advisor; 2003 – 2009; Chulabhorn Research Institute, Bangkok Thailand)
- Erik Carlson (1999- 2003) – *1 SOT award (2000)*
- Ninah Enane (Co-Advisor, 1995 - 1999)
- Peter Atkins (Co-Advisor, 1992 - 1996)

Post-doctoral Trainees (2) & Mentoring Committees

- Jason Blum (2009 – 2012) – *1 SOT post-doc award*
- Daniel Willis (2011 – 2013)- *NSF/FDA post-doctoral fellowship (Zelikoff, PI)- 2013*

Junior Faculty Mentoring Committee (2)

- Jason Blum (2012 – Present)
- Kevin Cromar (2012-Present)

Doctoral Thesis Committee (12):

- Kirtan Kaur (2016-2018, Chair)
- Carolyn Klocke (2015-2017) – University of Rochester (External Examiner)
- Mary Francis (2015-2016) - Rutgers University (External Examiner)
- Eric Saunders (2012-2015)
- Joshua Vaughn (2012 – 2015)
- AJ Cuevas (2007 – 2012)
- Jessica Lyon (2007 - 2012)
- Judy Blatt Nichols (Chair, 2007 – 2011)
- Patricia Gillespie (2006 - 2010)
- Elizabeth Vanza (Chair, 2004 – 2009)
- Ann Zulkosky (2005 – 2007; SUNY Stony Brook)
- Samantha DeLeon (Chair, 1999 – 2003)

COMMUNITY OUTREACH, EDUCATION & ENGAGEMENT INITIATIVES:

- **Director**, *Community Outreach & Education Program, NYU, Dept. of Environ. Med. (2005- present)*
- **Director**, *NIEHS Center of Excellence, Community Outreach & Engagement Program, NYU, Dept. of Env. Med. (2005 – present)*
- **Director**, *NIEHS Superfund Community Outreach and Education Core, NYU, Dept. of Environ. Med. (2005- 2010)*

- **Co-director**, NIEHS Superfund Translation Core, *NYU, Dept. of Environ. Med.* (2005- 2011)

Community Partners:

- *Ironbound Community Corporation (ICC): Newark, NJ (2015-present)*
- *Ramapough Lenape Tribal Nation: Ringwood, NJ/Mahwah, NJ/Hillburn, NY (2013-present)*
- *City of Garfield, NJ (2012-present)*
- *Susquehanna, PA: Fracking communities (2015-2016)*
- *Flint, Michigan via Water Defense*

Translation/Communication of toxicology to non-toxicologists & underserved minorities

- Community groups in PA and NY: Environmental and Health Implications of Hydraulic Fracturing (2013-2014).
- Ramapo Indians: Living on a Superfund Site (2014-present)
- NY Presbyterian Lang Program for Underserved Youth (2010 - Present)
- *Harlem Children Society Mentoring Program - Bronx, NY (2010-Present)*
- Y-2 Kids (NY State 4th – 12th grade, Career day representative, 2008 - Present)
- *Center for Talented Youth, New York University Department of Environmental Medicine & Johns Hopkins Center for Talented Youth (2005 – Present)*
- *Environmental Commission of Ramsey (2001 – 2007; Vice-Chair; 2004-2006)* - Ramsey, New Jersey. Woodburning: A Cozy Atmosphere or a Public Menace? (2003)
- *Senior Citizen Advisory Board of Ramsey (2003 - 2005)*
- *Ramsey High School (Presenter on toxicology and the environment 2005-2006)*
- *Youth Guidance Commission of Ramsey (1999 - 2001)*
- *Rotary Club, Goshen, New York. Woodburning: A Cozy Atmosphere or a Public Menace? (2003)*
- *Upper Saddle River Community Center, Upper Saddle River, New Jersey. The Hazards of Woodburning (1997)*

Non-Academic Related Outreach Committees:

- 2011- 2014 – *Board of Ethics*, Community Hospice of Bergen County (NJ)
- 2009- 2014 – *Fundraising Committee*, Community Hospice of Bergen County (NJ)
- 2006-2013 – President, Condominium Association
- 2013-2016 – Vice-President, Condominium Association
- 2018 – South Bronx Asthma Coalition

Judith Zelikoff, Ph.D.

Page 14	Page 16
<p>1 BY MR. HEGARTY: 2 Q. Good morning, Dr. Zelikoff. 3 A. Good morning. 4 Q. My name is Mark Hegarty. I 5 represent the J&J defendants in this 6 action. Can you please state your full 7 name for the record, please? 8 A. Judith Terri Zelikoff. 9 Q. Dr. Zelikoff, who is your 10 current employer? 11 A. New York University School 12 of Medicine, also known as NYU Langone 13 Health. 14 Q. What is your title at New 15 York University School of Medicine? 16 A. Professor with tenure. 17 Q. How long have you held that 18 position? 19 A. Since 1982. 20 Q. Do you have any separate 21 personal consulting business for 22 litigation purposes? 23 A. I do not. 24 Q. Where do the fees go that</p>	<p>1 plaintiffs' counsel for your services in 2 this litigation? 3 A. \$350 per hour. 4 Q. Is there any difference in 5 your rate depending on whether it's 6 literature review, sitting for a 7 deposition, trial testimony? 8 A. Sitting for a deposition or 9 trial testimony is \$450. 10 Q. Did anyone outside of 11 plaintiffs' attorneys assist you in any 12 way with your expert report in this case? 13 A. No one with my expert 14 report. 15 Q. We were provided today a 16 copy of several invoices that you have 17 prepared for your work in this case. I'm 18 going to mark as Exhibit Number 1 a copy 19 of those invoices. 20 (Document marked for 21 identification as Exhibit 22 Zelikoff-1.) 23 BY MR. HEGARTY: 24 Q. Dr. Zelikoff, would you look</p>
Page 15	Page 17
<p>1 you earn as an expert witness in this 2 case? 3 A. They go to household 4 expenses as well as charity. 5 Q. But they go to you, correct? 6 A. They go to me. 7 Q. Other than your work at New 8 York University and the fees that you're 9 earning as part of this litigation, do 10 you have any other sources of income? 11 A. Just income that I have from 12 advisory boards or -- when you -- when 13 you sit on panels, they also pay you. 14 But other than that, no. 15 Q. Tell me an example of an 16 advisory board for which you receive 17 income. 18 A. It's on a very sporadic 19 basis. And it depends on what it is. 20 But the NIEHS, National Institute of 21 Environmental Health Sciences. And it's 22 an NIH institute. And I serve as a -- I 23 review grants for them. 24 Q. What are you charging</p>	<p>1 at Exhibit Number 1 and tell me whether 2 those are all the invoices that you have 3 generated and provided to plaintiffs' 4 counsel in this case. 5 A. It appears to be. 6 Q. Thank you. The last work 7 noted is December 24, 2018. 8 Have you spent any 9 additional time on this case for which 10 you intend to bill plaintiffs' counsel -- 11 A. Yes, I have. 12 Q. -- that's not reflected in 13 the invoices? 14 A. Yes, I have. 15 Q. How much additional time? 16 A. Approximately 25 to 30 hours 17 by the end of this deposition. Not 18 including the deposition. 19 Q. With regard to these 20 invoices, have they all been paid? 21 A. Yes, they have. 22 Q. Were you paid a retainer for 23 your work on this case? 24 A. I don't recall.</p>

5 (Pages 14 to 17)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 18</p> <p>1 Q. Dr. Zelikoff, as you know 2 we're here to take your deposition in the 3 case of In Re Johnson & Johnson Talc 4 Litigation, which is an MDL setting. Are 5 you aware you've been designated as an 6 expert in that case? 7 A. I am aware. 8 Q. When were you first 9 contacted about serving as an expert in 10 this case? 11 A. Early 2017. I was 12 requested -- I was requested if I had 13 interest in it. 14 Q. The first invoice that you 15 provided has a date of April 5, 2017. 16 When in relation to the first invoice 17 entry was that initial contact? 18 A. To the best of my knowledge, 19 it was January or February. 20 Q. Of 2017? 21 A. Of 2017, right. 22 Q. Who contacted you? 23 A. Jennifer Emmel. 24 Q. Did you know her before she</p>	<p style="text-align: right;">Page 20</p> <p>1 representing plaintiffs? 2 A. No, sir. 3 Q. Did you agree to serve as an 4 expert witness at the time of Ms. Emmel's 5 first contact with you? 6 A. No, sir. I told her that I 7 would have to do some literature 8 searching myself and come up with a 9 conclusion as to whether or not I felt 10 comfortable based on the science in 11 serving in that capacity. 12 Q. At one point -- at what 13 point between -- at what point did you 14 come to or did -- strike that. 15 At what point did you agree 16 to serve as an expert witness in this 17 litigation in relation to that first 18 call? 19 A. Probably about a month 20 later. 21 Q. What did Ms. Emmel tell you 22 at that first call about the litigation? 23 MS. O'DELL: We just 24 instruct -- I mean conversations,</p>
<p style="text-align: right;">Page 19</p> <p>1 contacted you? 2 A. Not at all. 3 Q. How was the contact made, by 4 telephone? 5 A. By telephone. 6 Q. Apart from anything that 7 attorneys for plaintiffs may have told 8 you, do you know how she came to contact 9 you? 10 A. I'm not aware as to how she 11 came to contact me. 12 Q. Did you have any prior 13 litigation work with her? 14 A. Not with Ms. Emmel, no. 15 Q. How do you spell her name? 16 A. How do I -- 17 Q. Yes. 18 A. -- spell her name? 19 Q. Yes. 20 A. To the best of my knowledge, 21 it's E-M-M-E-L. 22 Q. Have you had any prior 23 litigation work with any of the lawyers 24 with whom you have met that are</p>	<p style="text-align: right;">Page 21</p> <p>1 in terms of -- let me just strike 2 that and say don't discuss 3 anything that you communicated to 4 us or we communicated to you after 5 you decided to become an expert in 6 the case. 7 BY MR. HEGARTY: 8 Q. Correct. I'm talking about, 9 right now I'm talking about that initial 10 phone call where you said you had not -- 11 where you did not agree at that point in 12 time to serve as an expert witness. 13 That's the only call I'm talking about. 14 What did Ms. Emmel tell you 15 about the litigation or about what they 16 wanted you to do at that first call? 17 A. Well, I don't remember the 18 details as it was about over a year ago. 19 But to the best of my knowledge and my 20 recollection, it was just that they 21 represented the plaintiffs in a case of 22 ovarian cancer and its relationship to 23 talcum powder products, and was I 24 familiar with it, did I know anything</p>

6 (Pages 18 to 21)

Judith Zelikoff, Ph.D.

Page 22	Page 24
<p>1 about it, and did I have -- did I have 2 interest in being associated with, and I 3 responded to her that I follow the 4 science, that's all I do is I follow the 5 science. 6 And if the science leads me 7 in a direction that I would have interest 8 or that I felt comfortable in doing this, 9 then I would let her know. 10 Q. What was your response when 11 she asked you if you were familiar with 12 the science of talc and ovarian cancer? 13 A. I was familiar with it at 14 that time in a superficial manner. I 15 work in a very high-powered department of 16 environmental medicine. And we discuss 17 current events over lunch. 18 Q. When you say in a 19 superficial manner, what do you mean? 20 A. Certainly not to the depth 21 that I'm aware of the issue currently. 22 Q. Is it correct that you had 23 not formed any opinions as to any link 24 between talc and ovarian cancer as of the</p>	<p>1 the time that you agreed to serve as an 2 expert witness in the case? 3 A. No, not -- not to my 4 recollection. 5 Q. Do you recall anything else 6 that you discussed with Ms. Emmel at that 7 first call besides what we talked about 8 already? 9 A. No, sir. 10 Q. Did Ms. Emmel at that first 11 call tell you anything about plaintiffs' 12 theory of causation or theory of 13 mechanism of action or biologic 14 plausibility? 15 A. No, sir, not at all. 16 Q. Did she send you any 17 documents before you agreed to serve as 18 an expert witness? 19 A. Not to my knowledge. I 20 think the -- I'm sure the literature 21 reviews that I did at that time were 22 solely my own. 23 Q. Had you heard of lawsuits 24 involving talc and ovarian cancer before</p>
Page 23	Page 25
<p>1 time of that first call with Ms. Emmel? 2 A. I had -- I had no opinion at 3 that time. 4 Q. Did you have any discussions 5 with Ms. Emmel or any other lawyer 6 representing plaintiffs between that 7 initial phone call and when you agreed to 8 serve as an expert witness? 9 A. To my -- to the best of my 10 knowledge, I had not spoken to 11 Ms. O'Dell. So to the best of my 12 knowledge it was just Ms. Emmel. 13 Q. Again, focusing on that 14 first phone call -- well, strike that. 15 Had you had any further 16 discussion with Ms. Emmel between the 17 time of that first call and the time you 18 agreed to serve as an expert witness? 19 A. I'm sorry, between the time 20 of the first call and the time I agreed, 21 could you repeat the question please? 22 Q. Sure. Did you have any 23 additional discussions with Ms. Emmel 24 between the time of the first call and</p>	<p>1 being contacted by Ms. Emmel? 2 A. I actually had not. 3 Q. What then were your sources 4 of knowledge about talc and ovarian 5 cancer as of the time of the first call? 6 A. The media, whatever I might 7 have read in the paper and any 8 discussions that might have been brought 9 up by my colleagues. 10 Q. Do you recall any colleague 11 who brought the -- anything up about talc 12 and ovarian cancer? 13 A. I do not recall a specific 14 colleague. Lunchroom chatter. 15 Q. Did you form any opinions 16 from the material you did read in the 17 media or from discussion with your 18 colleagues? 19 A. I had no opinion. 20 Q. And you were ultimately 21 retained and asked to give expert 22 opinions in this case, correct? 23 A. I was ultimately retained, 24 yes, correct.</p>

7 (Pages 22 to 25)

Judith Zelikoff, Ph.D.

Page 26	Page 28
<p>1 Q. The lawyers for the 2 plaintiffs in this case have paid you to 3 review materials and offer opinions, 4 correct? 5 MS. O'DELL: Objection to 6 the form. 7 THE WITNESS: Do I answer 8 the question? 9 BY MR. HEGARTY: 10 Q. Yes. 11 MS. O'DELL: Yes. 12 THE WITNESS: They have 13 remunerated me for my time and 14 effort in reading hundreds of 15 articles. 16 BY MR. HEGARTY: 17 Q. The opinions that you've 18 formulated were ultimately set out in 19 your November 16, 2018, MDL report, 20 correct? 21 A. That's correct. 22 Q. The hours you spent in 23 preparing that report are reflected in 24 the invoices we marked as Exhibit</p>	<p>1 testify today? 2 A. It would be in my invoice, 3 but if I had to approximate that without 4 the knowledge of having that in front of 5 me, I would say 30 to 50 hours. 6 Q. What attorneys did you meet 7 with to prepare for your deposition here 8 today? 9 A. I met with Ms. O'Dell and 10 Ms. Emmel. 11 Q. Anyone else? 12 A. In a face-to-face. 13 Q. Face-to-face. There were 14 phone calls as well? 15 A. There were -- one of -- one 16 of the phone calls, it may have been two. 17 I also -- Chris, and I'm not familiar 18 with your last name, sorry. 19 Chris from the -- 20 MS. O'DELL: Tisi. 21 THE WITNESS: Tisi? Chris 22 Tisi and Alistair -- 23 MR. FINDEIS: Findeis. 24 MS. O'DELL: Findeis.</p>
Page 27	Page 29
<p>1 Number 1, correct? 2 A. I don't recall what exhibit 3 number it is, but it is in one of the 4 invoices. 5 Q. A description that you have 6 in your invoices includes report 7 preparation. Is that a description which 8 describes your -- the time you spent 9 preparing your report? 10 A. Yes, it is. 11 Q. Every entry under report 12 preparation would be the time that you 13 spent preparing your report? 14 A. Yes, that's true. That 15 could include reading material, searching 16 for material or writing. 17 Q. The invoices we marked as an 18 exhibit also reflect the time you spent 19 with lawyers for plaintiffs; is that 20 correct? 21 A. It does. 22 Q. With regard to your 23 deposition here today, how much time did 24 you spend preparing to come here and</p>	<p>1 THE WITNESS: Findeis -- was 2 on the phone, and there may have 3 been one or two others, but I 4 don't recall. 5 BY MR. HEGARTY: 6 Q. Have you spoken with any of 7 your colleagues about your work in this 8 litigation? 9 A. What -- can you explain what 10 you mean by colleagues? 11 Q. Well, you mentioned 12 colleagues in discussing talc and ovarian 13 cancer. So those colleagues. 14 A. If -- do you mean other 15 faculty? 16 Q. Correct. 17 A. And the question again, 18 please? 19 Q. Sure. Have you spoken with 20 other faculty at New York University 21 regarding your work on this litigation? 22 A. No, I have not. 23 Q. Have you told any faculty at 24 New York University of your opinions in</p>

8 (Pages 26 to 29)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 30</p> <p>1 this case?</p> <p>2 A. I have not.</p> <p>3 Q. Have you told anyone at NYU</p> <p>4 School of Medicine of your opinions?</p> <p>5 A. I have not. I have</p> <p>6 discussed, not my opinion, but in my</p> <p>7 class, my toxicology course, to graduate</p> <p>8 students at NYU.</p> <p>9 I have, in my course on</p> <p>10 speaking about reproductive toxicology</p> <p>11 and developmental toxicology, in</p> <p>12 discussing risk factors, two graduate</p> <p>13 students I have discussed -- I've</p> <p>14 included talc as a potential risk factor.</p> <p>15 Q. When did you start including</p> <p>16 talc as a potential risk factor in that</p> <p>17 course?</p> <p>18 A. Prior -- if you're asking me</p> <p>19 was it prior to or -- prior to my</p> <p>20 retainment, it was prior to my</p> <p>21 retainment.</p> <p>22 Q. So prior to your</p> <p>23 retainment -- let me -- let me word it</p> <p>24 differently.</p>	<p style="text-align: right;">Page 32</p> <p>1 A. Yes.</p> <p>2 Q. Does that continue to be the</p> <p>3 extent of any discussion you had with any</p> <p>4 students at New York University about</p> <p>5 talc and ovarian cancer?</p> <p>6 A. Well, right now we're on</p> <p>7 break. I -- I probably will -- I will</p> <p>8 continue after the deposition to also</p> <p>9 talk -- talk with them and list it as</p> <p>10 a -- as a risk factor for ovarian cancer.</p> <p>11 Q. What about -- strike that.</p> <p>12 Did you have discussions,</p> <p>13 that same discussion with toxicology</p> <p>14 students between -- I should say before</p> <p>15 you were contacted by Ms. Emmel and</p> <p>16 today, have you had -- continued to have</p> <p>17 that same discussion with your toxicology</p> <p>18 students?</p> <p>19 A. I've not --</p> <p>20 MS. O'DELL: Objection to</p> <p>21 form.</p> <p>22 Doctor, give me just a</p> <p>23 moment after the question if I</p> <p>24 need to object. Thank you.</p>
<p style="text-align: right;">Page 31</p> <p>1 Prior to the call from</p> <p>2 Ms. Emmel, you had included in your</p> <p>3 course to -- your toxicology course a</p> <p>4 discussion about talc and ovarian cancer?</p> <p>5 A. Not a discussion, just</p> <p>6 didactic lecture saying that this is the</p> <p>7 female reproductive tract. Ovarian</p> <p>8 cancer is part of an adverse outcome of</p> <p>9 disease. It's very prevalent. And there</p> <p>10 are factors including early menarche,</p> <p>11 late menopause, and there's some issues</p> <p>12 currently on the table as to whether</p> <p>13 cosmetic talc also plays a role.</p> <p>14 No opinion was given to my</p> <p>15 class. Just information.</p> <p>16 Q. Do you have any materials</p> <p>17 for your course, whether in PowerPoint</p> <p>18 form or other form that sets out that</p> <p>19 discussion you just had?</p> <p>20 A. No.</p> <p>21 Q. Is that the extent of the</p> <p>22 discussion that you had with your</p> <p>23 toxicology students about talc and</p> <p>24 ovarian cancer?</p>	<p style="text-align: right;">Page 33</p> <p>1 THE WITNESS: Shall I</p> <p>2 continue?</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. Sure.</p> <p>5 A. Could you repeat the</p> <p>6 question, please?</p> <p>7 Q. Sure. You mentioned that</p> <p>8 the discussion that we just went over was</p> <p>9 before your contact by Ms. Emmel,</p> <p>10 correct?</p> <p>11 A. I said that it started. My</p> <p>12 lectures started prior to my conversation</p> <p>13 with Ms. Emmel.</p> <p>14 Q. What was -- what was the</p> <p>15 name of the course that you had that</p> <p>16 lecture?</p> <p>17 A. Organ system toxicology.</p> <p>18 Q. Have you taught that course</p> <p>19 since your call with Ms. Emmel?</p> <p>20 A. Actually it's coming up</p> <p>21 this -- this semester, starting the 30th</p> <p>22 of January.</p> <p>23 Q. So between -- as of the</p> <p>24 first part of 2017 through today you have</p>

9 (Pages 30 to 33)

Judith Zelikoff, Ph.D.

Page 34	Page 36
<p>1 not taught that same course?</p> <p>2 A. It's taught every other</p> <p>3 year.</p> <p>4 Q. Have you communicated with</p> <p>5 anyone outside of plaintiffs' counsel in</p> <p>6 this case about your opinions in your</p> <p>7 report?</p> <p>8 A. Not about my opinions, no.</p> <p>9 Q. Have you talked with anyone</p> <p>10 outside of plaintiffs' counsel in this</p> <p>11 case about your report?</p> <p>12 A. Only to say that I -- to my</p> <p>13 friends, when I refuse to go anywhere</p> <p>14 with them, because I have to stay home</p> <p>15 and work, only to say that I'm working on</p> <p>16 a report.</p> <p>17 Q. Have you discussed the</p> <p>18 litigation or your report with any other</p> <p>19 experts retained by the plaintiffs in</p> <p>20 this case?</p> <p>21 A. No, sir, I have not.</p> <p>22 Q. Have you reviewed any of the</p> <p>23 other plaintiffs' experts' MDL reports in</p> <p>24 this litigation besides those referenced</p>	<p>1 Exhibit B. It should be the very last</p> <p>2 page of that document.</p> <p>3 A. Thank you.</p> <p>4 Q. The very last page of</p> <p>5 Exhibit B of your report, you list a</p> <p>6 number of expert reports, correct?</p> <p>7 A. I do. Deposition and</p> <p>8 exhibits.</p> <p>9 Q. Have you reviewed any other</p> <p>10 expert reports -- strike that.</p> <p>11 Did you review any other</p> <p>12 expert reports for purposes of your</p> <p>13 expert report besides those listed here?</p> <p>14 A. No, sir. Unless --</p> <p>15 Dr. Longo, December 2018 supplement, that</p> <p>16 was a report, and I did review that.</p> <p>17 Q. We were provided today with</p> <p>18 a copy of a report of Longo and Rigler,</p> <p>19 January 15, 2019. And I'm going to mark</p> <p>20 that as Exhibit 3.</p> <p>21 (Document marked for</p> <p>22 identification as Exhibit</p> <p>23 Zelikoff-3.)</p> <p>24 BY MR. HEGARTY:</p>
Page 35	Page 37
<p>1 in your report?</p> <p>2 A. I reviewed Dr. Dydek's. I</p> <p>3 reviewed -- did you say the plaintiffs'</p> <p>4 witnesses?</p> <p>5 Q. Yeah, let me -- let me -- in</p> <p>6 your report -- and I can -- we can get it</p> <p>7 out here in a moment. But you list</p> <p>8 the -- in your list of reports, you list</p> <p>9 the report of Michael Crowley.</p> <p>10 A. I'm sorry, sir. Can you --</p> <p>11 Q. It's in Exhibit B at the end</p> <p>12 of Exhibit B of your report. If you need</p> <p>13 a copy I can give it to you now.</p> <p>14 A. Can you give me a copy.</p> <p>15 (Document marked for</p> <p>16 identification as Exhibit</p> <p>17 Zelikoff-2.)</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. I'm marking Exhibit 2 Dr.</p> <p>20 Zelikoff's report that was provided to us</p> <p>21 in this case.</p> <p>22 A. Thank you. And what page</p> <p>23 are you referring to?</p> <p>24 Q. It is the last page of</p>	<p>1 Q. Is that the supplemental</p> <p>2 report that you described for us?</p> <p>3 A. It is, sir. It's an</p> <p>4 analysis Johnson & Johnson Historical</p> <p>5 Product Containers and Imerys' Historical</p> <p>6 Railroad Car Samples, etc..</p> <p>7 Q. That report is dated</p> <p>8 January 15th, 2019, correct?</p> <p>9 A. Yes, sir.</p> <p>10 Q. When did you receive this</p> <p>11 report?</p> <p>12 A. In January.</p> <p>13 Q. When in relation to</p> <p>14 January 15, 2019?</p> <p>15 A. Today is the --</p> <p>16 Q. Is the 21st.</p> <p>17 A. Today is the 21st. I would</p> <p>18 say somewhere between the 15th and the</p> <p>19 21st. Actually it was this past Saturday</p> <p>20 as it was placed in my Dropbox and I</p> <p>21 could not open my Dropbox.</p> <p>22 Q. When did you review Exhibit</p> <p>23 Number 3?</p> <p>24 A. That same report?</p>

10 (Pages 34 to 37)

Judith Zelikoff, Ph.D.

Page 38	Page 40
<p>1 Q. Yes.</p> <p>2 A. I received it on Saturday.</p> <p>3 I reviewed it on Sunday.</p> <p>4 Q. How much time did you spend</p> <p>5 reviewing this additional Longo and</p> <p>6 Rigler report?</p> <p>7 A. Sorry. About three hours.</p> <p>8 Q. Did you read every page?</p> <p>9 A. I read -- I reviewed each</p> <p>10 page but I did not scrutinize every page.</p> <p>11 Q. Did you read the entirety of</p> <p>12 the text in this supplemental report?</p> <p>13 A. May I see the report,</p> <p>14 please.</p> <p>15 MS. O'DELL: Objection.</p> <p>16 Asked and answered. That's the</p> <p>17 same question.</p> <p>18 THE WITNESS: Should I</p> <p>19 answer?</p> <p>20 MS. O'DELL: Yes, you may.</p> <p>21 THE WITNESS: I reviewed the</p> <p>22 text going up to Page 32 with</p> <p>23 greater rigor than I did the</p> <p>24 tables.</p>	<p>1 A. The attorneys.</p> <p>2 Q. I'm going to show you --</p> <p>3 A. Plaintiffs' attorneys.</p> <p>4 (Document marked for</p> <p>5 identification as Exhibit</p> <p>6 Zelikoff-4.)</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. I'm going to show you what I</p> <p>9 marked as Exhibit Number 4. This is the</p> <p>10 MDL report provided to us for Michael</p> <p>11 Crowley.</p> <p>12 A. Mm-hmm.</p> <p>13 Q. Did you read the entirety of</p> <p>14 that report?</p> <p>15 A. I cannot say that I read the</p> <p>16 entirety of this report. I reviewed the</p> <p>17 report.</p> <p>18 Q. Okay. Well, your report is</p> <p>19 dated November 16, 2018. And that report</p> <p>20 is dated November 12, 2012, -- 2018.</p> <p>21 When did you receive the report by</p> <p>22 Dr. Crowley in relation to the date on</p> <p>23 the first page, November 12th.</p> <p>24 A. I really cannot say with</p>
Page 39	Page 41
<p>1 BY MR. HEGARTY:</p> <p>2 Q. When you say "reviewed,"</p> <p>3 does that mean that you read every -- all</p> <p>4 the words on every page up to Page 32?</p> <p>5 A. I did.</p> <p>6 Q. You included in the list of</p> <p>7 reports that you reviewed, the report of</p> <p>8 Michael Crowley, correct?</p> <p>9 A. Every one of the reports</p> <p>10 were not read with the -- read with</p> <p>11 the -- sorry, I'm caught up in the</p> <p>12 microphone -- were not read with the same</p> <p>13 intensity and duration of time put into</p> <p>14 it. I reviewed it. To what extent, I'm</p> <p>15 not clear at this moment.</p> <p>16 Q. The first report that you</p> <p>17 list in the list of reports in Exhibit B</p> <p>18 is the expert report of Michael M.</p> <p>19 Crowley, correct?</p> <p>20 A. It's written that way, yes.</p> <p>21 Q. Did you prepare this list of</p> <p>22 reports?</p> <p>23 A. I did not.</p> <p>24 Q. Who did?</p>	<p>1 certainty. It seems to me that I</p> <p>2 received this prior to my report</p> <p>3 conclusion.</p> <p>4 Q. There are 212 pages there.</p> <p>5 Again, did you read every word of every</p> <p>6 page?</p> <p>7 A. No, sir. Did I look at</p> <p>8 every word of every page? Yes.</p> <p>9 Q. No, my question is did you</p> <p>10 read every word of every page.</p> <p>11 A. My answer is --</p> <p>12 MS. O'DELL: She answered</p> <p>13 your question.</p> <p>14 THE WITNESS: -- I looked at</p> <p>15 every page.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Did you read all the</p> <p>18 references that he has in that report?</p> <p>19 A. I looked at the references.</p> <p>20 Q. Did you actually pull the</p> <p>21 references and read the citations that he</p> <p>22 refers to?</p> <p>23 A. No, sir. I did my own -- my</p> <p>24 own literature search in terms of</p>

11 (Pages 38 to 41)

Judith Zelikoff, Ph.D.

Page 42	Page 44
<p>1 fragrance and chemicals within the</p> <p>2 fragrances. And I did receive that as an</p> <p>3 exhibit this morning.</p> <p>4 Q. I'm sorry. What did you</p> <p>5 say?</p> <p>6 A. I said I did my own</p> <p>7 literature search in terms of fragrances,</p> <p>8 and I think you received a copy of that</p> <p>9 this morning. In that report that I did,</p> <p>10 that I prepared, I was assessing</p> <p>11 carcinogenicity of each of the compounds.</p> <p>12 Q. Going back to the Crowley</p> <p>13 report, did you read all the tables in</p> <p>14 that report?</p> <p>15 A. I did not read. I reviewed.</p> <p>16 Q. What is --</p> <p>17 A. I looked at them.</p> <p>18 Q. Okay. What is the</p> <p>19 difference between reading and reviewing</p> <p>20 to you?</p> <p>21 A. In my mind, reading is</p> <p>22 in-depth assessment, and whereas</p> <p>23 reviewing is looking over. Reading is</p> <p>24 more intense.</p>	<p>1 Dr. Crowley's report. And with that I --</p> <p>2 I used the case number. I reviewed each</p> <p>3 one of the chemicals in terms of their</p> <p>4 potential carcinogenicity by, number one,</p> <p>5 putting -- writing down the chemical,</p> <p>6 looking to see if there were other</p> <p>7 structures or chemicals -- or chemicals</p> <p>8 that had similar names.</p> <p>9 I reviewed through Google,</p> <p>10 through PubMed and through Tox Lit and</p> <p>11 IARC reports to see whether or not there</p> <p>12 was a listing for them in terms of</p> <p>13 carcinogenicity. And that is the result.</p> <p>14 This is the result.</p> <p>15 Q. When did you do all of that?</p> <p>16 A. I did that post the</p> <p>17 report --</p> <p>18 Q. When -- sorry.</p> <p>19 A. -- as part of my preparation</p> <p>20 for the deposition.</p> <p>21 Q. When did you do it post</p> <p>22 report in relation to today?</p> <p>23 A. One to two weeks ago.</p> <p>24 Q. Did you review -- strike</p>
Page 43	Page 45
<p>1 Q. You pointed to us -- pointed</p> <p>2 to us -- strike that.</p> <p>3 You pointed to the document</p> <p>4 that was provided to us this morning,</p> <p>5 which you say is -- what I think you said</p> <p>6 reflects your own literature search with</p> <p>7 regard to fragrances; is that correct?</p> <p>8 A. Mine and a student.</p> <p>9 Q. What student?</p> <p>10 A. A graduate student in my</p> <p>11 laboratory.</p> <p>12 (Document marked for</p> <p>13 identification as Exhibit</p> <p>14 Zelikoff-5.)</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. I've marked as Exhibit</p> <p>17 Number 5 the document that was produced</p> <p>18 to us this morning. Can you tell me what</p> <p>19 Exhibit Number 5 is.</p> <p>20 A. Exhibit Number 5 is -- is a</p> <p>21 list of the chemicals that -- part of</p> <p>22 which, if not in its entirety, were taken</p> <p>23 from the fragrances that were -- and the</p> <p>24 chemicals that were listed in</p>	<p>1 that.</p> <p>2 Did you read all the MSDSes</p> <p>3 that you list in Exhibit Number 5?</p> <p>4 A. I did not read all of the</p> <p>5 MSDSes. But I did look at them. I</p> <p>6 reviewed them to make sure they were</p> <p>7 accurate.</p> <p>8 Q. Did you -- did you look at</p> <p>9 and review every MSDS listed in Exhibit</p> <p>10 Number 5?</p> <p>11 A. No, sir.</p> <p>12 Q. I'm sorry?</p> <p>13 A. No, sir.</p> <p>14 Q. Approximately how many did</p> <p>15 you look at in review?</p> <p>16 A. I would say I looked at</p> <p>17 perhaps half. Looked -- looked at, not</p> <p>18 reviewed.</p> <p>19 Q. But with regard to your</p> <p>20 analysis of the fragrances that are</p> <p>21 reportedly in Johnson's Baby Powder, you</p> <p>22 did not do any of your own analysis as of</p> <p>23 the time of your report, correct?</p> <p>24 A. I --</p>

12 (Pages 42 to 45)

Judith Zelikoff, Ph.D.

Page 46	Page 48
<p>1 MS. O'DELL: Objection to 2 the form. 3 THE WITNESS: I did no 4 analysis except to gather the 5 information that is out there by 6 reputable organizations. 7 BY MR. HEGARTY: 8 Q. Well, did you gather that 9 information before you completed your 10 expert report? 11 A. I did this after my expert 12 report. 13 Q. And my question was, before 14 your expert report, did you do any of 15 your own analysis of the fragrances that 16 we -- are listed in Exhibit Number 5? 17 MS. O'DELL: Objection to 18 form. 19 THE WITNESS: I'm not sure 20 what you mean by analysis. 21 BY MR. HEGARTY: 22 Q. Well, did you do any of your 23 own research, review of the literature, 24 anything with regard to fragrances as of</p>	<p>1 THE WITNESS: I -- 2 post-report, I did my own search. 3 BY MR. HEGARTY: 4 Q. But my question was, before 5 your report, with regard to Dr. Crowley's 6 report, did you actually pull the 7 literature references that he cites and 8 read them yourself? 9 A. No, sir. 10 Q. You also make reference to 11 reviewing Dr. Longo's report, MDL report, 12 which is dated November 14, 2018. That's 13 in the last page of Exhibit Number B. Do 14 you see that? 15 A. I -- I see that, yes. 16 Q. Did you read every page of 17 that report? 18 A. No, sir, I did not. But I 19 did read every page of the December 2018 20 Longo mass supplement report. 21 Q. Well, focusing on the 22 November 14, 2018, report, that report is 23 over 2,000 pages. Are you aware of that? 24 A. Yes, sir.</p>
Page 47	Page 49
<p>1 the time of your signing of your expert 2 report November 16, 2018? 3 A. I very briefly looked up 4 limonene and eugenol. And it wasn't in 5 regards to this case. It was in regards 6 to work that I do with electronic 7 cigarettes. They are being used as 8 flavorants. 9 Q. Was that the extent of your 10 review of the fragrances as of the time 11 of your expert report, November 16, 2018? 12 MS. O'DELL: Object to form. 13 You may answer. 14 THE WITNESS: Whatever is in 15 the report from Dr. Crowley that 16 listed, I looked at those. 17 BY MR. HEGARTY: 18 Q. But as you indicated, you 19 did not read all the citations, the 20 literature resources that Dr. Crowley 21 cites in his report and review them 22 yourself? 23 MS. O'DELL: Object to the 24 form.</p>	<p>1 Q. Did you read all 2,000 2 pages? 3 A. No, sir. I did not. 4 Q. Did you read any of those 5 2,000 pages? 6 A. I reviewed several of those 7 pages. 8 Q. Okay. How about the rest of 9 the reports that are listed there? Did 10 you read every page of the reports that 11 are listed there? 12 A. I read every page of the 13 Dr. Thomas Dydek's report. And I read 14 two-thirds of Dr. Plunkett's. 15 Q. As to the rest, did you 16 review the remaining reports? 17 MS. O'DELL: Object to the 18 form. 19 BY MR. HEGARTY: 20 Q. Or not look at them at all? 21 A. I glanced over them. 22 Q. Do you recall if you were 23 ever provided any draft reports from any 24 of the plaintiffs' experts in the MDL,</p>

13 (Pages 46 to 49)

Judith Zelikoff, Ph.D.

Page 50	Page 52
<p>1 where you understood them to be drafts? 2 A. I never received anything 3 that I understood to be a draft document. 4 (Document marked for 5 identification as Exhibit 6 Zelikoff-6.) 7 BY MR. HEGARTY: 8 Q. Dr. Zelikoff, I'm marking 9 Exhibit Number 6 a copy of your 10 deposition notice for purposes of today's 11 deposition. 12 A. Yes, sir. I see it. 13 Q. Did you have a chance to 14 look at that before today? 15 A. I did not. 16 Q. What materials did you bring 17 with you to the deposition today? 18 MS. O'DELL: I would just 19 reassert that the objections that 20 plaintiffs have served regarding 21 certain of the requests and would 22 state that Dr. Zelikoff has 23 brought binders of her cited 24 materials, and then I believe I</p>	<p>1 Q. Is it correct that the 2 binders to your right are copies of 3 everything in -- under the listing -- 4 under the heading of Materials and Data 5 Considered? 6 MS. O'DELL: Object to the 7 form. 8 THE WITNESS: I cannot say 9 that every single paper in here is 10 in there. Maybe in something that 11 I have looked up, but I can't say 12 with likely certainty that yes, 13 everything is in there. Although 14 I cannot tell you that I reviewed 15 every single one and matched it to 16 this page. 17 BY MR. HEGARTY: 18 Q. Who prepared -- who prepared 19 the document Materials and Data 20 Considered? 21 A. What do you mean by 22 prepared? 23 Q. Did you prepare it? 24 MS. O'DELL: Object to the</p>
Page 51	Page 53
<p>1 gave you a jump drive of all the 2 reference materials. 3 BY MR. HEGARTY: 4 Q. Let me go back to my 5 question. Sitting to your right are 6 binders of materials. Do you know what 7 those binders are, Dr. Zelikoff? 8 A. I do know what those black 9 binders are to my right. 10 Q. What are they? 11 A. They are binders containing 12 materials, papers, literature -- 13 literature, in alphabetical order of 14 papers that are relevant to my -- to my 15 testimony, as well as production 16 documents which include letters, reports 17 of internal documents. 18 Q. Your Exhibit B in your 19 report starts with a page Materials and 20 Data Considered. Do you see that? 21 A. Page please? 22 Q. It's Exhibit B. 23 A. Materials and data 24 considered, I have it, yes, sir.</p>	<p>1 form. 2 THE WITNESS: I supplied 3 data, references, and in 4 coordination and complementation 5 with the plaintiffs' attorneys, 6 they prepared this. 7 (Document marked for 8 identification as Exhibit 9 Zelikoff-7.) 10 BY MR. HEGARTY: 11 Q. I'm marking as Exhibit 12 Number 7 a flash drive that we were 13 provided here today. Do you know what 14 Exhibit Number 7 is? 15 A. I do not. 16 Q. Do you know what's contained 17 on the flash drive? 18 A. I have not seen the data 19 within the flash drive. 20 MS. O'DELL: I'll just 21 represent that I prepared the 22 flash drive and the flash drive 23 has all the materials on 24 Exhibit B, on behalf of</p>

14 (Pages 50 to 53)

Judith Zelikoff, Ph.D.

Page 54	Page 56
<p>1 Dr. Zelikoff. 2 BY MR. HEGARTY: 3 Q. Are the materials you also 4 cited -- I'm sorry. Are the references 5 you also cited in the body of your report 6 contained in those notebooks to your 7 knowledge? 8 A. To my knowledge, they are. 9 Q. Are the materials that -- 10 that are in those notebooks materials you 11 reviewed or had access to prior to 12 completion of your expert report? 13 A. Prior to the completion. 14 However I also prepared my own. So in 15 going through -- in coming to my 16 conclusion and opinion, I also went 17 through the literature using various 18 websites including, as I said Tox Lit, 19 Google and PubMed. And I arranged my 20 documents that I thought were relevant 21 after reviewing all of the ones that came 22 up in my literature search, and I 23 reviewed the abstracts and if I found 24 them to be relevant, I placed them in --</p>	<p>1 Q. You had not read that 2 manuscript though at the time you 3 completed your report, correct? 4 A. No, I did not, sir. 5 Q. So that manuscript did not 6 inform the opinions set out in your 7 report, correct? 8 MS. O'DELL: Objection to 9 form. 10 THE WITNESS: Do I answer? 11 MS. O'DELL: Yes, you may 12 answer. 13 THE WITNESS: Okay. 14 MS. O'DELL: Yes. 15 THE WITNESS: I -- I had 16 access to an abstract from the 17 same author with emerging results 18 that was brought forward in larger 19 context and in greater detail in 20 the publication. So I had -- so 21 the abstract did go into my 22 thinking. 23 BY MR. HEGARTY: 24 Q. The manuscript though we</p>
Page 55	Page 57
<p>1 in order and in bins, in silos, in 2 different areas, and I prepared my own. 3 Q. We were also provided today, 4 this morning, what I've marked as Exhibit 5 Number 8 which is a manuscript from a 6 publication called Reproductive Sciences. 7 The lead author, Ghassam Saed. 8 (Document marked for 9 identification as Exhibit 10 Zelikoff-8.) 11 BY MR. HEGARTY: 12 Q. Can you tell me when you 13 received that manuscript? 14 A. I received the manuscript in 15 December. 16 Q. Approximately when in 17 December? 18 A. Let me say that it was 19 either December or early January. I 20 cannot be more exact than that. 21 Q. Have you read that 22 manuscript? 23 A. Have I -- yes, I've read 24 this manuscript.</p>	<p>1 marked as Exhibit 8 did not go into your 2 thinking? 3 A. The manuscript -- no, sir, 4 it did not. It did post my report and it 5 added supplementary and compelling 6 evidence for my opinion. 7 (Document marked for 8 identification as Exhibit 9 Zelikoff-9.) 10 BY MR. HEGARTY: 11 Q. I've also marked as Exhibit 12 Number 9 another document we were 13 provided this morning which is -- which 14 is called Draft Screening Assessment. 15 When did you receive this 16 draft screening assessment? 17 A. January. 18 Q. Approximately when in 19 January? 20 A. About two weeks ago. 21 Q. Who -- what was your source 22 for getting that document? 23 A. Ms. Emmel. 24 Q. Did Ms. Emmel also provide</p>

15 (Pages 54 to 57)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 58</p> <p>1 the -- the Saed manuscript?</p> <p>2 A. Yes, sir, she did.</p> <p>3 Q. So neither the Canadian</p> <p>4 assessment nor Dr. Saed's manuscript were</p> <p>5 materials you found on your own, correct?</p> <p>6 A. Correct.</p> <p>7 Q. Do you know how Ms. Emmel</p> <p>8 came to receive an unpublished</p> <p>9 manuscript, apart from any discussions</p> <p>10 that you had with plaintiffs' counsel?</p> <p>11 A. Actually, which manuscript</p> <p>12 are you referring to?</p> <p>13 Q. Well, there's only one</p> <p>14 manuscript in front of you?</p> <p>15 A. Reproductive Science --</p> <p>16 Q. Dr. -- yes.</p> <p>17 A. -- Dr. Saed?</p> <p>18 To my knowledge, this has --</p> <p>19 and seeing the cover letter that was</p> <p>20 associated with this, this is not a</p> <p>21 manuscript. This is an in-press</p> <p>22 manuscript, and there is a very large</p> <p>23 difference.</p> <p>24 Q. Okay. Apart from anything</p>	<p style="text-align: right;">Page 60</p> <p>1 that is a supplement of that or a -- an</p> <p>2 adjacent document.</p> <p>3 Q. Do you have that document</p> <p>4 with you?</p> <p>5 A. Perhaps. I do, yes, sir.</p> <p>6 Q. May I see it, please.</p> <p>7 (Document marked for</p> <p>8 identification as Exhibit</p> <p>9 Zelikoff-10.)</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. I'm going to mark as Exhibit</p> <p>12 Number 10 what you just handed to me,</p> <p>13 which is titled "Systematic Review and</p> <p>14 Meta-Analysis of the Association Between</p> <p>15 Perineal Use of Talc and Risk of Ovarian</p> <p>16 Cancer," lead author Taher.</p> <p>17 When did you receive Exhibit</p> <p>18 Number 10?</p> <p>19 MS. O'DELL: Did we skip</p> <p>20 nine?</p> <p>21 MR. HEGARTY: Exhibit 9 is</p> <p>22 the draft screening assessment.</p> <p>23 MS. O'DELL: Okay. I'm</p> <p>24 sorry. I had that as Number 8.</p>
<p style="text-align: right;">Page 59</p> <p>1 that counsel for plaintiffs may have told</p> <p>2 you, do you know how this manuscript</p> <p>3 became available for you to review?</p> <p>4 A. I have no knowledge.</p> <p>5 Q. With regard to the</p> <p>6 Canadian -- sorry, the draft screening</p> <p>7 assessment, did you read the entirety of</p> <p>8 this assessment?</p> <p>9 A. I'm looking for it right</p> <p>10 now.</p> <p>11 Q. Sorry.</p> <p>12 A. Thank you. Except for the</p> <p>13 references, I read the entirety of the</p> <p>14 text.</p> <p>15 Q. Did you pull the references</p> <p>16 and review the references themselves?</p> <p>17 A. No, sir, I did not.</p> <p>18 Q. There are also supplemental</p> <p>19 materials associated with this -- or do</p> <p>20 you know whether there are supplemental</p> <p>21 materials associated with this draft, or</p> <p>22 with this draft screening assessment?</p> <p>23 A. I was also provided a</p> <p>24 document by Dr. Taher. I'm not sure if</p>	<p style="text-align: right;">Page 61</p> <p>1 MR. HEGARTY: Number 8 is</p> <p>2 the manuscript by Dr. Saed.</p> <p>3 MS. O'DELL: Okay. I'm</p> <p>4 sorry.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. Going back to my question,</p> <p>7 when did you receive the article by</p> <p>8 Taher?</p> <p>9 A. At the same time that I</p> <p>10 received the health -- the screening</p> <p>11 health assessment from Health Canada.</p> <p>12 Q. Who provided it to you?</p> <p>13 A. Ms. Emmel.</p> <p>14 Q. Did you read the entirety of</p> <p>15 that document?</p> <p>16 A. I read the entirety of this</p> <p>17 document minus the references.</p> <p>18 Q. Did you pull the literature</p> <p>19 cited in the Taher article and review it</p> <p>20 yourself?</p> <p>21 A. I may have looked at</p> <p>22 references that have -- were on the</p> <p>23 reference list of the Saed document, but</p> <p>24 I did not go through each individual</p>

16 (Pages 58 to 61)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 62</p> <p>1 reference in the document and pull it 2 specifically. 3 Q. The Taher article -- strike 4 that. 5 You were provided the Taher 6 article after you completed your expert 7 report in this case, correct? 8 A. That's correct. 9 Q. So it's correct that it did 10 not inform your opinions in your report, 11 correct? 12 A. It informed my opinions -- 13 let me say that it added to my opinions 14 following the writing of my report. It 15 supported my position. 16 Q. Did the assessment conclude 17 that talc use causes ovarian cancer? 18 Strike that. Let me strike that 19 question. We'll come back to that. 20 (Document marked for 21 identification as Exhibit 22 Zelikoff-11.) 23 BY MR. HEGARTY: 24 Q. I'm going to mark next as</p>	<p style="text-align: right;">Page 64</p> <p>1 Q. Have you reviewed any 2 materials since completion of your report 3 for purposes of your work on this case 4 that we have not talked about this 5 morning? 6 A. I reviewed -- since my 7 report, I reviewed Dr. Pier's deposition. 8 Is that what you mean? 9 Q. Dr. Julie Pier's deposition? 10 A. Yes. Three-quarters of it. 11 It is a very long deposition. 12 Q. The second-to-last page of 13 Exhibit Number B under depositions makes 14 reference to depositions and exhibits of 15 Julie Pier dated 9/12 to 9/13/2018. 16 Do you see that? 17 A. Sorry, sir. Fifth line 18 down, deposition/exhibits of Julie Pier. 19 Q. Is that the deposition to 20 which you just referred? 21 A. To the best of my knowledge. 22 Q. Anything else that you have 23 reviewed for purposes of your work on 24 this case that we have not talked about</p>
<p style="text-align: right;">Page 63</p> <p>1 Exhibit Number 11 a copy of the Exhibit C 2 that's referenced in your report. 3 Did you prepare Exhibit 4 Number C? 5 A. If you mean by preparation, 6 did I write it, did I prepare the 7 summary, no, sir I did not. 8 Q. Do you know who prepared it? 9 A. From my reading, it appears 10 as though the attorneys may have prepared 11 it based upon -- to my knowledge, based 12 upon other deponents. 13 Q. Other than the documents 14 that we have talked about that are laid 15 out before us, did you bring any other 16 documents with you to the deposition? 17 A. Other than the documents 18 that are to my right in the folders, the 19 health assessment from the -- the 20 screening health assessment from Canada, 21 Dr. Taher's paper, a letter -- this is in 22 the documents to my right, a letter from 23 Luzenac to Dr. Al Wehner, my CV, the 24 expert report, Exhibit B, my CV, no, sir.</p>	<p style="text-align: right;">Page 65</p> <p>1 this morning or made reference to? 2 A. I reviewed Dr. Hopkins' 3 report. 4 Q. Let me ask it different. 5 Anything that you have reviewed that's 6 either not listed somewhere in your 7 report or we have not marked as an 8 exhibit? 9 A. To the best of my knowledge, 10 no. 11 Q. With regard to Exhibit C, 12 did you review all the documents that are 13 referenced in Exhibit Number C? 14 A. Can I see that, please. 15 Q. I think you still have a 16 copy in front of you. 17 A. Okay. 18 Q. It's Exhibit Number 11, 19 which is marked Exhibit -- which is 20 Exhibit C. Did you actually pull the 21 documents and confirm the accuracy of the 22 information -- 23 A. No, sir. 24 Q. -- contained in Exhibit C?</p>

17 (Pages 62 to 65)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 66</p> <p>1 A. There are no -- there are no 2 references in here, as I understand it. 3 Q. Well, there are Bates 4 numbers -- 5 A. Bates numbers. 6 Q. -- that are listed at the 7 right, which correspond to documents, 8 correct? 9 A. Yes, but when I -- when I 10 hear references I think of citations, 11 papers. 12 Q. Did you actually pull the 13 documents whose Bates numbers are listed 14 and confirm the accuracy of the 15 information contained in Exhibit C? 16 A. I did not pull them as part 17 of reviewing this exhibit, but I have 18 looked at them, because I have gone 19 through all of the production documents. 20 Q. With regard to your expert 21 report in this case, is it correct that 22 you prepared that report -- strike that. 23 With regard to your expert 24 report it defines the scope of your</p>	<p style="text-align: right;">Page 68</p> <p>1 BY MR. HEGARTY: 2 Q. You agree that the standard 3 for proving biologic plausibility or any 4 other scientific issue in the medical 5 literature is the same one that applies 6 in litigation, correct? 7 MS. O'DELL: Object to the 8 form. If you know. 9 THE WITNESS: Can you repeat 10 that, please. 11 BY MR. HEGARTY: 12 Q. Sure. You agree that the 13 standard for proving biologic 14 plausibility or any other scientific 15 issue in a medical literature or in 16 science should be the same that is 17 applied in litigation? 18 MS. O'DELL: Object to the 19 form. 20 THE WITNESS: I will use the 21 same scrutiny and rigor, as I said 22 before. 23 BY MR. HEGARTY: 24 Q. You would -- you intend to</p>
<p style="text-align: right;">Page 67</p> <p>1 testimony in this case, correct? 2 MS. O'DELL: Objection to 3 form. 4 THE WITNESS: Yes, it does. 5 BY MR. HEGARTY: 6 Q. And is it correct that the 7 report was prepared with the same 8 methodology and approach as you would 9 have prepared an article for publication 10 in a scientific journal? 11 A. An article, a grant, a 12 review, an advisory board report, with 13 the same rigor and the same scrutiny, 14 yes. 15 Q. In other words, is it 16 correct that you prepared this report in 17 the same manner as you had prepared all 18 of your articles for publication? 19 MS. O'DELL: Asked and 20 answered. 21 THE WITNESS: I used the 22 same methodology, the same 23 scrutiny and the same rigor to 24 prepare this, yes.</p>	<p style="text-align: right;">Page 69</p> <p>1 apply the same standards to your report 2 and your opinions in this case as you 3 would apply if you were looking at this 4 as simply a professor at New York 5 University? 6 A. Well, I don't see simply a 7 professor. 8 If I were -- I review 9 papers. I think I've answered this 10 already. But I review papers and 11 literature with the same scrutiny as I 12 prepared this report. 13 Q. Did you apply the same 14 standard for assessing biologic 15 plausibility as you apply in your work at 16 NY University? 17 A. I do. 18 Q. Did you sign your report 19 dated November 16, 2018, with the same 20 intent as if signed under penalty of 21 perjury? 22 A. Could you repeat that 23 please. 24 Q. Sure. Did you sign your</p>

18 (Pages 66 to 69)

Judith Zelikoff, Ph.D.

Page 70	Page 72
<p>1 expert report dated November 16, 2018, 2 with the same intent as if signed under 3 penalty of perjury? 4 MS. O'DELL: Object to form. 5 THE WITNESS: I'm not sure I 6 understand what that question 7 means. 8 BY MR. HEGARTY: 9 Q. Well, did you -- by signing 10 this report, did you confirm to the 11 accuracy of everything contained in the 12 report? 13 A. To the best of my knowledge, 14 I signed this report knowing that I 15 prepared this report and there is -- with 16 the same intent of accuracy and rigor. 17 Q. You understand this is 18 supposed to be your testimony as if on a 19 stand before a judge or a jury, correct? 20 MS. O'DELL: Object to the 21 form. 22 THE WITNESS: My 23 understanding of the deposition is 24 that it is a legal document and</p>	<p>1 that these are my -- my report 2 reflects my opinion. 3 BY MR. HEGARTY: 4 Q. Are they -- are there any 5 necessary changes, or revisions to your 6 report? 7 A. Not to my knowledge. 8 Q. And all the opinions that 9 you intend to offer in this litigation 10 are set out in your report, as you just 11 said, correct? 12 A. To come to my decision or my 13 opinion, prior to -- included all the 14 documents that I had in my possession and 15 were -- had access to prior to my report. 16 Q. My question is a little bit 17 different, Doctor. My question is, the 18 opinions that you intend to offer as you 19 just indicated, those are set out in your 20 report, correct? 21 A. The opinions that I intend 22 to offer, yes. 23 Q. As your report shows, you 24 don't intend to offer the opinion that</p>
Page 71	Page 73
<p>1 testifying my -- my opinion. And 2 that it has to be honest and 3 truthful and transparent. 4 BY MR. HEGARTY: 5 Q. Well, this time I'm talking 6 about your report. Do you understand 7 your report is supposed to be your 8 testimony as if you are before a judge 9 and a jury? 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: I -- I 13 understand that this has to be 14 honest and truthful, and this will 15 be -- could be, will be, the basis 16 for my testimony in a court trial, 17 if that is what you're asking. 18 BY MR. HEGARTY: 19 Q. You understand it's supposed 20 to set out your -- the entirety of your 21 opinions in this case? 22 MS. O'DELL: Object to the 23 form. 24 THE WITNESS: I understand</p>	<p>1 use of Johnson's Baby Powder or Shower to 2 Shower causes ovarian cancer, correct? 3 A. My mission, the question 4 that I was asked by plaintiff attorney 5 was to confer or to assess biological 6 plausibility in the causation of talc for 7 ovarian cancer. 8 Q. And as your report shows, 9 you did not do a risk assessment or 10 Bradford Hill analysis of all the 11 literature looking at talc products and 12 ovarian cancer, correct? 13 A. I think I answered that, but 14 I'm not an epidemiologist, and my -- my 15 question was to look at biological 16 plausibility. 17 Q. And all the materials that 18 you intend to rely upon for purposes of 19 your opinions, are those set out in your 20 report, those we've talked about here 21 this morning, correct? 22 A. Yes, including the 23 contributions that were made after my 24 report including Dr. Longo's supplement,</p>

Judith Zelikoff, Ph.D.

Page 74	Page 76
<p>1 including Dr. Saed's paper. They added 2 to my opinion, supplemented them. But it 3 is -- but my -- my opinion stays the same 4 as the report. 5 Q. Okay. 6 MR. HEGARTY: The next 7 section I have is pretty long. I 8 don't know if you want to take a 9 quick break now or just keep 10 going. It's up to you. 11 MS. O'DELL: We've been 12 going about an hour. I think 13 that's probably a good idea. 14 MR. HEGARTY: Because 15 otherwise it's not -- there's not 16 going to be a good break time. So 17 we should probably do it now. 18 MS. O'DELL: Well, we can 19 definitely do it now, but we'll -- 20 of course we'll break when the 21 witness needs to break. 22 MR. HEGARTY: Understood. 23 Understood. But you know what I 24 mean.</p>	<p>1 by more than one investigator, and is a 2 compilation of different points, then 3 I -- I will use -- I will not necessarily 4 put quotations around it. And I will not 5 necessarily reference it, because it's -- 6 may have been taken from another document 7 but it's common knowledge. 8 Q. What about -- 9 A. And it's -- 10 Q. I'm sorry. I didn't mean to 11 interrupt. 12 A. I couldn't -- I'm sorry. I 13 couldn't write it any better than as it 14 was put. 15 Q. What about if you take 16 materials from a published article for 17 purposes of your report, did you 18 reference those articles? 19 A. In some cases, not. Again, 20 it's my opinion that if there is 21 something that is stated by an 22 investigator and it's written extremely 23 well, and it's common knowledge for 24 scientists in that area, as well as</p>
Page 75	Page 77
<p>1 MS. O'DELL: Yeah. 2 THE VIDEOGRAPHER: Stand by 3 please. The time is 10:11 a.m. 4 Off the record. 5 (Short break.) 6 THE VIDEOGRAPHER: We are 7 back on the record. The time is 8 10:26 a.m. 9 BY MR. HEGARTY: 10 Q. Dr. Zelikoff, with regard to 11 your expert report, do you have that in 12 front of you? 13 A. I do now. Thank you. 14 Q. We marked that as exhibit 15 what? 16 A. Exhibit 2. 17 Q. With regard to Exhibit 18 Number 2, is it your testimony that all 19 of the sentences in your report are your 20 own words and not copied from others, 21 except where you used quotations? 22 A. Mm-hmm. The way I report 23 and write publications is if something 24 is, I feel, common knowledge or provided</p>	<p>1 others, then I will -- I will use it. 2 Q. That's not how you prepare 3 your report -- that's not how you prepare 4 your articles for journals though, 5 correct? 6 A. No, that's the same way I 7 prepare them. 8 If they are -- if they are, 9 again, common knowledge, I will not 10 necessarily cite them. 11 Q. Is it not your approach that 12 authors are to cite material to which 13 they are relying on or referring to in 14 published articles? 15 A. Again, I think you're asking 16 me the same question. But again, if 17 something is well known, then I do not 18 necessarily reference it. 19 Q. What is the definition -- 20 what is your definition of well known? 21 A. For example, if chromium -- 22 let's use nickel instead. If nickel is 23 being spoken about by IARC, by U.S. EPA, 24 by National Toxicology Program, and</p>

20 (Pages 74 to 77)

Judith Zelikoff, Ph.D.

Page 78	Page 80
<p>1 they're all saying the same thing, I in 2 some cases may take what the IARC has 3 said and put it in my reference. 4 Q. And it's your testimony that 5 you do that in all -- you've done that in 6 all the articles that you've ever 7 published? 8 MS. O'DELL: Objection to 9 form. 10 THE WITNESS: I can't say 11 about all the articles. I 12 published over 130 -- 13 MR. HEGARTY: Mark -- 14 THE WITNESS: -- 15 publications and book chapters. 16 (Document marked for 17 identification as Exhibit 18 Zelikoff-12.) 19 BY MR. HEGARTY: 20 Q. Let me mark as Exhibit 21 Number 12 the academic integrity for 22 students at NYU policy. Is this the 23 policy applicable to your university? 24 A. It appears to be that you've</p>	<p>1 Q. Is that not -- is that a 2 definition you agree with? 3 A. I agree that there's ways to 4 interpret that. 5 Q. Is that -- is that the 6 definition New York University applies to 7 its students? 8 A. This sentence, "Presenting 9 others' work without adequate 10 acknowledgment of its source as though it 11 were one's own," that is for students. 12 That is not what I'm doing in my opinion. 13 In my opinion, I'm taking 14 common knowledge and presenting it. 15 Q. Well, they go on to give 16 examples of plagiarism that include, "A 17 sequence of words incorporated without 18 quotation marks." 19 Do you see where I'm 20 reading? 21 A. I do see it. "A sequence of 22 words incorporated without quotation 23 marks." 24 Q. It also says that,</p>
Page 79	Page 81
<p>1 taken it off the website in the academic 2 integrity for students at NYU. 3 Q. If you turn to the second 4 page, there is a definition of 5 plagiarism, that says, "Presenting 6 others' works without adequate 7 acknowledgment of its source as though it 8 were one's own." 9 A. I'm sorry. 10 Q. Do you agree with that 11 definition? 12 A. I'm sorry. What -- 13 Q. Second page of Exhibit 12. 14 A. You mean on the back? Is it 15 under Number 2, Number 1? 16 Q. Number 1. The definition of 17 plagiarism by your university for your 18 students is, "Presenting others' work 19 without adequate acknowledgement of its 20 source as though it were one's own." 21 Do you agree with that -- 22 that definition? 23 A. I agree that there's many 24 different ways to interpret that.</p>	<p>1 "Plagiarism is an unacknowledged passage 2 paraphrased from another's work." 3 Do you see that? 4 A. Some examples of plagiarism, 5 "Unacknowledged passage rephrased from 6 another's work." 7 Q. Do you agree those are -- 8 the two definitions that I just read from 9 your university's own policy for students 10 are examples of plagiarism? 11 A. This is the NYU 12 interpretation or what they've put on the 13 website, yes. 14 Q. Should this be a policy -- 15 strike that. 16 Is this a policy that 17 applies to students at NY university? 18 A. It applies -- it's an 19 academic integrity for students at NYU. 20 Q. Do you agree that professors 21 at NY university should also conform to 22 this policy? 23 A. I believe that honesty, 24 transparency is the key factor for all</p>

21 (Pages 78 to 81)

Judith Zelikoff, Ph.D.

Page 82	Page 84
<p>1 scientists at any level. 2 Q. You would agree that this 3 should apply to your work as well, 4 correct? 5 A. I think that this definition 6 is open to interpretation. 7 Q. Well, do you either agree or 8 disagree that this -- well, strike that. 9 Do you agree that this 10 policy should be applied to your work in 11 this case? 12 A. I agree that plagiarism is 13 defined as presenting others' work 14 without adequate acknowledgment of its 15 source as though it were one's own. 16 That's the NYU policy for students. 17 Q. Did you -- you did that in 18 your own report, correct? 19 MS. O'DELL: Object to form. 20 THE WITNESS: I did what in 21 my own report? 22 BY MR. HEGARTY: 23 Q. You plagiarized portions of 24 other people's work without proper</p>	<p>1 Q. Do you know who Shawn Levy 2 is? 3 A. I do not. 4 Q. Did you review Dr. Levy's 5 report for purposes of your -- preparing 6 your report in this case? 7 A. I actually looked at it, but 8 did not -- did not read it. 9 Q. When did you have a chance 10 to look at his expert report? 11 A. I have looked at it -- I'm 12 trying to gather the knowledge. I 13 actually do not recall when I looked at 14 it. 15 Q. If you look at your report 16 on Page 20. In that exhibit, Doctor. 17 A. Oh okay. 18 Q. Your report and the portion 19 of Dr. Levy's report is attached, and if 20 you look at your report Page 20 and his 21 report Page 5 -- 22 MS. O'DELL: I think, Mark, 23 I think there's confusion because 24 there's two documents put together</p>
Page 83	Page 85
<p>1 acknowledgment, correct? 2 MS. O'DELL: Objection to 3 form. 4 THE WITNESS: That is 5 totally incorrect. 6 I used sentences from other 7 people's -- other people's papers 8 because they were common knowledge 9 and contributed by multiple 10 authors. And it was -- 11 BY MR. HEGARTY: 12 Q. I'm going to mark -- sorry. 13 A. And it was stated in a way 14 that I couldn't have stated better. 15 Q. I'm going to mark as 16 Exhibit 13 a report -- a portion of your 17 report dated November 16, 2018. And the 18 back of that is a portion of Rule 26 19 expert report of an expert by the name of 20 Shawn Levy. 21 (Document marked for 22 identification as Exhibit 23 Zelikoff-13.) 24 BY MR. HEGARTY:</p>	<p>1 in this -- 2 MR. HEGARTY: Right. One is 3 her report and one is Levy's 4 report. 5 MS. O'DELL: I just think 6 that that was the confusion. 7 THE WITNESS: Thank you. 8 BY MR. HEGARTY: 9 Q. So the -- do you see that 10 sentences marked as 1 and 2 from 11 Dr. Levy's report are identical to 12 sentences marked 1 and 2 in your report? 13 MS. O'DELL: Object to form. 14 And, Doctor, if you need to 15 take the documents apart and 16 compare them, rather than flipping 17 back and forth, if that would be 18 helpful to you, feel free to do 19 that. 20 THE WITNESS: Good idea. I 21 actually don't recall. Could 22 you -- could you tell me when my 23 report is dated please? 24 BY MR. HEGARTY:</p>

22 (Pages 82 to 85)

Judith Zelikoff, Ph.D.

Page 86	Page 88
<p>1 Q. November 16. His report is 2 also dated November 16. 3 A. I did not actually see this 4 report until after mine. 5 However, let me address your 6 question to the best of my ability. 7 "Things stated as both 8 inherited and acquired gene mutations 9 work together to cause cancer." 10 Everyone from the time of 11 their scientific career back in college 12 knows that. 13 "While genetic testing" -- 14 let me make sure I have both -- "both 15 inherited and acquired gene mutations 16 work together to cause cancer." 17 How -- there is no way for 18 me to say that differently. This is a 19 very well statement, very well put 20 statement. I used it without a 21 reference. Even if one -- 22 Q. My question -- I'm sorry. I 23 thought you were finished. 24 A. "Even if one has inherited a</p>	<p>1 from either Dr. Levy's report or from 2 somewhere -- some other source? 3 A. The thoughts are the same. 4 The words seem to be identical. And 5 again, if you interpret that one way and 6 I interpret it another, I certainly do 7 not interpret it as plagiarism. 8 Q. Let me show you another 9 example. 10 (Document marked for 11 identification as Exhibit 12 Zelikoff-14.) 13 BY MR. HEGARTY: 14 Q. I'm going to mark as 15 Exhibit 14, again a portion of your 16 report Page 12 and a portion of a report 17 by Rebecca Smith-Bindman. Do you know 18 who that is? 19 A. Not at all. 20 Q. Did you see her report in 21 this case before preparing your report? 22 A. I never looked at her 23 report. 24 Q. If you would look at the two</p>
Page 87	Page 89
<p>1 genetic mutation that predisposes one's 2 chances, doesn't mean he or she has to 3 get cancer." Again, common knowledge 4 from everyone. 5 Q. Well, Dr. Zelikoff, my 6 question is different than that. 7 My question is, can you 8 explain to us here today, given that you 9 did not see Dr. Levy's report until after 10 you completed your report, how you have 11 several identical sentences between your 12 report and Dr. Levy's report? 13 MS. O'DELL: Object to the 14 form. 15 BY MR. HEGARTY: 16 Q. Dr. Levy's report. 17 A. I cannot -- I -- I don't 18 know. The only -- what I can say is that 19 there was likely a publication. But that 20 is speculation, because I have not looked 21 that over. 22 Q. But is it your testimony 23 here today that the words in your report 24 were solely your own words and not taken</p>	<p>1 reports side by side under the 2 definition -- under the heading 3 Fragrances -- 4 A. I'm sorry, I don't have her 5 report. 6 Q. You have one page of her 7 report in that exhibit. You have the -- 8 the front page and the one page of her 9 report, and you have Page 12 of your 10 report, correct? 11 A. I see. Correct. 12 Q. Do you see that the section 13 under the heading Fragrances is identical 14 between the two reports? 15 A. Yes. They are identical 16 wording. 17 Q. And none of those sentences 18 are common knowledge, correct? 19 MS. O'DELL: Object to the 20 form. 21 THE WITNESS: It's a 22 statement. 23 BY MR. HEGARTY: 24 Q. But it's not common</p>

23 (Pages 86 to 89)

Judith Zelikoff, Ph.D.

Page 90	Page 92
<p>1 knowledge, correct, Doctor?</p> <p>2 A. But it's a -- it is -- there</p> <p>3 are more than 150 different chemicals</p> <p>4 added to Johnson's Baby Powder and Shower</p> <p>5 to Shower products. I reviewed the</p> <p>6 expert report from Dr. Crowley that</p> <p>7 concludes that some of these chemicals</p> <p>8 may contribute to the inflammatory</p> <p>9 response, toxicity, and potential</p> <p>10 carcinogenicity. I concur with his</p> <p>11 opinion.</p> <p>12 I say the same thing as</p> <p>13 Dr. Smith-Bindman.</p> <p>14 Q. Is it your testimony that</p> <p>15 you and Dr. Smith-Bindman came to the</p> <p>16 exact same words just by coincidence?</p> <p>17 MS. O'DELL: Object to the</p> <p>18 form.</p> <p>19 THE WITNESS: We came to the</p> <p>20 same conclusions.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. That's not my question. My</p> <p>23 question is, is it your testimony here</p> <p>24 today that you and Dr. Smith-Bindman came</p>	<p>1 Q. Sure. Is it your testimony</p> <p>2 that the words in your report under</p> <p>3 section -- under the section Fragrances</p> <p>4 are your words and your words alone from</p> <p>5 no other source?</p> <p>6 MS. O'DELL: Object to the</p> <p>7 form.</p> <p>8 THE WITNESS: I don't quite</p> <p>9 understand what you mean by no</p> <p>10 other source.</p> <p>11 These are my words. They</p> <p>12 confer my opinion.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Well, did you copy those</p> <p>15 words from some source besides</p> <p>16 Smith-Bindman's report?</p> <p>17 A. I did not copy words. I --</p> <p>18 I don't know how this happened.</p> <p>19 If I was in error, I own</p> <p>20 that responsibility.</p> <p>21 (Document marked for</p> <p>22 identification as Exhibit</p> <p>23 Zelikoff-15.)</p> <p>24 BY MR. HEGARTY:</p>
Page 91	Page 93
<p>1 to the exact -- to say the exact same</p> <p>2 thing under the section Fragrance simply</p> <p>3 by coincidence?</p> <p>4 MS. O'DELL: Objection to</p> <p>5 form.</p> <p>6 THE WITNESS: I don't do</p> <p>7 anything usually by coincidence.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Okay. Is it your testimony</p> <p>10 that the words that you wrote under the</p> <p>11 section Fragrances on Page 12 are your</p> <p>12 words and came from nowhere else?</p> <p>13 A. I don't quite understand</p> <p>14 where they could have come from because I</p> <p>15 did not review her report.</p> <p>16 Q. Is it your testimony that</p> <p>17 the words in your report under the</p> <p>18 section Fragrances are your words and</p> <p>19 your words alone from no other source?</p> <p>20 MS. O'DELL: Object to the</p> <p>21 form.</p> <p>22 THE WITNESS: Could you</p> <p>23 please repeat the question?</p> <p>24 BY MR. HEGARTY:</p>	<p>1 Q. I'm going to show you what</p> <p>2 I'm next marking as Exhibit 15.</p> <p>3 MS. O'DELL: Is this one</p> <p>4 exhibit?</p> <p>5 MR. HEGARTY: That's one</p> <p>6 exhibit.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Doctor, Exhibit Number 15 is</p> <p>9 again a portion of your report, and also</p> <p>10 attached to it is a reference from</p> <p>11 Genetics Home Reference dated June 27,</p> <p>12 2017. Do you see both documents?</p> <p>13 A. I do see both documents.</p> <p>14 Q. We have highlighted and</p> <p>15 numbered in Exhibit 15 the portions from</p> <p>16 your report which are taken word for word</p> <p>17 from Genetics Home Reference without a</p> <p>18 single reference to that authority</p> <p>19 anywhere in your report, including in the</p> <p>20 materials considered or reviewed.</p> <p>21 MS. O'DELL: Objection.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Do you see that?</p> <p>24 MS. O'DELL: Objection to</p>

24 (Pages 90 to 93)

Judith Zelikoff, Ph.D.

Page 94	Page 96
<p>1 form.</p> <p>2 And -- and, Doctor, take a</p> <p>3 moment to review both, because the</p> <p>4 way this is put together is a</p> <p>5 little confusing.</p> <p>6 THE WITNESS: I see what</p> <p>7 you're referring to.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. And did you copy, for</p> <p>10 purposes of your report, without citation</p> <p>11 to this authority, the words that we've</p> <p>12 identified from this reference to Genetic</p> <p>13 Home Reference?</p> <p>14 MS. O'DELL: Objection to</p> <p>15 the form.</p> <p>16 THE WITNESS: So when you</p> <p>17 have things like, "Inherited</p> <p>18 mutations are passed down from</p> <p>19 parent to child and are present</p> <p>20 throughout a person's life in</p> <p>21 virtually in every cell of the</p> <p>22 body." Biology 101, basically,</p> <p>23 where that came from.</p> <p>24 "These mutations are called</p>	<p>1 your report in this case?</p> <p>2 A. I may have used -- it</p> <p>3 appears that I have used the same words.</p> <p>4 And if I did that, which it</p> <p>5 appears that I have, then I've done it</p> <p>6 with the intent to get those same points</p> <p>7 across.</p> <p>8 Q. But you do agree that you</p> <p>9 have included in your report a sequence</p> <p>10 of words incorporated from another source</p> <p>11 without quotation marks, correct?</p> <p>12 MS. O'DELL: Objection to</p> <p>13 form.</p> <p>14 THE WITNESS: I don't use --</p> <p>15 I don't usually use quotation</p> <p>16 marks.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. Well, you have used other</p> <p>19 people's words without acknowledging</p> <p>20 where they came from, correct?</p> <p>21 MS. O'DELL: Object to the</p> <p>22 form.</p> <p>23 THE WITNESS: I could have</p> <p>24 used quotation marks. And if I</p>
Page 95	Page 97
<p>1 germ line mutations because</p> <p>2 they're present in the parents'</p> <p>3 egg or sperm, a germ cell."</p> <p>4 Yes, some of these sentences</p> <p>5 appear to be the same as what is</p> <p>6 in here.</p> <p>7 However, again, I stand on</p> <p>8 the fact that all of these -- all</p> <p>9 of my statements are common</p> <p>10 knowledge that have come from</p> <p>11 numerous references. Although the</p> <p>12 words may be the same, the</p> <p>13 thoughts are -- are said as well</p> <p>14 as they can be said.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Dr. Zelikoff, have you ever</p> <p>17 seen this reference to Genetic Home</p> <p>18 Reference before right now?</p> <p>19 A. Not to my knowledge.</p> <p>20 Q. So is it your testimony that</p> <p>21 you did not copy the words from Genetic</p> <p>22 Home Reference that we have highlighted</p> <p>23 that correspond by number to the portions</p> <p>24 in your report for purposes of preparing</p>	<p>1 were to do this over, I would use</p> <p>2 quotation marks.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. You're not telling us,</p> <p>5 Doctor, that if you prepared an article</p> <p>6 for publication in a journal, that you</p> <p>7 would take references from another source</p> <p>8 like Genetic Home Reference, include them</p> <p>9 in the article, verbatim, not use</p> <p>10 quotation marks and not reference that</p> <p>11 cite. Is that what you're saying?</p> <p>12 MS. O'DELL: Objection to</p> <p>13 form.</p> <p>14 THE WITNESS: I'm standing</p> <p>15 on my interpretation, and that is</p> <p>16 that in a reference that I would</p> <p>17 prepare in a publication, it would</p> <p>18 be accepted for peer review if</p> <p>19 there was something that I felt</p> <p>20 was common knowledge, that I would</p> <p>21 not reference it.</p> <p>22 To your point, if I had to</p> <p>23 do this over, I would have put</p> <p>24 quotation marks around this.</p>

25 (Pages 94 to 97)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 98</p> <p>1 BY MR. HEGARTY: 2 Q. You would have cited to the 3 authority, as well, from which that -- 4 those passages were lifted, correct? 5 MS. O'DELL: Objection to 6 form. 7 THE WITNESS: I certainly 8 could if that was a concern from 9 the journal or from the reviewer, 10 then I would definitely put in the 11 reference. 12 BY MR. HEGARTY: 13 Q. If a student had prepared 14 this, and you became aware that the 15 student had lifted portions from Genetic 16 Home Reference without any citation, 17 without acknowledging where it came from, 18 would that be okay with you? 19 MS. O'DELL: Objection to 20 form. 21 THE WITNESS: There are -- 22 this is a large document. And in 23 order for something to be copied 24 or, as you put it, plagiarized,</p>	<p style="text-align: right;">Page 100</p> <p>1 will not -- this is the -- what 2 you gave me was an interpretation, 3 was NYU policy, an interpretation 4 of that, which is not the same as 5 mine. 6 BY MR. HEGARTY: 7 Q. Well, you do agree, though, 8 that between the -- your report, the 9 portions taken from your report and the 10 Genetic Home Reference reference are 11 identical? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: I agree that 15 there are sentences that are 16 identical. Yes. 17 BY MR. HEGARTY: 18 Q. You did not acknowledge that 19 source anywhere in your report, correct? 20 A. If you say so. 21 Q. Do you think that's okay to 22 do that? 23 MS. O'DELL: Objection to 24 form.</p>
<p style="text-align: right;">Page 99</p> <p>1 there has to be a certain amount 2 or percentage of the document that 3 has to be the same. 4 And this document, my 5 report, is quite large. So if a 6 student prepared this, and their 7 term paper, for example, was 50 8 pages, I would let them know that 9 if prepared the next time they 10 might want to put in a reference. 11 But I would have to look at 12 the entire size of the document 13 and the percentage of it which had 14 similar -- similar statements and 15 sentences. 16 BY MR. HEGARTY: 17 Q. You do agree that under the 18 policy we marked, we're talking about 19 what you did with regard to this Genetics 20 Home Reference cite, meets the definition 21 of plagiarism? 22 MS. O'DELL: Objection to 23 form. 24 THE WITNESS: I certainly</p>	<p style="text-align: right;">Page 101</p> <p>1 THE WITNESS: If I had not 2 thought it was okay, I would not 3 have done it. 4 BY MR. HEGARTY: 5 Q. Would that -- would that be 6 acceptable for purposes of publishing 7 your report? 8 MS. O'DELL: Objection to 9 the form. 10 THE WITNESS: My opinion 11 stands. And that is my 12 interpretation of what is okay to 13 do based on common knowledge and 14 multiple sources, stands the same. 15 BY MR. HEGARTY: 16 Q. If you were to publish your 17 report, as it is, would you go back and 18 use quotation marks and cite the 19 reference that we just looked at -- 20 A. If I had -- 21 Q. -- Exhibit Number 16? 22 MS. O'DELL: Excuse me, 23 Doctor. Just let him finish. 24 THE WITNESS: Of course.</p>

26 (Pages 98 to 101)

Judith Zelikoff, Ph.D.

Page 102	Page 104
<p>1 I'm sorry. 2 MS. O'DELL: Thank you. And 3 just give me a moment to object. 4 Thank you. 5 BY MR. HEGARTY: 6 Q. Did you hear my question? 7 A. Could you repeat your 8 question, please? 9 Q. Sure. If you were to 10 publish a report as it is, would you go 11 back and use quotation marks and cite the 12 reference that we just looked at in 13 Exhibit Number 16? 14 A. Now that you've pointed out 15 your interpretation of it, I would 16 certainly consider that. 17 (Document marked for 18 identification as Exhibit 19 Zelikoff-16.) 20 BY MR. HEGARTY: 21 Q. Let me show you what I'm 22 next marking as Exhibit Number 16. 23 MS. O'DELL: I'll reach 24 over, instead of you throwing it.</p>	<p>1 increased release of ROS." 2 That is a very common -- 3 commonly known point. 4 BY MR. HEGARTY: 5 Q. How about Point Number 4 in 6 the abstract? 7 A. As -- 8 Q. That's -- is it your 9 testimony that Point Number 4 in the 10 abstract is what you consider common 11 knowledge? 12 A. "Activation of the 13 transcription factors can lead to the 14 expression of over 500 genes, including 15 more for growth factors." And I'm going 16 to read the entire abstract. 17 Actually this is a review 18 paper. And this is not a unique finding 19 to this particular author. 20 And thus "Activation of 21 transcription factors," again as I read, 22 is an outcome of many, many authors. And 23 as I said, is a review paper, not a 24 unique investigator-initiated outcome.</p>
Page 103	Page 105
<p>1 BY MR. HEGARTY: 2 Q. This is another portion of 3 your report which we've correspondingly 4 referenced to an article by Simone 5 Reuter. And you can see where we've 6 identified six different times where 7 sentences have been copied verbatim from 8 this article without any quotation or any 9 acknowledgment of its -- of the source. 10 Do you see that? 11 MS. O'DELL: Object -- 12 excuse me. Object to the form. 13 Feel free to review it, the 14 reference or the exhibit. Not off the top of my head. 23 Q. But you did do that in your 24 expert report in this case, correct?</p>

27 (Pages 102 to 105)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 106</p> <p>1 MS. O'DELL: Object to the 2 form. 3 THE WITNESS: It appears 4 from what you're showing me, that 5 in my interpretation of common 6 knowledge and multiple -- multiple 7 investigators, I have done that, 8 yes. 9 (Document marked for 10 identification as Exhibit 11 Zelikoff-17.) 12 BY MR. HEGARTY: 13 Q. I'm going to mark next 14 Exhibit Number 17, another portion of 15 your report where you, again, take 16 sentences from a publication called 17 EnvironmentalChemistry.com. 18 You cite them word for word 19 in your report and you make no reference 20 anywhere in your report to this 21 authority. 22 A. I said -- 23 MS. O'DELL: Excuse me. 24 Excuse Me, Doctor. Excuse me.</p>	<p style="text-align: right;">Page 108</p> <p>1 MS. O'DELL: Object to the 2 form. 3 THE WITNESS: Yes, I see 4 what you're saying. 5 BY MR. HEGARTY: 6 Q. And nowhere in your report 7 do you give acknowledgment to 8 EnvironmentalChemistry.com as a source of 9 the information that you copied, correct? 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: I do say the 13 U.S. EPA defines asbestos by 14 limiting the term to six specific 15 fibrous minerals from two distinct 16 groups. And I go on from there. 17 That is a referral to the U.S. 18 EPA. 19 BY MR. HEGARTY: 20 Q. Doctor, nowhere in your 21 report, in those notebooks or anywhere do 22 you cite to EnvironmentalChemistry.com, 23 do you? 24 MS. O'DELL: Object. Object</p>
<p style="text-align: right;">Page 107</p> <p>1 MR. HEGARTY: I'm not 2 finished with my question. 3 MS. O'DELL: I thought you 4 were finished with your question. 5 MR. HEGARTY: Because I just 6 made a statement. 7 MS. O'DELL: Well, I object 8 to the statement. You ask your 9 question, and I'll probably object 10 to that. 11 But give me a chance, the 12 two of you, please. 13 BY MR. HEGARTY: 14 Q. Let me -- Doctor, this -- 15 the reference that we have here in the 16 Exhibit Number 17 is to a website called 17 EnvironmentalChemistry.com. Did you 18 review this website in preparing your 19 report? 20 A. I don't recall. 21 Q. Do you see where we make 22 reference to five different places where 23 you copied word for word from 24 EnvironmentalChemistry.com?</p>	<p style="text-align: right;">Page 109</p> <p>1 to the form. 2 THE WITNESS: Not to my 3 knowledge. 4 EnvironmentalChemistry.com, I 5 don't even recall reviewing it. 6 BY MR. HEGARTY: 7 Q. O'DELL: Object to the 14 form. 15 THE WITNESS: This -- again, 16 this information is common 17 knowledge. This is not a creation 18 of EnvironmentalChemistry.com. 19 They are not an individual 20 investigator finding this data. 21 They are reporting this data on 22 the internet for people's review. 23 BY MR. HEGARTY: 24 Q. Is</p>

28 (Pages 106 to 109)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 110</p> <p>1 EnvironmentalChemistry.com a reliable 2 authority? 3 MS. O'DELL: Object to the 4 form. 5 THE WITNESS: I have no 6 idea -- sorry. 7 MS. O'DELL: Go ahead. 8 THE WITNESS: I have no idea 9 of the impact factor or the 10 reliability of this. However, in 11 talking about this, and saying the 12 things that I -- that you have 13 said I have used identically, 14 which appear to be the case -- 15 "while amphibole and serpentine 16 asbestos may have fibrous habits, 17 they have very different forms. 18 Amphibole are double-chain 19 silicates." 20 This is known in the 21 asbestos -- in the asbestos 22 literature. And the basic 23 structural unit is silicone oxide. 24 This is not Environmental</p>	<p style="text-align: right;">Page 112</p> <p>1 published methodology which says that 2 your interpretation of what you are to 3 quote and what you are to cite in an 4 article is an accepted methodology in 5 publishing scientific literature? 6 A. It's my professional opinion 7 after 30 years of work. 8 Q. Well, can you cite for me 9 any published authority that says your 10 definition of what you are to cite and 11 what you are to reference is the 12 definition that's applicable to medical 13 literature? 14 MS. O'DELL: Objection to 15 form. 16 THE WITNESS: I have never 17 been accused or cited by any 18 publication in any of my 135 19 papers or my over 30 book chapters 20 of having anything that was of a 21 dubious nature, ever. 22 BY MR. HEGARTY: 23 Q. That's not my question. My 24 question was can you cite for me any</p>
<p style="text-align: right;">Page 111</p> <p>1 Chemistry's individual 2 investigator initiated. 3 I think you may be confusing 4 an individual paper where an 5 investigator sits down in the 6 laboratory and works out or comes 7 up with a fact and that it's his. 8 As opposed to data that's just out 9 there in the internet, out there 10 in the world, out there in book 11 chapters, out there everywhere, 12 that people know. 13 This is not an investigator 14 initiated, whether it's 15 EnvironmentalChemistry.com. 16 So I will -- I will say to 17 you that in many cases, I did use 18 the same sentence. Certainly 19 EnvironmentalChemistry.com is not 20 an investigator-initiated point of 21 reference. It's just facts that 22 are supported by other experts. 23 BY MR. HEGARTY: 24 Q. Can you cite for me any</p>	<p style="text-align: right;">Page 113</p> <p>1 written authority that says that in 2 publishing medical literature, if you're 3 citing what you call general knowledge 4 word for word from another source, you 5 don't have to quote it and you do not 6 have to give it any reference. 7 A. Just my professional opinion 8 of 30 years of work. 9 Q. Okay. And in a -- and 10 you've never done that in any medical 11 article you -- any article you have 12 published, correct? 13 A. I cannot -- I cannot speak 14 to all. 15 Q. Well, if you were to write a 16 medical article -- a scientific article 17 today, and you were to quote something 18 from -- take something word for word from 19 EnvironmentalChemistry.com, is it your 20 testimony you wouldn't give any reference 21 to it or wouldn't use quotation marks? 22 MS. O'DELL: Object to the 23 form. 24 THE WITNESS: I -- I stand</p>

29 (Pages 110 to 113)

Judith Zelikoff, Ph.D.

Page 114	Page 116
<p>1 on the opinion that I have, that</p> <p>2 it would be common knowledge.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. That's not my question. My</p> <p>5 question is if you were to write an</p> <p>6 article today and you were to cite</p> <p>7 Environmental.com word for word, is it</p> <p>8 your testimony you would not quote</p> <p>9 that -- those words or give any reference</p> <p>10 or acknowledgment to environmental --</p> <p>11 to --</p> <p>12 A. EnvironmentalChemistry.com.</p> <p>13 Q. EnvironmentalChemistry.com?</p> <p>14 MS. O'DELL: Object to the</p> <p>15 form.</p> <p>16 THE WITNESS: I would do the</p> <p>17 same thing I've done for this</p> <p>18 report.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Okay. And is that true for</p> <p>21 every resource that we've looked at so</p> <p>22 far? You would -- if you were to write a</p> <p>23 scientific journal today, you would --</p> <p>24 and quoted from all those resources, you</p>	<p>1 that you have copied verbatim from that</p> <p>2 publication without giving any</p> <p>3 acknowledgment to Dr. Rakoff-Nahoum or</p> <p>4 use any quotation marks. Do you see</p> <p>5 that?</p> <p>6 MS. O'DELL: Object to the</p> <p>7 form.</p> <p>8 THE WITNESS: So on Page 124</p> <p>9 of the review by Seth</p> <p>10 Rakoff-Nahoum -- Nahoum, if you</p> <p>11 look on -- under cancer and</p> <p>12 inflammation, and one of the</p> <p>13 points that you make here -- and</p> <p>14 by the way, this is a review</p> <p>15 paper, again not an independent</p> <p>16 investigator-initiated data from</p> <p>17 the laboratory -- "Epidemiological</p> <p>18 evidence points to a connection</p> <p>19 between inflammation and" -- "and</p> <p>20 predisposition for the development</p> <p>21 of cancer, i.e., long-term</p> <p>22 inflammation leads to the</p> <p>23 development of dysplasia," there's</p> <p>24 no reference there.</p>
Page 115	Page 117
<p>1 would not use quotation marks and you</p> <p>2 would not give any acknowledgment in</p> <p>3 any -- if you were to write a scientific</p> <p>4 article today?</p> <p>5 MS. O'DELL: Object to form.</p> <p>6 Misstates her testimony.</p> <p>7 THE WITNESS: I -- I did say</p> <p>8 that there are certain cases that</p> <p>9 if I had to do it over and based</p> <p>10 upon your rigorous opinion of</p> <p>11 this, that I would place quotation</p> <p>12 marks or add a reference, yes.</p> <p>13 (Document marked for</p> <p>14 identification as Exhibit</p> <p>15 Zelikoff-18.)</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. I'm going to show you what</p> <p>18 I'm next marking as Exhibit 18.</p> <p>19 This is another portion of</p> <p>20 your report. In addition to that</p> <p>21 exhibit -- or with that exhibit is a</p> <p>22 reference to a publication by</p> <p>23 Rakoff-Nahoum, where you again made</p> <p>24 references to four different sentences</p>	<p>1 So this author also,</p> <p>2 Dr. Rakoff-Nahoum -- sorry, I'm</p> <p>3 murdering his name -- also gives</p> <p>4 no reference to that.</p> <p>5 Again, in this case, using</p> <p>6 my analogy of something that has</p> <p>7 been gathered by numerous other</p> <p>8 investigators and is common</p> <p>9 knowledge to the -- to the</p> <p>10 scientific population, he did also</p> <p>11 not use a reference. And I did</p> <p>12 not use a reference.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. But if -- but if you look at</p> <p>15 his -- the last reference, Number 4, he</p> <p>16 does acknowledge a resource for all of</p> <p>17 those statements, Resource 20 in the</p> <p>18 publication, correct?</p> <p>19 MS. O'DELL: Objection.</p> <p>20 Could you provide, if you're</p> <p>21 going to use this exhibit, provide</p> <p>22 the full manuscript that</p> <p>23 identifies Resource 20.</p> <p>24 (Document marked for</p>

30 (Pages 114 to 117)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 118</p> <p>1 identification as Exhibit 2 Zelikoff-20.) 3 BY MR. HEGARTY: 4 Q. I'll mark as 20, the 5 entirety of the Rakoff-Nahoum article, 6 which does include 20, which is a 7 reference to Hussain, "Radical Causes of 8 Cancer." 9 A. Citation 20 in Exhibit 20 is 10 also a review paper, and none of these 11 references are going back to the 12 independent investigator who actually 13 said this. 14 So these are reviewed in. 15 Again, standing by my opinion that 16 oftentimes in review articles which -- 17 in -- in review articles, they often take 18 the liberty, as seen in your first point, 19 that you do not use a reference. 20 Now, I would have to read 21 Reference 20 in order to see whether 22 that, in fact, reviews Points 2, 3 and 4 23 in your "Why Cancer and Inflammation" 24 paper.</p>	<p style="text-align: right;">Page 120</p> <p>1 publication by OSHA for purposes of your 2 report. Do you see that? 3 MS. O'DELL: Objection to 4 form. 5 THE WITNESS: I do see what 6 you're pointing to. I also will 7 tell you that Point 1 that you 8 point out in the OSHA United 9 States Department of Labor, on 10 hexavalent chromium, which is off 11 the internet, adverse health 12 effects associated, yes, I used 13 adverse health -- health effects 14 other than cancer, and then I had 15 these different words. 16 I'm just explaining what I 17 see. 18 With chromium-6, hexavalent 19 chromium exposure include 20 occupational asthma, eye 21 irritation and damage, perforated 22 ear drums, et cetera, et cetera. 23 This can be found in numerous, 24 numerous references. This again</p>
<p style="text-align: right;">Page 119</p> <p>1 I do not know that 2 Reference 20 actually reviews all of 3 these points and are the reference. 4 Also, many of these 5 points -- and again, another review 6 paper. 7 Many of these points, the 8 chronic inflammatory states associated 9 with infection, irritation, may lead to 10 environments that foster genomic lesions 11 in tumor initiation, no reference there. 12 One effect and mechanism, et 13 cetera, et cetera. Hydroxyl radicals, 14 reactive oxygen species, no reference 15 there. No quotation marks. 16 So I don't know whether he, 17 in fact, uses the same logic that I did. 18 (Document marked for 19 identification as Exhibit 20 Zelikoff-19.) 21 BY MR. HEGARTY: 22 Q. I'm going to show you 23 Exhibit 19. This is another reference 24 where you copied portions of a</p>	<p style="text-align: right;">Page 121</p> <p>1 is common knowledge for anyone 2 doing chromium -- chromium 3 studies. 4 Again, did I use the same 5 words? In many cases, I did here. 6 "Can also develop an 7 allergic skin reaction called 8 allergic contact dermatitis." I'm 9 not quite sure how else you can 10 say that, that phrase. 11 So I still feel confident in 12 what I did was based upon my 13 professional judgment. 14 (Document marked for 15 identification as Exhibit 16 Zelikoff-21.) 17 BY MR. HEGARTY: 18 Q. Okay. I'll show you what I 19 next marked as Exhibit 21. Exhibit 21 is 20 again a portion of your report where we 21 have identified statements that are taken 22 verbatim without acknowledgment from the 23 publication attached thereto by Kasprzak. 24 A. Kasprzak. I'm sorry, sir.</p>

31 (Pages 118 to 121)

Judith Zelikoff, Ph.D.

Page 122	Page 124
<p>1 MS. O'DELL: Did you finish 2 your question? 3 BY MR. HEGARTY: 4 Q. No. Do you see where I'm 5 talk -- do you see where I'm referencing? 6 MS. O'DELL: Object to form. 7 THE WITNESS: I -- 8 MS. O'DELL: Take a moment 9 if you need to, Doctor. 10 THE WITNESS: So what I see 11 in the abstract of a paper, a 12 review paper called Nickel 13 Carcinogenesis by Kasprzak and 14 Sunderman and Konstantine 15 Salnikow, you say -- you're 16 pointing to, "The exact mechanisms 17 of nickel-induced carcinogenesis 18 are not known and have been 19 subject of numerous 20 epidemiological and experimental 21 investigations." 22 That is not -- that -- okay. 23 And what's in my paper is, "The 24 exact mechanisms of nickel-induced</p>	<p>1 risks are primarily related to 2 exposure to soluble nickel 3 concentrations," et cetera, et 4 cetera. 5 But in many cases throughout 6 this reference, I can also -- it 7 being a review paper, I can also 8 tell you there's epidemiological 9 evidence on possible cancer risk 10 from general environment and 11 dietary nickel exposures not cited 12 as a reference, not quoted. 13 BY MR. HEGARTY: 14 Q. Are you finished? 15 A. I am, thank you. 16 THE WITNESS: Excuse me. 17 May I just point out that it's 18 getting even colder in here and 19 I'm a bit uncomfortable. 20 (Whereupon, a discussion was 21 held off the record.) 22 THE WITNESS: May I go get 23 my scarf? 24 MR. HEGARTY: Off the</p>
Page 123	Page 125
<p>1 cainogenesis are not known but 2 likely involve genetic and 3 epigenetic routes." 4 That's not the same as this 5 sentence. It has portions of the 6 same, but not the entire sentence 7 is the same. 8 "Are likely to evolve 9 genetic and epigenetic routes." 10 Not quite sure how else you would 11 say this. 12 And this again is a review 13 paper. And going through it, here 14 I can cite a sentence. 15 "Occupational exposure to nickel 16 occurs predominately in mining, 17 refining, alloy production, 18 electroplating, and welding." 19 This is in the review by Kasprzak. 20 There's no reference there either. 21 In this sentence, "In 1990 22 the International Committee on 23 Nickel Carcinogenesis in Man 24 suggested that respiratory cancer</p>	<p>1 record. 2 THE VIDEOGRAPHER: The time 3 is 11:11 a.m. Off the record. 4 (Short break.) 5 THE VIDEOGRAPHER: The time 6 is 11:23 a.m. Back on record. 7 (Documents marked for 8 identification as Exhibits 9 Zelikoff-25 through 32.) 10 MR. HEGARTY: We're back on 11 the record. I'm going to mark -- 12 I've marked as Exhibits 25 through 13 32, other examples taken from 14 Dr. Zelikoff's report where -- 15 along with the references to which 16 they were taken. And I'm just 17 going to mark those for purposes 18 of the deposition as those 19 exhibits. 20 MS. O'DELL: What's the 21 exhibit number? 22 MR. HEGARTY: Exhibits 25 23 through 32, and I did skip over 24 through 22 through 24, but I'll</p>

32 (Pages 122 to 125)

Judith Zelikoff, Ph.D.

Page 126	Page 128
<p>1 come back to it. So we did get 2 kind of out of order in the way I 3 marked those. 4 MS. O'DELL: So plaintiff 5 objects to the Exhibit 25 through 6 32 being added to the record. 7 There's no testimony from 8 Dr. Zelikoff. So any assertion 9 that counsel has made that those 10 are relevant, we would object 11 and -- and oppose their being 12 included. 13 BY MR. HEGARTY: 14 Q. Doctor, if you would look at 15 your report which is Exhibit Number 2. 16 A. Yes, sir. 17 Q. On Page 2 of your report, 18 under the section Mandate and 19 Methodology? 20 A. Yes, sir, I see it. 21 Q. You say your mandate was to 22 look at the scientific literature and 23 assess whether there is biologic 24 plausibility for talc to cause ovarian</p>	<p>1 A. That was my -- that was -- 2 the request was to assess biological 3 plausibility. 4 Q. You say in that portion that 5 we just reviewed that -- you say for the 6 increased risk of ovarian cancer with 7 talc use. Did you assume for purposes of 8 your report that there is, in fact, an 9 increased risk of ovarian cancer with 10 talc use? 11 A. I'm sorry, sir, can you tell 12 me exactly which paragraph? 13 Q. In the first paragraph under 14 the section Mandate and Methodology, you 15 say "assess whether there is biologic 16 plausibility" -- "biologically plausible 17 explanation for the increased risk of 18 ovarian cancer with the perineal use of 19 talcum powder products." 20 Do you see that? See where 21 I'm reading? 22 A. I am sorry, sir, I do not. 23 Q. First paragraph under 24 page -- on Page 2 under mandate and</p>
Page 127	Page 129
<p>1 cancer from perineal use; is that 2 correct? 3 MR. GOLOMB: I'm sorry. 4 What page are you on? 5 MR. HEGARTY: Page 2. 6 THE WITNESS: Are you done? 7 BY MR. HEGARTY: 8 Q. Yes. 9 A. My mandate was to review the 10 scientific literature and assess whether 11 there was biological plausible 12 explanation for the increased risk of 13 ovarian cancer with perineal use of 14 talcum powder products, yes, that is 15 correct. 16 Q. Who gave you that mandate? 17 A. That was the plaintiff 18 attorney, Ms. Emory [sic] and Ms. O'Dell. 19 Q. You say -- 20 A. They -- I -- but let me add 21 they -- when you say gave me that 22 mandate, can you explain what you mean by 23 gave me that mandate? 24 Q. Well, from --</p>	<p>1 methodology. 2 A. Is that the notion of 3 biological plausibility paragraph, or are 4 you -- 5 Q. It's the first paragraph 6 under the section Mandate and 7 Methodology. 8 A. Well, sir, there are two, 9 two paragraphs. One says mandate. I was 10 asked to review the scientific 11 literature. Then there is another 12 paragraph that says the notion of 13 biological plausibility is 14 multifactorial. 15 Q. Doctor, if you'd listen to 16 my question. I said the first paragraph 17 under mandate and methodology. Do you 18 understand that? 19 A. I do not -- I do not see it 20 and you can -- 21 Q. You don't see the first 22 paragraph that begins mandate? 23 A. I just read that to you, 24 sir.</p>

33 (Pages 126 to 129)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 130</p> <p>1 Q. And -- and you understand 2 that's the first paragraph of -- under 3 the section Mandate and Methodology? 4 A. Under mandate it says, "I 5 was asked to review the scientific 6 literature and assess whether there is 7 biological plausible explanation for the 8 increased risk of ovarian cancer and the 9 perineal use of talcum powder products." 10 Q. And for purposes of your 11 mandate, did you assume that there was, 12 in fact, an increased risk of ovarian 13 cancer with the perineal use of talcum 14 powder? 15 A. I made no assumptions. 16 Q. Did you individually assess 17 whether there is an increased risk of 18 ovarian cancer with the perineal use of 19 talcum powder products? 20 A. Could you please slow down? 21 You are asking the question very quickly. 22 Q. Okay. Did you 23 individually -- did you do an analysis of 24 whether there's an increased risk of</p>	<p style="text-align: right;">Page 132</p> <p>1 Q. What graduate students 2 assisted you? 3 A. Are you asking me for their 4 names? 5 Q. Yes. 6 A. Nick Lawrence who was a 7 master student. And Catherine Fecchi who 8 was my master student. Both of them have 9 which graduated. 10 Q. Did you bill plaintiffs' 11 counsel for their time? 12 A. I paid them out of my 13 pocket. 14 Q. And how much did you pay 15 them per hour? 16 A. \$25 per hour. 17 Q. Do you describe -- strike 18 that. 19 Anyone else assist you with 20 your literature search? 21 A. I'm sorry, anyone else? 22 Q. Assist you in your 23 independent comprehensive literature 24 review.</p>
<p style="text-align: right;">Page 131</p> <p>1 ovarian cancer with perineal use of 2 talcum powder products? 3 A. No. As you can see by the 4 mandate I was asked to assess the 5 biological plausibility. I did no 6 analysis of causation. 7 Q. You did no analysis of 8 whether there is, in fact, an increased 9 risk of ovarian cancer with the perineal 10 use of talcum powder products? 11 A. I did no analysis of 12 causation. I'm not an epidemiologist. 13 Q. You also discuss in the 14 third paragraph, which begins "I 15 performed an independent comprehensive 16 literature review." 17 A. I see that, yes. Thank you. 18 Q. That you did do a literature 19 search, correct? 20 A. I did do a literature 21 search, correct. 22 Q. Did you do this yourself? 23 A. I did do this myself along 24 with several graduate students.</p>	<p style="text-align: right;">Page 133</p> <p>1 A. No, sir. 2 Q. So doing the searches was 3 part of your methodology for preparing 4 your report, correct? 5 A. Doing the searches were my 6 initial, my initial, yes. 7 Q. Did you prepare in advance a 8 written protocol on how you were going to 9 do the searches? 10 A. I followed the same protocol 11 that I used for papers, publications, 12 advisory boards, grant -- grant reviews 13 and grants that I write. 14 Q. That's not my question. My 15 question is, did you prepare a written 16 protocol as far as how you were going to 17 do the literature review for purposes of 18 your report? 19 A. I did not do a written 20 outline as to how to do this. I've been 21 doing this for over 35 years. 22 Q. You agree that it was part 23 of your methodology is -- for your 24 literature search, to find and review all</p>

34 (Pages 130 to 133)

Judith Zelikoff, Ph.D.

Page 134	Page 136
<p>1 literature that touch on talc and its 2 biologic effects, correct? 3 MS. O'DELL: Object to the 4 form. 5 THE WITNESS: My purpose was 6 to examine the literature, assess 7 the literature, first identify the 8 literature that I felt was -- 9 well, all -- all the literature 10 that I could find or that the 11 students could find, and from me 12 to review them in terms of 13 relevancy and pertinence to the 14 question that I was being asked. 15 BY MR. HEGARTY: 16 Q. Did you do any testing of 17 your methodology of doing searches to 18 ensure that you had captured all the 19 relevant literature? 20 MS. O'DELL: Object to the 21 form. 22 THE WITNESS: What do you 23 mean by testing? 24 BY MR. HEGARTY:</p>	<p>1 reviewed all of the literature out 2 there. I have no way of knowing 3 that I reviewed or have not. 4 I gathered the literature in 5 a systematic fashion and I 6 reviewed that literature. 7 BY MR. HEGARTY: 8 Q. Did you read every paper 9 that you found from your literature 10 search? 11 A. Only those that were 12 relevant. I read the abstracts to 13 determine whether it was in fact related 14 to the question that I was being asked. 15 When you do a literature 16 search, you come up with things that are 17 related and some that are not related at 18 all. 19 Q. Does your report anywhere 20 describe or include a description of how 21 you weighed the various authorities that 22 you reviewed? 23 A. My report talks about under 24 mandate and methodology how I -- the last</p>
Page 135	Page 137
<p>1 Q. Well, I don't know. Did you 2 do any tests, having someone else do 3 searches, repeating the searches, to see 4 if your original searches captured all of 5 the relevant literature? 6 A. We did several searches 7 doing -- using different words and 8 different aspects, so that we could -- we 9 got numerous duplicates because we came 10 in with different words, and key -- 11 keywords and key phrases. 12 Q. You do agree that it would 13 be necessary for a proper methodology to 14 reach opinions about biologic 15 plausibility, that you have reviewed all 16 the pertinent literature, correct? 17 MS. O'DELL: Object to the 18 form. 19 THE WITNESS: To my 20 knowledge I reviewed the 21 literature that was pertinent to 22 the question that I was being 23 asked. 24 I am not stating that I</p>	<p>1 paragraph, and that begins more than 300 2 publications, will -- talks about how 3 I -- how I looked at the publications and 4 how I decided how to cut down or dismiss 5 certain papers based on a closer 6 scrutiny. And I focused specifically for 7 biological plausibility and being a 8 toxicologist on in vitro, in vivo, and ex 9 vivo studies as well as cell studies, 10 animal studies, and tissues. 11 Q. Did you assign any numerical 12 value to each authority as they relate to 13 the importance to you? 14 A. I did not assign any 15 numerical value. There was no 16 quantitative measurement done. 17 Q. Was it also part of your 18 methodology to review all expert reports 19 in the litigation that concerned biologic 20 plausibility? 21 MS. O'DELL: Object to the 22 form. 23 THE WITNESS: Can you ask me 24 that again, please.</p>

35 (Pages 134 to 137)

Judith Zelikoff, Ph.D.

Page 138	Page 140
<p>1 BY MR. HEGARTY: 2 Q. Sure. Was it part of your 3 methodology to review all expert reports 4 in the litigation concerning biologic 5 plausibility? 6 A. I -- I looked at reports 7 that had relevancy in terms of animal 8 models, in vitro cultures or ex vivo 9 studies, yes. My opinion was formed 10 primarily by the publications and the 11 science that I reviewed. 12 Q. Was it part of your 13 methodology for purposes of your opinions 14 to review the expert witness reports from 15 the litigation that touch on biologic 16 plausibility? 17 MS. O'DELL: Object to the 18 form. Asked and answered. 19 THE WITNESS: I reviewed the 20 publications and the book chapters 21 and information that I thought 22 would go towards my -- my opinion. 23 BY MR. HEGARTY: 24 Q. Your expert report, as we</p>	<p>1 THE WITNESS: To my 2 knowledge, I have no knowledge as 3 to how they selected the reports 4 or which reports they selected to 5 send. 6 BY MR. HEGARTY: 7 Q. You didn't have -- get a 8 list of all expert reports and decide 9 which ones you wanted, correct? 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: I -- no. I 13 did not get a list of an entirety. 14 BY MR. HEGARTY: 15 Q. Do you know plaintiffs' 16 counsel methodology for purposes of 17 selecting the reports to provide to you? 18 A. I do not know their 19 methodology, but I would guess since 20 papers were supplied to me that had both 21 opinions and conclusions that led to 22 either positive associations or lack of 23 positive or data from scientific in vivo 24 studies, et cetera, that showed effects</p>
Page 139	Page 141
<p>1 have looked at, includes references to 2 several other experts' reports, correct? 3 We looked at that earlier. 4 A. If you say so, yes. 5 Q. Did you select those expert 6 reports for purposes of your review? 7 MS. O'DELL: Object to the 8 form. 9 THE WITNESS: I formed my 10 opinion with contributions from 11 some of the reports that I had. 12 But it was primarily based upon 13 literature reviews. 14 BY MR. HEGARTY: 15 Q. The reports that you had 16 were provided to you by plaintiffs' 17 counsel, correct? 18 A. Reports that I received was 19 supplied to me by plaintiffs' counsel. 20 Q. They selected the reports 21 that they were going to provide to you, 22 correct? 23 MS. O'DELL: Object to the 24 form.</p>	<p>1 and no effects, I would assume that I got 2 all the literature both -- from both 3 perceptions. 4 Q. Can you identify any medical 5 literature that you had reviewed prior to 6 being contacted by Ms. Emmel? 7 A. Medical literature on? 8 Q. Let me finish my question. 9 A. I'm sorry. 10 Q. Can you identify any 11 scientific or medical literature that you 12 reviewed before being contacted by 13 Ms. Emmel concerning talc and ovarian 14 cancer? 15 A. There is no literature that 16 I reviewed prior to me being contacted by 17 Ms. Emmel. 18 Q. Also in Exhibit B -- 19 A. B as in boy? 20 Q. -- boy -- to your report. 21 There is a listing of produced documents 22 by Bates number. 23 A. Correct. I see it, 24 "materials and data considered."</p>

36 (Pages 138 to 141)

Judith Zelikoff, Ph.D.

Page 142	Page 144
<p>1 Q. Did the plaintiffs' counsel 2 provide you with copies of those 3 documents? 4 A. I have not gone through 5 every paper in those multiple binders. I 6 would assume that many of them are in 7 there. 8 Q. That's not my question, 9 Doctor. My question was, were those 10 documents provided to you by counsel for 11 plaintiffs? 12 MS. O'DELL: What documents 13 are you referring to? 14 MR. HEGARTY: The documents 15 that are listed by Bates number in 16 Exhibit B. 17 THE WITNESS: Oh, you're 18 talking about produced documents? 19 BY MR. HEGARTY: 20 Q. Yes. 21 A. Repeat your question, 22 please. 23 Q. Sure. Were the documents 24 listed by Bates number under produced</p>	<p>1 section "produced documents"? 2 A. I reviewed all of the 3 documents that are in the binder listed 4 as production documents. I did not check 5 one for another, so I cannot say I did 6 all of these -- 7 Q. Did you receive -- 8 A. -- or they did not. 9 Q. I'm sorry. Did you receive 10 from counsel from plaintiffs all the 11 documents that have been produced in this 12 litigation that concerned biologic 13 plausibility? 14 MS. O'DELL: Object to the 15 form. 16 THE WITNESS: I have no 17 knowledge of whether I received 18 every single document there is out 19 there. 20 BY MR. HEGARTY: 21 Q. Did you ask for -- did you 22 ask counsel for plaintiffs to provide you 23 all the documents that have been produced 24 in this case concerning biologic</p>
Page 143	Page 145
<p>1 documents provided to you by counsel for 2 plaintiffs? 3 A. Produced documents were 4 supplied to me in the folder that is 5 listed, production documents. 6 Q. Did you ask for those 7 specific documents? 8 A. I did not. 9 Q. Do you know what the 10 methodology was for selecting those 11 specific documents to send to you? 12 A. I do not. 13 MS. O'DELL: Object to the 14 form. 15 THE WITNESS: Sorry. 16 BY MR. HEGARTY: 17 Q. Did you ask for any 18 additional documents that would fall 19 under the definition of produced 20 documents besides those plaintiffs' 21 counsel provided to you? 22 A. Not to my knowledge. 23 Q. Did you review all the 24 documents that are listed under the</p>	<p>1 plausibility? 2 MS. O'DELL: Object to the 3 form. 4 THE WITNESS: Did not ask it 5 in that manner. 6 I did ask for in vitro 7 studies that they could find, ex 8 vivo studies, and I also did my 9 own literature search. Yes. 10 BY MR. HEGARTY: 11 Q. Were you -- did you 12 understand that -- or do you understand 13 that you've been provided with all the 14 produced documents that concern biologic 15 plausibility? 16 MS. O'DELL: Object to form. 17 THE WITNESS: I have no 18 knowledge of whether I received 19 all documents. 20 BY MR. HEGARTY: 21 Q. With regard to the produced 22 documents, did you sign a protective 23 order before reviewing those documents? 24 A. Regarding these produced</p>

37 (Pages 142 to 145)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 146</p> <p>1 documents --</p> <p>2 Q. Yes.</p> <p>3 A. -- did I sign a protective</p> <p>4 order?</p> <p>5 Q. Yes.</p> <p>6 MS. O'DELL: Object to the</p> <p>7 form. It's a confidentiality</p> <p>8 order in this litigation. You may</p> <p>9 not be aware of it.</p> <p>10 MR. HEGARTY: Okay, well,</p> <p>11 confidentiality order.</p> <p>12 MS. O'DELL: Just so it's</p> <p>13 not unclear to the witness.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Did you sign a</p> <p>16 confidentiality order before reviewing</p> <p>17 the Bates-stamped documents?</p> <p>18 A. I signed a confidentiality</p> <p>19 agreement early on.</p> <p>20 Q. Do you rely on any tests for</p> <p>21 purposes of your opinions that are not</p> <p>22 reported in the medical literature?</p> <p>23 A. Again --</p> <p>24 MS. O'DELL: Object to the</p>	<p style="text-align: right;">Page 148</p> <p>1 experiments that I'm aware of that</p> <p>2 were done that I have knowledge</p> <p>3 of? No I have no knowledge of any</p> <p>4 laboratory testing or experimental</p> <p>5 testing in this field.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. You did not do any testing</p> <p>8 yourself for purposes of developing your</p> <p>9 opinions in this case, correct?</p> <p>10 A. I did not do any laboratory</p> <p>11 tests.</p> <p>12 Q. All the opinions that are</p> <p>13 set out in your report about biologic</p> <p>14 plausibility between talc and ovarian</p> <p>15 cancer were formed after being contacted</p> <p>16 by counsel for plaintiffs about</p> <p>17 testifying as an expert in this case,</p> <p>18 correct?</p> <p>19 MS. O'DELL: Objection to</p> <p>20 form.</p> <p>21 THE WITNESS: After being</p> <p>22 contacted by the plaintiffs I did</p> <p>23 a literature search and followed</p> <p>24 the science.</p>
<p style="text-align: right;">Page 147</p> <p>1 form.</p> <p>2 THE WITNESS: Please</p> <p>3 describe "tests."</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. Well, did you rely on any</p> <p>6 testing or tests for purposes of your</p> <p>7 opinions that are not contained in the</p> <p>8 medical literature --</p> <p>9 MS. O'DELL: Objection to</p> <p>10 form.</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. -- that we wouldn't have</p> <p>13 access to but that you did?</p> <p>14 MS. O'DELL: Object to the</p> <p>15 form. Besides those produced in</p> <p>16 the litigation?</p> <p>17 MR. HEGARTY: Yeah, that</p> <p>18 goes without saying.</p> <p>19 MS. O'DELL: It doesn't go</p> <p>20 without saying. It's an unfair</p> <p>21 question.</p> <p>22 THE WITNESS: So if I</p> <p>23 understand your question to mean</p> <p>24 are there any laboratory</p>	<p style="text-align: right;">Page 149</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. That's not my question,</p> <p>3 Doctor.</p> <p>4 My question is, all the</p> <p>5 opinions set out in your report about</p> <p>6 biologic plausibility as they relate to</p> <p>7 talc and ovarian cancer were formed after</p> <p>8 being contacted by counsel for</p> <p>9 plaintiffs, correct?</p> <p>10 A. That is correct.</p> <p>11 Q. Can you cite for us any</p> <p>12 occasion where you've done the exact same</p> <p>13 thing that you have done here to prepare</p> <p>14 your report; that is, do an analysis of</p> <p>15 the literature on the biologic</p> <p>16 plausibility between the exposure to a</p> <p>17 substance and a disease?</p> <p>18 A. Nothing has been done</p> <p>19 exactly like it's been here, but for</p> <p>20 advisory boards that I've been on,</p> <p>21 including the National Toxicology Board,</p> <p>22 the Institute of Medicine, the Institute</p> <p>23 of Engineering for the National Academies</p> <p>24 of Science, we have -- we were requested</p>

38 (Pages 146 to 149)

Judith Zelikoff, Ph.D.

Page 150	Page 152
<p>1 to do literature reviews on the question</p> <p>2 that's in front of them and come up with</p> <p>3 an opinion based upon our literature</p> <p>4 reviews.</p> <p>5 Q. Have you ever published an</p> <p>6 article in the medical literature where</p> <p>7 you've done the same thing that you've</p> <p>8 done here, which is to review all the</p> <p>9 literature on a substance and a disease</p> <p>10 and offer opinions as to whether there's</p> <p>11 biologic plausibility between that</p> <p>12 substance and a disease?</p> <p>13 A. I have written reviews that</p> <p>14 are a culmination of all of the</p> <p>15 literature that I reviewed on topics.</p> <p>16 Never one on ovarian cancer and talc.</p> <p>17 And to my knowledge, I have</p> <p>18 not offered an opinion, but followed a</p> <p>19 conclusion from the science.</p> <p>20 Q. I think my question is a</p> <p>21 little bit different. My question is,</p> <p>22 have you published any article in the</p> <p>23 literature where you have done</p> <p>24 essentially the same thing that you have</p>	<p>1 the words "biological feasibility" or</p> <p>2 "potential mechanisms" or "plausible" --</p> <p>3 I may have used the word "plausibility,"</p> <p>4 but I have used words that are similar to</p> <p>5 those.</p> <p>6 Q. Doctor, when did you first</p> <p>7 become aware of an alleged link between</p> <p>8 ovarian cancer and talc use?</p> <p>9 MS. O'DELL: Object to the</p> <p>10 form.</p> <p>11 THE WITNESS: When did I</p> <p>12 first become aware of the alleged</p> <p>13 link between ovarian cancer and</p> <p>14 talc use? From -- from the media.</p> <p>15 I would say maybe a year prior to</p> <p>16 being contacted by Ms. Emmel.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. Can you cite for me any</p> <p>19 scientific or medical group, entity or</p> <p>20 organization who has concluded that</p> <p>21 genital talc use causes ovarian cancer?</p> <p>22 A. I -- really, my opinion is</p> <p>23 based on biological plausibility.</p> <p>24 Q. I understand that. But my</p>
Page 151	Page 153
<p>1 done here, which is review all the</p> <p>2 literature on an exposure and a disease</p> <p>3 and offer opinions as to whether there's</p> <p>4 biologic plausibility between the</p> <p>5 exposure and the disease?</p> <p>6 A. Most of the papers that I</p> <p>7 publish will offer a potential, whether a</p> <p>8 speculative potential or one that is</p> <p>9 defined within other published literature</p> <p>10 as a potential mechanism of action or as</p> <p>11 potential plausible outcome.</p> <p>12 So for any published paper</p> <p>13 from the research that I've done or that</p> <p>14 people do, we explain an observation that</p> <p>15 has been found in our laboratory from</p> <p>16 testing, as you call it. And we will</p> <p>17 explain the observation in terms of</p> <p>18 biological plausibility, if that's what</p> <p>19 you're referring to.</p> <p>20 Q. Well, have you ever used the</p> <p>21 phrase "biologic plausibility" in any</p> <p>22 published article?</p> <p>23 A. I cannot cite them for you,</p> <p>24 but I -- I am confident that I have used</p>	<p>1 question is simply from your knowledge,</p> <p>2 here today, can you cite for me any</p> <p>3 scientific or medical group, entity or</p> <p>4 organization who has concluded that</p> <p>5 genital talc use causes ovarian cancer?</p> <p>6 MS. O'DELL: Object to the</p> <p>7 form.</p> <p>8 THE WITNESS: Well,</p> <p>9 concluded is -- is a word for</p> <p>10 discussion.</p> <p>11 IARC in the 1993 report from</p> <p>12 inhalation toxicology and</p> <p>13 inhalation of talc did show that</p> <p>14 there was tumor induction in</p> <p>15 female rats in the lungs and that</p> <p>16 there was adrenal gland tumors</p> <p>17 that were formed.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. Well, IARC has never</p> <p>20 concluded that the use of talc in the</p> <p>21 genital area causes ovarian cancer,</p> <p>22 correct?</p> <p>23 A. You asked me whether there</p> <p>24 was any body of literature or any</p>

39 (Pages 150 to 153)

Judith Zelikoff, Ph.D.

Page 154	Page 156
<p>1 advisory boards or any institution which 2 has concluded that there is a causal 3 relationship. And I've cited to you a 4 study -- 5 Q. That's not my question. My 6 question was can you cite for me any 7 scientific or medical group, entity or 8 organization who has concluded that 9 genital talc use causes ovarian cancer. 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: I have -- I 13 have given you information on a 14 study done at the national 15 toxicology program. 16 BY MR. HEGARTY: 17 Q. Is that the extent of your 18 answer? 19 A. There are -- to my 20 knowledge, that's the best study that I 21 can cite to you. 22 Q. That's a study, correct? 23 A. That was a study, and they 24 are also a body that makes conclusions.</p>	<p>1 BY MR. HEGARTY: 2 Q. II-B is possibly 3 carcinogenic, correct? 4 A. To humans. 5 Q. I'm sorry? 6 A. To humans. Possibly 7 carcinogenic to humans. That doesn't 8 exclude the fact that there is animal 9 data supporting that conclusion. If 10 there were no animal data it -- it would 11 not even be considered a II-B. So 12 there -- there's evidence that the IARC 13 evaluated and came up with a II-B 14 classification. 15 Q. Is it your opinion that the 16 biologic plausibility of talc products 17 causing ovarian cancer has been generally 18 accepted in the medical community? 19 A. I think it depends on the 20 medical community. 21 Q. Well, aside from any medical 22 community that has accepted that there is 23 biologic plausibility between the use of 24 talc products in -- in ovarian cancer.</p>
Page 155	Page 157
<p>1 Q. That study did not involve 2 any commentary on ovarian cancer, 3 correct? 4 A. The study did not involve 5 commentary on that. 6 Q. Can you name any regulatory 7 body who has stated that talc use is a 8 cause of ovarian cancer? 9 A. Not as I sit here right now. 10 But again, making conclusions on 11 causation was not my question, is not 12 my -- is not within my purview. 13 And there are different 14 levels of cancer conclusion. For 15 instance, IARC has several 16 classifications. And -- as you know, I, 17 II-A, II-B, et cetera. 18 Q. And what is IARC's 19 classification of talc use in the genital 20 area? 21 MS. O'DELL: Object to the 22 form. 23 THE WITNESS: To my 24 knowledge, I think it's a II-B.</p>	<p>1 Let me -- let me restate that. 2 Can you cite for me any 3 medical community that has accepted that 4 there is biologic plausibility of talc 5 products causing ovarian cancer? 6 A. I'm not knowledgeable at -- 7 about all the medical communities and 8 what disciplines they are in. 9 Q. Well, can you cite for me 10 any medical or scientific community that 11 has accepted that there is biologic 12 plausibility of talcum powder products 13 causing ovarian cancer? 14 A. I have no knowledge of that. 15 That doesn't mean it's not out there. It 16 means that I have no knowledge of that. 17 Q. You have no knowledge -- 18 you -- so you cannot testify that the 19 medical or scientific communities have 20 accepted that there is biologic 21 plausibility of talcum powder products 22 causing ovarian cancer? 23 MS. O'DELL: Object to the 24 form.</p>

40 (Pages 154 to 157)

Judith Zelikoff, Ph.D.

Page 158	Page 160
<p>1 THE WITNESS: What I'm 2 saying is I have no knowledge of 3 the documents they have put out 4 with a conclusion as a white paper 5 or any other published literature 6 that has made that conclusion. 7 BY MR. HEGARTY: 8 Q. What does -- sorry. 9 A. Or has not made that 10 conclusion. 11 Q. What does general acceptance 12 mean to you? 13 A. General acceptance -- for 14 example, benzene, it causes leukemia and 15 other blood cancers. That is a general 16 acceptance by the medical community which 17 we all adhere to, abide by, based upon 18 the excessive amount of literature that 19 is out there showing -- proving and 20 addressing Hill's criteria and coming up 21 with the fact that it is a -- it is a 22 carcinogen for blood cancers. 23 That is general knowledge. 24 General knowledge is something saying</p>	<p>1 Thank you. 2 BY MR. HEGARTY: 3 Q. You don't -- you don't know 4 what a cosmetic is? 5 A. I'm asking you what your 6 definition is. 7 Q. Well, I -- what is your 8 definition? 9 A. A definition of a cosmetic 10 is -- since I'm not in the cosmetic 11 field -- a cosmetic is something that is 12 used for hygiene or aesthetics and used 13 dermally. 14 Q. Have you ever written any 15 scientific article about a cosmetic under 16 your definition? 17 A. Not to my knowledge, but I 18 would have to look at all of my papers 19 again, if you'd like me to do that. 20 Q. Can you cite for me any 21 publication of yours where you comment on 22 asbestos? 23 A. I would have to look at my 24 references. I go back from 1982.</p>
Page 159	Page 161
<p>1 that nickel can be a carcinogen, nickel 2 is a carcinogen and is classified by IARC 3 as a I. In that case, the general 4 population is aware of that. 5 Q. Before being hired by the 6 plaintiffs' lawyers in this case, you had 7 never written anything about talc, 8 correct? 9 A. That's correct. 10 Q. Or commented on talc in any 11 setting, correct? 12 A. Other than teaching? 13 Q. Other than the teaching 14 reference you cited earlier? 15 A. That's correct. 16 Q. Before being hired by 17 plaintiffs' counsel you had never written 18 anything about any cosmetic, correct? 19 MS. O'DELL: Object to the 20 form. 21 Could you please -- it's 22 vague in terms of cosmetic. Do 23 you have a definition in mind? 24 THE WITNESS: Exactly.</p>	<p>1 Q. Sitting here today, can you 2 cite for us, without looking at any 3 references, any article you've ever 4 written about asbestos? 5 MS. O'DELL: Doctor, if you 6 need to look at your CV, you're 7 welcome to do that. 8 BY MR. HEGARTY: 9 Q. Well, my question didn't ask 10 about the CV. I said just simply sitting 11 here today, just based on your memory -- 12 A. Okay. 13 Q. -- are you able to recall 14 any article you've ever written about 15 asbestos. 16 MS. O'DELL: If you would 17 like to look at your CV, it's in 18 front of you. You are welcome 19 to -- to do that. 20 MR. HEGARTY: I'll withdraw 21 the question. 22 BY MR. HEGARTY: 23 Q. Doctor, have you ever 24 written any article about a fragrance?</p>

41 (Pages 158 to 161)

Judith Zelikoff, Ph.D.

Page 162	Page 164
<p>1 A. I would also like to look at 2 my CV. 3 Q. Without looking at your CV, 4 you can't say one way or the other? 5 A. I can't say conclusively. 6 My CV and my publications go back to 7 1982. It was quite a while ago. 8 Q. And you can't say 9 conclusively whether you've written an 10 article about asbestos? 11 A. I would rather look at my -- 12 my publications. 13 Q. Okay. Have you ever 14 written -- 15 A. Would you like me to do 16 that, sir? 17 Q. No. I'm not asking you to 18 do that right now. 19 A. Thank you. 20 Q. Sitting here today without 21 looking at your CV, can you cite for me 22 any article you've ever written about 23 asbestos? 24 MS. O'DELL: Objection to</p>	<p>1 as scientists, involved as co-authors, 2 oftentimes. And I do not recall back to 3 1982. 4 Q. Well, for purposes of your 5 report, you do not cite to any of your 6 own work, correct? 7 A. That is correct. 8 Q. You've never written 9 anything about talc and ovarian cancer, 10 correct? 11 A. I think I asked and answered 12 that. I think I answered that. But I 13 can repeat it. 14 Q. No, you did not. I did not 15 ask you that question, ma'am. 16 A. So can -- 17 Q. I asked you had you ever 18 written anything about talc. My question 19 that I just asked you is have you ever 20 written anything about talc and ovarian 21 cancer? 22 A. To my knowledge, as I sit 23 here now without looking at my 24 publications, no.</p>
Page 163	Page 165
<p>1 form. 2 THE WITNESS: To my 3 knowledge at this particular 4 moment, I cannot cite for you an 5 article that I specifically wrote 6 on asbestos. Whether or not I was 7 a co-author on one, I cannot 8 recall. 9 BY MR. HEGARTY: 10 Q. Would that be the same 11 answer as to a fragrance? 12 A. I -- I would really rather 13 look at my CV and my publications and 14 book chapters. 15 Q. Before being contacted by 16 counsel for plaintiffs in this case, you 17 had never developed or offered any 18 opinions about talc, correct? 19 A. That is correct. 20 Q. You've never written 21 anything about ovarian cancer, correct? 22 A. Again, just to put on the 23 record, I would really like to look at my 24 CV and look at my publications. We are,</p>	<p>1 Q. Prior to being contacted by 2 plaintiff's counsel have you ever 3 reviewed the body of literature on the 4 etiologies or biology related to ovarian 5 cancer? 6 A. Not prior to being 7 contacted, no. 8 Q. You've never published any 9 opinions about the causes of ovarian 10 cancer, correct? 11 A. To my knowledge, sitting 12 here, no. 13 Q. You never published any 14 opinions about the risk factors for 15 ovarian cancer, correct? 16 A. I really -- I'm not sure. I 17 know that I have given that information, 18 not an opinion, but have given that 19 information in teaching courses. 20 Q. Have you ever taught any 21 courses on asbestos? 22 A. Asbestos has been included. 23 I give lectures in my organ system 24 toxicology course as well as in my</p>

42 (Pages 162 to 165)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 166</p> <p>1 toxicology course for biology masters. I 2 give courses in air pollutants and 3 cancer-causing agents and the toxicology 4 of -- of airborne. 5 Q. Have you ever taught in your 6 courses any discussion about fragrances 7 and toxicity? 8 A. It may have come up as a 9 minor point. We talk about pesticides, 10 we talk about air pollutants. We talk 11 about metals. Fragrances, we talked 12 about limonene, eugenol, menthol and 13 other fragrances in that realm in the 14 discussion of electronic cigarettes and 15 the aerosols produced by them. 16 Q. And you provided to us all 17 the lectures or the content of lectures 18 that you've given where you mentioned 19 talc, correct? 20 A. I was not asked to -- 21 MS. O'DELL: Object to the 22 form. 23 THE WITNESS: I was not 24 asked to provide them. But please</p>	<p style="text-align: right;">Page 168</p> <p>1 reproductive docs who do focus on this, 2 yes. 3 Q. And that has not been an 4 area of your focus, correct? 5 A. Not -- not in past. Has not 6 been a primary focus. 7 Q. You have provided for us 8 your CV, correct? 9 A. That is correct. 10 Q. That's included as part of 11 Exhibit B to your expert report, correct? 12 MS. O'DELL: Objection to 13 form. 14 THE WITNESS: I think it's 15 stated here as Exhibit A. 16 BY MR. HEGARTY: 17 Q. It's Exhibit A to your 18 expert report. Is that a current CV of 19 yours? 20 A. It was updated in 21 August 2018. So it is not completely 22 updated as of January 2019. 23 Q. Did you bring an updated CV 24 to your deposition?</p>
<p style="text-align: right;">Page 167</p> <p>1 let me explain my teaching style. 2 My teaching style is such 3 that I use few PowerPoints as 4 queues. And much of my teaching 5 is done verbally, one-on-one. And 6 they're not recorded. 7 So there is really not that 8 much -- there is nothing to supply 9 to counsel. 10 BY MR. HEGARTY: 11 Q. Well, other than the 12 reference that you provided to us earlier 13 about talc and ovarian cancer, you have 14 not otherwise lectured regarding this 15 subject, correct? 16 A. That is correct. 17 Q. There are toxicologists who 18 focus on issues dealing with reproductive 19 medicine or reproductive sciences such as 20 ovarian cancer and uterine cancer, 21 correct? 22 A. There are scientists whose 23 major focus is on talc and ovarian cancer 24 and there are OB/GYNs as well as</p>	<p style="text-align: right;">Page 169</p> <p>1 A. I did not. 2 Q. As you stated -- 3 A. I'm sorry. I can provide 4 that. 5 Q. Does your CV anywhere list 6 any professional experience on ovarian 7 cancer? 8 A. Excuse me. Not to my 9 knowledge, in briefly reviewing my CV, 10 and not to my knowledge as I sit here. 11 Q. Does your CV list any 12 professional experience regarding 13 asbestos? 14 A. Specifically, asbestos as I 15 review, no. No, sir. 16 Q. Does your CV list any 17 professional experience regarding 18 fragrances? 19 A. Not to my knowledge, no, 20 sir. But you're asking me only what's in 21 my CV. 22 I have -- I have worked -- I 23 have looked at or heard about from other 24 advisory boards things to do with</p>

43 (Pages 166 to 169)

Judith Zelikoff, Ph.D.

Page 170	Page 172
<p>1 flavorants, as I said with electronic 2 cigarettes, hookah and smokeless tobacco. 3 So I am familiar with other -- which may 4 not be listed here in detail, which is 5 not listed here in detail, on flavorants 6 and some of those same flavors used in 7 electronic cigarettes are also, I found, 8 listed here. 9 Q. Has any entity or agency 10 consulted you with regard to diseases of 11 the female reproductive tract? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: Not to my 15 knowledge. 16 BY MR. HEGARTY: 17 Q. And no one has ever asked 18 you to look into any of the issues set 19 out in your report besides plaintiffs' 20 counsel, correct? 21 A. I'm sorry. Again? 22 Q. No one has asked you to look 23 at the issues set out in your expert 24 report in this case other than</p>	<p>1 or scientist who believes that there is 2 biologic plausibility between use of 3 talcum powder and ovarian cancer? 4 MS. O'DELL: Object to form. 5 THE WITNESS: I have not 6 spoken to any doctors in that 7 regard. 8 BY MR. HEGARTY: 9 Q. How about any scientists? 10 A. I have not spoke to any 11 scientists in that regard. 12 Q. Have you -- 13 A. My opinion was specifically 14 based upon the scientific literature that 15 I had access to. 16 Q. Have you ever had your 17 deposition taken before? 18 A. I have. Yes, sir. 19 Q. How many times? 20 A. One that I can recall. Two 21 that I'm now recalling. One that was 22 in -- for Dow Chemical on breast implants 23 and relationship with autoimmune disease 24 and one from a personal attorney who</p>
Page 171	Page 173
<p>1 plaintiffs' counsel, correct? 2 A. This specific ovarian cancer 3 and asbestos, that is correct. 4 Q. You have not submitted your 5 expert report in this case for peer 6 review, correct? 7 A. The only ones who have seen 8 my report have been the plaintiff 9 attorneys, to my knowledge. 10 If that was given out to 11 others at that point, I do not -- I do 12 not have knowledge of that. 13 Q. You certainly have not 14 submitted your report for peer review, 15 correct? 16 A. I have not submitted my 17 report for peer review. 18 Q. Have you spoken to any 19 physicians who treat ovarian cancer 20 regarding talc and ovarian cancer? 21 A. I have not. 22 Q. Other than experts 23 identified by plaintiffs in this 24 litigation, can you identify any doctor</p>	<p>1 was -- who had a client who was exposed 2 to wood burning from a wood stove, an 3 outdoor wood stove. 4 Q. As to the latter case, do 5 you know where that case was pending or 6 was filed? 7 A. I was deposed in New York 8 City. 9 Q. Do you know the name of the 10 case? 11 A. I'm afraid not, sir. 12 Q. How long ago was it? 13 A. 15 years. 14 Q. You were testifying on 15 behalf of the plaintiff in that case? 16 MS. O'DELL: Object to form. 17 THE WITNESS: I was not 18 testifying. I was deposed for 19 the -- sorry, for the person who 20 was making the claim that they had 21 increased asthma as a result of 22 neighbors use of a wood boiler. 23 BY MR. HEGARTY: 24 Q. In the Dow Chemical breast</p>

44 (Pages 170 to 173)

Judith Zelikoff, Ph.D.

Page 174	Page 176
<p>1 implant case, were you testifying as an 2 expert witness? 3 A. I was. 4 Q. On behalf of the plaintiffs? 5 A. If you're talking about on 6 the part of Dow, yes. 7 Q. Well, on the part of Dow who 8 was the defendant or the plaintiffs? 9 A. Dow was the defendant. I'm 10 sorry. 11 Q. Were you testifying on 12 behalf of Dow? 13 A. I was. 14 Q. Any other cases you've been 15 deposed in? 16 A. Not that I can recall. 17 Q. Have you been identified in 18 any other cases as an expert witness 19 besides this one to your knowledge? 20 A. I have done literature 21 reviews for a number of attorneys but 22 have not been deposed. 23 Q. My question is specific to 24 whether you -- whether you are aware that</p>	<p>1 cases -- are there any articles on which 2 you rely for purposes of your opinions -- 3 strike that. Let me ask it a different 4 way. 5 How many articles have you 6 published since August of 2018? 7 A. I'm going to look at the 8 last publication. 9 I have one that was accepted 10 in press on the Garfield community and 11 looking at chromium exposure and doing 12 community engagement for the community 13 and looking at blood level of 14 measurements -- or toenail measurements, 15 excuse me, toenail measurement of 16 chromium, as they're impacting 17 communities environmentally. 18 Also two publications have 19 come out with the lead author, my being a 20 corresponding author with the lead author 21 being from the University of Rochester in 22 the area of inhaled particulate matter 23 and -- during pregnancy and effects on 24 the -- on the offspring and on the fetus.</p>
Page 175	Page 177
<p>1 you've been designated, identified, in 2 the case as a testifying expert besides 3 this case. Are you aware of any such 4 cases? 5 A. Not to my knowledge. 6 Q. I know I referred earlier to 7 your CV. But I'm marking it as 8 Exhibit 22. You can look at that one or 9 Exhibit 22. 10 (Document marked for 11 identification as Exhibit 12 Zelikoff-22.) 13 BY MR. HEGARTY: 14 Q. Are there any publications 15 of yours that relate to any of the issues 16 in this case that are not included in 17 your CV? 18 MS. O'DELL: Object to form. 19 THE WITNESS: Let's talk 20 about the issues of the case. Can 21 you define them a little better? 22 BY MR. HEGARTY: 23 Q. Yeah, let me ask you a 24 different question. Are there any</p>	<p>1 Q. You are not a medical 2 doctor, correct? 3 A. I am not a medical doctor, 4 although I did go to medical school for 5 my Ph.D. training. 6 Q. You can't treat patients, 7 correct? 8 A. I do not treat patients. 9 Q. You are not an oncologist, 10 correct? 11 A. I am not an oncologist. 12 Q. You have no training in 13 oncology, correct? 14 A. I have no training in 15 oncology. I have training in pathology, 16 which is what I got my Ph.D. degree in at 17 a medical school. 18 Q. You have never diagnosed or 19 treated a disease in a patient, including 20 cancer, correct? 21 A. That is correct. 22 Q. You have no expertise in 23 treating patients with ovarian cancer, 24 correct?</p>

45 (Pages 174 to 177)

Judith Zelikoff, Ph.D.

Page 178	Page 180
<p>1 A. I have no expertise in that, 2 no. 3 Q. You have no expertise in 4 diagnosing ovarian cancer, correct? 5 A. I do not. 6 Q. You are not an expert on 7 asbestos, correct? 8 A. I have not been classified 9 as an expert in asbestos, although as I 10 said, I do work in air pollution and if 11 asbestos is in the confines -- taken in 12 the confines of air pollution, I could 13 speak to that. But I have not been 14 designated as an expert. 15 Q. What's the difference 16 between amphibole and serpentine forms of 17 asbestos? 18 MS. O'DELL: Object to form. 19 BY MR. HEGARTY: 20 Q. You can answer. 21 A. It depends on whether it's 22 asbestiform or non-asbestiform. 23 Q. Okay. Asbestiform. What's 24 the difference between amphibole and</p>	<p>1 those forms can exist both in 2 crystalline form or in a 3 non-asbestiform. 4 So they are both -- both 5 concluded to be asbestos. 6 BY MR. HEGARTY: 7 Q. Well, are there any 8 differences between -- 9 A. By the EPA. 10 Q. Are there any differences 11 between amphibole and serpentine forms of 12 asbestos? 13 MS. O'DELL: Object to form. 14 THE WITNESS: Well, they are 15 different -- they are different 16 minerals. But they are both 17 classified as asbestos. 18 BY MR. HEGARTY: 19 Q. Any other differences? 20 A. It -- both of which contain 21 carcinogenic -- classified I, as IARC. 22 Both have within them carcinogenic 23 asbestos. To my knowledge, that is -- 24 that is all I --</p>
Page 179	Page 181
<p>1 serpentine forms? 2 A. Well -- 3 MS. O'DELL: Object to the 4 form. 5 THE WITNESS: Amphibole 6 lists serpentine which is 7 associated with chrysotile. They 8 all have an aspect ratio of, 9 depending on who you are looking 10 at, whether it's three to one or 11 five to one. Johnson & Johnson 12 includes it as five to one, which 13 is length-to-width ratio. They 14 both have the same length-to-width 15 ratio. 16 If they're asbestiform, then 17 they are fibers that are made up 18 of fibrils. They both have that. 19 And they go in a 20 longitudinal manner and they are 21 in one direction. 22 Amphibole includes within it 23 the crocidolite, and as well as 24 tremolite, amosite, and some of</p>	<p>1 Q. What was the most 2 commercially used asbestos? 3 A. Well, it -- it depends on 4 the time. But for commercial use, in 5 paints and housing and insulation, it was 6 either chrysotile was used commercially 7 and crocidolite was also used 8 commercially. 9 Q. Okay. How did the supposed 10 toxicities various -- vary across the 11 various forms of asbestos? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: When you say 15 toxicity what do you mean? 16 BY MR. HEGARTY: 17 Q. The -- the toxicities vary 18 across the various forms. 19 MS. O'DELL: Object to the 20 form. 21 THE WITNESS: Mm-hmm. It 22 depends on the chemical 23 composition. It depends on the 24 surface material. It depends on</p>

46 (Pages 178 to 181)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 182</p> <p>1 the amount of iron. It depends on 2 the size of the fiber or the 3 crystal. 4 And so depending upon those 5 factors you are going to have 6 differences in toxicity. 7 BY MR. HEGARTY: 8 Q. Well, how does -- does 9 tremolite asbestos compare to chrysotile 10 asbestos in terms of toxicity? 11 A. I don't really -- I don't 12 think I can answer that in terms of 13 ranking it. I can tell you that 14 chrysotile is a well-known carcinogen, 15 well-established carcinogen by the 16 agencies. That tremolite is an amphibole 17 and it can exist in both forms, either 18 asbestiform in the long longitudinal 19 fibriles, or it can exist as a mineral 20 that has dimensions in all different 21 directions. 22 So tremolite -- it's 23 difficult to rank, but chrysotile appears 24 to be -- when you say more toxic, you</p>	<p style="text-align: right;">Page 184</p> <p>1 Q. You are not an expert in 2 fragrances, correct? 3 MS. O'DELL: Object to form. 4 THE WITNESS: I have -- I 5 have not been listed as an expert 6 in fragrances. 7 BY MR. HEGARTY: 8 Q. Would you consider yourself 9 an expert in fragrances? 10 A. I am a toxicologist so I can 11 review chemicals and make a decision or 12 assess their toxicity based on outcomes. 13 Q. Before being contacted by 14 Ms. Emmel in this case, would you have 15 considered yourself an expert in 16 fragrances? 17 MS. O'DELL: Objection. 18 THE WITNESS: Expert in 19 fragrances. It is not something I 20 studied in my own laboratory. 21 However, a toxicologist 22 should be able to go into the 23 literature and have a greater 24 knowledge than most people in</p>
<p style="text-align: right;">Page 183</p> <p>1 have to understand what is the outcome 2 that you're looking at. They can both 3 cause toxicity. I don't know what you 4 exactly mean by more toxic. 5 Do you mean at a given 6 dose -- what -- what do you mean by -- 7 Q. I didn't -- I didn't use the 8 word "more toxic." I just -- I asked you 9 how does tremolite asbestos compare to 10 chrysotile asbestos in terms of toxicity. 11 A. I think I -- yeah, that's a 12 very difficult question to a 13 toxicologist. Because when you compare 14 toxicity across -- across lines, you have 15 to somehow rank them based on a 16 particular outcome. 17 So toxicity could be does it 18 produce more lactate dehydrogenase when 19 put in a macrophages culture of -- of 20 pulmonary cells, or does it produce more 21 apoptosis. You can't just say toxicity 22 in my opinion. You have to give me an 23 outcome. Does this produce more toxicity 24 in this area.</p>	<p style="text-align: right;">Page 185</p> <p>1 looking up different chemicals. 2 BY MR. HEGARTY: 3 Q. You are not an expert on 4 talc, correct? 5 MS. O'DELL: Object to the 6 form. 7 THE WITNESS: I have done 8 much work in dust, including the 9 World Trade Center dust. I've 10 done work on diesel exhaust and 11 other things that are powders. So 12 particularly talc, I don't think I 13 am classified as a talc expert. 14 But as I said I've done much 15 work in other dusts, other 16 aerosols, vapors, gases, 17 particles, and I am an expert in 18 particles. 19 BY MR. HEGARTY: 20 Q. You are not a geneticist, 21 correct? 22 A. I'm -- if a geneticist is 23 someone who has been trained specifically 24 in genetics, I have not been trained in</p>

47 (Pages 182 to 185)

Judith Zelikoff, Ph.D.

Page 186	Page 188
<p>1 genetics. I have had courses in 2 molecular toxicology and I do teach some 3 molecular toxicology. 4 Q. You are not a mineralogist, 5 correct? 6 A. I am not a mineralogist. 7 Q. You are not an expert on 8 testing for the presence of asbestos, 9 correct? 10 A. I am not a chemist. 11 Q. You are not an expert on 12 testing the air for asbestos, correct? 13 A. We collect -- I collect 14 particles in the air. I do air 15 measurements. That is the basis of my 16 research. 17 When it comes to asbestos, 18 we will send those -- those filters out 19 to be analyzed by an expert laboratory, 20 and then we will help interpret the data. 21 Q. You are not an industrial 22 hygienist, correct? 23 A. I work with industrial 24 hygienists, but I do not have a degree in</p>	<p>1 components by percentage of Johnson's 2 Baby Powder? 3 MS. O'DELL: Object to the 4 form. Vague. 5 THE WITNESS: I cannot -- 6 although I have looked at it, I 7 cannot tell you that off the top 8 of my head. I would have to 9 look -- refresh my memory by 10 looking at an exhibit or a 11 document. 12 BY MR. HEGARTY: 13 Q. What were the current 14 components of Johnson's Baby Powder by 15 percentage from the 19 -- 1900s through 16 the present? 17 A. I cannot -- 18 MS. O'DELL: Excuse me. 19 Excuse me. Object to the form. 20 Vague. 21 THE WITNESS: I cannot give 22 you percentages off the top of my 23 head. If you allow me to look at 24 a document I -- I could tell you.</p>
Page 187	Page 189
<p>1 it. 2 Q. You are not an expert on 3 Johnson's Baby Powder, correct? 4 MS. O'DELL: Objection to 5 form. 6 THE WITNESS: I am not an 7 expert on -- I -- could you 8 rephrase that? 9 BY MR. HEGARTY: 10 Q. I don't think I can. 11 A. I don't know what you mean 12 by expert. I mean I need to have -- I 13 think I need to have some criteria that 14 would make me an expert. If you are 15 talking about the number of publications 16 I have or whether I've testified. 17 I -- the word "expert" 18 throws me off a bit. 19 Q. Well, where is the talc for 20 J&J's Baby Powder been mined over the 21 years? 22 A. In Vermont, in Italy, and 23 also in Korea. 24 Q. What are the current</p>	<p>1 BY MR. HEGARTY: 2 Q. Are the opinions in your 3 report specific to particular 4 formulations of talcum powder consumer 5 products? 6 MS. O'DELL: Object to the 7 form. 8 THE WITNESS: Are the 9 opinions in your report specific 10 to particular formulations. 11 My opinion is based on 12 biological plausibility based on 13 studies that have used talcum 14 powder or talc or fibrous talc or 15 nonfibrous talc. 16 BY MR. HEGARTY: 17 Q. Did you analyze specifically 18 the biologic plausibility of the 19 components of Johnson's Baby Powder for 20 purposes of your opinions? 21 MS. 48 (Pages 186 to 189)

Judith Zelikoff, Ph.D.

Page 190	Page 192
<p>1 was aware of. And looked at their</p> <p>2 ability to cause inflammation,</p> <p>3 let's say, or their carcinogenic</p> <p>4 potential.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. But did you look</p> <p>7 specifically -- did you specifically</p> <p>8 analyze biologic plausibility specific to</p> <p>9 J&J's -- strike that.</p> <p>10 Did you analyze biological</p> <p>11 plausibility specific to Johnson's Baby</p> <p>12 Powder in your report?</p> <p>13 A. If the literature was there,</p> <p>14 there was some -- I'm sorry, I can't</p> <p>15 remember the author now. But there were</p> <p>16 authors and investigators that did use</p> <p>17 Johnson's Baby Powder in their studies,</p> <p>18 and if they used those studies, and I</p> <p>19 used that for -- to provide biological</p> <p>20 plausibility, then yes.</p> <p>21 Q. What studies were done</p> <p>22 specific to Johnson's Baby Powder?</p> <p>23 MS. O'DELL: Object to the</p> <p>24 form.</p>	<p>1 in the question that I was asked to</p> <p>2 comment on, but from cursory knowledge</p> <p>3 there are different cell types.</p> <p>4 Q. What's the difference</p> <p>5 between a low grade and high grade tumor?</p> <p>6 A. The induction of</p> <p>7 invasiveness and proliferation capacity.</p> <p>8 Q. What is thought to be the</p> <p>9 primary origin of high-grade serous</p> <p>10 ovarian cancer?</p> <p>11 MS. O'DELL: Object to the</p> <p>12 form.</p> <p>13 THE WITNESS: Primary</p> <p>14 origin. I'm not sure what that</p> <p>15 means.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Well, what is -- what is</p> <p>18 typically the primary location or origin</p> <p>19 of high-grade serous?</p> <p>20 A. Do you mean in the ovary?</p> <p>21 Q. I don't think I can ask it</p> <p>22 any different way.</p> <p>23 A. Well, I don't quite</p> <p>24 understand your question.</p>
Page 191	Page 193
<p>1 THE WITNESS: Of course all</p> <p>2 of the product documents.</p> <p>3 Sorry, I'm having difficulty</p> <p>4 recalling that -- the particular</p> <p>5 name. It's not a memory test.</p> <p>6 I'm sorry.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. With regard to ovarian</p> <p>9 cancer, what are the subtypes of the</p> <p>10 disease?</p> <p>11 A. Well, as -- as --</p> <p>12 MS. O'DELL: Object to the</p> <p>13 form.</p> <p>14 THE WITNESS: -- was pointed</p> <p>15 out, I'm not an OB/GYN. I can</p> <p>16 tell you just from cursory</p> <p>17 knowledge that there are serous,</p> <p>18 high grade, low grade serous,</p> <p>19 endometrioid, mucous cell,</p> <p>20 epithelioid.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. What are the differences in</p> <p>23 subtypes?</p> <p>24 A. Again, this is not in my --</p>	<p>1 Q. What is the primary origin</p> <p>2 of clear cell carcinoma?</p> <p>3 MS. O'DELL: Object to the</p> <p>4 form.</p> <p>5 THE WITNESS: If you're</p> <p>6 asking me the types, I don't</p> <p>7 recall the type of cell for clear</p> <p>8 cell carcinoma. Again, I'm not an</p> <p>9 OB/GYN, and I'm not a histologist.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. For purposes of your report,</p> <p>12 did you analyze biologic plausibility for</p> <p>13 each subtype of ovarian cancer?</p> <p>14 A. No, sir.</p> <p>15 Q. Is it your opinion that the</p> <p>16 etiology of each of the subtypes of</p> <p>17 ovarian cancer is the same?</p> <p>18 A. There are many</p> <p>19 commonalities.</p> <p>20 As I said, from my cursory</p> <p>21 knowledge and my background, early</p> <p>22 background in 1980, of being a --</p> <p>23 pathology when this was not even</p> <p>24 considered or thought about, there is</p>

49 (Pages 190 to 193)

Judith Zelikoff, Ph.D.

Page 194	Page 196
<p>1 etiologies -- I'm sorry, I had to refresh 2 my memory of your question. 3 There are different 4 etiologies. Many -- and many of the 5 same, and so I think that -- if I may 6 gather my thoughts and refresh your 7 question. 8 So as I said, in terms of my 9 opinion that the etiology in each of the 10 subtypes of ovarian cancer is the same, 11 there are many commonalities in -- 12 etiology being the underlying reason. 13 There are many commonalities for the same 14 cancers, including things like cancer 15 stem cells in ovarian cancer, which are 16 now being identified in the literature as 17 a possibility for recurrence of ovarian 18 cancer. 19 So, yes, there are definite 20 commonalities in terms of the induction 21 of ovarian types of cancer. 22 Q. Well, my question was, is it 23 your opinion that the etiologies of each 24 subtype are the same?</p>	<p>1 Remove your microphones. The time 2 is 12:22 p.m. Off the record. 3 (Lunch break.) 4 THE VIDEOGRAPHER: We are 5 back on the record. The time is 6 1:17 p.m. 7 BY MR. HEGARTY: 8 Q. Doctor, we're back on the 9 record. I want to go back to something 10 we talked about at the beginning, that 11 is, the initial call that you had from 12 Ms. Emmel. 13 You mentioned that you 14 reviewed materials between the time of 15 the call and the time that you agreed to 16 serve as an expert witness. Do you 17 recall saying that? 18 A. I do recall. 19 Q. What materials did you 20 review? 21 A. Just random, whatever I got 22 from the -- that came out using keywords 23 of talc, talcum powder, ovarian cancer. 24 Those were my initial keywords.</p>
Page 195	Page 197
<p>1 MS. O'DELL: Objection to 2 form. 3 THE WITNESS: I have -- 4 MS. O'DELL: Asked and 5 answered. 6 THE WITNESS: I have no 7 opinion on that. 8 BY MR. HEGARTY: 9 Q. Is it your opinion -- 10 MS. O'DELL: Excuse me. 11 THE WITNESS: Other than 12 what I -- 13 MS. O'DELL: Sorry. 14 THE WITNESS: I'm sorry. 15 MS. O'DELL: You may finish. 16 I didn't mean to cut you off. 17 THE WITNESS: Other than 18 what I've just given. 19 MS. O'DELL: So, Mark, we've 20 been going about an hour and ten 21 minutes, I think. 22 MR. HEGARTY: Okay. Take a 23 break. 24 THE VIDEOGRAPHER: Stand by.</p>	<p>1 Q. Do you recall, sitting here 2 today, any particular articles, whether 3 by author name or by name of that initial 4 search that you did before agreeing to 5 serve as an expert? 6 A. I looked at Ghio, G-I -- 7 G-H-I-O. Did inhalation of talc and 8 airway cells in in vitro study. 9 I also looked at 10 Dr. De Boers and migration of carbon 11 black material. 12 I also looked at Dr. Venter 13 and Iturralde, who talked about 14 administered radiolabeled microspheres. 15 I read Dr. Weiner's -- 16 Weiner's -- Dr. Weiner's publication. I 17 read Dr. Epstein's letter. 18 Q. Is that something that you 19 found on your own? 20 A. Excuse me. It wasn't 21 Dr. Epstein's letter. I'm sorry. I 22 stand corrected. 23 I read the National 24 Toxicology Report, the NTP 1993.</p>

50 (Pages 194 to 197)

Judith Zelikoff, Ph.D.

Page 198	Page 200
<p>1 Q. Did you do a more expansive 2 literature search and literature review 3 after agreeing to serve as an expert 4 witness? 5 A. Of course. 6 Q. Did you form any opinions, 7 though, from that initial search that you 8 performed? 9 A. My opinion at that time was 10 that there was certainly -- I had a great 11 deal of interest in the topic, that there 12 was certainly enough information and 13 enough evidence to provide -- that was 14 provided by these publications that -- 15 certainly that particles of the size of 16 talc can be -- can be translocated, 17 migrated, and that -- at least from the 18 lung, and so that there was biological 19 plausibility for movement within the 20 body. 21 And I found it convincing 22 that I could -- that I could get involved 23 in this case and that I believe that 24 there was, at that point with only</p>	<p>1 known about the product is consistent 2 with a cause-and-effect relationship." 3 Do you see that where I'm 4 reading? 5 A. I see where you're reading. 6 Q. Where does that definition 7 of biological plausibility come from? 8 A. It is my professional 9 opinion. 10 Q. Is there still biological 11 plausibility if what is known about a 12 substance and a disease is consistent 13 with no cause-and-effect relationship? 14 MS. O'DELL: Object to the 15 form. 16 THE WITNESS: Biological 17 plausibility, to me, as stated 18 here -- and I will state it a 19 different way, is that there is 20 actually literature and 21 information, reliable, sound 22 science that could -- that 23 provides evidence that there is a 24 mechanism or mechanisms as well as</p>
Page 199	Page 201
<p>1 superficial literature searching, that 2 there was indeed room for an opinion. 3 And that opinion being that there 4 certainly was information provided that 5 could lead me to provide biological 6 plausibility in that regard. Otherwise, 7 I would not have taken the case. 8 What I would like to say is 9 that I would have done the same thing if 10 you had called me, sir, to answer the 11 question of what my beliefs are and where 12 the science is. 13 Q. If you look at Page 2 again 14 of your expert report. 15 A. Yes, sir. 16 Q. That's Exhibit 2. Again, 17 under the section mandate -- 18 A. Yes. 19 Q. -- and methodology. 20 A. I see it. 21 Q. You say at the end of the 22 second paragraph that, "Biological 23 plausibility does not mean proof of 24 mechanism, but rather whether what is</p>	<p>1 underlying information that could 2 prove the -- although it's not 3 necessary in Hill's criteria, that 4 could be used to prove a causal 5 relationship. 6 And in this case, that 7 talcum powder, in particular 8 Johnson & Johnson talcum powder, 9 can lead to ovarian cancer. 10 BY MR. HEGARTY: 11 Q. Well, do you agree that the 12 finding of biologic plausibility by 13 itself does not mean causation? 14 A. Biological plausibility is 15 used to supplement or to add on. It is 16 actually one of Hill's criteria. One 17 that he listed in his 1962 paper that is 18 not absolutely necessary but does provide 19 compelling evidence. And I do believe 20 that biological plausibility is extremely 21 important, in my personal opinion, in 22 causal relationship. And Hill agrees to 23 that as well. 24 Q. You agree, though, that the</p>

51 (Pages 198 to 201)

Judith Zelikoff, Ph.D.

Page 202	Page 204
<p>1 other Hill factors should be applied to 2 determine causality, other than -- in 3 addition to biological plausibility? 4 A. Well, I really can't say. 5 Again, I know -- I know of Hill's work, 6 and I know of his groundbreaking 7 publication. But again, I'm here to talk 8 about plausibility, not causation. 9 Q. At the bottom of Page 2 you 10 say as part of your analysis you 11 reviewed, "Depositions and numerous 12 documents, internal memorandum and 13 published and unpublished studies and 14 testing results that I have found in my 15 own searches of documents, documents 16 provided by attorneys, and documents that 17 I requested." That's carrying over to 18 Page 3. 19 Do you see that? 20 A. Toxicological studies. Are 21 we talking about toxicological studies 22 including in vivo and in vitro? 23 Q. No. I'm looking at the very 24 last sentence of the paragraph at the</p>	<p>1 publication of yours, depositions or 2 expert reports in a litigation? 3 A. No. However, there are 4 papers and regulatory -- regulatory 5 documents that are not considered 6 published, published. If you mean 7 peer-reviewed literature, that's one way 8 of publishing. But another way of 9 publishing is also documents that are in 10 a report. 11 And I have used reports in 12 my own publications, if they -- if they 13 are accessible to me. 14 Q. Have you ever in a published 15 scientific article of yours cited to an 16 expert report from a doctor in a 17 litigation? 18 A. I'm sorry. I have to look 19 down at your question. 20 Not that I recall. But 21 that's not to say that I would not. 22 If it was appropriate for 23 the paper that I was writing, I would 24 certainly use it.</p>
Page 203	Page 205
<p>1 bottom of Page 2, carrying over to the 2 top of Page 3? 3 A. In addition, I've reviewed 4 depositions and numerous documents 5 internal memorandum and published and 6 unpublished studies and testing results 7 that I have found in my own searches. 8 Q. Correct. In any scientific 9 analysis that you have done, have you 10 ever included as part of that analysis 11 documents provided by attorneys? 12 A. In my -- when I publish, I 13 look at all relevant information that I 14 have access to. It's about the science. 15 Q. Not my question. My 16 question is in any prior work that you 17 have done where you have published an 18 article, have you included in the review 19 for purposes of publishing that article, 20 documents provided by lawyers? 21 A. No, sir, not to my 22 knowledge. 23 Q. Have you ever included as 24 materials that you have reviewed for any</p>	<p>1 Q. Can you identify any 2 scientific group -- strike that. 3 Before I ask you about 4 causation, now I want to ask you about 5 biological plausibility. Can you cite 6 for me any scientific group, body, or 7 even paper that has concluded that there 8 is biological plausibility between 9 perineal talc use and ovarian cancer? 10 A. Mm-hmm-hmm. If you look at 11 -- I don't know what exhibit it is. But 12 it is the Health Canada report. And -- 13 Canadian U.S. EPA. And if you look at 14 Taher's paper, systemic review and 15 meta-analysis, in both of those -- okay. 16 So the environmental -- Health Canada and 17 Canadian EPA, they put out this -- this 18 document, which is an assessment, a 19 screening assessment document, to look at 20 biological plausibility as well as the 21 other epidemiological literature. 22 And they do speak to the 23 causation and they do speak to biological 24 plausibility of talc and its association</p>

52 (Pages 202 to 205)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 206</p> <p>1 or talc and it's causation for ovarian 2 cancer. So they do in that document. 3 The systematic review and 4 meta-analysis 2018 of Taher also speaks 5 of it and reviews the 30 -- I think it's 6 30 -- 30 studies, of which there are 26 7 case-controls and -- studies, and I think 8 four cohort studies. And they do also 9 conclude that, by looking at the 10 meta-analysis, that there are -- that 11 there is causation associated -- that 12 there is causation for talcum powder and 13 ovarian cancer. 14 Q. Actually, Doctor, both 15 documents to which you reference conclude 16 only that perineal use of talcum powder 17 is a possible cause of ovarian cancer, 18 correct? 19 MS. O'DELL: Object to the 20 form. 21 THE WITNESS: They state 22 cause. And if you give me a 23 moment, I can look for it, within 24 the document. So I'm looking at</p>	<p style="text-align: right;">Page 208</p> <p>1 MS. O'DELL: It's Exhibit 9. 2 BY MR. HEGARTY: 3 Q. If you would look -- do you 4 have the Taher review? 5 A. I do. 6 Q. What's that marked as? 7 A. That is Exhibit 10. 8 Q. Exhibit 10? 9 A. Based on your yellow mark, 10 yes. 11 Q. If you look at the abstract 12 under the conclusion section, it 13 concludes that perineal use of talcum 14 powder is a possible cause of human 15 ovarian cancer. 16 Do you see that? 17 A. Excuse me. I dropped my 18 microphone. 19 Okay. Please repeat your 20 question. Your comment. 21 Q. Second page under the 22 conclusion section. The conclusion of 23 the Taher article is, "The perineal use 24 of talc powder is a possible cause of</p>
<p style="text-align: right;">Page 207</p> <p>1 the Health Canada document. 2 Meta -- page -- I'm sorry. 3 Roman Numeral III, "Meta-analysis 4 of the available human studies in 5 the peer-reviewed literature 6 indicate a consistent and 7 statistically significant positive 8 association between perineal 9 exposure to talc and ovarian 10 cancer. Further available data 11 are indicative of causal effect." 12 BY MR. HEGARTY: 13 Q. Okay. What is their 14 ultimate conclusion? 15 A. This is part of their 16 conclusion. 17 Q. Can I look at that document? 18 A. Absolutely. 19 MR. TISI: Is this marked as 20 an exhibit, Mark? 21 MR. HEGARTY: Yes. 22 MR. FINDEIS: Sorry, which 23 number is it marked? So the 24 record is clear.</p>	<p style="text-align: right;">Page 209</p> <p>1 human ovarian cancer," correct? 2 MS. O'DELL: Objection to 3 form. 4 THE WITNESS: I see that 5 conclusion sentence. 6 BY MR. HEGARTY: 7 Q. Nowhere in here do they say 8 that talcum powder causes ovarian cancer, 9 correct? 10 MS. O'DELL: Objection to 11 form. 12 THE WITNESS: If you're 13 looking for a specific sentence, 14 allow me to review. 15 BY MR. HEGARTY: 16 Q. Well, are you going to need 17 to review the entirety of the paper? 18 A. I may. 19 Q. Okay. Well, I can't -- we 20 don't have time for you to review the 21 entirety of the paper so I'll withdraw 22 the question. If you need to review the 23 entirety of the paper. 24 Can you cite here without</p>

53 (Pages 206 to 209)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 210</p> <p>1 reviewing it anywhere where they say 2 talcum powder causes ovarian cancer? 3 A. I cannot -- 4 MS. O'DELL: Excuse me. And 5 you're referring specifically to 6 Exhibit 10? 7 MR. HEGARTY: Correct. 8 MS. O'DELL: The Taher 9 paper? 10 THE WITNESS: I can't say it 11 without looking at the paper. 12 BY MR. HEGARTY: 13 Q. Has the Taher paper been 14 peer reviewed? 15 A. The Taher paper has -- is a 16 document that, yes, has been peer 17 reviewed. To my knowledge. 18 Q. Okay. What publication peer 19 reviewed that document? 20 A. Excuse me? 21 Q. Who peer reviewed that 22 document? 23 A. I have -- I have no 24 knowledge of that.</p>	<p style="text-align: right;">Page 212</p> <p>1 letter, information. And I specifically 2 asked that same question. 3 Q. Now, are you relying on the 4 fact it's been peer reviewed for your 5 opinions in this case? 6 A. I'm relying on the science. 7 Q. Well, are you relying on 8 whether -- on what plaintiffs' counsel 9 told you as far as whether it's been peer 10 reviewed? 11 MS. O'DELL: Object to the 12 form. 13 THE WITNESS: That is what 14 I'm trying to look, whether there 15 is an acknowledgment and whether 16 there is a statement within it 17 which says it's peer reviewed. 18 It -- it's stated that in 19 order for this -- in order for a 20 document such as this, and again 21 it depends on what you mean by 22 peer review, whether it's a 23 community or whether it's the 24 government. The government has</p>
<p style="text-align: right;">Page 211</p> <p>1 Q. How do you know it's been 2 peer reviewed? 3 A. The -- the plaintiff lawyers 4 have shown me a document, a cover letter, 5 information, I specifically asked that 6 question of them. 7 Q. And are you relying on what 8 they provided to you for purposes of 9 saying it's peer reviewed? 10 A. Please allow me to -- I'm 11 going to take a look into the document 12 again. There may be evidence that's in 13 the document which says it's peer 14 reviewed. 15 Q. Doctor, what are you looking 16 at for purposes of peer review? I asked 17 you -- 18 A. I'm looking to see -- sorry, 19 please finish your question. 20 Q. I asked you how do you know 21 it's been peer reviewed. 22 A. And I stated that the 23 plaintiff lawyer -- the plaintiffs' 24 lawyers have shown me a document, a cover</p>	<p style="text-align: right;">Page 213</p> <p>1 looked at this, and they were 2 submitted by Health Canada, and as 3 of now it's been submitted for 4 peer review, but it was looked at 5 by the Health Canada and by EPA. 6 BY MR. HEGARTY: 7 Q. What document were you shown 8 that shows it's been peer reviewed? 9 A. On the first page, 10 Exhibit 10, materials submitted to Health 11 Canada, materials submitted to journal 12 for peer review. 13 Q. So it's not been peer 14 reviewed? 15 A. To my knowledge, it has been 16 peer reviewed. And again I'm relying on 17 plaintiffs' attorney with that 18 information. 19 Q. Have you ever cited in a 20 scientific article of yours a publication 21 that's not been peer reviewed? 22 A. All the time. 23 Q. So that's something that -- 24 that you have done as part of your</p>

54 (Pages 210 to 213)

Judith Zelikoff, Ph.D.

Page 214	Page 216
<p>1 methodology?</p> <p>2 MS. O'DELL: Object to the</p> <p>3 form.</p> <p>4 THE WITNESS: It's</p> <p>5 something -- if there is -- based</p> <p>6 on my opinion of the study design,</p> <p>7 the information, the science, if</p> <p>8 it -- if it needs to be stated, if</p> <p>9 the science needs to be out there,</p> <p>10 then I have cited numerous times</p> <p>11 unpublished information.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. Do you understand that for</p> <p>14 purposes -- that the -- strike that.</p> <p>15 Do you understand that the</p> <p>16 Health Canada risk assessment is a --</p> <p>17 only a draft assessment at this point in</p> <p>18 time?</p> <p>19 A. It is going to be reviewed,</p> <p>20 yes. I understand that it -- it is a</p> <p>21 draft assessment. I also understand that</p> <p>22 it has gone through scrutiny by both</p> <p>23 Health Canada and Canadian EPA.</p> <p>24 Q. Do you understand that</p>	<p>1 or paper that has concluded that there is</p> <p>2 biologic plausibility between talcum</p> <p>3 powder use and ovarian cancer?</p> <p>4 A. Biological plausibility, in</p> <p>5 my case, and for my review and for my</p> <p>6 report, I'm looking at the inflammation</p> <p>7 as a biological plausibility.</p> <p>8 There is data going back and</p> <p>9 scientific reviews and publications going</p> <p>10 back to the '60s which implicate</p> <p>11 inflammation as a biological mediator for</p> <p>12 cancer.</p> <p>13 Q. Doctor, listen to my</p> <p>14 question. My question is very specific</p> <p>15 to talc and the biologic plausibility</p> <p>16 between talc and ovarian cancer.</p> <p>17 Can you cite for me, besides</p> <p>18 the Canadian documents you cited, any</p> <p>19 scientific group, body or organization</p> <p>20 that has concluded that there is biologic</p> <p>21 plausibility between talcum powder use</p> <p>22 and ovarian cancer?</p> <p>23 A. There is biological</p> <p>24 plausibility and there is evidence that</p>
Page 215	Page 217
<p>1 there's a comment period that's going on</p> <p>2 right now?</p> <p>3 A. I understand that, yes.</p> <p>4 Q. And that this is not a final</p> <p>5 statement?</p> <p>6 A. Final statement. In any</p> <p>7 document, any regulatory document that --</p> <p>8 those that are put out by the National</p> <p>9 Academy of Science, whatever document</p> <p>10 you're using, there's always a peer</p> <p>11 review or comment period.</p> <p>12 In my opinion, in my</p> <p>13 professional career, documents do not</p> <p>14 change that drastically based upon the</p> <p>15 comments that come in. Based upon</p> <p>16 National Academy of Science, and the</p> <p>17 National Toxicology Program. There are</p> <p>18 usually not -- there are no -- by the</p> <p>19 time it reaches this point, there are no</p> <p>20 substantive comments that allow for</p> <p>21 extensive changes.</p> <p>22 Q. Other than the Canadian</p> <p>23 documents you just cited, can you cite</p> <p>24 for me any other scientific group, body</p>	<p>1 in Step 1, that talc causes inflammation.</p> <p>2 In Step 2, that inflammation is a</p> <p>3 well-known and well-established factor</p> <p>4 in -- in cancer.</p> <p>5 Q. Doctor, you are not</p> <p>6 answering my question. Do you want to</p> <p>7 read my question? My question is very</p> <p>8 specific.</p> <p>9 Can you cite for me any</p> <p>10 scientific body or group or organization,</p> <p>11 other than what you say the Canadian</p> <p>12 group or groups did, that has concluded</p> <p>13 that there is biologic plausibility</p> <p>14 between talcum powder use and ovarian</p> <p>15 cancer?</p> <p>16 MS. O'DELL: Objection.</p> <p>17 Objection to the question. Asked</p> <p>18 and answered.</p> <p>19 THE WITNESS: I stand by my</p> <p>20 answer. That, again, talc can</p> <p>21 cause inflammation. It's well</p> <p>22 known. And inflammation is an</p> <p>23 underpinning for cancer.</p> <p>24 BY MR. HEGARTY:</p>

55 (Pages 214 to 217)

Judith Zelikoff, Ph.D.

Page 218	Page 220
<p>1 Q. Okay. Cite for me any 2 scientific group, body or organization 3 who has said that. 4 A. That is throughout 5 literature. If you go back to 1960 and 6 talk about the Vertel and the role of 7 inflammation in cancer, and numerous 8 other publications since that, if you 9 look at -- talc is used to induce 10 pleurodesis because of its inflammatory 11 responsiveness. 12 Q. Doctor, you still are not 13 answering my question. My question is 14 name a scientific body, organization or 15 group who has concluded, as you have 16 done, or you say you do in your paper, 17 that there is biologic plausibility 18 between talc and ovarian cancer. 19 MS. O'DELL: Objection to 20 the form. 21 THE WITNESS: I gave you -- 22 BY MR. HEGARTY: 23 Q. Cite for me the groups. 24 MS. O'DELL: Excuse me. Let</p>	<p>1 biological mechanism that everyone 2 including the National Toxicology, the 3 IARC, the National Academy of Science, 4 EPA, all recognize. 5 Q. Cite for me any group. 6 Again, you are not answering my question. 7 My answer -- 8 A. Okay. 9 Q. -- my question is other than 10 the Canadian groups you've cited, cite 11 for me any group by name who has reached 12 the same opinion as you about biologic 13 plausibility. 14 MS. O'DELL: Objection to 15 form. Other than those she just 16 listed in her last answer? 17 MR. HEGARTY: Well, she 18 didn't list any. I think the 19 record shows that. 20 MS. O'DELL: Yes, she did. 21 MR. HEGARTY: Which ones did 22 she list? 23 MS. O'DELL: NTP. IARC. 24 MR. HEGARTY: Okay. Are you</p>
Page 219	Page 221
<p>1 me -- objection to form. Asked 2 and answered. The doctor has 3 answered your question. You may 4 not like the answer, but she's 5 answered it. 6 BY MR. HEGARTY: 7 Q. Cite for me the groups by 8 name. 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: Ask the 12 question again? 13 BY MR. HEGARTY: 14 Q. Cite for me any name of any 15 group that has reached the same opinion 16 as you? 17 A. Besides the Health Canada? 18 Q. Correct. 19 A. There are -- I -- you're 20 asking for something that is not -- I'm 21 answering the question by telling you 22 that you have talc which is an 23 inflamagogue, and you have talc and its 24 relationship with cancer. And that is a</p>	<p>1 going on the record to say NTP has 2 concluded that talcum powder use 3 is a biologic 4 plausibility/plausible cause of 5 ovarian cancer? 6 THE WITNESS: We're not -- 7 MS. O'DELL: She was talking 8 about inflammation and cancer, as 9 you well know. 10 MR. HEGARTY: Right, which 11 is why she's not answering my 12 question. 13 MS. O'DELL: No, no. Your 14 question was not in relation to 15 specific talc and biologic 16 plausibility. 17 So the doctor has answered 18 your question. 19 MR. HEGARTY: I think the 20 record will reflect otherwise. 21 BY MR. HEGARTY: 22 Q. Doctor, listen to my 23 question -- 24 MS. O'DELL: No, it will</p>

56 (Pages 218 to 221)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 222</p> <p>1 not. 2 BY MR. HEGARTY: 3 Q. Listen to my question. 4 Can you cite for me any 5 group besides the Canadian group who has 6 concluded that there is biologic 7 plausibility, who has made a statement 8 that there is biologic plausibility 9 between talcum powder use and ovarian 10 cancer? 11 A. I'm telling -- as I said 12 before, you're leaving out the word 13 "inflammation." 14 Q. Doctor, you -- you need to 15 answer the question I ask. 16 A. I -- I -- 17 Q. Your counsel can come back 18 and ask you that question. I under -- I 19 want to know the name of any organization 20 by name who has concluded that there is 21 biologic plausibility between perineal 22 use of talc and ovarian cancer. 23 A. Anyone -- 24 MS. O'DELL: Other than the</p>	<p style="text-align: right;">Page 224</p> <p>1 I've shown, whether it's in air pollution 2 or whether it's in tobacco products or 3 nicotine products or World Trade Center 4 dust or metal inhalation or nanoparticle 5 inhalation. They all give biological 6 plausibility statements for the 7 observations that have been found in my 8 laboratory. 9 Q. Where have you ever 10 published step-by-step methodology for 11 how you go about determining whether 12 there is biological plausibility between 13 a substance and a disease? 14 A. I use my professional 15 judgment. 16 Q. Have you ever published that 17 professional judgment? 18 MS. O'DELL: Objection to 19 form. 20 THE WITNESS: I don't think 21 that would be publishable 22 material. 23 BY MR. HEGARTY: 24 Q. In the end, Doctor, your</p>
<p style="text-align: right;">Page 223</p> <p>1 ones she -- she's listed. 2 THE WITNESS: Anyone that 3 you say -- any -- I'll do it 4 again. National Toxicology 5 Program. IARC. Institute of 6 Medicine. 7 They may not say the 8 sentence you are -- you are 9 implying or you're stating. But 10 they all show that talc has -- 11 produces inflammation. 12 I don't think that the -- I 13 think that's a very common 14 knowledge that talc or talcum 15 powder products does produce 16 inflammation. 17 BY MR. HEGARTY: 18 Q. Doctor, where have you ever 19 published a methodology for determining 20 whether there is biologic plausibility 21 between an exposure and a disease? 22 A. Almost every paper that I 23 have in my CV talks about the biological 24 plausibility for the observations that</p>	<p style="text-align: right;">Page 225</p> <p>1 report is your subjective take on the 2 studies, correct? 3 MS. O'DELL: Objection to 4 form. 5 BY MR. HEGARTY: 6 Q. I mean, you don't speak for 7 any scientific group, do you? 8 A. I'm an expert toxicologist, 9 recognized clearly by the Society of 10 Toxicology as an expert in my field. 11 And -- I'm sorry. I -- 12 Q. Well, is your report 13 speaking for the society -- 14 MS. O'DELL: Excuse me. 15 BY MR. HEGARTY: 16 Q. Is your report speaking for 17 the Society of Toxicology? 18 MS. O'DELL: She wasn't 19 finished. 20 THE WITNESS: I wasn't. I 21 was -- 22 MS. O'DELL: She wasn't 23 finished. Please let the witness 24 finish.</p>

57 (Pages 222 to 225)

Judith Zelikoff, Ph.D.

Page 226	Page 228
<p>1 MR. HEGARTY: I'll withdraw 2 the question. 3 BY MR. HEGARTY: 4 Q. Doctor, do you speak for the 5 Society of Toxicology for purposes of 6 your opinions in your report? 7 A. No. 8 Q. Do you speak for any 9 society, any toxicology society -- 10 society for purposes of your opinions? 11 A. You didn't let me finish my 12 answer. 13 I do not speak for the 14 society of toxicology. But I am a 15 recognized toxicology expert, recognized 16 by the Society of Toxicology as an 17 expert. And I have written this report 18 based upon literature, scientific 19 evidence, and my professional judgment. 20 Q. What society has recognized 21 you as an expert in talc and ovarian 22 cancer? 23 A. I'm recognized as expert in 24 toxicology.</p>	<p>1 form. 2 You can answer. 3 THE WITNESS: This is my 4 opinion based upon my systematic 5 review of all the scientific 6 literature. And they -- by the 7 nature of hiring me, they have 8 approved of my -- my opinions. 9 Maybe not specifically in this 10 case, but they would not have 11 hired me or kept me for 35 years 12 if they did not agree that I was a 13 well-known established 14 toxicologist whose opinions are 15 based in my professional judgment. 16 BY MR. HEGARTY: 17 Q. Did you tell the university, 18 New York University, of your opinions in 19 this case? 20 A. I did not. 21 Q. Have you told them that 22 you're an expert witness for plaintiffs 23 in this litigation? 24 A. I have, yes.</p>
Page 227	Page 229
<p>1 Q. What society has -- 2 A. Society of Toxicology. 3 Q. Has the Society of 4 Toxicology recognized you as an expert in 5 talc and ovarian cancer? 6 MS. O'DELL: Objection to 7 form. 8 THE WITNESS: I was 9 recognized as an expert in tox and 10 ovarian cancer and talc by the 11 very basis that I'm sitting here. 12 BY MR. HEGARTY: 13 Q. You don't speak for your 14 university, do you? 15 A. No one -- no one speaks 16 directly for the university. But what we 17 say, we understand our paychecks come 18 from the university, and we follow within 19 the university and the medical school 20 guidelines. 21 Q. Are your opinions in this 22 case the opinions of New York University? 23 A. This is my -- 24 MS. O'DELL: Objection to</p>	<p>1 Q. Have you reported, in your 2 financial disclosure, the money that 3 you've made in this litigation? 4 A. Up until -- we are asked 5 that question -- we have to fill out 6 reports on transparency and conflicts of 7 interest. And I think the last time I 8 did it was in November of 2018. And I 9 reported up to that time, yes. We are 10 required to do that and, yes, I am 11 completely transparent. 12 So any money that I've made 13 since November, or since the filing of 14 the confidentiality agreement has not 15 been reported but will be coming in March 16 or April. 17 Q. You don't speak for any 18 journal for the purpose of your report, 19 do you? 20 A. For purposes of this report 21 I do not speak for journals. But I do 22 speak for journals because I'm an editor, 23 I'm an associate editor and on the 24 editorial boards for numerous</p>

58 (Pages 226 to 229)

Judith Zelikoff, Ph.D.

Page 230	Page 232
<p>1 environmental health and toxicology 2 journals. 3 Q. At the top of Page 3 of your 4 report, you say in the first full 5 paragraph that you considered the studies 6 that did not find an increased risk of 7 ovarian cancer with talc use. 8 Do you see that? 9 MS. O'DELL: What page are 10 you on? I'm sorry. 11 BY MR. HEGARTY: 12 Q. Page 3. 13 A. I'm sorry. I know we're on 14 Page 3. 15 Q. The first full paragraph. 16 A. My opinions below? 17 Q. The first full paragraph. 18 A. My opinions below. "My 19 opinions below" -- 20 Q. At the very -- at the very 21 end, you say you considered those studies 22 that did not find an increased risk. 23 Do you see that? 24 A. I'm reading it.</p>	<p>1 several, there are case-control 2 studies as well as cohort studies 3 which showed negative 4 associations. 5 BY MR. HEGARTY: 6 Q. You did not cite any of 7 those in your report, though, did you? 8 A. No. What I said -- I'm 9 sorry. Let me try and make it clear. 10 Yes, those meta-analyses 11 were included in the report or -- I need 12 to find the names. Systematic review 13 that I cited was 14 P-E-N-N-I-N-K-I-L-A-M-P-I 2018. And that 15 was a meta-analysis which reviewed the 16 epidemiological case-control and cohort 17 studies which showed that there were 18 studies that had negative associations. 19 Q. Is that the only reference 20 that you included in your report, to 21 studies that did not find an increased 22 risk of ovarian cancer with talc use? 23 MS. O'DELL: Object to the 24 form.</p>
Page 231	Page 233
<p>1 Yes, okay. You were reading 2 in the middle of the sentence. "To my 3 knowledge, I considered and evaluated the 4 majority of all available relevant 5 studies in the process of evaluating the 6 literature, including those that reported 7 an elevated risk of ovarian cancer with 8 exposure to talc and those where other 9 chemicals were reported within talc-based 10 body powders, including those that did 11 not find an increased risk." Yes. 12 Q. You did not cite a single 13 paper in your report that did not find an 14 increased risk of ovarian cancer with 15 talc use, did you? 16 MS. O'DELL: Objection to 17 form. 18 THE WITNESS: There were -- 19 in reading over the meta-analysis 20 of -- I'm sorry, I'm probably 21 going to get his name wrong -- 22 Penninkilampi. 23 In reading over the 24 meta-analysis of several -- from</p>	<p>1 THE WITNESS: No. No. 2 MS. O'DELL: Excuse me. 3 Object to the form. 4 THE WITNESS: No. Under the 5 animal models on Page 13, there 6 were -- with rats that were 7 exposed by the peritoneum -- 8 perineum, sorry, to either talc or 9 no treatment. And while they did 10 find inflammatory response -- 11 again, going back to my biological 12 plausibility -- they did not find 13 neoplasms. 14 BY MR. HEGARTY: 15 Q. So that would be an example 16 of a study that did not show an increased 17 risk of ovarian cancer with talc use, 18 correct? 19 A. That is -- 20 MS. O'DELL: Object to the 21 form. 22 Go ahead. 23 BY MR. HEGARTY: 24 Q. Is that correct?</p>

59 (Pages 230 to 233)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 234</p> <p>1 A. Sorry. Repeat the question. 2 Repeat the question, please. 3 Q. Sure. So that is an example 4 of a study that, in your opinion, does 5 not show an increased risk of ovarian 6 cancer with talc use? 7 MS. O'DELL: Objection to 8 form. Go ahead. Sorry. 9 THE WITNESS: Sorry. 10 This is a study which shows 11 biological plausibility by showing 12 that there is a foreign body 13 reaction and inflammatory 14 response. However, it does not 15 show that there was any change in 16 neoplasm -- or any induction of 17 neoplasms or cancer. 18 BY MR. HEGARTY: 19 Q. Did you read any cell study 20 that showed that talc is not cytotoxic? 21 A. Can you please explain what 22 you mean by cytotoxic? I want to answer 23 the question as you understand it. 24 Q. What is your definition of</p>	<p style="text-align: right;">Page 236</p> <p>1 showing that talc was not toxic to cells? 2 A. I read comparison studies. 3 Let me please find that, the exact names. 4 Q. Let me withdraw the 5 question. Doctor, in your opinion is 6 talc mutagenic? 7 A. How do you define 8 "mutagenic"? 9 Q. Doctor, what's your -- 10 mutagenic is mutation to genes. Does 11 talc mutate genes? 12 A. Talc leads to changes in 13 gene expression which can be inferred as 14 a mutation. However, when you talk about 15 mutation, you have many different 16 mechanisms of mutation. Mutation can 17 occur as a result of a genotoxic or 18 direct impact on DNA, or it can occur as 19 a result of changes in the epigenome, 20 which leads to changes in expression of 21 the gene. 22 Q. Does talc directly mutate 23 genes? 24 A. Talc has been shown to</p>
<p style="text-align: right;">Page 235</p> <p>1 cytotoxicity? 2 A. I'd like to answer the 3 question that you're asking me. 4 Q. I'm asking you your 5 definition. The way a deposition works 6 is I ask you questions. You don't ask me 7 questions. 8 MS. O'DELL: Don't be -- be 9 courteous to the witness, please. 10 MR. HEGARTY: I am. 11 THE WITNESS: I appreciate 12 that. I just want to, as a 13 toxicologist, the word 14 "cytotoxicity" carries many 15 meanings. 16 BY MR. HEGARTY: 17 Q. What is your definition -- 18 basic definition of cytotoxicity? 19 A. There are many meanings. 20 Cytotoxicity taken literally meaning 21 toxicity to a cell. Cyto, cell; 22 toxicity, toxic. However, toxicity can 23 be measured by numerous endpoints. 24 Q. Did you read any studies</p>	<p style="text-align: right;">Page 237</p> <p>1 cause -- to cause changes in particular 2 enzymes in the gene expression. So a 3 mutation -- yes, it has been -- it has 4 been shown for mutation. But I just 5 need -- I need the attorneys to 6 understand that there are many ways to 7 mutate a cell, not only can you do it by 8 chemical agent, but you can also -- it 9 occurs with aging. 10 So you do not need -- I'm 11 sorry. You do not need genotoxicity to 12 produce mutagenesis. 13 Now, if you look at many 14 different assays such as the Ames assay 15 which uses bacteria to assess 16 mutagenicity, you are not going to see 17 that as a possibility for talc because 18 the bacteria cannot engulf the particle 19 and the particle needs to be ingested in 20 order to show mutagenesis. 21 Q. Doctor, on Page 4 above your 22 section "fibrous talc" -- 23 A. I see it. 24 Q. -- you refer to particle</p>

60 (Pages 234 to 237)

Judith Zelikoff, Ph.D.

Page 238	Page 240
<p>1 size for talc.</p> <p>2 A. That's correct.</p> <p>3 Q. Is knowing particle size</p> <p>4 part of your methodology for your</p> <p>5 opinions in your report?</p> <p>6 A. I'm sorry. I don't</p> <p>7 understand what you mean by was it part</p> <p>8 of my methodology.</p> <p>9 Q. Well, what is the threshold</p> <p>10 size of a talc particle to establish</p> <p>11 biologic plausibility?</p> <p>12 MS. O'DELL: Object to form.</p> <p>13 THE WITNESS: I don't think</p> <p>14 you can answer that question.</p> <p>15 In -- let me say this.</p> <p>16 In doing my methodology and</p> <p>17 accumulating literature, I -- as I</p> <p>18 said, I binned or siloed</p> <p>19 individual things.</p> <p>20 And one of the silos and one</p> <p>21 of the categories that I -- that I</p> <p>22 wanted to read was size. Size</p> <p>23 makes a very big difference in</p> <p>24 particles, and for example, if the</p>	<p>1 THE WITNESS: Establishing</p> <p>2 my biological plausibility was --</p> <p>3 was travel -- is traveling through</p> <p>4 migration and the ability for a --</p> <p>5 for the powder to migrate or the</p> <p>6 constituents to migrate. And --</p> <p>7 and also the ability to be</p> <p>8 inflammatory.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. Well, what size -- what size</p> <p>11 of particle -- what size must the</p> <p>12 particle be to cause inflammation that</p> <p>13 leads to ovarian cancer?</p> <p>14 A. Particles of any --</p> <p>15 MS. O'DELL: Objection to</p> <p>16 form. You may go.</p> <p>17 THE WITNESS: Particles of</p> <p>18 any size can cause inflammation.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. What about talc particles,</p> <p>21 what size of talc particle must there be</p> <p>22 to cause inflammation?</p> <p>23 A. Talc particles of any size</p> <p>24 can cause inflammation.</p>
Page 239	Page 241
<p>1 particle is greater than</p> <p>2 10 microns it's going to be what</p> <p>3 we call inhalable as opposed to</p> <p>4 respirable. So where a particle</p> <p>5 can go in terms of, and now I'm</p> <p>6 using the lung as an example,</p> <p>7 where the particle can go will</p> <p>8 depend upon its size and how long</p> <p>9 it will remain in a tissue.</p> <p>10 So in my bins, in my silos</p> <p>11 were -- certainly size was a</p> <p>12 parameter.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. And what is the threshold</p> <p>15 size of a talc particle to establish</p> <p>16 biologic plausibility between talc and</p> <p>17 ovarian cancer?</p> <p>18 MS. O'DELL: Objection to</p> <p>19 the form.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. What size must the particle</p> <p>22 be?</p> <p>23 MS. O'DELL: Objection to</p> <p>24 form.</p>	<p>1 Q. And is there --</p> <p>2 A. However, there are</p> <p>3 differences, from reading the literature,</p> <p>4 that indicates that the smaller the</p> <p>5 particle the greater the inflammation.</p> <p>6 And that's universally</p> <p>7 known.</p> <p>8 Q. Was part of your analysis,</p> <p>9 did you -- did that involve investigating</p> <p>10 biologic plausibility as it relates to</p> <p>11 particle size?</p> <p>12 A. That was -- that was part of</p> <p>13 my reading and part of my -- my thought</p> <p>14 process, my gathering of information,</p> <p>15 yes.</p> <p>16 Q. And is there a certain size</p> <p>17 of particle necessary to establish</p> <p>18 biologic plausibility under your opinion?</p> <p>19 MS. O'DELL: Objection.</p> <p>20 Asked and answered.</p> <p>21 THE WITNESS: Well, I do</p> <p>22 think I answered that question.</p> <p>23 But again there's really --</p> <p>24 apart -- it is not just particle</p>

61 (Pages 238 to 241)

Judith Zelikoff, Ph.D.

Page 242	Page 244
<p>1 size which is important in 2 producing an inflammation. It is 3 many parameters. And so there was 4 no one size or one cutoff that 5 induces inflammation or does not. 6 It's chemical composition, it's 7 shape of the particle, it's 8 bioavailability of the particle. 9 BY MR. HEGARTY: 10 Q. Can you cite for me the -- 11 the particle size for Johnson's Baby 12 Powder over the last 120 years? 13 MS. O'DELL: Objection to 14 form. 15 THE WITNESS: I'm not sure I 16 can cite it over the last 17 120 years. But I can tell you 18 from the information in the 19 documents that I -- that I 20 reviewed, that particle size goes 21 from above 50 microns, 22 micrometers, microns, down to 23 0.3 micron with an average size of 24 10.5 to 11.5 depending on the</p>	<p>1 Q. Well, fibrous talc is only 2 talc that grows in an -- in an 3 asbestiform habit, correct? 4 A. Fibrous talc refers to the 5 shape and the longitudinal direction of 6 the fibers. That's what fibrous talc is, 7 and asbestiform refers to the same 8 longitudinal pattern of the particular 9 fibrils and -- to form a bundle or to 10 form a fiber. 11 Q. So you don't agree that 12 fibrous talc is only talc that grows in 13 an asbestiform habit? 14 MS. O'DELL: Objection to 15 form. 16 THE WITNESS: Fibrous talc 17 by its very nature is saying that 18 it grows in an asbestiform-like 19 phenotype or asbestiform-like 20 morphology. That's the nature of 21 asbestiform. 22 Asbestiform is a form. 23 BY MR. HEGARTY: 24 Q. You state in the middle</p>
Page 243	Page 245
<p>1 document that you read. So an 2 average or median size. 3 BY MR. HEGARTY: 4 Q. So did you -- did you do 5 analysis for biologic plausibility 6 purposes of every size of talc particle? 7 MS. O'DELL: Objection. 8 Asked and answered. 9 THE WITNESS: Did I do 10 analysis -- I -- no, as I said, I 11 gave you the size of the -- of the 12 talcum that was reviewed, that I 13 reviewed within the documents. 14 BY MR. HEGARTY: 15 Q. You, on -- on page -- strike 16 that. 17 Under the section Fibrous 18 Talc, you say that -- is it your 19 testimony that -- strike that. 20 Is it your opinion that 21 asbestiform talc is also called fibrous 22 talc? 23 A. Talc and asbestos are -- are 24 different minerals.</p>	<p>1 paragraph, in that section, that talc in 2 its fibrous form has been classified by 3 IARC as Group I, a known carcinogen. 4 That's not correct, is it? 5 MS. O'DELL: Objection to 6 form. 7 THE WITNESS: I'm sorry, 8 could you say again? 9 BY MR. HEGARTY: 10 Q. Well, you agree that only 11 talc containing asbestiform fibers has 12 been classified as Group I by IARC, 13 correct? 14 A. Are you referring to in 2010 15 IARC expanded or -- I'm sorry, in its 16 fibrous form, talc has been classified as 17 a Group I known carcinogen? 18 Q. Correct. 19 A. Asbestiform fibers have been 20 listed by IARC as a carcinogen. 21 Q. A talc containing 22 asbestiform fibers is the only form of 23 talc that's been designated as a class -- 24 as a Category I carcinogen by IARC,</p>

62 (Pages 242 to 245)

Judith Zelikoff, Ph.D.

Page 246	Page 248
<p>1 correct?</p> <p>2 A. It's not the only one that's</p> <p>3 been associated with it, but for the</p> <p>4 purpose of my report that I put down,</p> <p>5 it's the asbestiform that has been</p> <p>6 classified by the IARC.</p> <p>7 Q. Well, it's talc containing</p> <p>8 asbestiform fibers, correct?</p> <p>9 MS. O'DELL: Objection to</p> <p>10 form.</p> <p>11 THE WITNESS: It's -- it's</p> <p>12 fibrous talc.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Is that -- that's your --</p> <p>15 your -- it's your opinion that IARC's</p> <p>16 designation in 2012 is of asbestiform</p> <p>17 talc?</p> <p>18 A. Their designations is</p> <p>19 form -- is talc fibers, which are</p> <p>20 asbestiform in nature.</p> <p>21 Q. Do you cite to any published</p> <p>22 data in the medical literature that</p> <p>23 asbestiform talc has been found in</p> <p>24 Johnson's Baby Powder?</p>	<p>1 Can you cite for me any published medical</p> <p>2 literature finding asbestiform talc in</p> <p>3 Johnson's Baby Powder?</p> <p>4 A. Page 6 of my report speaks</p> <p>5 of the Crowley report, and that the fiber</p> <p>6 content ranged from 8 percent to</p> <p>7 30 percent. And that Pooley and Rohl</p> <p>8 analyzed 27 talc powders and detected</p> <p>9 tremolite fibers in three samples.</p> <p>10 Q. Is it your testimony that</p> <p>11 Crowley -- Crowley's article refers to</p> <p>12 Johnson's Baby Powder?</p> <p>13 A. I would have to see the</p> <p>14 article.</p> <p>15 Q. How about Pooley and Rohl,</p> <p>16 do they refer to Johnson's Baby Powder?</p> <p>17 A. I would have to see the</p> <p>18 article.</p> <p>19 Q. In the end, for purposes of</p> <p>20 your opinion as to asbestos and talc,</p> <p>21 you're relying on the report of Longo and</p> <p>22 Rigler, correct?</p> <p>23 MS. O'DELL: Objection to</p> <p>24 form.</p>
Page 247	Page 249
<p>1 A. I'm sorry.</p> <p>2 You cite -- do you cite to</p> <p>3 any published data in the medical</p> <p>4 literature that asbestiform talc...</p> <p>5 The documents, the published</p> <p>6 documents within Johnson & Johnson and</p> <p>7 the Longo report, Longo's 2017, as well</p> <p>8 as 2018 supplement from December, shows</p> <p>9 asbestiform fibers.</p> <p>10 Q. My question though is can</p> <p>11 you cite any data published in the</p> <p>12 medical literature that has found</p> <p>13 asbestiform talc in Johnson's Baby</p> <p>14 Powder?</p> <p>15 A. I thought I just did in</p> <p>16 terms of the Longo report.</p> <p>17 Q. Is the Longo report</p> <p>18 published in the medical literature?</p> <p>19 A. It's -- I'm not sure whether</p> <p>20 it's accessible in the medical -- medical</p> <p>21 literature at this point. But I'm sure</p> <p>22 it could be gathered.</p> <p>23 Q. My -- my question is solely</p> <p>24 as to the published medical literature.</p>	<p>1 THE WITNESS: No, I rely on</p> <p>2 the scientific literature, not on</p> <p>3 any one paper. I used weight of</p> <p>4 evidence to come to my opinion.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. Did you include in your</p> <p>7 weighing of evidence the expert reports</p> <p>8 of Longo and Rigler?</p> <p>9 A. I read the Longo supplement</p> <p>10 2018 after I wrote the report.</p> <p>11 Q. For purposes -- for purposes</p> <p>12 of the opinions again in this case, do</p> <p>13 you rely in any way on the Longo and</p> <p>14 Rigler reports?</p> <p>15 MS. O'DELL: Objection to</p> <p>16 form.</p> <p>17 THE WITNESS: I'm not sure I</p> <p>18 understand your question. As I</p> <p>19 said, I wrote the report on</p> <p>20 November 16th. I read the Longo</p> <p>21 supplement report in -- about two</p> <p>22 weeks ago.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. But you cite in your report</p>

63 (Pages 246 to 249)

Judith Zelikoff, Ph.D.

Page 250	Page 252
<p>1 the -- the MDL report of Longo and 2 Rigler, correct? 3 A. What page is that please? 4 Q. At the end of Exhibit B. 5 A. I -- okay. 6 Excuse me. I referred to 7 Longo on page -- there is no page. 8 Sorry. 9 The cosmetic talc in the 10 Lancet and cosmetic talc in -- and 11 ovarian cancer in the Lancet. Those are 12 very early papers which I -- which I 13 reviewed. Those papers were considered. 14 The latest papers from Longo were not 15 considered in my report. 16 Q. Are you talking about the 17 latest -- 18 A. 2017, 2018. They were not 19 read until after the report was 20 finalized. 21 Q. Do you know Longo and 22 Rigler? 23 A. Not at all. 24 THE VIDEOGRAPHER: Doctor,</p>	<p>1 use, the polarized light 2 microscopy and the TEM all seem to 3 be the way he describes it. His 4 methodologies were spot on in 5 terms of what other people do. 6 BY MR. HEGARTY: 7 Q. Are you an expert in XRD? 8 A. As I stated, I worked with 9 people who used the instrumentation. An 10 expert, again, I'm not sure what you mean 11 by expert. Have I done XRD on my own, 12 no. But in our department we have 13 numerous people who -- who use that 14 instrumentation. 15 Q. Are you an expert in TEM? 16 A. I have done TEM for my Ph.D. 17 thesis. 18 Q. Have you do TEM -- have you 19 ever done TEM to detect asbestos? 20 A. I have not done TEM to 21 detect asbestos. But I looked at his 22 methodologies, his study design, and the 23 instruments that he used. And they are 24 state of the art.</p>
Page 251	Page 253
<p>1 can you raise your microphone up? 2 THE WITNESS: Oh, sure. 3 BY MR. HEGARTY: 4 Q. Did you do anything to 5 assess their expertise in this area? 6 A. I -- I -- 7 MS. O'DELL: Are you 8 referring to Dr. Longo and 9 Dr. Rigler? 10 MR. HEGARTY: Yes. 11 THE WITNESS: I read the -- 12 the bio sketch, a brief, very 13 brief bio sketch of Ray Longo. 14 And I looked up his credentials in 15 terms of how long he's been in 16 the -- in this company, how he 17 started this company or at least 18 was president of this company for 19 a short period of time. 20 From what I know of my own 21 work in the laboratory and working 22 with other chemists and technical 23 instrumentation people in the 24 laboratory, I -- the XRD that they</p>	<p>1 Q. Have you ever performed the 2 test that he describes in his articles or 3 reports? 4 A. I have used polarized light 5 microscopy. 6 Q. That's not my question. My 7 question is have you performed the same 8 tests in your lab or in any -- in your 9 experience that he has performed and 10 reported on in his reports? 11 A. Personally, no. 12 Q. Starting on Page 5, you talk 13 about asbestos. 14 A. Page 5 of what? 15 Q. Of your report. 16 A. Thank you. 17 Q. Is it your opinion that any 18 amount of exposure to asbestos, even to a 19 single fiber, can cause disease? 20 A. From the scientific 21 literature it is -- it appears -- it 22 appears pretty conclusive that there is 23 no threshold for the amount of 24 asbestiform asbestos that is needed to at</p>

64 (Pages 250 to 253)

Judith Zelikoff, Ph.D.

Page 254	Page 256
<p>1 least start a disease process.</p> <p>2 Q. Before being contacted by</p> <p>3 counsel for plaintiffs in this case, had</p> <p>4 you read any literature concerning</p> <p>5 asbestos and ovarian cancer?</p> <p>6 A. I have not read literature</p> <p>7 prior to that on asbestos and ovarian</p> <p>8 cancer. However, I am familiar with, as</p> <p>9 I said, other particles, other dusts,</p> <p>10 other fibers that I have worked with in</p> <p>11 the laboratory.</p> <p>12 Q. Had you even heard of a link</p> <p>13 between asbestos and ovarian cancer</p> <p>14 before being contacted by plaintiffs'</p> <p>15 counsel?</p> <p>16 A. Yes.</p> <p>17 Q. Where did you hear that</p> <p>18 from?</p> <p>19 A. Discussed it with my</p> <p>20 colleagues. As I said, I've listened to</p> <p>21 the media on discussing it. And my</p> <p>22 colleagues are a very good source,</p> <p>23 although they do not do this work in</p> <p>24 their laboratory, we all try to keep up</p>	<p>1 THE WITNESS: I don't think</p> <p>2 that's -- I don't think that's --</p> <p>3 I don't personally think that's</p> <p>4 the question.</p> <p>5 The question is, asbestos is</p> <p>6 well classified, well known as a</p> <p>7 Class 1 carcinogen by IARC. And</p> <p>8 one fiber has the potential to</p> <p>9 initiate the biological processes</p> <p>10 or provides biological</p> <p>11 plausibility that there, in fact,</p> <p>12 by producing inflammation and</p> <p>13 producing reactive oxygen</p> <p>14 intermediates, one fiber can start</p> <p>15 the process for ovarian cancer.</p> <p>16 And again, let me just</p> <p>17 repeat that my mission, my</p> <p>18 question that was asked, was to</p> <p>19 provide biological plausibility</p> <p>20 for talc, not to define causation</p> <p>21 as an epidemiologist.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. So it's your opinion that a</p> <p>24 single fiber of asbestos in talc can</p>
Page 255	Page 257
<p>1 with the latest emerging scientific</p> <p>2 debates.</p> <p>3 Q. What is the minimum number</p> <p>4 of asbestos fibers necessary to cause</p> <p>5 ovarian cancer?</p> <p>6 A. Can -- do you mean -- I said</p> <p>7 that there is really no threshold. And</p> <p>8 it can be one fiber. It depends on the</p> <p>9 individual and the susceptibilities and</p> <p>10 the vulnerabilities of that particular</p> <p>11 individual.</p> <p>12 Q. So it's your opinion that</p> <p>13 one fiber of asbestos can cause ovarian</p> <p>14 cancer?</p> <p>15 A. Under certain conditions,</p> <p>16 yes, it is my opinion.</p> <p>17 Q. Can you cite for me any</p> <p>18 authority for that opinion specific to</p> <p>19 one fiber?</p> <p>20 MS. O'DELL: Object to form.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. And ovarian cancer.</p> <p>23 MS. O'DELL: Object to the</p> <p>24 form.</p>	<p>1 establish biological plausibility between</p> <p>2 talc and ovarian cancer?</p> <p>3 A. My --</p> <p>4 MS. O'DELL: Object to the</p> <p>5 form.</p> <p>6 THE WITNESS: My opinion is</p> <p>7 that a single fiber can induce</p> <p>8 inflammation and reactive oxygen</p> <p>9 species and can change the cell</p> <p>10 into a pro-oxidant cell that</p> <p>11 starts the process for ovarian</p> <p>12 cancer.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Do you agree that there are</p> <p>15 background rates of asbestos in certain</p> <p>16 areas?</p> <p>17 A. Do you mean in the air?</p> <p>18 Q. In the air?</p> <p>19 A. In the air, it depends on</p> <p>20 that area. If that's an area where</p> <p>21 there's mining or there's a house being</p> <p>22 redone from the 1970s or 19 -- early '80s</p> <p>23 that might have used asbestos, then there</p> <p>24 will be asbestos in the air. But not</p>

65 (Pages 254 to 257)

Judith Zelikoff, Ph.D.

Page 258	Page 260
<p>1 sitting in this room, unless there is</p> <p>2 asbestos in the walls, which I doubt</p> <p>3 because it was only built about ten years</p> <p>4 ago.</p> <p>5 Q. Do the background rates of</p> <p>6 asbestos in certain areas cause ovarian</p> <p>7 cancer?</p> <p>8 A. Asbestos has been shown to</p> <p>9 cause ovarian cancer by inhalation, yes.</p> <p>10 Q. Is it your opinion that</p> <p>11 background rates of asbestos in the air</p> <p>12 can cause ovarian cancer?</p> <p>13 MS. O'DELL: Object to the</p> <p>14 form.</p> <p>15 THE WITNESS: I don't --</p> <p>16 again, background rates, it has</p> <p>17 been shown that workers that are</p> <p>18 in places where asbestos is made</p> <p>19 have a higher incidence of lung</p> <p>20 cancer as shown by Dr. Selikoff</p> <p>21 many, many years ago.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Doctor, you know what a</p> <p>24 background rate of -- background level of</p>	<p>1 A. It depends. After the World</p> <p>2 Trade Center, there was.</p> <p>3 Q. Are those background</p> <p>4 levels -- do those background levels</p> <p>5 cause ovarian cancer?</p> <p>6 MS. O'DELL: Objection to</p> <p>7 the form.</p> <p>8 THE WITNESS: The studies</p> <p>9 that have been done by my</p> <p>10 colleagues in the aftermath of the</p> <p>11 World Trade Center disaster where</p> <p>12 asbestos was generated have not at</p> <p>13 this time -- and New York City</p> <p>14 Public Health has not at this time</p> <p>15 looked at ovarian cancer. Ovarian</p> <p>16 cancer occurs within 10 to 30, up</p> <p>17 to 40 years later. So since 9/11</p> <p>18 was only 2001, there is -- there</p> <p>19 is not sufficient time to have</p> <p>20 developed ovarian cancer.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. Doctor, before 9/11 there</p> <p>23 were background levels of asbestos in</p> <p>24 certain parts of New York City, correct?</p>
Page 259	Page 261
<p>1 a particle in air is, right?</p> <p>2 A. Yes, sir, I do.</p> <p>3 Q. Okay. And is it your</p> <p>4 opinion that background levels of</p> <p>5 asbestos in the air can cause ovarian</p> <p>6 cancer?</p> <p>7 MS. O'DELL: Objection to</p> <p>8 form.</p> <p>9 THE WITNESS: As I said,</p> <p>10 sitting in this room, there should</p> <p>11 not be any background level of</p> <p>12 asbestos. So if you're talking</p> <p>13 about background level in a</p> <p>14 particular institute or industry</p> <p>15 where they're developing it, those</p> <p>16 levels are quite high, and yes, I</p> <p>17 do believe that those levels</p> <p>18 within a working environment can</p> <p>19 indeed cause inflammation that can</p> <p>20 lead to causation.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. There are background levels</p> <p>23 of asbestos in the air in New York City,</p> <p>24 correct?</p>	<p>1 A. When there are houses that</p> <p>2 were built with it. There is -- asbestos</p> <p>3 is not just -- should not be -- unless</p> <p>4 there's a source, asbestos should not --</p> <p>5 it would not be coming from jet engines.</p> <p>6 It would not be coming from other</p> <p>7 sources. If it's there, it came from a</p> <p>8 specific source. It's like we should not</p> <p>9 have lead in our body at all. But we do</p> <p>10 because the lead came from the air where</p> <p>11 there was lead in the gasoline.</p> <p>12 So there shouldn't be</p> <p>13 background levels of asbestos just</p> <p>14 hanging around unless there's an adequate</p> <p>15 source that produced it.</p> <p>16 Q. Does EPA allow background</p> <p>17 levels of asbestos in water?</p> <p>18 A. I'm not familiar with that</p> <p>19 information. That's in water. You asked</p> <p>20 me about air.</p> <p>21 Q. I asked you a different</p> <p>22 question. I can ask you a different</p> <p>23 question, Doctor.</p> <p>24 A. I understand the question,</p>

66 (Pages 258 to 261)

Judith Zelikoff, Ph.D.

Page 262	Page 264
<p>1 yes.</p> <p>2 Q. Does EPA allow background</p> <p>3 levels of asbestos in water?</p> <p>4 A. I have not reviewed that</p> <p>5 literature.</p> <p>6 Q. As a toxicologist, you agree</p> <p>7 that dose or level of exposure determines</p> <p>8 the toxicity of substances, correct?</p> <p>9 MS. O'DELL: Object to the</p> <p>10 form.</p> <p>11 THE WITNESS: I believe that</p> <p>12 dose as well as frequency,</p> <p>13 duration, time of exposure are</p> <p>14 all -- as well as dose contribute</p> <p>15 to the toxicity of an agent.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. You agree that a substance</p> <p>18 can produce a harmful effect only if it</p> <p>19 reaches a susceptible biological system</p> <p>20 within the body in high enough</p> <p>21 concentration, correct?</p> <p>22 MS. O'DELL: Objection to</p> <p>23 form.</p> <p>24 THE WITNESS: It depends on</p>	<p>1 not been done.</p> <p>2 There are -- there is</p> <p>3 information on no observable</p> <p>4 adverse effect level that has been</p> <p>5 established using a dose-response</p> <p>6 by the NTP, National Toxicology</p> <p>7 Program.</p> <p>8 And two milligrams of talc</p> <p>9 that they used produced minimal --</p> <p>10 minimal affects in the rats and</p> <p>11 mice that they tested. So</p> <p>12 somewhere below at least, from an</p> <p>13 inhalation perspective, is --</p> <p>14 produces no effect.</p> <p>15 However, they saw effects</p> <p>16 even at the lowest, two milligrams</p> <p>17 per.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. My question was specific to</p> <p>20 ovarian cancer. That study did not --</p> <p>21 did not identify any ovarian cancers in</p> <p>22 the mice -- in the mice or rats, correct?</p> <p>23 A. That's not what they looked</p> <p>24 for.</p>
Page 263	Page 265
<p>1 the -- let me read your question</p> <p>2 over. It was a lengthy question.</p> <p>3 It depends on the -- on the</p> <p>4 toxicant that you're talking</p> <p>5 about. There is dose that you're</p> <p>6 exposed to, or concentration that</p> <p>7 you're supposed to, and dose to</p> <p>8 the target tissue. And for every</p> <p>9 different -- every different</p> <p>10 chemical, there is a different</p> <p>11 target dose that could start a</p> <p>12 biological process.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. And what is the target dose</p> <p>15 that is necessary to start the biologic</p> <p>16 process of talc and ovarian cancer?</p> <p>17 MS. O'DELL: Object to the</p> <p>18 form.</p> <p>19 THE WITNESS: Well, if</p> <p>20 you -- if you look at talc as a</p> <p>21 whole, to give you a</p> <p>22 concentration, a threshold</p> <p>23 concentration, I'm not sure that</p> <p>24 has been -- I don't -- that has</p>	<p>1 Q. My question is specific to</p> <p>2 ovarian cancer.</p> <p>3 A. Let me read your question</p> <p>4 over again. Could you repeat your</p> <p>5 question. It's already gone past.</p> <p>6 Q. What is the target dose that</p> <p>7 is necessary to start the biologic</p> <p>8 process of talc and ovarian cancer?</p> <p>9 A. Well, as I talked about, one</p> <p>10 fiber of asbestos could start the</p> <p>11 biological process. It is not clear if</p> <p>12 there is a threshold dose or a</p> <p>13 concentration, or whether one -- and</p> <p>14 we're talking about the whole talcum</p> <p>15 powder product. We're not talking about</p> <p>16 any one product. You're talking about</p> <p>17 the whole process and how much it will</p> <p>18 start the biological process.</p> <p>19 It's unknown, it's not in</p> <p>20 the literature. But I will tell you that</p> <p>21 even small doses that are used of the</p> <p>22 talcum -- of a talcum product, if you</p> <p>23 take a woman who takes a handful, if you</p> <p>24 take a woman that takes a little bit on a</p>

67 (Pages 262 to 265)

Judith Zelikoff, Ph.D.

Page 266	Page 268
<p>1 powder puff, that amount could even, 2 depending upon the woman, the 3 susceptibility, the vulnerability, can 4 all start the process. 5 We're talking about the 6 process, in my opinion. What you're 7 talking about and in the opinion that I 8 report here, is that that can start an 9 inflammatory process. 10 Q. And what is the number of 11 particles of talc necessary to start the 12 biologic process? 13 MS. O'DELL: Object to form. 14 THE WITNESS: That is not in 15 the scientific literature. 16 BY MR. HEGARTY: 17 Q. Over Pages 6 through 8 of 18 your report you discuss asbestos. Is the 19 presence of asbestos in talc necessary 20 for your biologic plausibility opinions? 21 A. I looked at the entire 22 product. 23 Q. Well, do you intend to 24 testify that there is biologic</p>	<p>1 THE WITNESS: Can -- can you 2 address the question again? 3 BY MR. HEGARTY: 4 Q. Is it your opinion that pure 5 talc does not exist? 6 When I say pure talc, I mean 7 talc without asbestos, without heavy 8 metals, without fragrance. 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: The idea of 12 talc is that it has, within its 13 lattice, metals. 14 So platy talc refers to the 15 structure or the morphology of the 16 talc, how it looks, what 17 dimensions it's in. 18 So, do I think there is 19 platy talc? Of course there is 20 platy talc. 21 BY MR. HEGARTY: 22 Q. Is there platy talc without 23 asbestos? 24 A. Well, according to the</p>
Page 267	Page 269
<p>1 plausibility between pure talc, the platy 2 talc, and ovarian cancer? 3 MS. O'DELL: Object to the 4 form. 5 THE WITNESS: I don't 6 think -- my opinion is that there 7 may not be anything such as platy 8 talc in a pure form. 9 BY MR. HEGARTY: 10 Q. Okay. It's your opinion 11 that pure talc does not exist? 12 MS. O'DELL: I'm not sure 13 she -- she finished her answer. 14 Had you finished, Doctor, 15 before? 16 THE WITNESS: I actually 17 need a little water. 18 MS. O'DELL: Okay. Sure. 19 Had you finished your answer 20 before the second question was 21 asked? 22 THE WITNESS: No. 23 MS. O'DELL: Okay. You may 24 finish.</p>	<p>1 studies out of Mossman's laboratories, 2 they used asbestos, they used talc that 3 contained nonfibrous talc. 4 Q. Do you have an opinion on 5 whether there is talc without asbestos? 6 MS. O'DELL: Object to the 7 form. 8 THE WITNESS: In many of the 9 documents from Johnson & Johnson, 10 they measured fibrous talc as well 11 as other forms, non-asbestiform, 12 and they -- they found that there 13 were samples, individual samples 14 that they reported as 15 nondetectable as having 16 asbestiform talc. 17 BY MR. HEGARTY: 18 Q. Well, do you have an opinion 19 of whether there is talc without 20 asbestos? 21 A. It depends where -- where 22 it's mined. If it's mined in an area 23 where people were extremely cautious, 24 there could be.</p>

68 (Pages 266 to 269)

Judith Zelikoff, Ph.D.

Page 270	Page 272
<p>1 Q. Did you do analysis of 2 biologic plausibility for talc without 3 asbestos? 4 MS. O'DELL: Objection to 5 form. 6 THE WITNESS: My biological 7 assessment, my -- my biological 8 plausibility was looking at the 9 entire product of talcum powder. 10 BY MR. HEGARTY: 11 Q. And how do you define the 12 entire product? 13 A. The entire product is 14 whatever are the ingredients or listed 15 within the documents or the test results 16 from Imerys that -- that indicate what 17 they measured, including the metals, the 18 asbestos, the -- the asbestiform fibers, 19 the fragrances. 20 Q. So you did your biologic 21 plausibility analysis with -- based on 22 talc that has asbestos, heavy metals and 23 fragrance in it, correct? 24 MS. O'DELL: Objection to</p>	<p>1 sure how that would be done or I 2 don't think it could be done. 3 What I did was I did it for 4 the entire product. 5 BY MR. HEGARTY: 6 Q. And what do you -- what do 7 you think -- what is your opinion -- 8 strike that. 9 What is in the entire 10 product in your opinion? 11 A. Based upon the Johnson & 12 Johnson documents. That's where my -- 13 that's where I will tell you what is in 14 there. 15 As -- as far as the product 16 documents, it indicates that there are 17 metals, including -- not -- not totally 18 inclusive of, but to mention a few of the 19 more well-known ones, cobalt, chromium 20 and nickel. 21 There are also, according to 22 the Crowley report, there are also many 23 chemicals that make up a fragrance. And 24 there -- and in many of the samples</p>
Page 271	Page 273
<p>1 form. 2 THE WITNESS: I did my 3 biological plausibility on talcum 4 powder products. 5 I looked at individual 6 products, individual constituents 7 in adding to my -- to my report, 8 to my document. But I looked at 9 the entire product. And it is my 10 opinion that the entire product 11 causes inflammation and that 12 inflammation then goes on as a 13 triggering mechanism to turn on 14 certain genes and to bind iron 15 that can lead to the changes 16 needed for cancer in the ovary. 17 BY MR. HEGARTY: 18 Q. You did not do a separate 19 analysis of talc without asbestos or 20 without -- and without heavy metals and 21 without fragrance, correct? 22 MS. O'DELL: Object to the 23 form. 24 THE WITNESS: I'm not even</p>	<p>1 tested, there was asbestos or asbestiform 2 fibers, some of which were called fibrous 3 talc, others were called asbestiform and 4 others in which they were called asbestos 5 fibers, or amphiboles or anthophyllite. 6 Q. Did you review all the 7 test -- 8 A. Anthophyllite. 9 Q. I'm sorry. 10 Did you review all the 11 testing documents produced by Johnson & 12 Johnson and Imerys in this case? 13 A. I reviewed the documents 14 that are in the production document black 15 binder to my right. 16 Q. Those were provided to you 17 by plaintiffs' counsel, correct? 18 A. That is correct. 19 Q. Did you ask them if they 20 provided to you all testing documents 21 that had been produced in this case with 22 regard -- by Johnson & Johnson and 23 Imerys? 24 A. I did not ask that question</p>

69 (Pages 270 to 273)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 274</p> <p>1 specifically.</p> <p>2 Q. Do you know whether there</p> <p>3 are additional documents of tests --</p> <p>4 documents describing tests that were done</p> <p>5 by Johnson & Johnson and/or Imerys with</p> <p>6 regard to asbestos, heavy metals,</p> <p>7 fragrances and talc?</p> <p>8 MS. O'DELL: Object to form.</p> <p>9 THE WITNESS: Plaintiff</p> <p>10 counsels and myself did talk about</p> <p>11 that, some of that information,</p> <p>12 and --</p> <p>13 MS. O'DELL: Doctor,</p> <p>14 don't -- in terms of our</p> <p>15 conversations --</p> <p>16 THE WITNESS: I'm sorry.</p> <p>17 MS. O'DELL: -- those</p> <p>18 conversations are our work</p> <p>19 product.</p> <p>20 But to the degree that your</p> <p>21 answer doesn't depend on our</p> <p>22 conversations, you may -- you may</p> <p>23 answer.</p> <p>24 THE WITNESS: I -- I made it</p>	<p style="text-align: right;">Page 276</p> <p>1 not present.</p> <p>2 Q. You relied on plaintiffs'</p> <p>3 counsel to select for you the testing</p> <p>4 documents that you reviewed, correct?</p> <p>5 A. I -- I read and reviewed</p> <p>6 whatever they sent me.</p> <p>7 Q. And did you do anything to</p> <p>8 verify that you had all the documents</p> <p>9 regarding the testing of Johnson's Baby</p> <p>10 Powder?</p> <p>11 A. I did nothing personally</p> <p>12 other than ask the -- the attorneys if</p> <p>13 there was anything else I needed in</p> <p>14 forming my opinion. In -- of production</p> <p>15 documents, if we're just referring to</p> <p>16 that.</p> <p>17 I have no access to</p> <p>18 production documents on my own or through</p> <p>19 the internet. And I know none of the</p> <p>20 other deposees.</p> <p>21 Q. Did you do a comparison of</p> <p>22 biologic plausibility across various</p> <p>23 brands of talcum powder products?</p> <p>24 A. I did not personally do any</p>
<p style="text-align: right;">Page 275</p> <p>1 clear that I would like to see</p> <p>2 documents that could go into my</p> <p>3 assessment of biological</p> <p>4 plausibility.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. Would you like to see</p> <p>7 documents showing that there is no</p> <p>8 asbestos in talcum powder, in particular</p> <p>9 Johnson's Baby Powder?</p> <p>10 A. I will review any documents</p> <p>11 that are provided to me, if asked to</p> <p>12 review them.</p> <p>13 Q. Did you ask plaintiffs'</p> <p>14 counsel to provide you documents of</p> <p>15 testing showing no asbestos in Johnson's</p> <p>16 Baby Powder?</p> <p>17 A. Many of those -- of the</p> <p>18 documents that are in the product</p> <p>19 production document show that there are</p> <p>20 samples that do not contain asbestos, or</p> <p>21 I will say asbestiform or talc fibers.</p> <p>22 So there is information in there showing</p> <p>23 when there is -- it is present and</p> <p>24 information in there showing when it was</p>	<p style="text-align: right;">Page 277</p> <p>1 of that. However many of the documents</p> <p>2 and many of the studies including the</p> <p>3 Longo supplement did compare, for</p> <p>4 example, I think I misspoke when I said</p> <p>5 one of the places that Johnson & Johnson</p> <p>6 gets their talc is Korea. What I meant</p> <p>7 was China. I should have said Asia. So</p> <p>8 Korea is also a mine that provided, but</p> <p>9 not to Johnson & Johnson.</p> <p>10 MS. O'DELL: Hey, Mark,</p> <p>11 we've been going about an hour and</p> <p>12 15 minutes.</p> <p>13 MR. HEGARTY: Okay.</p> <p>14 MS. O'DELL: Can we take a</p> <p>15 break?</p> <p>16 MR. HEGARTY: Yeah.</p> <p>17 THE VIDEOGRAPHER: The time</p> <p>18 is 2:27 p.m. Off the record.</p> <p>19 (Short break.)</p> <p>20 THE VIDEOGRAPHER: We are</p> <p>21 back on the record. The time is</p> <p>22 2:45 p.m.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Doctor, if evidence was that</p>

70 (Pages 274 to 277)

Judith Zelikoff, Ph.D.

Page 278	Page 280
<p>1 there is no asbestos in Johnson's Baby 2 Powder, would that change your opinions 3 as to biological plausibility? 4 A. No, sir, it would not. 5 Q. Same question with regard to 6 heavy metals. If there were no heavy 7 metals in Johnson's Baby Powder, would 8 that change your opinions on biological 9 plausibility? 10 A. I looked at the entire 11 product and it would not -- it would not 12 change my opinion, as it exists 13 currently, with biological plausibility 14 that it would cause ovarian cancer 15 through -- through inflammation, is my 16 opinion. 17 Q. In looking at your heavy 18 metals section, beginning at Page 8 of 19 your report -- are you there? 20 A. I'm not. I had to put my 21 glasses on. Thank you. 22 Q. There are no studies that 23 have looked at the effects of these 24 metals in powder dusted on the perineum,</p>	<p>1 ludicrous actually. 2 Q. None of the studies that you 3 cite in your heavy metals section link 4 the exposures that you discussed to 5 ovarian cancer risk, correct? 6 THE WITNESS: I'm sorry. 7 This is not coming up. 8 (Whereupon, a discussion was 9 held off the stenographic record.) 10 THE WITNESS: They -- the 11 studies that I list for the 12 individual metals talk about the 13 potential inflammatory and 14 carcinogenic potential of those 15 particular metals. And based on 16 the Crowley report, there are, and 17 other production documents from 18 Johnson & Johnson, they list three 19 particular metals that are 20 associated with Johnson & Johnson 21 products, cobalt, nickel and 22 chromium. 23 BY MR. HEGARTY: 24 Q. That was not my question.</p>
Page 279	Page 281
<p>1 correct? 2 A. Your question is there are 3 no studies looking at these individual 4 metals? 5 Q. Correct? 6 A. Perineal studies in the 7 ovarian -- 8 Q. No, my question is, there 9 are no studies that looked at the effects 10 of these metals in powder dusted on the 11 perineum, correct? 12 A. I'm not sure I understand 13 your question. 14 Q. You don't cite any studies 15 that have looked at the effect of 16 applying these metals to the perineum, 17 correct? 18 A. To my knowledge, there are 19 no specific animal studies that show 20 nickel was applied to the perineal. 21 Q. There are no human studies 22 either, correct? 23 A. To my knowledge, there are 24 no human studies. That would be</p>	<p>1 My question is, none of the studies that 2 you cite -- 3 A. On the -- 4 Q. -- in your section on heavy 5 metals, evaluate ovarian carcinogenicity 6 potentials of these metals, correct? 7 MS. O'DELL: Object to the 8 form. 9 THE WITNESS: I do not talk 10 about ovarian cancer in particular 11 relation to these three metals 12 that I cited -- 13 BY MR. HEGARTY: 14 Q. No studies -- 15 A. -- in the report. 16 Q. -- that you cite refer to 17 risk of ovarian cancer with exposure to 18 these metals, correct? 19 A. With my charge being 20 biological plausibility, I thought that 21 it was my opinion -- my professional 22 opinion is that it was more important to 23 discuss the potential for inflammatory 24 responsiveness and carcinogenic</p>

71 (Pages 278 to 281)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 282</p> <p>1 potential.</p> <p>2 Q. Doctor, you don't cite any</p> <p>3 studies that look at -- look at the</p> <p>4 ovarian carcinogenicity potential of any</p> <p>5 of these metals, correct?</p> <p>6 MS. O'DELL: Object to form.</p> <p>7 THE WITNESS: Not in my</p> <p>8 report.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. What are the exposure levels</p> <p>11 of these metals necessary to have</p> <p>12 biologic plausibility of ovarian cancer?</p> <p>13 A. As far as biological</p> <p>14 plausibility of these metals, these</p> <p>15 metals are -- unless there are particular</p> <p>16 standards for a particular metal, nothing</p> <p>17 is really established for what it would</p> <p>18 take for nickel to cause ovarian cancer.</p> <p>19 However, the ability of</p> <p>20 these metals to produce inflammation are</p> <p>21 very, very low levels. And if they</p> <p>22 produce inflammation, then they have the</p> <p>23 potential to go on to produce cancer.</p> <p>24 And many of these metals do.</p>	<p style="text-align: right;">Page 284</p> <p>1 them.</p> <p>2 Q. Did you find any?</p> <p>3 A. Again, the purpose of</p> <p>4 writing this section on heavy metals had</p> <p>5 to do with bringing out the inflammatory</p> <p>6 and the biological plausibility that in</p> <p>7 my mind is linked to talc and ovarian</p> <p>8 cancer.</p> <p>9 Q. Doctor, listen to my</p> <p>10 question. Did you find any studies</p> <p>11 reporting on a risk of ovarian cancer</p> <p>12 with exposure to any of those metals?</p> <p>13 MS. O'DELL: Objection to</p> <p>14 form.</p> <p>15 THE WITNESS: I found in</p> <p>16 cobalt, but it does not have to do</p> <p>17 with ovarian cancer, but I did</p> <p>18 find that the absorption of cobalt</p> <p>19 is much higher in women than in</p> <p>20 men. And that many of these</p> <p>21 studies show that you have</p> <p>22 increased proliferation. And as I</p> <p>23 said, mine was -- my question that</p> <p>24 I needed to address was biological</p>
<p style="text-align: right;">Page 283</p> <p>1 Q. Well, none of these studies</p> <p>2 report a threshold level of exposure to</p> <p>3 cobalt, chromium, or nickel to increase</p> <p>4 the risk of ovarian cancer, correct?</p> <p>5 MS. O'DELL: Object to the</p> <p>6 form.</p> <p>7 THE WITNESS: That was not</p> <p>8 the purpose of my writing.</p> <p>9 My -- my writing was to</p> <p>10 exemplify the carcinogenic</p> <p>11 potential and the inflammatory and</p> <p>12 some of the human health effects</p> <p>13 that are commonly seen. Ovarian</p> <p>14 cancer is not that common. And so</p> <p>15 it's not unusual that other --</p> <p>16 that ovarian cancer was not looked</p> <p>17 into in some of these studies.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. Well, you found no studies</p> <p>20 looking at exposure to any of those</p> <p>21 metals and risk of ovarian cancer,</p> <p>22 correct?</p> <p>23 A. It's not that I didn't find</p> <p>24 any. I wasn't particularly looking for</p>	<p style="text-align: right;">Page 285</p> <p>1 plausibility.</p> <p>2 So I did find many of these</p> <p>3 factors, many of these metals, all</p> <p>4 of these metals have the potential</p> <p>5 to produce the changes that are in</p> <p>6 the carcinogenic process.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. I'm going to ask the</p> <p>9 question one more time. And if we don't</p> <p>10 get an answer I'm going to call Judge</p> <p>11 Pisano.</p> <p>12 Cite for me, which study did</p> <p>13 you find that linked exposure to these</p> <p>14 metals to ovarian cancer?</p> <p>15 MS. O'DELL: Objection to</p> <p>16 the form.</p> <p>17 Dr. Zelikoff has answered</p> <p>18 your question multiple times.</p> <p>19 But you may answer it again.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. Let me ask it differently.</p> <p>22 Did you find any studies reporting on a</p> <p>23 risk of ovarian cancer with exposure to</p> <p>24 any of these metals, that being cobalt,</p>

72 (Pages 282 to 285)

Judith Zelikoff, Ph.D.

Page 286	Page 288
<p>1 chromium, or nickel?</p> <p>2 A. I was not looking</p> <p>3 specifically for that. So, no, I did not</p> <p>4 find that.</p> <p>5 Q. Which of the studies that</p> <p>6 you report show that the exposure levels</p> <p>7 evaluated in those studies are in any way</p> <p>8 related to human exposure levels through</p> <p>9 Johnson's Baby Powder?</p> <p>10 MS. O'DELL: Object to the</p> <p>11 form.</p> <p>12 THE WITNESS: Are you</p> <p>13 talking about inhalation or</p> <p>14 perineal application?</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Either method of exposure.</p> <p>17 A. So many of the inhalation</p> <p>18 numbers are concentrations, and looking</p> <p>19 at the Johnson & Johnson documents in</p> <p>20 terms of what is in the head and in the</p> <p>21 face area after diapering as well as</p> <p>22 during powdering, indicates that the</p> <p>23 concentrations that are possibly inhaled</p> <p>24 contain particles that can initiate a</p>	<p>1 of these metals in terms of parts</p> <p>2 per million, whatever talc reached</p> <p>3 there, there's -- there is a</p> <p>4 strong potential that that amount</p> <p>5 of the concentration of the metal</p> <p>6 would also reach the target organ.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. That's not my question,</p> <p>9 Doctor.</p> <p>10 How much nickel, cobalt and</p> <p>11 chromium reached the ovary with a single</p> <p>12 application of Johnson's Baby Powder to</p> <p>13 the perineum?</p> <p>14 A. I don't have -- that</p> <p>15 information is not available.</p> <p>16 They did show in studies, in</p> <p>17 a few studies, I think it was the</p> <p>18 Hamilton study that -- or Henderson</p> <p>19 study -- that there -- talc indeed does</p> <p>20 reach the ovary from perineal application</p> <p>21 or from intravaginal application. And</p> <p>22 whatever is -- whatever the concentration</p> <p>23 is that reached the ovary, carried with</p> <p>24 it these -- one -- one or more or all of</p>
Page 287	Page 289
<p>1 response.</p> <p>2 Also, from looking at the</p> <p>3 Johnson & Johnson documents, many of</p> <p>4 those results indicate -- and I think we</p> <p>5 have an exhibit here of the table of the</p> <p>6 concentrations that were found.</p> <p>7 Well, it's not at my local</p> <p>8 fingertips here. But --</p> <p>9 MS. O'DELL: Are you looking</p> <p>10 for Exhibit C, Doctor, I think</p> <p>11 it's right there with -- on</p> <p>12 your -- on your paper clip.</p> <p>13 MR. HEGARTY: Let me</p> <p>14 withdraw the question.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Doctor, how much nickel,</p> <p>17 cobalt and chromium reach the ovary with</p> <p>18 one application of Johnson's Baby Powder</p> <p>19 to the perineum?</p> <p>20 MS. O'DELL: Object to the</p> <p>21 form.</p> <p>22 THE WITNESS: Since much of</p> <p>23 the -- since Johnson's Baby Powder</p> <p>24 has a high concentrations of some</p>	<p>1 these three metals.</p> <p>2 Q. You agree --</p> <p>3 A. So it was a similar</p> <p>4 concentration.</p> <p>5 Q. You agree that all of the</p> <p>6 metals you talk about are in -- are all</p> <p>7 around us, they are in food, correct?</p> <p>8 A. The metals nickel, chromium,</p> <p>9 cobalt can be in food, yes.</p> <p>10 Q. They are in the air,</p> <p>11 correct?</p> <p>12 A. They are in certain ambient</p> <p>13 environments.</p> <p>14 Q. These are metals that are</p> <p>15 considered ubiquitous, correct?</p> <p>16 MS. O'DELL: Objection to</p> <p>17 the form.</p> <p>18 THE WITNESS: They are --</p> <p>19 chromium not as much -- I'm sorry,</p> <p>20 cobalt not as much. But chromium</p> <p>21 and nickel, they are in the air,</p> <p>22 and depending upon the environment</p> <p>23 that is producing it, if you go to</p> <p>24 Sundre, Canada, you can have lots</p>

73 (Pages 286 to 289)

Judith Zelikoff, Ph.D.

Page 290	Page 292
<p>1 of nickel in the air. But if you 2 go to New York City, concentrate 3 as we've measured in my laboratory 4 prior to this deposition, or prior 5 to this case, my involvement in 6 this case, you will see very small 7 concentrations of nickel. There 8 should not be a lot in the air. 9 And we also measured 10 chromium, and it should not be -- 11 unless you have a polluted 12 environment there should not be a 13 lot of these metals in the air. 14 BY MR. HEGARTY: 15 Q. Is the metal are not -- the 16 metals that are in the air, nickel and 17 chromium, sufficient to have biologic 18 plausibility between those metals and 19 ovarian cancer? 20 A. Those -- those metals, yes, 21 the metals in the air can cause an 22 inflammatory response. The 23 concentrations of the metals in the air 24 can cause an inflammatory response and</p>	<p>1 Q. Did you do an analysis 2 yourself of Johnson's Baby Powder for the 3 presence of these heavy metals? 4 A. I did not do any 5 instrumentation studies measuring the 6 amount. I -- I relied on the documents. 7 Q. But you are capable of doing 8 that analysis, correct? 9 A. We are capable, in my 10 laboratory, along with colleagues, of 11 measuring by XRF, x-ray fluorescence, and 12 by ICP mass spec, measuring the amounts 13 of metals in tissues, correct. 14 Q. But you did not do that 15 testing here, correct? 16 A. My job was to define 17 biological plausibility based upon 18 literature, relevant literature and 19 documents, internal documents. 20 Q. Nowhere in your report do 21 you identify the exposure levels of any 22 of these metals that are necessary to 23 cause ovarian cancer, correct? 24 MS. O'DELL: Objection to</p>
Page 291	Page 293
<p>1 can start processes and change gene 2 expression within cells. 3 Q. Cite for me any study that 4 shows that inflammatory response has ever 5 occurred in the ovary. 6 MS. O'DELL: Objection to 7 form. 8 THE WITNESS: There are 9 granulomas that have been found in 10 animal studies of -- in the lung. 11 You are talking about in the 12 ovary, I understand that. 13 BY MR. HEGARTY: 14 Q. I'm talking about the 15 studies that have not looked at talc, but 16 have looked at cobalt, chromium -- 17 A. Okay. 18 Q. -- nickel and cobalt without 19 regard to talc, cite for me any studies 20 that have shown that those metals have 21 caused inflammation in the ovary? 22 A. By themselves, there are no 23 studies that demonstrate that, that I'm 24 aware of.</p>	<p>1 form. Asked and answered. 2 THE WITNESS: There is no 3 literature that says you need one 4 particle or ten particles. 5 The inflammatory response 6 that nickel causes is extremely 7 well established, even at very low 8 concentrations. And -- and the 9 same is true for hexavalent 10 chromium and for chromium, 11 trivalent chromium. 12 BY MR. HEGARTY: 13 Q. Are there any studies that 14 report on exposure of these metals to the 15 ovaries? 16 A. Are you talking about alone? 17 Q. Individually or together, 18 but the metals themselves. 19 A. Just the metals -- 20 MS. O'DELL: Object -- 21 objection to form. 22 THE WITNESS: These metals 23 by themselves have been tested 24 extensively in cells and in -- in</p>

74 (Pages 290 to 293)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 294</p> <p>1 animals to produce inflammation, 2 to change the epigenome of the 3 cells, to change gene expression. 4 And there was no -- there was no 5 reason to believe whether or not 6 there are specific studies 7 associated with the ovary. There 8 are no reason to believe that it 9 would not do the same effects in 10 cells as well as in the ovary, in 11 the lung, and the kidney and the 12 liver. 13 BY MR. HEGARTY: 14 Q. Doctor, you are not aware of 15 any studies that have looked at the 16 effects of these metals on human ovarian 17 cells, correct? 18 MS. O'DELL: Object to the 19 form. 20 THE WITNESS: Again, I'm not 21 an epidemiologist, so -- and I'm 22 not a clinical toxicologist. So I 23 will have to stand by the -- the 24 data that I do know in -- in</p>	<p style="text-align: right;">Page 296</p> <p>1 form. 2 THE WITNESS: The exposures 3 are similar, or can be similar. 4 But as I stated before, for 5 these metals as well as for 6 asbestiform fibers, all it takes 7 is a small amount, if not just one 8 fiber, to cause the response and 9 to start the process of 10 inflammation, gene expression, 11 upregulation of genes that are 12 associated with biological 13 mediators, proinflammatory 14 cytokines. 15 BY MR. HEGARTY: 16 Q. Yet you cite no study that 17 reports that response in human ovarian 18 cells, correct? 19 MS. O'DELL: Object to the 20 form. 21 THE WITNESS: I -- if you're 22 still talking about individual 23 metals, no. 24 But if you're talking about</p>
<p style="text-align: right;">Page 295</p> <p>1 extensive -- have extensive 2 knowledge of. And that's human ex 3 vivo and in vitro studies. And I 4 am not aware. 5 That is not to say that they 6 are not out there. And I 7 especially do not know about the 8 humans, because I focus as a 9 toxicologist. I'm an animal 10 toxicologist. 11 BY MR. HEGARTY: 12 Q. Did you do any comparison 13 between the doses of -- of the metals 14 reported in the studies that you cited to 15 those in women using talc? 16 A. I did no calculations on -- 17 on my own. 18 Q. Did you do any calculations 19 that tested these metals in animals to 20 determine what the -- that -- that they 21 relate in any way to the dose that a 22 human would experience through Johnson's 23 Baby Powder use? 24 MS. O'DELL: Objection to</p>	<p style="text-align: right;">Page 297</p> <p>1 in vitro studies like those of 2 Saed who looked for oxidative 3 stress and -- and prooxidant 4 changes, and if you are talking 5 about Shukla study who also looked 6 at ovarian cells, human ovarian 7 cells, and looked at changes in 8 gene expression associated with 9 oxidant production and reactive 10 oxygen species production, then 11 yes, in cell culture using human 12 ovarian epithelial cells, because 13 that's what we are talking about 14 here. 15 BY MR. HEGARTY: 16 Q. None of those studies 17 applied nickel to human ovarian cells, 18 did they? 19 A. No, they did not. 20 Q. None of those studies 21 applied cobalt to human ovarian cells, 22 correct? 23 A. No, they did not. 24 Q. None of those studies</p>

75 (Pages 294 to 297)

Judith Zelikoff, Ph.D.

Page 298	Page 300
<p>1 applied chromium to ovarian -- human 2 ovarian cells, correct? 3 A. Correct. But what we're 4 talk -- what I'm talking about and the 5 basis of my opinion is the product in its 6 entirety, not breaking it down to 7 individual constituents. 8 Q. Is it necessary for purposes 9 of your biologic plausibility opinion 10 that talc reach the ovary? 11 A. Not necessarily. 12 Talc does -- talc and any 13 other particle does not have to reach the 14 site of deposition. They can, and -- and 15 do, I believe that they not only migrate 16 to an area and they can get to an area 17 and then cause inflammation which then 18 can be -- the cytokines where there's 19 tumor necrosis factor, interleukin-1, or 20 any of the other proinflammatory 21 cytokines can then get to the air, the 22 site of this -- this target organ. 23 So you do not have to have, 24 in particle toxicology and in talc</p>	<p>1 target site, let's say in the case 2 of inhalation or in the case of 3 direct application to the perineal 4 area, you will have the process of 5 impacting with those cells and 6 generating cell mediated reactions 7 and immunological reactions and 8 inflammatory responses. 9 And those inflammatory 10 responses and those reactive 11 oxygen species, except for 12 hydrogen peroxide which can't 13 travel a far distance, can get 14 into -- can and do get into the 15 blood circulation and then can 16 reach distant organs. 17 BY MR. HEGARTY: 18 Q. Cite for me any published 19 authority that says that inflammation in 20 the lungs will cause inflammation in the 21 ovaries. 22 MS. O'DELL: Object to the 23 form. Misstates her testimony. 24 THE WITNESS: To that</p>
Page 299	Page 301
<p>1 toxicology, you do not have to have the 2 presence. Although, in early studies 3 they have found talc particles not only 4 in the ovary, but also in the lymph 5 node -- in the lymphatics that drain the 6 ovary. 7 Q. Cite for me any study that 8 has reported inflammation in the ovaries 9 from inflammation of -- due to a particle 10 in the lung -- strike that. 11 Is it your contention that 12 inflammation in the lung due to a 13 particle will cause inflammation in the 14 ovaries? 15 MS. O'DELL: Objection to 16 form. 17 THE WITNESS: I'm telling 18 you that -- 19 MS. O'DELL: Go ahead. 20 THE WITNESS: -- there's 21 biological plausibility to suggest 22 that. 23 When you have a particle 24 coming in and going to a local</p>	<p>1 specific question, no. But I 2 can -- I can cite you many studies 3 that show in terms of other 4 particles for the lungs that has 5 been shown to cause inflammation 6 in other areas. 7 For example, in the case of 8 Ghio and other investigators, you 9 will find inflammation not only in 10 the blood by the measurement of 11 cytokines in the blood, even 12 though the first target organ was 13 the -- was the lungs. 14 Also, if you look at 15 obesity, obesity is a pro-oxidant 16 state, and that can generate -- 17 the reason obesity causes other 18 health effects is because it's a 19 big mass of inflammation. And the 20 inflammation in that particular 21 site of all those fatty cells, 22 they can release inflammatory 23 mediators that go all over. And 24 that literature is out there.</p>

76 (Pages 298 to 301)

Judith Zelikoff, Ph.D.

Page 302	Page 304
<p>1 BY MR. HEGARTY: 2 Q. So is it your opinion for 3 purposes of your biological 4 plausibility -- strike that. 5 Is it -- is your biological 6 plausibility opinion that talc inhaled 7 and in the lungs causes inflammation in 8 the ovaries that can lead to ovarian 9 cancer? 10 A. There's plausibility for 11 that, yes. 12 Q. And can you cite for me any 13 published authority that says that talc 14 inhaled in the lungs will cause 15 inflammation in the ovaries that can lead 16 to ovarian cancer? 17 A. There's multiple parts of 18 that question. 19 Q. That's a very specific 20 question to that very specific subject 21 area. Can you cite to me any published 22 literature that says that? 23 MS. O'DELL: Would you mind 24 repeating the full question or</p>	<p>1 cadmium. 2 Q. So in other words a lot of 3 particles besides talc, according to you, 4 can cause inflammation of the lungs, 5 correct? 6 A. Many do. There are others 7 that do not, like titanium dioxide which 8 were used in many studies as a control. 9 Q. And those nanoparticles, 10 those air particles -- 11 A. In fact -- 12 Q. -- those diesel particles. 13 A. I'm sorry. 14 Q. Okay. And those 15 nanoparticles, those diesel particles, 16 air particles that can cause inflammation 17 in the lungs, will also cause 18 inflammation in the ovaries, correct? 19 MS. O'DELL: Objection to 20 form. 21 THE WITNESS: I said they 22 will cause inflammation 23 systemically. I did not indicate 24 the ovaries.</p>
Page 303	Page 305
<p>1 read it. 2 THE WITNESS: Any published 3 authority that says that -- that 4 says that talc inhaled in the 5 lungs will cause inflammation in 6 the ovaries that can lead to 7 ovarian cancer. 8 For that particular, and 9 that specific of a question, I 10 cannot cite you. 11 BY MR. HEGARTY: 12 Q. You have published 13 extensively on particulates in the air 14 causing inflammation in the lungs, 15 correct? 16 A. In the lungs and 17 systemically. 18 Q. And those particulates 19 include? 20 A. Air particulates; 21 particulate matter, called PM, ambient 22 PM; diesel exhaust particles. I'm also 23 going to go to my CV. Nanoparticles, 24 metal nanoparticles, specifically</p>	<p>1 BY MR. HEGARTY: 2 Q. Well, there's no -- there's 3 nothing unique about talc particles 4 versus the other particles you mentioned, 5 correct? 6 MS. O'DELL: Object to form. 7 THE WITNESS: Size, chemical 8 composition, they -- they -- 9 particles -- particles are -- they 10 can -- they can be different and 11 they can be the same. So many 12 studies use model particles to 13 look at a negative effect like in 14 the Shukla study where they used 15 titanium dioxide particles of a 16 similar size in their -- as a 17 control and got no gene expression 18 changes. 19 Particles in the air, if 20 you're looking at -- there are 21 many factors that go into how a 22 particle behaves, including size, 23 including composition, including 24 morphology.</p>

77 (Pages 302 to 305)

Judith Zelikoff, Ph.D.

Page 306	Page 308
<p>1 BY MR. HEGARTY: 2 Q. Well, by your methodology, 3 any particle inhaled that causes 4 inflammation in the lungs is biologically 5 plausible, can lead to ovarian cancer, 6 correct? 7 MS. O'DELL: Object to form. 8 THE WITNESS: No, it can -- 9 sorry. It can lead to 10 inflammation systemically. 11 BY MR. HEGARTY: 12 Q. That can lead to ovarian 13 cancer, correct? 14 A. Inflammation -- 15 MS. O'DELL: Object to the 16 form. 17 Go ahead. 18 THE WITNESS: Sorry. 19 MS. O'DELL: Sorry. 20 THE WITNESS: Inflammation 21 is responsible for -- in my 22 opinion, is the underlying 23 mechanism, a key underlying 24 mechanism for the association for</p>	<p>1 same inflammation that you believe that 2 talc does, correct? 3 A. Inflammation is 4 characterized by certain key components. 5 Inflammation -- whether it's an 6 inflammation in the ovary or an 7 inflammation in the lung or inflammation 8 in the kidney, inflammation is an immune 9 response. And it's going to involve key 10 cells, including the macrophage, the 11 neutrophil, the natural killer cell, all 12 of which can produce reactive oxygen 13 species -- well, primarily the 14 macrophages and neutrophils produce 15 oxygen radicals. 16 However, the natural killer 17 cell, they all produce cytokines, which 18 can produce inflammation. So 19 inflammation is characterized by the same 20 components. 21 Q. And you can't cite for me 22 any different components of the 23 inflammation caused by cadmium as you 24 believe the inflammation that is caused</p>
Page 307	Page 309
<p>1 ovarian cancer, yes. 2 BY MR. HEGARTY: 3 Q. And that mechanism can be 4 initiated by any particle inhaled into 5 the lungs, correct? 6 A. No, it's -- 7 MS. O'DELL: Objection to 8 form. 9 THE WITNESS: Sorry. 10 Well, as -- again, as I 11 stated, it depends on the -- it 12 depends on the particle. For 13 example, titanium dioxide will not 14 produce inflammation in the lungs. 15 However, other particles, many 16 other particles, including 17 cadmium, cadmium oxide particles 18 do cause inflammation, as well as 19 asbestos does, as well as talc has 20 been shown to. 21 They can all produce 22 inflammation or oxidative stress. 23 BY MR. HEGARTY: 24 Q. Cadmium particles induce the</p>	<p>1 by talc, correct? 2 A. When I measured inflammatory 3 responses to the inhalation of cadmium 4 nanoparticles, I looked for the standard 5 inflammatory markers. So I measured in 6 the lung and in the circulation. I 7 measured the percentages of neutrophils, 8 which is a key indicator, key criteria 9 for inflammation. I determined 10 macrophage numbers as well as function in 11 terms of their ability to phagocytose, in 12 their ability to produce reactive oxygen 13 species. And I looked for lung injury, 14 as measured by lactose, lactate 15 dehydrogenase. 16 So when one looks for 17 inflammation in the body, whether it's an 18 animal or a human, C-reactive protein, 19 you are going to be looking for all the 20 same markers. 21 Q. You identified, based on 22 your opinion, no difference in the 23 inflammation caused by talc and the 24 inflammation caused by cadmium, correct?</p>

78 (Pages 306 to 309)

Judith Zelikoff, Ph.D.

Page 310	Page 312
<p>1 A. I did not do talc inhalation 2 in my laboratory. The studies 3 indicate -- looked for the same thing. 4 They look for changes in gene expression 5 of activating transcription factors. 6 They did in the Shukla study. 7 They look for the percentage 8 of neutrophils. They look for macrophage 9 activation. We all look at the same 10 thing when coming to the conclusion of 11 inflammation. 12 Q. And according to you, talc 13 and cadmium act similarly with regard to 14 inducing inflammation in the lungs? 15 MS. O'DELL: Objection to 16 form. 17 THE WITNESS: Do they act 18 similarly? Well, I think I 19 answered that question. 20 Inflammation is -- is the -- 21 inflammation is modified by the 22 same components, the same soluble 23 factors, the same cell type 24 factors, including macrophages and</p>	<p>1 because I haven't investigated 2 that literature. 3 But inflammation -- 4 inflammation doesn't change. It 5 can get out of the particular 6 local organ. I don't think that 7 cadmium has been investigated in 8 terms of the ovary. It's 9 certainly been investigated in 10 terms of the kidney, which is 11 local -- which is systemically a 12 distant organ from the local 13 target, which is the lung. And it 14 can cause inflammation in the 15 kidney. 16 BY MR. HEGARTY: 17 Q. You haven't identified any 18 differences between the inflammation 19 caused by other particulates and the 20 inflammation caused by talc, correct? 21 MS. O'DELL: Objection to 22 form. 23 THE WITNESS: Inflammation 24 is inflammation.</p>
Page 311	Page 313
<p>1 neutrophils, dendritic cells, 2 whatever. So inflammation, 3 whether it's acute or chronic 4 inflammation used the same 5 parameters. 6 We call inflammation -- we 7 call inflammation when you -- in a 8 tissue or in organs when you see 9 these characteristics. And we say 10 these are markers indicative. 11 These are pathologies 12 indicative -- these are -- of an 13 inflammatory response. 14 BY MR. HEGARTY: 15 Q. So according to your 16 opinion, that's biologic plausibility 17 between cadmium exposure and ovarian 18 cancer? 19 MS. O'DELL: Objection to 20 form. 21 THE WITNESS: I would have 22 to do more research on that to be 23 able to say that. I would not say 24 biological plausibility, only</p>	<p>1 BY MR. HEGARTY: 2 Q. You referred to fragrances. 3 A. I'm sorry. Could you give 4 me a page? 5 Q. Over on Page 12. You cite 6 to a single study that discusses what 7 exposure levels of these fragrances have 8 been shown to induce a biologically 9 plausible effect in the ovary. 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: Many of these 13 fragrances, many of these 14 chemicals within a specific 15 fragrance, it can consist of maybe 16 150 or even more chemicals within 17 any one given fragrance. Many of 18 them have been shown to cause 19 inflammation. 20 BY MR. HEGARTY: 21 Q. Have any of the chemicals in 22 the fragrances that you looked at been 23 reported in the medical literature to 24 induce inflammation in the ovaries?</p>

79 (Pages 310 to 313)

Judith Zelikoff, Ph.D.

Page 314	Page 316
<p>1 A. No one specifically -- to my 2 knowledge, no one specifically looked at 3 inflammation in the ovaries. But again, 4 if you go back to the idea of 5 inflammation being caused by a particle 6 at a local site and then having the 7 potential -- or having the capacity I 8 should say, to -- to have that 9 inflammation go to a distant -- a more 10 distant site. 11 So the fact that no one has 12 looked at it does not delete the fact 13 that certainly inflammation can get to 14 distant sites, including the ovary. 15 Q. Well, what is the dose of 16 nickel or -- and cobalt and chromium 17 individually that must -- that the woman 18 must be exposed to in vivo to induce 19 inflammation in the ovaries? 20 MS. O'DELL: Object to the 21 form. Asked and answered. 22 THE WITNESS: There are -- 23 as I said, there's really -- one 24 particle, one piece can start the</p>	<p>1 metals, but there's also -- if you look 2 at nickel and it's a micronutrient, so 3 you can have very, very, very tiny 4 amounts in the body -- very tiny. And it 5 can be used as a micronutrient. 6 You can have lead, but that 7 should not be in the body at all. And 8 there is no safe level of lead. So 9 despite what the regulatory agencies say, 10 there is no safe level which is what 11 their conclusion is moving towards. 12 And -- so a metal is not a 13 metal is not a metal. 14 Now, when you look at these 15 three metals, so for example you have 16 nickel which is classified as a 1A 17 carcinogen, but -- 18 Q. I'll withdraw the question. 19 You're not -- Doctor, you're not 20 answering my question. 21 MS. O'DELL: She is 22 answering your question. 23 MR. HEGARTY: No, she is 24 not.</p>
Page 315	Page 317
<p>1 process for inflammation. 2 BY MR. HEGARTY: 3 Q. So it -- 4 A. It could be one. 5 Q. -- it's your opinion that 6 one particle of nickel will induce 7 inflammation in the ovaries? 8 MS. O'DELL: Objection. 9 BY MR. HEGARTY: 10 Q. Is that correct? 11 A. Will? I can't -- I haven't 12 gone through the literature, but could, 13 certainly. 14 Q. And what literature can you 15 cite that would say that one particle of 16 nickel could cause inflammation in the 17 ovary? 18 A. It's my professional 19 judgment being an expert toxicologist in 20 the area of metals. 21 Q. Okay. Same question as to 22 cobalt and chromium. 23 A. Well, metals can't be lumped 24 together like that. Metals are indeed</p>	<p>1 MS. O'DELL: Yes, she is. 2 And if you don't -- let her 3 finish. 4 MR. HEGARTY: Okay. 5 We'll -- we'll call Judge Pisano 6 and he'll see if we're asking the 7 question -- if she's answering the 8 question. 9 MS. O'DELL: Are you 10 threatening the witness by saying 11 that? 12 MR. HEGARTY: No, I'm 13 talking to you. We'll go off the 14 record -- 15 MS. O'DELL: No, we are not 21 going off the record. 22 MR. HEGARTY: Yes, let's go 23 off the record. 24 MS. O'DELL: If she's</p>

80 (Pages 314 to 317)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 318</p> <p>1 answering your question, she --</p> <p>2 she gets the right to finish her</p> <p>3 answer. You don't cut her off,</p> <p>4 Mark.</p> <p>5 MR. HEGARTY: Let's go off</p> <p>6 the record.</p> <p>7 MS. O'DELL: No, we're not</p> <p>8 going off the record. She's</p> <p>9 finishing her answer.</p> <p>10 MR. HEGARTY: Let's go off</p> <p>11 the record. I'm not --</p> <p>12 MS. O'DELL: And then you</p> <p>13 can ask her another question.</p> <p>14 MR. HEGARTY: Let's go off</p> <p>15 the record. It's my deposition.</p> <p>16 MS. O'DELL: No. It's your</p> <p>17 deposition, but it's not fair to</p> <p>18 mistreat this witness if she is</p> <p>19 answering your question.</p> <p>20 MR. HEGARTY: I'm not</p> <p>21 mistreating the witness.</p> <p>22 MS. O'DELL: Yes, you are.</p> <p>23 MR. HEGARTY: We'll go off</p> <p>24 the record and call Judge Pisano.</p>	<p style="text-align: right;">Page 320</p> <p>1 either inhaled or applied to the perineum</p> <p>2 will induce inflammation in the ovaries?</p> <p>3 A. It's my opinion that it</p> <p>4 could.</p> <p>5 Q. What literature do you have</p> <p>6 to support that opinion?</p> <p>7 A. My professional opinion as a</p> <p>8 toxicologist in metals with over</p> <p>9 30 years.</p> <p>10 Q. Next question. Is it your</p> <p>11 opinion that one particle of cobalt,</p> <p>12 either inhaled or applied to the</p> <p>13 perineum, will induce inflammation in the</p> <p>14 ovaries?</p> <p>15 A. Again, it's my opinion that</p> <p>16 it -- it could. It has the biological</p> <p>17 plausibility to, because inflammation,</p> <p>18 although not as toxic in many ways as</p> <p>19 it's classified as a 2B -- 2B by IARC</p> <p>20 is -- has the potential -- does cause</p> <p>21 inflammation, and that inflammation can</p> <p>22 leave the site of the target site.</p> <p>23 Q. What authority do you have</p> <p>24 for that opinion?</p>
<p style="text-align: right;">Page 319</p> <p>1 MS. O'DELL: You are</p> <p>2 mistreating the witness by not</p> <p>3 allowing her to finish her --</p> <p>4 MR. HEGARTY: I withdrew the</p> <p>5 question.</p> <p>6 MS. O'DELL: Well, okay.</p> <p>7 The with -- the question was</p> <p>8 withdrawn. Ask a question, let</p> <p>9 her --</p> <p>10 MR. HEGARTY: No, we're off</p> <p>11 the record. We're going to call</p> <p>12 Judge Pisano.</p> <p>13 MS. O'DELL: Okay. Great.</p> <p>14 THE VIDEOGRAPHER: Off the</p> <p>15 record. The time is 3:21 p.m.</p> <p>16 Off the record.</p> <p>17 (Whereupon, a discussion was</p> <p>18 held off the record.)</p> <p>19 THE VIDEOGRAPHER: We are</p> <p>20 back on the record. The time is</p> <p>21 3:23 p.m.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Dr. Zelikoff, is it your</p> <p>24 opinion that one particle of nickel</p>	<p style="text-align: right;">Page 321</p> <p>1 A. My professional opinion.</p> <p>2 Q. Is it your opinion that one</p> <p>3 particle of chromium, either inhaled or</p> <p>4 applied to the perineum, will induce</p> <p>5 inflammation in the ovaries?</p> <p>6 MS. O'DELL: Objection to</p> <p>7 the form.</p> <p>8 THE WITNESS: It depends on</p> <p>9 the form of the chromium.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. What form of chromium does</p> <p>12 it need to be?</p> <p>13 A. A trivalent chromium</p> <p>14 which -- I'm sorry, hexavalent chromium</p> <p>15 which will then get into the cell, start</p> <p>16 the process and -- and convert to</p> <p>17 chromium-3, 4 and 5.</p> <p>18 Q. That's chromium-6, correct?</p> <p>19 A. Hexavalent chromium is</p> <p>20 chromium-6, right.</p> <p>21 Q. Is it your opinion that one</p> <p>22 particle of chromium-6, either inhaled or</p> <p>23 applied to the perineum, will induce</p> <p>24 inflammation in the ovaries?</p>

81 (Pages 318 to 321)

Judith Zelikoff, Ph.D.

Page 322	Page 324
<p>1 MS. O'DELL: Objection to 2 form. 3 THE WITNESS: It could, 4 because inflammation again could 5 leave the target site. And it 6 depends on the form of the metal. 7 So we have soluble metals -- 8 I don't want to go on too long. 9 You have soluble metals and 10 insoluble metals. Some of them 11 are more toxic and more -- and 12 potentially more carcinogenic than 13 other forms. There are many salts 14 within those metals that you gave. 15 BY MR. HEGARTY: 16 Q. And what authority do you 17 have for the statement that one particle 18 of chromium, either inhaled or applied to 19 the perineum, will induce inflammation in 20 the ovaries? 21 A. My professional judgment. 22 Q. Will one particle of the 23 fragrance of the chemicals that you list 24 from the fragrances, either inhaled or</p>	<p>1 lumped. And particles oftentimes, 2 if they're different in size, if 3 they're different in chemical 4 structure, if they have iron or 5 don't have iron, you have -- you 6 may have differences. 7 BY MR. HEGARTY: 8 Q. Will one particle from 9 diesel exhaust, inhaled or applied to the 10 perineum, cause inflammation in the 11 ovary? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: Again, same 15 answer, it could. Depends on the 16 particle size, the particle type, 17 the particle morphology. And it 18 has the potential to induce 19 inflammation as shown in cells. 20 And can produce an oxidant state. 21 BY MR. HEGARTY: 22 Q. Doesn't inflammation just 23 reflect the body's normal response to the 24 presence of the particles?</p>
Page 323	Page 325
<p>1 applied to the perineum, cause 2 inflammation to the ovaries? 3 MS. O'DELL: Objection to 4 the form. 5 THE WITNESS: If -- I -- I 6 don't have the knowledge, I don't 7 have the literature knowledge to 8 answer that question. 9 BY MR. HEGARTY: 10 Q. Will one -- will one 11 particle of -- of cadmium, either inhaled 12 or applied to the perineum, cause 13 inflammation in the ovaries? 14 A. It can cause -- 15 MS. O'DELL: Objection to 16 form. You can answer. 17 THE WITNESS: It can cause 18 inflammation in the area if it's 19 inhaled in the lung and that 20 inflammation can get out 21 systemically. 22 Now it depends, again, on 23 the size of the particle. Metals, 24 as I said before, cannot be</p>	<p>1 A. There are two -- there are 2 two forms of -- well, there are multiple 3 forms of inflammation. But the two that 4 are of concern and in -- in response to 5 your question, is that they are acute 6 inflammation and there is chronic 7 inflammation. 8 And with acute inflammation, 9 the first response to a foreign -- a 10 foreign particle or an antigen on a 11 bacterial cell or an infectious agent, is 12 for the body to mount an immune response. 13 How it does that is through 14 the same cell types that I just 15 mentioned. Polymorphonucleocytes, also 16 known as neutrophil. Macrophages, and 17 those are the two key players, but 18 natural killer cells all come into it. 19 That involves the innate 20 immune system. And so the first thing to 21 protect the body, whether it's a viral 22 infection or whether it's a bacterial 23 infection or whether it's a foreign 24 particle, is to mount that kind of immune</p>

82 (Pages 322 to 325)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 326</p> <p>1 response to kill or negatively impact 2 that particular particle. 3 That will then -- that's an 4 innate immune response being active. 5 That will then, in some cases, upregulate 6 the T-cell and -- and humoral or -- and 7 cell-mediated immune response. 8 Now, that is, in terms of 9 cancers and in terms of tumors, that is 10 called immunosurveillance and that's the 11 first thing. And you're absolutely 12 right. The purpose of the immune system 13 is to protect the body. That is the 14 function. 15 However, there are three 16 stages or three types of processes for 17 the immune system in carcinogenesis. The 18 second being immuno equilibrium. But the 19 part that is the last part is that the 20 tumor can actually quiet or cause 21 immunosenescence of the immune system. 22 So in a chronic 23 inflammation, it does not always act in 24 the best interest of the -- of the host</p>	<p style="text-align: right;">Page 328</p> <p>1 inflammation. Not that they involve 2 different cell types or different 3 mechanisms. But they are called, in 4 terms of timing or temporality, acute 5 which will kill whatever right away and 6 then chronic which unfortunately keeps 7 playing back on itself and the 8 inflammation will continue. 9 Q. Granulomas which you just 10 mentioned don't cause cancer, correct? 11 A. Granulomas do not -- I'm 12 sorry. 13 Q. Granulomas which you just 14 mentioned don't cause cancer, correct? 15 A. Granulomas are in response 16 to a foreign body. In the case of 17 asbestos or in the case of another type 18 of fiber, macrophage will come over and 19 their normal process in what we call 20 innate immunity is to engulf the fiber. 21 And unfortunately, many times the fiber 22 cannot be engulfable or the particle 23 cannot be engulfable. 24 And so many macrophage will</p>
<p style="text-align: right;">Page 327</p> <p>1 but in the best interest of the tumor. 2 So your -- the answer to 3 your question is yes, that's the function 4 of it. But it can behave, it's a 5 two-prong sword. 6 Q. You said there are multiple 7 types of inflammation and you listed two 8 types: Acute and chronic. Are there any 9 other types besides those two? 10 A. Well, you have the reactions 11 to those inflammation in terms of having 12 a foreign body reaction. That is part of 13 an inflammatory response. So in terms of 14 temporality or timing, inflammation is 15 acute and is chronic. 16 What occurs during that 17 time, such as a foreign body reaction 18 where macrophages all come together and 19 engulf the particle or the fiber and try 20 to keep it within a localized space, that 21 is a process that can occur within 22 inflammation. 23 So my answer to you is that 24 there are two major types of</p>	<p style="text-align: right;">Page 329</p> <p>1 come over, and they will try to engulf it 2 as a body. And that is called a 3 granulomatous reaction. 4 And that's what happens 5 during tuberculosis when the organism 6 forms, many macrophages come over to kill 7 the organism, but it can't, and so they 8 form granulomas. 9 Q. Doctor, listen to my 10 question. I didn't ask you what a 11 granuloma was. I asked you, granulomas 12 don't cause cancer, correct? 13 MS. O'DELL: Object to form. 14 THE WITNESS: There is no 15 literature to my knowledge that 16 shows a granuloma, meaning immune 17 response, forming macrophages 18 engulfing, can cause cancer. 19 BY MR. HEGARTY: 20 Q. And a reaction to 21 inflammation can include the development 22 of fibrosis or scar tissue, correct? 23 A. That is a long-term chronic 24 response associated with chronic</p>

83 (Pages 326 to 329)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 330</p> <p>1 inflammation. 2 Q. And there's no literature 3 linking fibrosis to cancer, correct? 4 MS. O'DELL: Object to the 5 form. 6 THE WITNESS: My 7 professional opinion is that there 8 is literature -- let me just read 9 over the question, please. 10 So fibrosis is produced by 11 release of factors from the 12 macrophage. And it causes 13 scarring within that particular 14 target organ. 15 Now, whether or not that -- 16 those -- that scarring can 17 actually make that site more 18 vulnerable to cancer, like in the 19 case of hepatitis, where you get 20 scarring, and you get cancer as a 21 result of that particular 22 fibrosis, but they are two 23 different diseases. 24 But whether the area of</p>	<p style="text-align: right;">Page 332</p> <p>1 A. Fibrosis does not morph or 2 turn into cancer. That is correct. 3 Q. In Section 12 -- I'm sorry. 4 On Page 12, under your section 5 "exposure," talc particle access to the 6 body. 7 Do you see that section? 8 A. Is this Paragraph 1, 2, or 9 3? 10 Q. Well, I'm looking just at 11 the Section Number 4 right now. 12 A. Yes. Okay. Section Number 13 6 is on Page 12. 14 Q. Section 6. I'm sorry. I 15 had those transposed. 16 A. And please repeat your 17 question. 18 Q. You never -- prior to being 19 contacted by counsel for plaintiffs, you 20 never looked at the studies reporting on 21 whether talc can reach the ovaries via 22 inhalation or perineal application, 23 correct? 24 A. I did not study the</p>
<p style="text-align: right;">Page 331</p> <p>1 fibrosis creates a more vulnerable 2 tissue base that can -- that can 3 progress or go to cancer is a 4 question that there is some 5 examples of, but -- in the liver 6 in particular. 7 BY MR. HEGARTY: 8 Q. Well, there's no literature 9 reporting an increased risk of cancer in 10 any organ because there's fibrosis in 11 that organ, correct? 12 A. What I'm saying is that in 13 terms of the liver and in terms of 14 fibrosis, let's say from ethanol or 15 acetaminophen ingestion, you get fibrosis 16 which is a whole disease or symptomology 17 by itself, and then you have cancer, 18 which is another disease. But what I'm 19 saying is that in the area where the 20 injury and the fibrosis occurs, in the 21 liver there is a higher risk of getting 22 cancer. 23 Q. Fibrosis doesn't morph or 24 turn into cancer?</p>	<p style="text-align: right;">Page 333</p> <p>1 literature or review the literature prior 2 to being contacted. But I studied it and 3 reviewed it extensively after being 4 contacted. 5 Q. On Page 12 of the last 6 paragraph -- I'm sorry -- second-to-last 7 paragraph, which begins, "A common 8 exposure route." 9 Do you see that paragraph? 10 A. I do. Thank you. 11 Q. You write, "Again, a common 12 exposure route for cosmetic talc is via 13 the dermal route including vaginally 14 after perineal application." 15 A. Yes. 16 Q. Is it your testimony that 17 there's biologic plausibility with talc 18 applied to the skin? 19 A. Applied to the skin, talc 20 does not -- is not absorbed into the skin 21 or through the skin, although there is 22 some question as to whether if there's 23 injury or scratch or openings in the 24 skin, whether the talc can penetrate.</p>

84 (Pages 330 to 333)

Judith Zelikoff, Ph.D.

Page 334	Page 336
<p>1 But in and of itself talc cannot 2 penetrate through the skin. 3 However, we're not -- when 4 we're talking about perineal or vaginal 5 application, you are not talking about an 6 epidermal subcutaneous keratinized skin. 7 Q. None of the studies that you 8 cite in this paragraph researched 9 particle transport through the 10 reproductive tract through perineal 11 application, correct? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: These -- it is 15 extremely technically difficult, 16 from my knowledge as an animal 17 toxicologist, to do perineal 18 application to a mouse. 19 BY MR. HEGARTY: 20 Q. I'm going to withdraw the 21 question. Doctor, you will not respond 22 to my question. My question is simply, 23 none of the studies that you cite in this 24 paragraph researched particle transport</p>	<p>1 the form. 2 BY MR. HEGARTY: 3 Q. Correct? 4 MS. O'DELL: Excuse me. You 5 may answer his question any way 6 you'd want to, Doctor. 7 THE WITNESS: None of these 8 that I have stated on Page 12 9 refer to perineal exposure in the 10 second paragraph in terms of 11 Venter, Iturralde, Sjosten and 12 Heller. 13 However, on Page -- on Page 14 13, there is a study by Keskin, 15 who used rats and did a vaginal or 16 perineum to talc. 17 BY MR. HEGARTY: 18 Q. I'm going to move to strike. 19 We're going to go off the record. 20 MR. HEGARTY: We're going to 21 call Judge Pisano. There's no 22 reason to add that additional part 23 to the answer to that question. 24 And I'm not -- I'm tired of that</p>
Page 335	Page 337
<p>1 through the reproductive tract through 2 perineal application. That's correct? 3 A. There is a study, and I'm 4 afraid the name of the author does not 5 come to me. So allow me to look at my 6 report. 7 Q. And I'm just talking about 8 the authorities that you cite in the 9 second paragraph beginning, "A common 10 exposure route." 11 MS. O'DELL: Feel free to 12 look at your report if you need 13 to, Doctor. 14 THE WITNESS: I understand. 15 On Page 13, animal models -- 16 BY MR. HEGARTY: 17 Q. Doctor, that's not my 18 question. My question is in the 19 paragraph that I referenced beginning a 20 common exposure route, none of those 21 authorities looked at transport of the 22 particles via application of those 23 particles to the perineum? 24 MS. O'DELL: Objection to</p>	<p>1 happening. So we'll call him 2 unless you're going to talk to the 3 witness. 4 MS. O'DELL: Is your 5 objection she didn't answer your 6 question? Because she -- you 7 asked her about the paragraph. 8 She said "no; however" -- 9 MR. HEGARTY: We're off the 10 record. 11 MS. O'DELL: No, we're not 12 off the record. 13 MR. HEGARTY: We're off the 14 record. 15 MS. O'DELL: No, we -- 16 MR. HEGARTY: We're going 17 off the record. 18 MR. LOCKE: We are off. Let 19 me throw out something. We've got 20 seven hours. I think there's a 21 plan here to stall, and we need to 22 do a better job of keeping things 23 moving, or we are going to have to 24 ask the court for more time.</p>

85 (Pages 334 to 337)

Judith Zelikoff, Ph.D.

Page 338	Page 340
<p>1 MR. HEGARTY: Let's go off 2 the record. 3 MS. O'DELL: The suggestion 4 that there's -- let me just -- 5 before we go off the record, the 6 suggestion that there's somehow a 7 plan to -- is incorrect, and 8 improper. So if you want to go 9 off the record, I think you've got 10 an answer to your question, which 11 was, "No, not in the paragraph." 12 However, she has a right to 13 point to evidence in her report. 14 That's perfectly appropriate. 15 MR. HEGARTY: We'll let 16 Judge Pisano decide. We'll go off 17 the record. 18 THE VIDEOGRAPHER: The time 19 is 3:39 p.m. Going off the 20 record. 21 (Short break.) 22 THE VIDEOGRAPHER: The time 23 is 4:04 p.m. Back on the record. 24 MR. HEGARTY: We're back on</p>	<p>1 have looked at transport of dry powder 2 talc to the perineum showing that the -- 3 that talc transports to the ovaries, 4 correct? 5 MS. O'DELL: Object to the 6 form. 7 THE WITNESS: When we say -- 8 when you say talc, you're 9 referring to talcum powder 10 products? 11 BY MR. HEGARTY: 12 Q. Correct, correct. 13 A. That's correct to my 14 knowledge. 15 Q. And are you aware that talc 16 is in toilet paper? 17 A. Yes, I just learned that 18 recently. 19 Q. Can talc in toilet paper 20 migrate to the ovaries? 21 MS. O'DELL: Object to the 22 form. 23 THE WITNESS: Can -- my 24 knowledge is that talc in toilet</p>
Page 339	Page 341
<p>1 the record and we're going to 2 continue without calling Judge 3 Pisano at this time. But we do 4 reserve the right to ask Judge 5 Pisano for more time based on our 6 belief that Dr. Zelikoff has many 7 occasions over the course of this 8 deposition not been responsive to 9 the questions asked and as a 10 result has -- has wasted the 11 defendant's time and to our 12 prejudice. 13 So -- but we're going to go 14 forward and see if we can finish 15 this deposition. 16 MS. O'DELL: Plaintiffs will 17 obviously oppose that -- that 18 motion. Dr. Zelikoff has been 19 responsive to your questions. 20 BY MR. HEGARTY: 21 Q. Dr. Zelikoff, we're talking 22 about the section on talc particle's 23 access to the body. There have been no 24 studies in either animals or humans that</p>	<p>1 paper is -- is bound to the 2 other -- the other components 3 there. So unless it becomes 4 bioavailable it cannot migrate 5 from the toilet paper. 6 BY MR. HEGARTY: 7 Q. How about talc -- talc in 8 soap, is there talc in soaps? 9 A. To my knowledge there is. 10 Q. Can talc in soaps, if 11 applied to the perineum, migrate to the 12 ovaries? 13 A. If it becomes -- 14 MS. O'DELL: Object to form. 15 THE WITNESS: If it becomes 16 bioavailable. Likely bound up to 17 the other components. 18 BY MR. HEGARTY: 19 Q. When you say bioavailable, 20 what do you mean? 21 A. To me, "bioavailable" means 22 that the body can see it, and it 23 becomes -- it becomes -- it has access to 24 biological responsiveness.</p>

86 (Pages 338 to 341)

Judith Zelikoff, Ph.D.

Page 342	Page 344
<p>1 Q. And do you know a 2 Dr. Benjamin Neel at NY University -- New 3 York University? 4 A. Dr. Neel, isn't he the head 5 of the cancer center? 6 Q. He is. 7 A. He is the head of the cancer 8 center. 9 Q. Do you know him? 10 A. I do not know him. 11 Q. Does he know more about 12 cancer biology than you do? 13 MS. O'DELL: Object to the 14 form. 15 THE WITNESS: I've not seen 16 his CV. I would assume as head of 17 the cancer center, that he 18 probably does. Since that is not 19 my area of study. 20 BY MR. HEGARTY: 21 Q. Are dose-response 22 relationships important in evaluating 23 potential carcinogenicity of a substance? 24 A. Dose-response --</p>	<p>1 Q. You need a specific page? 2 Over on Page 16. Over the course of this 3 page and carrying over to the next page, 4 you cite a number of studies that refer 5 to talc causing pleural inflammation, 6 correct? 7 A. Yes. 8 Q. Talc causing granulomas, 9 correct? 10 A. Yes. 11 Q. Talc causing pulmonary 12 interstitial fibrosis, correct? 13 A. Talcum powder can do those 14 things, yes. 15 Q. And talc causing 16 carcinogenic activity in the lungs, 17 correct? 18 A. Are you referring to a 19 specific line? 20 Q. No, I'm not referring to a 21 specific line. I'm talking about 22 generally from this part of your report. 23 A. In general, this is the 24 section on inhalation. I'm talking</p>
Page 343	Page 345
<p>1 dose-responses are -- contribute to, as I 2 said frequency, duration, exposure route. 3 They all contribute to carcinogenicity. 4 Q. In other words, in 5 evaluating the carcinogenicity of a 6 substance, it's important to look at dose 7 relationships, correct? 8 A. Are you speaking about 9 dose-response, or more than one dose? 10 Q. Let me ask it again. In 11 evaluating the substance for 12 carcinogenicity purposes, it's important 13 to look at dose-response relationships, 14 correct? 15 A. It's important to look at 16 dose-response relationships, but it's not 17 the only factor, is what I'm saying. 18 Q. In your report, you cite a 19 number of reactions to talc that have 20 been reported, pleural inflammation, 21 granulomas, pulmonary 22 interstitial fibrosis -- 23 A. What page are you referring 24 to?</p>	<p>1 about -- yes, I'm talking about talcum 2 powder and its ability to bring about 3 changes in the lungs that could lead to 4 carcinogenic -- carcinogenesis. 5 Q. Of the reactions that we 6 just talked about, have any of those been 7 reported in women using talc on the 8 perineum? 9 A. There have been no studies 10 to my knowledge showing that application 11 of perineal talc can produce -- produces 12 lesions in the lungs. 13 Q. And there's been no studies 14 that you are -- of which you are aware 15 that have reported findings of granulomas 16 in women using talc in the perineum, 17 correct? 18 A. There is evidence of 19 inflammation clearly, but there -- to my 20 knowledge, I have not seen any of the 21 literature which shows a granuloma in the 22 ovary. 23 Q. What studies have you seen 24 that have reported seeing inflammation in</p>

87 (Pages 342 to 345)

Judith Zelikoff, Ph.D.

Page 346	Page 348
<p>1 the ovaries of women using talc on the 2 perineum? 3 MS. O'DELL: Object to the 4 form. 5 THE WITNESS: I'm just 6 trying to find the section. 7 There were many studies, I 8 can't right now, without finding 9 it in my report, identify any one 10 in particular. 11 BY MR. HEGARTY: 12 Q. Well, sitting here today, 13 can you cite any study that has reported 14 on finding inflammation of the ovaries 15 following perineal application of talc? 16 A. As I said, there are many -- 17 there are many examples in animal models 18 that was not perineal, that was vaginal, 19 as you stated. 20 There were studies -- 21 study -- an early study which identified 22 talcum powder particles in the ovary with 23 inflammatory responsiveness or 24 inflammatory responses. That was a</p>	<p>1 disease. 2 Q. Okay. Rheumatoid arthritis 3 does not increase the risk of cancer, 4 correct? 5 A. Rheumatoid arthritis, for 6 what's known now, does not increase the 7 risk of cancer. 8 Q. Psoriasis is another chronic 9 inflammatory process, correct? 10 A. Another autoimmune disease 11 and another inflammatory process, yes. 12 Q. Having psoriasis does not 13 increase the risk of any form of cancer, 14 correct? 15 A. Not that -- not that we know 16 with the current knowledge. 17 Q. So just having chronic 18 inflammation does not mean cancer will 19 develop, correct? 20 MS. O'DELL: Object to the 21 form. 22 THE WITNESS: Just having 23 chronic inflammation does not have 24 to indicate. It's one -- again,</p>
Page 347	Page 349
<p>1 very -- that was a very early study. I'm 2 not sure if it was Hamilton or Henderson. 3 If I may. 4 I'm sorry it's not coming to 5 mind now. 6 Q. Okay. Over on Page 20 you 7 discuss the role of the immune system -- 8 A. Yes, sir. 9 Q. -- correct? 10 A. I see that, yes. 11 Q. You agree that it's not 12 generally accepted by the medical or 13 scientific communities that all cancers 14 are caused by chronic inflammation, 15 correct? 16 A. There are other mechanisms 17 that are associated with carcinogenesis 18 and the process of carcinogenesis. If 19 you'd like, I can identify those. 20 Q. You agree that there are 21 types of chronic inflammation that are 22 not related to cancer. Rheumatoid 23 arthritis is one, correct? 24 A. That's an autoimmune</p>	<p>1 it's one mechanism that provides 2 biological plausibility for the 3 cancer induction. 4 If I may give an example. 5 BY MR. HEGARTY: 6 Q. Well, let me -- that's not 7 what I asked you for. 8 A. Okay. I thought I answered 9 your question. 10 Q. Does having pelvic 11 inflammatory disease cause ovarian 12 cancer? 13 A. The inflammation has been 14 linked with ovarian cancer, yes. 15 Q. In your opinion is there a 16 biologically plausible mechanism between 17 PID and ovarian cancer? 18 A. Well, PID is usually 19 associated with an infection. And what's 20 related to cancer and why there's higher 21 risk in inflammatory diseases of 22 endometriosis and pelvic inflammatory 23 disease is through a mechanism of 24 inflammation.</p>

88 (Pages 346 to 349)

Judith Zelikoff, Ph.D.

Page 350	Page 352
<p>1 Q. Your biologically plausible 2 mechanism for talc and ovarian cancer is 3 inflammation, correct? 4 A. That's primary, yes. 5 Q. You make reference to MUC-1. 6 That's not your biological plausibility 7 mechanism, is it? 8 A. You mean MUC-1 -- 9 Q. Yes. 10 A. -- antibodies? 11 Q. Correct? 12 A. MUC-1, if I may explain it, 13 is mucin. And -- 14 Q. I don't want to interrupt. 15 I'm not after an explanation. I just 16 wanted to know whether it's part -- 17 whether the references you include in 18 your report to MUC-1 are included in your 19 biologically plausible opinion? 20 A. It is included in my -- in 21 reaching my opinion, yes. 22 Q. Is that a separate mechanism 23 from inflammation? 24 A. It is a separate mechanism</p>	<p>1 A. It's -- the only evidence 2 out there that addresses this is when 3 they do correlation studies with the 4 level of antibodies to MUC-1. And when 5 the antibody levels are decreased, then 6 you have -- they found that you have an 7 increased risk of ovarian cancer. 8 Q. There are no studies 9 reporting or correlating MUC-1 levels in 10 talcum powder users to ovarian cancer 11 risk, correct? 12 MS. O'DELL: Object to form. 13 THE WITNESS: Not to my 14 knowledge. 15 MS. O'DELL: Sorry. 16 BY MR. HEGARTY: 17 Q. And measuring MUC-1 is not 18 used to diagnose ovarian cancer, correct? 19 A. MUC-1 is also known as 20 CA-125, and it is used as a marker. 21 Q. My question is, is MUC-1 22 used to -- levels -- strike that. 23 Are MUC-1 levels used to 24 diagnose a woman with ovarian cancer?</p>
Page 351	Page 353
<p>1 from inflammation. It's seen in ovarian 2 cancer as a marker. And when you have -- 3 evidence has shown that if you have 4 antibodies to MUC-1, and if they're 5 decreased as is seen in response to talc, 6 that you will have less of an immune 7 response and protection. 8 Q. Can you cite for me any 9 study that has correlated MUC-1 levels 10 with ovarian cancer risk? 11 MS. O'DELL: Object to form. 12 THE WITNESS: They use it as 13 a marker. The literature uses 14 MUC-1 as a marker of cancer. Can 15 I cite you any studies that links 16 it with ovarian cancer? No, I 17 cannot. 18 BY MR. HEGARTY: 19 Q. Are there any studies that 20 link the levels of MUC-1 to ovarian 21 cancer risk? 22 A. Do you mean human studies or 23 animal? 24 Q. Yes, human studies only.</p>	<p>1 A. My response to that is MUC-1 2 is synonymous with CA-125. CA-125 is a 3 shed marker in the blood associated with 4 ovarian cancer, so yes. 5 Q. Okay. Is it your testimony 6 that for purposes of -- strike that. 7 Is it your testimony that 8 CA-125 levels are used to diagnose 9 ovarian cancer? 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: I'm saying 13 that CA-125 is used as a 14 biological marker of progression, 15 extent, and intensity and whether 16 ovarian cancer is present. 17 BY MR. HEGARTY: 18 Q. My question is, in a woman 19 who comes in complaining of symptoms that 20 might be ovarian cancer, is CA-125 used 21 to diagnose ovarian cancer? 22 A. I'm sorry, I'm not a 23 physician. I can't answer that question 24 in terms of what -- what an OB/GYN or an</p>

89 (Pages 350 to 353)

Judith Zelikoff, Ph.D.

Page 354	Page 356
<p>1 oncologist would do.</p> <p>2 Q. And measuring CA-125 levels</p> <p>3 does not give you any evidence of the</p> <p>4 etiology of the ovarian cancer, correct?</p> <p>5 A. Not to the etiology.</p> <p>6 However, it is an epithelial-associated</p> <p>7 protein.</p> <p>8 So if we are talking about</p> <p>9 epithelial, and we are talking about</p> <p>10 epithelial ovary carcinoma, it is related</p> <p>11 to -- to that.</p> <p>12 Q. Does all types -- do all</p> <p>13 types of inflammation irreparably damage</p> <p>14 tissue?</p> <p>15 A. Irreparably. Do you mean</p> <p>16 persistently without -- is there</p> <p>17 recovery?</p> <p>18 Q. No, my question is do all</p> <p>19 types of inflammation, all acute, all</p> <p>20 chronic inflammation, damage tissue where</p> <p>21 it's not repaired?</p> <p>22 A. Where it's not repaired?</p> <p>23 Q. Yes.</p> <p>24 A. No, you can have -- with</p>	<p>1 the systematic review of the</p> <p>2 literature as I have. But each</p> <p>3 doctor, I'm sure, makes their own</p> <p>4 opinion.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. Can you cite any doctor who</p> <p>7 treats ovarian cancer or researches</p> <p>8 ovarian cancer who believes that the</p> <p>9 biological plausible mechanism of ovarian</p> <p>10 cancer is inflammation?</p> <p>11 A. I have not spoken to any</p> <p>12 doctors in that regard.</p> <p>13 Q. What does the inflammation</p> <p>14 in the ovary look like in your opinion</p> <p>15 from talc exposure?</p> <p>16 A. It looks like any other</p> <p>17 local target of inflammation, in that</p> <p>18 there are neutrophils, immune cells that</p> <p>19 migrate into the area. There are</p> <p>20 macrophages that migrate into the area.</p> <p>21 There can be higher levels of cytokines</p> <p>22 like interleukin and chemotactic factor,</p> <p>23 growth factor.</p> <p>24 Q. Such inflammation, if it was</p>
Page 355	Page 357
<p>1 acute inflammation, of course you can</p> <p>2 have repair of -- it's there to protect</p> <p>3 against the invader.</p> <p>4 Q. Does having inflammation in</p> <p>5 one organ or one tissue in the body</p> <p>6 always mean that other tissues in the</p> <p>7 body will be inflamed?</p> <p>8 A. It does not always mean</p> <p>9 that.</p> <p>10 Q. The medical community has</p> <p>11 not generally accepted that chronic</p> <p>12 inflammation is a cause of ovarian</p> <p>13 cancer, correct?</p> <p>14 MS. O'DELL: Objection to</p> <p>15 form.</p> <p>16 THE WITNESS: Again, I'm not</p> <p>17 quite sure what you mean by</p> <p>18 generally accepted. Everyone</p> <p>19 has -- every medical community has</p> <p>20 its own opinion. I'm sure there</p> <p>21 are many doctors who do embrace</p> <p>22 it. And I'm sure there are many</p> <p>23 doctors who do not. I'm not sure</p> <p>24 whether they've done the extent of</p>	<p>1 occurring would be visible, correct?</p> <p>2 A. Not necessarily. In a -- in</p> <p>3 a chronic -- first of all, you can get</p> <p>4 different time periods. So</p> <p>5 inflammation -- if it's chronic</p> <p>6 inflammation you are talking about one</p> <p>7 thing. And then you might see some</p> <p>8 remnants of the inflammation.</p> <p>9 But if you look at a period</p> <p>10 of time, you can miss the inflammatory</p> <p>11 response. It can be there, impact the</p> <p>12 cells and then be gone.</p> <p>13 Q. Even with chronic</p> <p>14 inflammation?</p> <p>15 A. With chronic inflammation,</p> <p>16 if you looked hard enough you would find</p> <p>17 the remnants of its presence and you will</p> <p>18 also likely find neutrophilic</p> <p>19 infiltration.</p> <p>20 Q. Has that --</p> <p>21 A. That does not last forever.</p> <p>22 Q. Has that ever -- that --</p> <p>23 those findings ever been reported in</p> <p>24 women using talc in the perineum?</p>

90 (Pages 354 to 357)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 358</p> <p>1 A. The inflammatory response?</p> <p>2 Q. Correct.</p> <p>3 A. Or the infiltration? Not</p> <p>4 that I'm aware of. Not in my report.</p> <p>5 Q. How many applications of</p> <p>6 talc to the perineum does it take to</p> <p>7 cause chronic inflammation in the</p> <p>8 ovaries?</p> <p>9 A. That's -- that</p> <p>10 information -- that is not known how many</p> <p>11 applications, whether it could be one or</p> <p>12 it needs to be over a period of three</p> <p>13 years or a period of ten years. Some of</p> <p>14 the meta-analysis evaluations indicated</p> <p>15 that there were some temporal</p> <p>16 associations with it, and that it needed</p> <p>17 to be used longer than ten years, where</p> <p>18 you saw responsiveness. And others</p> <p>19 indicated less than ten years.</p> <p>20 So it's -- it's difficult to</p> <p>21 say, and it's also associated with the</p> <p>22 woman.</p> <p>23 Q. Does acute inflammation</p> <p>24 cause cancer?</p>	<p style="text-align: right;">Page 360</p> <p>1 Q. None of those inflammatory</p> <p>2 markers are tested to diagnose or monitor</p> <p>3 a woman for developing ovarian cancer,</p> <p>4 correct?</p> <p>5 A. To my knowledge, tumor</p> <p>6 necrosis factors, C-reactive protein,</p> <p>7 none of the interleukins are monitored.</p> <p>8 But again, I have to say</p> <p>9 that I'm not an OB/GYN and so I'm not --</p> <p>10 I'm not familiar with what their -- what</p> <p>11 they are using other than what's in the</p> <p>12 literature.</p> <p>13 Q. And no study has clinically</p> <p>14 correlated those markers with ovarian</p> <p>15 cancer or ovarian cancer risk, correct?</p> <p>16 MS. O'DELL: Objection to</p> <p>17 form.</p> <p>18 THE WITNESS: In looking at</p> <p>19 biological plausibility, which</p> <p>20 I'm -- which I'm focused on, the</p> <p>21 indication of those elevated</p> <p>22 levels as well as decreased levels</p> <p>23 of antioxidants are associated</p> <p>24 with inflammation and are</p>
<p style="text-align: right;">Page 359</p> <p>1 A. Acute inflammation has not</p> <p>2 been linked to my knowledge to cancer.</p> <p>3 As I said, it's used as an immune</p> <p>4 surveillance and protective mechanism as</p> <p>5 you pointed out.</p> <p>6 Q. Over on Pages 20 and 21 of</p> <p>7 your report you refer to CRP and other</p> <p>8 inflammatory markers, cytokines,</p> <p>9 inflammatory mediators. Do you see the</p> <p>10 section I'm referring to?</p> <p>11 A. I -- roles of the immune</p> <p>12 system, and then Section E, ovarian</p> <p>13 cancer inflammation?</p> <p>14 Q. Correct.</p> <p>15 A. Which section are you</p> <p>16 referring to?</p> <p>17 Q. Well, the section ovarian</p> <p>18 cancer inflammation at the bottom of</p> <p>19 Page 20, carrying over to the top of</p> <p>20 Page 21.</p> <p>21 A. I see that.</p> <p>22 Q. And there you talk about a</p> <p>23 number of inflammatory markers, correct?</p> <p>24 A. Correct.</p>	<p style="text-align: right;">Page 361</p> <p>1 associated with ovarian cancer.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. Well, can you cite for me</p> <p>4 any study that has clinically correlated</p> <p>5 those findings to ovarian cancer risk?</p> <p>6 MS. O'DELL: Objection.</p> <p>7 Asked and answered.</p> <p>8 THE WITNESS: First of all,</p> <p>9 I'm not -- and again, not an</p> <p>10 OB/GYN.</p> <p>11 I can tell you that those</p> <p>12 risk factors, which are</p> <p>13 inflammatory markers, are used as</p> <p>14 an indicator of inflammation as a</p> <p>15 biological plausible mechanism.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Well, do you cite in your</p> <p>18 paper any studies that have --</p> <p>19 A. I'm sorry, do you mean the</p> <p>20 report?</p> <p>21 Q. In your report. Do you cite</p> <p>22 in your report any studies that have</p> <p>23 found that women with these markers have</p> <p>24 a higher -- higher or an increased risk</p>

91 (Pages 358 to 361)

Judith Zelikoff, Ph.D.

Page 362	Page 364
<p>1 of ovarian cancer?</p> <p>2 A. Well, what I -- no. But</p> <p>3 what I have found is that in women who</p> <p>4 have ovarian cancer, when they measure</p> <p>5 concurrently or subsequently, that the</p> <p>6 levels of certain inflammatory markers</p> <p>7 are elevated.</p> <p>8 Q. My question was specific to</p> <p>9 women prior to being diagnosed with</p> <p>10 ovarian cancer, has any study shown that</p> <p>11 women with higher levels of these</p> <p>12 inflammatory markers have an increased</p> <p>13 risk of ovarian cancer?</p> <p>14 MS. O'DELL: Objection to</p> <p>15 form.</p> <p>16 THE WITNESS: Not in that</p> <p>17 particular context. But again I'm</p> <p>18 not an OB/GYN.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Has any study shown that</p> <p>21 these inflammatory factors are elevated</p> <p>22 in women using talc on the perineum?</p> <p>23 MS. O'DELL: Objection to</p> <p>24 the form.</p>	<p>1 are a normal product of cell activity,</p> <p>2 correct?</p> <p>3 A. That is correct --</p> <p>4 Q. For example, for many --</p> <p>5 A. -- for many cells.</p> <p>6 Q. -- reactive oxygen species</p> <p>7 increase if we exercise, correct?</p> <p>8 A. As well as antioxidants</p> <p>9 increase, yes.</p> <p>10 Q. The same is true for</p> <p>11 reactive nitrogen species, correct?</p> <p>12 A. Yes.</p> <p>13 Q. These --</p> <p>14 A. It's a matter of degree.</p> <p>15 Q. Reactive oxygen species and</p> <p>16 reactive nitrogen species increase if</p> <p>17 we're under stress, correct?</p> <p>18 A. They have been shown to do</p> <p>19 that, yes.</p> <p>20 Q. And the body has defense</p> <p>21 mechanisms to handle this increase in</p> <p>22 reactive oxygen species and reactive</p> <p>23 nitrogen species, correct?</p> <p>24 MS. O'DELL: Objection to</p>
Page 363	Page 365
<p>1 THE WITNESS: It's not a</p> <p>2 common thing to measure</p> <p>3 inflammatory mediators as a result</p> <p>4 of the common use of talcum powder</p> <p>5 products. So there is no</p> <p>6 indication of that because there</p> <p>7 are no studies of that.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. If you look over on Page 24</p> <p>10 of your report under the section Role of</p> <p>11 Oxidants in Ovarian Cancer. Do you see</p> <p>12 that section?</p> <p>13 A. Section C on Page 24?</p> <p>14 Q. Correct.</p> <p>15 A. Yes.</p> <p>16 Q. All the processes that you</p> <p>17 describe in this section occur in</p> <p>18 everyone everyday, correct?</p> <p>19 MS. O'DELL: Object to the</p> <p>20 form.</p> <p>21 THE WITNESS: To a degree,</p> <p>22 yes.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. The reactive oxygen species</p>	<p>1 form.</p> <p>2 THE WITNESS: The body has</p> <p>3 antioxidant mechanisms, including</p> <p>4 superoxide dismutase, catalase, et</p> <p>5 cetera, that are -- that elevate</p> <p>6 in response to reactive oxygen</p> <p>7 species. But they can be</p> <p>8 overwhelmed by the amount of ROS</p> <p>9 release.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. But it would be improper to</p> <p>12 say that simply by the generation of</p> <p>13 reactive oxygen species or reactive</p> <p>14 nitrogen species, DNA mutations and tumor</p> <p>15 development will occur, correct?</p> <p>16 MS. O'DELL: Object to form.</p> <p>17 THE WITNESS: One couldn't</p> <p>18 say that just by the -- as you</p> <p>19 point out, as the normal -- under</p> <p>20 normal circumstances, endogenously</p> <p>21 within the body, and not in</p> <p>22 response to a particular agent</p> <p>23 does produce these. So one cannot</p> <p>24 say, to answer your question, that</p>

92 (Pages 362 to 365)

Judith Zelikoff, Ph.D.

Page 366	Page 368
<p>1 it -- just the presence of</p> <p>2 reactive oxygen species will lead</p> <p>3 to cancer.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. What data shows that the</p> <p>6 body's response system to reactive oxygen</p> <p>7 species and reactive nitrogen species is</p> <p>8 unable to handle those species that might</p> <p>9 be generated by talc exposure?</p> <p>10 A. Numerous cell studies and</p> <p>11 numerous animal studies. And you would</p> <p>12 look at that by the level of antioxidants</p> <p>13 that are also present. And if a</p> <p>14 substance such as talcum powder product</p> <p>15 reduces antioxidants, then the cell or</p> <p>16 the tissue is going to be overwhelmed by</p> <p>17 that product.</p> <p>18 Q. Has that process ever been</p> <p>19 shown in vivo?</p> <p>20 A. In a -- I'm not sure if this</p> <p>21 answers your question. I'll do my best</p> <p>22 to answer it. And your question was has</p> <p>23 that process, meaning the process of</p> <p>24 antioxidant change -- is that your</p>	<p>1 of the literature comes from in vivo</p> <p>2 animal studies as well as in vitro cell</p> <p>3 studies. But my role is to -- is to look</p> <p>4 at biological plausibility. And so</p> <p>5 studies that reveal or indicate that</p> <p>6 response in an animal model and in cell</p> <p>7 culture indicates to me that there's no</p> <p>8 likely reason why it could not happen in</p> <p>9 women.</p> <p>10 Q. Okay. At the top of Page 25</p> <p>11 of your report, you say that even a</p> <p>12 single dose of a carcinogen can produce</p> <p>13 effects that are adverse to cells and</p> <p>14 tissue at the site of exposure.</p> <p>15 Do you see where I'm</p> <p>16 reading?</p> <p>17 A. Yes.</p> <p>18 Q. When you say dose, do you</p> <p>19 mean exposure at a dose or volume of</p> <p>20 exposure to a substance that studies have</p> <p>21 proven are adverse to cells and tissues?</p> <p>22 MS. O'DELL: Object to the</p> <p>23 form.</p> <p>24 THE WITNESS: That's a</p>
Page 367	Page 369
<p>1 question?</p> <p>2 Q. No. The process where the</p> <p>3 cell or the tissue is going to be</p> <p>4 overwhelmed, has that process ever been</p> <p>5 shown in vivo in women?</p> <p>6 A. In women?</p> <p>7 Q. Yes.</p> <p>8 MS. O'DELL: Object to the</p> <p>9 form. You can answer.</p> <p>10 THE WITNESS: Certainly in</p> <p>11 animals, but not to my knowledge</p> <p>12 in women.</p> <p>13 I'm sorry. I'm still</p> <p>14 thinking.</p> <p>15 Whenever the antioxidant</p> <p>16 levels are decreased, that is an</p> <p>17 indicator of being overwhelmed by</p> <p>18 the reactive oxygen species or the</p> <p>19 oxidation stress.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. And what studies have shown</p> <p>22 the antioxidant levels are decreased in</p> <p>23 women using talc?</p> <p>24 A. In women using talc -- most</p>	<p>1 multiple question. But when I</p> <p>2 refer to even a single dose, I</p> <p>3 mean even a single exposure.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. Are you saying there a</p> <p>6 single molecule of the substance?</p> <p>7 A. What I meant in this report</p> <p>8 is even a single exposure. The</p> <p>9 concentration of which could be unknown.</p> <p>10 A single exposure to a certain</p> <p>11 concentration, whatever that</p> <p>12 concentration is, can produce effects.</p> <p>13 I'm not saying can produce cancer. What</p> <p>14 I'm saying is can start the process of</p> <p>15 either inflammation or oxidative stress.</p> <p>16 Q. And to what tissue does that</p> <p>17 single dose need to reach to have the</p> <p>18 adverse effects that you describe there?</p> <p>19 MS. O'DELL: Object to the</p> <p>20 form.</p> <p>21 THE WITNESS: Whatever that</p> <p>22 particular -- it depends upon the</p> <p>23 carcinogen or the inflammagogue</p> <p>24 that one is looking at in terms of</p>

93 (Pages 366 to 369)

Judith Zelikoff, Ph.D.

Page 370	Page 372
<p>1 a single exposure. And it depends</p> <p>2 on the susceptibility of the</p> <p>3 tissue. So to answer your</p> <p>4 question, doses or concentration</p> <p>5 to the target tissue is unknown or</p> <p>6 open.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. You're not saying that a</p> <p>9 single application of talc to the</p> <p>10 perineum can produce effects that are</p> <p>11 adverse to cells and tissue in the</p> <p>12 ovaries, correct?</p> <p>13 MS. O'DELL: Object to the</p> <p>14 form.</p> <p>15 THE WITNESS: I'm not saying</p> <p>16 that it can't. I think I</p> <p>17 testified earlier that a single --</p> <p>18 depending upon what that product</p> <p>19 is -- in this case we're talking</p> <p>20 about talcum powder product --</p> <p>21 that one exposure, one</p> <p>22 application, one perineal direct</p> <p>23 exposure could in fact trigger the</p> <p>24 cells to start a process leaning</p>	<p>1 A. In women?</p> <p>2 Q. Yes.</p> <p>3 A. I can -- I cannot off the</p> <p>4 top of my head or looking at my report</p> <p>5 tell you that. Again, I just want to</p> <p>6 repeat that my charge was to look at</p> <p>7 biological plausibility and I -- I see</p> <p>8 those effects or processes that you're</p> <p>9 indicating in cells and animal models,</p> <p>10 but I do not have that information with</p> <p>11 humans.</p> <p>12 Q. Are you aware of any study</p> <p>13 correlating the exposures used in those</p> <p>14 cell and animal models to the exposures</p> <p>15 that women would experience with perineal</p> <p>16 application of talc?</p> <p>17 MS. O'DELL: Object to the</p> <p>18 form.</p> <p>19 THE WITNESS: Well, in my</p> <p>20 mind, and in reality, women use</p> <p>21 different amounts, whether it's</p> <p>22 different handfuls. So I can't</p> <p>23 really give you a concentration.</p> <p>24 But there are studies, the in</p>
Page 371	Page 373
<p>1 towards inflammation.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. And where the talc -- where</p> <p>4 does the talc need to go in the body to</p> <p>5 trigger that mechanism?</p> <p>6 A. Well, once it gets -- once</p> <p>7 it's applied to the perineal region, it's</p> <p>8 my belief that it then migrates up to</p> <p>9 the -- to the vaginal area. And in the</p> <p>10 vaginal area, it could also start</p> <p>11 mechanisms, gene expression changes in</p> <p>12 the vaginal tissues that could lead to</p> <p>13 inflammation, or it could get to the</p> <p>14 point of the cervix or to the fallopian</p> <p>15 tubes. It causes changes in cells,</p> <p>16 whether it's gene expression or an</p> <p>17 inflammation, at any one of those</p> <p>18 upward -- upward reproductive tract organ</p> <p>19 systems or tissues. They're all made up</p> <p>20 of cells that are susceptible to oxidant</p> <p>21 stress.</p> <p>22 Q. Can you cite to us any study</p> <p>23 that has shown that process in women</p> <p>24 using talc to the perineum?</p>	<p>1 vitro studies, that did use more.</p> <p>2 However, when you're looking</p> <p>3 at toxicology and you're looking</p> <p>4 to define a mechanism or a</p> <p>5 potential mechanism, if you use</p> <p>6 even a higher dose, you're</p> <p>7 still -- you still can elicit the</p> <p>8 same mechanism.</p> <p>9 So perineal application --</p> <p>10 to answer your question, perineal</p> <p>11 application can put a lot or a</p> <p>12 little. But it also depends on</p> <p>13 the frequency and the duration of</p> <p>14 the use.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Doctor, my question, though,</p> <p>17 was, has any study correlated the</p> <p>18 exposures in the animal or cell studies</p> <p>19 to which you are referring to, to show</p> <p>20 that those same exposures are occurring</p> <p>21 in women applying talc to the perineum?</p> <p>22 A. No.</p> <p>23 Q. For purposes of your</p> <p>24 opinions on biological plausibility, do</p>

Judith Zelikoff, Ph.D.

Page 374	Page 376
<p>1 you rely on the studies that you cite in 2 your report done by Dr. Saed? 3 A. I relied on the information 4 from Dr. Saed. It went into making up my 5 opinion, yes. 6 Q. If those studies were not 7 available to you, would your opinions 8 still be the same? 9 A. As I said, one of the -- one 10 of the manuscripts came after my report. 11 And it was -- I looked at an abstract, so 12 I had information. And other -- others 13 of Dr. Saed's I reviewed. But I would 14 have come to the same conclusion. That 15 was just -- that was supplemental and 16 complementary and compelling. 17 Q. Have you ever cited an 18 abstract in any published article of 19 yours? 20 A. Yes, I have. 21 Q. Are you an expert in the 22 kinds of testing that Dr. Saed has 23 reported in the materials you reviewed? 24 A. Yes, I am.</p>	<p>1 just? 2 BY MR. HEGARTY: 3 Q. Ovarian epithelial -- thank 4 you. 5 Have you ever done studies 6 using any type of ovarian epithelial cell 7 lines? 8 A. I have not. 9 Q. Have you ever done any study 10 using ovarian cancer cell lines? 11 A. I have not. Not personally. 12 Q. What data shows that the 13 doses that Dr. Saed used in his studies 14 are comparable to those to which 15 epithelial ovarian cells would be exposed 16 to via perineal application of talc? 17 MS. O'DELL: Objection to 18 form. 19 THE WITNESS: There was no 20 comparison in his study directly. 21 But if I may, I just want to say, 22 when you're looking at biological 23 plausibility, which was the 24 question that I was asked,</p>
Page 375	Page 377
<p>1 Q. Do you understand that 2 Dr. Saed is an expert for the plaintiffs 3 in this litigation? 4 A. I do understand that from 5 looking at his publication. 6 Q. Did you do anything yourself 7 to verify the reliability of the testing 8 that he performed whose results you have 9 read in his publications? 10 A. I focused my review and 11 reading of the study design, which is -- 12 and the experimental approach, which are 13 key factors for evaluating any study. 14 And I agree with the experimental 15 approach and the study design that he 16 used. 17 He used proper controls. He 18 used a dose-response. He used the proper 19 techniques in analyzing for cell 20 survivability as well as for oxidative 21 stress and gene expression changes. 22 Q. Have you ever done studies 23 using epithelial cell lines? 24 MS. O'DELL: Ovarian or</p>	<p>1 oftentimes higher doses in vitro 2 studies are used to provide a 3 mechanism or a plausibility or 4 feasibility that that can -- that 5 that product, in this case, talcum 6 powder product, can induce 7 inflammation, inflammatory 8 responses and changes in 9 antioxidant levels. 10 So it is not uncommon to use 11 higher doses in in vitro studies 12 than what might be seen in a human 13 for biological plausibility 14 studies. 15 BY MR. HEGARTY: 16 Q. Can you cite any study that 17 has shown the results reported in 18 Dr. Saed's studies in vivo in women using 19 talc? 20 MS. O'DELL: Objection to 21 form. 22 THE WITNESS: May I get 23 Dr. Saed's paper? 24 BY MR. HEGARTY:</p>

95 (Pages 374 to 377)

Judith Zelikoff, Ph.D.

Page 378	Page 380
<p>1 Q. Well, I'm actually not 2 asking about Dr. Saed's paper. 3 A. Okay. 4 Q. But my question is -- you've 5 read Dr. Saed's papers, correct? 6 A. Yes, I have. 7 Q. Can you cite for me any 8 study that has shown the results he 9 reports in his studies in women using 10 talc? 11 MS. O'DELL: Object to form. 12 THE WITNESS: His studies 13 were in vitro studies. 14 BY MR. HEGARTY: 15 Q. Are there any such studies 16 looking at the effects in vivo of talc? 17 MS. O'DELL: Objection. 18 THE WITNESS: In vivo in 19 humans or in vivo in animals? 20 BY MR. HEGARTY: 21 Q. In humans. 22 MS. O'DELL: Object to the 23 form. 24 THE WITNESS: When you refer</p>	<p>1 polymorphisms? 2 A. I need to look at my CV 3 again, as being co-investigator. I've 4 worked with other people. I have not 5 performed studies looking at single 6 nucleotide polymorphisms. But I have 7 worked with people who have -- have done 8 them. And if I look at my curriculum 9 vitae, I can tell you if I've been on any 10 publications. 11 Q. Okay. Because of time, just 12 sitting here today, recognizing for the 13 record you haven't looked at your CV, do 14 any such studies come to mind? 15 A. I don't -- I have not done 16 those studies in my own laboratory. 17 Although I'm -- I'm just saying that I 18 may have been on a publication where 19 colleagues of mine have used that -- that 20 method, those methods. 21 Q. Do you have an opinion about 22 talc in single nucleotide polymorphisms 23 or SNPs? 24 MS. O'DELL: Objection.</p>
Page 379	Page 381
<p>1 to such studies, can you tell me 2 which studies -- which types of 3 studies again are you referring 4 to? 5 BY MR. HEGARTY: 6 Q. The cell studies that you 7 reference by Dr. Saed on Page 25 of your 8 report. 9 A. And the question is are 10 there any? 11 Q. Studies in humans showing 12 such effects following application of 13 talc to the perineum. 14 MS. O'DELL: Objection to 15 form. 16 THE WITNESS: Not to my 17 knowledge. 18 Excuse me. You said that 19 was on Page 25 that you were 20 referring to? 21 BY MR. HEGARTY: 22 Q. Correct. 23 Have you ever published a 24 paper discussing single nucleotide</p>	<p>1 THE WITNESS: I think 2 there -- there is literature 3 showing, including in Dr. Saed's 4 papers, that there are single -- 5 and in -- in a paper that looked 6 at women and looked at antioxidant 7 enzymes and they showed there was 8 single nucleotide polymorphism 9 changes in those women. 10 Looking at, I think it was 11 glutathione S-transferase M 1. 12 So what is my -- so if your 13 question is what is my opinion on 14 single nucleotide polymorphisms in 15 ovarian cancer? 16 BY MR. HEGARTY: 17 Q. Well, let me ask a different 18 question. Is your biologic mechanism -- 19 I'm sorry. Is your biologic plausibility 20 opinion between talc and ovarian cancer 21 the process or action that Dr. Saed 22 describes in his studies? 23 A. I believe that it could be 24 adding to the -- the plausibility of the</p>

96 (Pages 378 to 381)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 382</p> <p>1 relationship or of the causation between 2 ovarian cancer and talcum powder 3 products. 4 Q. Well, is it your opinion 5 that the mechanism by which talc can be 6 biologically -- be a biological plausible 7 cause of ovarian cancer, that's cited by 8 Dr. Saed in his cell studies? 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: I believe 12 that -- in my opinion and what I'm 13 stating here in the report, is 14 that inflammation is the 15 primary -- one of the primary 16 biological mechanisms. 17 Whether it appears from the 18 literature that single nucleotide 19 polymorphisms may, in fact, play a 20 role. 21 BY MR. HEGARTY: 22 Q. Okay. But is -- is that -- 23 is it your opinion that -- not that they 24 play -- just that they play a role, but</p>	<p style="text-align: right;">Page 384</p> <p>1 topic. I'll introduce the topic each 2 time that I ask you a question. 3 Going back to the Canadian 4 health assessment that you provided to us 5 at the beginning of the day. 6 A. Yes. 7 (Brief interruption.) 8 BY MR. HEGARTY: 9 Q. Doctor, we talked earlier 10 about Canada's health assessment with 11 regard to talc. Are you familiar with 12 the process by which the Canadian 13 authorities do that health assessment? 14 A. I am -- only from what is in 15 the document. 16 Q. Have you ever been a part of 17 that, of a Canadian health assessment 18 like the one shown with talc? 19 A. I've worked with Health 20 Canada. 21 Q. Okay. Have you ever worked 22 with Health Canada on doing a health 23 assessment like that reflected in the 24 document we looked at earlier today?</p>
<p style="text-align: right;">Page 383</p> <p>1 that is the mechanism for biologic 2 plausibility between talc and ovarian 3 cancer? 4 A. I -- I do not believe it 5 is -- it is not my opinion that -- it is 6 my opinion that single nucleotide 7 polymorphisms, along with inflammation 8 and -- and perhaps other mechanisms may 9 be involved that talc is associated with. 10 I focused my -- my opinion 11 on the assessment of inflammation and its 12 role. 13 MR. HEGARTY: Off the record 14 for a minute. 15 THE VIDEOGRAPHER: The time 16 is 4:48 p.m. We are off the 17 record. 18 (Short break.) 19 THE VIDEOGRAPHER: We are 20 back on the record. The time is 21 5:08 p.m. 22 BY MR. HEGARTY: 23 Q. Dr. Zelikoff, I'm going to 24 jump around a little bit from topic to</p>	<p style="text-align: right;">Page 385</p> <p>1 A. No, I have not. 2 Q. Do you know what kind of 3 standards that they apply in determining 4 whether to call -- whether to say whether 5 there's a potential for harm with a 6 substance? 7 A. Just what is in the 8 document. And then I use my own 9 professional judgment, whether I agree 10 with that or not. 11 Q. Did plaintiff's counsel 12 provide you with some scientific and 13 medical literature with regard to talc or 14 ovarian cancer? 15 A. So the question is whether I 16 was provided with some scientific and 17 medical literature with regard -- yes, 18 many of the articles in the binders were 19 provided to me by them. 20 Q. Are you able to identify 21 which of those articles came from 22 plaintiffs' counsel versus which you 23 found on your own? 24 A. I may be able to do that</p>

97 (Pages 382 to 385)

Judith Zelikoff, Ph.D.

Page 386	Page 388
<p>1 with some, yes. But this is over a 2 period of, as I said, 2017 to now. 3 Q. With regard to your 4 invoices -- do you have your invoices 5 there? 6 A. I do not. 7 Q. They've been marked as an 8 exhibit. 9 A. Oh. 10 Q. Can someone help her find 11 those invoices? 12 MS. O'DELL: Did you take 13 them back? I don't know that -- 14 there was only one copy. 15 MR. HEGARTY: I don't think 16 I did. I think it was Exhibit 1. 17 MS. O'DELL: The reason I 18 say that is I did not see it 19 during the lunch break when I 20 looked at -- 21 THE WITNESS: I do have the 22 invoices in my binder here. 23 BY MR. HEGARTY: 24 Q. Okay. If you can turn to</p>	<p>1 Q. What are the differences 2 between your current report dated 3 November 16, 2018, and the final report 4 that you provided as shown here back in 5 February of 2018? 6 A. It was -- I own that. It 7 should have said draft report. And the 8 difference is that that's more literature 9 and more time had gone by for the 10 emergence and review of more literature. 11 Q. You go from a reference on 12 February 4, 2018, to the next reference 13 on September 20th -- I'm sorry. Did I 14 say -- let me back up. 15 You go from a reference on 16 February 4, 2018, to the next cite for 17 time on September 20, 2018. Did you 18 review any additional literature between 19 February 4th and September 20, 2018? 20 A. Yes, I'm sure I did. And I 21 also reviewed the production documents 22 within that time. More of the production 23 documents. 24 Q. Your report doesn't show any</p>
Page 387	Page 389
<p>1 your binder, please. 2 A. If I recall. 3 Q. If we can find that exhibit, 4 that would be helpful? 5 MS. O'DELL: I'm not sure 6 there are any invoices in her 7 binder. 8 Is it in the stack that's 9 right there? 10 MR. HEGARTY: No, I don't 11 think so. 12 BY MR. HEGARTY: 13 Q. Yeah invoices. I found it. 14 Your invoices, Doctor, 15 reflect that you prepared a final report 16 delivered on February 4, 2018. 17 Do you see that? 18 A. I do see that. 19 Q. That was almost a year ago, 20 correct? 21 MS. O'DELL: Objection to 22 form. 23 THE WITNESS: Yes. 24 BY MR. HEGARTY:</p>	<p>1 time invoiced between February 4, 2018, 2 and September 20, 2018. Did you spend 3 time reviewing literature or otherwise 4 working on your report that's not 5 contained in your invoices? 6 A. It -- I may have. I did not 7 always invoice for something that I spent 8 maybe an hour on. 9 Q. Are you able to cite for me 10 the sections in your report that you 11 added or changed between the report that 12 you prepared on February 4, 2018, and the 13 November 16, 2018, report? 14 A. Not without seeing both 15 reports side by side. 16 Q. Do you still have a copy of 17 the February 4, 2018, report? 18 A. Not with me. 19 Q. Does it exist? 20 A. It likely does on my 21 computer, yes. 22 Q. You mentioned that you 23 referred to -- that you reviewed Julie 24 Pier's deposition testimony?</p>

98 (Pages 386 to 389)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 390</p> <p>1 A. I said three-quarters of the 2 deposition, half to three-quarters. 3 Q. That was provided to you by 4 counsel for plaintiffs, correct? 5 A. Yes, correct. 6 Q. Do you know how they went 7 about selecting the deposition 8 transcripts to provide to you for 9 purposes of your review in this case? 10 A. I do not. 11 Q. Did you ask for any 12 deposition -- did you ask for the 13 depositions of all experts who have 14 testified in this litigation? 15 MS. O'DELL: Objection to 16 form. 17 THE WITNESS: I did not ask 18 for depositions. 19 Let me -- let me retract 20 that, please. If in reading my 21 literature there was something 22 that I thought might be in a 23 deposition of someone, I asked the 24 plaintiff attorneys if they had</p>	<p style="text-align: right;">Page 392</p> <p>1 Canada, like Exhibit Number 9? 2 A. I'm sorry. 3 MS. O'DELL: Objection to 4 form. 5 THE WITNESS: All I can say 6 is that in working with Health 7 Canada on immunology in my early 8 career days, that I may have used 9 an assessment like that. 10 BY MR. HEGARTY: 11 Q. Can you cite for me, sitting 12 here today, anytime that you -- your 13 opinions were informed by a Health Canada 14 safety assessment or screening 15 assessment? 16 MS. O'DELL: Object to the 17 form. Other than what she said? 18 THE WITNESS: Except for 19 what I said, I cannot recall. 20 BY MR. HEGARTY: 21 Q. Did you review for purposes 22 of your opinions in this case the current 23 National Cancer Institutes position -- 24 healthcare -- healthcare -- health</p>
<p style="text-align: right;">Page 391</p> <p>1 anything in that regard that would 2 lend to my opinion. 3 BY MR. HEGARTY: 4 Q. And did you ever ask for any 5 additional depositions beyond those that 6 were provided? 7 A. No, I did not. 8 Q. Going back to the Health 9 Canada assessment. Have you ever cited 10 to a Health Canada assessment in any 11 written publication of yours? 12 A. Without looking at my 13 publications, I cannot. But I can tell 14 you that coming to mind just sitting 15 here, as I said, I worked with Health 16 Canada, and I worked with them on my 17 research in fish immunology, and it is 18 possible that I cited Health Canada -- 19 Health Canada literature in those 20 publications concerning fish. 21 Q. Sitting here today, can you 22 recall at any point in time when you -- 23 when your opinions were informed by a 24 draft screening assessment by Health</p>	<p style="text-align: right;">Page 393</p> <p>1 professional PDQ, or the NCI PDQ? 2 A. I have seen that recently. 3 Q. I'll mark as Exhibit Number 4 23, a copy of the NCI PDQ that mentions 5 talc. 6 (Document marked for 7 identification as Exhibit 8 Zelikoff-23.) 9 BY MR. HEGARTY: 10 Q. Have you seen what I marked 11 as Exhibit 23 before -- or as of the time 12 that you drafted your report? 13 A. No, sir. 14 Q. Plaintiffs' counsel did not 15 provide you a copy of that? 16 A. Not prior to my report, no. 17 Q. How did you happen -- who -- 18 strike that. 19 Did -- from where did you 20 receive a copy of Exhibit 23 after 21 preparing your report? 22 A. From the plaintiff attorney. 23 Q. Did you ask for it? 24 A. In general, I asked for all</p>

99 (Pages 390 to 393)

Judith Zelikoff, Ph.D.

Page 394	Page 396
<p>1 relevant literature and internal 2 information. But I did not specifically 3 ask for the NCI report. 4 Q. When you asked for all 5 relevant information, internal 6 information, was that prior to preparing 7 your expert report? 8 A. That's pretty much on a 9 chronic level, in other words from the 10 time that I was recruited or asked to 11 participate in this, I always asked, "Is 12 there literature? Is there more 13 literature? Here is the literature that 14 I have found," which were quite a number. 15 "Is there anything else that you can add 16 to this?" So I provided literature, and 17 they provided me with literature. 18 Q. You did not find the NCI's 19 PDQ yourself? 20 A. I did not find it myself. 21 Q. Did the NCI PDQ statements 22 on perineal talc exposure inform your 23 opinions in this case? 24 A. As I said, I only saw it</p>	<p>1 A. I reviewed their opinions. 2 I have many questions about how they 3 reached their opinions and what studies 4 they used. 5 If we can just be on the 6 same page in terms of what their opinion 7 is? 8 Q. I'm looking at the section 9 under perineal talc exposure. And my -- 10 my question is -- strike that. 11 I'm looking at the section 12 on perineal talc exposure which is about 13 four pages from the end. 14 A. I see. 15 Q. And my question is only 16 whether that section informed your 17 opinions in this case. 18 MS. O'DELL: Object to the 19 form. 20 THE WITNESS: I reviewed it. 21 It did not change my opinion. 22 Did -- did it inform my opinion? 23 It did not change my opinion. 24 BY MR. HEGARTY:</p>
Page 395	Page 397
<p>1 within the last few days. 2 Q. Understood. But you also 3 reviewed the Saed manuscript, you 4 reviewed the Canadian health assessment. 5 You said both those documents informed 6 your opinions. 7 So my question is, did the 8 NCI PDQ also inform your opinions. 9 MS. O'DELL: Object to the 10 form. 11 THE WITNESS: Well, the -- 12 the documents that you previously 13 mentioned do not inform my opinion 14 prior to my report of 15 November 16th. However, it's 16 information that has added to me 17 to get to this place where I am 18 right now. 19 So my opinion has not 20 changed from my report until 21 sitting here today. 22 BY MR. HEGARTY: 23 Q. Did the NCI PDQ add to your 24 opinions in this case?</p>	<p>1 Q. Do you agree with the NCI 2 PDQ statement on perineal talc exposure? 3 A. If we are talking about 4 their final conclusion? 5 Q. I'm talking -- yes. We can 6 talk about their final conclusion. 7 A. Okay. If I'm recalling 8 this, their final conclusion that -- was 9 that there was no causal relationship 10 between talc -- talcum powder exposure 11 and ovarian cancer. Is that -- 12 Q. Well, the -- the weight of 13 the evidence does not support an 14 association between perineal talc 15 exposure and an increased risk of ovarian 16 cancer. Do you agree with that 17 statement? 18 A. I do not agree with that 19 statement. 20 And I find, in reading this 21 document, that I'm not sure how they 22 reached that conclusion. On several 23 points, if you're interested. 24 One is --</p>

100 (Pages 394 to 397)

Judith Zelikoff, Ph.D.

Page 398	Page 400
<p>1 Q. No, I'm just asking you 2 whether you agreed with it. 3 A. I do not agree with their 4 final conclusion. 5 Q. Neither FDA nor any 6 scientific regulatory or other group has 7 ever sought out your opinions with regard 8 to the biologic plausibility of talc and 9 ovarian cancer, correct? 10 A. That is correct. 11 Q. You made reference earlier 12 to the Penninkilampi article. Do you 13 recall that? 14 A. I recall mentioning it, yes. 15 Q. I'm going to mark as 16 Exhibit 34 a copy of the Penninkilampi 17 article. That's the article that you 18 were talking about earlier, correct? 19 A. 2018, correct. 20 (Document marked for 21 identification as Exhibit 22 Zelikoff-34.) 23 BY MR. HEGARTY: 24 Q. If you turn over to page --</p>	<p>1 A. Yes, I do. 2 Q. Third line down it says, 3 "The mechanism by which perineal talc use 4 may increase the risk of ovarian cancer 5 is uncertain." 6 Do you agree with that 7 statement? 8 MS. O'DELL: Objection to 9 form. 10 THE WITNESS: I think 11 there's no -- in providing 12 biological plausibility, 13 biological plausibility, in and of 14 itself, says that there is a 15 possible mechanism or action that 16 could provide evidence for the 17 causation. 18 So the mechanism by which 19 perineal talc use may increase the 20 risk of ovarian cancer is 21 uncertain. It does not mean 22 it's -- it means it's uncertain, 23 that there are many viewpoints on 24 it.</p>
Page 399	Page 401
<p>1 strike that. 2 This is an article that you 3 rely on for purposes of your opinions in 4 this case, correct? 5 A. This is an article that I 6 reviewed and played into, yes, informed 7 my opinions. 8 Q. Did you find it to be a 9 reliable source of information? 10 MS. O'DELL: Object to the 11 form. 12 THE WITNESS: I found no 13 problems in the study design as I 14 read it. 15 Again, I'm not an 16 epidemiologist. So getting into 17 the nuances of this. I'm a 18 toxicologist and I depend on my 19 epidemiology colleagues to fill in 20 the gaps. 21 BY MR. HEGARTY: 22 Q. Over on Page 45, under the 23 section Discussion. Do you see that 24 section?</p>	<p>1 BY MR. HEGARTY: 2 Q. At the very -- in the very 3 last line of that article -- I'm sorry, 4 the very last line of that paragraph it 5 says, "The potential mechanism by which 6 genital talc is associated with an 7 increased risk of ovarian cancer hence 8 remains unclear." 9 Do you agree with that 10 statement? 11 A. I think there is -- in -- in 12 regards to your previous questions that 13 asked me if it was -- if there was an 14 agreement among the medical population, 15 and I said that I didn't know that there 16 was agreement or was not agreement. I 17 thought that there were not agreement. 18 So I agree with the statement that there 19 is still room for further study. 20 Unclear does not mean 21 unknown or that there are not biological 22 plausible mechanisms that could be 23 entertained. 24 Q. Is inflammation part of a</p>

101 (Pages 398 to 401)

Judith Zelikoff, Ph.D.

Page 402	Page 404
<p>1 normal mechanism of response to the 2 presence of particles in the lungs? 3 A. Depending upon the particle, 4 inflammation can be a normal part of a 5 response, yes. 6 Q. Can tumors occur in the 7 respiratory system with very high 8 exposure to particles that overwhelm the 9 body's clearance mechanisms and lead to 10 particle overload of lung macrophages? 11 A. Are you referring to the NTP 12 study? 13 Q. I'm not referring to any 14 study in particular. That was just a 15 question in general. 16 A. Okay. Can you repeat the 17 question? 18 Q. Yeah. Can tumors occur in 19 the respiratory system with very high 20 exposure to particles that overwhelm the 21 body's clearance mechanisms and lead to 22 particle overload of lung macrophages? 23 MS. O'DELL: Object to form. 24 THE WITNESS: That is a --</p>	<p>1 statement in the third paragraph at the 2 end that says even incidental -- the 3 third paragraph at the end. 4 A. I was looking for a pen. 5 Excuse me. 6 Okay. Go ahead. 7 Q. Says, "Even incidental 8 contamination by amphibole forms of 9 asbestos is hazard enough to cause 10 asbestos-related illnesses." 11 Do you see where I'm 12 reading? 13 A. I'm sorry, are you in the 14 first paragraph? 15 Q. Third paragraph. 16 A. Third paragraph. 17 Q. At the end. 18 A. At the -- traces of these 19 types of asbestos are -- 20 Q. No, third paragraph. 21 Even -- the last line. "Even incidental 22 contamination by amphibole forms of 23 asbestos is hazard enough to cause 24 cancer-related illnesses."</p>
Page 403	Page 405
<p>1 that has been seen as a 2 potential -- as a potential to 3 occur, yes. 4 BY MR. HEGARTY: 5 Q. Are there any publications 6 that indicate such a mechanism of 7 particle overload can occur in the 8 ovaries? 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: No studies 12 that I'm aware of that -- that 13 refer to particle overload in the 14 ovaries in this regard, in regard 15 to talcum powder. There's 16 evidence, of course, as I said 17 that there is talcum powder in the 18 ovary. 19 BY MR. HEGARTY: 20 Q. Over on Page 5 of your 21 report, Exhibit 2. 22 A. Page headed by Section 4, 23 Asbestos? 24 Q. Correct. You make a</p>	<p>1 Do you see where I'm 2 reading? 3 A. Says, "Cause 4 asbestos-related illnesses." 5 Q. I'm sorry. "Can cause 6 asbestos-related illnesses." You cite -- 7 A. I see where you are reading. 8 Q. -- the Rohl and Langer 9 paper? 10 A. Yes. 11 Q. I'll mark as Exhibit 35 the 12 Rohl and Langer paper that you've cited. 13 (Document marked for 14 identification as Exhibit 15 Zelikoff-35.) 16 BY MR. HEGARTY: 17 Q. Doctor, nowhere in that 18 paper did the author say that incidental 19 contamination by amphibole forms of 20 asbestos is hazard enough -- hazardous 21 enough to cause asbestos-related 22 illnesses, do they? 23 MS. O'DELL: Objection to 24 form.</p>

102 (Pages 402 to 405)

Judith Zelikoff, Ph.D.

Page 406	Page 408
<p>1 THE WITNESS: I'm sorry, I'm 2 not certain that this is the same 3 paper. This is Rohl, et al. The 4 paper that I cited is Rohl and 5 Langer. 6 BY MR. HEGARTY: 7 Q. It's dated 1976 -- 8 A. 1976. 9 Q. -- correct? 10 A. That's correct. 11 Q. If you look in the abstract 12 of that paper -- 13 A. Yes. The paper -- 14 Q. -- the paper that I marked 15 as Exhibit 35. 16 A. Rohl, et al, yes. 17 Q. Yes. It says, "It's 18 possible adverse health effects from 19 intermittent use of these products, 20 especially those that contain asbestiform 21 and fragmented anthophyllite, tremolite, 22 chrysotile, quartz, and trace minerals 23 are presently unknown and warrant 24 evaluation."</p>	<p>1 Many investigators, 2 including myself, have papers that come 3 out the same year but with different 4 authors. 5 Q. If you -- you turn over to 6 Page 6 of your report. 7 A. Yes, sir. 8 Q. At the end of the first 9 paragraph, at the top of the page. 10 A. Yes. 11 Q. You say that "the close 12 proximity of asbestos in talc and mineral 13 deposits makes extraction of either 14 material alone difficult, if not 15 impossible." 16 Do you see where I'm 17 reading? 18 A. Yes, I do. 19 Q. Is it your testimony that it 20 is impossible to extract talc from 21 mineral deposits without asbestos? 22 MS. O'DELL: Objection to 23 form. 24 THE WITNESS: I'm not a --</p>
Page 407	Page 409
<p>1 Did I read that correctly? 2 A. I'm sorry, you are in the 3 abstract, but I don't know what line you 4 are on. 5 Q. The very last line of the 6 abstract. 7 A. "Possible adverse health 8 effects from intermittent use of these 9 products especially those that contain 10 asbestiform and fragmented anthophyllite, 11 tremolite, chrysotile, quartz, and trace 12 minerals are presently unknown and 13 warrant evaluation." 14 Yes. This is also dated 15 1976. 16 Q. Which is the date that you 17 cite to the Rohl and Langer paper? 18 A. Yes, I -- I understand that, 19 sir. However, because this is a Rohl et 20 al., it is certainly possible that I 21 miscited and it was Rohl et al. But my 22 citation in there is Rohl and Langer. So 23 it may have been an error on my part. 24 However, there's pause.</p>	<p>1 I'm not a geologist. I cannot -- 2 I can only rely on the references 3 that are there. 4 BY MR. HEGARTY: 5 Q. Can you list all the steps 6 used in the processing of pharmaceutical 7 grade talc? 8 A. I can give you an overview. 9 But again, I'm not a commercial talc 10 production person, nor am I a geologist, 11 nor am I in the industry. So I can only 12 give you a superficial glimpse. 13 Q. Can you describe the 14 beneficiation for talc? 15 MS. O'DELL: Objection to 16 form. Asked and answered. 17 THE WITNESS: Not in -- not 18 in detail. I only know in general 19 that there is -- actually, I 20 prefer not to answer that at all 21 because I don't want to be 22 inaccurate. It's not my field. 23 BY MR. HEGARTY: 24 Q. Can you turn over to Page 7</p>

103 (Pages 406 to 409)

Judith Zelikoff, Ph.D.

Page 410	Page 412
<p>1 of your report. 2 In the second paragraph you 3 refer to the deposition of Alice Blount. 4 Do you see that? 5 A. Yes, I do. Second sentence. 6 Q. And you contend that the 7 sample she tested claimed to include 8 asbestos, including asbestos in Johnson's 9 Baby Powder. Do you see where you make 10 that reference? 11 A. Yes, I'm citing her 12 deposition. 13 Q. Did you read the entirety of 14 her deposition? 15 A. No, sir. 16 Q. What testing method did she 17 use? 18 A. I'd like to see the 19 deposition again. 20 Q. Did you see from her 21 deposition where she testified that her 22 results published in 1991 came from a 23 Johnson's Baby Powder bottle purchased in 24 1996?</p>	<p>1 Q. You read every word of it? 2 A. I reviewed it. And I read 3 it to the best of my ability. 4 Q. You make reference there to 5 Exhibits 47 and 28, 47 from Julie Pier 6 deposition and 28 from Dr. Hopkins' 7 deposition. 8 Do you see that? 9 A. Yes, I do. 10 Q. Do you know who prepared 11 those exhibits? 12 A. I do not. I would make an 13 assumption that it was attorneys. 14 Q. Were you aware that they 15 were prepared by counsel for plaintiffs? 16 MS. O'DELL: Objection to 17 form. 18 THE WITNESS: As the 19 questions were asked by some of 20 the attorneys for the plaintiff, I 21 would make that assumption. 22 BY MR. HEGARTY: 23 Q. Did you do anything yourself 24 to verify the accuracy of the information</p>
Page 411	Page 413
<p>1 A. You know, I'm waiting for 2 the -- see the article, please. 3 Q. Let me withdraw the 4 question. I don't have time to cover 5 that. 6 If you turn over to -- if 7 you look at Page 7, the second-to-last 8 paragraph you make reference there to the 9 testimony of Dr. Hopkins and the 10 testimony of Julie Pier. 11 Do you see that? 12 A. I see reference to 13 Dr. Hopkins in the third sentence. And 14 in the same paragraph, I see on the last 15 sentence, deposition of Julie Pier, 16 corporate representative of Imerys. 17 Q. You've already testified 18 that you have not completed reading the 19 deposition of Julie Pier, correct? 20 A. I have testified to that, 21 yes. 22 Q. Did you read the entirety of 23 the deposition of Dr. Hopkins? 24 A. I read the entirety, yes.</p>	<p>1 in any of those exhibits? 2 A. I'm not sure what you mean 3 did I do anything myself. I read them, 4 and I did not do any further literature 5 searching, if that's what you mean. 6 Q. Did you review the test 7 results themselves that are supposedly 8 reported in those two exhibits? 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: Did I review 12 the testing methodology? I did 13 not review it in the sense that I 14 did further literature searching, 15 but I -- I looked at and reviewed 16 the testing methods that they -- 17 that they said they used. 18 BY MR. HEGARTY: 19 Q. Did you actually pull the 20 tests that are referenced in those 21 exhibits and look at the test results 22 yourself? 23 A. I did not. 24 Q. Are you aware that in 2009</p>

104 (Pages 410 to 413)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 414</p> <p>1 FDA pulled -- did its own testing with 2 regard to asbestos and talc? 3 A. I am aware of that. 4 Q. Did you review the results 5 of those tests? 6 A. I did review the results. 7 It doesn't come to mind right now. I'd 8 like to see a copy of it, if I may. 9 Q. Nowhere in your report do 10 you cite those test results, do you? 11 A. Not that I can recall. 12 I do cite a paper or a 13 comment by Epstein writing to the FDA in 14 here. And the FDA's response in terms of 15 migration. 16 But in answer to your 17 question -- can you repeat your question? 18 Q. Sure. Did you cite -- you 19 agree that you didn't cite anywhere -- 20 strike that. 21 You did not cite anywhere in 22 your report the results of the FDA's 23 testing of talc in 2009, correct? 24 A. It doesn't appear so, no.</p>	<p style="text-align: right;">Page 416</p> <p>1 THE WITNESS: There are many 2 studies that IARC used, not just 3 worker study populations. 4 BY MR. HEGARTY: 5 Q. But their conclusion with 6 regard to designating talc -- sorry, 7 designating asbestos as Category 1 was 8 based on five cohort studies involving 9 heavy industrial exposure, correct? 10 A. The preponderance -- or the 11 weight -- the weight of evidence was 12 contributed among all studies, but it's 13 my -- it's my thought that the worker 14 studies were probably weighted as heavy 15 as any others. 16 Q. You agree -- you agree that 17 nowhere in your report do you analyze 18 what asbestos exposure levels had been 19 shown to induce a biologically plausible 20 effect in tissues, correct? 21 MS. O'DELL: Object to the 22 form. 23 THE WITNESS: Again, what do 24 you mean by analyze?</p>
<p style="text-align: right;">Page 415</p> <p>1 Q. Did you have that 2 information before you finalized your 3 report? 4 A. I'm not certain. Probably 5 yes. 6 Q. Did you review all the 7 epidemiologic literature looking at 8 asbestos exposure and ovarian cancer? 9 A. Well, as I said, I'm not an 10 epidemiologist. So I looked at several 11 of the meta-analyses, including 12 Dr. Taher. 13 Q. Did you read all the 14 meta-analyses that had been published 15 with regard to asbestos and ovarian 16 cancer? 17 A. No, I have not. 18 Q. The medical literature 19 looking at asbestos exposure and ovarian 20 cancer was based on exposure to -- was 21 based on a heavy industrial exposure, 22 correct? 23 MS. O'DELL: Objection to 24 form.</p>	<p style="text-align: right;">Page 417</p> <p>1 BY MR. HEGARTY: 2 Q. Well, nowhere do you cite 3 studies in your report reporting on the 4 effect of asbestos in tissues, correct? 5 A. I certainly do talk about 6 asbestos. If you give me a minute to 7 review. 8 I talk about it on Page 7 9 being listed as a Group 1 carcinogen. 10 Q. My question is nowhere in 11 your report do you analyze the studies 12 that look at the toxicity or discuss the 13 toxicity of asbestos in human tissue, 14 correct? 15 MS. O'DELL: Object to the 16 form. 17 THE WITNESS: I -- I did not 18 look at -- I did not analyze in 19 depth, no, the studies that are 20 associated with the IARC report, 21 if that's what you're asking. 22 BY MR. HEGARTY: 23 Q. What type of chromium -- 24 strike that.</p>

105 (Pages 414 to 417)

Judith Zelikoff, Ph.D.

Page 418	Page 420
<p>1 Is chromium-6 in Johnson's 2 Baby Powder? 3 A. Chromium is in Johnson's 4 Baby Powder. 5 Q. I'm sorry? 6 A. Chromium is present. 7 Q. Is chromium-6 present in 8 Johnson's Baby Powder? 9 A. There are indications. They 10 just discuss total chromium. 11 Q. Can you testify here today 12 that Johnson's Baby Powder has chromium-6 13 in it? 14 MS. O'DELL: Object to the 15 form. 16 THE WITNESS: Again, not 17 being a geologist and only going 18 by the internal documents, and if 19 I may also look at one of the 20 exhibits that has the data for the 21 metals. I'm sorry. 22 MS. O'DELL: It's Exhibit C 23 that was marked. 24 THE WITNESS: I don't want</p>	<p>1 Q. Of your report. The third 2 paragraph from the bottom where it 3 begins, "Chromium-3." 4 A. Yes. 5 Q. You say, "Chromium-3 has 6 weak cell membrane permeability, allowing 7 it to cross the cell membrane in order to 8 bind to DNA and cause lesions." That's 9 not correct, is it? 10 A. That is not correct. That 11 is an error on my part in the report. 12 Chromium-3 has strong membrane 13 permeability. And when you asked me the 14 question initially whether there was an 15 error in my report, I should have looked 16 at it, and that is an error. Yes. 17 Q. In fact chromium-3 does not 18 cross the cell membrane, correct? It's 19 unable to cross the cell membrane? 20 A. Chromium-6 crosses the cell 21 membrane and then converts into -- is 22 oxidized to chromium-3. And chromium-3 23 is the actual component which causes the 24 instability.</p>
Page 419	Page 421
<p>1 to go by my memory alone. I'd 2 like to see that. 3 Thank you very much. 4 In the document prepared as 5 Exhibit C, chromium has not been 6 speciated and it's listed as total 7 chromium. I would make the 8 assumption from my professional 9 opinion that in mining, you do get 10 both chromium-6 and chromium-3 11 when you have -- when you're 12 mining talc. But I'm not a 13 geologist. 14 BY MR. HEGARTY: 15 Q. Does chromium-6 only come 16 through industrial processing? 17 A. No. It can actually be 18 found in the soil as a product of 19 contamination. 20 Q. If you look over -- 21 A. And it can be re-oxidized. 22 Yes. 23 Q. If you look over on Page 9? 24 A. Of?</p>	<p>1 Q. But chromium-3 is unable to 2 cross the cell membrane, correct? 3 A. Completely. To some degree 4 it has -- it can cross to some -- some 5 minimal degree. But it's hexavalent 6 chromium which can cross -- which has 7 great capacity to cross the cell 8 membrane, yes. 9 May I take a minute, please. 10 Let me -- let me restate 11 based upon the third paragraph that 12 starts, "Chromium-3 has weak cell 13 membrane permeability." 14 It has weak to no cell 15 membrane permeability. 16 It is the active oxidized 17 product of hexavalent chromium or 18 chromium-6, that along with chromium-4 19 and chromium-5 which is responsible for 20 genetic instability and oxidative stress. 21 So it's chromium-3. 22 Q. If you turn over to Page 23 13 -- I'm sorry, Page 12 of your report. 24 Section entitled C, Fragrances?</p>

106 (Pages 418 to 421)

Judith Zelikoff, Ph.D.

Page 422	Page 424
<p>1 A. Yes.</p> <p>2 Q. As of the time you prepared</p> <p>3 your report, your entire opinions with</p> <p>4 regard to fragrances was based on the</p> <p>5 report by Michael Crowley, correct?</p> <p>6 A. That is correct.</p> <p>7 Q. You understand --</p> <p>8 A. And, and what I know about</p> <p>9 some of the components from other --</p> <p>10 other studies.</p> <p>11 Q. Have you had any prior work</p> <p>12 experience with him?</p> <p>13 A. Dr. Michael Crowley?</p> <p>14 Q. Yes.</p> <p>15 A. No.</p> <p>16 Q. Do you know anything about</p> <p>17 his qualifications beyond -- beyond what</p> <p>18 you read in his report?</p> <p>19 A. No. Just in his report and</p> <p>20 the information that he gives about</p> <p>21 himself. And the questions that were</p> <p>22 asked to him and the responses.</p> <p>23 Q. You say that you concur --</p> <p>24 "I concur with his opinion." Does that</p>	<p>1 expert witness report in litigation?</p> <p>2 MS. O'DELL: Object to the</p> <p>3 form.</p> <p>4 THE WITNESS: I am trying to</p> <p>5 recall whether or not I have ever</p> <p>6 had that opportunity.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Sitting here right now, can</p> <p>9 you recall when you had such an</p> <p>10 opportunity?</p> <p>11 A. In this particular setting</p> <p>12 of being deposed?</p> <p>13 Q. Or in any -- in any setting</p> <p>14 where you are concurring with the opinion</p> <p>15 of someone who -- who comments on</p> <p>16 toxicity in an expert witness report</p> <p>17 written for litigation?</p> <p>18 MS. O'DELL: Objection to</p> <p>19 form.</p> <p>20 THE WITNESS: I would --</p> <p>21 I -- I would comment on it if I</p> <p>22 agreed.</p> <p>23 And in this case, you know,</p> <p>24 having the knowledge base that I</p>
Page 423	Page 425
<p>1 mean that you agreed with everything that</p> <p>2 he says in his report?</p> <p>3 MS. O'DELL: Object to the</p> <p>4 form.</p> <p>5 THE WITNESS: I concur with</p> <p>6 his statement which says that</p> <p>7 "some of these chemicals in</p> <p>8 fragrances may contribute to the</p> <p>9 inflammatory response, toxicity</p> <p>10 and potential carcinogenicity of</p> <p>11 Johnson & Johnson talcum powder</p> <p>12 products."</p> <p>13 And that's based on the</p> <p>14 knowledge of some of the chemicals</p> <p>15 as I said that I've reviewed for</p> <p>16 other studies and personal</p> <p>17 studies. And they are indeed</p> <p>18 inflammatory and can cause</p> <p>19 toxicity.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. Prior to reading</p> <p>22 Dr. Crowley's report, had you ever</p> <p>23 concurred with a finding as to toxicity</p> <p>24 of a substance based on the reading of an</p>	<p>1 have, not on -- certainly not on</p> <p>2 all 150 different chemicals, which</p> <p>3 is why I did my own literature</p> <p>4 search, but on the chemicals that</p> <p>5 I do know, I did agree with the</p> <p>6 fact that they -- they do</p> <p>7 contribute to inflammatory</p> <p>8 responses, toxicity, some are</p> <p>9 cytotoxic and produce cell injury</p> <p>10 and potential carcinogenicity.</p> <p>11 So as ethyl benzene as one</p> <p>12 of the ingredients or one of the</p> <p>13 constituents in fragrances, is</p> <p>14 listed as a type -- as a Class 2</p> <p>15 carcinogen. So I did agree with</p> <p>16 it.</p> <p>17 If I had any question, I did</p> <p>18 my own search.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Over on page -- Pages 12 and</p> <p>21 13, again you discuss exposure routes of</p> <p>22 talc either through perineal exposure or</p> <p>23 through inhalation, correct? And that</p> <p>24 carries over to Pages 14 and 15, and 16</p>

107 (Pages 422 to 425)

Judith Zelikoff, Ph.D.

Page 426	Page 428
<p>1 and 17.</p> <p>2 A. Okay.</p> <p>3 Q. So in that section, did you</p> <p>4 in any way analyze whether the particles</p> <p>5 that -- whether talc can transport in the</p> <p>6 same way that the particles do in the</p> <p>7 studies that you cite?</p> <p>8 MS. O'DELL: Objection to</p> <p>9 form.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. In other words, did you cite</p> <p>12 any authority showing that talc particles</p> <p>13 transport in the same way as the</p> <p>14 particles you reference in these studies?</p> <p>15 A. Not conclusively. But as I</p> <p>16 said, if the particles are of similar</p> <p>17 sizes, which they are in these -- in</p> <p>18 these animal studies, then I would have</p> <p>19 no reason to believe that the talc</p> <p>20 particles did not move in the same</p> <p>21 manner.</p> <p>22 Q. Well, do you agree that it</p> <p>23 is important when talking about transport</p> <p>24 of particles, that -- strike that. Let</p>	<p>1 that are applied to talc via the perineal</p> <p>2 route?</p> <p>3 A. What I did was I looked at</p> <p>4 the internal documents, found that the --</p> <p>5 according to the -- the instrumentation</p> <p>6 and the graphics that they did, as well</p> <p>7 as Dr. Longo, and looked at the size</p> <p>8 range of the particles. As I said, the</p> <p>9 median and the average is around 10.5 to</p> <p>10 11.5, but there were particle size range</p> <p>11 in the talc -- talcum powder products</p> <p>12 that range all the way from 50 microns or</p> <p>13 larger all the way down to 0.3 microns or</p> <p>14 300 nanometers.</p> <p>15 Q. Well, did you do any</p> <p>16 correlation to determine whether the --</p> <p>17 the size of the particles studied in</p> <p>18 the -- in the articles you cite in any</p> <p>19 way correlate or relate to the particle</p> <p>20 sizes in Johnson's Baby Powder?</p> <p>21 MS. O'DELL: Object to the</p> <p>22 form.</p> <p>23 THE WITNESS: The size of</p> <p>24 particles that were used in many</p>
Page 427	Page 429
<p>1 me ask it a different way.</p> <p>2 You cite to an authority</p> <p>3 that makes the following statement, I</p> <p>4 don't want to ask you -- I want to ask</p> <p>5 you if you agree with it.</p> <p>6 A. Okay.</p> <p>7 Q. In an experiment to</p> <p>8 evaluate --</p> <p>9 A. I'm sorry. What page?</p> <p>10 Q. It's -- it's not on -- it's</p> <p>11 not in your report. It's part of my</p> <p>12 question.</p> <p>13 A. Okay.</p> <p>14 Q. Do you agree that in an</p> <p>15 experiment to evaluate the translocation</p> <p>16 of solid particles, the characteristics</p> <p>17 of the particle, i.e., size and material,</p> <p>18 should be considered carefully?</p> <p>19 A. I agree that the size should</p> <p>20 be considered very carefully.</p> <p>21 Q. And did you do any</p> <p>22 comparison with the size of particles</p> <p>23 that are referenced in the literature</p> <p>24 that you cite, to the size of particles</p>	<p>1 of the animal studies certainly</p> <p>2 fall within the range that I just</p> <p>3 gave you.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. Well, a number of the animal</p> <p>6 studies used nanoparticles, correct?</p> <p>7 A. They used .1 micron, but</p> <p>8 they also used larger particles.</p> <p>9 Q. Is it your testimony that</p> <p>10 there are nanoparticles of talc in</p> <p>11 Johnson's Baby Powder?</p> <p>12 A. If a particle -- a particle</p> <p>13 is considered an ultra fine particle if</p> <p>14 it's .1 micron or less.</p> <p>15 Q. But my question is as to</p> <p>16 nanoparticles. Are there nanoparticles</p> <p>17 in Johnson's Baby Powder?</p> <p>18 A. Not that your literature</p> <p>19 showed. But ultra fines are also -- can</p> <p>20 be called nanoparticles because they go</p> <p>21 as low as .1.</p> <p>22 Q. If you look over on Page 14</p> <p>23 of your report, you cite in the second</p> <p>24 paragraph a letter from FDA to</p>

108 (Pages 426 to 429)

Judith Zelikoff, Ph.D.

Page 430	Page 432
<p>1 Dr. Epstein, correct?</p> <p>2 A. That's correct.</p> <p>3 Q. I marked as Exhibit</p> <p>4 Number 33 a copy of that letter.</p> <p>5 (Document marked for</p> <p>6 identification as Exhibit</p> <p>7 Zelikoff-33.)</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Is that a copy of the letter</p> <p>10 that you are referencing in that</p> <p>11 paragraph?</p> <p>12 A. If you could point me to the</p> <p>13 paragraph, please.</p> <p>14 Q. Well, it's the second --</p> <p>15 it's the second paragraph at the top of</p> <p>16 Page 14.</p> <p>17 A. Stating "further evidence</p> <p>18 for migration"?</p> <p>19 Q. Correct.</p> <p>20 A. Okay. Yes. This is the</p> <p>21 letter that I'm referring to.</p> <p>22 Q. In the same paragraph that</p> <p>23 you reference, where you make -- where</p> <p>24 you -- in the same paragraph where you</p>	<p>1 A. I did not.</p> <p>2 Q. Why not?</p> <p>3 A. And in terms of my report,</p> <p>4 and talking about migration, again, the</p> <p>5 ovarian cancer and cogent biological</p> <p>6 mechanism was not appropriate for that,</p> <p>7 where I cited the original statement.</p> <p>8 Q. But you cite elsewhere in</p> <p>9 your report statements and studies you</p> <p>10 contend support your opinion that there</p> <p>11 is a biologically plausible mechanism</p> <p>12 between talc and ovarian cancer, correct?</p> <p>13 A. Yes, I do.</p> <p>14 Q. This statement by FDA</p> <p>15 concerns whether there's a biologically</p> <p>16 plausible mechanism between talc and</p> <p>17 ovarian cancer, correct?</p> <p>18 A. That is -- that is what the</p> <p>19 FDA says, yes.</p> <p>20 Q. Did you cite FDA's statement</p> <p>21 about -- as to its view of whether a</p> <p>22 cogent biological mechanism exists</p> <p>23 anywhere in your report?</p> <p>24 A. I did not cite this</p>
Page 431	Page 433
<p>1 pull out the statement that you cite</p> <p>2 here, "FDA states that while there exists</p> <p>3 no direct proof of talc in ovarian</p> <p>4 carcinogenesis" --</p> <p>5 A. Genesis?</p> <p>6 Q. Genesis, carcinogenesis.</p> <p>7 It's getting late for me too.</p> <p>8 Did you cite that finding by</p> <p>9 FDA in this paragraph?</p> <p>10 A. No. What I was trying to</p> <p>11 cite was referring to migration through</p> <p>12 the upper genital tract. So citing the</p> <p>13 information on carcinogenesis would not</p> <p>14 have been appropriate in that paragraph.</p> <p>15 Q. If you turn over to Page 4</p> <p>16 of the FDA's letter. At the very bottom</p> <p>17 FDA states, "A cogent biological</p> <p>18 mechanism by which talc might lead to</p> <p>19 ovarian cancer is lacking."</p> <p>20 Do you see that?</p> <p>21 A. I do see that.</p> <p>22 Q. You do not cite that</p> <p>23 statement anywhere in your report,</p> <p>24 correct?</p>	<p>1 statement.</p> <p>2 Q. You cite one statement by</p> <p>3 FDA that you believe they are correct</p> <p>4 about?</p> <p>5 A. They put a lot of weight</p> <p>6 into that statement and...</p> <p>7 Q. Well, how did you weigh that</p> <p>8 statement versus the other statement that</p> <p>9 I read at the bottom of Page 4?</p> <p>10 A. Sorry, I'd like to find it.</p> <p>11 And repeat the question</p> <p>12 please.</p> <p>13 Q. How did you weigh the</p> <p>14 statements you cite about migration</p> <p>15 versus the other statement that I read at</p> <p>16 the bottom of Page 4 about a cogent</p> <p>17 biologic mechanism?</p> <p>18 A. In terms of the migration,</p> <p>19 this is something that not only has been</p> <p>20 found by the FDA and -- and is being</p> <p>21 reiterated as a result of numerous</p> <p>22 studies, this, Number 4, a cogent</p> <p>23 biological mechanism by which talc led to</p> <p>24 ovarian cancer is lacking is the FDA's</p>

109 (Pages 430 to 433)

Judith Zelikoff, Ph.D.

Page 434	Page 436
<p>1 opinion in 19 -- in 2014, and I did not 2 know at all how they came to that 3 conclusion. 4 So in terms of migration, 5 that's been ferreted out and it's well 6 known in the literature for migration of 7 particles. But the -- their opinion, the 8 FDA's opinion on this, I could not 9 substantiate in terms of what they were 10 basing that conclusion on. 11 Q. What methodology did you use 12 to determine which of the statements by 13 FDA in this letter you believed are 14 correct and which you believed are not 15 correct? 16 MS. O'DELL: Object to the 17 form. 18 THE WITNESS: Well, if it 19 was a common finding such as that 20 which particles can migrate which 21 has been shown since late 1990s, 22 versus information that is given 23 in this report and is the basis -- 24 and is what the FDA is opining on,</p>	<p>1 scrutiny. I think that for what they 2 did, they did a good study. 3 Q. If you look at Page 3 of the 4 FDA letter. 5 A. Okay. 6 Q. At the bottom, do you see 7 they comment on the very NTP study -- 8 A. Yes. 9 Q. -- that you just mentioned, 10 right? 11 MS. O'DELL: Which page are 12 you on? 13 MR. HEGARTY: Page 3. 14 THE WITNESS: There were a 15 number -- 16 BY MR. HEGARTY: 17 Q. I'm not -- I'm haven't asked 18 a question. 19 A. Oh, I'm sorry. 20 Q. My question was simply, do 21 you see where they comment on that NTP 22 study? 23 A. I see that, yes. 24 Q. Do you cite anywhere in your</p>
Page 435	Page 437
<p>1 however, I don't know what the -- 2 what the literature is that they 3 reached in that conclusion. 4 BY MR. HEGARTY: 5 Q. IARC includes a citation in 6 its 2010 monograph saying essentially 7 that the evidence of migration to the 8 ovaries is weak. Do you recall reading 9 that? 10 A. I do not recall reading 11 that. I've reviewed the IARC paper, but 12 I -- I do not recall. And I could look 13 at it and tell you what I thought. 14 Q. You made reference earlier 15 in the deposition to the 1992 NTP study, 16 correct? 17 A. Yes. 18 Q. Do you find that to be a 19 well-done study? 20 A. For what it was, I do find 21 it to be a well-done study. I've worked 22 with the NTP. I've served as an advisory 23 board member. And I think that the work 24 they do are -- is with rigor and</p>	<p>1 report FDA's commentary on the NTP study? 2 A. I can find it in my report. 3 I did comment on some of the other that 4 there's been some controversy by 5 Dr. Warheit and Dr. Goodman. They had 6 some pushback on this. I think I 7 commented on that, but I'd like to find 8 the page where I said that. 9 Q. You agree that you didn't 10 cite to FDA's commentary about the NTP 11 study in its February 14, 2014, letter? 12 A. Not -- not that I recall, 13 no. But as I said, I did comment on 14 other -- their -- the FDA's comments are 15 very similar to those made by other 16 scientists. 17 Q. You say the FDA's comments 18 are very similar to those made by other 19 scientists. You are talking about the 20 comments on Page 3? 21 A. I am. And I'm talking about 22 the comments made by Dr. Jay Goodman and 23 Dr. David Warheit that pushed back on the 24 studies by the NTP and the conclusion.</p>

110 (Pages 434 to 437)

Judith Zelikoff, Ph.D.

Page 438	Page 440
<p>1 Q. For purposes of your 2 analysis in this case, did you review all 3 the studies on talc miners and millers? 4 A. No, I did not. 5 Q. For purposes -- 6 A. I am not an epidemiologist. 7 Q. For purposes of your 8 analysis in this case, did you look at 9 all the studies looking at talc -- 10 looking at long-term effects of talc 11 pleurodesis? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: It was -- it 15 was not my question to look at -- 16 only to bring the pulmonary 17 aspects in in manners that relate 18 to ovarian effects and 19 inflammation and plausibility. 20 So, no, I did not. I 21 reviewed several studies on 22 pleurodesis, in terms of 23 understanding it, why talcum 24 powder is used, and the effect of</p>	<p>1 So when you're looking at 2 toxicology, it's not just the 3 concentration that you use. It's 4 also the length and duration and 5 frequency of the use and their 6 cumulative effects. 7 BY MR. HEGARTY: 8 Q. Is it your opinion that a 9 single particle of talc is sufficient for 10 biologic plausibility? 11 MS. O'DELL: Objection to 12 form. 13 THE WITNESS: I'm pretty 14 sure I answered that question 15 before. But I will -- again, 16 talcum powder is known to produce 17 inflammation, and inflammation is 18 known to be a biological mechanism 19 for cancer. 20 BY MR. HEGARTY: 21 Q. My question is, is a single 22 particle of talc in vivo sufficient for 23 your biologic plausibility opinion in 24 this case?</p>
Page 439	Page 441
<p>1 talcum powder on pleurodesis. 2 BY MR. HEGARTY: 3 Q. What is the volume of talc 4 that gets introduced in vivo with a 5 single application to the perineum? 6 MS. O'DELL: In pleurodesis? 7 THE WITNESS: For 8 pleurodesis? 9 BY MR. HEGARTY: 10 Q. No, just in women in 11 applying -- strike that. 12 MS. O'DELL: I'm sorry. 13 BY MR. HEGARTY: 14 Q. What is the volume of talc 15 that gets introduced in vivo with a 16 single application of talc to the 17 perineum? 18 MS. O'DELL: Objection to 19 form. 20 THE WITNESS: I do not know 21 the concentration. It depends on 22 the person and how they're using 23 it. It also depends on the 24 frequency that they are using it.</p>	<p>1 A. If it produces inflammation, 2 it could be used that way. As a matter 3 of relevancy, I don't think that there's 4 anyone who produces -- who uses a single 5 molecule. But in answer to your 6 question, if that single talc -- talcum 7 powder product produced inflammation, 8 then yes, it could -- it could be related 9 to biological plausibility. 10 Q. Can you cite any published 11 authority that supports that opinion? 12 A. That shows me that one 13 particle could produce inflammation? 14 Q. That could lead to cancer. 15 A. That could lead to cancer. 16 I cannot show you. It's not that I don't 17 know if it's there or not there. I just, 18 to my knowledge, I am not aware. 19 MR. HEGARTY: I'm going to 20 let Mr. Ferguson ask you some 21 questions for a little bit. Then 22 I will come back and finish up. 23 THE WITNESS: Okay. Thank 24 you.</p>

Judith Zelikoff, Ph.D.

Page 442	Page 444
<p>1 THE VIDEOGRAPHER: The time 2 is 6:00 p.m. Off the record. 3 (Short break.) 4 THE VIDEOGRAPHER: The time 5 is 6:25 p.m. Back on the record. 6 - - - 7 EXAMINATION 8 - - - 9 BY MR. FERGUSON: 10 Q. Hello, Dr. Zelikoff. 11 A. Hello. 12 Q. How are you? 13 A. Good, thank you. 14 Q. My name is Ken Ferguson, and 15 I represent Imerys, one of the parties to 16 this litigation. Do you understand that? 17 A. I understand what you said, 18 yes. 19 Q. Okay. And I'm going to have 20 some questions for you, which I'm going 21 to maybe try to go through pretty 22 quickly. But just stop me if I speed up 23 too much. I'm told that I talk slowly. 24 So maybe I won't be speeding up too much.</p>	<p>1 Q. Have you ever been elected 2 to membership in any of the national 3 academies, for example the National 4 Academy of Science? 5 A. I've not been elected as a 6 member, but I have served on the advisory 7 body numerous times. 8 Q. Okay. But you haven't been 9 elected to membership; is that right? 10 A. No, that is correct. 11 Q. Dr. Zelikoff, have you 12 communicated with any regulatory bodies 13 of any country regarding the issue of 14 talc and ovarian cancer that we've been 15 discussing today? 16 A. I have not. 17 Q. Have you communicated with 18 any scientific journals or publications 19 regarding talc and ovarian cancer? 20 A. I have not. 21 Q. So, can you turn to your 22 report, which is Exhibit Number 2. 23 A. I have it. 24 Q. Okay. Can you look at the</p>
Page 443	Page 445
<p>1 So first of all, let me just 2 go back briefly to your background and 3 qualifications. 4 A. Okay. 5 Q. Just briefly, do you 6 currently have a laboratory? 7 A. I do have a laboratory. 8 Q. And how many personnel do 9 you have employed in the laboratory? 10 A. Today? 11 Q. Yes, ma'am. 12 A. Today I have no one 13 employed, but three graduate students. 14 Q. And where does the funding 15 come from to support that laboratory? 16 A. It comes from the NIEHS, 17 National Institute of Environmental 18 Health Sciences from a center grant. And 19 that is the main source at this moment. 20 Q. Are you the principal 21 investigator of any extramural or 22 intramural funding at the current time? 23 A. I have -- as of today, I'm 24 not.</p>	<p>1 top of Page 3, please. 2 A. Yes, sir. 3 Q. And in the first full 4 paragraph on that page, it says, "My 5 opinions below are based upon my 6 experience as a toxicologist and research 7 scientist and have been reached through 8 employing the same scientific methodology 9 and rigor that I employ in my academic 10 research and professional duties." 11 Correct? 12 A. Yes, sir, I see that. 13 Q. And is that true? 14 A. That is true. 15 Q. And in your professional 16 duties and academic research, do you 17 customarily rely on peer-reviewed 18 publications in the scientific literature 19 for your research? 20 A. I do -- peer reviews, I rely 21 on. Abstracts come into play. 22 Documents. Whatever is needed, I will 23 use and cite in my publications. 24 Q. Do you customarily rely on</p>

112 (Pages 442 to 445)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 446</p> <p>1 non-peer-reviewed research that is paid 2 for by a party that has a direct 3 financial interest in the outcome of the 4 study? 5 MS. O'DELL: Object to the 6 form. 7 THE WITNESS: I go by the 8 science. I don't look at the 9 funding. Many scientists do. But 10 I think if the science is sound, I 11 look at the science -- I go by the 12 science. 13 BY MR. FERGUSON: 14 Q. Look at -- look at Page 8, 15 please. 16 A. Yes, sir. 17 Q. There in the first full 18 paragraph, you talk about recent TEM 19 testing on historic samples. 20 Do you see that sentence? 21 A. Recent TEM testing on 22 historic samples, yes. 23 Q. And you cite Longo and 24 Rigler from 2018, correct?</p>	<p style="text-align: right;">Page 448</p> <p>1 testing from the company? 2 BY MR. FERGUSON: 3 Q. And my question was, can you 4 cite any scientific articles that you've 5 authored in which you cited an 6 unpublished paper authored by an expert 7 witness who is being paid in the 8 litigation on the very topic that you're 9 writing on? 10 A. I have not had that 11 opportunity so the answer is no. 12 Q. So, you've never done that 13 in your academic writings, correct? 14 A. If you mean that -- by that, 15 that I have never cited an unpublished 16 paper authored by an expert witness? 17 Q. Yes, ma'am. 18 A. I have not done -- I have 19 not had the opportunity to do that. My 20 publications are primarily, if not 21 solely, based either on reviews or -- or 22 results that have emerged from my own 23 laboratory or a colleague's laboratory. 24 I've not had that</p>
<p style="text-align: right;">Page 447</p> <p>1 A. Mm-hmm-hmm, yes. 2 Q. Okay. And are you aware 3 that Longo and Rigler are paid expert 4 witnesses who were hired by plaintiffs' 5 counsel to testify in talc litigation, 6 including this matter you're working on? 7 A. I understand -- I understand 8 today that they are plaintiffs' 9 witnesses, experts. 10 Q. Can you cite any scientific 11 articles that you've authored in the past 12 in which you cited an unpublished paper 13 that was authored by expert witnesses 14 hired by a party in litigation on the 15 very topic that you're writing on? 16 MS. O'DELL: Objection to 17 form. 18 THE WITNESS: I relied 19 primarily on Longo. But it is, as 20 I said, or as I will say, it's a 21 Johnson & Johnson product that 22 they are testing, so in my 23 opinion, who better to know what's 24 there than someone who did the</p>	<p style="text-align: right;">Page 449</p> <p>1 opportunity. So the answer is no. 2 Q. If you look at Page 7. 3 A. Of the report? 4 Q. Of -- of your report. Yes 5 please. 6 On Page 7 you say, "In 2004, 7 a television station reported that 8 Johnson's Baby Powder had been analyzed 9 and found anthophyllite asbestos at 10 0.2 percent," correct? 11 A. I see that. That's in the 12 last paragraph. The second sentence: In 13 2004, a television station reported 14 Johnson's Baby Powder had been analyzed 15 and found anthophyllite asbestos at 16 0.2 percent, yes. 17 Q. In your previous academic 18 research, have you ever cited to stories 19 run on local television stations? 20 A. I have. 21 Q. And is that something that 22 you think shows scientific rigor? 23 MS. O'DELL: Objection to 24 form.</p>

113 (Pages 446 to 449)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 450</p> <p>1 THE WITNESS: It depends on 2 the scientific paper. And it -- 3 it depends on the source of the 4 media. 5 BY MR. FERGUSON: 6 Q. If we go to Pages 6 -- 7 A. If -- if I may add to that, 8 my recollection is that that television 9 station data was given to Johnson & 10 Johnson and it was not -- I did not cite 11 television station itself, but the -- the 12 document that was turned over to Johnson 13 & Johnson. 14 Q. If you go to Page 6 of 15 your -- 16 A. Page what, I'm sorry? 17 Q. 6. 18 A. 6? 19 Q. So on Pages 6 to 8 you cite 20 documents or other sources that you claim 21 show the presence of asbestos in talc 22 powder, correct? You -- 23 A. Pages 6 to 8? 24 Q. Yeah. Why don't you go to</p>	<p style="text-align: right;">Page 452</p> <p>1 BY MR. FERGUSON: 2 Q. And that's in your report, 3 correct? 4 A. On Page 7 at the top. 5 Q. Then you also cited 6 Dr. Blount's paper that you and 7 Mr. Hegarty talked about, correct? 8 A. I'm sorry, can you give me a 9 location? 10 Q. Sure. It's the second 11 paragraph on Page 7. 12 A. Van Gosen? 13 Q. No, the second full 14 paragraph, cosmetic and pharmaceutical 15 talc products, et cetera -- 16 A. Yes, deposition of Alice 17 Blount. Yes. 18 Q. Correct. 19 A. Sorry to interrupt. 20 Q. And Dr. Blount's paper was 21 some 30 or so years ago, correct? 22 A. 1991. 23 Q. And -- and I won't go 24 through this in detail, but Mr. Hegarty</p>
<p style="text-align: right;">Page 451</p> <p>1 the top of 7. Let me go to it 2 specifically. 3 One of the things you cite 4 to is Paoletti in 1984? 5 A. Yes, sir. 6 Q. Okay. And the Paoletti 7 study was completed -- I don't know if I 8 can do my math very well, but is that 9 36 years ago? 10 A. 36, yes. 11 Q. And you notice they have 12 assessed, according to your own report, 13 contamination in industrial and cosmetic 14 talcs, correct? 15 A. 9 of the 24 pharmaceutical 16 and cosmetic grade talcs contain 17 tremolite fibers. 18 Q. And they are from the 19 Italian market, correct? 20 A. From the Italian market. 21 MS. O'DELL: Objection to 22 form. 23 THE WITNESS: And the 24 European pharmacopeia.</p>	<p style="text-align: right;">Page 453</p> <p>1 discussed with you the fact that U.S. 2 Food and Drug Administration conducted a 3 survey of cosmetic grade raw material 4 talc and some cosmetic products 5 containing talc. And you were generally 6 aware of that, correct? 7 A. The FDA report that he -- he 8 pointed me to, yes. 9 Q. Okay. You were aware but 10 you didn't cite it, correct? 11 A. I was aware but I did not 12 cite it. 13 Q. And that came from 2010 as 14 opposed to 1984 or 1991, correct? 15 MS. O'DELL: Objection -- 16 THE WITNESS: Yes -- 17 MS. O'DELL: Excuse me. 18 Objection to form. 19 If you're going to ask a 20 specific -- about a specific date, 21 I would ask -- or a specific item 22 of that -- in that document I 23 would just ask that you show the 24 witness.</p>

114 (Pages 450 to 453)

Judith Zelikoff, Ph.D.

Page 454	Page 456
<p>1 BY MR. FERGUSON: 2 Q. Do you -- do you recall when 3 that survey was from? 4 A. The FDA was 2014. I don't 5 recall a specific. 6 Q. Well, okay. Counsel's 7 suggested it. Why don't we go ahead and 8 mark as Exhibit 37. 9 (Document marked for 10 identification as Exhibit 11 Zelikoff-37.) 12 BY MR. FERGUSON: 13 Q. And is this a document that 14 you've reviewed before? 15 A. This is a document that I 16 have reviewed, yes. 17 Q. Okay. If you look at Page 2 18 at the top of the page, in the second 19 paragraph there, it says, "The study ran 20 from September 28, 2009, to September 27, 21 2010," correct? 22 A. So I'm trying to put that 23 sentence into context. So I need to read 24 the above sentences.</p>	<p>1 Luzenac America, correct? 2 A. Correct. On the left side. 3 Q. On the left side. And on 4 the right side there are two columns that 5 say percentage asbestos by PLM and 6 percentage asbestos by TEM, correct? 7 A. I see that. 8 Q. And each of those says NAD, 9 correct? 10 A. They say NAD. 11 Q. And from your review of 12 this, do you know that NAD means no 13 asbestos detected? 14 A. Yes, I do. That means that 15 the measurements that they had and the 16 scientific -- and the sensitivities that 17 they were using at the given time, they 18 did not see any, is my interpretation of 19 that. 20 Q. According to the paper that 21 you said, NAD means no asbestos detected, 22 correct? 23 A. In this study, yes, correct. 24 Q. Let's take a look. You've</p>
Page 455	Page 457
<p>1 I assume that the study they 2 are talking about was the contract with 3 the AMA analytical services to conduct 4 the laboratory survey. 5 Is that the study that they 6 are referring to? It's unclear. 7 Q. And in your review of this 8 document, did you read that there was no 9 asbestos detected by the survey by the 10 FDA in either the cosmetic grade raw 11 material talc, or the finished product 12 cosmetic products containing talc, 13 correct? 14 A. I'm trying to find where 15 that was stated. 16 Q. If you look at Page 3? 17 A. Yes, sir. 18 Q. See where it says at the top 19 of the page, "Cosmetic raw material 20 talc"? 21 A. I see that, yes, sir. 22 Q. Correct? 23 Then there is a list of 24 suppliers called Rio Tinto Minerals</p>	<p>1 cited to IARC several times during 2 your -- in your report, correct? 3 A. Yes, I did. 4 Q. And let's look at the IARC 5 monograph 100 C, which was published in 6 2012 that I've marked as Exhibit 36. 7 (Document marked for 8 identification as Exhibit 9 Zelikoff-36.) 10 THE WITNESS: Entitled 11 Arsenic Metals, Fibrous and Dusts? 12 BY MR. FERGUSON: 13 Q. Correct. 14 And if you -- I've provided 15 you a page there, correct? 16 A. You've provided me with 17 three pages. 18 Q. Okay. And was that 19 Page 225? 20 A. 225 starts 1.5 human 21 exposure. 22 Q. Okay. If you look at the 23 top of 225. Do you have that page? 24 A. Yes, sir.</p>

115 (Pages 454 to 457)

Judith Zelikoff, Ph.D.

Page 458	Page 460
<p>1 Q. In an exposure it says, 2 "Inhalation and ingestion are the primary 3 routes of exposure to asbestos," correct? 4 MS. O'DELL: Objection to 5 form. 6 BY MR. FERGUSON: 7 Q. The very first sentence. 8 A. Mm-hmm-hmm. I cannot attest 9 to ingestion, but certainly inhalation is 10 a primary. 11 Q. But you'd agree that -- that 12 this is what IARC said, correct? 13 A. I agree that this is what's 14 in IARC, yes, 2012. 15 Q. And then there's another 16 section called exposure of the general 17 population, correct? 18 A. Yes, sir. 19 Q. And in the second paragraph 20 under that, do you see that paragraph 21 starts in studies of asbestos 22 concentrations? 23 A. I do. 24 Q. Okay. And -- and let's --</p>	<p>1 A. That's what's here, yes. 2 Q. Okay. So certainly based on 3 what IARC has said, a person could inhale 4 or ingest one or more asbestos fibers 5 from the air that they breathe, correct? 6 MS. O'DELL: Objection to 7 form. 8 THE WITNESS: Based on the 9 measurements, I can't really tell 10 where they took these, where they 11 took the measurements or how they 12 measured them, from this Page 225, 13 but based on what they are saying 14 here, they have measured in 15 outdoor air and rural locations, 16 10 fibers per cubic meter, yes. 17 As I said, if you look down 18 in that paragraph it also 19 indicates that asbestos has been 20 measured in the air in a disaster 21 such as the World Trade Center, in 22 higher concentrations by 23 Dr. Longo. 24 BY MR. FERGUSON:</p>
Page 459	Page 461
<p>1 let's read it and see if it -- you and I 2 agree on what it says. 3 "In studies of asbestos 4 concentrations in outdoor air, chrysotile 5 is the predominant fiber detected. Low 6 levels of asbestos have been measured in 7 outdoor air in rural locations; typical 8 concentration, 10 fibers per cubic meter. 9 Typical concentrations are about tenfold 10 higher in urban locations and about 1,000 11 times in close proximity to industrial 12 sources of exposure, e.g., asbestos mine 13 or factory demolition site, or improperly 14 protected asbestos-containing waste 15 site," correct? 16 A. That's what's written here, 17 yes. 18 Q. Okay. And if you go down to 19 the first sentence of the next paragraph, 20 it says, "In indoor air, for example in 21 homes, schools and other buildings, 22 measured concentrations of asbestos are 23 in the range of 30 to 6,000 fibers per 24 cubic meter," correct?</p>	<p>1 Q. And then if you look at 2 Page 229. Are you with me? 3 A. Yes, I am. 4 Q. Under B, dietary exposure. 5 A. Yes. 6 Q. It says in the first 7 sentence under that paragraph heading, 8 "The general population can be exposed to 9 asbestos in drinking water," correct? 10 A. It can happen under certain 11 conditions, yes. It says, "The general 12 population can be exposed to asbestos in 13 drinking water." 14 Q. And then below it says about 15 nine lines down, "In the U.S.A., the 16 concentration of asbestos in most 17 drinking water supplies is less than one 18 fiber per milliliter even in areas with 19 asbestos deposits or with asbestos cement 20 water supply pipes." Correct? 21 A. That's what it says here. 22 Q. And then it says, "However, 23 in some locations the concentration in 24 water may be extremely high containing 10</p>

116 (Pages 458 to 461)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 462</p> <p>1 to 300 million fibers per liter or even 2 higher." Correct? 3 MS. O'DELL: Objection to 4 form. 5 THE WITNESS: That's what it 6 says here. 7 BY MR. FERGUSON: 8 Q. So -- 9 A. But it's talking about -- 10 it's talking about specific locations and 11 it's also saying "can." This is not a 12 normal situation. Normal -- this is a 13 contaminated situation. 14 Q. But as IARC said, in the 15 first line we talked about, inhalation 16 and ingestion can be routes of exposure 17 to asbestos for the general population, 18 correct? 19 A. It can be. Can being the 20 keyword. 21 Q. I've got some more questions 22 that I could ask. But I'm going to pass 23 it back to Mr. Hegarty. 24 THE WITNESS: Hello again.</p>	<p style="text-align: right;">Page 464</p> <p>1 (Whereupon, a discussion was 2 held off the record.) 3 THE VIDEOGRAPHER: The time 4 is 6:46 p.m. Back on the record. 5 - - - 6 EXAMINATION 7 - - - 8 BY MR. HEGARTY: 9 Q. Doctor, you have done a 10 number of studies looking at inhalation 11 of particles in animal species primarily, 12 correct? 13 A. In animal species primarily, 14 but also I have done studies in cell 15 culture, yes. 16 Q. In any of the studies where 17 you have looked at inhalation of 18 particles in animals, have you reported 19 finding those particles in the ovaries? 20 A. I did not look in the 21 ovaries. 22 Q. So have you ever evaluated 23 the ovaries in any study that you have 24 done?</p>
<p style="text-align: right;">Page 463</p> <p>1 MR. HEGARTY: Hello again. 2 MS. O'DELL: So are you 3 finished with your questions? 4 MR. FERGUSON: I have other 5 questions that I could ask. But 6 I'm trying to share the limited 7 time that we have. 8 MS. O'DELL: I understand. 9 I'm just trying -- typically we 10 don't go back and forth between 11 the parties. The plaintiffs' side 12 has had time to ask questions. So 13 I guess I'm just trying to figure 14 out what y'all are doing. 15 MR. HEGARTY: Let's go off 16 the record real quick and have a 17 discussion. Because what we 18 planned to do, I took the time 19 that Ken was using to organize my 20 notes and to finish up the 21 remaining time. 22 Go off the record. 23 THE VIDEOGRAPHER: The time 24 is 6:45 p.m. Off the record.</p>	<p style="text-align: right;">Page 465</p> <p>1 A. I have evaluated -- in the 2 cadmium particle studies, we looked for 3 the soluble ions, that's what we 4 measured, using atomic absorption and ICT 5 mass spec. And we did find cadmium -- 6 sorry. Sorry. We did find soluble 7 cadmium ions in the -- in the tissue -- 8 in the ovaries. 9 Q. Of what animal? 10 A. Mice. 11 Q. So there's nothing unique 12 with regard to talc in your opinion with 13 regard to its ability to transport within 14 the body, correct? 15 MS. O'DELL: Object to the 16 form. 17 THE WITNESS: Talc is a 18 fiber and will transport as a 19 fiber. It's also hydrophilic so 20 it will require some time for the 21 other products within the talc 22 molecule to be released. I am not 23 sure if I answered your question. 24 BY MR. HEGARTY:</p>

117 (Pages 462 to 465)

Judith Zelikoff, Ph.D.

Page 466	Page 468
<p>1 Q. What about platy talc? Will 2 platy talc travel in the body as cadmium 3 would travel? 4 A. Cadmium is a -- has traveled 5 as a soluble ion. So platy talc -- 6 neither platy talc nor asbestos will 7 travel as a soluble ion. They are 8 fibers. 9 Q. Have you done -- 10 A. They are -- I'm sorry, platy 11 talc is a crystal with different forms. 12 But my understanding is that platy talc 13 can fracture and also form fragments and 14 they could travel, given their size. 15 Q. Could they travel as cadmium 16 has traveled in your studies, if that 17 happens? 18 A. No, in -- in my studies we 19 did not measure -- we did not look for 20 the presence of the particle -- of the 21 nanoparticle in the tissues. We measured 22 for the metal in those tissues. 23 So we are of the opinion 24 that it was the soluble ion that was</p>	<p>1 to reach -- it can reach the deep lung, 2 if it's five micrometers or smaller. 3 And -- 4 Q. Go ahead. 5 A. And in that case since it's 6 not disposed of through the mucociliary 7 escalator, then it is in the other parts 8 of the lung and it can reach the 9 capillaries. And once it gets into the 10 bloodstream, it can be transported. 11 Certain particles have predilections for 12 where they go. 13 Q. When you say it can be 14 transported, does that include to the 15 ovaries? 16 A. Are you asking specifically 17 about talc or particles in general? 18 Q. Particles in general that 19 meet the size standards that you just 20 referenced of getting into the deep lung? 21 A. Mm-hmm-hmm. There's no 22 reason not to believe that it couldn't 23 get into the ovaries. 24 Q. Did you examine, for</p>
Page 467	Page 469
<p>1 released, and in this case, I know of no 2 studies off the top of my head that 3 measured how much of the other components 4 were released. 5 Q. Can any particle that's 6 inhaled reach the ovary? 7 A. If it -- if it meets certain 8 size constituents. There's no reason why 9 a particle could not reach the ovary or 10 the kidney or the liver or -- under 11 proper circumstances. 12 Q. Is there a certain size 13 limitation? 14 A. Well, something that's 15 inhaled, is that what you're talking 16 about? 17 Q. Yes. 18 A. Something that's inhaled, if 19 it's 10 micrometers or greater, it's 20 going to be caught in the upper airways 21 and probably dismissed through the 22 mucociliary escalator. If it's of a 23 smaller nature, then depending on where 24 the impaction is for the lung, it's going</p>	<p>1 purposes of your biological plausibility 2 opinion, all the studies looking at 3 NSAIDs and use of aspirin in women with 4 ovarian cancer? 5 A. I looked at several studies. 6 I'm sure I -- 7 (Document marked for 8 identification as Exhibit 9 Zelikoff-38.) 10 BY MR. HEGARTY: 11 Q. I'm going to show you what I 12 marked as Exhibit 38, which is a study 13 that you cited by Wu 2009. 14 A. Actually, it's Merritt. 15 Q. I'm sorry. It's Merritt 16 2008, correct? 17 A. Yes. And let me find it in 18 my report. 19 Q. You cite it on Page 26. 20 Above the italicized paragraph -- 21 italicized paragraph at the bottom. 22 A. I see it. "At high 23 concentrations with chronic exposure, 24 reactive oxygen species, known as ROS,</p>

118 (Pages 466 to 469)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 470</p> <p>1 can damage cellular macromolecules and 2 contribute to neoplastic transformation 3 and/or tumor growth. Other likely 4 manifestations of talc." That's the 5 paragraph that you're referring to. 6 Q. You do agree that a relevant 7 body of literature is whether NSAIDs or 8 aspirin have an effect on ovarian cancer 9 risk, if you're considering inflammation 10 as a biologically plausibility mechanism. 11 A. NSAIDs being an -- one type 12 of anti-inflammatory, it could reduce 13 oxidative stress, yes, to different 14 degrees. 15 Q. If you look at the abstract 16 on the first page of the Merritt paper. 17 A. Yes. 18 Q. At the very end, they say, 19 "We conclude that on balance chronic 20 inflammation does not play a major role 21 in the development of ovarian cancer." 22 Do you see where I'm 23 reading? 24 A. I'm seeing the last</p>	<p style="text-align: right;">Page 472</p> <p>1 on Page 21 of your report? 2 A. Can you direct me to it? 3 Oh, I see it. Second paragraph. "Wu, et 4 al, 2009, performed a study to determine 5 the role of talc in the development of 6 ovarian cancer considering the history of 7 endometriosis." 8 Q. If you look at the abstract 9 of the Wu paper, about two-thirds of the 10 way down, it reads, "Contrary to the 11 hypothesis." 12 Do you see that start of the 13 sentence? 14 A. I do. 15 Q. "Contrary to the hypothesis 16 that risk of ovarian cancer may be 17 reduced by use of NSAIDs, risk increased 18 with increasing the frequency in years of 19 NSAID use," citing the relative risk, the 20 confidence intervals. "This was 21 consistent across types of incident." 22 Do you see where I'm 23 reading? 24 A. I do see where you're</p>
<p style="text-align: right;">Page 471</p> <p>1 sentence, yes. 2 Q. Do you agree with that 3 statement in general? 4 A. I do not agree with that 5 statement. That's -- my biological 6 plausibility is associated with the 7 oxidative stress and inflammation. Also 8 this paper was written in 2008. 9 Q. Did you cite that finding 10 that I just read anywhere in your report? 11 A. I cite Merritt. 12 Q. Do you cite for the reader 13 of your report the statement that I just 14 read in the abstract? 15 A. Not to my recollection. 16 (Document marked for 17 identification as Exhibit 18 Zelikoff-39.) 19 BY MR. HEGARTY: 20 Q. I'm showing you what I've 21 marked as Exhibit Number 39. That is the 22 Wu paper. 23 A. Mm-hmm-hmm. 24 Q. You cite the Wu paper over</p>	<p style="text-align: right;">Page 473</p> <p>1 reading. 2 Q. That finding is inconsistent 3 with inflammation as a mechanism by which 4 ovarian cancer can occur, correct? 5 MS. O'DELL: Object to the 6 form. 7 THE WITNESS: This -- NSAIDs 8 are known as antioxidants. And 9 yes, that's true, but there are 10 other antioxidants from other 11 papers that demonstrate that it 12 does indeed reduce inflammation. 13 BY MR. HEGARTY: 14 Q. Well, did you cite the 15 finding of the Wu paper with regard to 16 its data on NSAID use and the risk of 17 ovarian cancer? 18 A. I did have a section, to my 19 recollection, on the papers of Wu and 20 Merritt. 21 Q. Well, in the section that I 22 was referring to, in the middle of the 23 paragraph on Page 21, middle paragraph on 24 Page 21, you don't cite that study's</p>

119 (Pages 470 to 473)

Judith Zelikoff, Ph.D.

Page 474	Page 476
<p>1 findings as to NSAIDs and risk of ovarian 2 cancer, correct? 3 A. I do not cite that 4 particular sentence, no. 5 Q. Over on Page 23, you refer 6 to the Shukla study? 7 A. Yes, sir. 8 Q. That's second to the last 9 paragraph? 10 A. "In a molecular cell study 11 by Shukla"? 12 Q. Yes. The -- strike that. 13 Gene expressions like those 14 measured in the Shukla study occur 15 everyday in everyone, correct? 16 MS. O'DELL: Objection to 17 form. 18 THE WITNESS: There are 19 changes in genes per day. But 20 I'm -- I'm not -- I do not know 21 nor do I have knowledge of whether 22 the gene for ATF3 or ATF1 is 23 changed everyday by no exposure. 24 BY MR. HEGARTY:</p>	<p>1 proinflammatory cytokines and oxidase, 2 yes. 3 Q. Is there any study that 4 sites the clinical significance of ATF as 5 it relates to ovarian cancer risk? 6 MS. O'DELL: Object to the 7 form. 8 THE WITNESS: No study that 9 I'm currently aware of. But there 10 are many studies that link ATF 11 upregulation to inflammation and 12 then inflammation to -- in the 13 process of carcinogenesis, both 14 progression and initiation. 15 BY MR. HEGARTY: 16 Q. If you turn over to the 17 second to the last page of your report, 18 Page 27. 19 In Paragraph 3, you say that 20 exposure to talcs -- 21 A. Excuse me, Number 3? 22 Q. I called it Paragraph 3. 23 You can call it Number 3. 24 A. It's listed as Number 3.</p>
Page 475	Page 477
<p>1 Q. But the -- the fact of gene 2 expression is not a -- strike that. 3 The fact that gene 4 expression occurs does not mean that 5 cancer will occur, correct? 6 A. No. My role is to look for 7 biological plausibility, and when you 8 have a transcription factor which is so 9 well immersed into oxidation and reactive 10 oxygen species and inflammation, and I 11 would say that changes or upregulation of 12 the -- of the ATF gene certainly is 13 linked with inflammation. 14 Q. Can you cite for me any 15 studies that have used measurements of 16 level -- of the levels of ATF3 to assess 17 ovarian cancer risk? 18 A. I cannot cite those studies 19 to you, but again, going back to 20 biological plausibility, I can tell you 21 that this gene is extremely important in 22 growth factors and proinflammatory 23 cytokines. So an upregulation is going 24 to lead to the production of</p>	<p>1 Q. 3. You state that "exposure 2 to talcum powder products causes an 3 inflammatory tissue reaction which may 4 result in the following," and then you 5 list -- 6 A. Elevation. 7 Q. -- a number of -- of events 8 that you label as A through F -- I'm 9 sorry, A through G carrying over to the 10 top of the next page. 11 A. I see that, thank you. 12 Q. Can you cite for me any 13 studies showing any of that activity in 14 women using talc on the perineum? 15 MS. O'DELL: Object to the 16 form. 17 THE WITNESS: If I can 18 recall the Health Canada study, I 19 think they looked at -- they also 20 included inflammatory responses 21 that are seen in some of their 22 meta-analysis. 23 BY MR. HEGARTY: 24 Q. Well, the Health Canada</p>

120 (Pages 474 to 477)

Judith Zelikoff, Ph.D.

Page 478	Page 480
<p>1 study, the Taher study, was a 2 meta-analysis, correct? 3 A. Yes, correct. 4 Q. Can you cite for me any 5 studies reporting that -- reporting these 6 events occurring in women using talc on 7 the perineum? 8 MS. O'DELL: Object to the 9 form. 10 THE WITNESS: If you're 11 asking me if gene alterations or 12 mutations or the level of 13 apoptosis has been measured in any 14 women exposed, no, I do not recall 15 that. 16 BY MR. HEGARTY: 17 Q. Have any of the processes -- 18 A. Excuse me. If I may add. 19 But inflammatory markers have been looked 20 at in women with ovarian cancer and they 21 are elevated. 22 Q. And my question, as you'll 23 recall, is specific to talc users, 24 correct?</p>	<p>1 as exhibit -- Exhibits 40 through 2 48 -- I'm sorry, 47 -- the 3 notebooks that had been produced 4 for purposes of the deposition 5 here today. 6 (Documents marked for 7 identification as Exhibits 8 Zelikoff-40 through 47.) 9 BY MR. HEGARTY: 10 Q. Over on Page 23, you -- 11 A. Of my report? 12 Q. Of your report, with regard 13 to the Shukla study. 14 I'm sorry, over on Page 26. 15 You cite again the Shukla study. Do you 16 see that where -- do you see where you 17 say "nonfibrous talc at low in vitro 18 exposure concentrations caused increased 19 expression of transcription factors 20 associated with the inflammatory process 21 in a time and dose dependent manner"? 22 A. I'm sorry, I'm not clear 23 on -- 24 Q. Middle of the second full</p>
Page 479	Page 481
<p>1 MS. O'DELL: Objection to 2 form. 3 THE WITNESS: Talc -- yes, 4 talc products. 5 BY MR. HEGARTY: 6 Q. Can you -- can you cite to 7 me any studies showing elevations of any 8 of these processes in women using talc? 9 MS. O'DELL: Object to the 10 form. 11 THE WITNESS: Well, 12 neoplastic transformation and 13 proliferation is clearly seen 14 in -- obviously if there's a 15 variant answer, you've had 16 neoplastic transformation 17 proliferation. 18 BY MR. HEGARTY: 19 Q. Well, my question is 20 specific to women using talc prediagnosis 21 of ovarian cancer. 22 A. I see. No, sir. 23 MR. HEGARTY: For purposes 24 of the deposition, we want to mark</p>	<p>1 paragraph. 2 A. Not -- after the Mori 3 citation? 4 Q. Yes. 5 A. "Nonfibrous talc at low in 6 vitro exposure concentrations caused 7 increased expression of transcription 8 factors associated with the inflammatory 9 process in a time and dose dependent 10 manner." Yes, I see that. 11 Q. What did you mean by say -- 12 by time and dose manner? 13 A. May I see the paper? 14 (Document marked for 15 identification as Exhibit 16 Zelikoff-48.) 17 BY MR. HEGARTY: 18 Q. Marking as Exhibit 49 -- 48 19 that paper. 20 A. Thank you. 21 MR. TISI: We are at seven 22 hours by the way. 23 MS. O'DELL: We are at seven 24 hours?</p>

121 (Pages 478 to 481)

Judith Zelikoff, Ph.D.

Page 482	Page 484
<p>1 MR. TISI: Yes, we are.</p> <p>2 MS. O'DELL: We're at seven</p> <p>3 hours, Mark.</p> <p>4 MR. HEGARTY: Okay. Are you</p> <p>5 going to instruct her not to</p> <p>6 answer that question?</p> <p>7 MS. O'DELL: Well, the</p> <p>8 federal rules limit this</p> <p>9 deposition to seven hours and --</p> <p>10 MR. HEGARTY: No, I</p> <p>11 understand, but I also remember a</p> <p>12 deposition where I think I let</p> <p>13 Chris go over about two or</p> <p>14 three minutes.</p> <p>15 MR. TISI: Yeah, but you are</p> <p>16 using a whole new exhibit.</p> <p>17 MS. O'DELL: You just marked</p> <p>18 it --</p> <p>19 MR. HEGARTY: I just want to</p> <p>20 make sure that was --</p> <p>21 MR. TISI: Are you going to</p> <p>22 suggest --</p> <p>23 MR. HEGARTY: No, I just</p> <p>24 want to know if that -- if you</p>	<p>1 want to let her answer or not.</p> <p>2 It's simply up to you. If you say</p> <p>3 we're done, then I will -- I'm not</p> <p>4 going to dispute it.</p> <p>5 MS. O'DELL: We are -- I</p> <p>6 will let you answer that question.</p> <p>7 But after that, we're -- we're</p> <p>8 done.</p> <p>9 MR. HEGARTY: Okay. Thank</p> <p>10 you.</p> <p>11 MS. O'DELL: Do you recall</p> <p>12 the question, Dr. Zelikoff?</p> <p>13 THE WITNESS: Yes. The</p> <p>14 question is -- what -- I'll repeat</p> <p>15 it from here.</p> <p>16 What did I mean by a time</p> <p>17 and dose dependent manner?</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. Yes.</p> <p>20 A. In the Shukla study?</p> <p>21 Q. Correct.</p> <p>22 A. Well, if we look at Figure 2</p> <p>23 concerning cell viability in the Shukla</p> <p>24 paper, Page 117.</p>
Page 483	Page 485
<p>1 want to end the deposition for me</p> <p>2 right here?</p> <p>3 MR. TISI: That was a fact</p> <p>4 witness, as you know.</p> <p>5 I leave it to Leigh. If</p> <p>6 we're going to -- if we're going</p> <p>7 to have this rule, we need to kind</p> <p>8 of be consistent with it.</p> <p>9 MR. HEGARTY: No, I'm not</p> <p>10 looking to apply another rule.</p> <p>11 Just tell me whether you'll let</p> <p>12 her answer the question or if the</p> <p>13 time -- because the time is up,</p> <p>14 that question will not be</p> <p>15 answered.</p> <p>16 MS. O'DELL: The time -- the</p> <p>17 time is up. What is your -- what</p> <p>18 was your question?</p> <p>19 MR. HEGARTY: My question</p> <p>20 was, "What do you mean where you</p> <p>21 say time and dose dependent</p> <p>22 manner." But I'm not going to</p> <p>23 insist on any applicable rule.</p> <p>24 I'll let you decide whether you</p>	<p>1 So we can see, I'm trying to</p> <p>2 find the exact one that I want to refer</p> <p>3 to. Figure A, one can see that in terms</p> <p>4 of the concentration and over time, that</p> <p>5 the number -- total number of viable</p> <p>6 cells were altered. And in Figure 2, 15</p> <p>7 and 75 -- no, scratch Figure 2, sorry.</p> <p>8 So on Page 118, in looking</p> <p>9 at number of genes that were</p> <p>10 significantly changed, we can see looking</p> <p>11 at the concentration -- and this is for</p> <p>12 asbestos -- there was a change in effect</p> <p>13 in asbestos. If one looks at -- I think</p> <p>14 that's it. That's what I meant.</p> <p>15 MR. HEGARTY: Okay. Thank</p> <p>16 you.</p> <p>17 MS. O'DELL: Off the record.</p> <p>18 THE VIDEOGRAPHER: The time</p> <p>19 is 7:07 p.m. Off the record.</p> <p>20 (Short break.)</p> <p>21 THE VIDEOGRAPHER: We are</p> <p>22 back on the record. The time is</p> <p>23 7:30 p.m.</p> <p>24 - - -</p>

122 (Pages 482 to 485)

Judith Zelikoff, Ph.D.

Page 486	Page 488
<p>1 EXAMINATION</p> <p>2 - - -</p> <p>3 BY MS. O'DELL:</p> <p>4 Q. Dr. Zelikoff, I have a few</p> <p>5 follow-up questions for you.</p> <p>6 Prior to your involvement in</p> <p>7 litigation, this litigation, did you hold</p> <p>8 the opinion that inflammation causes</p> <p>9 cancer?</p> <p>10 MR. HEGARTY: Objection to</p> <p>11 form.</p> <p>12 THE WITNESS: Yes. I held</p> <p>13 the opinion for a very long time</p> <p>14 that inflammation causes cancer.</p> <p>15 BY MS. O'DELL:</p> <p>16 Q. And in terms of your</p> <p>17 knowledge and opinion prior to your</p> <p>18 involvement in the litigation, did you --</p> <p>19 did you have an opinion regarding the</p> <p>20 role of oxidative stress in the</p> <p>21 development of cancer?</p> <p>22 A. Yes, I did. My opinion was</p> <p>23 that oxidative stress was closely</p> <p>24 involved with the causation of cancer.</p>	<p>1 A. I relied on his report, yes.</p> <p>2 Q. And did Dr. Crowley conclude</p> <p>3 that the chemicals involved in the</p> <p>4 fragrances for both Johnson & Johnson's</p> <p>5 Baby Powder and Shower to Shower may</p> <p>6 contribute to the inflammatory response,</p> <p>7 toxicity and potential carcinogenicity of</p> <p>8 Johnson & Johnson's talcum powder</p> <p>9 products?</p> <p>10 MR. HEGARTY: Objection to</p> <p>11 form.</p> <p>12 THE WITNESS: Yes. I concur</p> <p>13 with that whole opinion.</p> <p>14 BY MS. O'DELL:</p> <p>15 Q. And in fact, that's the</p> <p>16 specific opinion he included in his</p> <p>17 report that you relied on?</p> <p>18 A. Yes, that's correct.</p> <p>19 MR. HEGARTY: Objection to</p> <p>20 form.</p> <p>21 BY MS. O'DELL:</p> <p>22 Q. And so if another expert was</p> <p>23 also relying on Dr. Crowley's analysis,</p> <p>24 it wouldn't be surprising that the same</p>
Page 487	Page 489
<p>1 Q. So to the degree that your</p> <p>2 work in this case addressed new</p> <p>3 considerations, were those considerations</p> <p>4 primarily focused on talc and its ability</p> <p>5 to cause inflammation and oxidative</p> <p>6 stress?</p> <p>7 MR. HEGARTY: Objection to</p> <p>8 form.</p> <p>9 THE WITNESS: That is</p> <p>10 correct.</p> <p>11 BY MS. O'DELL:</p> <p>12 Q. Can you -- if I could ask</p> <p>13 you to take your report. I think it's</p> <p>14 right to your left. I'm going to ask</p> <p>15 you -- if you'll turn to Page 12. Do you</p> <p>16 see that? The subsection involving</p> <p>17 fragrance, fragrance chemicals?</p> <p>18 A. Yeah. C, fragrances.</p> <p>19 Q. And did you rely on</p> <p>20 Dr. Crowley's report and his review of</p> <p>21 the relevant literature and other</p> <p>22 information regarding the chemicals that</p> <p>23 are included in the fragrance for Baby</p> <p>24 Powder and Shower to Shower?</p>	<p>1 wording was used?</p> <p>2 MR. HEGARTY: Objection to</p> <p>3 form.</p> <p>4 THE WITNESS: Absolutely</p> <p>5 not.</p> <p>6 BY MS. O'DELL:</p> <p>7 Q. Let me ask you other</p> <p>8 questions about the general principles in</p> <p>9 your report. I think you testified, you</p> <p>10 were asked a number of questions about</p> <p>11 general principals. And in your</p> <p>12 judgment, is it generally accepted to --</p> <p>13 to use common phrasing for general</p> <p>14 principles in scientific publications?</p> <p>15 A. Yes.</p> <p>16 MR. HEGARTY: Objection to</p> <p>17 form.</p> <p>18 THE WITNESS: I answered</p> <p>19 that question before, and yes.</p> <p>20 Common, well-publicized,</p> <p>21 well-established concepts, yes.</p> <p>22 BY MS. O'DELL:</p> <p>23 Q. You were asked during the</p> <p>24 early part of the day certain questions</p>

123 (Pages 486 to 489)

Judith Zelikoff, Ph.D.

Page 490	Page 492
<p>1 about whether you were an expert in areas 2 such as talc and inflammation? 3 A. Yes. 4 Q. And I think if you recall 5 the response you answered you were not 6 classified as an expert. What did you 7 mean by that? 8 MR. HEGARTY: Objection to 9 form. 10 THE WITNESS: What I meant 11 was in terms of legal, whether -- 12 one of the questions that arose 13 was, in the past, have I been 14 listed as an expert in other 15 cases. And so I followed that 16 line of thought and thought that 17 we were still talking about 18 litigation and formal declaration 19 as an expert in that area. 20 BY MS. O'DELL: 21 Q. Are you an expert in the 22 toxicological effects of minerals on 23 the -- on humans? 24 MR. HEGARTY: Objection to</p>	<p>1 A. My numerous publications in 2 that area of metal toxicology that I've 3 been doing for many, many, many years. 4 Q. And in addition to your 5 training, experience, do you also make 6 those statements based on your review of 7 the available scientific and medical 8 literature? 9 A. In regards to metals? 10 Q. In all the environmental 11 exposures we've just discussed? 12 A. Yes. I rely on 13 literature -- 14 Q. You were asked questions -- 15 A. -- as well as my own 16 scientific research. 17 Q. Excuse me. I didn't mean to 18 cut you off, Doctor. 19 You were asked questions 20 about whether there were any studies or 21 evidence that you relied on involving 22 Johnson's Baby Powder. 23 Do you recall that? 24 A. I do recall that question,</p>
Page 491	Page 493
<p>1 form. 2 THE WITNESS: I'm expert in 3 toxicology of environmental 4 chemicals, including mixtures, 5 including fibers, including 6 particles, including talc. 7 BY MS. O'DELL: 8 Q. And would that -- would that 9 also include -- when you said fibers, 10 would that also include asbestos and 11 fibrous talc? 12 MR. HEGARTY: Objection to 13 form. 14 THE WITNESS: Yes. 15 BY MS. O'DELL: 16 Q. Are you an expert in the 17 toxicological effects of heavy metals on 18 the humans? 19 MR. HEGARTY: Objection to 20 form. 21 THE WITNESS: Yes, I am. 22 BY MS. O'DELL: 23 Q. And what do you base that 24 statement on?</p>	<p>1 yes. 2 Q. And do the -- strike that 3 and start again. 4 Did Dr. Saed in the testing 5 that was done and reported in not only 6 the abstracts but also his manuscript, 7 involve Johnson's Baby Powder? 8 MR. HEGARTY: Objection to 9 form. 10 THE WITNESS: Yes. 11 Dr. Saed's did. Thank you for 12 reminding me. 13 BY MS. O'DELL: 14 Q. Was Dr. Longo and Rigler's 15 testing of historical samples of talcum 16 powder products produced in this 17 litigation, including Johnson's Baby 18 Powder and Shower to Shower? 19 A. Dr. Longo stated he did use 20 products over time from Johnson & Johnson 21 talcum powders. 22 Q. And was the evidence that 23 was presented in Hopkins Exhibit 28, did 24 it involve Johnson's talcum powder</p>

124 (Pages 490 to 493)

Judith Zelikoff, Ph.D.

Page 494	Page 496
<p>1 products?</p> <p>2 A. Yes, it did.</p> <p>3 Q. Was evidence that you relied</p> <p>4 on in the form of Pier Exhibit 47, did</p> <p>5 those also involve talc that was taken</p> <p>6 from sources used to supply Johnson's</p> <p>7 talcum powder products?</p> <p>8 MR. SILVER: Objection to</p> <p>9 form.</p> <p>10 MR. HEGARTY: Objection to</p> <p>11 form.</p> <p>12 THE WITNESS: Dr. Pier?</p> <p>13 BY MS. O'DELL:</p> <p>14 Q. Yes.</p> <p>15 A. To my recollection, yes. If</p> <p>16 you'd like, I can look at the paper and</p> <p>17 confirm that.</p> <p>18 Q. Let me ask you about</p> <p>19 Dr. Blount. You were asked previously</p> <p>20 about her publication in 1991.</p> <p>21 Did Dr. Blount test</p> <p>22 Johnson's Baby Powder?</p> <p>23 A. Yes. But again, if I looked</p> <p>24 at the reference I could give you -- I</p>	<p>1 go.</p> <p>2 BY MS. O'DELL:</p> <p>3 Q. Did the FDA conclude in</p> <p>4 Exhibit 37 that -- well, let me just ask</p> <p>5 the question this way.</p> <p>6 If you'll turn to Page 2 of</p> <p>7 Exhibit 37, what was the FDA's conclusion</p> <p>8 regarding the testing that they had</p> <p>9 performed on the cosmetic powders?</p> <p>10 Doctor, I'll direct you to</p> <p>11 the second-to-the-last paragraph at the</p> <p>12 bottom of the page, the middle sentence.</p> <p>13 Do you see that, "Beginning for these</p> <p>14 reasons"?</p> <p>15 A. Yes, I see that.</p> <p>16 Q. And what was the FDA's</p> <p>17 conclusion?</p> <p>18 A. "For these reasons, while</p> <p>19 FDA finds these results informative, they</p> <p>20 do not prove that most or all talc or</p> <p>21 talc-containing cosmetic products that</p> <p>22 are currently or currently marketed in</p> <p>23 the United States are likely to be free</p> <p>24 of asbestos contamination."</p>
Page 495	Page 497
<p>1 could give you specifics.</p> <p>2 Q. Okay. And do you recall</p> <p>3 that that -- did -- let me just ask it</p> <p>4 this way.</p> <p>5 Did Dr. Blount find that</p> <p>6 there was asbestos in the Johnson's Baby</p> <p>7 Powder samples that she tested?</p> <p>8 A. Yes. To my recollection,</p> <p>9 she did, yes.</p> <p>10 Q. You were asked about some</p> <p>11 testing that had been done by the FDA on</p> <p>12 certain cosmetic powders. Do you</p> <p>13 remember that? It was Exhibit 37.</p> <p>14 MS. O'DELL: And is that in</p> <p>15 the bottom of that stack, 37?</p> <p>16 Thanks, Mark. If you'll</p> <p>17 hand those to me. I appreciate</p> <p>18 it.</p> <p>19 THE WITNESS: Sorry. My</p> <p>20 microphone.</p> <p>21 MS. O'DELL: Oh, did it come</p> <p>22 off?</p> <p>23 THE VIDEOGRAPHER: Raise it</p> <p>24 up as high as possible. There you</p>	<p>1 Q. You were also asked a number</p> <p>2 of questions regarding the FDA response</p> <p>3 to Dr. Epstein's letter in April of 2014,</p> <p>4 Exhibit 33.</p> <p>5 Do you recall those</p> <p>6 questions?</p> <p>7 A. I recall that questions were</p> <p>8 asked in this regard, yes.</p> <p>9 Q. While at this point in the</p> <p>10 day, I wouldn't expect you to recall the</p> <p>11 specific question, but you recall those</p> <p>12 general discussions?</p> <p>13 A. Yes, I do.</p> <p>14 Q. All right. Let me ask you,</p> <p>15 if you wouldn't mind, to turn to Page 3</p> <p>16 of -- of Exhibit 33.</p> <p>17 And the second paragraph.</p> <p>18 A. Starting, "The survey</p> <p>19 found"?</p> <p>20 Q. Yes. Yes, ma'am.</p> <p>21 And as of April 2014, was it</p> <p>22 the FDA's conclusion that their testing</p> <p>23 results did not prove that</p> <p>24 talc-containing cosmetic powders</p>

125 (Pages 494 to 497)

Judith Zelikoff, Ph.D.

Page 498	Page 500
<p>1 currently marketed in the U.S. are free 2 of asbestos contamination? 3 MR. HEGARTY: Objection to 4 form. 5 THE WITNESS: Yes. I can 6 read the sentence, "While FDA 7 found this data informative, the 8 results were limited by the fact 9 that only four suppliers submitted 10 samples and the number of products 11 used. They do not prove that all 12 talc containing cosmetic products 13 currently marketed in the United 14 States are free of asbestos 15 contamination." 16 BY MS. O'DELL: 17 Q. Okay. While we are on this 18 Exhibit 33, Doctor, if you'll turn to 19 Page 5 of the exhibit. About two-thirds 20 of the way down, the paragraph beginning, 21 "While." 22 A. "While there exists no 23 direct proof"? 24 Q. Yes. And would you mind</p>	<p>1 causing ovarian cancer? 2 MR. HEGARTY: Objection to 3 form. 4 THE WITNESS: They are 5 consistent with my opinion, yes. 6 BY MS. O'DELL: 7 Q. Let me ask you if you would, 8 Doctor, to -- I'll do it for you. 9 Because it was marked here. 10 I'm going to hand to you the 11 Health Canada draft screening assessment 12 that was marked previously as Exhibit 9. 13 A. I see it. 14 Q. And let me ask you if you 15 would please, Doctor, first, did you 16 submit your report in this case prior to 17 Health Canada issuing the draft causal 18 assessment? 19 A. I submitted my -- my final 20 report November 15th or 16th. I'm not 21 quite clear on the date. And received 22 this or saw it for the first time in 23 January. So it did not go into my -- it 24 was not cited in my report and was not</p>
Page 499	Page 501
<p>1 reading, you know, the -- the -- those 2 first two sentences of that paragraph, 3 please? 4 A. "While there exists no 5 direct proof of talc and ovarian 6 carcinogenesis, the potential for 7 particulates to migrate from the 8 peritoneum" -- "the perineum and vagina 9 to the peritoneal cavity is 10 indisputable." 11 Q. And then if you'll read the 12 next sentence? 13 A. "It is, therefore, plausible 14 that perineal talc and other particulate 15 that reaches the endometrial cavity, the 16 fallopian tubes and ovaries and the 17 peritoneum may elicit a foreign body-type 18 reaction and an inflammatory response 19 that in some exposed women may progress 20 to epithelial cancers." 21 Q. And are those statements 22 written by the FDA consistent with your 23 opinions regarding the biologic 24 plausibility of talcum powder products</p>	<p>1 reviewed for my report. 2 Q. And by virtue of the fact 3 that came out after your report, did -- 4 did the health -- strike that and start 5 again. 6 Did the Health Canada 7 assessment inform your opinions in this 8 case? 9 A. It -- it could not have 10 informed my opinion that's written out in 11 the report. It was compelling evidence 12 that helped support the opinion that I 13 came to. 14 Q. Did it confirm your 15 opinions? 16 MR. HEGARTY: Objection to 17 form. 18 THE WITNESS: Yes. It 19 confirmed my opinions on many 20 lines, including methodology. 21 BY MS. O'DELL: 22 Q. If you'll look at Page 18 of 23 the assessment. 24 A. Yes. I see it.</p>

126 (Pages 498 to 501)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 502</p> <p>1 Q. And looking at the 2 literature that is cited in this section, 3 did you cite in support of your opinions 4 Keskin 2009? 5 A. Keskin 2009, yes. 6 Q. And did you -- of course we 7 talked about it before. You cited 8 Penninkilampi 2018? 9 A. Yes, I did. 10 Q. And did you cite other 11 references included in the mode of action 12 discussion that was undertaken by Health 13 Canada on Pages 18, 19 and, you know, 20 14 of the Health Canada assessment? 15 A. Yes, I did. Do you want me 16 to tell you which ones? 17 Q. Just give us a few. Just 18 give us a few. 19 A. Henderson 1971. These are 20 the ones that come to mind readily. 21 Edelstam 1997. Egli and Newton 1961. De 22 Boer in 1972. Venter and Iturralde, 23 1979. Heller 1996. Cramer in 2007. 24 Would you like me to go on?</p>	<p style="text-align: right;">Page 504</p> <p>1 mechanism for the cause of cancer? 2 MR. HEGARTY: Objection to 3 form. 4 THE WITNESS: Biological 5 plausibility. 6 BY MS. O'DELL: 7 Q. They -- let me ask a better 8 question. Did they -- did they discuss 9 chronic inflammation, inflammation as a 10 biologically plausible mechanism for the 11 development of ovarian cancer? 12 A. Yes, they did. 13 Q. Did they discuss the role of 14 reactive oxygen species as part of the 15 biologically plausible mechanism of talc 16 in the development of ovarian cancer? 17 MR. HEGARTY: Objection to 18 form. 19 THE WITNESS: Oxidative 20 stress, yes. Yeah. React -- ROS. 21 Oxidative stress. 22 May I give the statement? 23 BY MS. O'DELL: 24 Q. Yes.</p>
<p style="text-align: right;">Page 503</p> <p>1 Q. So it's fair to say that 2 many of the references that you read, 3 reviewed, relied on in your report are 4 some of the same studies that Health 5 Canada relied on in their causal 6 assessment? 7 MR. HEGARTY: Objection to 8 form. 9 THE WITNESS: Yes. This was 10 very validating for my -- my 11 report in my opinion. 12 BY MS. O'DELL: 13 Q. Were you aware of the -- of 14 the assessment prior to it being issued 15 to the public? 16 A. Not at all. It was -- it 17 came out in late 2018, in December. 18 Q. In the assessment that was 19 undertaken by Health Canada, did they 20 assign any numerical weights in the 21 causal assessment to certain studies? 22 A. No, they do not. 23 Q. Did they discuss 24 inflammation as a sort of recognized</p>	<p style="text-align: right;">Page 505</p> <p>1 A. With respect to talc, 2 specifically local chronic irritation 3 leading to inflammatory response is one 4 possible mechanism of tumor progression 5 that is frequently hypothesized. 6 Q. And that's consistent with 7 your -- with your opinion in this case? 8 MR. HEGARTY: Objection to 9 form. 10 THE WITNESS: Yes. 11 BY MS. O'DELL: 12 Q. Is that consistent with your 13 opinion in this case? 14 A. Yes, it is. 15 Q. Did they discuss migration 16 as part of the biologically plausible 17 mechanism for the connection between 18 perineal use of talc and development of 19 ovarian cancer? 20 A. Yes, they did. 21 Q. Okay. Did they, on Page 15 22 and 16, did they discuss some of the 23 animal studies that you reference and 24 rely on in reaching your opinions in this</p>

127 (Pages 502 to 505)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 506</p> <p>1 case?</p> <p>2 A. Yes, they do.</p> <p>3 MR. HEGARTY: Objection to</p> <p>4 form.</p> <p>5 THE WITNESS: And --</p> <p>6 BY MS. O'DELL:</p> <p>7 Q. Excuse me.</p> <p>8 A. They include Hamilton et</p> <p>9 al., 1984. Keskin 2009. Hamilton 1984</p> <p>10 again. Keskin again.</p> <p>11 Q. Okay. And if you'll turn to</p> <p>12 Page 21. You'll see at the top of the</p> <p>13 page, they have a section on biologic</p> <p>14 plausibility.</p> <p>15 A. Yes, they do.</p> <p>16 Q. Is -- is their discussion of</p> <p>17 biological plausibility as outlined on</p> <p>18 Page 21 consistent with your opinions in</p> <p>19 this case?</p> <p>20 MR. HEGARTY: Objection to</p> <p>21 form.</p> <p>22 THE WITNESS: Definitely</p> <p>23 consistent. Particles of talc are</p> <p>24 hypothesized to migrate into the</p>	<p style="text-align: right;">Page 508</p> <p>1 Q. Counsel directed your</p> <p>2 attention to the sentence -- counsel for</p> <p>3 Johnson & Johnson -- direct -- directed</p> <p>4 your attention to the sentence near the</p> <p>5 bottom of the left column.</p> <p>6 A. An important finding of this</p> <p>7 study is that talc use?</p> <p>8 Q. Yeah, the -- the potential</p> <p>9 mechanism by which genital talc is</p> <p>10 associated with an increased risk of</p> <p>11 ovarian cancer --</p> <p>12 A. I'm sorry. Again,</p> <p>13 discussion on the left side?</p> <p>14 Q. Yes. At the bottom of the</p> <p>15 first paragraph, the last sentence.</p> <p>16 A. Okay. I'm sorry.</p> <p>17 "Potential mechanism by which general</p> <p>18 talc associated with an increased risk of</p> <p>19 ovarian cancer hence remains unclear."</p> <p>20 Q. And Johnson & Johnson's</p> <p>21 counsel asked you about that sentence.</p> <p>22 A. Yes, they did.</p> <p>23 Q. But they didn't ask you</p> <p>24 about other sentences in this -- this</p>
<p style="text-align: right;">Page 507</p> <p>1 pelvis and ovarian tissue causing</p> <p>2 irritation and inflammation. And</p> <p>3 the presence of talc in the</p> <p>4 ovaries as I discussed previously</p> <p>5 has been documented by Heller in</p> <p>6 1996.</p> <p>7 BY MS. O'DELL:</p> <p>8 Q. Great. Thank you.</p> <p>9 Doctor, you were also asked</p> <p>10 some questions about the Penninkilampi</p> <p>11 paper.</p> <p>12 Do you recall those?</p> <p>13 A. I do recall being asked,</p> <p>14 yeah, from that.</p> <p>15 Q. Potentially the most</p> <p>16 difficult name to pronounce in the</p> <p>17 litigation.</p> <p>18 The Penninkilampi paper</p> <p>19 was -- was marked as Exhibit 34. Do you</p> <p>20 recall that?</p> <p>21 A. I see, I see it here. Yes.</p> <p>22 Q. And if I can ask you to turn</p> <p>23 to Page 45.</p> <p>24 A. I see Page 45.</p>	<p style="text-align: right;">Page 509</p> <p>1 paper, fair?</p> <p>2 A. That's fair.</p> <p>3 Q. So if you'll look to the</p> <p>4 right column on Page 45. Do you see the</p> <p>5 sentence beginning "if chronic</p> <p>6 inflammation"?</p> <p>7 A. I do. "If chronic</p> <p>8 inflammation due to ascending foreign</p> <p>9 bodies is indeed the mechanism by which</p> <p>10 talc use is associated with increased</p> <p>11 ovarian cancer risks, then the results</p> <p>12 fit the picture."</p> <p>13 Q. Is -- is that statement that</p> <p>14 the authors of the Penninkilampi study</p> <p>15 included in their report, excuse me, in</p> <p>16 their article, is that consistent with</p> <p>17 your opinions in this case?</p> <p>18 A. It is consistent.</p> <p>19 Q. And does it confirm the</p> <p>20 opinions that you reached in this case?</p> <p>21 A. It acts to confirm, yes, it</p> <p>22 does.</p> <p>23 Q. Okay. You were asked</p> <p>24 about -- a number of questions about</p>

128 (Pages 506 to 509)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 510</p> <p>1 asbestos and the specific amount of 2 asbestos that would be introduced with 3 the perineal application of -- of talc. 4 A. Yes -- 5 Q. And let me ask you -- 6 A. -- I recall. 7 Q. You recall those questions? 8 A. Yes, I do. 9 Q. Is there any safe level of 10 asbestos -- 11 MR. HEGARTY: Objection to 12 form. 13 BY MS. O'DELL: 14 Q. -- in the perineum? 15 A. My opinion and conclusion is 16 no. 17 Q. Is asbestos a known potent 18 carcinogen? 19 A. It is. According -- 20 Q. Excuse me. Please go ahead. 21 A. According to the regulators 22 and the documents, it is, yes, a known 23 carcinogen, and it's extremely potent. 24 If you look at the effects that it causes</p>	<p style="text-align: right;">Page 512</p> <p>1 deposition of Robert Glenn in your 2 report? 3 A. I'm sorry, the deposition of 4 who? 5 Q. Robert Glenn. Page 6, about 6 midway down. 7 A. Yes, I did. "Because 8 asbestos is a known carcinogen, its 9 presence in cosmetic talc is 10 unacceptable, FDA 2012, FDA 2015." 11 Q. And do you recall that -- 12 was Mr. Glenn a former director of the 13 National Institute for Occupational 14 Safety and Health or NIOSH? 15 A. Yes. 16 Q. And what did Mr. Glenn 17 testify to regarding the presence of 18 asbestos in talc-based products? 19 A. He says, "As stated in a 20 recent deposition, that if there were a 21 fiber of asbestos in talcum-based 22 products, it would certainly 'provide a 23 biologically plausible mechanism for 24 increased lung disease' and that he</p>
<p style="text-align: right;">Page 511</p> <p>1 and at the dose levels that it causes 2 these effects. 3 Q. And of course IARC has -- 4 A. IARC has classified it as a 5 Class 1A. 6 Q. And did you review and rely 7 on IARC's conclusion regarding asbestos? 8 A. I did. 9 Q. Excuse me. And its 10 contribution to the -- to the development 11 of ovarian cancer? 12 A. Yes, I did. 13 Q. Did you review and rely on 14 IARC's conclusions regarding fibrous talc 15 or talc in an asbestiform habit regarding 16 its ability to cause ovarian cancer? 17 MR. HEGARTY: Objection to 18 form. 19 THE WITNESS: I did. 20 BY MS. O'DELL: 21 Q. If you'll turn to Page 6 in 22 your report. 23 A. Yes, I see it. 24 Q. Did you -- did you cite the</p>	<p style="text-align: right;">Page 513</p> <p>1 suspected that it would also have a 2 similar mechanism of disease in other 3 tissues and organs." 4 Q. And you were asked a number 5 of questions about the different 6 constituents of talcum powder products. 7 A. Yes. 8 Q. If talcum powder products 9 did not contain asbestos, would that 10 change your opinion about the biological 11 plausible mechanism of -- that explains 12 talc -- talc-based products causing 13 ovarian cancer? 14 A. No, it would not. 15 Q. You were asked questions 16 about a Dr. Neel from NYU. 17 A. The NYU Cancer Center. 18 Q. And you were asked if you 19 knew Dr. Neel. 20 A. Yes, I recall the question. 21 Q. And what's your 22 understanding of Dr. Neel's position? 23 A. My understanding is that he 24 is the chair -- he may not be called the</p>

129 (Pages 510 to 513)

Judith Zelikoff, Ph.D.

Page 514	Page 516
<p>1 chair -- but he is the director of the 2 cancer center for NYU Langone Health and 3 NYU Medical School. It morphs into 4 different names. 5 Q. And in regard to the 6 toxicity of talcum powder products and 7 its effects, toxicological effects, 8 would -- would you be more knowledgeable 9 about those particular effects than a 10 clinician who diagnoses and treats 11 ovarian cancer? 12 MR. HEGARTY: Objection to 13 form. 14 BY MS. O'DELL: 15 Q. Like Dr. Neel? 16 A. I'm a toxicologist, and so 17 my main area of focus and understanding 18 and literature has to do with toxicology, 19 toxicological mechanisms, toxicological 20 effects. 21 Q. So -- 22 A. So my knowledge base in 23 those areas would -- I would suspect very 24 strongly would exceed that of Dr. Neel's,</p>	<p>1 form. 2 THE WITNESS: Could you 3 clarify that question? 4 BY MS. O'DELL: 5 Q. Yeah. It was a bad 6 question. I'm sorry. I'm getting tired. 7 A. If you're asking -- would 8 you like to ask -- rephrase it, or should 9 I give you my thought of what you were 10 trying to ask? 11 Q. Well, why don't you 12 interpret my question, and I'll follow 13 up. 14 A. If you're asking me if 15 nickel was a component of the non-fibrous 16 talc, then was nickel also in place when 17 it was treated, when the cells were 18 treated? 19 Q. That's correct. 20 A. Yes, if nickel was in the 21 non-fibrous talc then, yes, it was also 22 there when the cells were being exposed. 23 Q. And so -- and that would be 24 true of chromium and cobalt?</p>
Page 515	Page 517
<p>1 who is a clinician. 2 Q. You were asked some 3 questions about the Shukla paper. 4 A. Yes. 5 Q. And -- and the Shukla paper 6 involved the use of talcum powder? 7 A. Yes. 8 Q. And if the -- 9 A. Do you recall what exhibit 10 that was? 11 Q. I think it was the last 12 exhibit. 13 A. May I have a copy? 14 Q. 48. And did the Shukla 15 study involve the testing of, or the use 16 of talcum powder? 17 A. Yes. As they call it, 18 non-fibrous talc. 19 Q. And if the talcum powder 20 used in the Shukla study contained 21 nickel, that would be -- the data that 22 was reported in that study would be 23 relevant for the effects of nickel, fair? 24 MR. HEGARTY: Objection to</p>	<p>1 A. Yes. 2 Q. And so, the results from the 3 Shukla study would have bearing on the 4 effect of those heavy metals if contained 5 in talcum powder? 6 MR. HEGARTY: Objection to 7 form. 8 THE WITNESS: Yes, if they 9 were -- yes, as constituents, they 10 would -- I would imagine and know 11 that they would play -- they could 12 be playing a role in the 13 toxicity -- the cell toxicity or 14 the gene expression changes that 15 were observed. 16 BY MS. O'DELL: 17 Q. Thank you. And in regard to 18 your opinions related to cobalt, 19 chromium, and nickel, you were asked a 20 number of questions about whether there 21 were any human studies measuring the 22 effect of -- of nickel at -- in the 23 ovary. Do you recall that? 24 A. I recall that question --</p>

130 (Pages 514 to 517)

Judith Zelikoff, Ph.D.

Page 518	Page 520
<p>1 those questions.</p> <p>2 Q. Would it be possible to</p> <p>3 design a study in humans where nickel was</p> <p>4 deposited at their ovary to see if a</p> <p>5 female would develop ovarian cancer?</p> <p>6 A. I think I answered and said</p> <p>7 that would be ridiculous in the sense</p> <p>8 that this would be totally unethical to</p> <p>9 take a known carcinogen or a classified</p> <p>10 1A carcinogen and use it for experimental</p> <p>11 studies in humans by placing it in the</p> <p>12 perineal -- or anywhere within the body</p> <p>13 intentionally.</p> <p>14 Q. And would that also be true</p> <p>15 for similar reasons for cobalt and</p> <p>16 chromium?</p> <p>17 A. Yes.</p> <p>18 Q. Would the same also be true</p> <p>19 of designing a study that applied</p> <p>20 asbestos to a female's ovary for purposes</p> <p>21 of seeing if she developed cancer?</p> <p>22 A. I'm smiling because it holds</p> <p>23 true for any -- any known or suspected</p> <p>24 carcinogen cannot be used intentionally</p>	<p>1 IRBs.</p> <p>2 Q. Okay. You looked at, as I</p> <p>3 understand it, for your purposes of your</p> <p>4 task in this case, you looked at the</p> <p>5 issue of biologic plausibility for</p> <p>6 perineal talc use and ovarian cancer.</p> <p>7 A. Yes, I did.</p> <p>8 Q. Did you -- did you -- was</p> <p>9 that inquiry focused on epithelial</p> <p>10 ovarian cancer in particular?</p> <p>11 A. It -- it was -- most, if not</p> <p>12 all the studies I looked at in animals</p> <p>13 and -- were associated with epithelial</p> <p>14 ovarian cancer.</p> <p>15 Some studies in humans did</p> <p>16 look -- did break out the differences.</p> <p>17 Q. Let me ask you if you</p> <p>18 wouldn't mind, to turn to Page 8 of your</p> <p>19 report. And you'll look at the top of</p> <p>20 the page. In the first full paragraph,</p> <p>21 middle of the -- that paragraph discusses</p> <p>22 Dr. Longo and Rigler's recent report that</p> <p>23 reports that talcum powder products</p> <p>24 manufactured by Johnson's Baby Powder and</p>
Page 519	Page 521
<p>1 on a human being for testing. It's</p> <p>2 unethical, and would probably in all</p> <p>3 likelihood not be approved by the</p> <p>4 institutional review board of academic</p> <p>5 institutions or any reputable scientists.</p> <p>6 Q. Would that be true of</p> <p>7 fibrous talc?</p> <p>8 MR. HEGARTY: Objection to</p> <p>9 form.</p> <p>10 BY MS. O'DELL:</p> <p>11 Q. You may answer.</p> <p>12 A. That would be true of</p> <p>13 fibrous talc.</p> <p>14 Q. Would it be true of platy</p> <p>15 talc, if there is such a thing as pure</p> <p>16 platy talc?</p> <p>17 A. If there is a -- if there is</p> <p>18 any suspicion that any product, including</p> <p>19 platy talc, might be involved in</p> <p>20 producing inflammation or any other type</p> <p>21 of adverse health effect, then it would</p> <p>22 be very unethical to go ahead and</p> <p>23 intentionally use that in a human study,</p> <p>24 in my opinion, and in the opinion of most</p>	<p>1 Shower to Shower have contained and</p> <p>2 continue to contain asbestos. Do you see</p> <p>3 that sentence?</p> <p>4 A. Yes, I do.</p> <p>5 Q. And then it goes on, you go</p> <p>6 on to report his results from test of</p> <p>7 samples manufactured from the 1960s and</p> <p>8 1990s.</p> <p>9 A. Through -- through the</p> <p>10 1990s.</p> <p>11 Q. Through the 1990s, that's</p> <p>12 correct.</p> <p>13 And you -- you have a</p> <p>14 footnote here to Footnote 7?</p> <p>15 A. Yes.</p> <p>16 Q. And Dr. Longo and Rigler's</p> <p>17 report is noted in the footnote and it's</p> <p>18 dated November 14, 2018.</p> <p>19 A. Yes.</p> <p>20 Q. Do you see that?</p> <p>21 A. Yes.</p> <p>22 Q. And just, did you have in</p> <p>23 your possession and review Dr. Rigler and</p> <p>24 Longo's November 14, 2018, report during</p>

131 (Pages 518 to 521)

Judith Zelikoff, Ph.D.

Page 522	Page 524
<p>1 the completion of your own report? 2 A. I had it available prior to 3 the submission of my final report, yes. 4 The only thing I did not 5 have was the December 2018 supplement. 6 Q. His most recent supplement? 7 A. His most recent supplement, 8 yes. 9 Q. I think just to be clear, 10 that -- was his most recent supplemental 11 report you're referring to, was that the 12 report dated in January, I think 16th or 13 15th of this month? 14 A. It was sometime in January. 15 Q. Okay. 16 A. Yes. I could answer that 17 question specifically if I saw the 18 exhibit. 19 Q. And I've handed you what's 20 been marked I think as Exhibit -- 21 A. 3. 22 Q. 3. And is Exhibit 3 the 23 supplemental report -- 24 A. Yes, it is.</p>	<p>1 that Ms. O'Dell asked you. 2 First of all, you were 3 referred to Page 12 of your report 4 under -- under Section C, Fragrances. 5 Would you go to that portion of your 6 report please? 7 A. I will, thank you. Yes. 8 I'm here. 9 Q. You were asked about this 10 part of your report being identical to 11 the same part of Smith-Bindman's report. 12 Do you recall being asked those 13 questions? 14 MS. O'DELL: Object to the 15 form. 16 THE WITNESS: Smith -- 17 Smith-Bindman report? I'm sorry, 18 I don't recall -- oh, in the 19 beginning of the deposition? 20 BY MR. HEGARTY: 21 Q. Yes. 22 A. Okay. That was a long time 23 ago. 24 Q. First of all, are you aware</p>
Page 523	Page 525
<p>1 Q. -- that you reviewed 2 recently? 3 A. I'm sorry, yes. 4 Q. And what's the date on the 5 report? 6 A. January 15, 2019. 7 MS. O'DELL: Okay. I have 8 nothing further, Doctor. Thank 9 you. 10 MR. HEGARTY: Take a break. 11 I need to use the restroom. 12 THE VIDEOGRAPHER: The time 13 is 8:10 p.m. Going off the 14 record. 15 (Short break.) 16 THE VIDEOGRAPHER: We are 17 back on the record. The time is 18 8:16 p.m. 19 - - - 20 EXAMINATION 21 - - - 22 BY MR. HEGARTY: 23 Q. Dr. Zelikoff, I have some 24 questions in follow-up to the questions</p>	<p>1 that Dr. Crowley has been deposed in this 2 litigation? 3 A. Yes. 4 Q. Did you read his deposition? 5 A. I did. 6 Q. When did you read his 7 deposition? 8 A. I'm sorry, I don't recall 9 the exact date. 10 May I see Dr. Crowley's 11 deposition? 12 Q. Well, I just asked you if 13 you had read it. That's my only 14 question. 15 Other than Dr. Crowley's 16 deposition, have you read the depositions 17 of any other plaintiffs' experts deposed 18 in the MDL, this litigation? 19 A. Any of the other plaintiffs' 20 depositions? 21 Q. Correct. 22 A. Dr. Dydek. 23 Q. Anybody else? 24 A. I'm looking to see the</p>

<p>1 others. 2 Q. It's at the end of Exhibit 3 B. 4 A. Okay. Thank you. Thank 5 you. 6 Q. Well, my question -- let me 7 ask a different question. Let me ask 8 whether you have reviewed the MDL 9 depositions; that is, the depositions 10 that plaintiffs' experts have taken in 11 this litigation over their expert reports 12 besides Dr. Crowley? 13 MS. O'DELL: Object to form. 14 THE WITNESS: Dr. Longo. 15 Sorry. 16 BY MR. HEGARTY: 17 Q. Dr. Longo has not yet been 18 deposed in -- 19 A. I read his report. 20 Q. -- for his MDL report. 21 No, I'm talking about the 22 deposition -- 23 A. I'm sorry. 24 Q. -- of an expert who has</p>	<p>1 Q. Page 12. 2 A. "There are more than 150 3 different chemicals"? 4 Q. Those four sentences, or 5 three -- or strike that. 6 The second sentence in that 7 section is not in Dr. Crowley's report. 8 He did not write, "I reviewed the expert 9 report of Dr. Michael Crowley that 10 concludes that some of these chemicals 11 may contribute to the inflammatory 12 response, toxicity, and potential 13 toxicity of Johnson & Johnson's talcum 14 powder products." 15 MS. O'DELL: Objection. 16 BY MR. HEGARTY: 17 Q. That sentence is not in 18 Dr. Crowley's report? 19 MS. O'DELL: Objection. 20 THE WITNESS: I'm terribly 21 sorry. I'm going to silence that 22 or we can and talk over it. 23 MS. O'DELL: Go ahead and 24 silence it.</p>
Page 527	Page 529
<p>1 been -- who is being deposed about their 2 report in the MDL. 3 You said Dr. Crowley. Have 4 you read anyone else's deposition that 5 have discussed their report in the MDL? 6 MS. O'DELL: I think there 7 may be some confusion between 8 report and deposition. 9 THE WITNESS: Yes. There 10 was. 11 BY MR. HEGARTY: 12 Q. Did you read Dr. Crowley's 13 deposition over his report? 14 A. I read Dr. Crowley's report. 15 I'm sorry. I stand corrected. 16 Q. Dr. Crowley's report does 17 not contain the sentences that you've 18 included under your Section C, 19 fragrances, correct? 20 MS. O'DELL: Object to the 21 form. 22 THE WITNESS: What page are 23 we going back to, please? 24 BY MR. HEGARTY:</p>	<p>1 (Brief interruption.) 2 MR. HEGARTY: Let's go off 3 the record. 4 THE VIDEOGRAPHER: The time 5 is 8:21 p.m. Off the record. 6 (Whereupon, a discussion was 7 held off the record.) 8 THE VIDEOGRAPHER: The time 9 is 8:21 p.m. Back on the record. 10 BY MR. HEGARTY: 11 Q. The second sentence under 12 your section fragrances is nowhere in 13 Dr. Crowley's report? 14 A. That -- 15 MS. O'DELL: Objection to 16 form. 17 THE WITNESS: That sentence 18 is not there, but I concluded that 19 when he talked about the 20 fragrances, I concluded that -- I 21 inferred from his -- from his 22 report, that these chemicals do 23 contribute to the inflammatory 24 response, toxicity and potential</p>

133 (Pages 526 to 529)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 530</p> <p>1 carcinogenicity. 2 BY MR. HEGARTY: 3 Q. The sentence, "I concur with 4 his opinion," is not in Dr. Crowley's 5 report, is it? 6 A. No. That was my opinion. 7 Q. That same opinion, stated 8 exactly the same way, is in the 9 Dr. Smith-Bindman report, correct? 10 A. Can I see that report? 11 Q. Do you recall without 12 looking at it, that that same section is 13 in her report? 14 A. I do not. I do not recall. 15 Q. Okay. Did you -- do you 16 know -- have you ever spoken to 17 Dr. Smith-Bindman? 18 A. Not at all. 19 Q. Do you know who she is? 20 A. I don't. 21 Q. Do you know her expertise? 22 A. I do not. 23 Q. Have you ever heard her name 24 before today?</p>	<p style="text-align: right;">Page 532</p> <p>1 BY MR. HEGARTY: 2 Q. Doctor, you -- 3 A. -- that included talc. 4 Q. Doctor, you testified 5 earlier in this deposition that your 6 information as it relates to talc and 7 ovarian cancer came from the media and 8 discussion with colleagues, correct? 9 A. Prior to being contacted. 10 Q. Right. So prior to being 11 contacted for counsel for plaintiffs, you 12 had no expertise in talc and ovarian 13 cancer, correct? 14 A. As a toxicologist -- I'm 15 sorry. I'm getting hung up on the word 16 "expert" as you're using it. As a 17 toxicologist, I am familiar with talc. I 18 am familiar with much of the toxicity of 19 it. But the primary -- in discussing 20 talc and its relationship to cancer, it 21 was through colleagues and the media, 22 yes, correct. 23 Q. You had not studied, prior 24 to being contacted by plaintiffs'</p>
<p style="text-align: right;">Page 531</p> <p>1 A. Not -- not to my knowledge. 2 But I would like to see -- to refresh my 3 memory, if it's available. 4 Q. You were asked about your 5 expertise as it relates to talc and 6 inflammation. Before you were contacted 7 by Ms. Emmel, you had no expertise in 8 talc, correct? 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: I performed no 12 scientific studies in it. 13 BY MR. HEGARTY: 14 Q. You also reviewed no 15 scientific studies concerning talc, 16 correct? 17 MS. O'DELL: Objection to 18 form. 19 THE WITNESS: I have 20 reviewed papers. I am editor and 21 associate editor on an editorial 22 board so that in my past 23 experience, I likely reviewed 24 papers --</p>	<p style="text-align: right;">Page 533</p> <p>1 counsel, any issues reported in the 2 medical literature with regard to talc 3 and ovarian cancer, correct? 4 A. I have not studied in my 5 laboratory, that's correct. 6 Q. You also did not review any 7 literature discussing talc and ovarian 8 cancer prior to being contacted by 9 counsel for plaintiff? 10 A. That is correct. 11 Q. Prior to being contacted by 12 counsel for plaintiffs you had not 13 studied the toxicology -- toxic aspects, 14 if any, of talc, correct? 15 MS. O'DELL: Object to the 16 form. 17 THE WITNESS: I have -- as I 18 stated, I have reviewed papers 19 that have looked at it. And I've 20 reviewed them for acceptance into 21 journals. 22 BY MR. HEGARTY: 23 Q. Can you cite for us today 24 any such papers?</p>

134 (Pages 530 to 533)

Judith Zelikoff, Ph.D.

Page 534	Page 536
<p>1 A. Over my career, I cannot. 2 Sorry. 3 Q. Can you identify any study 4 you have published that investigated or 5 discussed the toxicity of cobalt? 6 A. I've written review articles 7 on the toxicology of metals in general 8 and cobalt was in there, and in book 9 chapters. 10 Q. But it's your testimony that 11 you have written review papers where you 12 discussed the toxicity of cobalt? 13 A. I did not say review papers. 14 I said book chapters. 15 Q. So you had written a book 16 chapter to discuss the toxicity of 17 cobalt? 18 MS. O'DELL: Objection to 19 form. 20 THE WITNESS: I was an 21 editor of a book, several books -- 22 two books actually, which looked 23 at the toxicity of cobalt -- 24 looked at the toxicity of metals.</p>	<p>1 nickel? 2 A. Yes. 3 Q. What published article have 4 you -- have you written discussing the 5 toxicity of nickel? 6 A. One that comes to my mind, 7 without looking at my CV, is an early 8 publication associated with the 9 immunology and immunotoxicity of nickel 10 in fish. 11 Q. What nickel -- was it a 12 nickel compound? 13 A. It was a nickel chloride, a 14 soluble nickel compound. 15 Q. Are nickel compounds in 16 Johnson's Baby Powder? 17 A. Nickel -- according to the 18 J&J documents and other -- other internal 19 documents, yes. 20 Q. Okay. What nickel compounds 21 are in Johnson's Baby Powder? 22 A. The report indicates nickel. 23 It does not break it down to a particular 24 salt or a particular compound of nickel.</p>
Page 535	Page 537
<p>1 And cobalt, to my recollection, 2 was in both of those books. 3 BY MR. HEGARTY: 4 Q. Did you write those 5 chapters? 6 A. I reviewed those chapters 7 for publication in those books. 8 Q. My question was did you 9 write those chapters? 10 A. I'm sorry. Did I write 11 those chapters on cobalt? No, I did not. 12 Q. Have you ever written any 13 published chapter or article discussing 14 the toxicity of cobalt? 15 A. I have not -- 16 MS. O'DELL: Objection. 17 THE WITNESS: -- written an 18 article in the area of cobalt, but 19 I am familiar with metals, very 20 much so from the department and 21 the research that I do. 22 BY MR. HEGARTY: 23 Q. Have you written any 24 published article discussing toxicity of</p>	<p>1 Q. Have you written any papers 2 looking at the toxicity of chromium-3? 3 A. I'm going to look in my -- 4 in my CV. 5 Q. Well, without looking at 6 your CV, for purposes of time, can you 7 recall any such article? 8 MS. O'DELL: If you need to 9 take a moment, Doctor, feel free 10 to. 11 MR. HEGARTY: We'll go off 12 the record if she needs to take a 13 moment. 14 BY MR. HEGARTY: 15 Q. Because I qualified my 16 question by asking you, without looking 17 at your CV, are you able to cite an 18 article that you've written? 19 A. I want to give actual data 20 to you. In my mind, I recall a paper 21 that I wrote with Dr. Max Costa on 22 chromium. And -- and possibly with Toby 23 Rossman. But without looking, I can't be 24 absolutely sure.</p>

135 (Pages 534 to 537)

Judith Zelikoff, Ph.D.

Page 538	Page 540
<p>1 Q. You refer over on pages -- 2 or on Page 25 of your report -- 3 A. Yes. 4 Q. -- to -- 5 A. Talc-induced inflammation. 6 Q. Well, let me finish my 7 question. 8 A. Oh, I'm sorry. 9 Q. You refer over on Page 25 in 10 the fourth paragraph to an abstract and 11 other material by Dr. Harper and 12 Dr. Saed, correct? 13 A. Yes. In the last -- in the 14 last paragraph, in the last sentence. 15 Q. And none of those 16 publications refer to testing using 17 Johnson's Baby Powder, correct? 18 MS. O'DELL: Objection to 19 form. 20 THE WITNESS: To my 21 knowledge, no, but I would have to 22 look at the paper to be absolutely 23 sure. But they did use talc, 24 yes -- talcum powder.</p>	<p>1 the statements that you were asked about 2 by plaintiffs' counsel in your expert 3 report, correct? 4 MS. O'DELL: Object to form. 5 THE WITNESS: Not without 6 checking my document, I can't 7 answer conclusively. 8 BY MR. HEGARTY: 9 Q. You did not rely on this 10 portion of the FDA's letter for purposes 11 of your opinions in this case, correct? 12 MS. O'DELL: Regarding the 13 asbestos testing? 14 BY MR. HEGARTY: 15 Q. The portion that I just 16 referred you to, the top two paragraphs 17 at Page 3. 18 A. They do not prove that all 19 talc-containing cosmetic products 20 currently marketed in the United States 21 are free of asbestos. Is that -- 22 Q. Yes. 23 A. Okay. And the question was? 24 Q. You did not refer to that</p>
Page 539	Page 541
<p>1 BY MR. HEGARTY: 2 Q. Can you cite for me any 3 animal or cell studies that you reviewed 4 for purposes of preparing your report 5 that tested Johnson's Baby Powder other 6 than Dr. Saed's recent manuscript? 7 A. I know I have, I just can't 8 recall. 9 You are talking about 10 publications, correct? 11 Q. Yes. That you've cited in 12 your report. 13 A. I can't find it at the 14 moment, so I would have to say no. 15 Q. Did you find Exhibit 33, the 16 FDA's response letter to Dr. Epstein. 17 A. Thank you. 18 Q. You were referred to Page 3 19 in FDA's statement with regard to its 20 testing of samples of cosmetic grade raw 21 material talc and cosmetic products for 22 asbestos? 23 A. Yes, I did. 24 Q. You did not refer to any of</p>	<p>1 statement in your report, correct? 2 A. That is correct, yes. 3 Q. Also you did not cite on 4 Page 5 in your report the statement that 5 "it is, therefore, plausible that 6 perineal talc and other particulate that 7 reaches the endometrial cavity, et 8 cetera, may elicit foreign body-type 9 reaction and inflammatory response that 10 in some exposed women may progress to 11 epithelial cancers." 12 You did not cite that 13 sentence in your report either, correct? 14 A. I did not -- 15 MS. O'DELL: Objection to 16 form. 17 THE WITNESS: I did not cite 18 that sentence in my report either. 19 However, this document was in 20 my -- in my citations in the 21 overall reliance -- reliance 22 document. 23 BY MR. HEGARTY: 24 Q. With regard to the draft</p>

136 (Pages 538 to 541)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 542</p> <p>1 screening assessment by Canada, Canada 2 employs a precautionary principle. Are 3 you aware of that? 4 A. Yes. 5 Q. Do you know what a 6 precautionary principle is? 7 A. I do know what a 8 precaution -- 9 Q. What is it? 10 A. A precautionary principle is 11 one where you -- in my -- in my opinion 12 and what -- to my knowledge, it's a 13 principle in which you use every 14 precaution in terms of assessment, in 15 terms of use in animal models and human 16 models. You follow precaution. 17 Q. Okay. The draft screenings 18 assessment, Exhibit Number 9, contains 19 the following statement -- and I only -- 20 I only have your copy. 21 A. Oh okay. 22 Q. I'm going to read it to you 23 and tell me whether you agree with it. 24 A. Okay.</p>	<p style="text-align: right;">Page 544</p> <p>1 "The specific mechanisms and 2 cascade of molecular events by which talc 3 might cause ovarian cancer have not been 4 identified." 5 MS. O'DELL: Wait. Do you 6 mind showing Dr. Zelikoff? 7 MR. HEGARTY: Well, then I 8 won't have -- I'm just reading 9 this statement. 10 MS. O'DELL: Well, but if 11 you're reading from the draft 12 assessment -- 13 MR. HEGARTY: You know what, 14 I -- this is the only copy I have. 15 If you want to hand me your copy. 16 MR. TISI: I have my copy. 17 It has my notes on it. If you... 18 Do you want it? 19 MS. O'DELL: You're welcome 20 to my copy. 21 MR. HEGARTY: Thank you. 22 BY MR. HEGARTY: 23 Q. Page 18, second paragraph. 24 I was on Page 18, Doctor.</p>
<p style="text-align: right;">Page 543</p> <p>1 Q. "The etiology of most 2 ovarian tumors in general has not been 3 well established." 4 MS. O'DELL: What page are 5 you on, please? 6 MR. HEGARTY: Page 18. 7 BY MR. HEGARTY: 8 Q. Do you agree with that 9 statement? 10 A. Please read it again. 11 Q. "The etiology of most 12 ovarian tumors in general has not been 13 well established." 14 A. The etiology is -- has not 15 been well established. But it has been 16 studied. But there -- okay. I'm done. 17 Q. The -- on page -- strike 18 that. On Page 21 -- 19 A. Of my report? 20 Q. No, of the -- 21 A. Health Canada. 22 Q. -- health assessment states 23 the following statement and tell me 24 whether you agree with it.</p>	<p style="text-align: right;">Page 545</p> <p>1 A. You handed it to me like 2 this, sir. 3 Q. Right. On page -- I'm 4 sorry, Page 21. 5 A. This is Page 21. 6 Q. Sorry. Page 21, second 7 paragraph. The statement at the end 8 reads, "However, the specific mechanisms 9 and cascade of molecular events by which 10 talc might cause ovarian cancer have not 11 been identified." 12 Do you agree with that 13 statement? 14 MS. O'DELL: Objection to 15 form. 16 THE WITNESS: That's a 17 statement here. 18 BY MR. HEGARTY: 19 Q. Do you agree with that 20 statement? 21 A. Oh, I'm sorry. I'm sorry, 22 I've lost -- Page 21, what -- 23 Q. Page 21, second paragraph -- 24 A. -- what paragraph?</p>

137 (Pages 542 to 545)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 546</p> <p>1 Under --</p> <p>2 Q. Last two lines.</p> <p>3 A. Under --</p> <p>4 Q. Under -- in the biologic</p> <p>5 plausibility section.</p> <p>6 A. I see it. Thank you.</p> <p>7 Q. It read -- the statement</p> <p>8 reads: The specific mechanisms and</p> <p>9 cascade of molecular events by which talc</p> <p>10 might cause ovarian cancer have not been</p> <p>11 identified.</p> <p>12 Do you agree with that</p> <p>13 statement?</p> <p>14 A. Yes, they have not been</p> <p>15 clearly and conclusively identified.</p> <p>16 Q. But that's not what that</p> <p>17 sentence reads. My question was do you</p> <p>18 agree with the sentence that I just read</p> <p>19 to you.</p> <p>20 A. It is -- I think it's a</p> <p>21 sentence taken out of text.</p> <p>22 Do I agree with the sentence</p> <p>23 as it is written? No. I would have to</p> <p>24 add the words, "have not been clearly</p>	<p style="text-align: right;">Page 548</p> <p>1 today it's not -- you're not using it to</p> <p>2 inform your opinions, correct?</p> <p>3 A. It is -- it is support and</p> <p>4 validation of my opinions.</p> <p>5 Q. You referenced IARC and its</p> <p>6 designation of asbestos. What has IARC</p> <p>7 designated talc for genital uses as?</p> <p>8 MS. O'DELL: Objection.</p> <p>9 THE WITNESS: I -- in -- in</p> <p>10 terms of classification, may I</p> <p>11 look at the document?</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. Well, they've designated</p> <p>14 talc used --</p> <p>15 A. Fibrous -- fibrous --</p> <p>16 Q. -- for perineal use as 2B,</p> <p>17 correct?</p> <p>18 A. 2B, yes. Fibrous talc,</p> <p>19 correct.</p> <p>20 Q. You were asked about the</p> <p>21 deposition of Robert Glenn, correct?</p> <p>22 A. The past manager and</p> <p>23 director of NIOSH.</p> <p>24 Q. Yes.</p>
<p style="text-align: right;">Page 547</p> <p>1 identified."</p> <p>2 Q. So you don't agree with</p> <p>3 everything in the --</p> <p>4 A. Or established.</p> <p>5 Q. So you don't agree with</p> <p>6 everything in Health Canada's risk</p> <p>7 assessment, correct?</p> <p>8 MS. O'DELL: Objection to</p> <p>9 form.</p> <p>10 THE WITNESS: I -- I do not</p> <p>11 agree with this sentence, correct.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. You do rely on, for purposes</p> <p>14 of your opinions in this case, the draft</p> <p>15 screening assessment, correct?</p> <p>16 MS. O'DELL: Objection.</p> <p>17 THE WITNESS: No. That came</p> <p>18 out well after I handed in my</p> <p>19 final report, so it was not used</p> <p>20 to inform my opinion. It was</p> <p>21 supporting validation for my</p> <p>22 opinion.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. So still -- still through</p>	<p style="text-align: right;">Page 549</p> <p>1 A. Yes.</p> <p>2 Q. Did you read the entirety of</p> <p>3 his deposition?</p> <p>4 A. No, I did not.</p> <p>5 Q. Did you agree with</p> <p>6 everything he said in his deposition?</p> <p>7 A. I said I did not read the</p> <p>8 entirety. I can't answer.</p> <p>9 (Document marked for</p> <p>10 identification as Exhibit</p> <p>11 Zelikoff-49.)</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. I'm going to mark as</p> <p>14 Exhibit 49, portions of the deposition of</p> <p>15 Dr. Robert Glenn. If you turn to the</p> <p>16 first page of that exhibit, Page 482.</p> <p>17 A. Page 482, yes.</p> <p>18 Q. Yes. Mr. Glenn was asked in</p> <p>19 the middle of the page, Lines 12 to 14,</p> <p>20 "Has the data also showed that talcum</p> <p>21 powder is not cytotoxic, meaning it</p> <p>22 doesn't damage cells?"</p> <p>23 Mr. Glenn answer's, "Yes."</p> <p>24 A. Yes.</p>

138 (Pages 546 to 549)

Judith Zelikoff, Ph.D.

Page 550	Page 552
<p>1 Q. Did you cite that portion of 2 his testimony in your expert report? 3 MS. O'DELL: Objection to 4 form. 5 THE WITNESS: No. 6 BY MR. HEGARTY: 7 Q. Did you read it? 8 A. I said that I did not read 9 this in its -- in its entirety. 10 Q. Do you agree with that 11 sentence? 12 I'm sorry, do you agree with 13 his answer to that question? 14 MS. O'DELL: Objection to 15 form. 16 THE WITNESS: To the 17 question, "Has the data also 18 showed that talcum powder is not 19 cytotoxic, meaning it doesn't 20 damage cells?" 21 So if the question is do I 22 agree with that sentence -- do I 23 agree with his answer of yes, 24 there have been data showing, in</p>	<p>1 shows that talcum powder is not 2 mutagenic? There is. 3 Q. Did you cite that portion of 4 Mr. Glenn's testimony in your report? 5 A. No, I did not. 6 Q. If you look at the next page 7 at the top. The question, 2 through 7, 8 with the answer on 8. 9 A. Mm-hmm-hmm. 10 Q. Did you cite that question 11 and answer in your report? 12 MS. O'DELL: Object to the 13 form. 14 THE WITNESS: I did not cite 15 any of Dr. Glenn's information 16 because I -- I did not read it in 17 detail. 18 BY MR. HEGARTY: 19 Q. You can put that aside. 20 Is it your testimony that 21 you're more knowledgeable regarding talc 22 and ovarian cancer than Dr. Neel? 23 A. No, what my testimony is to 24 is that I have extensive knowledge in</p>
Page 551	Page 553
<p>1 certain circumstances, in certain 2 cell lines, that talcum powder has 3 not been shown to be cytotoxic at 4 certain concentrations. 5 BY MR. HEGARTY: 6 Q. Looking down at the next 7 question, 18 through 21, he's asked, "And 8 has the data also showed that talcum 9 powder is not mutagenic, meaning it 10 doesn't mutate genes?" 11 "Answer: Yes." 12 Do you agree with his answer 13 to that question? 14 A. I do not agree. I think 15 that the -- I do not agree with his 16 answer. I think that his -- that the 17 question has to be -- the question in my 18 opinion, it was ambiguous. And I'm not 19 sure what he was basing that on in terms 20 of his response. 21 If you -- if he was looking 22 at mutagenicity in terms of Ames assays 23 or yes, they have not shown mutagenicity. 24 So is there data that also</p>	<p>1 toxicological aspects, the cytotoxicity 2 of it, and the inflammatory responses 3 from an -- from an academic perspective 4 and a biological mechanism perspective. 5 Q. What is Dr. Neel's knowledge 6 of the toxicological aspects and the 7 toxicity of talc? 8 A. I do not know. 9 Q. What's his -- is he a 10 cancer -- strike that. 11 He is a cancer biologist, 12 correct? 13 MS. O'DELL: Objection to 14 form. 15 THE WITNESS: The only thing 16 I know about Dr. Neel is that he 17 is the director of the Cancer 18 Institute. I am not familiar with 19 his research. 20 BY MR. HEGARTY: 21 Q. Have you ever evaluated his 22 qualifications? 23 A. No. I was not on the search 24 committee nor do I have access to his CV.</p>

Judith Zelikoff, Ph.D.

Page 554	Page 556
<p>1 Q. You made statements 2 indicating that you believe that you are 3 more knowledgeable than Dr. Neel 4 regarding the toxicities of talc. Is 5 that true? 6 A. What I do know is that he is 7 not a toxicologist. 8 Q. Do you know what his area of 9 expertise is? 10 A. He's -- OB/GYN and oncology. 11 Q. Do you know what his level 12 of knowledge is in the area of 13 toxicology? 14 A. I do not. 15 Q. Have you ever met him? 16 A. Yes, I have met him. 17 Q. Have you ever talked to him 18 about his qualifications in the area of 19 toxicology? 20 A. No, I have not. But I know 21 he is not a -- he is not considered a 22 toxicologist by his peers, by colleagues. 23 He is known as a cancer oncologist. He 24 is not known or recognized as a</p>	<p>1 Q. Are you a board-certified 2 oncologist? 3 A. I am not, never claimed to 4 be. 5 Q. Are you a board-certified 6 gynecologic oncologist? 7 MS. O'DELL: Wait a minute. 8 THE WITNESS: I am not, nor 9 have I ever claimed to be. 10 Because -- 11 BY MR. HEGARTY: 12 Q. You were asked -- you were 13 asked about whether you could do -- 14 whether there could be studies looking at 15 risk of cancer in women exposed to 16 cobalt, chromium, and nickel. Do you 17 recall those questions? 18 A. I do. 19 Q. Studies looking at exposures 20 of metals in humans are done all the 21 time. They are called retrospective 22 case-control studies, correct? 23 A. They are not done in a 24 laboratory nor is there insertion of</p>
Page 555	Page 557
<p>1 toxicologist. 2 Q. Who have you ever asked -- 3 who have you ever spoken with regarding 4 to Dr. Neel's qualifications as it 5 relates to toxicology? 6 A. I have not spoken to him 7 about his qualifications. My answer 8 comes from the fact that I am an active 9 member in the Society of Toxicology, but 10 nationwide and internationally. And also 11 I'm an active member in the International 12 Union of Toxicology and active member in 13 the other -- other toxicology programs 14 and societies. 15 And I have -- I have not 16 seen Dr. Neel at any of these, nor have I 17 heard of him being spoken at or about in 18 these -- in these meetings. 19 Q. Do you go to OB/GYN 20 conferences? 21 A. I do not. 22 Q. Do you go to oncology 23 conferences? 24 A. I do not.</p>	<p>1 those metals into humans. 2 Q. That's not my question. You 3 said -- you testified that there is no 4 way that you can do a study looking at 5 the effect of nickel in humans. That's 6 not true, is it? 7 MS. O'DELL: Objection to 8 form. Misstates -- 9 THE WITNESS: I'm sorry. 10 MS. O'DELL: -- the question 11 and the testimony. 12 Excuse me, Doctor. 13 THE WITNESS: I was -- I was 14 talking about clinical studies and 15 studies in people. 16 BY MR. HEGARTY: 17 Q. There are retrospective 18 case-control studies looking at exposure 19 of humans to nickel, correct? 20 A. That is -- those are 21 epidemiological studies. My 22 understanding of the question that was 23 asked of me had to do with laboratory 24 studies and intentional exposure.</p>

140 (Pages 554 to 557)

Judith Zelikoff, Ph.D.

Page 558	Page 560
<p>1 Q. Well, can you cite for me 2 any epidemiologic studies showing an 3 increased risk of ovarian cancer in women 4 exposed to nickel? 5 A. Nickel alone, I have not 6 reviewed that. But I do know the IARC 7 document talks about it as a Class 1 8 carcinogen. 9 Q. Can you cite for me, any 10 retrospective case-control studies, 11 showing an increased risk of ovarian 12 cancer in women exposed to chromium? 13 A. Chromium alone? 14 Q. Yes. 15 A. No, I cannot. 16 Q. Same question as to cobalt? 17 A. No, I cannot. 18 Q. Can you cite for me any 19 case-control studies looking at whether 20 there's an increased risk of ovarian 21 cancer in women exposed to nickel, 22 chromium, and cobalt in combination? 23 A. I hope I understand your 24 question right. But what I am -- what</p>	<p>1 is not unethical, but to use it in 2 a clinical study would be 3 extremely unethical. 4 BY MR. HEGARTY: 5 Q. It would also be appropriate 6 to do cell studies looking at nickel, 7 cobalt, and chromium in ovarian cancer 8 cells, correct? 9 MS. O'DELL: Objection to 10 form. 11 THE WITNESS: Alone -- I'm 12 sorry. Alone or in combination? 13 BY MR. HEGARTY: 14 Q. Or all of the above. 15 A. Your question was it would 16 be unethical to do cell culture studies? 17 Q. Would it be unethical in 18 your opinion? 19 A. Not to do cell culture 20 studies. 21 Q. Have such studies been done? 22 A. I'm not sure about the 23 combination. There have been studies, a 24 number of studies that have been done in</p>
Page 559	Page 561
<p>1 I'm saying is yes, there is an increased 2 risk in exposure to talc because talc 3 contains, according to the J&J documents, 4 and according to other studies that just 5 looked at talcum powder products, 6 contains nickel, cobalt, and chromium in 7 elevated levels. 8 Q. My question is specific to 9 looking only at exposure to cobalt, 10 nickel, and chromium. Can you cite for 11 me any case-control studies showing an 12 increased risk of ovarian cancer in women 13 exposed to those three metals in 14 combination? 15 A. No, I can't. 16 MS. O'DELL: Objection. 17 Asked and answered. 18 BY MR. HEGARTY: 19 Q. It would not be unethical to 20 do such a case-control study, correct? 21 MS. O'DELL: Objection. 22 THE WITNESS: A case-control 23 study or an epidemiological study 24 which uses data from populations</p>	<p>1 cell culture. I can't cite them all, 2 because there are numerous that have 3 looked at nickel or cobalt or chromium in 4 cell culture studies, and many that have 5 been done in my own laboratory. 6 Q. Can you cite to me any such 7 studies that have done those tests in 8 ovarian cells? 9 A. I'm sorry. When you say 10 "any such studies," do you mean cell 11 culture studies? 12 Q. Yes. 13 A. Well, the Shukla study, the 14 Saed studies. 15 Q. So the Shukla and Saed 16 studies applied nickel, chromium and 17 cobalt to the cells? 18 A. I'm sorry. I'm sorry. I 19 thought you said talcum powder. 20 Q. Doctor, listen to my 21 question. My question is can, you cite 22 for me any culture studies that have 23 applied nickel, cobalt, or chromium or 24 all three to ovarian cancer cells?</p>

141 (Pages 558 to 561)

Judith Zelikoff, Ph.D.

Page 562	Page 564
<p>1 A. I cannot -- I have not seen 2 that literature, no. 3 Q. Those studies could be done, 4 correct? 5 A. Those studies could be done. 6 Q. They could be done in your 7 laboratory, couldn't they? 8 A. I have the facilities to 9 carry out those studies. 10 Q. You have not done those 11 studies? 12 MS. O'DELL: Objection to 13 form. 14 THE WITNESS: Correct. 15 BY MR. HEGARTY: 16 Q. You cited to the Cramer 2007 17 study, which I'm marking as Exhibit 18 Number 40. 19 (Whereupon, a discussion was 20 held off the stenographic record.) 21 (Document marked for 22 identification as Exhibit 23 Zelikoff-50.) 24 BY MR. HEGARTY:</p>	<p>1 of the first page on the right-hand 2 column. 3 A. Yes. 4 Q. The authors state that 5 the -- "First, the association is a 6 relatively weak" -- "a relatively weak 7 one; i.e., summary relative risk of 8 approximately 1.3." 9 Do you agree with that 10 statement? 11 MS. O'DELL: Objection to 12 form. 13 THE WITNESS: Number one, I 14 am not an epidemiologist so I'm 15 not testifying to epidemiological 16 odds ratio, whether that is weak 17 or not weak. 18 BY MR. HEGARTY: 19 Q. The next sentence says, 20 "Second, no clear increase in risk or 21 duration of use has been found in most 22 studies." 23 Do you agree with that 24 sentence?</p>
Page 563	Page 565
<p>1 Q. I'm marking as Exhibit 2 Number 50 the Cramer 2007 study that you 3 referred to in response to counsel's 4 questions. 5 A. Mm-hmm-hmm. 6 MS. O'DELL: Objection. 7 That misstates the record. I 8 never referred to the Cramer 9 study. 10 MR. HEGARTY: She cited it 11 in response to your questions. 12 MS. O'DELL: No, she did 13 not. But you may ask questions 14 about it, but that's not a proper. 15 MR. HEGARTY: Well, she 16 cited the Cramer 2007 article. 17 BY MR. HEGARTY: 18 Q. Do you find this article to 19 be a credible source of information for 20 you? 21 A. It was published in 22 Obstetrics and Gynecology. That is good 23 journal, reputable journal. 24 Q. And if you look at the top</p>	<p>1 MS. O'DELL: Objection to 2 form. 3 THE WITNESS: There are many 4 studies that do show that duration 5 plays a role. 6 BY MR. HEGARTY: 7 Q. That's not my question. My 8 question is do you agree with that 9 sentence? 10 A. I see. 11 MS. O'DELL: Objection to 12 form. Asked and answered. 13 THE WITNESS: I do not agree 14 that there is no clear -- there is 15 some evidence that leads to an 16 increase in risk associated with 17 duration of use. 18 BY MR. HEGARTY: 19 Q. So you don't agree with that 20 sentence? 21 A. So I do not completely agree 22 with that sentence. 23 Q. The next sentence reads, 24 "Third, the ability of talc used in the</p>

142 (Pages 562 to 565)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 566</p> <p>1 genital area to enter the pelvic cavity 2 has not been conclusively proven." 3 Do you agree with that 4 sentence? 5 A. None of these are -- none of 6 these sentences are cited or referenced 7 by the way. 8 It has not been conclusively 9 proven. I agree with the sentence. 10 May I -- 11 Q. You cited as well to the 12 Keskin paper. You cited that several 13 times, including in response to counsel's 14 questions. 15 A. Yes, I did. I recall that. 16 Q. The Keskin paper was an 17 animal study that did not show tumor 18 formation from application of talc, 19 correct? 20 MS. O'DELL: Object to the 21 form. 22 THE WITNESS: If you allow 23 me to specifically look for that, 24 please.</p>	<p style="text-align: right;">Page 568</p> <p>1 findings that led to inflammation 2 including an increased number of 3 follicles, and that goes to 4 biological plausibility. 5 BY MR. HEGARTY: 6 Q. Did you agree with that 7 finding? 8 A. That there were increased 9 number of follicles? 10 Q. Yes. 11 A. And the histopathology? 12 That there was foreign body 13 reactions and that there were infections, 14 I agree with those studies. 15 Q. Do you agree with the 16 statement that the author made that this 17 effect seems to be in the form of foreign 18 body reaction or infection rather than a 19 neoplastic change? 20 A. I'm sorry, could you tell me 21 where that might be? 22 Q. Again, in the conclusion 23 section that we have just been looking 24 at.</p>
<p style="text-align: right;">Page 567</p> <p>1 BY MR. HEGARTY: 2 Q. I'll mark it as Exhibit 51. 3 (Document marked for 4 identification as Exhibit 5 Zelikoff-51.) 6 BY MR. HEGARTY: 7 Q. The Keskin paper over in the 8 conclusion section on Page 927 says that 9 with regard to the reported effects of 10 talc, "This effect seems to be in the 11 form of foreign body reaction or 12 infection rather than a neoplastic 13 change." 14 A. Which is inflammation. 15 Q. And in this study it showed 16 no neoplastic changes in any of the 17 animal study, correct? 18 MS. O'DELL: Object to the 19 form. 20 You may answer. 21 THE WITNESS: It was -- he 22 did not find or they did not find 23 that there was neoplastic changes, 24 but they did find a number of</p>	<p style="text-align: right;">Page 569</p> <p>1 A. Mm-hmm-hmm. 2 Well, a foreign body 3 reaction can -- is an immunological 4 response. Whether it's considered a 5 neoplastic change, likely not. A foreign 6 body reaction does not necessarily -- is 7 not necessarily known as a neoplastic 8 response, correct. 9 Q. And you -- you didn't cite 10 that statement from the Keskin paper in 11 your report, did you? 12 A. Not that I recall. 13 Q. Do you agree with the -- 14 A. But my -- my role was to 15 define biological plausibility. So what 16 I did -- what I did put in my report were 17 the things that indicated to me that 18 there was inflammation. 19 Q. You agree with the 20 conclusions from the Taher paper? 21 MS. O'DELL: Object to the 22 form. 23 Doctor, it's in this stack. 24 THE WITNESS: Okay. Thank</p>

143 (Pages 566 to 569)

Judith Zelikoff, Ph.D.

Page 570	Page 572
<p>1 you. Oh, thank you. 2 BY MR. HEGARTY: 3 Q. Second page, Line 34, on the 4 second page. 5 A. In the abstract? 6 Q. Yes. 7 MS. O'DELL: Give me just a 8 moment, I'm sorry. I'll pull out 9 my copy. 10 THE WITNESS: I'm sorry, 11 should I wait? 12 MR. HEGARTY: I think Leigh 13 wants you to wait. 14 MS. O'DELL: Okay. Go 15 ahead. I'm sorry. 16 BY MR. HEGARTY: 17 Q. Do you agree with the 18 statement made in Line 34? 19 A. Perineal use of talc powder 20 is a possible cause of human ovarian 21 cancer? 22 Q. Yes. 23 A. I believe that it's more 24 than a possible cause. I believe that</p>	<p>1 counsel has it. I'll hand it to you. If 2 you'll -- 3 A. Oh. You mean the draft 4 screening assessment? 5 Q. Yes. Sorry, I was going to 6 it by the wrong name. It is Exhibit -- 7 A. 9. 8 Q. Thank you. 9 If you'll turn to Page 16. 10 A. I see that, Keskin et al., 11 2009, it's the first statement under 12 human studies. 13 Q. Yes. Right above that when 14 it refers to the Keskin and colleagues 15 2009. What was the conclusion that the 16 sentence beginning "while no cancer"? Do 17 you see that above human studies on 18 Page 16? 19 A. The conclusion, "while no 20 cancer"? 21 Q. Yes. 22 A. "While no cancer/precancer 23 effects were observed, Keskin and 24 colleagues noted the study's duration may</p>
Page 571	Page 573
<p>1 there's biological plausibility which 2 shows that it -- it could be, it is 3 linked to human ovarian cancer. 4 Q. So you don't -- you disagree 5 with that statement? 6 A. One could say that, taking 7 it literally, that it is certainly a 8 possible cause. I just believe that it 9 is greater than a possible cause. 10 MR. HEGARTY: Okay. Thank 11 you. I think that's it for my 12 time. 13 MS. O'DELL: Okay. 14 - - - 15 EXAMINATION 16 - - - 17 BY MS. O'DELL: 18 Q. Doctor, I just have two 19 questions for you. 20 I think you had the causal 21 assessment in front of you. 22 A. Do you mean the Taher? 23 Q. No, ma'am. The actual 24 causal assessment -- actually I think</p>	<p>1 have been too short to note these types 2 of effects." 3 Q. And in regard to -- and 4 that -- that statement's consistent with 5 the statements that you've included in 6 your report, fair? 7 MR. HEGARTY: Objection to 8 form. 9 THE WITNESS: Yeah. 10 BY MS. O'DELL: 11 Q. And then secondly you were 12 asked a question, several questions about 13 the actual Keskin paper itself. And I 14 think it's still in front of you. Do you 15 see that? It's Exhibit 51. Yeah, 16 Exhibit 51. 17 A. This is it, thank you. 18 Q. Okay. And I'll turn you to 19 the conclusion please, Dr. Zelikoff. 20 A. That is on Page 930? 21 Q. It's 927 actually. One of 22 the conclusions, at least the ones I -- I 23 was looking at. 24 927. Do you see that?</p>

144 (Pages 570 to 573)

Judith Zelikoff, Ph.D.

Page 574	Page 576
<p>1 A. I see.</p> <p>2 Q. And counsel directed your</p> <p>3 attention to the sentence that said,</p> <p>4 "However this effect seems to be in the</p> <p>5 form of foreign body reaction or</p> <p>6 infection rather than neoplastic change."</p> <p>7 Do you see that? Recall</p> <p>8 those questions --</p> <p>9 A. In the conclusion section?</p> <p>10 Q. Yes.</p> <p>11 A. On Page --</p> <p>12 Q. 927.</p> <p>13 A. "However this effect seems</p> <p>14 to be in the form of a foreign body</p> <p>15 reaction or infection rather than a</p> <p>16 neoplastic change."</p> <p>17 Yes, I see that.</p> <p>18 Q. And if you'll look to the</p> <p>19 next sentence, what also did the authors</p> <p>20 conclude?</p> <p>21 A. "Results of previous studies</p> <p>22 are in favor of a neoplastic effect,</p> <p>23 particularly in the ovaries."</p> <p>24 And they conclude that more</p>	<p>1 dissolved in DMSO.</p> <p>2 Q. Is -- is the data included</p> <p>3 in this manuscript, was that part of</p> <p>4 the -- the data you relied on in abstract</p> <p>5 in reaching your opinions in this case?</p> <p>6 A. In abstract form, yes. That</p> <p>7 was all that was -- that was available</p> <p>8 since this only came out a few weeks ago.</p> <p>9 MS. O'DELL: Okay. I have</p> <p>10 nothing further.</p> <p>11 THE WITNESS: Accepted for</p> <p>12 E-press a few weeks ago.</p> <p>13 MS. O'DELL: Okay. I have</p> <p>14 nothing further.</p> <p>15 - - -</p> <p>16 EXAMINATION</p> <p>17 - - -</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. Dr. Zelikoff, in looking at</p> <p>20 the Keskin paper, in -- in particular at</p> <p>21 the portion of the conclusions section</p> <p>22 that counsel asked you to read --</p> <p>23 A. Yes.</p> <p>24 Q. -- the results of previous</p>
Page 575	Page 577
<p>1 experimental and clinical studies are</p> <p>2 warranted.</p> <p>3 Q. All right. And one other</p> <p>4 question. You were asked about the Saed</p> <p>5 studies regarding talc and cell culture,</p> <p>6 both ovarian cancer cells and regular</p> <p>7 cells.</p> <p>8 A. Yes. I recall.</p> <p>9 Q. And you were asked earlier</p> <p>10 about the manuscript that's been marked</p> <p>11 as --</p> <p>12 A. Exhibit 8.</p> <p>13 Q. -- Exhibit 8.</p> <p>14 Is it -- is it -- turn to</p> <p>15 Page 5 of the manuscript please.</p> <p>16 A. I see it.</p> <p>17 Q. And looking at the top, did</p> <p>18 Dr. Saed use Johnson's Baby Powder as a</p> <p>19 part of the -- his treatment of cells?</p> <p>20 A. Yes. It's Page 5, top,</p> <p>21 treatment of cells, talcum powder from</p> <p>22 Fisher -- Fisher Scientific or Baby</p> <p>23 Powder from Johnson & Johnson, and the</p> <p>24 numbers of the lots are given were</p>	<p>1 studies, that sentence?</p> <p>2 A. Yes, I see it on Page 927.</p> <p>3 Q. Can you cite for me any</p> <p>4 previous studies to Keskin which were in</p> <p>5 favor of a neoplastic effect?</p> <p>6 A. Culture cell studies that</p> <p>7 have looked at proliferation, increased</p> <p>8 proliferation which was seen in the Saed</p> <p>9 studies and in the abstract.</p> <p>10 Proliferation is one hallmark of the</p> <p>11 carcinogenic process.</p> <p>12 Q. Doctor, listen to my</p> <p>13 question. This publication was in 2008.</p> <p>14 A. Okay. I'm sorry.</p> <p>15 MS. O'DELL: 2009 I believe,</p> <p>16 but go ahead.</p> <p>17 THE WITNESS: 2009.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. Received December 2009.</p> <p>20 Published 2009.</p> <p>21 The sentence reads: The</p> <p>22 results of previous studies before 2009</p> <p>23 are in favor of neoplastic effect.</p> <p>24 What studies are they</p>

145 (Pages 574 to 577)

Judith Zelikoff, Ph.D.

<p style="text-align: right;">Page 578</p> <p>1 referring to?</p> <p>2 A. I don't know because it's</p> <p>3 not referenced.</p> <p>4 MR. HEGARTY: I don't have</p> <p>5 any additional questions.</p> <p>6 MS. O'DELL: Nothing</p> <p>7 further, Doctor.</p> <p>8 THE VIDEOGRAPHER: Stand by</p> <p>9 please. This marks the end of</p> <p>10 today's deposition. The time is</p> <p>11 9:03 p.m. Off the record.</p> <p>12 (Excused.)</p> <p>13 (Deposition concluded at</p> <p>14 approximately 9:03 p.m.)</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p>	<p style="text-align: right;">Page 580</p> <p>1 INSTRUCTIONS TO WITNESS</p> <p>2</p> <p>3 Please read your deposition</p> <p>4 over carefully and make any necessary</p> <p>5 corrections.
